The state hospitals are required to be "all things to all people" and provide a wide range of services for their varied clientele. In fact, for over half the "patients", these hospitals do not really serve as hospitals at all. For some, the hospital attempts to be a school, for others a nursing home, for some a home for the aged, for others a sheltered workshop and boarding home, and for some "patients" the hospital is a way station before transfer to a foster home or other community facility.⁴

³ Department of Mental Hygiene, *Survey of Patient Needs for Residential Care and Assistance*, Bulletin No. 34, August, 1963, p. 8.

⁴ *Ibid.*, 33, The Department of Mental Hygiene has studied the needs of the present population in our state hospitals for the retarded and concluded that "only 36.3 percent require hospitalization for medical, surgical, or psychiatric reasons." Also see appendix for more complete discussion of characteristics of the retarded population.

In 1963, the state financed care for 1,600 moderately retarded persons in foster homes and 115 profoundly retarded "crib cases" in small private nursing homes. All these people had to go from the "waiting list" into the state hospitals before being placed in their present homes. This peculiar arrangement makes "waiting lists" inevitable. Under the present arrangement, hundreds of children are moved from their own homes into the large wards of state hospitals, only to be moved again into foster homes or nursing homes. And in many cases, the present procedure results in years of hospital living for people who should never have been placed in a state hospital in the first place.

The heart of the problem is that most families who are unable to care for their retarded child at home have no choice other than to place the child in a state hospital.

MANY FAMILIES WANT ALTERNATIVES

The subcommittee's survey indicates that about half the families with children on the current waiting list for state hospitals for the retarded would not place their children in a state hospital if other alternatives were available.⁵

These families state they would prefer to hire help to assist them in caring for their children at home, or would elect to place their children in private care facilities such as foster homes or private institutions if funds were available to help them pay for these services.

The present state system does not offer such alternatives to state hospital care. The following quote from one of the many letters to the committee illustrates the dilemma:

"Our son is four years old, and living for the past few months in a foster home licensed by the State Department of Mental Hygiene.

"He was diagnosed by Dr. _____, at the Birth Defect Center at Children's Hospital in San Francisco, as neurologically damaged and severe sensory receptive aphasia. We were advised to make an application for him at Sonoma State Hospital The hospital told us that he was eligible but not suitable—that they could not duplicate the care and education he was receiving in San Francisco.

"Naturally we were delighted that he can be here in San Francisco where we can visit him, and that he is

⁵ Special Committee on Mental Health Services, Assembly Ways and Means Committee, Supplementary Factual Report No. 2, December, 1964.

showing progress in the classes for aphasic children at the San Francisco Hearing and Speech Center.

"But, I'm afraid we are classic examples of the middle-income family unable to afford the \$150 a month for his care. My husband makes an adequate salary for a family of seven with normal expenses . . . we are not eligible for any aid from public welfare . . . We're a bit stymied at this point. We are praying that funds will be made available as a result of new legislation and it is on that premise that we are taking a loan to help us take care of our son for the next several months."

For children needing special care, the only present way to circumvent the state hospital is through privately financed placement in a school, foster home or nursing home. About 2,500 retarded persons are now cared for in this manner. Unfortunately only the wealthy can afford this alternative for long periods—or the very poor whose children qualify for public welfare support in private institutions.

At the present time there are many vacancies in private facilities specifically licensed by the California State Department of Mental Hygiene to provide residential care for the mentally retarded.⁶ The evidence indicates that lack of funds is a major reason preventing families from placing their children in these facilities.⁷ (Another important fact is that over 55 percent of the families who have placed retarded children in private facilities are receiving some form of public assistance to help them pay for all, or part of, the cost of care. This fact suggests that low income families who are eligible for financial assistance and upper income families who can better afford the long-term expense are able to make greater use of private placements than middle-income families who cannot manage a continual drain on their family resources.)⁸

THESE FINDINGS CLEARLY SHOW THAT FAMILY INCOME IS A PRIMARY FACTOR LIMITING THE USE OF PRIVATE COMMUNITY FACILITIES FOR THE RETARDED. FEW FAMILIES CAN AFFORD TO HIRE HELP AT HOME OR PAY THE FEES IN PRIVATE FACILITIES AND HALF OF THOSE NOW IN PRIVATE FACILITIES WILL EVENTUALLY BE SHIFTED TO THE STATE HOSPITALS WHERE THE FAMILIES ARE REQUIRED TO PAY ONLY \$20 A MONTH.⁹

⁶ *Special Committee on Mental Health Services, Assembly Ways and Means Committee, Supplementary Factual Report No. 1, October, 1964.*

⁷ *Supplementary Factual Report No. 2, op. cit., p. 10.*

⁸ *Supplementary Factual Report No. 1, op. cit., p. 15.*

⁹ *See Appendix, Table VIII, for information regarding movement of retarded persons from community to state hospital facilities.*

As one parent put it: "Upon admission to the state hospital the parent's contribution to the care of the child drops to \$20 per month and remains at that figure even after the child is placed back in the community by the hospital . . . the state is, in fact, providing a financial reward to the family for the utilization of state hospital services."

In summary, a major cause of the lengthy state hospital "waiting lists" stems from the fact that despite the needs of children or the desires of their families, the state offers no alternatives other than the state hospital for these retarded children. Each year almost 1,000 retarded children are being funneled into a single system and family finances are a primary factor in determining where these children will go.

A HIGH PRIORITY MUST BE GIVEN TO CHANGING THE SYSTEM WHICH FORCES FAMILIES AND THEIR CHILDREN TO WAIT FOR A SERVICE WHICH IS OFTEN INAPPROPRIATE.

THE EFFECTS OF INSTITUTIONALIZATION OF CHILDREN

There is a massive body of professional knowledge and opinion that clearly documents the effects of institutionalization in large facilities remote from the natural family and the normal community.

Typical of research findings on this matter is the recent comparison of two groups of equally retarded children in California—one group residing in the community and the other at Sonoma State Hospital. The researchers conclude:

"The fact that the institution groups showed significant decreases in their social competency scores over the two-year study period, whereas the community groups showed significant increases, would indicate that the general environmental situation within the institution was not conducive to the development of trainable retarded children. The school within the institution apparently cannot counteract the pervasive lack of stimulation by providing a few hours of training each day.

"It is questionable whether the school within the institution can carry out a consistent and systematic program for trainable mentally retarded children, as institutions are presently constituted. Although no formal observational procedures were employed, the general impression of the institutional wards in which the children participating in the study resided, was that there was little opportunity for developing social competence. The children, when seen on the wards, were wearing hospital-

type smocks, no shoes and no socks, thus minimizing many learning experiences relative to dressing. A review of the items included in the San Francisco Social Competency Scale with one of the institution's administrative staff members indicated that there are a number of social competency skills that cannot be learned on the wards by the children because of restrictive institutional policies or limited environmental opportunities. For example, the children living on the wards involved in this study are permitted to use only spoons for eating, and learning to eat with a fork or cut with a knife is therefore not possible.

"The data of this study supports the point of view that the institution is not as desirable a setting as is an adequate home environment for the development of trainable mentally retarded children. It would appear that the present trend to keep such children at home is desirable despite the varied services available within the institution. There is also evidence to support the premise that a similar investment on the part of communities in providing professional services for trainable children would lead to an increased preference by parents for keeping their children at home."¹⁰

There is no doubt that we will better serve the interests of trainable retarded children, and perhaps even other more severely retarded children, if we redesign our system to provide home care help and other community-based alternatives to state hospital placement for those families who desire such choices.

The committee wishes to make it quite clear that its purpose is to *expand* the choices available to families. This does not exclude the state hospital choice. For families who prefer state hospital services (50 percent of those on the waiting list indicate this preference) and for families whose children may *require* state

hospital services, state hospitals should be available. It is the committee's intention to publish another report within the next year analyzing state hospital programs with a view toward improving the services in these institutions.

It will take time to develop adequate alternative services to hospital care. In view of this, it is most important that those interested in services for the retarded avoid the mistake of placing this issue in "either/or" terms. The state hospitals have, and will continue to have, a significant job to do. But they are not the *only* way in which the state should honor its obligation to this group of children.

HOW DO THE PARENTS FEEL ABOUT INSTITUTIONAL PLACEMENT?

In addition to analyzing information provided by agencies, professional persons, and organizations, the subcommittee has probed another dimension. Of major importance is the attitude of the individuals who use these services. What do parents of retarded children want the state to do? How do they view their problem, and what solutions are they seeking? The subcommittee attempted to find answers to these questions through correspondence with over 100 families with retarded children and a questionnaire answered by more than 1,200 families with children on the waiting list for state hospitals.

The results indicate that half the families most directly affected would like to have the state provide alternatives which are not now available.

Fortunately, and quite coincidentally, at almost the same time the subcommittee was conducting its research, another study was being carried out. On December 5th, Dr. Carolyn M. Fowle reported to the subcommittee the results of her study of 140 parents of retarded children.¹¹ Half of the families concerned had children on the waiting list and half had placed their children in Porterville State Hospital during the past five years. Dr. Fowle's observations provide further confirmation of the committee's findings.

In the face-to-face interviews conducted by Dr. Fowle almost 75 percent of the families stated a preference for a community-centered residential facility. In view of the timely significance

¹¹ Carolyn Fowle, *"The Effect of the Severely Mentally Retarded Child on His Family"* (unpublished doctoral dissertation, University of the Pacific).

of this new information, we will quote portions of Dr. Fowle's testimony:¹²

"... Of the 70 parents interviewed who had hospitalized their retarded child, 56 said they would prefer a community-centered residential facility. Of the other 70 parents interviewed who had their retarded child at home, 40 stated that they would like a small 24-hour facility closer to home than the present state hospital. It should be noted that the question was not worded, 'Do you favor such and such?', but rather the question was, 'What additional services would *you* like to have?' The responses were spontaneous, and seemingly this item generated more force than many of the others.

"In summary, the need for *community* residential care was the need most frequently mentioned by the 140 parents interviewed.

"It was my impression that for the most part retarded children are loved children; their families seem to care for them just as much as they do their other children—if not more. The parents are pained when they must send them off 150 to 200 miles to a large hospital; many parents do *not* want to forget their retarded children—they want to see them frequently—they want them in their own communities. Many parents are plagued by the fear that they are shirking their parental duties when they place their retardate miles away; if the child or young adult could remain in the families' own community, I feel the separation would not be so difficult.

"Generally speaking, the parents seem to want to include their retarded children in their family life whenever possible—and only if the child were in a community facility, would this be possible.

"Listen to a few excerpts from the parents' statements:

'It's so far to Porterville . . . we can't go very often . . . and I feel so guilty . . . sometimes it's so long in between that S. doesn't even recognize me.'

'I'll tell you institutions are not the answer—as institutions are now. If there were more and smaller, it would be different. We want S. to come home—but there's nothing for him here.'

'We didn't want S. to go to Porterville, but we couldn't take the expense. We didn't always live this way; before this all happened, we had a good home and five rooms of furniture. Just one year cost us over \$5,000; I finally had to take bankruptcy.'

¹² Testimony given by Carolyn Fowle before the Assembly Ways and Means Subcommittee on Mental Health Services. The hearing was held December 5, 1964, in Santa Cruz.

'I don't like huge institutions—you just feel you're letting someone else take care of your problems. Better to have smaller community facilities.'

'Well, there's no hesitation for me on what I'd like to see—community 24-hour care. We would like to see S. more often. The trip is really hard on us. We're older. Our car is older. There's so much traffic on Highway 99. If it were only 40 to 50 miles, we could go for a Sunday, or bring him home for a weekend.'

The second need most often stated by the interviewed parents was that of counseling. The occurrence of mental retardation in a family is usually an event in which the parents have had no previous experience in adapting to the problem. The dilemmas produced by the incident do not end but rather continue throughout the entire life of the retardate and his family members. Counseling only at the time of the diagnosis of the child seems to be insufficient. This was evidenced by the expressed need for counseling services by a significant number of the parents.

"It is believed that with available counseling services some parents would be able to cope with the presence of a retarded child without resorting to placement outside of the home. Parents sometimes stated that they just didn't know what to do, so they institutionalized; occasionally they were influenced by neighbors or relatives to do this. Again some statements:

'There was just no one to talk to—we took her to Porterville because we didn't know what to do. In two weeks we brought her home again.'

'You go down to the probation office . . . just fill out the forms . . . nothing is explained . . . you don't know if you're doing right or wrong. Even another parent would help . . . but they won't give out any names. So you're all alone.'

'A lot of times I just wish I had someone to talk to . . . It really helps me, but there is no one . . . I'd like to ask about Porterville. Do they ever get to come home again?' (Their child is one of those on the current waiting list.)

'People talk about you if you keep the child and they say you're sacrificing the other children. And then other people think you're awful if you put the child away, so you just don't know what to do.'

'There's nothing more hopeless than to have no place to go. We need a place for authoritative advice.'

"I knew very little of the plight of the parents of severely retarded children when I began this study; I inadvertently stumbled on to their overwhelming need for

community residential facilities, such as your committee is proposing. Perhaps, as one parent expressed, this study will indicate to you in some small way, the desire of many parents for community residential care for the retarded."

The evidence clearly indicates that many families would prefer and would use alternatives to the state hospital if they were made available.

FINANCIAL IMPLICATIONS OF THE PRESENT SYSTEM

The cost of constructing and the cost of operating state hospitals is the most expensive of all the alternatives the committee has investigated.¹³

THE COST OF CONSTRUCTION

The cost of building a state hospital facility for one patient is between \$15,000 and \$20,000.

In contrast, several excellent private agencies serving the retarded have reported to the subcommittee that their construction costs range from \$3,500 to \$7,000 per bed.¹⁴

Private agencies are able to build these facilities at lower cost than the state for several reasons: They can eliminate state administrative overhead, and because they are located in the community their "patients" are able to use community hospitals for acute illnesses, thereby eliminating the need to construct separate surgery, laboratory, and other very costly medical facilities now required in state hospitals. State hospitals are designed to meet the total needs of their patients and the resulting laundries, repair shops, surgeries, schools, etc., boost the cost of construction.

THE COST OF CARE

The average cost of caring for a retarded person in a state hospital is \$300-\$350 per month. (This figure does not reflect the cost of construction.)¹⁵

¹³ See appendix for a discussion and breakdown of hospital costs.

¹⁴ Testimony given by Dr. Dennis Marks before the Assembly Ways and Means Subcommittee on Mental Health Services at a public hearing at Sonoma Hospital, February 21, 1964, pp. 104-105.

¹⁵ See appendix, Table V, for detailed analysis of hospital operating costs prepared by Legislative Analyst.

In contrast we quote some statistics gathered in the subcommittee's survey of private agencies:

"Eight out of every 10 persons presently placed by their families in private facilities are being cared for at a cost of less than \$300 per month. The monthly rates being paid to the private institutions for the care of 1,429 children were broken down as follows:

- (a) 371 (25.9 percent) are maintained in private institutions at a cost of less than \$150 per month;
- (b) 790 (55.4 percent) are maintained at a cost of \$150 to \$300 per month;
- (c) 268 (18.7 percent) of the children are maintained at a cost in excess of \$300 per month.

Therefore, 1,161 (81.3 percent) are being maintained in private institutions at a cost of *less than \$300 per month*—the minimum cost necessary to maintain a child in a state hospital.¹⁶

The cost of care in nurseries and foster homes—even for profoundly retarded crib patients—was less than \$300 per month in over 90 percent of the facilities surveyed.¹⁷

Even though the retarded who are on the waiting list represent the more severely retarded in a community, over three-fourths of them are living at home. The cost of care very likely prevents many parents from placing their child in a private facility. However, the fact that such a large percentage are cared for at home may also indicate that with some type of assistance to the parents some of these children could continue to live at home, utilizing such services as day care centers and homemaker service, rather than being placed away from the family.¹⁸ (The cost of employing a "homemaker" 30 hours a week would cost about \$125 a month and a licensed vocational nurse about \$300 a month.)¹⁹

●

It is clear that the cost of community care is generally the same or less than the cost of state hospital care.

¹⁶ See appendix for detailed review of costs in community residential facilities.

¹⁸ Supplementary Factual Report No. 2, *op. cit.*, p. 5.

¹⁹ Information provided by State Department of Employment.

A HIDDEN STATE EXPENSE

At the present time the state provides and pays the total cost of all medical, recreational, educational, and child care services utilized by a child in the state hospital.²⁰

In contrast, retarded children living in the community are eligible for child welfare, medical, surgical, recreational and educational services provided by local public and private agencies.

Even more important than the cost savings to the state, the retarded child who is in a position to receive the same community services as all other children benefits from being assimilated into the mainstream of community life.

Most experts agree that services for the retarded should be in the community:

Stuart Knox, M.D.:

*"The medical profession feels that to be most effective, services must be continuous, close to home, and given as early as possible."*²¹

Mrs. Vivian Walter:

*"Even the most profoundly mentally handicapped (those requiring 24-hour nursing care) could be near to home in a wing of a private or county hospital."*²²

Richard Koch, M.D.:

*"By forcing parents to face state hospital placement, we predispose them toward emotional disturbances . . . we must not require hospitalization as a prerequisite for state services."*²³

California Department of Mental Hygiene:

*"The mentally retarded should receive general medical and psychiatric services from local resources as do other members of the community."*²⁴

There is general agreement, and the facts support the conclusion, that whenever possible *retarded children, who can be properly served in the community and whose parents prefer community services, should remain in the community.*

Financial and human welfare considerations all point to the need to extend state responsibility to include the provision of community-based alternatives to state hospitalization.

²⁰ Families or counties do contribute a token fee of \$20 per month.

²² Testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services on behalf of the California Council for Retarded Children at a public hearing held at Sonoma State Hospital, February 21, 1964.

²³ Testimony given before subcommittee at the Los Angeles hearing, October 2, 1964, *op. cit.*

²⁴ Department of Mental Hygiene, *A Long Range Plan for Mental Health Services in California*, March, 1962, p. D-18.

PART II: AN ALTERNATIVE SYSTEM

WE PROPOSE THAT THE STATE SHIFT ITS RESPONSIBILITY
FROM THE TIME WHEN THE CHILD ENTERS THE STATE
HOSPITAL TO THE TIME WHEN EXPERT DIAGNOSIS
ESTABLISHES THE FACT THAT SPECIAL CARE IS
NEEDED THAT THE FAMILY CANNOT PROVIDE

The result of the redefinition of state responsibility will be to expand the number of state-supported choices available to that group of children who are placed on the "waiting list" under current procedures. This group of children, about 5 percent of the retarded, has traditionally been accepted as a state responsibility. This proposed change will alter the *manner* in which the state provides help. It substitutes a flexible system for a rigid one.

The essential question to be answered in determining eligibility for state-supported services in the alternative system will be: "Is this a child whose needs and problems are such that he would normally be placed in a state hospital if no community based services are provided?" (It is further suggested that at the beginning, first priority will be given to those on the state hospital waiting list as of January 1, 1965.)

Under the provisions of the recommended arrangement, certain families would receive professional guidance and financial aid to help them in placing their children in privately operated and state-approved community residential facilities. Financial aid for visiting nurses, homemakers, and baby sitters, and day care services would also help many families to keep their children at home.

The subcommittee has received endorsement of this concept from many segments of the professional community as well as from the overwhelming majority of parents of retarded children who corresponded and testified.

The remainder of this report will discuss the specific steps necessary to develop the alternate system.

THE REGIONAL DIAGNOSTIC-COUNSELING-SERVICE CENTERS

WE PROPOSE THAT THE CALIFORNIA DEPARTMENT OF PUBLIC HEALTH BE GIVEN RESPONSIBILITY FOR ESTABLISHING STANDARDS AND FOR CONTRACTING WITH APPROPRIATE COMMUNITY BASED MEDICAL AGENCIES WHICH WOULD PROVIDE REGIONAL SERVICES, AND FOR TRANSMITTING STATE FUNDS TO THESE REGIONAL CENTERS FOR DISBURSEMENT ON BEHALF OF THOSE FAMILIES WHOSE CHILDREN ARE FOUND TO BE ELIGIBLE

In testimony before the committee, the Department of Public Health indicated its reactions to the committee proposal: ²⁵

"The Department of Public Health favors the first principle of the above proposal, namely 'that the state shift its responsibility from the time when the child enters the state hospital to the time when expert diagnosis establishes the fact that he needs special care his home cannot now provide.' This would be a major step forward, both toward curtailing unnecessary hospitalization and toward getting appropriate guidance to families and care to patients when these are urgently needed. Following this principle would also permit making the maximum, planned use of all private and public resources available for care of the mentally retarded.

"State support of regional diagnostic-counseling-service centers would provide on a statewide basis the highly skilled early diagnosis and counseling for such patients now available only on a limited basis. This type of comprehensive service has demonstrated its value as a means of meeting the need for prompt, definitive diagnosis and counseling as to proper care. It aids in minimizing the 'shopping around' which plagues so many families with a mental retardation problem.

²⁵ Testimony given by Dr. Breslow before the Assembly Ways and Means Subcommittee on Mental Health Services, Department of Public Health, at a public hearing in Santa Cruz, December 5, 1964.

"Administration of these regional centers would properly fit, as the proposal suggests, in the Crippled Children Services of the Department of Public Health. Placement here would permit taking maximum advantage of experience in developing specialized facilities for several types of handicapping conditions such as congenital heart disease, cerebral palsy and others. Developing of a high-quality service uniformly throughout the state is the pattern to be followed."

It has been estimated by public health officials that 10 such centers could provide service to the number of retarded persons needing service each year. The regional approach is the best way to, guarantee a uniform standard of service throughout the state and—as has been demonstrated by the Child Development Clinic of Los Angeles—traveling teams can effectively "reach out" to serve remote rural areas.²⁶

It is further recommended that at least two of the regional centers be based in medical schools and serve as research centers and manpower training programs for mental retardation specialists in the various disciplines.

The importance of the role of these centers in the development of the alternative system cannot be underestimated. Skillful *early* diagnosis and careful planning with the family is essential. The regional centers would provide diagnosis for *any* child suspected as being retarded.²⁷ *They would also carry responsibility for establishing the eligibility of retarded children for state-supported services and would assist families in placing these children in community facilities, state hospitals, or in caring for the child at home.*

Since publication of the committee's preliminary proposal in June 1964, several questions have been asked with regard to the organization of the proposed regional centers. While it is not possible in this report to deal with all the professional and administrative issues that have been posed, some of the major questions will be briefly discussed since the regional centers are of such critical importance in developing the alternative system.

²⁶ *For a description of the "traveling clinic" see "California Health", Vol. 19, No. 24, June 1962.*

²⁷ *The details and values of such clinical services are well established. See Public Health Programs for the Mentally Retarded in California (California Department of Public Health, March 1964). Also, The Evaluation and Treatment of the Mentally Retarded Child in Clinics, National Association for Retarded Children, 1956.*

QUESTION: *Why is the committee recommending that the centers be established under the jurisdiction of the Department of Health's Crippled Children's Services Division?*

In making this recommendation, the committee has been guided by the views of the majority of professional persons who have studied this matter.

The *California Medical Association* has indicated its concurrence; the *California State Department of Public Health* believes they are well equipped to do the job; the *American Academy of Pediatrics* has supported this proposal of the committee, as has the *California Council for Retarded Children* and the *California Study Commission on Mental Retardation*. The *California Department of Mental Hygiene* also recommended that this service be developed under Public Health auspices in their *Long-range Plan for Mental Health Services in California* (March 1962) and reaffirmed this position in 1963 in their special report to the Legislature, "*Legislation to Implement a Long-range Plan.*"

All these authorities indicate that the retarded should be integrated into the general health services of the community and that the Department of Public Health is ideally suited to accomplish this objective in the most effective and economical way. Some authorities have also cautioned against setting up a separate stream of psychiatrically oriented health services for these children, believing that to do so would further isolate the retarded from general health services and perpetuate a long-standing confusion between mental illness and mental retardation.

QUESTION: *Why does the committee use the term "centers"? Doesn't this term imply that the Department of Health would create new and separate clinics that may duplicate other existing community medical services?*

The committee uses the term "center" to express the concept of a *unified and coordinated* service in each region of the state. The Department of Public Health would not construct or operate any new clinics but would contract with existing agencies to perform the diagnostic counseling and other services required. These services may be coordinated under one roof or may be conducted through contractual arrangement with a federation of agencies—depending on the resources available in each region. Regardless of the arrangement employed, it would be the responsibility of the Department of Health to clearly determine the functions of each participating agency to avoid duplication and to assure that families will be served swiftly and without red tape.

QUESTION: *Are the regional centers just for the retarded?*

"Yes" and "no."

It must be kept in mind that the committee is primarily concerned in this proposal with the development of an alternate system for that 5 percent of the retarded who have been and will continue to be a state responsibility. Therefore state funds would be appropriated to contract for services which would enable the state to expand the types of services offered to this group of retarded children. In order to accomplish this objective, it is essential that the centers be staffed with people whose major activity would be devoted to this problem.

The difficult and complex problems of diagnosis, counseling, and servicing the retarded require specialized knowledge and interest on the part of professionals.²⁸

This does not mean that the regional centers cannot now or in the future be part of general purpose clinics which provide similar services for other handicapped children. But if they are integrated with general purpose clinics they must designate certain persons whose primary responsibility will be to execute the retardation program as defined by the state's Department of Public Health.

QUESTION: *The idea of "diagnostic counseling centers is not new. But the committee talks about "diagnostic counseling service" centers. What is meant by "service," and how would this work?*

Diagnostic and counseling centers for the mentally retarded are becoming more available throughout the nation, but a common weakness in these programs is that when, after diagnosis, it is determined that a child needs specialized care his family cannot afford, the state hospital remains the only practical referral. (There is only limited value in providing a better diagnosis if the end result is still the same.)

The committee views the regional centers as the appropriate agency to supervise the community treatment program prepared for the child as a result of the diagnosis. This view is consistent with the Department of Health's concept of the "one-door" approach, as opposed to a fragmented approach where families

²⁸ Many doctors are too quick to classify children as mentally retarded. In two years 800 children, supposedly backward, were sent for observation to the University of Oklahoma Child Study Center. After thorough testing, 373 of these 800 were found to be normal or near normal, and 5.4 percent actually checked out as superior on intelligence tests. Warns Dr. Harris D. Riley, Jr., professor of pediatrics: "It is imperative not to use lightly the diagnosis of mental retardation, since few misdiagnoses can be so catastrophic."

are referred to a variety of agencies, each handling a small piece of the problem. The fragmented approach is more expensive, confusing, and is impossible to administer effectively.

For these reasons, the committee's proposal includes the provision of funds to enable the regional center to employ enough staff to diagnose, to counsel, *and to supervise the treatment and child care services required by children who require specialized care. About 50 percent of the personnel budget allocated for each center would be used to carry out this activity.*

Under provisions of this system, the State Department of Public Health would provide funds to each center to be used by the service team to assist families in purchasing homemaker, foster care, day care, residential services, etc., as alternatives to state hospital placement. The service team would help the family select the proper service, would periodically review the child's progress, would assist the family in any required change of services, would help the family make maximum use of the services and funds available, and would continue to serve as case management consultants to the family as long as state funds are being used to help purchase services for the child.

In this manner diagnosis, counseling, treatment and professional supervision would be integrated into a single system which eliminates duplication. This pattern has been well established in the Crippled Children's Services Program. The only difference in this instance would be the use of a few regional centers rather than 58 county health departments. (The county health department would still serve as a major community resource if the regional center finds the child needs services available through that agency.)

This new method of organizing services for the retarded would be a significant departure from our present system. The committee is proposing the establishment of a totally "new track" which must be very carefully tested and evaluated during the first year or two. For this reason, the committee suggests that although more centers may be ultimately needed, two should be established at the present time—one in southern and another in northern California on a pilot basis. The new system should be very carefully evaluated for the purpose of providing the Legislature evidence of the value of this alternative to state hospitalization.

Personnel for the two pilot centers would cost roughly \$300,000. About half the funds would be needed to pay for diagnostic-counseling work with 600-700 new cases; the balance of the funds would provide salaries for service staff to assist about 500 families—whose children would otherwise go to state hospitals—in finding and supervising home or community residential care. To staff the regional centers with personnel to

place children in community facilities implies providing funds to assist families in making such placements.

The yearly cost of purchasing home or community care for about 500 children is estimated at \$1,200,000. (In contrast, the cost in the state hospital would be about \$2,000,000—excluding the cost of construction.)

Since there are now at least 1,000 retarded children on the state hospital waiting lists whose families would prefer community care, and since the new system may take six to eight months to become fully operative, the committee further recommends that the Department of Mental Hygiene be allocated additional funds up to \$500,000 to expand its "private placement" program as an expedient measure to create space in the hospitals for urgent cases on the waiting list.

Since 1961 the department has been allocated \$250,000 each year to contract for private care for 115 hospitalized patients. The authorization for this program is provided in the State Welfare and Institutions Code, Section 6726.6:

"Any patient may be placed for leave of absence for care in a licensed hospital or other suitable licensed facility. The Department may pay for such care at a rate not exceeding the average cost of care of patients in the state hospitals as determined by the Director. Such payments shall be made from funds available to the Department for that purpose or for the support of patients in the state hospitals."

The following dialogue between Chairman Waldie and Anderson Pollard took place at the committee's public hearing on October 2, 1964, and documents the feasibility of expanding the department's private placement program:

MR. ANDERSON POLLARD: I'm Anderson Pollard. I'm the supervising program consultant for the Bureau of Private Institutions of the Department of Mental Hygiene. We receive all complaints in our department that affect our licensed facilities, and to my recollection we have received about two complaints from relatives who were dissatisfied with the placement of patients from a state hospital into private facilities.

CHAIRMAN WALDIE: Out of how many placements?

MR. POLLARD: I don't know how many placements there have been.

CHAIRMAN WALDIE: Have there been a hundred?

MR. POLLARD: I believe there have been over 100, and out of this we feel that two complaints is pretty minimum.

CHAIRMAN WALDIE: Do you have anything to do with the licensing of the private facilities we have been using during the past four years? The program on which we are spending a quarter of a million dollars a year for private care of the retarded?

MR. POLLARD: Yes, we do. We license all the facilities for the mentally retarded.

CHAIRMAN WALDIE: What experience have you had with that?

MR. POLLARD: We've had a very favorable experience. When the program first started we found few facilities that wanted to participate, but now we have a surplus of facilities. We have a large number which we have certified. By certified I mean that certain standards, certain criteria above the basic minimum licensing standards were asked for these particular facilities. We have a large list with a great many vacancies waiting, just anticipating that this program will expand.

CHAIRMAN WALDIE: Have you had complaints from parents of children who have been in those institutions?

MR. POLLARD: When the program first started in 1962, the program was new, we ran into problems, we received a few complaints, not from parents but from the state hospitals, social workers, who were involved in supervising these children. Since that time I feel that the program has been very successful. We have received compliments on it, and as I said, we are anticipating a time when this can be expanded.

CHAIRMAN WALDIE: How many children have been placed?

MR. POLLARD: Not even 120.

CHAIRMAN WALDIE: And these were 120 children that would have been in a state hospital? These are children that were taken from the state hospital and placed in private institutions?

MR. POLLARD: Placed directly in private facilities, yes.

The suggestion to expand the department's private placement program is not an alternative to creating a system to bypass the state's hospitals. But by relocating some patients, immediate relief can be provided for urgent cases now on the hospital waiting lists.

In summary, during the first full year of operation, the committee's proposals would create a new system for diagnosing and counseling 600-700 new cases and could provide for community

care of 700-800 persons who would otherwise require state hospitalization. The total yearly cost would approximate \$2,000,000. (The yearly cost of care in state hospitals for 700 patients is \$2,400,000—excluding construction costs.)

If the committee's proposals regarding improvements in the standards and licensing system are also approved, an additional \$30,000 to \$50,000 may be required.

STANDARDS—FEES—LICENSING—INSPECTION

Since the alternative system would expand the use of community-based facilities by the use of state funds, it is absolutely essential that these facilities be of good quality.

The subcommittee received considerable testimony in support of new and more effective machinery to assure a better quality of service in community facilities.

Some existing community facilities are excellent and others are poor. There is no uniformity at present. The regional centers should be able to assist families to use services which will meet only the highest standards in much the same manner as the Crippled Children Program is now able to refer families to an approved physician for medical services.

Increased use of community facilities would pose problems in setting standards, rates, licensing and inspecting. The present system in California is not good. There is general agreement that we must considerably improve quality control if we are to use public funds to support children in private facilities.

On December 5 the subcommittee heard testimony from the San Francisco Coordinating Council on Mental Retardation. (This council represents 40 public and private agencies concerned with planning for the retarded.) They stated:

"The coordinating council has firmly endorsed centralized licensing and standard-setting for private facilities.

"The multidisciplinary standard-setting, licensing, and inspection machinery to establish standards and insure a high quality of service we believe to be essential. It is also essential that this machinery be separated from any one functional agency since standards and procedures are currently totally confused through the number of licensing organizations, their particular jurisdictional lines and emphases. The present procedure increases rather than decreases poor quality of service.

"Therefore, the council urgently recommends enactment of the organization proposal for a multidisciplinary standard-setting team independent of any existing functional agency."

At this same hearing the California Council for Retarded Children, an organization representing thousands of families with retarded children in California, made the following comments:

*"In our view the most urgent need is the establishment of a multidisciplinary standard-setting, licensing, and inspection body."*²⁹

Many witnesses have indicated that confusing licensing procedures, and the fact that many different agencies have different requirements for licensing, complicates and hampers the development of additional privately operated facilities.

*"There is an extremely high mortality rate among original inquiries offering to supply foster home care. Only 1 out of 10 who apply are licensed to take children. One of the policies that limits the kind of home acceptable for licensing is the 'principle of only accepting facilities with first floor bedrooms for patients.'*³⁰

*"The problems of finding foster homes is complicated not only by a lack of funds for persons under 18, but also by rigid licensing regulations. 'For example, certain homes required that the children all be boys or all girls, or that they be ambulatory or nonambulatory, or that they fit into cribs of certain sizes.'*³¹

*"You now have in any community the Youth Authority, the Veterans Administration (which pays \$175, and therefore beats us all in terms of money available), the child welfare programs of the various county welfare departments, the juvenile courts, and the Department of Mental Hygiene, and the Department of Social Welfare all out hunting homes. One of the major needs for this state is to get into some kind of more coordinated approach."*³²

At the present time, in California, different agencies (and even different bureaus within the same agency), set different standards, pay different rates, and have different licensing and inspection procedures. It is a bureaucratic tangle that defies all logic.

Hopefully, the Legislature will eventually solve the entire problem, but until a completely revised system has been created,

³⁰ Testimony given by William Wilsnack (D.M.H.), before the Assembly Ways and Means Subcommittee on Mental Health Services at the Sacramento public hearing, March 26, 1964, pp. 21-22.

³¹ Testimony given by Mrs. N. England, Sacramento Community Welfare Council, before the Assembly Ways and Means Subcommittee on Mental Health Services at the Sacramento public hearing, March 26, 1964, pp. 40-41.

³² Testimony given by Mrs. Elizabeth MacLatchie, Department of Social Welfare, before the Assembly Ways and Means Subcommittee on Mental Health Services at the Sacramento public hearing, March 26, 1964, pp. 35-36.

it is essential to make several immediate changes if the alternative system for the retarded is to develop properly.

The committee recommends that:

- a A Director of Mentally Retarded Care Standards position should be established under the State Health and Welfare Administrator.
- b It is recommended that the director's office be permitted to contract for consultation from experts in education, child care, pediatrics, nursing care, institutional management, etc. (In this way it will be possible to secure expert advice from the nation's leading authorities.) Standards should be established that insure that the total needs of various categories of retarded children will be met.
- c It is recommended that an advisory committee whose membership shall include parents of the retarded and directors of private agencies rendering services for the retarded be established to review and to advise the director in establishing standards for various kinds of care.
- d It is recommended that the Director of Mentally Retarded Care Standards have the additional responsibility of fixing rates which will enable private agencies to meet the recommended standards, including the cost of amortizing their capital investments. (*Rates and standards must be viewed as inseparable and the state should be prepared to pay for high-quality services.*)
- e It is further recommended that the proposed regional centers not refer families to, or use public funds to help pay for, services in any community facility which does not meet the standards established by the coordinator's office—*regardless of any other licenses the facility may hold*. (This means that the regional centers would only "do business" with individuals and agencies whose services are of guaranteed quality and who agree contractually to adhere to the standards required for participation in the program.)
- f *The staff of the regional centers should be required to periodically visit each child the center has helped place in a community facility. The purpose of this visit is twofold—to evaluate the child's progress and condition and to review the agencies' compliance with standards.*
- g It is also recommended that parents of children placed through the regional centers immediately report to the

regional center any unfavorable conditions they may find when visiting their children. If the regional center has any evidence that an approved facility is negligent in complying with their contractual agreement, and so recommends, state support funds should immediately be withdrawn for all children in that facility.

It may be argued that insistence on high standards may inhibit the use of many private community facilities and retard the rapid development of the alternative system. This may be true, but in the committee's judgment it is essential that the new system start off properly. Experience in other programs has shown that it is very difficult to correct inadequate programs once they have been established and have gained momentum.³³ In beginning the alternative system for the retarded it is possible to avoid past mistakes.

It may also be argued that the proposed new standards and fee schedules will not solve the existing duplication of state activity in this field but will only increase the multiplicity of agencies involved. It is quite true that the committee's proposal will not solve some of the long-standing anachronisms in the organization of California's licensing programs. But to wait for a resolution of that entire problem would mean authorizing the use of substandard facilities in this new program—a risk the committee is not willing to consider.

Hopefully, the proposed new system of standards will have the effect of forcing standards in other programs to rise. Quite possibly, in the future, standards for all mental retardation programs, including our state hospitals, will be governed by the same machinery.³⁴

³³ *Our recent experience in the field of nursing home care for the aged provides many lessons. (See final report, Assembly Ways and Means Subcommittee on Institutions, 1965.)*

³⁴ "It is worthy of note that by long established tradition state institutions are exempt from the requirements of law pertaining to child care. The state institutions must obey the law concerning licensing of motor cars or gasoline pumps or dogs, but what the state demands in essential standards from private child care institutions it does not demand from its own state facilities serving children. The question here is not on the technical aspects of applying for and securing a license but rather on the essence of the licensing process . . . the protection of children. Thus a mode of accrediting state residential facilities for the mentally retarded will create a means wherein the state meets its ethical responsibilities." *Accreditation of Residential Care Facilities for the Mentally Retarded*, Gunnar Dybwad, J.D., Executive Director, National Association for Retarded Children, presented at American Association on Mental Deficiency, Portland, Oregon, May 1963.

GUARDIANSHIP IN THE NEW SYSTEM

As the California Study Commission on Mental Retardation points out, "There is no more poignant or challenging question than the cry of the parent: 'What will happen to my retarded child when I am no longer able to care for him?'"³⁵ The state hospital—because of its permanency—has provided an answer. The subcommittee has received considerable testimony indicating that although many families would like an expanded use of home care and private community care, they are anxious about the long-term stability of these alternative arrangements:

*"We must provide a legal guarantee for continuity of care if we establish the private residential plan."*³⁶

*"There is a deep concern that we will detract from the stability and inherent protection provided by the state in a hospital with continuity of care and protection for these children after the parent has gone."*³⁷

*"The hospital is seen by the parent as a stable and permanent institution. The foster home, on the other hand, is a private enterprise that may go out of business for a variety of reasons. Parents of children in foster homes must always be concerned with the possibility of its closing necessitating the relocation of the child."*³⁸

THE COMMITTEE RECOMMENDS THAT GUARDIANSHIP BE AVAILABLE AS PART OF THE NEW SYSTEM

In order to provide families with full assurance of continuity of care for their retarded children, it is essential that whenever the state assumes responsibility, either in a state hospital or in a community facility, that, upon parental request, the state will agree to supervise the care of that child after the parents are no longer able to participate.

The committee is recommending a shift in the time and form of state responsibility. But the content of state responsibility—

³⁵ Report of the California Study Commission on Mental Retardation, *The Undeveloped Resource* (State of California: January 1965), p. 77.

³⁶ Testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services by Mrs. Vivian Walter at the Sonoma public hearing, February 21, 1964.

³⁷ Testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services by Mrs. Bess Hearne Toretsky at the Los Angeles public hearing, October 2, 1964.

³⁸ Letter to committee from Ronald L. Hunt, December 21, 1964.

our collective permanent concern for the well-being of the dependent individual—remains.

Notwithstanding any other guardianship services now available or any which may be created in the future, the committee recommends that families be permitted to transfer personal guardianship of their children to the Director of the California State Department of Public Health after their child has been screened by a regional center. The Director of the Public Health Department will carry out his responsibility for the proper placement of the retarded person through the regional center.

Under provisions of this system, the regional center, which has diagnosed the child and worked with the parents during their lifetime, will continue to provide supervision regarding the appropriate placement of the child after the death of the family.

It is reasonable that the child should not have to be moved to the state hospital from a community facility where he is doing nicely just because his parents have died.

It is also logical that the regional center, where the child is known and which is staffed by mental retardation experts, should continue to supervise his placement rather than transfer responsibility for his future care to some other agency.

The fact that a child may be moved from one foster home to another would have the same significance in the suggested program as if a child in a state hospital was moved from one hospital ward to another. The continuity of knowledgeable concern and supervision would be provided by the regional center and the stability of the State Department of Public Health would provide the same assurance of lifetime care as is now available through the Department of Mental Hygiene's state hospitals.

Furthermore, if after the parents' death, the regional center should determine that the retarded person will benefit from being moved from a community facility to a state hospital, such a transfer can be effected. (The state hospital will still remain one of the choices, but the decision to place in the state hospital will be made because the retardate *needs* state hospital services not because it is the only stable agency providing long-term care.)

* * * * *

The foregoing proposals do not attempt to answer all the many questions posed to the subcommittee during the past year. There is the issue of parental participation in the cost of care; the issue of relating the new system to older existing programs; the matter of coordinating other community services—such as education, recreation, etc. The subcommittee has attempted to develop a simple, direct answer to a chronic state problem. The proposed new system should be studied carefully during its first two years.

The system is flexible enough to be integrated into any comprehensive program for handicapped persons which may develop in the future. The proposed system does provide alternatives to state hospital care for those who seek alternatives. The subcommittee is convinced the proposal is professionally sound and economically advantageous.

STATE HOSPITAL CONSTRUCTION COSTS

The expense of building state hospitals is illustrated in Tables I and II. The estimates for these projections are based on information developed by the Department of Mental Hygiene and the Department of Finance and reported in Hospital Bed Needs for Mentally Retarded Patients in California—1963–1968.¹

The department's estimates for bed needs are based on a formula of 80 state hospital beds for the retarded per 100,000 state population. This estimate was developed by adding the number of persons in the state hospitals and the number of persons on the waiting list and comparing this sum to the total state population. The result is a projection of the number of beds per 100,000 population that will be needed.

The estimate of 80 beds per 100,000 population, however, must be considered as a minimum estimate of the facilities needed because the critical factor in preparing the projection (the present hospitalized population) is limited by the number of services now available. (For example, if there were more state hospital beds available, the number of persons in the state hospital would be higher, and an estimate of future beds needed based on the present hospital population would yield a higher figure.)

Also, the characteristics of the waiting list are affected by the services that are available. Since there are fewer beds available than there are persons who need some form of specialized care, an administrative decision is made as to who goes on the waiting list and who does not. Those who are designated as being in most urgent need of specialized care are placed on the waiting list, while those whose needs are relatively less urgent are not placed on the waiting list. They are therefore not counted in the estimates of beds needed per 100,000 population.

Table I shows the state hospital population increase from 1955 to the present, and projects the population figures from the present through 1968 on the basis of the 80 beds per 100,000 population estimate. It also shows the steady rise in the support expenditures for the hospitals, and projects the minimum support budget which would be required to operate the number of beds estimated to be needed by 1968.² This table indicates that by 1968 the support budget would have to be raised from the present \$44.7 million to at least \$55.8 million. The state would also have to increase the number of state hospital beds from the present 13,000 that are now available to 16,170.

¹ *Biostatistics Bulletin No. 32, Department of Mental Hygiene, May 1963.*

² *Statistics provided by the California Legislative Analyst's office.*

Table II shows the capital outlay California has expended since 1955 for the purpose of building hospital beds for the retarded. The projected construction cost estimates are based on the Department of Mental Hygiene figures which report that the cost of construction of a 500-bed hospital would run between \$6,000 to \$20,000 per bed, with an average cost of \$15,000 per bed.

* (An additional complication results from the fact that over $\frac{1}{3}$ of the existing 13,000 state hospital facilities are considered by the department to be substandard and in need of replacement.)

A REDEFINITION OF THE NEEDS OF THE RETARDED POPULATION

The results of a study done by the Department of Mental Hygiene and reported in *A Survey of Patient Needs for Residential Care and Assistance*³ indicates the potential for the use of facilities other than the state hospitals for caring for the retarded. This survey included all of the retarded who were in the hospitals and on the waiting list during the first few months of 1963. In doing this study, the Department of Mental Hygiene tried to determine the type of residential care most appropriate for each patient. The determination of the most suitable type of residential care facility was made according to the need of the patient, regardless of whether or not such a facility existed in the community at the time of the survey.

There were four categories of residential care utilized in the study:

- 1 HOSPITAL CARE—the patient needs placement in a hospital for intensive treatment for medical, surgical, or psychiatric services.
- 2 24-HOUR NURSING HOME CARE—the patient needs placement in a nursing care environment with occasional medical, surgical, or psychiatric assistance.
- 3 FOSTER HOME CARE—the patient's needs could be most adequately met in a home other than the patient's own home or that of a close relative.
- 4 HOME CARE—the patient could benefit most by placement in the home of parents, siblings, or other close relatives.

OTHER—a category used only where previously defined categories did not apply.

Each one of the patients in the state hospitals and on the "waiting list" to a hospital was placed in one of the above categories. The results of the survey are presented in Table III.

³ *Biostatistics Section Bulletin No. 34, Department of Mental Hygiene, Research Division, August 1963.*

TABLE III

Type of residential care most appropriate	Population	Percent
1. Hospital care	5,129	36.7
2. 24-hour nursing care	3,837	27.5
3. Foster home care	3,882	27.8
4. Home care	1,114	7.9
5. Other	16	0.1
TOTALS	13,978	100.0

The most significant fact brought to light in this study is that less than 40 percent of those who were in the state hospitals or on the "waiting list" were placed in the category of needing hospital care. Over 60 percent of the patients studied could have their residential care needs more adequately met in a setting other than a hospital. The importance of these findings is most significant in terms of the change in emphasis which must be made in future state planning. Not only is the hospital bed building approach an expensive way for the state to provide services for the retarded, but it is a method which does not fulfill residential needs for the patient in the most satisfactory way in over half of the cases.

Since the publication of Biostatistics Bulletin No. 34, the Department of Mental Hygiene has redefined the original four categories of residential care needs and grouped the patients into two broader and more general categories. Table IV shows the manner in which the reclassification was accomplished and indicates the two broad categories from which the department now projects future bed needs.⁴

⁴ The most recent projection of hospital bed needs published by the Department of Mental Hygiene based on the regrouping of the categories found in Biostatistics No. 34 may be found in the Department of Mental Hygiene's Tentative Proposal for a Five-year Program, October 5, 1964.

TABLE IV

**BIOSTATISTICS NO. 34
CATEGORIES (1963)**

Type of residential care	Population
Need hospital care	5,129
Need 24-hour nursing care	3,837
Need foster home care	3,882
Need home care	1,114

REDEFINED CATEGORIES (1964)

Type of residential care	Population
Need hospital care	8,966
Need residential care (other than hospital care)	4,996

TOTAL

13,962

The redefined "need hospital care" category shown in Table IV is a combination of the "need hospital care" and "need nursing care" categories used in Biostatistics Bulletin No. 34. The redefined "need residential care" category is a combination of the "need foster home care" and "need home care categories" of Biostatistics No. 34. These *redefined* categories modify the impact of the findings of Biostatistics No. 34, for upon redefinition the department now believes 64 percent of the patients in state hospitals and on the waiting lists need hospital care as compared to the 37 percent listed as needing hospital care a year ago.

In the Department of Mental Hygiene's *Tentative Proposal for a Five-year Plan*, the department projects state hospital bed needs for the retarded in California on the basis of the figures in the redefined categories. The accuracy of these projections rest on the assumption that all who are in the redefined "need hospital care" category are, in fact, in need of hospital care. There is some evidence to indicate, however, that many of those who were in the original "need 24-hour nursing care" category and are now redefined as needing hospital care, could actually be cared for very adequately in community facilities. (The department has conducted what they believe to be a successful program of placing persons who were categorized as "needing nursing care,"

into family care nursing homes where they are "making a very satisfactory adjustment.")^{5, 6}

The classification of patients according to their residential needs as is done in Biostatistics No. 34 and in the department's *Tentative Proposal* represents a more sophisticated approach to planning services for the retarded. Even though the exact number of persons actually needing hospital care rather than other types of residential care could not be precisely estimated in either of the reports, both reports point out the need for the development of residential services which can serve as alternatives to state hospitalization.

⁵ A letter to the subcommittee from Dr. William Beach of the Department of Mental Hygiene on October 9, 1964, stated that placements from the state hospitals into private nursing homes have resulted in the majority of the patients being correctly placed: "The key to successful placement lay in the careful selection and screening of facilities and patients. A period of intensive followup supervision immediately after placement was also indicated to facilitate adjustment. When this has been done the adjustment of those placed appeared to be adequate, with the facilities currently caring for patients rendering satisfactory to excellent care."

⁶ There is one additional problem in the projections for bed needs in the department's *Tentative Proposal*. In addition to the patients in the hospitals and on the waiting list who are included in the redefined "need hospital care" category, the department also includes in their figures some 650 retarded who are now residing in private nursing homes. A survey of private facilities conducted by the subcommittee found that 51.3 percent of those in private nursing homes were also on the waiting list. As a result, over 300 retardates are being counted twice in developing projections for state hospital bed needs.

Recapitulation

Personal services (1 through 13)	\$226.42	\$248.68
Operating expenses (14)	44.18	44.18
Miscellaneous (15 through 21)	40.55	40.91
Grand total	\$311.15	\$333.77
	\$384.93 if fully staffed at classified level	\$389.36 if fully staffed at classified level
Estimated 1963-64 monthly hospital per capita cost— Sonoma (all wards)	\$328.00	

¹ Cost figures for 1 through 8 are based on the actual gross payroll checks dated May 1, 1964, for the hospital employees assigned to the wards surveyed. The remaining cost figures are based on data appearing in the Governor's 1964-65 Budget and/or information furnished by the Department of Mental Hygiene.

In addition to the above costs, each of the three wards makes use of acute hospital services when the need arises. These services are, of course, more expensive than ward care. The following indicates the extent to which acute hospital care was required for the past six months.

Acute Hospital Care (Six-month Totals)		
Ward	Number of patients	Total patient-days
JOHNSON	10	325
CORCORAN	13	275

COST OF COMMUNITY RESIDENTIAL SERVICES

The costs of community services that can be used as alternatives to state hospitalization are less easily estimated than the costs of state hospitalization.

On the basis of the studies and hearings conducted by the subcommittee, however, some rough estimates regarding the costs of some alternative services can be made.

The results of a survey of private residential facilities done by the subcommittee are presented in Table V. This study indicated that about 8 out of 10 retarded who were in these facilities at the time of the survey were being cared for at less than \$300 a month. It can be seen, however, that there are differences in the costs of private care, depending on the type of facility being utilized.

In addition to these studies, testimony given before the subcommittee at its hearings gives further indication of some of the costs of community care. The Department of Mental Hygiene now spends about \$165 per month for the foster home care of the retarded who are included in their "aftercare" program. (This includes administrative overhead.) If a retarded person is eligible for welfare support, however, the fees paid by some counties for foster care may exceed this amount.¹¹ (Fees in excess of \$175 per month paid by governmental agencies for the purpose of placing the retarded in foster care facilities appear to be the exception, and not the rule.)

Under the present system any discussion of the true cost involved in subsidizing the placement of persons in community facilities is open to question. The system, as it now exists, requires that any parents wanting to place their child in a residential facility other than a state hospital must pay the fees.¹² The rate of utilization of private facilities is high only among the higher income families (see Table VII).¹³ The rates charged by private

¹¹ At a public hearing in Santa Cruz, December 5, 1964, in testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services, it was pointed out the Santa Clara County Welfare Department has paid over \$300 per month for support of children in private residential schools.

¹² The only exceptions are children whose parents are on welfare and children placed out of the state hospitals on aftercare basis, in which case the state pays for the placement.

¹³ Supplementary Factual Report No. 2 indicates that rate of utilization of private facilities increases significantly in families with a yearly family income in excess of \$10,000. (See Table VII.)

facilities tend to reflect the amount which these agencies know parents can afford, rather than a fee which is truly equitable. As one witness stated, "Due to a lack of funds on the part of a majority of parents, most private facilities are forced to keep their fees at a bare minimum. Therefore, we should not set our fees according to costs as they now exist."¹⁴

¹⁴ Testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services by Mrs. Mary Jeffrey at a public hearing in Los Angeles, October 2, 1964.

TABLE VI
 COST OF CARE PER MONTH
 IN PRIVATE FACILITIES

TABLE VII

RATE OF UTILIZATION OF PRIVATE FACILITIES BY INCOME GROUPS

YEARLY FAMILY INCOME

The foregoing indicates that although there is a great deal of evidence supporting the notion that community care is less costly than care in a state hospital, caution must be exercised in trying to state the case too strongly. If the state is to adopt a system which subsidizes placement in community facilities, then fees which reflect the true cost of good service will have to be established. The result may be an increase in the fees as we now know them.

There is still evidence which indicates that payments would not exceed the \$300 per month cost of state hospitalization for most cases.¹⁵ Even if the support costs for community care did exceed \$300 per month in some cases, the state would still save money by not having to build as many additional hospital beds.

IT SHOULD BE MENTIONED THAT COMMUNITY CARE IS NOT SYNONYMOUS WITH PRIVATE RESIDENTIAL CARE. COMMUNITY CARE COULD INCLUDE SUPPORT FOR CHILDREN PLACED IN PUBLIC AGENCY FACILITIES SUCH AS PUBLIC SCHOOL DAY CARE CENTERS AND NURSERY SCHOOLS, PAYMENT FOR HOME CARE AIDS SUCH AS HOME MAKERS, PAYMENT FOR ANY OTHER APPROVED SERVICES NEEDED BY THE CHILD AS AN ALTERNATIVE TO THE STATE HOSPITAL.

¹⁵ Mr. Jewell Trumbo in testimony given before the Assembly Ways and Means Subcommittee on Mental Health Services at a public hearing, Los Angeles, California, October 2, 1964, says, "I operate a home for retarded children privately. We charge approximately \$200 a month, with which we have been giving the kids something that we think is better than they can receive at the state hospitals . . . and we are not going in the hole, we're not going broke, and we can certainly build a lot cheaper than \$15,000 a bed."

TABLE VIII

PERCENT OF POPULATION IN PRIVATE INSTITUTIONS WHO TRANSFER TO STATE HOSPITALS

For all private institutions combined, 49.5% eventually transfer to state hospitals

ENDORSEMENTS

Since the publication of the "Preliminary Proposal" in June, the committee has received expressions of support from hundreds of families of retarded children as well as from numerous knowledgeable professional persons.

The following organizations have also expressed their endorsement:

AMERICAN ACADEMY OF PEDIATRICS
CALIFORNIA COUNCIL FOR RETARDED CHILDREN
CALIFORNIA MEDICAL ASSOCIATION
CALIFORNIA ASSOCIATION OF NURSING HOMES
CALIFORNIA NURSES ASSOCIATION
SAN FRANCISCO COORDINATING COUNCIL
FOR MENTAL RETARDATION

The following letters are typical of the majority of responses the committee has received.

THE WHITE HOUSE

WASHINGTON

December 24, 1964

Dear Mr. Waldie:

I want to let you know that I have received and carefully reviewed the materials from your special subcommittee relating to mental retardation.

I think that they are the finest materials of the kind that I have ever seen. They show a great deal of careful thought.

We are in the process of analyzing the waiting list group, and I will forward to you some more complete comments on this in the very near future.

Sincerely yours,

EDWARD H. FORGOTSON, M.D.
Deputy Special Assistant
to the President
for Mental Retardation

Honorable Jerome R. Waldie
Assembly California Legislature
State Capitol
Sacramento, California 95814

November 10, 1964

Assemblyman Jerome Waldie
The Capitol
Sacramento, California

Dear Mr. Waldie:

I have noted in communication from the National Association of State Mental Health Program Directors (Commissioners of Mental Health) that you are advocating out of hospital aid for the retarded.

I don't know whether you have seen the remarks that were made but these certainly are a credit to you and I want to congratulate you on taking this stand. You may recall that we discussed various matters related to this particular effort on your part and I am delighted to know that you are personally backing such an effort.

I would like at this time to reiterate my previous thanks to you for your strong support of good mental health programming in the state of California.

With every good wish,

Sincerely yours,

DANIEL BLAIN, M.D.
President
American Psychiatric Association

September 17, 1964

Mr. Arthur Bolton, Consultant
Subcommittee on Mental Health
State Capitol, Room 2140
Sacramento, California

Dear Mr. Bolton,

Thank you for your letter of August 26th together with the preliminary proposals suggesting significant reforms in the State programs for the mentally retarded child.

The American Academy of Pediatrics would wholeheartedly support these proposals and believe this would be a significant improvement for the welfare of the mentally retarded child and his family. I have requested Dr. Jack W. Bills, Chairman of the Committee on Mental Retardation, Section II of District X of the Academy, to testify at the public hearing to be held October 2, 1964, in Los Angeles. Dr. Bills' address is 14914 Sherman Way, Van Nuys, California. He would prefer to testify at the morning session.

The American Academy of Pediatrics is vitally interested in the welfare of children and appreciates the opportunity to give our endorsement to these proposals.

Sincerely yours,

RUSSELL W. MAPES, M.D.
Chairman, District X
American Academy of Pediatrics

RESOLUTIONS

Subcommittee on Mental Health Services

RESOLVED that the California Council for Retarded Children endorses the preliminary proposal of the Subcommittee on Mental Health Services, which provides a modern concept for utilizing untapped community resources for California's mentally retarded and serves as a means to effectively eliminate the waiting list for admission to State hospitals through ten regional diagnostic-counseling centers throughout the State; and

BE IT FURTHER RESOLVED that appreciation for the creative and bold approach in the preliminary proposal be and is hereby expressed to the Subcommittee on Mental Health Services.

Study Commission on Mental Retardation

RESOLVED that the California Council for Retarded Children does hereby express its appreciation for the diligence in preparation, scope of effort, and reflected sincerity of the Study Commission on Mental Retardation for its tentative recommendations for services to the mentally retarded in California; and

BE IT FURTHER RESOLVED that the California Council for Retarded Children does hereby approve and endorse the philosophy contained therein.

California State Hospitals

RESOLVED that any addition to or new construction of State hospital facilities for the mentally retarded be held in abeyance until alternative programs may be introduced and developed.

* * * * *

The above resolutions were unanimously supported by the CCRC Board of Directors at a meeting held in Sacramento, California on September 26, 1964

ASSEMBLY BILL

No. 690

Introduced by Assemblymen Waldie, Greene, and Petris
(Coauthor: Senator McAteer)

February 1, 1965

REFERRED TO COMMITTEE ON PUBLIC HEALTH

An act to add Article 7.6 (commencing with Section 416.3) to Chapter 2 of Part 1 of Division 1 of the Health and Safety Code, relating to the mentally retarded.

The people of the State of California do enact as follows:

1 SECTION 1. Article 7.6 (commencing with Section 416.3) is
2 added to Chapter 2 of Part 1 of Division 1 of the Health and
3 Safety Code, to read:

4
5 Article 7.6. Office of Standards of Care
6 for the Mentally Retarded
7

8 416.3. There is in the Health and Welfare Agency an office
9 which shall be known as the Office of Standards of Care for
10 the Mentally Retarded. The office shall be administered by the
11 Director of Standards. The director shall be appointed by and
12 shall serve at the pleasure of the Governor. He shall receive
13 an annual salary as provided in Section _____ of the Gov-
14 ernment Code.

15 416.4. The Director of Standards shall adopt reasonable
16 rules and regulations prescribing standards regarding physical
17 welfare, health, education, safety, and sanitation which shall

LEGISLATIVE COUNSEL'S DIGEST

AB 690, as introduced, Waldie (Pub.H.). Mentally retarded.

Adds Art. 7.6, Ch. 2, Pt. 1, Div. 1, H. & S.C.

Establishes Office of Standards of Care for the Mentally Retarded in Health and Welfare Agency, to be administered by a Director of Standards appointed by the Governor.

Requires the director to adopt standards regarding physical welfare, health, education, safety, and sanitation, which must be met by public or private facilities caring for mentally retarded persons, as a condition to the receipt of state funds.

Requires director to consult with authorities in various professional fields and with advisory committee provided for by the act.

Requires director to establish rates of state payment for care of mentally retarded persons in facilities.

(R) L-1891 5M

1 be satisfied and maintained as a condition to the receipt of
2 state-funds by any public or private facility in which mentally
3 retarded persons are placed by a regional center.

4 The director shall provide regional centers with current lists
5 of approved public and private facilities. The regional center
6 may not expend state funds for services in any facility which
7 is not approved by the director, notwithstanding any other
8 certification, licensing, or approval of the facility.

9 The director shall consult with, or contract with, and obtain
10 the advice and recommendations of such other public or pri-
11 vate authorities in the various professional fields as he deems
12 advisable in order that the standards prescribed pursuant to
13 this article shall give proper recognition to the mental, physi-
14 cal, social, and educational needs of mentally retarded persons.

15 416.5. The Governor shall appoint an advisory committee
16 consisting of 12 persons, 6 of whom shall be parents of men-
17 tally retarded persons and 6 of whom shall be directors of
18 community based agencies engaged in providing services for
19 the mentally retarded. The committee shall consult with and
20 advise the Director of Standards in the adoption of standards
21 pursuant to Section 416.4.

22 416.6. If there is evidence that a facility does not meet
23 the standards prescribed by the director, state funds may be
24 immediately withdrawn for all children in the facility.

25 416.7. The Director of Standards shall establish rates of
26 state payment for the care of mentally retarded persons in
27 public and private facilities utilized by the regional centers.

AMENDED IN ASSEMBLY MARCH 10, 1965

CALIFORNIA LEGISLATURE—1965 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 691

Introduced by Assemblymen Waldie, Greene, Lanterman
Alquist, Burgener, Petris, and Warren
(Coauthor: Senator McAteer)

February 1, 1965

REFERRED TO COMMITTEE ON PUBLIC HEALTH

An act to add Article 7.5 (commencing with Section 415) to Chapter 2 of Part 1 of Division 1 of the Health and Safety Code, relating to the mentally retarded.

The people of the State of California do enact as follows:

1 SECTION 1. Article 7.5 (commencing with Section 415) is
2 added to Chapter 2 of Part 1 of Division 1 of the Health and
3 Safety Code, to read:

4
5 ARTICLE 7.5. MENTALLY RETARDED PERSONS

6
7 415. As used in this article, "regional centers" means re-
8 gional diagnostic, counseling, and service centers for mentally
9 retarded persons and their families.

10 415.1. It is desirable that there be a shift in state responsi-
11 bility for mentally retarded persons from the time they enter
12 a state hospital to the time when they are diagnosed as needing
13 specialized care.

14 In order to provide fixed points of referral in the commu-
15 nity for the mentally retarded and their families; establish
16 ongoing points of contact with the mentally retarded and their
17 families so that they may have a place of entry for services
18 and return as the need may appear; provide a link between
19 the mentally retarded and sources in the community, including
20 state departments, to the end that the mentally retarded and
21 their families may have access to the facilities best suited to
22 them throughout the life of the retarded person; and offer
23 alternatives to state hospital placement, it is the intent of this
24 article that a network of regional diagnostic, counseling, and

1 service centers for mentally retarded persons and their fam-
2 ilies, easily accessible to every family, be established through-
3 out the state.

4 415.2. The State Department of Public Health, within the
5 limitations of funds appropriated, shall contract with appro-
6 priate agencies for the establishment of regional centers.

7 415.3. Regional centers shall be near centers of population
8 where most needed and wherever possible connected to or in
9 close proximity to institutions of higher learning and research.

10 415.4. The regional centers shall provide and perform or
11 cause to be performed services including, but not limited to,
12 the following:

13 (a) Diagnosis.

14 (b) Counseling on a continuing basis. Counseling shall in-
15 clude advice and guidance to any mentally retarded person
16 and his family, to assist them in locating and using suitable
17 community facilities, including, but not limited to: special
18 medical services; nursery and preschool training; public edu-
19 cation; recreation; vocational rehabilitation; and suitable resi-
20 dential facilities.

21 (c) Provide state funds to vendors of service to the re-
22 tarded, when failure to provide such services would result in
23 state hospitalization.

24 (d) Maintain a registry and individual case records.

25 (e) Systematic followup of the mentally retarded and re-
26 activation of cases as indicated.

27 (f) Assist, where necessary, in state hospital placement of
28 the mentally retarded.

29 (g) Call public attention to unmet needs in community care
30 and services, defining and interpreting standards of community
31 care and services as used by the regional center, and stimulat-
32 ing the community to develop such services as needed.

33 (h) Maintain a staff according to standards set by the State
34 Department of Public Health.

35 415.5. Upon referral by a physician, or other qualified
36 professional person authorized by the regional center, any
37 person suspected of mental retardation shall be eligible for
38 initial intake and for diagnostic and counseling services in
39 the regional centers.

40 415.7.

41 415.6. The State Department of Public Health may receive
42 and expend all funds made available to the department by the
43 federal government, the state, its political subdivisions, and
44 other sources, and, within the limitation of the funds made
45 available, shall act as an agent for the transmittal of such
46 funds for services through the regional centers. The depart-
47 ment may use any funds received under Article 2 (commenc-
48 ing with Section 249) of this chapter for the purposes of this
49 article.

50 416. The parents or guardian of a mentally retarded per-
51 son may designate the Director of Public Health as guardian
52 of the mentally retarded person on the death of the parents or

1 guardian, if the state has assumed responsibility for providing
2 care to the retarded person, through the regional center. Such
3 guardianship shall be for the purpose of carrying out the
4 recommendations of the regional center and to provide the
5 retarded person with the assurance of continuity of care.

6 416.1. This article does not authorize the care, treatment,
7 or supervision or any control over any mentally retarded per-
8 son without the written consent of his parent or guardian.

9 416.2. The agency operating a regional center may enter
10 into agreements with parents, guardians, persons responsible
11 for the care of the mentally retarded, or estates of mentally
12 retarded persons, to use such amounts as they may be able to
13 pay toward the cost of services for such mentally retarded
14 persons. In no event, however, shall there ~~be~~ be any charge for
15 diagnosis or counseling.

Summary of Findings and Recommendations

Consolidation of Licensing Functions Relative to Public Health Facilities

The interim study of this subject was directed by H.R. 317, introduced by Assemblyman Joseph Gonsalves during the 1964 First Extraordinary Session. Legislative interest was heightened by an executive order issued by the Health and Welfare Department Director which would have consolidated such functions through an interagency contract.

FINDINGS

According to the Attorney General and the Legislative Counsel, consolidation of licensing under the Department of Public Health through interagency contract would be illegal under existing statutes.

Letters and testimony received by the subcommittee suggest that staff of the Departments of Social Welfare and Mental Hygiene encouraged opposition to the executive order.

The wide range of services needed by senior citizens would be best handled by a single administrative agency. Programs, standards, licensing, enforcement and rate-setting pertaining to services for the aged could be more efficiently organized and administered in a single department under the Health and Welfare Agency. This would permit maximum use of federal funds, reduce the rate of institutionalization, make possible development of a comprehensive program for senior citizens.

The present confusing, duplicating and overlapping regulations make it very difficult to provide adequate and appropriate services for senior citizens. In many instances, regulations of different agencies conflict; to obey one set of regulations may mean violation of another.

The present diffusion of responsibility among existing agencies leads to waste and poor economy. Separation of rate setting, and licensing means that costs cannot be related to quality and scope of services.

6. Present licensing regulations of all agencies concerned are virtually unenforceable because penalties are not available to fit the severity of violations. Revocation of license is the sole punitive action authorized to deal with 125 possible violations under the law.
7. The problems in this area of human need cannot be solved piecemeal. A systematic revision of existing laws relating to care of the aged and of pertinent administrative regulations is urgently required.

COMMENDATIONS

The state should establish a Department of Senior Citizens Services in the Health and Welfare Agency to carry out a program of comprehensive services for the aged, including:

- a. Family counseling
- b. Homemaker assistance
- c. Visiting nurse services
- d. Recreation
- e. Employment counseling
- f. Medical care
- g. Foster homes, boarding homes, nursing homes, hospital care
- h. Preretirement counseling
- i. Housing services
- j. Analyze and recommend training and educational programs for personnel needed to provide services for the aged

Programs for the aged presently administered by Public Health, Social Welfare, and Mental Hygiene should be transferred to the Department of Senior Citizens Services.

This department should be organized and ready to submit program recommendations as well as suggested operating and licensing standards to the Legislature no later than January 5, 1967. A key element in the development of these program recommendations should be the objective of providing needed services to the aged on a timely basis.

The Department of Senior Citizens Services should establish diagnostic, counseling and referral centers to help senior citizens and their families obtain appropriate care.

Institutions which serve other classes of patients besides the aged should be licensed by the appropriate licensing agency as well as by the Department of Senior Citizens Services. If administrative regulations of the respective departments are in conflict then the regulations of the Department of Senior Citizens Services should apply until the next legislative session resolves the conflict.

For purposes of planning, there should be established five regional advisory councils composed of seven people appointed by the Governor all of whom shall be aged 65 years or older. Each regional council should elect one of its members to serve on a State Senior Citizens Advisory Council. In addition, this state council should have two members from each legislative house to be appointed by the presiding officers of the respective houses. It should replace the present Citizens Committee on Problems of the Aged which would be abolished. The majority of the regional councils and of the state council should be composed of public members. The Senior Citizens Advisory Council should be adequately staffed with whatever technical and professional assistance it may require.

The Transfer of Senile Patients to State Mental Hospitals

Although specifically prohibited by Section 5102 of the Welfare and Institutions Code, the transfer of senile patients from public and private institutions has been a continuing problem. H.R. 426, introduced by Assemblymen Lester McMillan and Joseph Kennick during the 1963 Regular Session, called for an interim study of this subject.

FINDINGS

- 1 Almost 3,000 people 65 years and older are committed to state mental hospitals for the first time each year. Almost 80 percent of these people die within a year of commitment. ,
- 2 This practice is socially and economically undesirable and should be halted.
- 3 In most instances, commitment to state mental hospitals of the aged is determined not by mental illness, but by local policy, lack of community resources, and budgetary convenience.¹
- 4 Extensive variations in the county aged commitment rate indicate that court procedures and policies are not uniform.² This situation is similar for other classes of patients beside the aged.

testimony to the committee, Dr. Robert Hewitt, Chief Deputy Director of the Department of Mental Hygiene, stated: *"In our hospitals today are a substantial number of people who do not require hospitalization, are not mentally ill, and some of whom should never have been committed to our care."*

Present statutes require the department to accept all patients committed by the courts. About 4,500 aged patients now in state hospitals do not require state hospital care. Dr. Hewitt testified further: *"Clearly, the best hope for reducing the number of nonmentally ill aged in our hospitals is to prevent them from entering in the first place."* Some counties have achieved notable success in preventing commitment through superior courts of persons whose needs are for nursing or residential care in the community. Other areas in the state have not done so well. Although there is a specific prohibition against it in the Welfare and Institutions Code, some aged patients who are not mentally ill are sent to state hospitals. Dr. Hewitt believes that inappropriate commitment results from inadequate screening procedures prior to commitment and errors in medical judgment. *"The commitment of nonmentally ill aged to the state hospital can be made a rare occurrence."*

According to information supplied to the committee by Dr. Hewitt, the commitment rate varies from 0.7 per 1,000 county population aged 65 in Los Angeles to 5.0 in San Francisco and 5.5 in Monterey County.

5. The "dumping," or improper placement of aged persons in state mental hospitals, forces the state to assume 100 percent of the cost of care from the General Fund and results in underutilization of federal funds available to California to care for the aged.
6. Halting transfer of aged patients to state hospitals would free beds needed for the mentally ill and would reduce the need for capital outlay expenditures for new state hospitals.
7. The state should assume the county share of Medical Assistance for the Aged (MAA) matching funds. It would be more economical for the state to assume the county share of the MAA formula than to continue to pay 100 percent of the cost of care in state hospitals.

RECOMMENDATIONS

The state should prohibit first commitments of aged persons 65 years and older to state mental hospitals. Only through such drastic action can this undesirable practice be effectively halted.

The Legislature should conduct an interim study to ensure that the rights of mental patients are safeguarded, that inappropriate commitments are eliminated and that community services be used whenever available.

Ray's

PIZZA

The Nursing Home Schedule of Maximum Allowances

H.R. 470, introduced by Assemblyman Robert W. Crown in the 1963 Regular Session, called for an interim study of the nursing home fee schedule issued by the Department of Finance to determine whether it adversely affected standards of care in nursing homes. In addition, H.R. 470 directed study of whether maximum and proper use was being made of available public funds from all sources in providing care for the aged.

CRITICISMS

The nursing home schedule of maximum allowances is unreasonable and inequitable. It is based on insufficient cost information and has encouraged substandard care.

Federal funds available to California under the Kerr-Mills Act are not being fully utilized. Persons who could be eligible for Kerr-Mills benefits are not covered due to improper commitments to mental care institutions. As a result, money from the state General Fund is being used inappropriately and excessively.

Planning for services for the aged which would reduce the total cost of institutional care and encourage alternative methods has been inadequate.

RECOMMENDATIONS

1. The Legislature should amend the Hospital Licensing Act to classify institutions for licensing purposes according to the scope and quality of services they are equipped to render. Institutions should be classified rather than patients.
2. MAA rates should be based on the type of services the individual institutions are equipped to render. MAA funds should not be paid to institutions which do not meet these licensing standards.
3. Violations of established standards, should be classified by severity and frequency of occurrence. An appropriate system of fines, suspensions and revocation of license should be instituted. The last inspection report should be posted in a conspicuous place in the institution.
4. Written admission and discharge policies should be required for each class of facilities. Transfer of patients to another institution without notification and consent of the patient or responsible relative, public guardian, or attending physician should be a misdemeanor.
5. The Health and Safety Code should be amended to prohibit continuation of "grandfathered" facilities, institutions in existence prior to the Hospital Licensing Act of 1946, under new ownership. The intention of the Legislature should be reaffirmed that "grandfathered" facilities be discontinued whenever the licensee surrenders the license.
6. Rates should be based on reimbursable cost and should be renegotiated every year. The state should require uniform cost accounting information from each vendor.
7. The transformation of county hospitals into community hospitals should be encouraged by halting further distribution of Hill-Burton and Hill-Harris funds. This would help to abolish segregation of the indigent sick from the rest of the sick, and eliminate expensive capital outlay by local bond issue or from property taxes. Governmental jurisdictions should consider the advantages of purchasing services from vendors on the basis of the recipient's *medical needs* rather than on his *economic* or *class status*.

tate law should be amended to permit realistic Hill-Burton and Hill-Harris priorities which take account of how people actually use hospital beds. For instance, members of group prepayment plans such as the Kaiser Foundation Health Plan use only their local Kaiser hospital. It is misleading to count these people for projecting hospital bed-population ratios as part of the general population. Similarly, other population groups who use only certain facilities such as hospitals run by various religious denominations should be counted according to actual use of facilities. In certain areas the proportion of aged is much higher than in others. Long-term hospital and nursing home bed needs should be projected on the basis of such differences. The Department of Public Health should present a revised priority schedule for legislative approval.

9. The Legislature should conduct an interim study into the advisability of continuing the present state-federal Hill-Burton matching fund formula, and the method by which Hill-Burton funds are disbursed. California is the only state which matches Hill-Burton federal funds. The financial difficulties of some institutions which have received Hill-Burton funds and their low occupancy rates indicate that present policies for distributing funds need serious review.

10. The Hospital Advisory Council members whose institutions or class of institutions are being considered for Hill-Burton or Hill-Harris grants should be disqualified from voting.

Private Supplementation of Nursing Home Rates

H.R. 25, introduced by Assemblyman Thomas Bane during the 1963 First Extraordinary Session, called for an interim study to determine whether private supplementation by patients' relatives or friends might provide a possible solution to the problems caused by the uniform nursing home rate schedule.

FINDINGS

- 1 The committee finds that allowing relatives to supplement MAA rates would be socially and economically unsound.
- 2 Supplementation is a covert form of relatives' responsibility. Since the Legislature has eliminated relatives' responsibility, it should not permit it in disguised form.
- 3 Supplementation would permit differential rates for the same services, an inequitable practice.
- 4 Supplementation would encourage operators to discriminate in favor of patients whose families could afford additional payments. This would tend to segregate patients by economic class and would have the long-run effect of forcing poorer patients into less desirable facilities.
- 5 Wherever supplementation is in effect, the problem of ensuring quality standards of care remains unsolved.
- 6 A reimbursable cost formula would result in fair reimbursement of operators, making supplementation unnecessary.

RECOMMENDATIONS

The present policy of prohibiting supplementation by relatives should remain unchanged.

The Legislature should reexamine the desirability of requiring families to pay part of all of the cost of care according to their ability to pay. In no case, should costs exceed the maximum fee schedule. If it is decided that financial responsibility of relatives should be reinstituted, then the amount paid by families should be deducted from the total cost of care.

Acceptance of supplemental payments above the maximum rate should be a misdemeanor.

Fixed-fee schedules for units of service should be required. Differential rates for the same services should be prohibited.

March 6, 1965

Honorable Robert W. Crown
Chairman, Assembly Committee on Ways and Means
San Francisco Capitol
San Francisco, California

Dear Bob:

The report of your subcommittee on "Supporting Services for Senior Citizens", chaired by Charles Petris, was exceedingly fine, and its recommendations are detailed and generally excellent. However, I would appreciate it greatly if you would include with "my approval with recommendations" the printing of the following comments within the report itself.

Cordially,
TOM BANE

H.R. 470—NURSING HOME SCHEDULE OF MAXIMUM ALLOWANCES

1. Rather than being based on the types of services the institution is equipped to render (Recommendation No. 1), I believe that the rates should be based on the types of services rendered to the patient according to the patient's needs.
2. All nursing and convalescent homes should be designed to provide long-term medical care to take care of a patient whose medical needs undoubtedly will progress as he ages. The compulsory moving of a patient from one home to another because of a slight change in the intensity of nursing care needed would result in great harm to the patient.
3. Regarding Recommendation No. 4, provision should be made for the transfer of a patient to a public institution without a misdemeanor being committed by the private institution when the private institution is no longer receiving remuneration for its services. Under the present language of the report a private institution might be required to give indefinitely services with no remuneration.
4. The subject of reimbursable costs (Recommendation No. 6) should receive extensive study. Reimbursable cost rates in hospitals have resulted in daily rates up to \$49 per day. Reimbursable cost rates in defense contracts known as cost plus resulted in excessive costs to the government because of sometimes careless and sometimes purposeful raising of costs. Such a procedure might result in an unnecessary heavy burden on the State Welfare Budget. Further confusion is caused when private patients are in the same facility as public patients. The costs of services to the private patient may result in raising the cost to the public patient. The rate should be established as to what is best for the patient, best for the provider of the services, and best for the taxpayer.

H.R. 25—PRIVATE SUPPLEMENTATION

Regarding the recommendations concerning the allowances of relatives to supplement MAA rates, I have the following comments:

1. Voluntary supplementation is not the same as the former relatives responsibility act because the Relatives Responsibility Act was compulsory supplementation. The forcing of relatives to pay for the care of other relatives caused great family and social stresses because of the compulsion. Voluntary supplementation would not cause the same social or family stresses.
2. All patients in a home do not require the same services. It seems logical that those requiring more services should be allowed to supplement if they are financially able to and willing to without requiring those who have less need for services to pay the same rate. The philosophy adopted in the income tax schedule has been taxation according to the ability to pay. This has been a compulsory taxation feature. It does not seem to be in conflict with voluntary supplementation in the welfare field by allowing people to pay according to their ability to pay.

3. Under the present circumstances in the State of California there would be no forcing of poor patients into less desirable facilities. In fact, it would result in the opposite. Poor patients would be receiving better care because the convalescent or nursing home involved would be receiving higher income and would be able to provide more desirable facilities to the poorer patients. Without supplementation all patients would be forced into less desirable facilities.

4. The report says in the past supplementation has not solved the problems of ensuring quality standards of care. Voluntary supplementation has not been tried so how can the report substantiate this statement. Colorado has a voluntary supplementation plan which is claimed to have worked satisfactorily. Before any such conclusion is drawn, I suggest a detailed study of results of the Colorado voluntary supplementation plan.

Regarding your report generally, exclusive of the above exceptions, it is exceedingly fine and its recommendations are detailed and generally very excellent.

INTRODUCTION

Assembly Bill 127, relating to the appointment of inheritance tax appraisers, was introduced in the First Extraordinary Session of 1964 by Assemblyman William T. Bagley. Because it was felt this subject needed more thorough analysis, and partly because it was generally felt that any legislative action with impending state elections would have been fraught with political overtones, real and imagined from both political parties, the bill was referred to the Interim Ways and Means Committee for study.

In its consideration of the measure, this committee conducted hearings, carried out independent research, and consulted with the Assembly Committee on Government Organization, the Commission on State Government Organization and Economy, and the Legislative Analyst on related studies undertaken by those agencies.

In the course of the study, several proposed reforms to current inheritance tax administration were presented to the committee. Several proposals in addition to AB 127 were therefore examined.

The committee is appreciative of the cooperation extended by many agencies and individuals in helping to develop the information contained in this report.

FINDINGS

1. The present system of appointing inheritance tax appraisers carries with it an unnecessary and potentially unhealthy element of political influence and patronage in state tax administration.
2. The present method of compensating inheritance tax appraisers by fees based on the value of estates appraised does not take into account the amount or caliber of actual appraisal work performed and it often results in excessive remuneration for some part-time appraisers.
3. The present lack of prescribed qualifications for inheritance tax appraisers is contrary to basic principles of public administration and provides a source of potential abuse.
4. The political nature of inheritance tax appraiser appointments results in excessive turnover in appraiser personnel when a Controller of an opposite political party takes office.
5. The present participation of county treasurers in the inheritance tax process is unnecessary and serves to diminish state revenues.
6. The committee finds that bringing inheritance tax appraisers into the state civil service structure, as proposed in AB 127, would be an improvement over the current system but that superior alternatives are available.

RECOMMENDATIONS

1. It is strongly recommended that action be taken at the 1965 legislative session to remove patronage from the administration of state inheritance taxes.
2. It is recommended that legislation be enacted providing for a self-assessed system of inheritance tax administration. Whether this is done in a single step or in several phases is less important than the principle involved. The recent proposal of the Legislative Analyst regarding the self-assessed system provides an excellent vehicle to achieve this goal.
3. It is further recommended that legislation be enacted to eliminate the county treasurers from the state inheritance tax process.

BACKGROUND

Taxes on property transferred as a result of the owner's death constitute one of the oldest and most widely used forms of state taxation. Forty-nine states, excluding only Nevada, tax the estates of deceased persons in some fashion. Also, the federal government imposes a similar "death" tax.

These taxes generally are handled in one of two ways—either as an estate tax, which is levied against the total estate before distribution among the heirs, or as an inheritance tax, which is levied against each portion of the estate after it has been distributed.

Estate taxes are collected by the federal government and by nine states while inheritance taxes are in effect in the 40 remaining states, including California.

Inheritance taxes in this state essentially date back to 1893. An earlier law, enacted in 1853, was never really effective as it was repealed the following year.

A revision of inheritance tax law in 1905, with subsequent modification, provided the basis for the present structure found in Part 8, Division 2, of the State Revenue and Taxation Code. In essence, inheritance taxes are imposed on the right to inherit or otherwise receive a decedent's property, levied at progressive rates which are based on the value of the property received and the relationship between the decedent and the beneficiary.

The Controller was first authorized to appoint an inheritance tax appraiser in each county in 1911. An Inheritance Tax Department was established within the office of the Controller in 1913. To prevent the avoidance of inheritance taxes through gifts prior to—or in contemplation of—death, the Gift Tax Act was passed in 1939 to be administered jointly with inheritance taxes.

Inheritance tax revenue has accounted for two to three percent of total state revenues for the past 20 years. In fiscal 1963-64, almost \$96 million was collected from this source. (See page 21 for more precise data.) Prior to the income, sales and gas taxes, the inheritance tax was a leading source of state revenue. While no longer of such high importance, it remains a firmly established and widely accepted method of taxation.

CURRENT INHERITANCE TAX ADMINISTRATION

Organization

Administration of the state inheritance tax is the responsibility of the State Controller. The Inheritance and Gift Tax Division of the Controller's office operates at an authorized strength of 109.5 positions out of three district offices (Sacramento, San Francisco and Los Angeles). An organization chart appears on page 22.

The division is responsible for providing advice on inheritance tax matters to appraisers in the field, county treasurers, attorneys, trust officers, title examiners, taxpayers and the general public. The division also issues rules and regulations, and it compiles and issues pertinent statistics.

The Controller appoints one or more persons to form a panel of appraisers in each county. No formal qualifications have ever been set for appointment. In practice, there are approximately 150 appraisers throughout the state with the number per county varying up to 30 for Los Angeles. The probate courts assign cases as they arise to individual members of the county panel. As a result, inheritance tax appraisers are legally considered officers of the courts and thereby not subject to the direction of the Controller for many administrative purposes.

Cost

Expenditures for salaries and other operating expenses of the Inheritance and Gift Tax Division during fiscal 1963-64 were \$1,088,623. This amount excludes commissions to county treasurers and the relatively small payments to appraisers in the form of report fees. (More complete cost data may be found on page 23.)

Inheritance Tax Appraisers derive most of their compensation not from the state but from the estates taxed. A fee is imposed, separate and apart from the tax liability, based on the appraised value of the estates. Under present law, the fee essentially is one dollar per thousand dollars valuation up to \$500,000 and half that rate for everything over \$500,000. Appraisers also earn some fees for releasing liens and they are reimbursed for certain expenses, in addition to receiving limited payments in the form of report fees from the state.

From their gross income the appraisers must cover such operating expenses as clerical and technical assistance and office rent. Net income for probate and inheritance tax work in 1963 was \$1,591,887, or an average per appraiser of roughly \$10,000. (A breakdown of appraiser income and expenses is on pages 24-30.)

Procedures

Under existing law, the inheritance tax function is procedurally integrated with the probate process. The probate inventory and appraisal is used as a basis for computing the inheritance tax. And it is within the jurisdiction of the probate court to determine the inheritance tax liability.

As soon as possible after the decedent's death, the probate court appoints an executor or administrator of the estate. At about the same time, a member of the panel of appraisers is selected by the court to handle the case.

An inventory of all assets is prepared, usually by the attorney for the estate, which normally includes "suggested values." The local county treasurer performs an official inventory of safe-deposit boxes. It is the duty of the appraiser to review the listed assets and assign a value to each.

In the case of estates valued more than \$300,000 an informal conference normally is held between the estate's representatives, the appraiser and the Inheritance and Gift Tax Division.

The completed report of the appraiser, including tax computations, is submitted to the Inheritance and Gift Tax Division for review and audit. This audit process, incidentally, is not required by law since the appraiser technically is an officer of the court and is not bound by the division's audit findings.

Upon division approval, or at the appraiser's discretion, the report is filed with the probate court and a copy is sent to the executor.

Within 10 days after court receipt of the appraiser's report, objections may be filed either by the executor, any beneficiary, or the Inheritance and Gift Tax Division. In such an event, a hearing is held by the court to decide the issues in question and to set the tax liability. This decision is final unless overruled by a higher court.

Once the tax liability has been fixed by the court, it is the executor's responsibility to pay the taxes due to the local county treasurer. Upon notification that the taxes have been paid, the court allows distribution of the estate to the heirs. The tax becomes delinquent two years after the date of death and an interest penalty is imposed. In practice, most state inheritance tax cases are processed in 10 to 14 months while the federal estate tax carries a 15-month deadline.

Existing law provides 90 days for county treasurers to remit inheritance tax collections to the Controller's office. For their role in the inheritance tax process, county treasurers are entitled to commissions of three percent of the taxes collected up to a prescribed maximum depending on the size of the county.

CRITICISM OF INHERITANCE TAX ADMINISTRATION

California's inheritance tax administration has come under increasing criticism in recent years, particularly regarding the method of appointing appraisers. One of the first to urge reform was the office of the Legislative Analyst. As far back as 1945 the analyst recommended "appropriate steps be taken to place inheritance tax appraisers under civil service." Over the years, legislation to effect reforms has been introduced on a number of occasions but has not passed either house. And appointive appraisers have come under fire during the heat of recent political battles. Meanwhile, the current system has received, in general, the continuing support of the State Bar Association and incumbent administrations of both parties.

While criticism has taken a number of forms, several major points at issue have emerged.

Political Patronage

Perhaps the most frequently advanced argument against the current system is that it is a form of political patronage otherwise long since eliminated in California.

Testimony before the committee generally held that the vast majority of past and present appointed appraisers has been honest and competent. Many of them have exercised their right to participate in political affairs and to contribute openly to political campaigns, including those of their appointing officer.

It is neither the committee's duty nor desire to pass judgment on such political activity by inheritance tax appraisers. But it seems evident that the system does invite abuse.

In public administration generally, patronage is on the decline. In tax administration specifically, the possible impact of political influence is entirely out of place. And patronage is still patronage whether it is dispensed by one or more sources.

Fee Compensation

Another major criticism has centered on the method of compensating appraisers through a fee based on the value of the estates appraised. This does not necessarily reflect the amount or the caliber of actual appraisal work performed.

Critics also point out that occasions can and do arise in which appraisers are paid for work actually performed by someone else. For example, most of the cases involving business interests or stocks having no established value, such as closely held corporations, occur in the Los Angeles area. A "preaudit review" of such assets is provided by a specialist examiner, a civil service employee, in the Los Angeles district office of the Inheritance and Gift Tax Division. In practice, much reliance is placed on this expert review, but the appraiser still collects the full fee for appraising that part of the estate.

Inheritance tax appraising can be profitable, particularly for work generally considered to be part time. The following table lists the gross and the net income, after expenses, of appraisers as reported by the State Controller for the calendar years 1962 and 1963.

Amount	Number of appraisers			
	Gross income		Net income	
	1962	1963	1962	1963
50,000 or more	8	13	0	0
40,000 to 50,000	19	13	0	0
30,000 to 40,000	13	25	0	1
25,000 to 30,000	9	4	5	7
20,000 to 25,000	11	9	12	21
15,000 to 20,000	14	13	21	17
10,000 to 15,000	13	8	30	22
5,000 to 10,000	21	24	33	36
Less than 5,000	28	32	38	37

The income of part-time inheritance tax appraisers becomes all the more impressive when compared with the pay of full-time civil service appraisers. To illustrate, the salary schedule and number of appraiser positions budgeted for the Property Tax Division of the State Board of Equalization follows:

Position	Number authorized	Salary range
Principal appraiser	3	\$12,696 to \$15,432
Senior appraiser	16	10,968 to 13,332
Associate appraiser	38	9,036 to 10,968
Assistant appraiser	25	8,428 to 9,036
Junior appraiser	13	5,832 to 6,744

Thus, while only 3 of 95 Board of Equalization appraisers are even in a position, after long years of experience, to earn \$15,000 a year, 46 of 150 inheritance tax appraisers gained more than \$15,000 in net income during 1963. On the other hand, the number of inheritance tax appraisers earning less than \$5,000—37 in 1963—raises the question of whether adequate appraisal work exists in some counties to warrant their having an appraiser panel. Where the workload is very light, there is little opportunity to gain sufficient experience in appraising.

Prior to the July 8, 1964, hearing of the Ways and Means Committee, very limited information was available on appraiser income and expenses. The more complete data presented by the Controller's office at that time was welcome. The public unquestionably has the right to know how much inheritance tax appraisers earn.

The reported expenses of the appraisers evoked considerable interest among committee members. A breakdown follows:

	Number of appraisers reporting net expenses	
	1962	1963
\$50,000 or more	1	0
40,000 to 50,000	0	1
30,000 to 40,000	3	7
25,000 to 30,000	13	11
20,000 to 25,000	12	9
15,000 to 20,000	12	18
10,000 to 15,000	16	13
5,000 to 10,000	18	20
Less than 5,000	63	62

One explanation offered for the great disparity in reported expenses was that some appraisers rely more on hired staff than do others. Perhaps so, but the reported overhead expenses appeared unusually excessive for a number of appraisers in the higher gross income brackets. In the gross income ranges over \$30,000 reports of expenses amounting to 60 percent, 70 percent and even 80 percent of gross income were not uncommon.

Lack of Qualifications

Under existing law, there are no minimum qualifications for appraisers, other than being considered suitable for appointment by the Controller. A breakdown prepared by the Legislative Analyst of the occupational background of 140 appraisers in office in 1963 showed this: attorneys—53; real estate brokers—32; insurance brokers or agents—9; real estate appraisers—7; accountants—7; miscellaneous—14; none reported—18.

Again on this point, there was testimony before the committee that most appointments to date have gone to competent persons. But without any legally prescribed standards of education or experience, an unnecessary opportunity for abuse exists.

In a recent presentation to the State Government Organization and Economy Commission, Controller Alan Cranston described the aim of prescribing qualifications for appraisers as a "sound" objective. The committee agrees.

Lack of Continuity

It has been charged that the current system results in wholesale appraiser turnover when the party in power changes. The change in occupants of the State Controller's office as a result of the 1958 election did, in fact, produce a major turnover on appraiser panels. With very little legal leverage to exert administrative control or direction over the appraisers, it is understandable that a Controller might prefer having under him persons of known loyalty rather than persons with ties to a past or future opponent. But this condition hardly contributes to efficient administration of an important tax function.

Role of County Treasurers

Apart from the method of appointing appraisers, another recurring point of criticism of current inheritance tax administration is the role played by county treasurers. The treasurers participate in the process by examining and inventorying safe-deposit boxes, issuing consents to transfer property, making tax collections and transmitting the funds to the State Treasurer. For these services, the county treasurers are allowed to retain 3 percent of their collections up to a statutory limit. Existing law permits the treasurers to hold collections for 90 days without penalty. In practice, the treasurers usually transmit these funds at bimonthly intervals, so most inheritance tax revenue is in the State General Fund within 60 days of its original collection.

Both the Board of Equalization and the Legislative Analyst contend that important savings (\$670,000) could be realized by having the

taxes paid directly to the state and transferring the other duties away from the treasurers.

Direct state collection would also permit interest earnings to commence upon payment of the tax rather than 60 to 90 days later.

The analyst suggests that bank officers, who normally are present at safe-deposit inspections anyway, could prepare the official inventory for a nominal fee or even as a public service.

Consents to transfer property prior to the time of tax settlement are issued by either the county treasurers or the Inheritance and Gift Tax Division. At present, the county treasurers issue more consents than does the division. If this function were to be withdrawn from the local treasurers, some added administrative costs for the division would result.

PROPOSED REFORMS

AB 127 (Bagley)

Enactment of this bill would accomplish the following changes in state inheritance tax administration:

1. Appraisers would be full-time civil service employees paid on a regularly salaried basis. The State Personnel Board would prescribe appropriate qualifications and positions would be filled through normal testing and hiring procedures. Administrative responsibility would remain with the Controller.

2. Repealed would be the statutory requirement that at least one appraiser be appointed in each county.

3. The fees now paid appraisers for their services, as specified in Section 609 of the Probate Code, would instead be deposited in the General Fund. In 1963, these fees totaled \$3,035,000.

4. The compensation now received by appraisers for reimbursable expenses and as report fees, under Section 14772 of the Revenue and Taxation Code, would instead be deposited in the General Fund. Such compensation amounted to more than \$250,000 in 1963.

5. The bill would be operative only after the election, or appointment, of the successor to the Controller in office at the time of enactment.

Cost estimates for the additional civil service personnel, plus their overhead and operating expenses, vary widely. The Controller estimates that 391 new positions would be needed with a total added cost of \$4,408,763 to the Inheritance and Gift Tax Division. However, the Board of Equalization contends that if it were given the inheritance and gift tax function, it would need only 202 appraisers and support personnel at an annual cost of \$2,767,260.

The Controller's office, in reaching the 391 new personnel figure, used Board of Equalization appraisal workload data. The board subsequently disputed this, asserting that its appraisals for intercounty equalization purposes are far more detailed and time consuming than appraisals for inheritance tax purposes. At any rate, the added administrative expense of employing civil service appraisers would be largely, if not fully, offset by the increased revenue of roughly \$3.3 million a year.

In presenting his views on AB 127, Legislative Analyst A. Alan Post suggested it be amended so as to eliminate the county treasurers from the inheritance tax process. This, as explained on page 14, would produce an estimated \$670,000 in added annual revenues.

Appearing before the committee in opposition to AB 127 were representatives of the State Bar Association and the Controller's office. The Controller also presented his position in some detail to the Commission on State Government Organization and Economy.

It was contended that civil service appraisers would not be impartial and that they could not perform the probate appraisal. This, explained

the Controller, was because: "The interests of a taxing agency and the taxpayer are necessarily adverse. Employees of a taxing agency would, of course, be partial to the interest of their employer." The committee, however, finds no reason to doubt that civil service inheritance tax appraisers would provide impartial and fair treatment to taxpayers. The committee is aware of no evidence that civil service appraisers presently in state service or in local county and city assessor offices fail to provide impartial treatment. Indeed, it would seem more likely that inflated appraisals might occur when they produce higher fees for the individual appraiser than when they produce added revenues for the state. There is no indication such abuse now occurs under the present appraisal system, nor does it seem any more likely under civil service.

Neither is the committee convinced that probate appraisals could not be performed by civil service appraisers. However, the committee recognizes that it would be more difficult to establish the close relationships between civil service appraisers and the attorneys of taxable estates that now exist between appointed appraisers and the attorneys. But the competence and impartiality of civil service appraisers should pose no major problem for the probate process.

Under AB 127, the final decision regarding inheritance tax liability is left with the probate courts. Any objections to the appraiser's valuations could, of course, be settled in the courts.

Self-assessed System

A leading proponent of converting California inheritance tax administration to a self-assessed system has been the Legislative Analyst. Under this system, appraisers and county treasurers both would be eliminated from the inheritance tax and probate process as the estate would be responsible for assessing its assets, subject to state audit. The self-assessed system would operate, in essence, as follows:

1. The probate court would continue to appoint the executor or administrator of the estate.
2. The estate's attorney would prepare the inventory of assets and their estimated values. The tax return, with tax computed, would be submitted to the Inheritance and Gift Tax Division along with necessary accompanying documents.
3. The Inheritance and Gift Tax Division would audit the return and either accept it as submitted or, within a prescribed time period, indicate the areas of disagreement. This time limit on administrative action would be aimed at preventing undue delays in settling estates.
4. Any disagreement between the estate, its beneficiaries, and the division would be settled by the probate courts, as under the present system.
5. After the inheritance tax liability has been set by the court, the estate's executor would make the necessary payment directly to the Inheritance and Gift Tax Division instead of through the local county treasurers.
6. The estate could be distributed among the heirs upon notification to the court that the taxes have been paid.

Under this proposal, the existing inheritance tax and probate appraisal fees would be dropped. Elimination of such fees would save taxable estates approximately \$3 million a year.

At the same time, removal of the county treasurers from the process would annually save the state some \$670,000 which is now retained by the local treasurers as commissions, plus \$300,000 in increased interest earnings through earlier receipt of the taxes. Almost \$200,000 more, the analyst estimates, would be saved yearly through discontinuance of inheritance tax report fees. Gross savings thus are placed at \$1.16 million.

Additional administrative costs to the Inheritance and Gift Tax Division for implementing the self-assessed system are estimated at between \$500,000 and \$750,000. The Analyst foresees a net saving to the state of \$400,000 to \$650,000 each year from adoption of this plan.

It was pointed out during committee hearings that federal estate taxes, which also are a form of "death" taxes, are administered on a self-assessed basis.

Objections to a self-assessed system were expressed by the Controller in his earlier cited statement to the Commission on State Government Organization and Economy. Criticism of this approach began:

"Under the usual self-assessment system the taxpayer (estate) must provide and pay for its own appraisal which is then reviewed and evaluated by the taxing agency to the extent that employee time permits."

Of course, the same could be said of the present arrangement. Estates in probate pay for the appraisal and their settlement is subject to delays due to appraiser workloads, audit review by the Inheritance and Gift Tax Division, and probate dockets.

The Controller also faulted the self-assessed system in that there would be "no hearing and prompt determination in the probate court in the particular county, during the probate period." The detailed presentation of the Legislative Analyst, explaining the step-by-step procedures of the self-assessed plan before the Assembly Committee on Government Organization, seems to satisfy this requirement.

Another criticism of the self-assessed approach leveled by the Controller was that it would necessitate dealing with "a remote state agency, operating from Sacramento or a branch or regional office." Some years ago, this certainly would have been a most onerous burden. But with modern modes of transportation and communication, state government can hardly be said to be remote. Moreover, the final determination of tax liability would be no further away than the county seat, with the probate courts, where it is today.

Apprehensions of the Controller that the self-assessed system would cause "considerable delay in closing probate administration in many if not most cases" would appear satisfied by the imposition of statutory time limits as proposed by the Analyst.

"Little Hoover" Commission Recommendation

An alternative reform of inheritance tax administration was recently proposed by the Commission on California State Government Organiza-

tion and Economy, the so-called "Little Hoover" Commission. In his address to the Legislature on January 5, the Governor endorsed this proposal.

In its report the commission described its plan as a "modified self-assessed" approach. Essentially, it would retain appointed appraisers but it would limit their activity, and resulting fees, to certain types of assets.

Under this plan, the executors or attorneys for affected estates would continue to compile an inventory of assets but instead of listing "suggested values," as is present practice, actual valuations would be made of assets which have "comparatively exact and ascertainable market value." This would include assets such as cash, stocks, bonds, mortgages, securities, and insured personal property. Additionally, improved real property with a current assessed valuation of \$6,250 or less would be appraised for probate and inheritance tax purposes by the executor or attorney. All of these self-assessments would, of course, be subject to audit by the state administering agency.

Appointed appraisers would be responsible for determining the market value of real property with an assessed valuation of more than \$6,250 as well as such specialized personal property as jewelry, antique furniture, paintings, closely held businesses, and other items requiring specialized appraisal skills.

Compensation for the appointed appraisers would continue to be on the present fee basis but would be computed only on those assets actually appraised. Fees for those assets handled on a self-assessed basis would go to the State General Fund. The commission estimates this would generate about \$1.1 million in added state revenues and leave almost \$2 million in gross appraiser income.

The commission also recommends the elimination of county treasurers from the inheritance tax process. Increased annual state revenues are estimated at \$670,000 from commissions now paid to the local treasurers plus an additional \$300,000 in interest value from earlier tax receipts. Even with partially offsetting administrative expenses, the commission foresees net savings to the state in excess of \$1.5 million per year.

In reviewing this proposal, the committee is interested to note that no obstacle apparently was found to using the self-assessed valuations for probate as well as inheritance tax purposes.

However, the committee finds it difficult to justify the state collecting a fee with respect to those assets which actually are self-assessed. In effect, the state would be collecting a fee for work performed by representatives of the estate. If the aim of reform in this area is to generate additional revenues, then it would be more appropriate to change the inheritance tax rate structure.

The primary advantage of the commission's proposal is that it constitutes at least a partial shift away from the current fee-compensated, patronage-based system. It would test the self-assessed approach and it would reduce the often excessive income of many appraisers. If adopted, however, it should be considered only a first step in a broader plan of reform. Its success should permit extension of the self-assessed method to all assets and the elimination of appraisers.

Administration Proposal

Yet another proposed change in inheritance tax administration was presented last August to the "Little Hoover" Commission with the endorsement of Governor Edmund G. Brown. It was contained in a report prepared at the direction of Finance Director Hale Champion which had the broader purpose of proposing consolidation of all state tax administration.

Under this proposal, a Department of Revenue would be created to administer the state personal income tax, sales tax, cigarette tax, gas tax, and the inheritance and gift tax functions among others. The Department of Revenue would be headed by a three-man "California Tax Commission" consisting of the State Controller, the State Treasurer and the Director of Finance. The commission would appoint inheritance tax appraiser panels for each county. The Controller would serve as permanent chairman of the commission.

This proposal would seem to have little effect on any of the drawbacks of current inheritance tax administration. Though it would seem to include the Treasurer and Finance Director in patronage decisions, the Controller—as permanent commission chairman, and long-time administrator of inheritance taxes—might well remain the dominant force in appraiser appointments.

In his message to the 1965 Legislature, Governor Brown seemed to move away from this approach, endorsing instead the modified self-assessment proposal of the "Little Hoover" Commission.

5. MINORITY REPORT

ASSEMBLYMAN HOWARD J. THELIN

February 4, 1965

It may be that the present system of appointing inheritance tax appraisers is not the best system possible and if a better method could be suggested I might well endorse and vote for a new kind of system.

However, it does not seem to me that there was any showing to the committee that the appraisers have done a bad or inefficient job. Quite the contrary, as I recall the testimony of the representatives of the State Bar of California, the lawyers who deal in probate matters and who are, therefore, the ones to a great extent who must deal with the inheritance tax appraisers if any sizeable amount of money is concerned, favor the present system and find that the appraisers and the Controller cooperate with the bar in these matters to the benefit of the taxpayer for whom the lawyer must speak and act.

I am also troubled by the fact that although bills introduced on this subject have been presented with the affirmation that they will save the taxpayer money, nothing in the suggested changes will reduce the tax rates. The argument is simply that instead of the money going to the appraiser as his fee that it will go into the General Fund of the state where it will undoubtedly be spent for some other state purpose. Moreover, if we change to a civil service system it might well be that we would develop quite an expensive replacement for the present method which will cost the taxpayers even more money.

The statement is made in the findings of the committee, "that the present method of compensating the present tax appraisers by fees based on the value of estates appraised does not take into account the amount or caliber of appraisal work performed and it often results in excessive remuneration for some part-time appraisers." While this may be true, it seems to me that it is also possible that in some instances a small fee is being paid for the service rendered compared to what it would cost to hire a qualified appraiser to do the same particular job. I believe this is particularly true if you are talking about the kind of appraiser who could go to court and testify as to the value concerned. I do not agree with the recommendation that we enter into a self-assessment system of inheritance tax administration. What this means is that the taxpayer will be required to do more work and still be taxed at the same rate and for the same amount of money.

It seems to me that, on the whole, the basic question as to whether adequate or good services are being rendered to the public or not under the present system has been overshadowed and lost sight of because of the dramatic imposition of the appraiser issue into the senatorial campaign of last year. I, therefore, cannot in good faith pledge myself to vote for such changes in the law as are recommended in this report, although I do not say that further study and information would not modify my views on the subject.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS
CALIFORNIA LEGISLATURE

March 8, 1965

To the Speaker and Members of the Assembly

Dear Mr. Speaker and Members:

Your Interim Committee on Ways and Means herewith submits its final report on the California Buy American Act.

The committee is deeply appreciative of the invaluable assistance rendered by the many witnesses who testified during the course of this interim study.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

SUBCOMMITTEE ON ECONOMIC DEVELOPMENT
ASSEMBLY INTERIM COMMITTEE ON WAYS AND MEANS

January 5, 1965

TO THE MEMBERS OF THE ASSEMBLY INTERIM COMMITTEE
ON WAYS AND MEANS

Gentlemen:

Transmitted herewith is the final report of the Subcommittee on Economic Development of the Assembly Interim Committee on Ways and Means on the subject of California's Buy American Act.

Assembly Bill 2424 (Petrus, 1963) constitutes the vehicle for the subcommittee's study of this subject matter.

The subcommittee is indebted to the many witnesses whose testimony provided the framework for the subcommittee's findings and recommendations.

Respectfully submitted,

ROBERT W. CROWN, *Chairman*

FRANK BELOTTI

PAULINE DAVIS (with reservations)

JOSEPH KENNICK (with reservations)

Assembly Interim Committee on Ways and Means Subcommittee on Economic Development Final Report

SUMMARY OF FINDINGS

The committee makes the following findings with respect to the California Buy American Act:

1. The act is costly to taxpayers. It is mandatory and virtually covers all public purchases, state and local, thereby reducing competitive bidding.
2. While the act purports to protect California industry, there is evidence that often it gives preference to products manufactured in one of the other 49 states. It is, therefore, difficult to justify its further existence as a California statute.
3. The act rests on uncertain constitutional and legal grounds and is in conflict with certain laws and policies of the federal government.
4. The confused legal situation created by the act often delays purchasing decisions by public agencies and often requires costly litigation.
5. The act serves to frustrate efforts to ease foreign restrictions on certain California exports and, in fact, invites retaliatory purchasing practices.
6. The act runs counter to the progressive international economic community, those persons engaged in the import-export business.

SUMMARY OF RECOMMENDATIONS

The committee makes the following recommendations relative to the California Buy American Act:

Favorable recommendation of the provisions of AB 2424 (1963) which would repeal the California Buy American Act.

INTRODUCTION

AB 2424 (1963, Petris) would repeal the California Buy American Act, Sections 4300-4305 of the Government Code. The act provides for mandatory and inclusive preference for domestic goods in public purchasing. The two key sections of the act are Section 4303:

The governing body of any political subdivision, municipal corporation, or district, and any public officer or person charged with the letting of contracts for (1) the construction, alteration, or repair of public works or (2) for the purchasing of materials for public use, shall let such contracts only to such persons who agree to use or supply only such unmanufactured materials as have been produced in the United States, and only such manufactured ma-

terials as have been manufactured in the United States, substantially all from materials produced in the United States;

and Section 4304:

Every contract for the construction, alteration, or repair of public works or for the purchase of materials for public use shall contain a provision that only unmanufactured materials produced in the United States, and only manufactured materials manufactured in the United States, substantially all from materials produced in the United States shall be used in the performance of the contract. Any person who fails to comply with such provision shall not be awarded any contract to which this article applies for a period of three years from the date of violation.

The California Buy American Act was passed in 1933, during the great depression. Many states and the federal government passed similar statutes in this period. They were clearly intended to protect American industry and labor in a time of crisis. In the intervening years, most of the other states and the federal government have repealed or substantially amended their domestic preference acts. Only California and New Jersey retain acts which are mandatory and general in their application.

RECOMMENDATIONS

The committee recommends repeal of the Buy American Act as provided in AB 2424 (1963).

FINDINGS

In 1963, the Subcommittee on Economic Development was created to explore ways in which state government can participate in the maintenance of a healthy economy and ensure necessary future economic expansion. In this study the primary criterion for evaluating AB 2424 was whether the continuance or the repeal of the California Buy American Act would best aid the economy of the state.

COST TO TAXPAYERS

There are several compelling reasons for the repeal of the California Buy American Act. Foremost among these is the additional cost to the taxpayers that the act imposes. Significant economies could be achieved through foreign competition on public purchases. A case in point is the recent purchase of turbines and generators by the Sacramento Municipal Utility District. The low foreign bid was close to \$2 million (*or approximately 45 percent*) less than the low domestic bid. The utility district was able to make this foreign purchase because in this particular case the Buy American Act came into conflict with a federal treaty and was therefore inoperative.¹ On the other hand, the

¹ For further information in this point, see the Buy American section of the Final Report of the Subcommittee on State Purchasing of the Assembly Interim Committee on Ways and Means, 1965.

Bay Area Rapid Transit District was recently forced by the act to reject a foreign bid on equipment and accept a domestic bid which was 50 percent higher.

In another example, there was testimony before the committee that more than \$20 million could be saved on the California Water Project if foreign equipment suppliers could compete for contract awards. According to William E. Warne, State Water Resources Director, an estimated \$20.5 million could be saved on electric power generators, motors, turbines and pumps by accepting foreign bids during the next four years. In addition, Warne expressed the opinion that substantial savings could also be realized on foreign transformers and circuit breakers although a thorough cost analysis had not been completed.

The State Water Resources Director cited experiences with the San Luis Water Project to show that "the presence of foreign competition on federal and local agency equipment contracts has a salutary effect on domestic bid prices." From a cost standpoint, this key state agency found the Buy American Act "in conflict with the public policy which requires major public works projects to be let by competitive bidding."

Another public agency which cited hard evidence in demonstrating how tax dollars can be saved by foreign competition was the Los Angeles City Department of Water and Power. Because of its status as a charter city, Los Angeles has been free to purchase foreign equipment when advantageous to do so. Since 1955, the city's Water and Power Department has saved almost \$12 million by purchasing \$34.2 million of foreign equipment on which the lowest domestic bids totaled \$46.1 million.

Testimony before the committee also indicated that after exploring the possibility of purchasing lower cost foreign products, many local government units felt it necessary to drop this interest when reminded of the Buy American Act.

From these examples, it is clear to the committee that very substantial savings of tax dollars are prevented by the provisions of the Buy American Act. Precise determination of just how great these savings might be would require detailed study beyond the resources of the committee. A thorough analysis of purchases by the state and affected local government units, plus comparison with prices of foreign goods of comparable quality, would be a vast undertaking. But regardless of what exact savings would result from foreign competition for public purchases, California taxpayers could only benefit.

FOREIGN TECHNOLOGICAL ADVANCES

While American technology is second to none, there are specialized areas in which foreign industries are showing new leadership. Under the Buy American Act, public purchasing policies cannot be sufficiently flexible to take full advantage of these foreign innovations when they occur.

This point was raised in committee hearings by State Water Resources Director Warne when he referred to certain heavy equipment items needed for the State Water Project and stated that foreign bidding is "essential from an engineering standpoint." Warne explained that

although American manufacturers have had some experience with multi-stage pumps, they have never built pumps of the size and for the function required at the planned Tehachapi crossing. Pumps of the type needed have been developed successfully in Europe but, under existing law, are precluded from use in the state project.

Even with respect to products never before manufactured or used in this country and thereby subject to exemption as provided in the Buy American Act (as "materials which are of a class or kind which are not, or which are manufactured from materials which are not, produced in the United States . . .") the situation is unclear. There is always a distinct possibility that an American firm would submit a bid to produce an item, despite a lack of related experience, thus posing a threat of costly litigation and unnecessary delay in public projects. This was another point made by Water Resources Director Warne, who concluded: "application of the present Buy American provisions could deprive the state of the best techniques and facilities available for this critical work (the State Water Project)."

OUT-OF-STATE SUBSIDY

Another reason for repeal of the act is that it provides a subsidy for out-of-state business. A case in point is the heavy electrical equipment needed for the California Water Project. None of it will be manufactured in California. The estimated \$20.5 million extra the California taxpayers must pay will help industry and labor in other states. In view of the pressing problems of California's own economy, this act of generosity cannot be supported.

CONSTITUTIONAL AND LEGAL ASPECTS

The Buy American Act is incompatible with the spirit of the United States Constitution and its effect is contrary to national trade policy. Article I, Section 8, paragraph 3 of the Constitution gives Congress the exclusive power to regulate commerce with foreign nations. While it is probable that it is within the sovereign power of the state to exercise its purchasing function in any way it chooses, the committee believes that the exclusion of more than \$1 billion annually from foreign trade is in effect a regulation of commerce with foreign nations. That is, while the act perhaps does not violate the letter of the United States Constitution, it clearly violates the spirit.

Moreover, since the act discriminates against those persons engaged in the import-export business for their livelihood, it can be argued that the equal protection clause of the U.S. Constitution is thereby violated.

Conflict With GATT

The California Buy American Act on occasion has come in conflict with the General Agreement on Tariffs and Trade, an international trade agreement to which the U.S. government is a party.

The California Buy American Act conflicts with the provisions of the General Agreement on Tariffs and Trade specifically in paragraphs

4 and 8 (a) of Article III, Part 2, of GATT, which read in part as follows:

(Paragraph 4) "The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favorable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use."

(Paragraph 8a) "The provisions of this Article shall not apply to laws, regulations or requirements governing procurement by governmental agencies of products purchased for governmental purposes and not with a view to use in the production of goods for commercial sale."

In one case involving this conflict, *Baldwin-Lima-Hamilton Corp. v. Superior Court*, 208 A.C.A. 865 (October 24, 1962), the district court of appeals ruled that the Buy American statute was "unenforceable in the situation now before us since (it) conflicts with certain treaties and agreements and thus with the 'supreme law of the land.'²" The district court ruling substantiated an opinion by the State Attorney General which held that the purchase of equipment for use on the Canyon Power Project by the City of San Francisco was exempt from the Buy American Act.³

The 1963 Legislature enacted AB 1222 which exempted the purchase of electrical turbines and generators by the Placer County Water Agency from the provisions of the California Buy American Act after the agency was confronted with a legal dilemma on the one hand and excessive costs on the other. Due to high bids from domestic equipment producers, compliance with the act would have forced the water agency either to revise its entire financing program—requiring approval of new bonding authority by the voters—or to seek an avenue which would permit purchase of lower priced foreign equipment. AB 1222 was considered emergency legislation and the proponents of the measure argued that the successful completion of the Placer County Water Project rested with the passage of the bill. The measure won approval of the Legislature and was signed by the Governor. Although the bill contained a section which specified that the specific exemption made by the measure was in no way to be construed as changing or modifying the policies contained in the Buy American code sections, this action serves as an example of the multifold problems posed by the act.

EXPANDING FOREIGN TRADE

The committee also believes that the California economy would be best served by the repeal of the act. Essentially, the committee finds that the best opportunities for expanding the economy beyond the normal expected growth is in increased foreign trade. California faces a unique economic problem. Because of an unprecedented in-migration approxi-

² See transcript of hearing, Assembly Interim Committee on Ways and Means Subcommittee on State Purchasing, January 10, 1964.

³ The suit in connection with the Canyon Power Project cost the City of San Francisco \$68,000 a week in lost Hetch Hetchy electric power sales during the months spent in litigation for a total of more than \$3 million.

mately 200,000 new jobs must be created each year just to keep pace. The California economy must sustain a rate of expansion adequate to provide these jobs. Increased foreign trade is one of the most promising means of accelerating the rate of economic expansion.

The difficulty of this enormous task is magnified by present and anticipated curtailment of federal defense spending in California. As this committee has pointed out elsewhere,⁴ the state's economic growth in recent years has been largely dependent on defense spending. But with defense needs changing, defense expenditures will decline or level off. The committee has concluded that a variety of new or increased economic activities must be developed to compensate for this loss of federal dollars. Increased foreign trade is one of the most readily available and highly productive of such compensators. The state should take appropriate action to increase foreign trade.

California is now heavily dependent on foreign trade for economic stimulation. It is the largest export state in the nation and has a favorable balance of trade.⁵ It is estimated that 400,000 Californians now depend directly or indirectly on this foreign trade for their jobs. And to place this in perspective, the California economy in general, and its foreign trade in particular, are larger than those of most of the nations of the world.

The Buy American Act is a significant obstacle to increasing California's foreign trade. It is estimated that the expenditures of the public agencies to which the act is applicable exceed \$1 billion annually. The act simply excludes this substantial business from foreign trade, resulting in most cases in increased costs to the state. In addition, the act produces an economic "ripple effect." Although it applies to public purchases only, its effect on the economy in general is much broader. It often discourages substantial state suppliers from stocking foreign goods since to do so would be to maintain a dual inventory—one for public customers and one for private customers.

National Trade Expansion Policies

The steady trend of national policy since 1934 has been toward "liberalized" trade. Tariffs have been progressively lowered, reciprocal trade agreements negotiated, international trade organizations sponsored, and greater and greater flexibility built into the economic partnership of the nations of the free world. The executive and legislative branches of the national government under both political parties have recognized the dependence of the national economy on world trade and have taken positive steps to foster it. Yet the California Buy American Act stands unaffected by the course of events and, in fact is contrary to them.

This incompatibility between national policy and state law and its detrimental consequences are illustrated by the fact that California's Buy American Act has been specifically cited by participants in the "Kennedy Round" tariff discussions as one of the items frustrating agreement.

⁴ See Impact of Federal Spending in California, final report of the Subcommittee on Economic Development, Assembly Interim Committee on Ways and Means.

⁵ Approximately \$1.9 billion exports annually against \$1.7 billion imports.

Foreign Retaliation

The act encourages retaliation by foreign nations—in effect, reciprocal trade barriers—further frustrating California's attempts to increase its foreign exports. For example, on September 25, 1963, the Japanese Cabinet amended their governmental purchasing policy of competitive bidding without regard for national origin by adopting Cabinet Order No. 336 which provides that competitive bidding may be limited to specifically designated bidders. This new policy obviously permits the Japanese government to discriminate very selectively in its purchasing, against, for example, California bidders only. And Japan purchases approximately 30 percent of California's exports.

California, like the United States as a whole, enjoys a comfortable balance of trade with Japan. Exports of \$566 million during 1964 exceeded imports of \$447 million by \$119 million.⁶ Japan's new policy has never been applied but it demonstrates the real possibilities of retaliation.

In conclusion, one of the committee's most fundamental objections to the anachronistic Buy American Act is that it is an obstacle to the rapid increase in foreign trade upon which California will become progressively more dependent for continued economic expansion.

SUMMARY

In summary, the committee recommends repeal of the Buy American Act because it will lower the cost of government to the heavily burdened taxpayer, it will remove a serious obstacle to badly needed expansion of the state's economy; and it will end the damaging incompatibility between bipartisan national trade policy and state law.

⁶ Transcript of San Francisco hearing, Subcommittee on Economic Development, November 9, 1964.

APPENDICES

1. Minority Report of Assemblymen Lanterman and Gaffney

February 16, 1965

To the Members of the Assembly Interim Committee
on Ways and Means

Gentlemen:

Transmitted herewith is a minority report of the Subcommittee on Economic Development of the Assembly Interim Committee on Ways and Means on the subject of the California "Buy American Act."

Assembly Bill 2424 (Petris, 1963) constitutes the vehicle for the subcommittee's study of this subject matter.

Respectfully submitted,

FRANK LANTERMAN
EDWARD M. GAFFNEY

Assembly Interim Committee on Ways and Means Subcommittee on Economic Development Minority Report

SUMMARY OF FINDINGS

The members of the committee signing this report make the following findings with respect to the California "Buy American Act":

1. Repeal of the act would cause serious disruptions in the California economy, further complicating California's extreme unemployment problem which is presently 20 percent above the national unemployment average.

2. The California "Buy American Act" does not increase the cost of government when the tax generation of governmental purchases of domestic materials is taken into consideration. As an example, a \$100,000 purchase by the federal government of domestic material, generates 36.014 percent of this amount in taxes. Due to the effect of the velocity of money, every dollar spent by the State of California and its political subdivisions on California produced goods stimulates the California economy 12 times the original expenditure. Purchases of foreign produced goods has the effect of depressing the California economy by 12 times the cost of these goods.

3. Over the past 10 years California's foreign trade has substantially increased to the point where it stands as first in the nation in volume of exports and second in the volume of imports. This has been accom-

plished in an orderly and constructive manner while the California "Buy American Act" has been in existence. Continued expansion is foreseen in California exports and imports regardless of the status of the act. The argument that repeal of the act would stimulate California industries has only a limited application. No evidence has been submitted showing how California industries would substantially benefit.

4. The State of California and its political subdivisions benefit in many ways from purchases made of out-of-state manufactured items by collection of the sales and use tax, property tax and other taxes. The purchase of foreign manufactured goods do not bring about as great tax revenues to the State of California as domestic manufactured items.

5. The General Agreement on Tariffs and Trade (GATT) regulating the foreign trade activities of over 40 major nations in the world recognizes the principle that governmental agencies' purchasing policies are beyond the scope of normal trade relationships. For many years and even before the existence of the GATT treaty, other foreign countries, as well as the United States, have had laws or regulations giving preference to domestically produced items when purchased for governmental purposes. These laws and regulations are not considered as unusual or provocative to necessitate retaliatory measures.

6. Because of the monopolistic practices of most foreign countries, especially Japan, California industries are placed at a distinct disadvantage in foreign trade. The major Japanese industries are large cartels subsidized by the Japanese government bringing about a business climate entirely opposed to the principle of "American free enterprise" and producing high, fixed domestic prices, artificially controlled low export prices, artificial allocations, high tariffs, artificially low shipping rates, dumping practices and business practices repugnant to the "American way of business." The Japanese government both at the national and local level has long practiced a policy of purchasing domestic manufactured products exclusively for governmental use. While there is no specific law, this administrative policy is strictly adhered to in the purchase of goods for government use.

7. The federal government in negotiating the General Agreement on Tariff and Trade (GATT) recognized the principle that the states could restrict their purchases to domestic materials. The federal "Buy American Act" applies to purchases by the federal government for federal projects and is an indication that the federal government recognizes the desirability of the principle of using tax moneys to purchase domestic materials. The California "Buy American Act" is in agreement with the principle of the federal "Buy American Act."

8. The California "Buy American Act" has been a statute of the State of California for over 30 years (since 1933) with a minimum of litigation. Recent court decisions concerning the act have clearly outlined the scope of the law precluding the necessity for further litigation.

9. Foreign manufactured generators, pumps and valves, are all machined with metric system measurements. In case of national defense emergency or catastrophe, replacement parts could not be manufactured in America. All American machine tools are calibrated on the decimal system and cannot reproduce metric based tolerances. On the

basis of national defense alone it would be suicidal to so jeopardize the entire State Water System so vital to the very existence of the people and their industry.

10. The crisis concerning the United States in its critical imbalance of international gold payments and the President's plea for increased consumption of domestic products makes repeal of the California "Buy American Act" unthinkable.

SUMMARY OF RECOMMENDATIONS

The members of the committee signing this report make the following recommendations relative to the California "Buy American Act":

1. Unfavorable recommendation of AB 2424 (1963) which provides for repeal of the California "Buy American Act."
2. Amend Sections 4300-4305 of the Government Code to title these sections the "California Job-preservation Act."

INTRODUCTION

The Assembly Ways and Means Interim Subcommittee on Economic Development held hearings to consider AB 2424 (Petris, 1963) at the Sheraton-Palace Hotel on November 9 and 10, 1964, in San Francisco. A review of the testimony presented at these hearings showed that 11 points were presented to support the passage of AB 2424 (Petris, 1963). These points are summarized in the following section entitled, "The California 'Buy American Act' Arguments—Pro and Con." Also listed with these points is subject matter introduced by those opposing the passage of AB 2424 (Petris, 1963).

RECOMMENDATION

1. It is the recommendation of the members of the committee signing this report that the preponderance of evidence supports the retention of the California "Buy American Act."
2. The members of the committee signing this report recommends that no action be taken on AB 2424 (Petris, 1963).

THE CALIFORNIA "BUY AMERICAN ACT"

Arguments—Pro and Con

ARGUMENT FOR REPEAL

The California "Buy American Act" is old fashioned and out of date, having been passed during the great depression in 1933 to combat unemployment. There are only two states in the United States that have "Buy American Act" statutes.

ARGUMENT FOR RETENTION

Unemployment is still California's number one problem. In November 1964 California unemployment rate was 6.5 percent which was 20

percent above the national unemployment average. Some 21 states and territories give some preference to domestically produced goods in their purchasing policies. The loss of the substantial business done with the State of California and its political subdivisions would mean bankruptcy for many California businesses further complicating the unemployment problem. Because California is unique in being a coastal state, with a dynamic, expanding economy and desirable port facilities, the combination of which is not found in other states, it has attracted greater imports.

ARGUMENT FOR REPEAL

The California "Buy American Act" forces state governmental agencies to pay considerably more for the products which they purchase and in effect increases taxes. The California "Buy American Act" raises the cost of government.

ARGUMENT FOR RETENTION

The California "Buy American Act" does not increase the cost of government when the tax generation of governmental purchases of domestic materials is taken into consideration. A \$100,000.00 purchase by the federal government of domestic materials generates 36.014 percent of this amount in taxes.

ARGUMENT FOR REPEAL

As a great majority of the items purchased by the State of California and other governmental agencies in the state under the provisions of the California "Buy American Act" are manufactured out of the State of California at a price higher than offered by foreign manufacturers the taxpayers in the State of California are paying a penalty to support manufacturers out of the State of California.

ARGUMENT FOR RETENTION

Well over 90 percent of all reinforcing steel produced in the State of California is consumed in the state. The State of California does benefit in many ways from purchases made of out-of-state manufactured items by the sales and use tax, property tax and other taxes. An economic benefit to any part of the United States is a benefit to every part.

ARGUMENT FOR REPEAL

If the California "Buy American Act" is retained Japan and other foreign countries will retaliate with similar or more restrictive laws or regulations against the United States.

ARGUMENT FOR RETENTION

The General Agreement on Tariffs and Trade (GATT) regulating the foreign trade activities of over 40 major nations in the world recognizes the principle that governmental agencies purchasing policies are beyond the scope of normal foreign trade relationships. For many

years and even before the existence of the GATT Treaty, other foreign countries as well as the United States have had laws or regulations which are not considered as unusual or provocative to necessitate retaliatory measures.

ARGUMENT FOR REPEAL

The repeal of the California "Buy American Act" would hurt some industries but would stimulate trade in others so that eventually California industries as a whole would do a greater volume of business creating more jobs and greatly stimulating the whole California economy. California must buy if it is going to sell in international trade.

ARGUMENT FOR RETENTION

California is the nations largest exporting state and the second largest importing state with exports and imports increasing each year and has a favorable balance of trade. Progress in California foreign trade in the last 10 years has been significant and has been accomplished in a constructive and orderly manner. The argument that the repeal of the California "Buy American Act" would stimulate California industries is highly theoretical. No concrete evidence has been submitted showing how California industries will be benefited.

ARGUMENT FOR REPEAL

To bring about peace in the world we need greater foreign trade. The modern world must be built on the principle of free trade. The California "Buy American Act" is opposed to this principle.

ARGUMENT FOR RETENTION

American manufacturers support the principle of "free" foreign trade. Because of the monopolistic practices of most foreign countries, especially Japan, American manufacturers do not consider foreign trade today "free trade." The major Japanese industries are large cartels subsidized by the Japanese government bringing about a business climate entirely opposed to the principle of "American free enterprise" and producing high, fixed domestic prices, artificially controlled low export prices, high tariffs, artificially low shipping rates, artificial allocations, dumping practices, and business practices repugnant to the "American way of business life." American manufacturers are not competing against "Japanese free enterprise;" they are competing against the Japanese government and people.

ARGUMENT FOR REPEAL

Article I, Section 8, Clause 3 of the Constitution of the United States confers upon the federal government the power to regulate commerce with foreign nations. The federal government administers tariffs and has a federal "Buy American Act" to adequately protect United States manufacturers. The State of California has a "Preference Act" to protect California manufacturers. Under these circumstances why is it necessary to retain the California "Buy American Act"?

ARGUMENT FOR RETENTION

The federal government in negotiating the General Agreement on Tariff and Trade (GATT) in Section 5 of Article 2 of Part 3 recognized the principle that the states could restrict their purchases to domestic materials. The federal "Buy American Act" applies to federal projects only and is an indication that monies to purchase domestic materials. The California "Buy American Act" is in agreement with the principle of the federal "Buy American Act" and is simply a declaration of policy by the State of California that it is to the best interests of the state that tax monies be spent on domestic materials.

ARGUMENT FOR REPEAL

The California "Buy American Act" is in conflict with public policy requiring competitive bidding to insure economy in the expenditure of public funds. The act restricts the field of bidders to domestic purchasers and thereby encourages the inflation of contract prices.

ARGUMENT FOR RETENTION

Competition among domestic producers of material for state agencies is extremely keen. Governmental business is aggressively sought after. The California Division of Highways, Highway Cost Index is comparable to the United States Bureau of Public Roads Composite Mile Index indicating that the State of California is obtaining extremely competitive bids, in purchasing domestically produced materials.

ARGUMENT FOR REPEAL

Certain types of foreign manufactured equipment is better on quality and performance. The state agencies should be able to take advantage of better products.

ARGUMENT FOR RETENTION

If certain types of foreign manufactured equipment is better in quality and performance, the state agencies should be allowed to purchase these items. The California Legislature in past years, has recognized this situation by excluding scientific and medical instruments, certain types of office machines and supplies, sewing machines and a certain type of printing press.

ARGUMENT FOR REPEAL

The retention of the California "Buy American Act" will lead to considerable legal litigation which will delay many of our vitally needed public projects.

ARGUMENT FOR RETENTION

The California "Buy American Act" has been a statute of the State of California for over 30 years (since 1933) with a minimum of litigation. Recent court decisions concerning the California "Buy American Act" have clearly outlined the scope of the law procluding the necessity for additional litigation.

ARGUMENT FOR REPEAL

The California "Buy American Act" violates the principle behind the Trade Expansion Act of 1962 and United States foreign trade policy since 1934 when the Reciprocal Trade Act was passed.

ARGUMENT FOR RETENTION

The federal government has retained the federal "Buy American Act" in spite of the United States foreign trade policy since 1934 and the Trade Expansion Act of 1962 because the principle has been well established that the matter of governmental purchases both federal and state are in a category entirely different than commercial trade. Signatories to the General Agreement on Tariffs and Trade (GATT) recognized this principle when the treaty was signed.

2. Minority Report of Assemblyman Charles J. Conrad

February 16, 1965

I cannot concur in the findings and recommendations of the Ways and Means Subcommittee on Economic Development with respect to the California Buy American Act.

It is inconsistent to deny the use of foreign labor in California agriculture, insisting that American labor at higher costs be utilized, then permit state and local governments to purchase goods produced at lower cost by foreign labor. I find many objectional parts to the federal government's G.A.T.T. program. Part of the administration's "War on Poverty" program is concerned with economically depressed areas. Some such areas have been brought about by G.A.T.T. policies which ruined certain American industries, especially in New England. An elimination of the Buy American Act could produce to a lesser degree a similar situation here in California.

There may be individual items for which there is not a comparable American product, but such occasions could be dealt with by specific exemption as was done in a previous session.

A blanket repeal of the Buy American Act could have a serious impact on the highly paid and highly skilled labor force here in California.

3. Remarks of Assemblyman Joseph M. Kennick

Kindly let the subcommittee report show that I approve of the findings and recommendations with the following reservations:

1. To repeal the act, outright, would operate to the disadvantage of California and U.S. business and labor interests, a disadvantage that would not appear to be immediately offset by advantages to the economy and the taxpayers.
2. If it is to the benefit of the state and the nation that the act be repealed, such benefit should be achieved in orderly fashion and should

not be taken at the specific expense of business and labor sectors which have operated under the present law for 22 years and are accustomed to the market situation which the act has created.

3. Repeal should be accomplished by a phasing program. For example, the state might adopt law comparable to the restrictions that the federal government imposes upon itself in its purchase agreements; that is, law which grants a percentage favoring of domestic bids; foreign bids may be accepted only if they do not fall below a given percentile of the domestic bids. The law could provide for an annual reduction of the percentage figure, until such time as the Act would be, in effect, repealed. This approach would meet the spirit of the subcommittee recommendations but would provide a cushion against the impact of repeal upon the economic communities most likely to be affected.

INTRODUCTION

The Subcommittee on State Purchasing was established to study and report on nine bills and resolutions concerning state purchasing policies and procedures which had been referred to the Committee on Ways and Means by the Committee on Rules. Similarities among the nine bills and resolutions suggested their division into four categories: (1) Investigation of procedures under the State Purchasing Act; (2) Consideration of changes in the state's Buy American Act; (3) Consideration of changes in the state's Buy California Act; and (4) Investigation of change orders made pursuant to the State Contract Act.

STATE PURCHASING PROCEDURES

HR 215 (1963, Mulford) directed the subcommittee to investigate the property acquisition procedures of the various departments and agencies of state government. HR 539 (1963, Lanterman) directed the subcommittee to investigate the procedures followed in the bidding on and awarding of contracts by the State Purchasing Agent*; to compile a list of bidders on contracts where only one or two bids were submitted; and to investigate the procedures for establishing specifications for bids let by the State Procurement Officer.

RECOMMENDATIONS

1. The committee recommends that the Legislature place primary responsibility for maximizing competition on the state's purchases with the Director of General Services and that he be directed to prepare a public information program which includes information on the kinds of supplies the state purchases, the procedures the state follows in purchasing, and the means by which potential suppliers may become qualified bidders as partial performance of this responsibility and that he report on this program to the Legislature not later than June 1, 1965.

2. The committee recommends that the Legislature direct the Director of General Services to formulate and enforce rules and regulations to insure competition on state purchases of less than \$1,000 and to report to the Legislature on such rules and regulations not later than June 1, 1965, and to make such rules and regulations available to any interested party on request.

3. The committee recommends that the Legislature direct the Director of General Services to specify the tests which prospective suppliers must meet to become prequalified bidders and report to the Legislature on such tests and the necessity for them not later than June 1, 1965, and make such information available to any interested party on request.

4. The committee recommends that the Director of General Services and all others who are responsible for the specification of the quality of state purchases refine the use of "brand-named specifications" in

* This position has since been renamed State Procurement Officer.

three respects: (1) that the use of two or more brand-named products which together set a standard is preferable to the use of one; (2) that "brand-named specifications" be used only in cases where it is known that one or more other products will meet the standards set by the brand-named products; and (3) that if only the one product is known to meet the standard of quality desired, the purchase should be made under Section 13402 of the Government Code which exempts from competitive bidding cases in which the department and the agency agree that "an article of a specified brand or trade name is the only article which will properly meet the needs of the agency" and Section 13403 which requires that in such cases a report of that determination be made to the Board of Control.

5. The committee recommends that increased use be made of "end product" or "performance" specifications to an extent consistent with the primary requirements of efficiency and economy.

6. The committee recommends that the Legislature make the Director of General Services responsible for establishing and enforcing statewide purchasing standards and that greater consolidation of purchases be effected through these standards; that the agencies retain the initial power to specify the quality of purchases to be made for them, but that if the State Procurement Officer finds these specifications to be inconsistent with the purchasing standards established, he may change them as necessary to make them consistent, with prior notice to the agency concerned; and that if the agency finds that the changes will cause the supplies and equipment to be purchased to not meet its needs, it may appeal these changes to the Director of General Services who shall, after hearing both sides, make a decision binding on both.

FINDINGS

In its investigation the committee focused on three major problem areas: the maximization of competition; the exercise of discretion in the specification of the quality of state purchases; and the centralization of purchasing policymaking. All of the committee's recommendations refer to these three areas.

MAXIMIZING COMPETITION

The basic purchasing policy of the state in competitive bidding. Competition insures that the state receives the highest quality for the lowest price. The committee has found that substantially less competition exists in state purchasing than is desirable. For example, in response to the direction in Assemblyman Lanterman's HR 539 to compile a list of bidders on contracts where only one or two bids were submitted, the State Office of Procurement informed the committee that on 13 of its 54 annual statewide contracts in 1963, only 1 or 2 bids were submitted. These 13 annual contracts on which there was little or no competition amounted to \$6,413,288.73. The committee recognizes that in certain cases there may be good reason for this lack of competition, but the relatively high incidence of noncompetitive purchases is considered to be a problem.

No agency of state government is responsible for maximizing competition. The state is wholly dependent on the normal operations of the free

enterprise system. Also, the State Office of Procurement operates in such a way that it is up to the prospective supplier to take the initiative in being placed on the state's list of qualified bidders. It is these bidders who regularly receive invitations to bid on state purchases. All of the subcommittee's witnesses agreed that many potential suppliers are neither aware that the state buys the kinds of goods they offer nor how to go about selling their goods to the state. No agency operates a program to inform these potential bidders of the opportunities for doing state business. The facts that no agency is responsible for maximizing competition, that the initiative lies with the bidders, and that no public information program exists explain in large part the lack of competition on roughly one-quarter of the state's major statewide purchases.

The subcommittee believes that the placement of responsibility for maximizing competition and the introduction of an inexpensive and effective public information program working through existing business or trade organizations would best serve to stimulate greater competition on state purchases and would result in substantial savings to the state.

The committee has found another element that contributes to less competition than is desirable. Competitive bidding is required by statute only on purchases in excess of \$1,000. Only 10 percent of all purchase orders are in amounts exceeding \$1,000 and this 10 percent of purchase orders accounts for only 40 percent of total purchasing expenditures. The degree of competition in the remaining 90 percent of purchase orders, accounting for 60 percent of total purchase expenditures, is not covered by the statutes and is wholly a matter of administrative discretion. Although the State Office of Procurement attempts informally to insure competition in this important area, the committee believes that an explicit policy of maximizing competition and the appropriate administrative rules and regulations would be more successful.

A final problem connected to competition concerns the prequalification process. Prequalification is an efficiency device by which the State Office of Procurement investigates the suitability of firms wishing to do business with the state. After prequalification, the firms are permanently placed on the State Office of Procurement's mechanized list of bidders and automatically receive notice of all contracts to be let in their respective areas of specialization. The problem is that prequalification depends upon tests which are wholly a matter of administrative discretion. Neither the Legislature nor the firms in question know the content of these tests. Thus, they are not only by definition arbitrary but cannot be evaluated as to effectiveness. This situation should be corrected.

SPECIFYING QUALITY

The next problem concerns the exercise of discretion in the specification of the quality of state purchases. The State Purchasing Act provides that the individual agencies may specify the quality of the supplies and equipment that are purchased for them by the State Office of Procurement. They operate under a single statutory limitation: that no specification may be drafted "in such a manner as to limit the bidding directly or indirectly to any one bidder." Thus, this is an unusually broad area of administrative discretion. And it is an area

particularly subject to intentional or unintentional discrimination in favor of or against any product or bidder.

The committee has not found any practice which is inconsistent with the best interests of the state. However, the committee has found that the practice of using brand named products to indicate a standard of quality in lieu of actually specifying the standard desired is conducive to unintentional discrimination. This practice is an efficiency device which saves the state the substantial expense of drafting detailed specifications on each purchase. Instead, the state specifies "X" product or its equal. The committee does not disapprove of this device but believes its use should be more rigorously circumscribed to prevent unintentional discrimination. The committee's recommendations are intended to mitigate the possibility of such unintentional discrimination.

The committee has also found that the more general the specification, the more competition is possible and that "end product" or "performance" specifications, which define the purpose the article to be purchased must serve or the function it must perform, are more general than "method" specifications which define how the article is to be constructed, and "brand-named specifications." The committee recommends increased use of the more general specifications.

POLICYMAKING

The final problem concerns the centralization of purchasing policy-making. The committee has found that significant economies could be achieved through statewide purchasing standards which would permit greater consolidation of purchases. The present law permits the agency to specify the quality of the articles to be purchased although the State Office of Procurement may disagree that the specification "best serves the interests of the state" and may request a ruling by the Board of Control. However, rulings by the Board of Control are requested in very few instances and the heavily burdened board is an inappropriate agency to establish and enforce statewide purchasing standards. The committee finds that the effective dispersal of the power to specify the quality of purchases throughout the agencies of state government and the inability of any agency to establish and enforce statewide purchasing standards results in a relatively inefficient and uneconomical purchasing system. Therefore, the committee recommends the centralization of this function by making the Director of General Services responsible for statewide purchasing policies through which greater consolidation of purchases and therefore greater economies can be effected.

THE BUY AMERICAN ACT

AB 2424 (1963, Petris) would repeal the state's Buy American Act.* HR 502 (1963, Petris) directed the committee to study the subject of AB 2626 (1963, Petris) which would make the provisions of the Buy American Act inapplicable to purchases by political subdivisions made with a view to use in the production or transmission of goods for commercial sale. HR 26 (1963, Dills) directed the subcommittee to study the subject of exempting from the provisions of the Buy American Act goods manufactured overseas in whole or in part from minerals produced in the United States.

RECOMMENDATIONS

1. The committee recommends that the Legislature approve AB 2626 (1963, Petris) which would exclude from the California Buy American Act those applications which conflict with the General Agreement on Tariffs and Trade, a federal treaty. The committee recommends that the language of AB 2626 be modified so that it will conform precisely with the language of the General Agreement on Tariffs and Trade.
2. The committee makes no recommendation on HR 26.

FINDINGS

The committee has found that the application of the California Buy American Act is general and inclusive and that in those cases where it applies to governmental purchases made for the purpose of "resale or for use in the production of goods for sale," it conflicts with a federal treaty, the General Agreement on Tariffs and Trade (GATT). In the case of such conflicts, the state law is clearly inoperative according to Article VI of the United States Constitution which provides that "... treaties made ... under the authority of the United States, shall be the supreme law of the land. ...". The Attorney General of the State of California and the California First District Court of Appeals, in the case of *Baldwin-Lima-Hamilton v. The Superior Court in and for the City and County of San Francisco*, concur in this view.

The committee has found that there is a certain amount of urgency connected to the passage of this measure. The conflict between existing state law and the supreme law of the land makes public procurement difficult. Those who are responsible for public procurement are subject to suit by foreign bidders if they follow the California Buy American Act and by domestic bidders if they follow the GATT. This situation needs clarification which the committee's recommendation is intended to supply.

The language of AB 2626 reads: "This article does not apply to purchases by a political subdivision, municipal corporation, or public

* After the subcommittee had studied the subject of AB 2424 it was transferred to the Subcommittee on Economic Development of the Assembly Interim Committee on Ways and Means. Therefore, no recommendations pursuant to HR 502 will be made in this report.

district of products purchased with a view to use in the production or transmission of goods for commercial sale." In order to conform to the supreme law of the land, the committee recommends that this bill be amended by the adoption of the precise language of the federal treaty: "This article does not apply to purchases of materials or products made with a view to resale or use in the production of goods for sale."

THE BUY CALIFORNIA ACT

AB 2111 (1963, Meyers) would limit bidders on contracts let by the state or any of its political subdivisions to licensed contractors; would give a 10-percent bid-price preference to bidders who furnish materials supplied by a dealer who is a resident of California and who has paid state and county taxes on the kinds of materials called for in the contract for at least the preceding two years. AB 2287 (1963, Meyers) would apply only to contracts let by public agencies for manufactured wood cabinetwork and would require that the contractor do business in California; that wages paid by him be not less than prevailing minimum wages as determined by the Director of Industrial Relations; that his employees not work in excess of eight hours a day or 40 hours a week unless allowed by a collective bargaining agreement; and that his working conditions comply with applicable law. AB 2953 (1963, Meyers) would apply only to municipal utility districts and would give a 5-percent bid-price preference to bidders who furnish California manufactured supplies and materials.

RECOMMENDATIONS

1. The committee recommends that the Legislature disapprove AB 2111, AB 2287, and AB 2953.

FINDINGS

The committee has found that AB 2111, AB 2287 and AB 2953 all create a legal preference for California manufacturers and dealers. The committee believes that such legal preference is incompatible with Article I, Section VIII, paragraph 3 of the United States Constitution which gives to Congress the exclusive power to regulate interstate commerce. If these measures do not violate the letter of the Constitution, the committee believes they clearly violate its spirit.

The committee has also found that the establishment of such legal preference in California would probably lead to retaliatory legislation in the other states which would in turn lead to a pattern of protection throughout the United States substantially hampering the free flow of goods and services among the states, as well as be injurious to the economy of California which is a major export state. Beyond the above considerations, these measures would be economically repressive within the California economy and would deteriorate its strength and future growth. Because their legal and economic consequences are undesirable, the committee must recommend disapproval of these measures.

CHANGE ORDERS

HR 334 (1964, Porter) directed the committee to study the subject of change orders and other modifications of construction contracts let pursuant to the State Contract Act. The act is administered by three major departments—the Department of Water Resources, the Department of Public Works, and the Department of General Services, Office of Architecture and Construction.

RECOMMENDATIONS

1. The committee recommends that the Legislature direct the departments to review the adequacy of their construction design work and to take appropriate steps to raise the quality of such design work to the level defined in Section 14270 of the State Contract Act; “full, complete, and accurate plans and specifications and estimates of cost, giving such directions as will enable any competent mechanic or other builder to carry them out.”

2. The committee recommends that the Legislature direct the departments to review their methods and procedures for consultation, cooperation, and joint planning in advance of construction with other public agencies which have an interest in the construction project and to take appropriate steps to improve this process in terms of reducing the number of change orders caused by the requests of other interested public agencies.

3. The committee recommends that the Legislature direct the departments to adopt as part of their administrative rules and regulations relative to change orders a maximum limit on the amount of price adjustment in the case of changes in a contract item or the amount of a price agreement in the case of extra work, such maximum limit to be the departments’ estimates of the cost of such work according to their regular “cost plus” formula.

4. The committee recommends that the Legislature direct the Legislative Analyst to prepare an annual review of change orders and related matters in the three departments to provide the Legislature with sufficient information for a comprehensive and orderly scrutiny of this process, such review to be included in his annual capital outlay report.

FINDINGS

The committee has found that in general the change order process is well regulated by the statutes and by the administrative rules and regulations adopted pursuant to the statutes. The departments’ power to make changes in construction contracts is necessary because no plan is perfect and unforeseeable circumstances do occur. However, the committee has found that an excessive number of change orders result from errors and omissions in the plans and specifications of construction projects. This indicates that inadequate attention may be given design

work. Design is admittedly done hastily in some cases, resulting in errors and omissions. The intent of Section 14270 of the State Contract Act is unambiguous: "full, complete, and accurate plans and specifications" must be prepared and approved by the director of the department before entering into any contract. The subcommittee has found that the departments are achieving somewhat less than full compliance with this section of the law.

The requests of other public agencies which have an interest in the construction project is another major cause of change orders. Each department now seeks advance cooperation with these public agencies. But the rate of occurrence of change orders from this cause indicates that this goal is inadequately pursued. Regular procedures should be established in each department to identify the interested agencies early in the design stages of a project, to identify all of their needs and to arrive at agreement on all points of common interest. If the problem stems from lack of cooperation on the part of the other public agencies, various alternatives are open to the departments. But beginning a project before all points of common interest have been agreed on is an alternative unacceptable to this committee.

Another problem concerns the administrative discretion to negotiate price with the contractor in the event of a change order. There are two basic types of change orders. When the department makes a change in a contract item, usually an increase or decrease in the quantity originally specified, under certain circumstances the contract item price may be adjusted. The adjustment is sometimes but not always made according to a formula specified in the department's regular contract provisions. When the department adds extra work to the contract, the price of such work may be agreed to between the department and the contractor. The problem is that there are no limits placed on such price negotiations.

All of the departments have a regular formula for "cost plus" payments on change orders. In the Department of Water Resources and the Department of Public Works, it is called "force account" and is the sum of all the contractors' necessary expenses in connection with the work plus a markup of 20 percent on the labor costs and 15 percent on material and equipment costs to cover the contractors' overhead and profit. In the Department of General Services' Office of Architecture and Construction it is called "time and materials" and is the sum of all the contractors' necessary expenses plus a markup of 16 percent on the total (the 16 percent was set on the basis of 10 percent for profit, 5 percent for overhead, and 1 percent for the performance bond).

The committee concurs with the view that the "cost plus" arrangement complements the competitive bidding principle in that it maintains the status quo, that it does not affect the contractors' opportunity to make a profit on the whole project. However, negotiation of price sometimes permits the state to make savings below the cost of the work figured at the "cost plus" formula. For this reason, the present alternative methods of payment—"cost plus" and negotiation—should be maintained. But a maximum limit on the amount of a negotiated price should be established for the state's protection.

The committee recommends that the departments establish by administrative rule a maximum limit defined by the departments' estimates of cost according to the regular "cost plus" formula. That is, in no case should contractors be paid more than the "cost plus" figure for changes in the contract made by the departments.

The final problem, and the most general one, which the committee considered was the relative invisibility of the change order process. The departments issue change orders on their own authority. The auditors of various levels of government are involved in the process but their interest is necessarily limited. The committee believes that because of the unusual discretion vested in administrators in this process, some provision for regular legislative review should be made. The committee recommends that the Legislative Analyst be directed to prepare this review and define its content according to his best judgment for the consideration of the 1966 Session of the Legislature and each session thereafter.

MINORITY REPORT

ASSEMBLYMAN FRANK LANTERMAN

February 18, 1965

Relative to the final draft of the Assembly Interim Committee on Ways and Means Subcommittee on State Purchasing regarding the section on the Buy American Act, the recommendations relative to amending the current existing Buy American Act appear to do considerable violence to the act based upon some erroneous assumptions made in the report. It certainly would appear that in view of the latest employment figures released from the Division of Labor Statistics and Research showing that there was a decrease of 4,500 manufacturing jobs in 1964 over 1963, that any procedure that would have an adverse effect upon employment which an amendment to this act would have would appear to be extremely ill advised.

In reviewing some basic material along the lines of discussing the California Buy American policy, it is definitely not clear whether GATT is a treaty or letter of understanding and in quoting from some of the material we find considerable support for the fact that this matter has not been clearly delineated and, therefore, until such time as the United States Supreme Court's decision is reached on the matter, there should not be any violence done to the California act.

In the so-called Allis-Chalmers case—"Although the issue was not squarely argued on appeal, a California district court of appeal held that the city's bid invitation was defective in that it merely complied with the California Buy American Act without providing for possible conflict with federal treaties." In the proposed amendment suggested in the tentative draft, the language is proposed which only covers one facet of the GATT treaty and I quote again: "GATT, however, provides three relevant escape clauses, only one of which was discussed by the Baldwin court."

It also would appear that the proposed suggested language leaves considerable to be desired because of the hazy language that currently exists. Again, taking from the Stanford Law Review discussion of the matter, the following is quoted:

"Although the interpretation of 'commercial sale' is relatively clear, the meaning of the phrase 'governmental purposes' is not. A recent unpublished California Attorney General's opinion interprets 'products purchased for a governmental purpose' very broadly. This opinion would read the exception clause to cover virtually any purchase by a government agency 'excepting those relatively infrequent occasions where a government agency . . . is engaged in a clearly commercial enterprise. This interpretation of the governmental purchases exception has been refuted in practice by the San Francisco Public Utilities Commission, which

maintains that whenever a municipality is performing a proprietary, as opposed to a governmental, function the exception is inapplicable."

Following through to the suggestion that to do violence to our currently existing act would be a matter of creating additional confusion until the United States Supreme Court has taken action, I continue quoting from the Law Review to the effect: "Therefore, unless and until a court follows the suggestion that state Buy American laws are an unconstitutional restraint on foreign commerce, attention will have to be focused on the 'commercial resale' phrase, because every undertaking by a municipal corporation within its statutory and constitutional powers is for a governmental purpose."

Still following through on the Law Review summary and to the effect that a subcommittee report did not deal with all facets of GATT, nor in the Baldwin case were any of the basic issues argued, I further quote: "The third argument that the California Buy American Act is not superseded by GATT relies on Section 1 of the Protocol of Provisional Application, which provides that Part II of GATT (which includes Article II) was to be applied provisionally 'to the fullest extent not inconsistent with existing legislation.' Since the California Buy American and Buy California Acts were enacted prior to October 30, 1947, the date selected by the original signatories for implementing Part II, those acts should still be considered valid in toto."

Further interesting developments in the activities of the federal government relative to Buy American are indicated in several current practices and procedures adopted by them. These are contained in the United States Corps of Engineers standard Form 32 as used in a recent negotiation for 20 large water-wheel generators for the "John Day Dam Project" with contract value of \$24 million. I am quoting exactly from that document as follows:

"The foregoing requirements are administered in accordance with Executive Order No. 10582, dated December 17, 1954. So as to alleviate the impact of Department of Defense expenditures on the United States balance of international payments, bids offering domestic source end products normally will be evaluated against bids offering other end products by adding a factor of fifty percent (50%) to the latter, exclusive of import duties. Details of the evaluation procedure are set forth in Section VI of the Armed Services Procurement Regulation."

The following is a copy of Pages 29 and 30 of the standard form used. I think this pretty well lays out what the federal practice is. For the State of California to suddenly become benevolent at the expense of domestic manufacturers at this time would appear to be bad judgment and an aggravation to problems of unemployment.

General Provision 14, "Buy American Act," General Provision 14 is hereby deleted and the following substituted in lieu thereof:

BUY AMERICAN ACT (MAY 1964)

(a) In acquiring end products, the Buy American Act (41 U.S.C. 10a-d) provides that the Government give preference to domestic source end products. For the purpose of this clause:

(i) "components" means those articles, materials, and supplies, which are directly incorporated in the end products;

(ii) "end products" means those articles, materials, and supplies, which are to be acquired under this contract for public use; and

(Page 29—6409)

(iii) a "domestic source end product" means (A) an unmanufactured end product which has been mined or produced in the United States and (B) an end product manufactured in the United States if the cost of the components thereof which are mined, produced, or manufactured in the United States exceeds 50 percent of the cost of all its components. For the purposes of this (a)(iii)(B), components of foreign origin of the same type or kind as the products referred to in (b)(ii) or (iii) of this clause shall be treated as components mined, produced, or manufactured in the United States.

(b) The Contractor agrees that there will be delivered under this contract only domestic source end products, except end products:

(i) which are for use outside the United States;

(ii) which the Government determines are not mined, produced, or manufactured in the United States in sufficient and reasonably available commercial quantities and of a satisfactory quality;

(iii) as to which the Secretary determines the domestic preference to be inconsistent with the public interest; or

(iv) as to which the Secretary determines the cost to the Government to be unreasonable.

(The foregoing requirements are administered in accordance with Executive Order No. 10582, dated December 17, 1954. So as to alleviate the impact of Department of Defense expenditures on the United States balance of international payments, bids offering domestic source end products normally will be evaluated against bids offering other end products by adding a factor of fifty percent (50%) to the latter, exclusive of import duties. Details of the evaluation procedure are set forth in Section VI of the Armed Services Procurement Regulation.)

(Page 30—6407)

STANDARD FORM 32

Continuation of 1961 Edition

(Prescribed by A.S.P.R.)

My recommendations are:

(a) Disapprove AB 2626 (Petrus) 1963.

(b) Reexamine AB 2111 and AB 2953 (Meyers) 1963.

(c) Approve AB 2287 (Meyers) 1963—in principle.

Cordially yours,

FRANK LANTERMAN

LETTER OF TRANSMITTAL

ASSEMBLY CHAMBER, STATE CAPITOL
Sacramento, January 4, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly, and
MEMBERS OF THE ASSEMBLY
Assembly Chamber, Sacramento

Gentlemen:

The Assembly Interim Committee on Criminal Procedure submits the Report on the Defense of Indigents in Criminal Proceedings in California in response to House Resolution 293 of the 1964 First Extraordinary Session.

The report is the result of a public hearing conducted on this subject in San Francisco. It is also, to a large degree, the result of the voluntary endeavors of Gregory S. Stout, Esq. of the San Francisco Bar who has contributed many hours of his valuable time to this committee and the Legislature in developing the information upon which our recommendations are based.

The committee recognizes, as does the Bar of the State of California, the need for a massive fortification of the defense of indigents within the system of administration of justice in our state. It feels that in this report it is presenting to the California Legislature a well considered program for achieving that fortification.

Respectfully submitted,

GORDON H. WINTON,
Chairman

ANTHONY C. BEILSON,
Vice Chairman
ROBERT W. CROWN
GEORGE DEUKMEJIAN
RICHARD J. DONOVAN

BURT M. HENSON
JOHN T. KNOX
HOWARD J. THELIN
GEORGE N. ZENOVICH

INTRODUCTION TO THE REPORT

The Supreme Court of the United States has charged the states through the Sixth and Fourteenth Amendments with the duty to provide effective counsel to indigent-accused and, in decisions subsequent to the *Gideon* case, has said that providing effective counsel requires such counsel at the earliest possible moment in time (prior to formal accusation by indictment or information) when an accused becomes a "putative defendant." No methods for implementing the constitutionally protected right to counsel have been suggested by the courts in the opinions that have been reviewed in the preparation of this report.

It would appear that the implementation of the decisions of the Supreme Court of the United States and the Supreme Court of California is a matter of local (state) political and legislative concern. There are a number of methods or modalities that can be employed for such implementation. The possibilities have been reviewed and certain choices have been made, which choices are based upon a number of assumptions which will be hereinafter set forth.

ASSUMPTIONS

At the level of the district courts of appeal and the Supreme Court of California, there exists no reserve of competent, skilled and knowledgeable experts in criminal appeals such as exists on the civil side of the law. Through liaison committees with the Judicial Council, the members of the Executive Committee of the Conference of State Bar Delegates and the Board of Governors of the State Bar of California have heard the frank statement by members of the judiciary that the quality of workmanship in criminal appeals is of a low order. Instead of a core of perhaps a thousand lawyers skilled in civil appellate practice there probably are no more than fifty in the entire state who are competent in the courts of appeal in criminal cases.

It follows therefrom that the volunteer lawyers who assist the several district courts and the Supreme Court and are appointed by those courts to represent indigent appellants are drawn essentially from novitiates to the practice whose law school training has been insufficient to acquaint them with the problems at issue and the methods of presentation and preservation of points on appeal favorable to the indigent convicted criminal.

At the trial court level it is assumed that there exists in California a far larger group of lawyers who are able to assume responsibility in the defense of indigent accused in the trial courts of California. In the large metropolitan areas there is in each such center a nucleus of competent, skilled and devoted practitioners in the art of criminal defense who are willing to assume responsibility for the defense of indigents at the trial court level if and provided that such representation does not involve too great a financial sacrifice on their respective parts. In many courts of the state there exist competent and qualified public defender offices created under general state law. Some of these offices are manned by permanent civil service officers headed by appointed officials skilled in the criminal defense. But one California defender is elected. Other public defender offices are private law offices who contract with the local board of supervisors to represent indigent accused in the trial courts.

In order to determine the most effective and economical manner of providing indigent accused with counsel at the trial and appellate court levels, a study was undertaken to determine how and in what manner selected counties at the trial court level were providing counsel to such persons. A similar study was made of the appellate courts.

SCOPE OF STUDY AND METHODS OF INQUIRY

From knowledgeable resources a selection of counties was made that use the public defender or assigned counsel system to defend indigent accused at the trial court level. The criteria employed in the selection of the counties utilized in the study related to such considerations as geographical dispersion between the north and the south. Urban, suburban and agricultural criteria were also employed. Among the counties that utilize the public defender system, Los Angeles, Orange, Alameda, San Francisco, Sacramento, Stanislaus and Imperial Counties were selected. For counties that employ the assigned counsel system, San Diego, San Mateo, Contra Costa, Ventura, Kern and San Luis Obispo Counties were chosen. In the case of public defender counties, letters were addressed to the public defender in the representative counties. In assigned counsel counties, letters were addressed to the chief administrative officer of the county. The letters to both groups were similar in format and content and requested that the following information be provided:

1. The number of indigent accused represented by the public defender or assigned counsel in the courts of the county for the fiscal years 1956 to date.
2. The annual budget.
3. The cost per case on an annual basis.
4. Additionally in assigned counsel counties, facts relating to the median or middle amount paid annually and the mode or point of greatest concentration together with the high and low spread of fees paid to assigned counsel was requested.

At the appellate court level, inquiry was made of the Administrative Office of the Courts. That office was requested to provide figures from the year 1956-57 to date giving the total number of cases and the range of fees paid together with the total annual budget appropriated to service indigent appellants before the district courts of appeal and the Supreme Court.

From the figures thus obtained a number of charts have been prepared which are set forth with appropriate descriptive material. It is hoped that the charts will be self-explanatory in large part and the material sought to be presented will be clearly set forth.

SUMMARY OF PROPOSED LEGISLATION

1. An act to amend § 27706 of the Government Code to authorize public defender offices to represent accused misdemeanants and juveniles at all court levels.

2. An act amending Penal Code § 987a to provide for the appointment of and payment to assigned counsel to represent indigent accused misdemeanants and juveniles in counties where there are no public defender services offered.

3. An act to create a state defender office charged with the responsibility of representing indigent appellants in the courts of California or in the courts of any other state or country either on direct or collateral attack of a judgment of conviction. Offices should be provided for a state defender in Los Angeles and San Francisco. The state defender would be charged with the duty of handling all cases which involve substantial questions of federal or state constitutional proportions. In addition it would be responsible for the overall handling of appeals involving criminal appellants at all court levels and would screen out of the mass of cases presented to such courts those cases of special significance as hereinbefore described. In other cases, the office would supervise court appointed and assigned counsel who would be charged with the responsibility of preparing and presenting appellate cases of lesser significance and importance.

4. An act to amend Penal Code § 1240 and § 1241, as follows:

(a) Change Penal Code § 1240 to eliminate the present \$100 restriction on costs and to provide for payment of all out-of-pocket expenses incurred by assigned counsel.

(b) Change Penal Code § 1241 by the elimination of the present provisions providing for a reasonable fee to be paid to assigned counsel and providing in lieu thereof that assigned counsel should be paid at the rate of \$25 per hour for work and labor performed in the courts of California or the courts of any county. The total fee would be fixed by the appointing court.

5. An act to provide a basic fee for court appointed and assigned counsel at the level of all trial courts where the counties lack a public defender service. At the superior level, the basic rate shall be \$15 per hour for investigation and preparation time and \$200 per day for trial time. At the municipal and justice court level, the basic rate shall be \$10 for investigation and preparation and \$150 per day trial time.

6. An act to subvent and assist counties so as to improve public defender and assigned counsel systems based upon the fiscal year 1962-1963. In the event that a county employs a calendar year as basis for its fiscal accounting purposes, the base year shall be 1963. For any improved and augmented services, the State of California will pay 70 percent of the costs of such improvements and the county 30 percent.

SUMMARY OF FACTUAL INFORMATION

A. AMENDMENT TO GOVERNMENT CODE SECTION 27706 AND PENAL CODE SECTION 987(a).

At the 1963 session of the Legislature, two bills were passed by the Legislature with reference to indigent misdemeanants. Senate Bill No. 73 by Virgil O'Sullivan, Senator from Colusa, Glenn, Tehama Counties amended Penal Code Section 987(a) to provide for the appointment of and payment to assigned counsel charged with duties of representing indigent misdemeanants at the municipal and justice court levels in the absence of a county defender system. This bill was signed by the Governor and became a law. A number of courts seeking to take advantage of this amendment to the Penal Code appointed counsel and approved their request for payment. The treasurers or other fiscal officers of certain counties have refused to honor the court order and have not made payments required thereby.

Another bill, Senate Bill No. 95, authored by Robert Lagomarsino of Ventura County was passed by the Legislature but not acted upon by the Governor. This proposed change in the law would have amended Government Code Section 27706 to provide that public defenders could be appointed to represent misdemeanant indigent accused and indigent juveniles. The proposed amendments to these sections are in the Appendices marked "A" and "C."

It is believed that these changes will positively state the legislative intention and eliminate the present confusion.

B. STATE DEFENDER OFFICE

As presently constituted, Penal Code Sections 1240 and 1241 relate to the appointment and assignment of counsel to represent indigent criminal appellants, to reimburse them for costs expended and to provide a reasonable compensation for their services. The underlying legislative theory expressed in these sections is that assigned counsel is appointed to service only the appointing court. When counsel has completed the representation of an accused before that court, his duties and obligations are in a sense terminated. For example, at the district court of appeal level, counsel's obligation ends after he has prepared and presented his briefs and has orally argued the case. Thereafter he might petition for a rehearing in that court and would be compensated therefor, but should he petition to the Supreme Court for a rehearing, he will not be compensated unless the rehearing is granted and the Supreme Court assumes jurisdiction. At the Supreme Court level and particularly in death penalty cases subject to the automatic review provided in Penal Code 1239, after preparation and presentation of briefs and oral argument and a possible petition for rehearing, his services before that court end and counsel would not be compensated for his appearances before the Governor at the clemency hearing, nor would he be compensated should he elect to pursue the remedy of cer-

tiorari in the Supreme Court of the United States. Furthermore, should counsel petition to the local federal district court in habeas corpus alleging violation of federally protected constitutional rights, he would not be compensated for such services. With reference to collateral attack on a final judgment of conviction in the courts of California, counsel is not compensated unless and until an alternative writ is granted.

As presently written, Penal Code Section 1240 expressly limits to \$100 the repayment for counsel's out-of-pocket expenses. In many instances these expenses not only exceed the \$100 limitation but are in excess of the total fees granted by the appointing court. Manifestly, it is unfair to appointed counsel who work for what is essentially an honorarium to force them to pay costs out of their own pocket.

The Administrative Office of the Courts was asked to provide information starting with the fiscal year 1956-1957 as to the number of cases in which counsel were assigned to present indigent criminal appellants. The fees paid to these counsel was also the subject of inquiry as was the total annual appropriation for such costs. The dollars appropriated for such service are as follows:

<i>Fiscal year</i>	<i>Supreme Court</i>	<i>District courts of appeal</i>
1956-57	\$2,900	\$10,295
1957-58	6,582	16,730
1958-59	5,325	20,540
1959-60	4,821	21,280
1960-61	7,037	19,349
1961-62	7,425	22,958
1962-63	6,200	25,744
1963-64	4,525	49,745

While it would appear that the absolute amount paid for services has increased in the years considered, nonetheless, in view of the complexity of litigation and the issues that counsel are called upon to inquire into, the absolute dollars paid to counsel can be only considering an honorarium when the fees paid are examined.

As regards the Supreme Court, the following chart is self-explanatory:

<i>Fiscal year</i>	<i>Number of cases in which fee was</i>								
	<i>Total cases</i>	<i>Less than \$100</i>	<i>\$100-199</i>	<i>\$200-299</i>	<i>\$300-399</i>	<i>\$400-499</i>	<i>\$500-599</i>	<i>\$600-699</i>	<i>\$700 and over</i>
1956-57	7	--	1	--	2	1	2	--	1
1957-58	15	--	1	3	2	2	2	3	2
1958-59	14	--	2	3	2	1	4	1	1
1959-60	17	--	5	3	4	3	2	--	--
1960-61	23	1	2	8	6	4	1	--	1
1961-62	17	--	2	2	3	4	1	2	3
1962-63	18	1	6	1	1	3	5	--	1
1963-64	19	--	8	6	2	1	1	1	--

The figures for the district courts of appeal are set forth in the following self-explanatory chart:

Fiscal year	Total cases	Less					\$300 and over
		\$100	\$100-	\$150-	\$200-	\$250-	
1956-57	80	21	17	21	11	3	7
1957-58	119	29	30	21	23	7	9
1958-59	149	56	28	26	20	12	7
1959-60	121	30	22	24	18	14	13
1960-61	113	22	26	22	13	14	16
1961-62	133	23	31	23	28	15	13
1962-63	183	33	42	49	23	22	14
1963-64	237	44	63	45	39	18	28

Percent increase: 1962-63 over 1961-62—27%

Percent increase: 1963-64 over 1962-63—23%

It is difficult to put a price tag on the cost of a state public defender office charged with the responsibility of representing indigent criminal appellants before the courts of this state and the courts of the United States. The salary range for the chief defender should be comparable to that currently paid the chief assistant attorney general. Deputies in the Los Angeles and San Francisco offices would have their pay scale fixed at figures comparable to assistant attorneys general. Appropriate secretarial help and office space and supplies would have to be provided. The estimated annual total for such an office is \$133,900 broken down as follows:

Chief defender	\$25,000 to \$25,000	\$25,000 to \$25,000
Assistant defender (3)	21,000 to 23,000	63,000 to 69,000
Secretarial (5)	425 to 550	25,500 to 33,000
Investigator (2)	850 to 950	20,400 to 22,800
Salaries total		\$133,900 to \$149,800
Service, supplies at 2 percent of budget	\$1,300	
Equipment at \$300 per year	900	
Grand total		\$136,100 to \$152,000

It should be noted that the table of organization includes two investigators, one for Los Angeles and one for San Francisco. As an explanation for the need for such investigators reference is made to *In Re Imbler*, 60AC535, and other recent cases which involve habeas corpus or coram nobis to attack final judgments of conviction imposing the death penalty. In *Imbler* at page 551 of the opinion reference is made by the Supreme Court of California to the fact that investigators from the Adult Authority obtained the evidence to establish the charge of testimonial perjury by prosecution witnesses. Reference is also made to *People v. Welch*, 61AC852 and *In Re Brubaker*, 61AC813 where extensive investigations were required to establish the basic charge for granting habeas corpus or coram nobis. It is believed that a state defender office should include investigation service so as to facilitate such proceedings.

The system thus provided is essentially a mixed one in that primary reliance is placed upon the state defender with additional provision for assigned counsel in what can be described as run-of-the-mine cases. Appointment of assigned counsel in such run-of-the-mine cases will continue as at present. Without definite figures upon which to base conclusions, we may assume that the fees paid to assigned counsel will be approximately three times the amounts paid currently if the proposed bill is enacted.

Employing the figures for 1963-64 for the Supreme Court, we may assume that of the 19 cases accounted for, 14 may be deemed run-of-the-mine. Employing the last figure in the column, for example in the \$100 to \$199 category, utilizing \$199, and by the number of cases set out in the column, multiplying it, similarly for \$299 times six, and \$399 times two gives a total of approximately \$2,800, which if multiplied by three, totals \$8,400.

If similar computation is made for 1963-64, upon the figures appropriate to the district court of appeal, employing the column less than \$100 through \$250 to \$299, excluding the last columns as being extraordinary cases the responsibility for which would be with the state defender office, multiplying the figures in the column by the highest figure and multiplying that total by three, the result is a total of \$118,400. If this figure is added to the \$8,400 Supreme Court figure a total cost of \$126,800 is chargeable annually to the operation of an assigned counsel system in the Supreme and district courts in combination with the defender office. When this sum is added to the previous computation of the annual costs of operation of a state public defender system and projected to 1965-66 using the percent of increases, we have a total cost of \$322,736 as contrasted with the current 1963-64 total of approximately \$54,270. The bill for the defender office is set forth in Appendix A.

Times may not be propitious to justify the creation of a new state agency. It has been said that because there is an excess of expenditures over receipts at state fiscal levels it will be impossible to budget for a new state agency at this legislative session. Assuming this to be the fiscal policy of the forthcoming session of Legislature, a bill has been proposed which will upgrade the compensation paid to assigned counsel. Despite the \$25 per hour rate set forth in the act, some discretion is given to the appellate courts to fix fees awarded to assigned counsel on a realistic basis. In many instances counsel reports an excessive number of hours as necessary to complete their work. Thus, discretion is given to the paying court to equalize the fees paid and to avoid excessive awards. Even with such discretion it is believed that the courts will roughly triple the awards to assigned counsel. If these expectations are fulfilled, the total paid to assigned counsel by the district courts of appeal for the year 1963-64 multiplied by three gives a total figure of \$149,235. Multiplying the same budget figure for the Supreme Court results in \$13,755 for a total of \$162,990 to be budgeted for counsel in the appellate courts.

If adjustment is made for the rate of increase in the work of the California appellate courts and if we apply the rate of increase of 23 percent to the previous and cumulative total, which represents three times the amount expended by the courts in 1964, it is estimated that the total cost for servicing the courts of appeal will be \$246,586 for the year 1965-66.

Recognizing that this figure is only an annual estimate of costs and considering other gains which may be reasonably expected from upgrading the fees paid to assigned counsel, it is hoped that better lawyers will be attracted to the work and that the courts will be materially aided in their decision making process.

C. SUPERIOR, MUNICIPAL AND JUSTICE COURTS

At present approximately 23 counties employ the public defender system in one of its several forms. The balance operates under an assigned counsel system. As has been previously noted, two bills have been proposed to fix and settle the responsibilities that the counties have for appointing counsel to represent accused felons, juveniles, and misdemeanants. It is assumed that with these additional responsibilities will come additional costs to the counties for the operation of whatever system they have chosen or in the future they will choose.

In order to demonstrate the current level of expenditure being made in selected counties, the following seven charts will set forth figures which represent the budget and case load picture in the selected counties. An additional five charts deal with the representation of accused misdemeanants in counties which employ the assigned counsel system. A number of conclusions are readily discernible from a close examination of the charts. It is apparent that there has been an absolute increase in the number of cases to be serviced annually at the superior court level.

CHART NO. 1

San Luis Obispo County	28	37	50	46	40	60	57	96

¹ Claims presented by counsel—not the number of cases.

² All courts—no division between superior-justice courts.

In a relative sense, material assembled by the committee indicates that if we analyze the population increase in the counties studied per 10,000 of population, our requirements have only slightly increased. Stated in another fashion, while the absolute number of cases processed by our courts has increased, relatively there is little or no increase.

The demands imposed upon the counties have been costly as indicated by the absolute dollar increase in the annual appropriations needed to service defender and assigned counsel systems. To assist, the percentage increase has been computed.

CHART NO. 3

Annual Budget—Public Defender Offices

	1956-57	1957-58	1958-59	1959-60	1960-61	1961-62	1962-63	1963-64

¹ Includes felony preliminary proceedings in inferior courts.

Reference is made now to the charts which average the annual cost per case to defender and assigned counsel offices. In all but two instances there has been an increase in the average annual cost per case. Only San Francisco and Imperial Counties show a downward trend. As regards assigned counsel counties, the annual cost per case has similarly increased with but one exception, Ventura County. A number of the present assigned counsel counties are contemplating the creation of public defender offices such as San Mateo, Contra Costa and Ventura Counties. It is hoped that this investigation will aid them in determin-

ing whether to turn to a defender system or maintain their current method of operation.

Examination now will be made of the practice in municipal and justice courts. As has already been described in a number of charts, certain public defender offices that were examined handle accused indigent misdemeanants. They include the Los Angeles City defender office and the defender offices for Alameda and San Francisco Counties. Sacramento County has just recently begun to represent indigent accused misdemeanants, but no figures are available therefor. Because the budgets for Alameda and San Francisco Counties cover the representation of accused felons and misdemeanants without allocation, no differential cost figures are obtainable. Other than figures for the Los Angeles City Defender office, at a cost of approximately \$1 per case, no other cost figures are available for public defender offices who service misdemeanants.

The following self-explanatory charts are included to establish certain material relative to the operation of municipal and justice courts in counties which employ the assigned counsel system. Since none of the studied counties had figures for their municipal and justices courts which separated felony preliminary proceedings from misdemeanors in their budgets, it is impossible to do anything more than speculate about the cost of handling misdemeanors in their respective courts. However, if we examine the final charts numbered 1 to 14, they indicate the spread in fees paid to assigned counsel in municipal and justices courts. From them it is possible to hypothesize that the low figures represent fees paid for the defense of misdemeanants. Since the low figures range from \$3.25 to \$25 some idea of current practice is gained.

The only court which reported a breakdown between felony preliminary proceedings and misdemeanor trials was the El Cajon Municipal Court in San Diego County. Of a total of 166 cases handled for the fiscal year 1963-64, 57 were felony preliminary proceedings and 109 were misdemeanors. Misdemeanors represented 65½ percent of the total. The El Cajon cost per case figures vary between \$25 and \$50 for misdemeanors.

Experience and the science of demography teach us that it is poor statistical practice to employ a percentile based upon such limited experience as that of El Cajon Municipal Court. We also know that the courts handle many more misdemeanors than felonies and at a far greater rate differential than the approximate two to one figure of the El Cajon Municipal Court. However, the two to one figure may be employed in seeking to develop a tentative set of working hypotheses.

To further develop working hypotheses, an examination has been made of the relative number of misdemeanors contrasted with the number of felonies handled by the San Francisco Public Defender office. Such figures as are now presented are developed from the annual reports of that office for the years 1960-61 through 1963-64, and are set forth in the following table:

	1960-61	1961-62	1962-63	1963-64
Misdemeanors -----	4,166	6,476	no figures	9,252
Felonies -----	1,022	1,228	no figures	1,410
Total -----	5,188	7,704		10,662
Percentage of municipal court total -----	80%	80%		86%

Similar figures were developed from the annual reports of the Alameda County Public Defender office for the years in question and are as follows:

	1959-60	1960-61	1961-62	1963
Misdemeanors -----	1,688	1,913	1,952	2,423
Felonies -----	793	1,213	1,126	2,016
Total -----	2,481	3,126	3,078	4,439
Percentage of municipal court total -----	68%	61%	63%	54%

No other annual reports of defender offices for the examined counties gave significant differential comparative figures for felonies and misdemeanors.

To summarize, we have the limited experience of one municipal court which employs the assigned counsel system at El Cajon Municipal Court. It shows a ratio of two misdemeanors for each felony. The two defender office charts vary from a high of four to one for San Francisco, to a low of a little more than one to one for Alameda County. The total number of misdemeanors handled in 1962-63 by all counties in California is unavailable. The only records kept in California are arrest records which are not deemed significant.

Despite having given some absolute figures relative to the number of misdemeanors versus felonies for the El Cajon Municipal Court and the San Francisco and Alameda County Defender offices, it is impossible either to apply these absolutes or the percentiles to the annual budgets for these respective courts and offices. For example, it would be improper statistical practice to divide the El Cajon Municipal Court budget for the year 1962-63 into three parts and allocate the figure of \$1,216, to felony defense, and the difference between that figure and \$3,650 or \$2,434 to the defense of misdemeanants because traditionally courts pay more money to counsel who represent accused felons than they do to counsel who represent accused misdemeanants.

As has heretofore been pointed out, it is impossible to allocate as between felonies and misdemeanors the budgets of the defender office as represented in preceding charts since no budgets are divided in such a manner. We are left therefore with no basis upon which to project

the increased cost that will have to be met if defender offices and assigned counsel are charged with the duty of representing accused indigent misdemeanants. Accordingly, it has been necessary to fix upon an arbitrary figure which will represent the increased services and dollars demanded if statewide defender services are charged with the duty of representing significant misdemeanants. Therefore, it has been estimated that a 33 percent increase in budgeted dollars will be needed to service indigent accused misdemeanants in the future under the proposed legislation. This figure is selected because of differential in pay between counsel charged with the duties of representing misdemeanants versus felons and the absence of a valid method of computing the actual number of the significant misdemeanor-accused who will require the services of counsel. In a sense then the figure 33 $\frac{1}{3}$ percent is nothing more than an arbitrary percentile based upon the assumptions that have been developed herein.

Two charts are hereinafter set forth and are self-explanatory. They represent a combination of charts heretofore included and combine the charts for public defender and assigned counsel counties in the two significant statistical classifications deemed most important in this study. They are the number of cases and the absolute dollars budgeted for representation. It is interesting to note that the rate of increase for cases and dollars between 1962-63 and 1963-64 was the same, namely, 11 percent. While the Judicial Council's figure for superior court felonies is 35,276, according to this survey, the total number of cases handled by defender or assigned counsel in superior courts was 41,475 in the same year. The difference represents such proceedings as motions to revoke probation and mental illness commitment proceedings in the various forms, all of which under the law require representation by counsel.

Total -----	41,475	45,428

Rate of increase 1963-1964 over 1962-1963—11%

Turning now to the totals of Chart No. 15, the total amount budgeted to service indigent accused in 1962-1963, in the counties surveyed, was \$1,935,012. The counties surveyed as of July 1, 1963, had a population of 12,930,800 as compared to the total population of California of 17,675,000. Therefore counties surveyed have approximately 72 percent of the total state population. The difference, or 23 percent, will be one of the variables considered in projecting the total cost for an augmented statewide defender service. The other variable is the annual rate of increase, and for purposes of this study it is assumed that the 11-percent figure remains a constant and will therefore be utilized as the other variable.

If the 23-percent increase factor previously described is applied to the total dollars budgeted by the counties surveyed in 1962-1963, it is estimated that the total amount budgeted for such services on a statewide basis is \$2,687,516. As has therefore been described, it is estimated that if the bills proposed herein are enacted in laws, namely, those which require the appointment of counsel in significant misdemeanor cases, a 33-percent increase in the number of cases and dollars will be necessary to service these situations. Accordingly, applying the 33 $\frac{1}{3}$ -percent factor to the statewide total cost of \$2,687,516, a new total is obtained, which represents the base year 1962-1963 if both variables are considered. The new total, therefore, is \$3,583,388. If the 11-percent annual increase variable is now applied to this total so as to cover the fiscal years 1963-1964; 1964-1965; 1965-1966, the last being the year for which the Legislature will be budgeting should they enact this program, a total of \$4,900,743 is obtained.

To summarize, the \$4,900,743 total figure is the product of the application of three variables to the total dollars budgeted for all defender services in California in 1962-1963 for the counties surveyed. The variables are: that proportion that the population of the counties surveyed bore to the total state population, or 23 percent; the variable arbitrarily fixed and assigned to increased demands placed upon defender services by requiring the defense of significant

misdemeanor cases, or $33\frac{1}{3}$ percent; and finally, the third variable is the rate of increase between 1962-1963 and 1963-1964, or 11 percent. Obviously, deviation in any of these variables would materially affect the conclusions herein presented, but they are the best that can be developed under all of the circumstances attendant upon the preparation and development of this report.

The enactment of the grant-in-aid or subsidy bill by the Legislature as proposed herein provides that the state will pay 70 percent of the estimated cost of augmented services and the counties 30 percent. As has been heretofore developed, the base year figure is \$3,583,388. The estimated budget cost for 1965-66 is \$4,900,743. The difference between these two sums is \$1,317,305. Applying the 70-30-percent formula thereto means that the state will pay \$922,148 and the counties \$395,307 of the total.

NONSTATUTORY RECOMMENDATIONS

From this survey it is apparent that there is a total absence of uniformity of nomenclature employed by the district attorneys, public defenders, courts, the Attorney General and the Judicial Council concerning the movement of criminal cases through the courts. The absence of a standard nomenclature means that this study and any future surveys will be comparing apples, oranges and bananas. While all are fruit, there the similarity ends. It is assumed that the Judicial Council has power to regulate the form of the reports by government agencies annually filed with it. A uniform system of reporting to be developed by the Judicial Council is recommended.

ACKNOWLEDGMENTS

During the course of preparation of this survey and report, the services of many government officials were employed. The demands made of them were unique and required many hours of effort on their part in order to respond to the inquiries. We acknowledge with grateful appreciation and thanks the efforts of the county administrators, judges, and defenders of the counties included in this survey. I. J. Shane of the Judicial Council supplied the committee with the material concerning appeals in criminal cases. Dr. A. LaMont Smith of the School of Criminology, University of California at Berkeley, was of assistance in the preparation of a number of the charts which were utilized by this survey. Terry Baum, of the Office of the Legislative Counsel prepared the proposed bills. To the ladies of the State Bar office in San Francisco, without whose willing and friendly cooperation this report would not have been possible, our grateful thanks.

SUMMARY

Budget for 1965-66 to service combined state defender and assigned counsel system for appellate courts -----		\$322,736
Budget for 1965-66 to service assigned counsel for appellate courts -----	\$246,586	
Costs of servicing counties to upgrade defender and assigned counsel systems -----	922,148	922,148
TOTAL -----	<u>\$1,168,734</u>	<u>\$1,244,884</u>

LEGISLATION

APPENDIX A—ASSEMBLY BILL 662

LEGISLATIVE COUNSEL'S DIGEST

State Public Defender.

Creates Office of State Public Defender, headed by State Public Defender, who is to be appointed by Governor for term of four years. Prescribes qualifications and salary. Authorizes him to appoint staff and require establishment of offices in Los Angeles and San Francisco, as well as permitting establishment of other offices.

Generally requires State Public Defender to represent in California appellate courts a person who was convicted of crime under California law or who is confined in state prison and who seeks relief with respect to such conviction or confinement, if the person is financially unable to employ counsel, but permits withdrawal and assignment of other counsel where it appears case does not present constitutional issue or issue of substantial statewide importance. Authorizes State Public Defender also to represent such a person seeking relief in U.S. Supreme Court unless case does not appear to have substantial merit.

Specifies that State Public Defender shall not undertake to represent person who is represented by county or city public defender.

Requires county public defender to represent persons charged with crimes triable in municipal or justice court, in addition to cases triable in superior court. Limits authority of county public defender to take cases up on appeal, to cases in which the conviction was in a municipal or justice court.

An act to add Part 6.7 (commencing with Section 15400) to Division 3 of Title 2 of, and to amend Section 27706 of, the Government Code, relating to counsel in criminal cases.

The people of the State of California do enact as follows:

SECTION 1. Part 6.7 (commencing with Section 15400) is added to Division 3 of Title 2 of the Government Code, to read:

PART 6.7. STATE PUBLIC DEFENDER

CHAPTER 1. APPOINTMENT, QUALIFICATIONS, AND OFFICES

15400. There is in the state government an Office of the State Public Defender. The office is in the charge of a chief, who shall be known as the State Public Defender.

15401. The State Public Defender shall be appointed by the Governor and shall hold office for the term of four years. He must, on appointment, be an attorney at law admitted to practice law before the Supreme Court of California for at least 10 years and admitted to practice before the Supreme Court of the United States of America. He must be a person especially learned in the subjects of criminal law and constitutional law.

15402. The annual salary of the State Public Defender is twenty-five thousand dollars (\$25,000).

15403. The State Public Defender shall appoint a chief assistant and, pursuant to civil service, such deputies and other personnel as he may need for the proper performance of his duties.

15404. The State Public Defender shall maintain offices in Los Angeles and San Francisco and in such other places as may appear necessary.

CHAPTER 2. DUTIES

15410. In any case in which a person who has been convicted of a crime under the laws of this state appeals his case to any appellate court of this state or seeks to attack his conviction collaterally in any such court, or in any case in which a person confined in a state prison in this state seeks to attack in any court of this state the legality of his confinement, and such person alleges to such court that he is financially unable to employ counsel, the court shall appoint the State Public Defender to represent him, or if he makes application for representation directly to the Office of the State Public Defender, the State Public Defender shall undertake to represent him.

If, however, it appears to the State Public Defender that such person if financially able to employ counsel, he shall withdraw as soon as this can be done without prejudice to such person's rights in the case, subject to approval of the court in which proceedings are pending if proceedings have already been commenced. If the State Public Defender concludes that the case is not one presenting any constitutional question or is not one presenting issues of substantial statewide importance, he shall likewise withdraw as soon as this can be done without prejudice to such person's rights in the case and subject to approval of the court in which proceedings are pending if proceedings already have been commenced, and upon such withdrawal the court may appoint other counsel for such person.

15411. In any case in which a person who has been convicted of a crime under the laws of this state or who is confined in a state prison in this state wishes to seek, or has already taken steps to obtain, relief from the United States Supreme Court with respect to such conviction or confinement, and applies to the Office of the State Public Defender for counsel, the State Public Defender shall undertake to represent if it appears that such person is financially unable to employ counsel, unless the case does not appear to have substantial merit.

15412. The State Public Defender shall not undertake to represent any person who is represented by a county or city public defender.

SEC. 2. Section 27706 of said code is amended to read:

27706. The public defender shall perform the following duties:

(a) Upon request of the defendant or upon order of the court, he shall defend, without expense to the defendant, any person who is not financially able to employ counsel and who is

1 charged with the commission of any contempt or offense triable
2 in the *superior, municipal, or justice* court at all stages of the
3 proceedings in any such court, including the preliminary ex-
4 amination. The public defender shall, upon request give counsel
5 and advice to such person about any charge against him upon
6 which the public defender is conducting the defense, and shall
7 prosecute all appeals to a higher court or courts of any person
8 who has been convicted in a *municipal or justice court*, where,
9 in his opinion, the appeal will or might reasonably be expected
10 to result in the reversal or modification of the judgment of con-
11 viction.

12 (b) Upon request, he shall prosecute actions for the collec-
13 tion of wages and other demands of any person who is not
14 financially able to employ counsel, where the sum involved
15 does not exceed one hundred dollars (\$100), and where, in the
16 judgment of the public defender, the claim urged is valid and
17 enforceable in the courts.

18 (c) Upon request, he shall defend any person who is not
19 financially able to employ counsel in any civil litigation in
20 which, in the judgment of the public defender, the person is
21 being persecuted or unjustly harassed.

22 (d) Upon order of the court, he shall represent any person
23 who is not financially able to employ counsel in proceedings
24 under Chapter 4 (commencing with Section 5400) of Part 1 of
25 Division 6 and under Chapter 1 (commencing with Section
26 5000) of Part 1 of Division 6 of the Welfare and Institutions
27 Code.

28 (e) Upon order of the court, he shall represent any person
29 who is entitled to be represented by counsel but is not finan-
30 cially able to employ counsel in proceedings under Chapter 2
31 (commencing with Section 500) of Part 1 of Division 2 of
32 the Welfare and Institutions Code when such proceedings are
33 concerned with a person alleged to be or who has been found
34 to be within the description of Sections 601 or 602 of the Wel-
35 fare Institutions Code.

APPENDIX B—ASSEMBLY BILL 661

LEGISLATIVE COUNSEL'S DIGEST

Compensation of appointed counsel.

Amends Secs. 1240, 1241, Pen.C.

Provides for reimbursement of all expenses, rather than only cost of preparing defendant's brief, incurred by appointed counsel in representing defendant in case of automatic appeal in death sentence case. Provides that fee for counsel appointed by Supreme Court or district courts of appeal in criminal case shall be not less than \$25 per hour.

An act to amend Sections 1240 and 1241 of the Penal Code, relating to compensation of counsel in criminal cases.

The people of the State of California do enact as follows:

1 SECTION 1. Section 1240 of the Penal Code is amended to
2 read:

3 1240. In any case where an automatic appeal is taken,
4 as provided in Section 1239, and where counsel has been
5 appointed by the court to appear for the defendant, ~~the cost~~
6 ~~of preparing the defendant's brief required in any such~~
7 ~~criminal case shall be paid such counsel shall be reimbursed~~
8 by the State from the current appropriation for the support
9 of the Supreme Court ~~for all expenses he has incurred in rep-~~
10 ~~resenting the defendant; in an amount not to exceed one~~
11 ~~hundred dollars (\$100).~~ Claim for payment of such cost
12 reimbursement for such expenses shall be presented by counsel
13 to the Clerk of the Supreme Court in such form as the clerk
14 prescribes. If the claim is in order, the clerk shall transmit it
15 to the State Controller, who shall draw his warrant in payment
16 thereof and transmit it to the clerk for delivery to the payee.

17 SEC. 2. Section 1241 of said code is amended to read:

18 1241. In any case in which counsel has been appointed by
19 the Supreme Court or by a district court of appeal to represent
20 a party to any appeal or proceeding in a criminal matter, the
21 court shall fix a reasonable fee, *not less than twenty-five dol-*
22 *lars (\$25) per hour,* for such counsel which shall be paid from
23 the General Fund. Claim for the payment of such fee shall be
24 presented by counsel to the clerk of the court allowing such
25 fee in such form as the clerk shall prescribe. If the claim is in
26 order, the clerk shall transmit it to the State Controller who
27 shall draw his warrant in payment thereof and transmit it to
28 the clerk for delivery to the payee.

LETTER OF TRANSMITTAL

ASSEMBLY CHAMBER, STATE CAPITOL
Sacramento, January 4, 1965

HON. JESSE M. UNRUH, *Speaker of the Assembly*
and Members of the Assembly
Assembly Chamber, Sacramento

Gentlemen :

The Assembly Interim Committee on Criminal Procedure submits the Report on Regulation and Control of Firearms in response to House Resolution 26 of the 1964 First Extraordinary Session.

The committee recommendations embody what are felt to be constructive additions to the criminal law in this area, and they are herewith commended to you.

Respectfully submitted,

GORDON H. WINTON, JR., *Chairman*

ANTHONY C. BELENSON, *Vice Chairman*
ROBERT W. CROWN

HISTORICAL BACKGROUND OF THE REGULATION AND CONTROL OF FIREARMS *

"No one shall come before the justices, or go, or ride armed." (Statute of Northumberland, 1328, 2 Edw. III, c.3.) This statute is still in force in England. Similar prohibition on carrying offensive weapons in public places appeared in colonial Massachusetts (Criminal Code of the Province of Mass., c. 18, Sec. 6), and was reenacted after the American Revolution (2 Mass. Laws, 1780-1800, Sec. 653).

Curiously enough, the first statute to prohibit carrying concealed weapons was enacted in a frontier state (Kentucky Acts 1812-1813, c. 89). The statute was held unconstitutional (*Bliss v. Commonwealth*, 2 Litt. 90 (Ky. 1822)). Notwithstanding savages and wild animals, the struggle for law and order against self-help and vigilantism continued. The State Constitution was amended (Ky. Const., Art. XIII, Sec. 25 (1850)) and another statute prohibiting the carrying of concealed weapons was enacted (Ky. Rev. Stat., v. I, p. 414 (Stanton, 1860)). This statute was sustained under the amended Constitution (*Hopkins v. Commonwealth*, 3 Bush. 480 (Ky. 1868)).

Under the English common law, it was a misdemeanor to go armed in public places but not criminal to carry a concealed weapon. Early American legislative and judicial experience was precisely opposite to the English view. The early statutes prohibited concealed rather than openly carried weapons. (Ky. Acts 1812-1813, c. 89, *supra*; Ind. Laws 1819, c. 23; Ark. Rev. Stat., c. 44, Div. 8, Art. I, Sec. 37 (1837)). When a statute undertook prohibition of weapons carried both concealed and openly (Ga. Laws 1837, p. 90), the court sustained the statute for concealed weapons but held it invalid for openly carried ones (*Nunn v. State*, 1 Ga. 243 (1846)).

The Constitution of the United States provides that "a well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed" (Amend. II). Like all of the provisions in the Bill of Rights, this has been held to be a restriction only on the power of Congress and the federal government, and not on the power of the states (*Presser v. Illinois*, 116 U.S. 252, *United States v. Cruikshank*, 92 U.S. 542, 553). Similar or identical provisions in numerous state constitutions have been repeatedly held to confer a collective and not an individual right to bear arms. Such provisions guarantee the arming of a state militia for the common defense and for warfare. They do not restrict a state from requiring an individual to obtain a license to carry a firearm. They do not prevent a state from regulating an individual in the manufacture, transport, disposition and possession of weapons in order to preserve the peace and prevent crime (*People v. Persce*, 204 N.Y. 397, *People v. Warden of City Prison*, 154 App. Div. 413, *Commonwealth v. Patson*, 231 Pa. 46, affirmed, 232 U.S. 138).

FEDERAL REGULATION AND CONTROL OF FIREARMS

ROY HOWLAND *

Assistant Superintendent in Charge (Enforcement)
Alcohol and Tobacco Tax Division
Bureau of Internal Revenue

There are two major firearms acts which are enforced by the Alcohol and Tobacco Tax Division. They are the National Firearms Act, which is known as Title 26, United States Code, Chapter 53, and the Federal Firearms Act, which is known as Title 15, United States Code, Chapter 18. The two terms, "National Firearms Act" and "Federal Firearms Act," are easily confused because of the similarities in title, so, in order to avoid this, I would like to mention them sequentially, starting with the National Firearms Act.

The regulations for the National Firearms Act are found in Part 179, Title 26, of the Code of Federal Regulations. This law was enacted on June 26, 1934, and has had several subsequent revisions. It was enacted for the purpose, primarily, of controlling those types of firearms which were most commonly used by gangsters during the '20's and the '30's. The law controls the possession, manufacture and transfers of these types of firearms: machine guns, sawed-off shotguns, sawed-off rifles, silencers and a few other weapons other than pistols and revolvers. These other types of weapons might be key guns, firearms concealed in cigarette lighters, firearms concealed in microphones, firearms other than standard garden variety of pistols and revolvers.

Under the National Firearms Act, it is legal for a person to own a machine gun. It is legal for a person to own a sawed-off shotgun. But this ownership is highly regulated and controlled by the federal government. Control of these firearms is achieved through the process of mandatory registration in the case of any firearm covered by the National Firearms Act. There is also a heavy transfer tax, \$200 in the case of most firearms, in order to transfer a firearm from one person to another. A transfer to a police agency would be an exempted transfer. Though it would be controlled, it would not be a taxable transfer. There is also a manufacturing tax on sawed-off shotguns and machine guns, and this is \$200 on each firearm. There are restrictions on importation. One may not import a sawed-off shotgun into the United States without specific authority to import that particular gun. This is difficult to achieve. A person wishing to import a firearm must make a showing to the satisfaction of our department that the firearm is unique and that it cannot be obtained in the United States. Also, there is a provision in the regulations to regulate dealers in these types of firearms under the National Firearms Act.

A violation of any of the provisions of the National Firearms Act is a felony, and it is punishable by imprisonment for a term of five years

* The following statement was prepared by Mr. Howland and presented to the Committee on October 19, 1964, in Room 4102 of the State Capitol in Sacramento as a part of the Committee's public hearing on the control of concealable weapons in California.

or a fine of \$2,000 or both in the judgment of the court. Our history in prosecution has been that severe sentences are often handed down by the courts.

The second of our acts that we enforce is the Federal Firearms Act. The regulations for the Federal Firearms Act are found in Part 177, Title 26, of the Code of Federal Regulations. This law was enacted on June 30, 1938, in order to achieve control over the interstate traffic of all firearms. As used in the Federal Firearms Act, the term "firearms" includes *any* weapon by whatever name known which is designed to expel a projectile or projectiles by the action of an explosive and also includes a firearm muffler or a firearm silencer or any part or parts of such a weapon. Control of these firearms under the Federal Firearms Act is achieved primarily by licensing all dealers in firearms who deal in interstate commerce, by licensing all manufacturers of firearms who manufacture firearms in interstate commerce and by licensing all importers. Certain acts are made unlawful by Section 902 of the Federal Firearms Act, and I have paraphrased these provisions for the Committee.

It is unlawful for any unlicensed dealer to deal in firearms in interstate commerce. It is unlawful to receive firearms in interstate commerce knowing or having reasonable cause to believe that the firearms were shipped by an unlicensed dealer. It is unlawful for any licensed manufacturer or dealer to ship to a person who is required to have a license in his state without having that license exhibited to the manufacturer or dealer at the time of sale. It is unlawful to ship a firearm to any person knowing or having reasonable cause to believe that that person is under indictment or has been convicted of a crime punishable by imprisonment for more than one year or that the person is a fugitive from justice. It is unlawful under the Federal Firearms Act for any person who is under indictment or has been convicted of a crime punishable by imprisonment for more than one year or who is a fugitive to ship or transfer any firearm in interstate commerce. It is unlawful for any person who is under indictment or who has been convicted of a crime punishable by imprisonment for more than one year or any fugitive from justice to receive any firearm in interstate commerce. It is unlawful to ship or transport any firearm in interstate commerce knowing or having reasonable cause to believe that the firearm is stolen or has been stolen. It is unlawful to receive, to conceal, to store, barter, sell, or otherwise dispose of any firearm in interstate commerce knowing or having reasonable cause to believe that that firearm was stolen. It is also unlawful to transport any firearm in interstate commerce where the serial number has been altered, obliterated or removed.

Any violation of the Federal Firearms Act is similarly punishable by imprisonment for five years and/or \$2,000 as the court may decide.

Those are brief outlines of the provisions.

Dealers, under the Federal Firearms Act, pay a \$1 annual licensing fee. Manufacturers, under the Federal Firearms Act, pay a \$25 annual licensing fee. Under the Federal Firearms Act, there are also record-keeping requirements which we find very useful, for dealers must ac-

count for all firearms they receive and all firearms that they dispose of.*

Chairman Winton: Suppose you have a manufacturer in California who does not sell anything in interstate commerce but confines his business to California alone. Would he come within the federal regulations?

Mr. Howland: No, he would not, but it would be pretty difficult for him to achieve that isolated status.

Chairman Winton: Because he would have to get parts or something through interstate commerce, is that the idea?

Mr. Howland: That is correct.

Assemblyman Henson: I was wondering when a weapon ceases to be defined as a weapon. What do you have to do when you have a machine gun that you want to just keep as an heirloom or something like that? What do you have to do with it in order to be clear of federal law?

Mr. Howland: Well, as matters now stand, a machine gun is always a machine gun. It may be rendered inoperative, and it may be transferred without paying tax, but it must be registered with the Treasury Department, and any subsequent transfers, though tax free, must be made pursuant to a written order form.

Assemblyman Henson: Well, yes, but do you have to pour concrete down a barrel or solder up the mechanism or turn it into something else?

Mr. Howland: Physically, we consider a machine gun to be rendered inoperative or unserviceable when the breech has been welded with a metal arc weld and the barrel has been welded to the receiver.

Assemblyman Henson: It doesn't make any difference to you whether it is operative or not operative. It will still have the same tax on it. Is that right?

Mr. Howland: No. Assuming that the person who has an inoperative machine gun that was lawfully registered transfers it to another person, this would be done without payment of tax.

Assemblyman Henson: Let us take the sawed-off shotgun business here in California. Under federal law, it is legal to have a shotgun with a barrel less than 18 inches, providing it is registered and a tax is paid. Is that right?

Mr. Howland: Yes, that is true.

Assemblyman Henson: And under California state law, it is illegal.

Mr. Howland: It is a contraband item in California.

Assemblyman Henson: I have read a little bit about that women have some kind of a gun for protection in their purses, something that shoots a teargas. Is this classified as a weapon subject to registration or taxation, under these federal laws?

Mr. Howland: Not if it fires gas. If it fired a projectile, such as a .22-caliber bullet, yes, it would be covered by the National Firearms Act.

Assemblyman Henson: But not if it fires teargas.

Mr. Howland: No.

* Mr. Howland was questioned by the Committee following his formal presentation. The questions and answers are reproduced below.

Chairman Winton: Just one further question that Mr. Henson's questions brought to mind. What do you define as a machine gun in the federal law?

Mr. Howland: A machine gun, under federal law, is any firearm which shoots, or is designed to shoot, more than one bullet with one function of the trigger. Whether or not it actually fires that way, if it was intended to at its original manufacture, it remains a machine gun. Are there any other questions from the Committee? Yes, Mr. Thelin.

Assemblyman Howard Thelin: Mr. Howland, you mentioned the federal requirement of registration. From the standpoint of your Bureau, is the purpose of that registration for tax purposes?

Mr. Howland: This is the basic legislation that was enacted as a tax act. The purpose of registration was to identify the firearms and freeze them in the hands of the original possessors.

Assemblyman Thelin: Well, is it for the purpose of being able to know whom to tax or whom not to tax, or is it to aid law enforcement?

Mr. Howland: The idea being, I conclude, that if you find a firearm in the possession of a person who is not the registered owner and there is actually a registered owner on record, a taxable transfer has occurred, so it is an aid to collecting taxes.

Assemblyman Thelin: You are sure?

Mr. Howland: Yes.

COMPARATIVE LAWS REGULATING AND CONTROLLING FIREARMS IN THE UNITED STATES *

More than a quarter of a million serious crimes are committed with weapons annually in the United States, and the number is on the increase.

The legislative problem posed for the 51 American jurisdictions (50 states and the District of Columbia), charged with the major responsibility of criminal law enforcement in the United States, suggests itself: to enact statutes adapted to prevent these crimes and occur-

TABLE 1.
ESTIMATED OFFENSES INVOLVING WEAPONS COMMITTED
IN THE UNITED STATES, 1960

Crime	Estimated number		Change 1960 over 3-year average	
	1960	1957-1959 average	Number	Percent
TOTAL.....	228,340	196,850	+31,490	+16
Murder.....	9,140	8,290	+850	+10
Robbery.....	88,970	72,540	+16,430	+23
Aggravated assault.....	130,230	116,020	+14,210	+12

—Uniform Crime Reports (1960) p. 2.

Excluded Are the Following Crimes or Occurrences Usually or Always Involving Weapons

Crime or occurrence	Number, 1960	Change, 1960
Forcible rape.....	15,560 (est.).....	+1,320, or +9 percent over 3-year average
Weapons, carrying, possessing.....	38,120 (actual arrests).....	+42, or +2 percent over preceding year
Fatal accidents with firearms.....	2,300.....	+1,120, or +6 percent over preceding year
Suicides.....	19,450.....	

rences before they happen, and, at the same time, preserve the legitimate interests of individual liberty, training for national defense, hunting, target shooting and trophy collecting. The divergency of state solutions to this problem is perhaps best illustrated by the statutes of our two newest states.

* This article is reproduced from the *Report of the New York Joint Legislative Committee on Firearms and Ammunition*, 1962, pp. 11-16.

The State of Hawaii has a comprehensive, consecutive and concise group of provisions entitled, "Firearms and Ammunition" (Rev. Laws Hawaii (1955) c. 157). Firearms are defined to include rifles and shotguns (Sec. 157-1). Visitors to the state must register their weapons with a local police chief within 48 hours (Sec. 157-2). A permit from the police chief is required for possession on the premises of any firearm with a barrel less than 18 inches in length. Licensees must either be citizens over 20 years of age or duly accredited foreign representatives. For an on-premises permit, there is no fee (Sec. 157-3). Rifles and shotguns having barrels more than 18 inches in length, as well as ammunition therefor, must be kept on the premises, except when being transported from the place of purchase in a wrapper or when actually being used for hunting or target shooting (Sec. 157-6). Persons convicted of a crime involving violence or narcotics may not lawfully possess such rifles, shotguns or ammunition (Sec. 157-7); neither may anyone under 20 years of age, except when actually engaged in hunting or target shooting, and then only if over the age of 16, accompanied by an adult and duly licensed as a hunter (Sec. 157-4). The manufacture, possession and disposition of machine guns, submachine guns, automatic rifles, cannons, firearm silencers, bombs and bombshells are outlawed (Sec. 157-8). So also is the defacement of firearms (Sec. 157-10). Permits to carry a pistol, revolver or ammunition therefor, as distinguished from on-premises possession of a firearm, may be issued by the police only in cases of fear of injury to person or property. Persons under 20 and those previously convicted of a felony or adjudged insane are ineligible. The fee for this permit to carry is \$10 (Sec. 157-9). Manufacture and sale of firearms similarly require licensing by the same authority and at the same fee (Secs. 157-30, 157-31). Exemptions from these pro-

visions are made for police departments, sheriffs, military and naval forces of the state and the United States, mail carriers, law enforcement officers and duly authorized organizations (Sec. 157-11).

The State of Alaska, on the other hand, has no statute regulating manufacture, transport, disposition, possession or defacement of firearms, or other weapons. A single statute makes criminal careless use of firearms, and then apparently only when injury results (Alaska Comp. Laws Ann. (1949), c.4, Sec. 65-4-20).

If a single explanation for such divergence is possible, then it must be in terms of difference in density of population. Alaska, with virtually no regulation of firearms and weapons, is by far the least densely populated state with only 9.4 persons per square mile. Hawaii, with comprehensive regulation, has a density of population almost double the national average (50.5) with 98.6. The State of New York, with 350.1, has a density of population almost seven times the national average. The significance of density of population for firearms regulation in the United States is apparent in the stringency of statutes controlling the carrying of concealed firearms.

Forty-four of the 51 American jurisdictions flatly prohibit the carrying of pistols and revolvers concealed, and an additional state prohibits such carrying in settled parts. Of these jurisdictions, 28 provide for licensing such carrying. The significance of density of population is apparent in this distribution. Of the half-dozen states that do not prohibit such carrying, only two have a density of population equal to or greater than the national average. Of the 45 jurisdictions prohibiting such carrying, 27 have such density.

In these regulations, the historic factor of whether the firearm is carried openly or concealed has frequently been decisive. Apparently in only 9 (Conn., D.C., Hawaii, Ind., Mass., N.M., N.Y., Tex., W.Va.) of the 45 prohibiting jurisdictions, does the prohibition extend to openly carried firearms. It is usual in such jurisdictions to exclude possession on premises (place of business or abode, or one's own property), as distinguished from carrying on or about one's person, for certain well-defined categories of persons, such as aliens, drug addicts or peddlers, ex-felons or persons convicted of crimes of violence, habitual drunkards, incompetents, or minors. Only two states require licenses for such possession, Hawaii in the case of rifles and shotguns as well as pistols and revolvers, and New York in the case of pistols and revolvers. A third state (Mich.) requires inspection by a peace officer of such firearms in order to assure safety.

The appropriate authority for licensing has been the subject of considerable comment, particularly by the county judges in 56 counties of New York, in the responses to the questionnaire of the Joint Legislative Committee. New York has a dual authority: in the City of New York and the County of Nassau, the police commissioner; in the remaining 56 counties, the county judge having his office in the county in which application may duly be made. What is the comparative law in jurisdictions that license possession of firearms?

The usual term of such license is one year with three states providing expiration at the end of the succeeding year (Iowa, Maine, N.Y.) and one state three years (Ga.). License fees vary from 50 cents (Ga., Mass.,

Ore., S.D.) to \$10 (Hawaii) and even \$20 (W.Va.). Customarily, full age, good character and absence of a criminal record are required. The latter is variously defined, ranging from conviction of a felony, through conviction of a crime of violence, to conviction of any crime. Notwithstanding this requirement, only three states make the taking of fingerprints compulsory (Calif., N.J., N.Y.), and in only two others

TABLE 3.

TYPES OF LICENSING AUTHORITY FOR POSSESSION

Police	Judicial	Other admin.	Either of three	Either police or judicial	Either police or admin.

is such practice discretionary with the licensing authority (Conn., Ind.). Nearly all of these jurisdictions provide that the license be carried with the weapon and produced on demand by a peace officer. This requirement, omitted from the existing law in New York, has been supplied in the bill introduced in behalf of the Joint Legislative Committee. About half of the states with a judicial licensing authority require publication by the applicant of his notice to apply (Del., W.Va.).

In two respects, the licensing requirements in New York are notably less stringent than a representative group of other states. In eight states, a proper purpose, usually fear of injury to person or property, must be established (Del., Hawaii, Ind., Mass., N.H., N.D., R.I., Va.). Two of these states also make target shooting a proper purpose (Ind., Mass.) and one both target shooting and hunting (N.H.). Five states that license possession require the posting of security, amounting to either \$100 (Fla., Ga.), \$300 (R.I.), \$2,000 (certain licenses, Miss.) or \$3,500 (W.Va.). The bond in West Virginia accrues to any person damaged by accidental, negligent, improper or unlawful use of the weapon.

The most strategic control of firearms by a state is effective regulation of their transfer. Three methods are in current use: licensing of dealers; permits for purchasers; and the keeping of a register by dealers. Probably, the licensing of dealers is most effective of the three methods: any violation imperils a business investment. Yet less than half of the jurisdictions that license possession also seek control of transfer by licensing dealers (Ala., Calif., D.C., Hawaii, Ind., Iowa, N.H., N.J., N.Y., N.D., S.D., Wash., Pa.), with only a handful requiring

permits of purchasers (Mass., Mich., N.J.) or the keeping of a register (R.I., Wyo.). A few states that do not license possession nevertheless undertake control of transfer either by licensing dealers (N.C., Tenn.), requiring permits of purchasers (N.C.), or providing for a register (Ill., La., Mo., N.C., Utah, Vt.). The significance of state control of transfer by license transcends state boundaries. So long as a state has such licensing requirement, it is a federal crime to ship any firearm, firearm silencer, or revolver or pistol ammunition, from outside the state to anyone within it not licensed to purchase (15 U.S.C., Sec. 902(c)).

About a third of the American jurisdictions prohibit defacement of firearms and about half outlaw machine guns. Most jurisdictions provide for confiscation and destruction of contraband weapons, although some states auction such confiscated weapons and others retain them for use by peace officers. A universal exemption covers peace officers and military personnel. Additional penalties for the use of firearms in the commission of crime is a frequent provision. By far, less frequent are statutory presumptions, either of possession of a weapon arising from presence in a place (usually an automobile) where such weapon is found, or of defacing a weapon arising from possession of the same, or of unlawful intent arising from unlicensed possession of a firearm. When such presumptions have been enacted, grave constitutional questions concerning the reasonableness of the relationship between the fact presumed and the fact proven has caused many courts to hold such statutes invalid (see, e.g., *People v. Murquia*, 6 Cal. 2d 190, 57 P. 2d 115; *Everett v. State*, 208 Ind. 145, 195 (N.E. 77)). The recommendations of the National Conference of Commissioners on Uniform Acts (Uniform Pistol Act, Uniform Firearm Act, Uniform Machine Gun Act) have met with acceptance *in toto* only by a handful of jurisdictions.

Unlike the states which have residual police power, the capability of the federal government in domestic affairs is limited to powers delegated by the Constitution. The most formidable of these powers in the control of crime is the power to tax: considerations of state boundaries are irrelevant to its exercise and it may operate on purely local and intrastate situations. Moreover, the fact that the effect of a given tax (e.g., on narcotics, or on bookmakers and wagers), is primarily regulatory and only incidentally productive of revenue, does not invalidate the tax. Yet Congress has used this power with much more restraint than it has exercised others in the control of firearms and ammunition.

In 1927, under the postal power, pistols and revolvers were declared nonmailable, except to certain federal agencies and officers (18 U.S.C. Sec. 1715). When Congress exercised its taxing power in the National Firearms Act of 1934 (26 U.S.C. Secs. 2720-2733m, 3260-3266), pistols and revolvers—included in the original draft of the bill—were deleted from the definition of a firearm. "Firearms" were defined to include only the sensational weapons of gang warfare, machine guns, firearm silencers and sawed-off shotguns (i.e., ones with barrels less than 18 inches unless .22 caliber, in which case the exempt barrel length could be 16 inches). For such "firearms," steep annual taxes were imposed

on dealers (\$200), pawnbrokers (\$300) and manufacturers (\$500) (26 U.S.C. Sec. 3260), and a tax of \$200 levied on anyone transferring them (26 U.S.C. Sec. 2720). Pistols and revolvers were relegated to the usual 10 percent excise or duty levied on manufacturers or importers, with the usual exemptions for purchases by federal, state or local authorities (26 U.S.C. Sec. 2700). Yet in 1938 when Congress sought to regulate the interstate and foreign transport of firearms in the so-called Federal Firearms Act (15 U.S.C. Secs. 901-909), the term "firearm" was broadly defined to include "any weapon, by whatever name known, which is designed to expel a projectile or projectiles by the action of an explosive and a firearm muffler or firearm silencer or any part or parts of such weapon" (15 U.S.C. Sec. 901(3)). Pistol and revolver ammunition were also brought within the Act (15 U.S.C. Sec. 901(7)). Under this Act, manufacturers and dealers were licensed for shipment and receipt of firearms and such ammunition, and such shipment or receipt to or by convicts, persons under indictment and fugitives from justice was prohibited. By requiring a license to purchase firearms or such ammunition, a state would automatically make a federal crime of shipments from outside its borders to unlicensed manufacturers and dealers within them (15 U.S.C. Sec. 902 (c)).

REGULATION AND CONTROL OF FIREARMS IN CALIFORNIA

TERRY L. BAUM

Deputy Legislative Counsel

I. THE GENERAL PATTERN

There are some types of firearms that are generally prohibited in California, such as sawed-off shotguns. Machine guns are subject to a high degree of control, so that the average person must have a license to possess one at all.

Conventional pistols and revolvers are not subject to such strict controls, and rifles and shotguns are subject to still less control. As for conventional pistols and revolvers—concealable firearms—a dealer must be licensed, but persons other than dealers can make casual sales without a license. There are restrictions on the sale of such firearms to felons, narcotic addicts, mental patients, and minors under 18. It is not necessary to obtain a license or permit to own or possess such a firearm but some formalities, such as a delay in delivery, are required for most sales. Generally, a license is necessary to carry such a firearm concealed.

There are restrictions on the sale of conventional rifles and shotguns to minors and mental patients, but a license is not necessary to sell such a firearm, or to own or possess one. Although “dealers” in concealable firearms must maintain a register of sales and report sales to law enforcement agencies, this is not required of dealers in rifles and shotguns (or of nondealers selling concealable firearms).

There are numerous provisions prohibiting the bringing or sending of firearms into correctional and mental institutions and possession of firearms therein or possession in other specified places.

There are numerous provisions that penalize particular acts involving firearms that jeopardize safety and provisions that impose increased minimum terms or restrict probation or other benefits where another act is committed, or the perpetrator is arrested, while armed with a firearm (or other deadly or dangerous weapon).

It should be noted that this summary deals only with state law. There are at least some ordinances imposing further restrictions on possession of firearms, and there are appellate department decisions upholding such ordinances against the contention of state preemption (*People v. Jenkins*, 207 Cal. App. 2d Supp. 904, *People v. Commons*, 64 Cal. App. 2d Supp. 925).

II. FIREARMS GENERALLY

Under this heading we summarize those laws that actually refer broadly to “firearms,” without limitation, or to guns, or, still more broadly, to deadly weapons, dangerous weapons, or weapons, or otherwise use language of such breadth that they apply at least to rifles

and shotguns in addition to handguns. We do not here refer to any devices covered by the State Fireworks Law (Sec. 12500, *et seq.*, H. & S.C.), even though some of those devices might also fall within a broad definition of firearm.

A. Sale

It is a misdemeanor to sell a firearm to a minor under age 16 (Sec. 12551, Pen.C.), and it is a misdemeanor to sell a firearm to a minor who is at least 16 years of age but not over 18 years of age without consent of his parent or guardian (Sec. 12550, Pen.C.). A stricter rule, applicable only to concealable firearms, is discussed below (IV A).

Every person who knowingly sells (or gives) a firearm to a person who is a mental patient in any hospital or institution *or on parole therefrom* is guilty of a misdemeanor (Sec. 5671, W. & I.C.).

Knowing sale or purchase of a firearm from which the serial number, etc., has been removed, is a misdemeanor (Sec. 537e, Pen.C.).

B. Possession and Use

There are numerous provisions prohibiting possession of firearms within, or bringing or sending firearms into, various correctional and mental institutions. Thus, any person not authorized by law who brings a firearm into a "reformatory" or the grounds thereof is guilty of a felony (Sec. 171a, Pen.C.). It is a felony to give or attempt to give a firearm to a state prisoner employed in a road camp pursuant to Sections 2760-2774 of the Penal Code or to a state prisoner employed in a public park or forest pursuant to Sections 2780-2792 of the Penal Code (Secs. 2772, 2790, Pen.C.).

Except when otherwise authorized by law, or by an appropriate officer, any person who knowingly brings or sends a firearm into, or knowingly assists in bringing or sending a firearm into, any state prison or prison road camp or prison forestry camp, or other prison camp or prison farm or any other place where prisoners of the state prison are located under the custody of prison officials, officers or employees, or any jail or any county road camp in this state, or within the grounds belonging or adjacent to any such institution, is guilty of a felony (Sec. 4574, Pen.C.). Every person confined in a state prison or who, while being conveyed to or from any state prison or while at any prison road camp, prison forestry camp, or other prison camp or prison farm or while being conveyed to or from any such place or while under the custody of prison officials, officers or employees, possesses or carries upon his person or has under his custody or control any firearm is guilty of a felony (Sec. 4502, Pen.C.), as is any person who, while lawfully confined in a jail or county road camp, possesses therein any firearm (Sec. 4574, Pen.C.). Possession, or allowing possession, of firearms by patients in mental institutions is forbidden and there is provision for confiscation of firearms so possessed (Secs. 5670, 5672, W. & I.C.).

Various provisions authorize removal of firearms from persons arrested or detained pursuant to law. A peace officer may search for dangerous weapons any person whom he has legal cause to arrest, whenever he has reasonable cause to believe that the person possesses a dangerous weapon. If the officer finds a dangerous weapon, he may

take and keep it until the completion of the questioning, when he shall either return it or arrest the person. The arrest may be for the illegal possession of the weapon (Sec. 833, Pen.C.). It is further provided that any person making an arrest may take from the person arrested all offensive weapons which he may have about his person and must deliver them to the magistrate before whom he is taken (Sec. 846, Pen.C.; see also Sec. 4003, Pen.C., re receipting for weapons by desk clerk or others at jail). When a person charged with a felony is supposed by the magistrate before whom he is brought to have on his person a dangerous weapon, the magistrate may direct him to be searched in his presence, and the weapon to be retained, subject to his order, or to the order of the court in which the defendant may be tried (Sec. 1542, Pen.C.). There is authorization for removal of firearms from a person detained or apprehended for mental examination (Sec. 5672, W. & I.C.).

Every person who shoots any firearm from or upon a public road or highway is guilty of a misdemeanor (Sec. 374c, Pen.C.). It is provided that the board of supervisors of a county may prohibit and prevent the unnecessary firing and discharge on or into the highways and other public places and may pass all necessary ordinances regulating or forbidding such acts (Sec. 25840, Gov.C.). Any person who with intent to do great bodily injury maliciously and willfully discharges a firearm at a vehicle on a highway or occupant thereof is guilty of a felony (Sec. 23110, Veh.C.). It is an offense for a person to shoot at an official traffic control device, traffic guidepost, traffic signpost, or historical marker (Sec. 21464, Veh.C.).

Every person who willfully discharges any firearm within 500 feet of any magazine or any explosive manufacturing plant is guilty of a misdemeanor punishable by a fine of not more than one thousand dollars (\$1,000), or by imprisonment for not more than one year, or by both (Sec. 12401, H. & S.C.).

It is a misdemeanor for a person, without permission of the owner, to enter private lands under cultivation or enclosed by a fence, belonging to or occupied by another, or to enter upon private uncultivated or unenclosed lands where signs forbidding trespass are displayed at intervals not less than three to the mile along all exterior boundaries and at all roads and trails entering such lands, and there discharge any firearm (subd. (n), Sec. 602, Pen.C.).

Various provisions regulate possession of firearms in game refuges and other refuges. Possession is generally prohibited but subject to exceptions for possession pursuant to permit issued by the Fish and Game Commission, and exceptions for transportation in a prescribed manner and other specified exceptions (Secs. 10500, 10501, 10506, 10650, 10651, 10655, 10659, F. & G.C.). It is unlawful for any person, other than the owner, person in possession of the premises, or a person having the express permission of the owner or person in possession of the premises, to hunt, or to discharge, while hunting, any firearm, within 150 yards of any occupied dwelling house, residence, or other building or any barn or other outbuilding used in connection therewith (Sec. 3004, F. & G.C.).

It is unlawful to take birds or mammals with firearms when intoxicated (Sec. 3001, F. & G.C.). It is unlawful to shoot at any game bird

or mammal, with exceptions, from a powerboat, sailboat, motor vehicle, or airplane (Sec. 3002, F. & G.C.). Every person who while taking any bird or mammal kills or injures another person by the use of any firearm used in such taking and who knowingly either abandons such person or fails to render to such injured person all necessary aid possible under the circumstances is guilty of a felony (Sec. 3009, F. & G.C.; see also Secs. 12150-12152, re consequences of wounding or killing a human being while hunting). There are restrictions on use of firearms for taking particular creatures (See, e.g., Sec. 6854, F. & G.C.) (See Sec. 12006, F. & G.C., re penalties). The Department of Fish and Game is required to furnish information on the safe handling of firearms which shall be distributed free of charge to applicants for hunting licenses by the person appointed and authorized to issue such licenses (Sec. 3033, F. & G.C.). A person under 18 is not to be issued a hunting license unless he has previously held a license or has completed a course in the safe use of firearms as prescribed (Sec. 3032, F. & G.C.).

Possession of a firearm from which the identifying number, etc., has been removed is an offense (Sec. 537e, Pen.C.).

Every person who has upon him any deadly weapon with intent to assault another is guilty of a misdemeanor (Sec. 467, Pen.C.), and every person who, except in self-defense, in the presence of any other person, draws or exhibits any firearm, whether loaded or unloaded, or any other deadly weapon whatsoever, in a "rude, angry or threatening manner," or who, in any manner, unlawfully uses the same in any fight or quarrel is guilty of a misdemeanor (Sec. 417, Pen.C.).

Every person who maliciously and willfully discharges a firearm at an inhabited dwelling or occupied building, is guilty of a felony (Sec. 246, Pen.C.), and it is a misdemeanor for a person to fire any "gun or pistol" in an "unincorporated town" (Sec. 415, Pen.C.).

That the offender was armed with a dangerous or deadly weapon causes robbery to be first degree (Sec. 211a, Pen.C.), and when a person committing burglary is armed with a deadly weapon or while in the commission of the burglary arms himself with a deadly weapon, the offense is first-degree burglary (Sec. 460, Pen.C.).

There are still provisions relating particularly to dueling (combat with deadly weapons, fought between two or more persons by previous agreement or upon a previous quarrel) prohibiting dueling itself and related acts (Secs. 225-231, Pen.C.; Art. II, Sec. 2, Calif. Const.). Assault with a deadly weapon is a distinct offense and is punished more severely where the offender knows or reasonably should know that the victim is in one of a number of specified categories of peace officer (Sec. 245, Pen.C.). Separate sections, imposing different penalties, punish assault with a deadly weapon by a person confined in a state prison (Secs. 4500, 4501, Pen.C.).

Increased minimum penalties are prescribed for felonies where defendant was armed with a deadly weapon at the time of commission of the offense or was armed with a concealed deadly weapon at the time of arrest (Secs. 3024, 3024.5, Pen.C.; see Secs. 969c and 1158a, Pen.C., re charging possession of a deadly weapon and the verdict on this issue). Possession or use of a deadly weapon can affect eligibility for

probation (Sec. 1203, Pen.C.) and bring the habitual criminal law into operation (Sec. 644, Pen.C.), and it can affect the right to engage in a licensed business or occupation (See Sec. 6886.1, B. & P.C., re collection agencies, Sec. 7528, B. & P.C., re detective agencies.).

There are provisions requiring persons operating or managing a hospital or part thereof or a pharmacy, and physicians, to report to law enforcement agencies gunshot wounds (Secs. 11160-11162, Pen.C.) and provisions requiring garagemen to report what appear to be bullet holes in cars (Secs. 10653, 10655, Veh.C.).

An exemption from attachment and execution can be claimed for one "gun" to be selected by the owner (Sec. 690.15, C.C.P.).

Special provisions govern disposition of firearms that are exhibits in criminal cases (Sec. 1419, Pen.C.).

III. RIFLES AND SHOTGUNS

Under this heading we refer to provisions limited to rifles or shotguns or both.

It is unlawful to use or possess a shotgun larger than 10-gauge, or to use or possess a shotgun capable of holding more than six cartridges at one time (Sec. 2010, F. & G.C.).

It is unlawful to possess a loaded rifle or shotgun in any vehicle or conveyance, or its attachments, which is standing on or along or is being driven on or along any public highway or other way open to the public (Sec. 2006, F. & G.C.).

An exemption from attachment or execution can be claimed for one rifle or shotgun (Sec. 690.2, C.C.P.; see also Sec. 690.15, C.C.P., previously discussed).

Sawed-off shotguns are specially dealt with. A "sawed-off shotgun" under California law is a shotgun having a barrel or barrels of less than 18 inches in length, or any weapon made from a rifle or shotgun (whether by alteration, modification, or otherwise) if such weapon as modified has an overall length of less than 26 inches (Sec. 12020, Pen.C.). It is unlawful to sell, possess, etc., such a weapon in this state and it is subject to seizure and destruction as a nuisance (Secs. 12020, 12028, 12029, Pen.C.; but apparently peace officers could be authorized to possess such a weapon—see Sec. 12002, Pen.C.). Additional penalties can be imposed for commission of a felony while armed with a sawed-off shotgun (Sec. 12022, Pen.C.).

IV. CONCEALABLE FIREARMS

The bulk of the law relating to sale and possession of "handguns" in particular is found in Chapter 1 (commencing with Section 12000) of Title 2 of Part 4 of the Penal Code, known as the Dangerous Weapons' Control Law. In addition to certain contraband weapons, this law relates to firearms capable of being concealed upon the person, i.e., firearms having a barrel less than 12 inches in length (but does not apply to "antique pistols or revolvers incapable of use as such") (Sec. 12001, Pen.C.). It is the law relating solely to such concealable firearms that is discussed in this part of the summary.

A. Sale

Persons engaged in the business of selling such firearms (or who advertise or offer or expose for sale such a firearm) must be licensed by the city or county, but it does not appear that the law spells out any qualifications to be licensed (Sec. 12071, Pen.C.). Anyone who engages in such a business without a license is guilty of a misdemeanor (Sec. 12070, Pen.C.) and a license may be revoked for violation of any of its conditions (Sec. 12071, Pen.C.). Every person in the business of selling, leasing or otherwise transferring such firearms is required to keep a register wherein information relative to all transactions is recorded. Recorded are such things as time of sale, date of sale, name of seller, place where sold, make, model, manufacturer's number, caliber and other identification marks of the pistol, revolver, or firearm (Sec. 12073, Pen.C.), and detailed information as to the name, address, and description of the purchaser and the salesman (Secs. 12076 and 12077, Pen.C.). It is an offense for a buyer to give a fictitious name or address (Sec. 12076, Pen. C.). Transfers of such firearms without identifying marks are prohibited (Sec. 12094, Pen.C.). A report of the information recorded in the register is forwarded on the date of sale to the Bureau of Criminal Identification and Investigation, and to the head of the city police department, or, if none, to the county sheriff (Sec. 12076, Pen.C.). A dealer may not deliver such a firearm within three days of application for purchase, and when the firearm is delivered it must be unloaded and securely wrapped. The firearm may not be delivered except to a person personally known to the dealer, or to a person who presents clear evidence of his identity (Sec. 12071, Pen.C.). It is a condition of a dealer's license that such a firearm, or imitation thereof, or placard advertising sale or transfer thereof, shall not be displayed in any part of the premises where it can readily be seen from the outside (Sec. 12071, Pen.C.). The prohibitions relating to the sale of concealed firearms do not apply in sales to persons properly identified as officers of police departments, sheriffs' departments, and district attorneys' offices, or to authorized representatives of cities, cities and counties, counties, state or federal government for use by such governmental agencies (Sec. 12078, Pen.C.).

It is unlawful for a dealer to deliver such a firearm to a person he has reason to believe is an alien, a narcotic addict, or a person who has been convicted of a felony* or a person under 18 years of age (Sec. 12072, Pen.C.).

Although a person must be licensed to engage in *the business* of selling firearms capable of being concealed upon the person, it is not required that a person be licensed to make a casual sale. A person not in the business of selling such firearms is not subject to the requirement of keeping a register or reporting, but he is also subject to the same prohibition against selling such a firearm to a person he has cause to believe is an alien, a narcotic addict, a felon or a person under

* A full and unconditional pardon based on a certificate of rehabilitation restores the felon's rights with respect to firearms, unless he was convicted of a felony involving use of a dangerous weapon (Sec. 4852.17, Pen.C.; see also Sec. 4853, re effect of pardons generally), but so-called expungement of a record pursuant to Section 1203.4 of the Penal Code for a person who has successfully completed probation does not (see Sec. 1203.4, Pen.C.).

18 years of age, and apparently is also subject to the requirement that delivery not be made for three days and that the firearm be delivered securely wrapped and unloaded. Where neither seller nor buyer holds a dealer's license, the sale may be made only if the buyer is personally known to the seller (Sec. 12072, Pen.C.).

It is a misdemeanor to sell, buy or receive a pistol or revolver which does not bear the manufacturer's number or other mark of identification in its original condition or as restored, or a distinguishing mark or number assigned by the Bureau of Criminal Identification and Investigation (Sec. 12094, Pen.C.).

B. Possession and Use

It is a crime for an alien, a person convicted of a felony, or a narcotic addict to own or possess, or have in his custody or control, a firearm capable of being concealed upon the person (Sec. 12021, Pen.C.). It does not appear, however, that any provision states that a person under 18 (knowing transfer to whom of such a firearm is generally prohibited) is himself guilty of an offense in buying or possessing such a firearm.

With the exceptions noted above, purchase and possession of a concealable firearm are not restricted. But generally a license (perhaps more often called a "permit") is required to carry such a firearm concealed. Such a license is issued by the appropriate law enforcement agency head on showing of good cause for issuance and good moral character of the applicant, and only after a prescribed investigation by C.I. & I. Otherwise, it is an offense for a person to carry such a firearm concealed on his person or concealed within a vehicle under his control, and such firearms so carried are subject to seizure and destruction. Prescribed records of licenses must be kept by the issuing agency and copies must be forwarded to C.I. & I. (Secs. 12025, 12028, 12050-12054, Pen.C.).

The requirement of a license for the carrying of a concealed firearm does not apply to or affect any of the following:

- (1) Possession of a firearm at a person's place of residence or business (Sec. 12026, Pen.C.).
- (2) Carrying of firearms openly in a belt holster (Sec. 12025, Pen.C.).
- (3) Sheriffs, marshals, policemen and other duly appointed peace officers (subd. (a), Sec. 12027, Pen.C.).
- (4) Possession or transportation by a merchant of unloaded firearms as merchandise (subd. (b), Sec. 12027, Pen.C.).
- (5) Members of the military or naval forces of the United States or the National Guard, when on duty (subd. (c), Sec. 12027, Pen.C.).
- (6) Duly authorized military or civil organizations while parading, or the members thereof when going to and from meetings of their organizations (subd. (d), Sec. 12027, Pen.C.).
- (7) Guards or messengers of common carriers, banks and other financial institutions while actually engaged in guarding or delivery functions (subd. (e), Sec. 12027, Pen.C.).

(8) Members of target-shooting clubs while using firearms on target ranges and going to and from such ranges (subd. (f), Sec. 12027, Pen.C.).

(9) Licensed hunters or fishermen while hunting or fishing or going to and from a hunting or fishing expedition (subd. (g), Sec. 12027, Pen.C.).

The scope of category (3), above, must be considered in the light of the dozens of sections, which we do not attempt to collect here, providing that specified personnel are, or have the powers of, peace officers. We do note certain provisions which are somewhat more specific in conferring a right to carry concealable firearms concealed (Sec. 308, P.U.C., re Public Utilities Commission personnel; Sec. 129, Lab.C., re I.A.C. personnel; Sec. 607f, Civ.C., re humane officers; Sec. 1406, Gov.C., re special policemen protecting public property).

Removal, alteration, or obliteration of identifying marks or unauthorized affixing of such a mark is an offense (Secs. 12090, 12093, Pen.C.). There is provision for assignment of a distinguishing number or mark by C.I. & I. (Sec. 12092, Pen.C.). Knowing possession of a pistol or revolver without original or properly assigned mark is an offense (Sec. 12094, Pen.C.).

Additional penalties are provided for commission of a felony while armed with a concealable firearm, without a license to carry such a firearm concealed (Sec. 12022, Pen.C.).

V. MISCELLANEOUS

A. *Machineguns*

Chapter 2 (commencing with Section 12200) of Title 2 of Part 4 of the Penal Code regulates machine guns. A machine gun is defined to include all firearms known as machine rifles, machine guns or sub-machine guns capable of discharging automatically and continuously loaded ammunition of any caliber in which the ammunition is fed to such gun from or by means of clips, discs, drums, belts or other separable mechanical device and all firearms which are automatically fed after each discharge from or by means of clips, discs, drums, belts or other separable mechanical device having a capacity greater than 10 cartridges (Sec. 12200, Pen.C.). The sale of machine guns to, and purchase and possession of machine guns by, police departments, city marshals, sheriff's offices and military or naval forces of California or of the United States are permitted, but in order for a corporation, firm or individual to have legal possession of a machine gun, a permit from the Chief of the Bureau of Criminal Identification and Investigation is required (Secs. 12201, 12220 and 12230, Pen.C.). Such permit is issued upon a showing of good cause (and never to a person under 21) (Sec. 12230, Pen.C.). Licenses to sell machineguns may be granted only by the Chief of the Bureau of Criminal Identification and Investigation subject to prescribed conditions, and the breach of any of these conditions will result in revocation of the license (Sec. 12250, Pen.C.). It does not appear that the statutes prescribe qualifications to secure such a license.

B. Pistols Which Are Not Concealable Firearms

Chapter 3 (commencing with Section 12350) of Title 2 of Part 4 of the Penal Code, regulates the sale of pistols other than those defined in Section 12001 of the Penal Code, i.e., those with a barrel length of 12 inches or longer. A person in the business of selling such pistols is required to keep a register in which the name, age, occupation and residence of each purchaser, together with the number or other mark of identification, if any, on the pistol sold is entered, and said register is required to be open to the inspection of peace officers at all times (Sec. 12350, Pen.C.). Violation of these provisions is a misdemeanor (Sec. 12351, Pen.C.).

C. Others

It is unlawful to use or possess any firearm commonly known as a "cane gun" or a gun of similar character (Sec. 2008, F. & G.C.), and it is unlawful to set or cause to be set or placed any "trap gun," i.e., a firearm loaded with other than blank cartridges and connected with a string or other contrivance contact with which will cause the firearm to be discharged (Sec. 2007, F. & G.C.), but there is a limited authorization for use of coyote guns (Sec. 162, Ag.C.).

With exceptions for use and possession by members of the armed forces and duly authorized peace officers, it is an offense to buy, sell, receive, dispose of, conceal, or possess a sniper scope. As defined, this does not mean a telescopic sight generally, but only an attachment designed for or adaptable for use on a firearm which through the use of a projected infrared light source and electronic telescope, enables the operator to determine visually and locate the presence of objects during the nighttime (Sec. 468, Pen.C.).

With exceptions for a city, county, state, or federal civil officer or a member of the armed forces possessing it for official use, it is an offense to possess a silencer (Secs. 12500-1, 12520, Pen.C.).

There are provisions governing sale and possession of tear gas equipment (Secs. 12400-12435, Pen.C.).

LEGISLATIVE HEARING ON REGULATION AND CONTROL OF FIREARMS IN CALIFORNIA

On October 19, 1964, the Assembly Committee on Criminal Procedure conducted a hearing in Room 4202 of the State Capitol in Sacramento. Seeking to limit the scope of their inquiry to an area of primary concern to law enforcement agencies throughout the state, the testimony received by the Committee was confined to comments concerning the regulation and control of concealable weapons in California. The following persons appeared before the Committee and presented their views. The transcript of the hearing is available through the office of the chairman of the Committee.

PERSONS TESTIFYING ON THE CONTROL OF CONCEALABLE WEAPONS IN CALIFORNIA (IN ORDER OF APPEARANCE)

Roy W. Howland

John McInerny for the Honorable Edmund G. Brown, Governor of the State of California

Mr. A. L. Coffey

Arlo E. Smith for the Honorable Thomas Lynch, Attorney General of the State of California

Honorable John Misterly

Gladys Sargent

Honorable Hilliard Comstock

Ellis Shamp

B. G. Simms

Harlon B. Carter

Carl C. Cowles

George Difani

Mrs. James C. Whitney

Delbert E. Schell

Harvey W. Sharrar

R. L. Belt

Frank J. Hillendahl

James E. Fields

William B. Edwards

William A. Wacker

E. F. Sloan

REGULATION AND CONTROL OF FIREARMS
COMMITTEE RECOMMENDATIONS

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 389

Bill provides: That the theft of any firearm, regardless of value, shall be defined as grand theft.

Justification: One of the major sources of firearms used in various criminal acts is through theft. The Committee views with particular alarm, therefore, the theft of firearms, and believes that such theft is of sufficient seriousness to warrant prosecution as grand theft regardless of the monetary value of the particular firearm stolen.

Recommendation: Amend *Penal Code*, Section 487 to include within its definition of grand theft the taking of any firearm.

An act to amend Section 487 of the Penal Code, relating to firearms.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 487 of the Penal Code is amended to
2 read:
3 487. Grand theft is theft committed in any of the follow-
4 ing cases:
5 1. When the money, labor or real or personal property
6 taken is of a value exceeding two hundred dollars (\$200);
7 provided, that when domestic fowls, avocados, olives, citrus or
8 deciduous fruits, nuts and artichokes are taken of a value ex-
9 ceeding fifty dollars (\$50); provided, further, that where the
10 money, labor, real or personal property is taken by a servant,
11 agent or employee from his principal or employer and aggre-
12 gates two hundred dollars (\$200) or more in any 12 consecu-
13 tive month period, then the same shall constitute grand theft.
14 2. When the property is taken from the person of another.
15 3. When the property taken is an automobile, a *firearm*,
16 horse, mare, gelding, any bovine animal, any caprine animal,
17 mule, jack, jenny, sheep, lamb, hog, sow, boar, gilt, barrow
18 or pig.

LEGISLATIVE COUNCIL'S DIGEST

Amends Sec. 487, Pen.C.

Classifies as grand theft the theft of any firearm.

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 390

Bill provides: That *Penal Code*, Section 12021 is broadened to make criminal the ownership or possession of a concealable weapon by a person addicted to dangerous drugs. Further, that the maximum term of imprisonment for violation of the section is increased from 5 to 15 years. Further, that it is a crime for a felon who used a firearm in the commission of the felony of which he was convicted to own, possess or have in his custody or control any firearm.

Justification: In view of the growing problems surrounding the use of dangerous drugs, the Committee feels that an appropriate change in the criminal law is called for to include dangerous drug addicts under the same prohibitions concerning the ownership or possession of concealable weapons that presently apply to narcotic addicts.

Because of the extreme seriousness of violation of the prohibitions against the ownership or possession of a concealable weapon, the Committee also feels that an increase in the maximum sentence for such violation is desirable.

Finally, the Committee feels that conviction of a felony in which a firearm was used is sufficient indication that the convicted felon is not a desirable person to own or possess or have in his custody a firearm. It recommends that such ownership or possession or custody be prohibited.

Recommendation: That *Penal Code*, Section 12021 be amended as outlined in Committee-recommended legislation, A.B. 390.

An act to amend Section 12021 of, and to amend the heading of Chapter 6 (commencing with Section 12550) of Title 2, Part 4 of, and to add Article 2 (commencing with Section 12560) to Chapter 6, Title 2, Part 4 of, the Penal Code, relating to firearms.

The people of the State of California do enact as follows:

1 SECTION 1. Section 12021 of the Penal Code is amended
2 to read:

3 12021. Any person who is not a citizen of the United
4 States and any person who has been convicted of a felony
5 under the laws of the United States, of the State of Califor-
6 nia, or any other state, government, or country, or who is
7 addicted to the use of any narcotic drug or of any dangerous
8 drug as defined in Section 4211 of the Business and Profes-
9 sions Code, who owns or has in his possession or under his
10 custody or control any pistol, revolver, or other firearm capa-
11 ble of being concealed upon the person is guilty of a public
12 offense, and shall be punishable by imprisonment in the state
13 prison not exceeding five 15 years, or in a county jail not
14 exceeding one year or by a fine not exceeding five hun-
15 dred dollars (\$500), or by both.

16 SEC. 2. The heading of Chapter 6 (commencing with Sec-
17 tion 12550) of Title 2 of Part 4 of the Penal Code is amended
18 to read:

19 CHAPTER 6. ~~SALE OF GUNS TO MINORS~~
20 MISCELLANEOUS
21

22 SEC. 3. A heading is added preceding Section 12550 of
23 said code, to read:

24 Article 1. Minors
25

26 SEC. 4. Article 2 (commencing with Section 12560) is
27 added to Chapter 6 of Title 2 of Part 4 of said code, to read:

LEGISLATIVE COUNSEL'S DIGEST

Firearms.

Amends Sec. 12021, and heading of Ch. 6 (commencing with Sec. 12550), Title 2, Pt. 4, adds Art. 2 to Ch. 6, Title 2, Pt. 4, Pen.C.

Broadens Sec. 12021, Pen.C., which now makes criminal the ownership or possession of a concealable firearm, or having such a firearm in one's custody or control, in the case of an alien, felon, or narcotic addict, to apply also to a person addicted to any "dangerous drug," as defined. Increases maximum term of imprisonment for violation of such section from 5 to 15 years. Makes it a crime for a felon who used firearm in commission of the felony of which he was convicted, to own, possess, or have in his custody or control, any firearm, not only concealable firearm.

Article 2. Felons

1
2
3 12560. Every person who has been convicted of a felony
4 under the laws of the United States, of the State of California,
5 or of any other state, government, or country and who used a
6 firearm in the commission of such felony, who owns or has in
7 his possession or under his custody or control any firearm is
8 punishable by imprisonment in the state prison not exceeding
9 15 years, or in a county jail not exceeding one year or by a
10 fine not exceeding five hundred dollars (\$500), or by both such
11 term of imprisonment and such fine.

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 391

Bill provides: That no person under the age of 18 shall have a concealable weapon in his possession unless accompanied by a parent or guardian.

Justification: The Committee feels that because of the particularly dangerous and sensitive nature of concealable weapons, minors under the age of 18 should be discouraged from the possession of such weapons. However, the Committee also recognizes the desirability of such activities as organized gun matches, competitive shoots, etc. It believes, however, that in participating in such activities, minors under the age of 18 should be accompanied by a responsible adult.

Recommendation: That Section 12021.5 be added to the *Penal Code* to prohibit persons under the age of 18 from possessing a concealable weapon unless accompanied by a parent or guardian.

*An act to add Section 12021.5 to the Penal Code,
relating to firearms.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 12021.5 is added to the Penal Code, to
- 2 read:
- 3 12021.5. Every person under 18 years of age who, while in
- 4 any place other than his place of residence and when not ac-
- 5 companied by his parent or guardian, has on his person or
- 6 under his custody or control in such place, any pistol, revolver,
- 7 or other firearm capable of being concealed upon the person,
- 8 is guilty of a misdemeanor.

LEGISLATIVE COUNSEL'S DIGEST

Firearms.

Adds Sec. 12021.5, Pen.C.

Provides that every person under 18 years of age who, while in any place other than his place of residence and when not accompanied by his parent or guardian, has on his person or under his custody or control in such place, any pistol, revolver, or other firearm capable of being concealed upon the person, is guilty of a misdemeanor.

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 392

Bill provides: That the purchaser of a concealable weapon from a dealer shall affix his date of birth in addition to his name and address to the dealer's register. Further, if the purchaser resides in a district other than the one in which the purchase is made, a copy of the triplicate sheet of the register shall be sent by the Bureau of Criminal Identification and Investigation to the appropriate law enforcement agency in the district of the purchaser's residence.

Justification: The addition of the date of birth to the dealer's register will expedite the investigation of the purchase by the appropriate law enforcement agencies.

Furthermore, the notification of the appropriate law enforcement agency when a purchase is made outside of the purchaser's place of residence will better enable local law enforcement to maintain records of concealable weapons within their jurisdictions.

Recommendation: That *Penal Code*, Sections 12076 and 12077 be amended as outlined in Committee-recommended legislation, A.B. 392.

An act to amend Sections 12076 and 12077 of the Penal Code, relating to sale of firearms.

The people of the State of California do enact as follows:

SECTION 1. Section 12076 of the Penal Code is amended to read:

12076. The purchaser of any firearm capable of being concealed upon the person shall sign, and the dealer shall require him to sign his legal name and affix his residence address *and date of birth* to the register in triplicate, and the salesman shall affix his signature in triplicate as a witness to the signature of the purchaser. Any person furnishing a fictitious name or address *or knowingly furnishing an incorrect birth date* and any person violating any of the provisions of this section is guilty of a misdemeanor.

The triplicate sheet of the register shall, on the date of sale, be placed in the mail, postage prepaid, and properly addressed to the Bureau of Criminal Identification and Investigation at Sacramento and the duplicate shall be mailed, postage prepaid, to the chief of police, or other head of the police department of the city or county wherein the sale is made. Where the sale is made in a district where there is no municipal police department the duplicate sheet shall be mailed to the sheriff of the county wherein the sale is made.

If, on receipt of the triplicate sheet, it appears to the bureau that the purchaser resides in a district other than that to which the duplicate is required to be mailed, the bureau shall make an additional copy and transmit it to the head of the municipal police department, if any, in the district in which the purchaser resides or, if none, to the sheriff of the county in which he resides.

SEC. 2. Section 12077 of said code is amended to read:

12077. The register provided for in this article shall be substantially in the following form:

FORM OF REGISTER

Original

Serial No. -----

Sheet No. -----

LEGISLATIVE COUNSEL'S DIGEST

Firearms.

Amends Secs. 12076, 12077, Pen.C.

Requires person purchasing concealable firearm from dealer to affix birth date to register and makes it a misdemeanor knowingly to affix an incorrect birth date. Modifies the form of the register to provide space for birth date.

Provides that if, on receipt of the triplicate sheet of the register, it appears to the Bureau of Criminal Identification and Investigation that the purchaser resides in a district other than that to which the duplicate is required to be mailed, the bureau shall make an additional copy and transmit it to the head of the municipal police department, if any, in the district in which the purchaser resides or, if none, to the sheriff of the county in which he resides.

DEALER'S RECORD OF SALE OF REVOLVER OR PISTOL
STATE OF CALIFORNIA

Notice to dealers: This original is for your files. If spoiled in making out, do not destroy. Keep in books. Fill out in triplicate.

A carbon copy must be mailed on the day of sale to the State Bureau of Criminal Identification and Investigation at Sacramento, and a carbon copy must be mailed at the same time to the head of police commissioners, chief of police, city marshal, town marshal, or other head of police department of the municipal corporation, wherein the sale is made, or to the sheriff of your county if the sale is made in a district where there is no municipal police department. Violation of this law is a misdemeanor. Use carbon paper for duplicate. Use indelible pencil.

11 *ingly affixing an incorrect birth date* to said register and any
12 person violating any of the provisions of this section is guilty
13 of a misdemeanor.)

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 393

Bill provides: That a person who has been involuntarily confined in a mental institution for 30 days or more may not own, possess or have in his custody or control any firearm unless he has obtained a certificate in prescribed manner that he can do so without endangering others.

Justification: The Committee feels that the possession of any firearm by a person who has been involuntarily committed to a mental institution is a question that requires particular attention in the criminal law. While it is reluctant to place an undue burden on any person who has been released from such an institution, it also feels that the possible dangers in the possession of firearms by such persons justify the requirement of an affirmative certification of their ability to possess firearms before they are allowed to do so.

Recommendation: That Section 5672 be added to the *Welfare and Institutions Code* as outlined in Committee-recommended legislation, Assembly Bill 393.

Concurring note: Mr. Beilenson prefers limiting the scope of criminality of this section to *knowing possession* of a concealable weapon.

An act to add Section 5672 to the Welfare and Institutions Code, relating to firearms.

The people of the State of California do enact as follows:

SECTION 1. Section 5672 is added to the Welfare and Institutions Code, to read:

5672. No person who has ever been involuntarily confined in any public or private mental hospital or sanitarium for a period of 30 days or more shall own or have in his possession or under his custody or control any firearm unless there has been issued to such person a certificate as hereafter described in this section and such person has not, subsequent to the issuance of such certificate, again been involuntarily confined for a period of 30 days or more in any such hospital or sanitarium.

A certificate meeting the requirements of this section must be a written statement that is either part of a broader certificate of competency or a separate document and that is issued, on application of the person who was confined, either at the time of release or at a later date, by the head of the institution in which such person was confined or by the superintendent of any California state hospital, stating that in the opinion of the person issuing the certificate, based either on his own knowledge or on the opinions of members of his staff or on records of the institution, the applicant is a person who may possess a firearm without endangering others. If a person applies to a superintendent of a California state hospital for such a certificate and the applicant has not been confined in that hospital, or if the superintendent believes that a current mental examination is necessary to enable him to determine whether or not such a certificate shall be issued, the superintendent shall cause such person to be examined by a member of the staff of the hospital and may otherwise investigate the case. The superintendent may charge a reasonable fee for such examination and investigation.

Every person who owns, possesses, or has under his custody or control any firearm in violation of this section is guilty of a misdemeanor.

LEGISLATIVE COUNSEL'S DIGEST

Firearms.

Adds Sec. 5672, W. & I.C.

Makes it a crime for a person who has been involuntarily confined in a mental institution for 30 days or more to own, possess or have under his custody or control any firearm unless he has obtained from head of a mental institution, in prescribed manner, a certificate that he can do so without endangering others, and he has not thereafter been so confined for such period.

COMMITTEE RECOMMENDED LEGISLATION

Assembly Bill 394

Bill provides: That a concealable weapon may be concealed in a vehicle without a license to do so when the vehicle is parked, unoccupied and locked.

Justification: At the present time, a concealable weapon may not be concealed by any person within a vehicle that is under his control or direction unless he has a license to carry it concealed. Under interpretations of this section of the *Penal Code*, a person wishing to leave his firearm in a parked vehicle is required to leave the firearm unconcealed. In the Committee's view, this situation is a potential invitation to the theft of the unattended firearm and to other crime.

The Committee feels that it is desirable to allow a firearm under this section to be concealed in the vehicle, providing that, when this is done, the vehicle is parked, unoccupied and locked.

Recommendation: That *Penal Code*, Section 12025 be amended as provided in the following legislation.

An act to amend Section 12025 of the Penal Code, relating to firearms.

The people of the State of California do enact as follows:

SECTION 1. Section 12025 of the Penal Code is amended to read:

12025. Except as otherwise provided in this chapter, any person who carries concealed upon his person or concealed within any vehicle which is under his control or direction any pistol, revolver, or other firearm capable of being concealed upon the person without having a license to carry such firearm as provided in this chapter is guilty of a misdemeanor, and if he has been convicted previously of any felony or of any crime made punishable by this chapter, is guilty of a felony.

Firearms carried openly in belt holsters are not concealed within the meaning of this section, nor are knives which are carried openly in sheaths suspended from the waist of the wearer.

It is not a violation of this section to leave a firearm in such a place in a parked, unoccupied and locked vehicle that the firearm is not visible from outside the vehicle.

LEGISLATIVE COUNSEL'S DIGEST

Firearms.

Amends Sec. 12025, Pen.C.

Modifies section penalizing the concealed carrying of a concealable firearm without a license to do so by providing that it is not a violation of the section to leave a firearm in such a place in a parked, unoccupied and locked vehicle that the firearm is not visible from outside the vehicle.

ADDITIONAL COMMITTEE RECOMMENDATIONS

I.

The Committee is aware of the problems that presently exist within the existing statutory definitions of firearms in the California codes. It feels that rather than taking an *ad hoc* approach and attempting to rewrite present definitions to include new types of particularly offensive weapons (e.g., "the enforcer") as they develop, it would be wiser to redraft the California definitions to conform with the comparable federal definitions.

The Committee is presently working on such a conformity statute, and it will be presented as a part of the Committee's proposals to the 1965 Regular Session.

II.

The Committee is also aware of problems involving the ownership, possession, sale and use of antique weapons, and it is willing to consider proposals for redefinitions in this area during the 1965 Regular Session.

III.

The Committee has a continuing interest in proposals for changing the mechanics of issuing permits to carry concealable weapons including the proposal that the sheriffs of the various counties should be the sole issuing officers for such permits. However, the committee wishes to consider this question further with particular emphasis on developing carefully defined and meaningful standards which, if met, would entitle an applicant to obtain such a permit.

ADDITIONAL COMMITTEE RECOMMENDATIONS (Continued)

PROPOSED DRAFTS

The following three bills have been drafted in response to Committee recommendations I and II on the preceding page.

I.

Assembly Bill 395

An act to amend Section 12200 of the Penal Code, relating to machine guns.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 12200 of the Penal Code is amended to
2 read:
3 12200. The term machine gun as used in this chapter means
4 any weapon which shoots, or is designed to shoot, automatically
5 or semiautomatically, more than one shot, without manual re-
6 loading, by a single function of the trigger. shall apply to and
7 include all firearms known as machine rifles, machine guns, or
8 submachine guns capable of discharging automatically and con-
9 tinuously loaded ammunition of any caliber in which the am-
10 munition is fed to such gun from or by means of clips, disks,
11 drums, belts or other separable mechanical device and all fire-
12 arms which are automatically fed after each discharge from or
13 by means of clips, disks, drums, belts or other separable me-
14 chanical device having a capacity greater than 10 cartridges.

LEGISLATIVE COUNSEL'S DIGEST

Amends Sec. 12200, Pen.C.

Redefines machine gun to conform with definition in federal law, as any weapon which shoots, or is designed to shoot, automatically or semiautomatically, more than one shot, without manual reloading, by a single function of the trigger.

I.

Assembly Bill 396

An act to amend Sections 12001 and 12020 of the Penal Code, relating to weapons.

The people of the State of California do enact as follows:

1 SECTION 1. Section 12001 of the Penal Code is amended to
2 read:

3 12001. "Pistol," "revolver," and "firearms capable of be-
4 ing concealed upon the person" as used in this chapter apply
5 to and include all firearms having a barrel less than 12 inches
6 in length.

7 This chapter does not apply to antique pistols or revolvers
8 incapable of use as such.

9 *Nothing in this chapter shall be construed as authorizing the*
10 *manufacture, importation into the state, keeping for sale, offer-*
11 *ing for sale, or giving, lending, or possession of any sawed-off*
12 *shotgun, as defined in Section 12020.*

13 SEC. 2. Section 12020 of said code is amended to read:

14 12020. Any person in this state who manufactures or causes
15 to be manufactured, imports into the state, keeps for sale, or
16 offers or exposes for sale, or who gives, lends, or possesses any
17 instrument or weapon of the kind commonly known as a black-
18 jack, slung shot, billy, sandclub, sandbag, sawed-off shotgun,
19 or metal knuckles, or who carries concealed upon his person
20 any explosive substance, other than fixed ammunition or who
21 carries concealed upon his person any dirk or dagger, is guilty
22 of a felony, and upon conviction shall be punishable by im-
23 prisonment in the county jail not exceeding one year or in a
24 state prison for not less than one year nor more than five years.

25 As used in this section a "sawed-off shotgun" means a shot-
26 gun having a barrel or barrels of less than 18 inches in length,
27 *or a rifle having a barrel or barrels of less than 16 inches in*
28 *length*, or any weapon made from a rifle or shotgun (whether
29 by alteration, modification, or otherwise) if such weapon as
30 modified has an overall length of less than 26 inches.

LEGISLATIVE COUNSEL'S DIGEST

Amends Secs. 12001, 12020, Pen.C.

Changes definition of "sawed-off shotgun" so as to include a rifle having a barrel or barrels of less than 16 inches in length.

Specifies that nothing in the Dangerous Weapons Control Law shall be construed as authorizing the manufacture, importation into the state, keeping for sale, offering for sale, or giving, lending, or possession of any sawed-off shotgun, as defined in Sec. 12020, Pen.C.

II.

Assembly Bill 397

An act to amend Section 12001 of the Penal Code, relating to firearms.

The people of the State of California do enact as follows:

1 SECTION 1. Section 12001 of the Penal Code is amended to
2 read:

3 12001. "Pistol," "revolver," and "firearms capable of be-
4 ing concealed upon the person" as used in this chapter apply
5 to and include all firearms having a barrel less than 12 inches
6 in length.

7 This chapter does not apply to *unloaded antique or historical*
8 *pistols, or revolvers or other firearms incapable of use as such*
9 *by reason of being mechanically inoperative or by reason of*
10 *the immediate inaccessibility of ammunitions with which to*
11 *load the same.*

LEGISLATIVE COUNSEL'S DIGEST

Amends Sec. 12001, Pen.C.

Changes the exemption from the Dangerous Weapons' Control Law from antique pistols and revolvers incapable of use as such, to unloaded antique or historical pistols, revolvers or other firearms incapable of use as such by reason of either being mechanically inoperative or immediate inaccessibility of proper ammunition.

APPENDIX I

December 18, 1964

THE HONORABLE GORDON WINTON, JR.
Chairman, Criminal Procedure Committee
State Capitol
Sacramento, California

Dear Gordon:

In general, I approve the Criminal Procedure Committee report on gun regulations but have these comments.

I suggest some consideration be given to a change in proposed Penal Code Section 12021.5 relating to the possession of concealable firearms by persons under the age of 18. I understand that there are some youth pistol shooting groups which have target practice under the supervision of an adult who is qualified and trained in the use of firearms. Many parents would normally not be in attendance at these youth target practice sessions.

You might want to consider some addition to proposed Penal Code Section 12021.5 along these lines: "When not accompanied by his parent or guardian or when not under the supervision of an adult qualified and trained in the use of firearms . . ."

I have some reservations about the practical operation of proposed Section 5672 of the Welfare and Institutions Code relating to the ownership or possession of firearms by a person who has been involuntarily confined in a mental hospital. The way the bill now reads, it would seem that the following factual situation could occur: A person owning a firearm is committed to a mental hospital and confined for more than 30 days. While he is confined in the mental hospital, he has no practical method of divesting himself of ownership of the firearm which would normally be left at his home. To make this effective, it would seem you would also either have to require his family to surrender the firearm to a police agency after confinement of 30 days or provide for some abatement or confiscation procedure. I am inclined to think that this proposal might be too complicated and involve more administrative expense than the protection is worth.

An alternative Section 5672 of the Welfare and Institutions Code might be to prohibit a person from purchasing or acquiring a firearm after he has been committed to a mental institution, unless he obtains a certificate of competency.

Sincerely,

BURT HENSON
State Assemblyman

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON CRIMINAL PROCEDURE
SACRAMENTO, January 4, 1964

HON. JESSE M. UNRUH, *Speaker of the Assembly*
and Members of the Assembly
Assembly Chamber, Sacramento, California

Gentlemen:

The principal function of this report is to inform the Members of the Legislature concerning our interim study of *probation, parole*, and related matters. Testimony was received from city, county, and state officers together with persons experienced in the administration of justice.

The committee heard of many problems and various solutions. Our recommendations for legislation will provide a realistic approach toward meeting some of these problems. In recognition of the need and interest in considering alternatives, the committee staff was instructed to develop legislative measures embodying proposals suggested by the witnesses and to prepare special reports on pertinent topics.

Copies of the complete transcript of our hearing and of this report were sent to all chief county probation officers, boards of supervisors, state executive agencies concerned, and other groups interested in this area. Additional reports concerning the work of this committee in other areas will be submitted pursuant to House Resolution 500.

Respectfully submitted,

GORDON H. WINTON, JR., *Chairman*

ANTHONY C. BEILENSON, *Vice Chairman*

READERS' GUIDE

The design of this report is intended to provide Legislators with a quick reference to the justification for adoption of the 12 recommended measures. Secondly, it furnishes a composite of testimony by various witnesses on the subject areas.

In addition to the use for legislative references, it is hoped that the page citations to the complete statements in the transcript will provide a guide for citizens or public officials interested in securing additional information on these topics.

The report is arranged in three chapters to permit selective consideration of the contents. Chapter I, "Legislative Hearings," presents the names, position, and the agency represented by hearing witnesses and persons filing statements with the committee. They are arranged in accordance with the topic upon which they had been invited to comment. In the course of the two days of hearings a considerable volume of historical, philosophical and general background information was presented and recorded, but only selected portions directly related to proposed legislative measures have been included in this report. Chapter II, "Committee Recommendations for Legislation," contains 12 bills with a brief explanation of the purposes, justification, and some pertinent statements from the testimony. In some instances agency reports providing more factual data have been placed immediately after the proposed bill. Chapter III, "Topical Commentaries," lists as an index a compilation of statements by various witnesses on particular topics. These are based upon the transcript of the testimony during the hearings. The appendices include a compilation of code sections governing eligibility for probation or parole and an implementing resolution by the Adult Authority. A detailed report concerning the first two years' experience by Orange County with the Work Furlough Rehabilitation Law should be a valuable guide for other counties considering its adoption.

The time and effort expended by the witnesses and the staff of all participating agencies in preparation for the hearing and in responding to subsequent inquiries is gratefully acknowledged.

A. LAMONT SMITH, D.P.A.
Special Consultant

WRITTEN STATEMENTS

"Relationship Between Economic Conditions, Crime and Parole Violation in California"

by Dr. Stuart Adams

Statement of the Friends Committee on Legislation

by Joe Gunterman

Letter from Heman G. Stark, Director, California Youth Authority, to Honorable Gordon H. Winton, Jr., dated March 6, 1964.

Letter from Justice Raymond E. Peters of the California Supreme Court to committee staff dated February 20, 1964.

Letter from Professor Paul W. Tappan of the Harvard Law School to Honorable Gordon H. Winton, Jr., dated March 5, 1964.

List of written material submitted to the committee by various witnesses and available in offices of the Assembly Committee on Criminal Procedure.

On the basis of testimony received at these hearings and of additional information developed by the committee and its staff, a 12-point legislative program is recommended to the 1965 Session of the California Legislature in the areas of probation and parole. In the interest of economy, prefatory material to these recommendations is omitted here. However, users of this report are referred to copies of the hearing transcript which are available through the office of the chairman of the committee. They are also referred to a topical compilation prepared by the committee consultant A. LaMont Smith that reviews probation and parole in California in terms of (1) its importance within the criminal system, (2) current probation practices and procedures, (3) probation results by (a) county class, (b) probation granted, (c) offense, (d) sex, (e) age, (f) recommendations, (g) conditions and (h) time on probation, and (4) experimental programs in the field. This compilation is also available through the office of the chairman.

CHAPTER II

COMMITTEE RECOMMENDED LEGISLATION

Committee Recommended Legislation—A.B. 1475

Purpose

Permit, with concurrence of the district attorney, extended use of adult probation by the courts and removal of their authority to increase restrictions on parole eligibility by ordering service of consecutive sentences.

Justification

In 1957 an amendment to Section 1203 of the Penal Code restored to the courts authority to grant probation, *in unusual cases*, to persons convicted of robbery, burglary, or arson. Since that date there appears to have been no significant increase in the number of such cases granted probation. The proposed measure would permit needed flexibility in the law safeguarded by the requirement of mutual agreement by the court and district attorney.

Effective operation of the indeterminate sentence law and recognition of progressive institutional treatment is hampered by variations in parole eligibility established at time of sentence when offenders have multiple charges. (See Appendix C)

Selected Statements by Hearing Witnesses

MR. A. MULL †: California has some of the most restrictive, prohibitive adult probation legislation in the nation. We feel that the time is right for an extensive reevaluation of Section 1203 of the *Penal Code*. We feel that oftentimes the defendant may represent an excellent probation risk (on the basis of emotional stability, good employment record, personality measurement tests, psychiatric and psychological evaluation, etc.) and still be legally ineligible for probation under the current code. We feel that a person's eligibility for probation should be determined strictly on his individual merit, rather than by a catch-all section of the law. (P. 25.)*

CHAIRMAN WINTON: I suggest another question about the cases which are sent to state prisons and are ineligible by law for probation. This suggests to me that perhaps some of these cases that are now ineligible for probation should be made eligible. (See Appendix A.) There might be success in probation there, too.

MR. DAVIS: I would agree with you. *Penal Code*, Section 1203 which describes eligibility for probation is so confusing that I doubt many of us understand it. I don't. I have talked to a very few probation officers who do. It's extremely difficult. (P. 127.)* There is at present no statistical evidence to suggest that a reasonable increase in the rate of probation will produce a compensating increase in the rate of recidivism.* (P. 124.)

MR. THORNTON: I would like to close by making two positive suggestions for your study which may assist in solving some of

* Hearing transcript, office of the chairman.

† Chairman, California Council on Crime and Delinquency.

our correctional problems. One, and speaking as Chief Probation Officer representing the Chief Probation Officers' Association of California, remove all the restrictions there are for the granting of probation in felony cases with the exception of murder. Allow the judge to make an individual decision on each case whether confinement in the state prison is necessary or whether confinement in the county jail is necessary and/or whether probation is the best for society and the prisoner. Make each case an individual judgment as to disposition, make it mandatory that no sentence can be given by a superior court or imposed without a presentence report for the judge to read. This protects the people of the State of California just as well as it protects the defender. (P. 68.)*

MR. R. KELDGORD †: Some comment was also offered yesterday in respect to the Adult Probation Law, Section 1203 of the *Penal Code*, and again Mr. Davis referred to this. We feel that this is a section of the law which bears close scrutiny. We are certainly aware of the current study, the joint committee on the revision of the Penal Code being chaired by Senator Regan. We know that some testimony has been taken by that committee in respect to revision of Section 1203. The figure which the chairman here was considering a few minutes ago, I believe, is from January 1963 Senate Fact Finding Committee on Judiciary Report on Post Conviction Procedures, and the figure that I believe is correct is 42 percent. They found at that time that 42 percent of the defendants in adult probation were statutorily ineligible for probation. Now I have just today learned that there is a very recent California State Supreme Court decision (*People v. Alotis*, dated January 30, 1964) which would seem to have the effect of liberalizing the Adult Probation Law and the adult probation responsibilities. As I understand it, and I am not an attorney, this decision has the effect of saying that in all misdemeanors, the defendant may be legally eligible for probation.

The astronomical cost involved in the misuse or nonuse of adult probation really gives us a lot of cause for concern. This report, the Senate Post Conviction Procedures Report, showed that between 1958 and 1961, there was a 2.2-percent decrease in the use of adult probation in the State of California. This report also predicted that even this very small percentage, only 2.2-percent increase in commitments to prison, still made necessary the use of institution space costing \$15 million, so we are talking not only about concepts. We are certainly talking about dollars and cents. (Pp. 134, 135.)*

MR. BREWER: First, there is a question of the eligibility for parole. I believe that study should be given to the problem of whether or not laws governing the eligibility for parole should be made more uniform, so that at least the truly exceptional cases might be examined by the Adult Authority. (P. 80.)*

* Hearing transcript, office of the chairman.

A.B. 1475

LEGISLATIVE COUNSEL'S DIGEST

Penalties for crimes.

Provides that in cases in which, under Sec. 1203, Pen.C., a defendant is now absolutely ineligible for probation, the judge may, if the case is an unusual one, if the interests of justice would be served thereby, and if the district attorney concurs, grant probation.

Generally eliminates authorizations for imposition of consecutive sentences. Eliminates special restriction on parole of persons undergoing consecutive sentences.

An act to amend Sections 19a, 669, 1203, and 12022, and to repeal Section 3043, of the Penal Code, relating to penalties for crimes.

The people of the State of California do enact as follows:

1 SECTION 1. Section 19a of the Penal Code is amended to
2 read:

3 19a. In no case shall any person sentenced to confinement
4 in a county or city jail, or in a county or joint county penal
5 farm, road camp, work camp, or other county adult detention
6 facility, or committed to the sheriff for placement in any such
7 county adult detention facility, on conviction of a misde-
8 meanor, or as a condition of probation upon conviction of
9 either a felony or a misdemeanor, or upon commitment for
10 civil contempt, or upon default in the payment of a fine upon
11 conviction of either a felony or a misdemeanor, or for any
12 other reason except upon conviction of more than one offense
13 when consecutive sentences have been imposed; be committed
14 for a period in excess of one year; provided, however, that the
15 time allowed on parole shall not be considered as a part of
16 the period of confinement.

17 SEC. 2. Section 669 of said code is amended to read:

18 669. When any person is convicted of two or more crimes,
19 whether in the same proceeding or court or in different pro-
20 ceedings or courts, and whether by judgment rendered by the
21 same judge or by different judges, the terms of imprisonment
22 for all such crimes shall run concurrently. the second or other
23 subsequent judgment shall direct whether the terms of impris-
24 onment or any of them to which he is sentenced shall run con-
25 currently, or whether the imprisonment to which he is or has
26 been sentenced upon the second or other subsequent conviction
27 shall commence at the termination of the first term of
28 imprisonment to which he has been sentenced; or at the ter-
29 mination of the second or subsequent term of imprisonment
30 to which he has been sentenced; as the case may be; provided,
31 however, if the punishment for any of said crimes is expressly
32 prescribed to be life imprisonment, whether with or without
33 possibility of parole; then the terms of imprisonment on the
34 other convictions, whether prior or subsequent, shall be merged
35 and run concurrently with such life term. In the event that

1 the court at the time of pronouncing the second or other judg-
2 ment upon such person had no knowledge of a prior existing
3 judgment or judgments, or having knowledge, fails to deter-
4 mine how the terms of imprisonment shall run in relation to
5 each other, then, upon such failure so to determine, or upon
6 such prior judgment or judgments being brought to the atten-
7 tion of the court at any time prior to the expiration of 60
8 days from and after the actual commencement of imprison-
9 ment upon the second or other subsequent judgments, the
10 court shall, in the absence of the defendant and within 60 days
11 of such notice, determine how the term of imprisonment upon
12 said second or other subsequent judgment shall run with
13 reference to the prior incomplete term or terms of imprison-
14 ment. Upon the failure of the court so to determine how the
15 terms of imprisonment on the second or subsequent judgment
16 shall run, the term of imprisonment on the second or subse-
17 quent judgment shall run concurrently.

18 The State Board of Prison Directors shall advise the court
19 pronouncing the second or other subsequent judgment of the
20 existence of all prior judgments against the defendant, the
21 terms of imprisonment upon which have not been completely
22 served.

23 SEC. 3. Section 1203 of said code is amended to read:

24 1203. After the conviction by plea or verdict of guilty of a
25 public offense not amounting to a felony, in cases where dis-
26 cretion is conferred on the court or any board or commission
27 or other authority as to the extent of the punishment, the
28 court, upon application of the defendant or of the people or
29 upon its own motion, may summarily deny probation, or at a
30 time fixed may hear and determine in the presence of the de-
31 fendant the matter of probation of the defendant and the
32 conditions of such probation, if granted. If probation is not
33 denied, and in every felony case in which the defendant is
34 eligible for probation, before any judgment is pronounced,
35 and whether or not an application for probation has been
36 made, the court must immediately refer the matter to the pro-
37 bation officer to investigate and to report to the court, at a
38 specified time, upon the circumstances surrounding the crime
39 and concerning the defendant and his prior record, which
40 may be taken into consideration either in aggravation or
41 mitigation of punishment. The probation officer must there-
42 upon make an investigation of the circumstances surrounding
43 the crime and of the prior record and history of the defendant,
44 must make a written report to the court of the facts found
45 upon such investigation, and must accompany said report with
46 his written recommendations, including his recommendations
47 as to the granting or withholding of probation to the defendant
48 and as to the conditions of probation if it shall be granted.
49 The report and recommendations must be made available to
50 the court and the prosecuting and defense attorneys at least
51 two days prior to the time fixed by the court for the hearing

1 and determination of such report and must be filed with the
2 clerk of the court as a record in the case at the time of said
3 hearing. By written stipulation of the prosecuting attorney
4 and the defense attorney, filed with the court, or by oral
5 stipulation in open court made and entered upon the minutes
6 of the court, the time within which the report and recommen-
7 dations must be made available and filed, under the preceding
8 provisions of this section, may be waived. At the time or
9 times fixed by the court, the court must hear and determine
10 such application, if one has been made, or in any case the
11 suitability of probation in the particular case, and in con-
12 nection therewith must consider any report of the probation
13 officer, and must make a statement that it has considered such
14 report which must be filed with the clerk of the court as a
15 record in the case. If the court shall determine that there are
16 circumstances in mitigation of punishment prescribed by law,
17 or that the ends of justice would be subserved by granting
18 probation to the defendant, the court shall have power in its
19 discretion to place the defendant on probation as hereinafter
20 provided; if probation is denied, the clerk of the court must
21 forthwith send a copy of the report and recommendations to
22 the Department of Corrections at the prison or other institu-
23 tion to which the defendant is delivered.

24 In every misdemeanor case, the court may, at its option
25 refer the matter to the probation officer for investigation and
26 report or summarily deny probation or summarily grant pro-
27 bation.

28 The Legislature hereby expresses the policy of the people of
29 the State of California to be that, except in unusual cases where
30 the interest of justice demands a departure from the declared
31 policy, no judge shall grant probation to any person who shall
32 have been convicted of robbery, burglary or arson, and who
33 at the time of the perpetration of said crime or any of them or
34 at the time of his arrest was himself armed with a deadly
35 weapon (unless at the time he had a lawful right to carry the
36 same), nor to a defendant who used or attempted to use a
37 deadly weapon upon a human being in connection with the
38 perpetration of the crime of which he was convicted, nor to
39 one who in the perpetration of the crime of which he was con-
40 victed wilfully inflicted great bodily injury or torture, nor to
41 any such person unless the court shall be satisfied that he has
42 never been previously convicted of a felony in this state nor
43 previously convicted in any other place of a public offense
44 which would have been a felony if committed in this state.

45 *Except as hereafter provided in this section*, probation shall
46 not be granted to any person who shall have been convicted
47 of burglary with explosives, rape with force or violence, mur-
48 der, assault with intent to commit murder, attempt to commit
49 murder, train wrecking, kidnaping, escape from a state prison,
50 conspiracy to commit any one or more of the aforementioned
51 felonies, and who at the time of the perpetration of said crime

1 or any of them or at the time of his arrest was himself armed
2 with a deadly weapon (unless at the time he had a lawful
3 right to carry the same), nor to a defendant who used or at-
4 tempted to use a deadly weapon upon a human being in con-
5 nection with the perpetration of the crime of which he was
6 convicted, nor to one who in the perpetration of the crime of
7 which he was convicted wilfully inflicted great bodily injury
8 or torture, nor to any defendant unless the court shall be satis-
9 fied that he has not been twice previously convicted of felony
10 in this state nor twice previously convicted in any other place
11 or places of public offenses which would have been felonies if
12 committed in this state; nor to any defendant convicted of the
13 crime of burglary with explosives, rape with force or violence,
14 murder, attempt to commit murder, assault with intent to mur-
15 der, train wrecking, extortion, kidnaping, escape from a state
16 prison, violation of Sections 286, 288 or 288a of this code, or
17 conspiracy to commit any one or more of the aforesaid felonies,
18 unless the court shall be satisfied that he has never been previ-
19 ously convicted of a felony in this state nor previously con-
20 victed in any other place of a public offense which would have
21 been a felony if committed in this state; nor to any defendant
22 unless the court shall be satisfied that he has never been pre-
23 viously convicted of a felony in this state nor convicted in any
24 other place of a public offense which would have been a felony
25 if committed in this state and at the time of the perpetration
26 of said previous offense or at the time of his arrest for said
27 previous offense he was himself armed with a deadly weapon
28 (unless at the time he had a lawful right to carry the same)
29 or he personally used or attempted to use a deadly weapon
30 upon a human being in connection with the perpetration of said
31 previous offense or in the perpetration of said previous offense
32 he wilfully inflicted great bodily injury or torture; nor to any
33 public official or peace officer of the state, county, city, city and
34 county, or other political subdivision who, in the discharge of
35 the duties of his public office or employment, accepted or gave
36 or offered to accept or give any bribe or embezzled public
37 money or was guilty of extortion.

38 *In unusual cases, otherwise subject to the preceding para-*
39 *graph, in which the interests of justice would best be served*
40 *thereby, the judge may, with the concurrence of the district*
41 *attorney, grant probation.*

42 No probationer shall be released to enter another state of the
43 United States, unless and until his case has been referred to the
44 California Administrator, Interstate Probation and Parole
45 Compacts, pursuant to the Uniform Act of Out-of-state Pro-
46 bationer and Parolee Supervision.

47 In those cases in which the defendant is not eligible for
48 probation, the judge may in his discretion refer the matter
49 to the probation officer for an investigation of the facts rele-
50 vant to sentence. The probation officer must thereupon make
51 an investigation of circumstances surrounding the crime and

1 the prior record and history of the defendant and make a
2 written report to the court of the facts found upon such
3 investigation.

4 SEC. 4. Section 3043 of said code is repealed.

5 ~~3043. No prisoner who has had imposed upon him two or~~
6 ~~more consecutive sentences may be paroled until he has served~~
7 ~~at least two calendar years of the aggregate of such consecu-~~
8 ~~tive sentences.~~

9 SEC. 5. Section 12022 of said code is amended to read:

10 12022. Any person who commits or attempts to commit any
11 felony within this state while armed with any of the weapons
12 mentioned in Section 12020 or while armed with any pistol,
13 revolver, or other firearm capable of being concealed upon the
14 person, without having a license or permit to carry such firearm
15 as provided by this chapter, upon conviction of such felony or
16 of an attempt to commit such felony, shall in addition to the
17 punishment prescribed for the crime of which he has been convicted,
18 be punishable by imprisonment in a state prison for not
19 less than five nor more than 10 years. Such additional period
20 of imprisonment shall ~~commence upon the expiration or other~~
21 ~~termination of the sentence imposed for the crime of which he~~
22 ~~is convicted and shall not run concurrently with such sentence~~
23 *the sentence for the crime of which he was convicted.*

24 Upon a second conviction under like circumstances the additional
25 period of imprisonment shall be for not less than 10
26 years nor for more than 15 years, and upon a third conviction
27 under like circumstances the additional period of imprisonment
28 shall be for not less than 15 nor more than 25 years,
29 such terms of additional imprisonment to run consecutively.

30 Upon a fourth or subsequent conviction under like circumstances
31 the person so convicted may be imprisoned for life or
32 for a term of not less than 25 years, within the discretion of
33 the court in which the fourth or subsequent conviction was had.

34 SEC. 6. Nothing in this act shall be deemed to impair the
35 validity of any sentence or term heretofore imposed or determined
36 if such sentence or term was valid under the laws
37 applicable when it was imposed or determined.

OFFICE OF LEGISLATIVE COUNSEL
Sacramento, September 10, 1964

PENALTIES FOR CRIMES—No. 6831

Dear Mr. Winton:

Pursuant to your request, we have prepared the enclosed bill relating to probation and consecutive sentences.

We have attempted to draft this bill so that imposition of consecutive sentences would generally not be permitted in the future, but we have attempted also not to invalidate previously imposed consecutive sentences. We did, however, include a repeal of Section 3043, imposing a special restriction on parole of persons undergoing consecutive sentences; and, this repealer would appear to affect those undergoing consecutive sentences on the effective date of the bill. We did not eliminate the special provision governing the time of commencement of a term of imprisonment for escape in Section 4530 of the Penal Code.

Very truly yours,

A. C. MORRISON
Legislative Counsel

By
TERRY L. BAUM
Deputy Legislative Counsel

Mr. Henson dissents from this recommendation with respect to probation authority for serious offenses and parole authority for consecutive sentences.

Committee Recommended Legislation—A.B. 1476

Purpose

Subsidize county probation and correctional services in a degree proportionate to: (1) the benefit derived by the state from the receipt of case history reports on newly committed prisoners and (2) purchases by the county of products of correctional industries.

Justification

Present law (Penal Code Section 1203c.) requires the county probation officer to submit a report to the Department of Corrections on each adult *not* eligible for probation and committed to prison. *Crime in California—1962* reports that of 27,084 convicted felony offenders, 75 percent plead guilty. In such cases there is not a trial, there is no transcript of the proceedings containing any explanation of the circumstances of the offense. Prison and parole authorities need this information as well as the individual's social history for making essential decisions regarding correctional treatment or determining the length of sentence.

There are about 4,000 prison inmates idle for lack of suitable industrial enterprises. Despite the population growth of the state, with a corresponding increase in the prison populations, the maximum dollar gross production allowed for each prison industry has not been substantially changed since originally established over twenty years ago. There is a limit to which prison industrial enterprises can be diversified, as mandated by law, because of the opposition of the various special interest groups.

The state pays inmate workers in industries an average of about eight cents per hour on a sliding scale which ranges between two cents to sixteen cents per hour, but is required by Section 2871 of the *Penal Code* to sell the products at "a prevailing market price." The resulting cash increment is placed in a "revolving fund" which is used to finance the daily operations of the industrial program and long-term expansion or capital outlay programs. Transfer of any surplus accumulated in this fund from industrial operations must be transferred to the general fund of the state. Since 1944 a total of \$2,300,000 has been transferred into the general fund, the most recent amount being \$600,000. †

The utilization of a portion of this accumulating surplus which accrues in the fund to finance a county subsidy appears justified.

The board of supervisors in each county can best determine the proper division of rehabilitation personnel between the correctional facilities and the probation services. The qualification of the personnel preparing reports for the state should not be less than those required and verified by state procedures.

† Letter, August 20, 1964, State Treasurer to committee chairman. See Topic B: Laws Governing Sale of Products of Correctional Industries, office of the chairman.

Selected Statements by Hearing Witnesses

MR. THORNTON: These services are to the state courts and not to county courts, so why should the local property owner be subjected to paying what in fact is a state function? Subsidy has been provided for years for maintenance and operation of county-operated boys' and girls' schools by the Youth Authority to our juvenile courts. Not only maintenance and operation, but capital outlay for construction of boys' ranches is provided by the state at this time. (P. 69)*

MR. TERZIAN: Regardless of what system of responsibility is devised, it is to the advantage of both the state and the county that state funds be available to the counties. The state, I suspect, cannot continue to build institutions at a cost of \$10,000 per bed. Neither the state nor the counties could possibly build enough beds to house every delinquent or criminal who might be considered for an extended period of institutionalization. Neither can local tax sources support a higher and more effective level of probation services. Incidentally, probation departments are virtually the only major county departments which are almost wholly dependent on local tax support. At the same time, counties do apparently provide a service to the state. Each felon placed on probation, instead of being sent to the penitentiary relieves the state of a burden. The probation officer's report, prepared on felons ineligible for probation, is another service to the state.

In any event, the magnitude of the problem of reasonably sized workloads, the fact that the state and counties provide services for each other would certainly argue that the state and even federal financial assistance to local probation departments would be in order and advantageous to all parties concerned.

This is not to suggest that subsidy is the final answer to all probation problems. Probation must be examined itself, must develop programs of caseload management and classification, and we know there is no unanimity of opinion on the desirability of state subvention. There is a minority of opinion which expresses concern that subsidy would also mean control of standards as well as money. This is a valid concern and should be a part of any consideration directed towards the development of a program of subsidy. But we are convinced that until there are funds available other than local we shall continue to lose ground and numbers alone can beat us. (P. 63)*

MR. THORNTON: In 1962 there were 22,600 felony convictions by our superior court, of which only 5,200 went to the state prison. The local county government cared for three-quarters of these felony convictions at the local level. As a matter of fact, the county placed 70 percent of the cases they handled, without sentence to the state prison, on probation. I want to make it clear, however, that nearly one-half of all those from the superior court cases who were convicted of a felony and placed on probation did serve a part of their probation in the county jail. They in fact then were confined, even though they were granted probation supervision from three to five years. (P. 64)*

* Hearing transcript, office of the chairman.

MR. W. DUNBAR †: As to probation, we really aren't practicing probation, and we are giving it a dirty name when we set a ratio of 1 to 250. This really isn't supervising the person in the community on a casework basis for control and protection. . . .

It is about time that we put probation on the spot and, at least on a subsidy basis in one or two selected counties, really put probation to the test. I am sure probation officers would appreciate this and that it would prove its value in terms of our goal. (P. 88)*

SHERIFF CANLIS:‡ I also would like to recommend to you that there be a subvention to the county jails of materials that are produced by the Department of Corrections prison industries program such as bedding, clothing, food, jail equipment and similar items. These items should be furnished to us at a greatly reduced cost, because right now they're pricing us right out of the market. At a greatly reduced cost, it would most certainly increase the development of new programs in the jail, it would upgrade the jails themselves and would have the added benefit of creating additional activities.

I would also recommend that this Legislature give strong support to the increase of probation services in California, because this is a most valuable tool at the local level to keep first offenders from progressing into prison and to make available to the court a realistic program in the community. (P. 180)*

ASSEMBLYMAN DONOVAN: Do you mean, for instance, a state participation on a sharing basis in the probation programs in the county?

MR. MCGEE: I have no formula to suggest to you. We have a lot of people who are theoretically on probation, but they aren't getting the kind of supervision that the public believes they are getting. If we want that, we have to pay for it, and I don't think the counties, 58 of them, are going to do it. (P. 18)*

If we are to avoid a backbreaking tax load, we must, in large measure, substitute control and treatment in the community for expensive incarceration. We cannot successfully do that without strengthening our parole supervision resources. (P. 12)*

MR. ZENOVICH: I noticed in the brochure here the report of the Saginaw project, and in light of all the testimony that has come before us today, I am just wondering if you can give an opinion on your feeling about, say, allocating state money in the budget and allocating it to the county level, to work something out on the basis of this Saginaw, Michigan, project. (P. 106)*

*Hearing transcript, office of the chairman.

† Director of Corrections, State of California.

‡ Sheriff, San Joaquin County.

MR. DUNBAR: I believe in Item Number One I made three recommendations, and one of them was to actually subsidize, on a demonstration basis, one or two counties to actually demonstrate what they could do as far as probation is concerned under what we might say, ideal circumstances, or good standards.

R. KELDGORD: Yesterday, Mr. Mull indicated to you that, in our opinion, the basic problem in California probation is a lack of manpower, pointing out that we presently need a 25-percent increase in qualified personnel if we are to perform a creditable probation job. (P. 131) *

We feel that the best way of providing for such additional staff is by means of a state subsidy to local probation departments. We note that such programs have been successful in New York (the first state to enact the probation subsidy law in 1955) and Ohio, Colorado, Indiana and Washington, all in 1959. Perhaps the most dramatic example of strengthened local probation services is the experience of the Saginaw project which was alluded to by the previous speaker, Mr. Davis. This was a project which was undertaken by our counterpart in the State of Michigan, the Michigan Council on Crime and Delinquency, and as I am sure most of you know, since we made copies of the report available to the committee, the project demonstrated that by strengthening local probation services, commitments to state prison could be reduced by about 50 percent and that recidivism could be reduced by about 50 percent. The only thing I have to add to the report itself is that subsequent to the publishing of that report it is our understanding that because of the emphasis placed upon the local probation services, Michigan has been able to close cell blocks in two of their state prisons, one of them in southern Michigan and another in Jackson. In Indiana, which is one of the other states which now have the subsidy law, they have been able to reduce their inmate population in two years by about 1,200 persons, and they feel that this is directly attributable to the strengthening of the local services.

We feel so strongly and so much in favor of a probation subsidy law or project that unless such a measure is independently introduced in 1965 in the Legislature, we are planning to seek and certainly will want to support and, if necessary, sponsor, a state subsidy bill.

* Hearing transcript, office of the chairman.

DEPARTMENT OF FINANCE
Sacramento, November 12, 1964

HON. GORDON H. WINTON
Member of the Assembly
Room 5159 State Capitol
Sacramento, California

Attention : Mr. Barry Keene

Dear Mr. Winton :

Subject : County Probation Subsidies

You have requested my opinion of the Department of Finance position on proposed legislation involving the Correctional Industries Revolving Fund. Such legislation would encourage counties to purchase equipment and other products from this revolving fund, with the resulting profits being redistributed for use of county probation departments.

The Department of Finance would not oppose such a bill if it did not divert normal profits of the revolving fund away from the State General Fund, and did not impose heavy facility investments by the state at this time. I have been assured that the cost accounting system is adequate to determine the net profit on the types and quantities of products purchased by the counties, so that identification of such profits is mechanically practical, at some additional cost.

A hurried review of the revolving fund does indicate, however, that the products which counties might purchase do not normally have large profits. Even a substantial increase in such products might not produce substantially greater profits, since we are using people more than machines to make such products. This obviously is the only way in which increased production can make a significant contribution to the reduction of idle time among prisoners.

The problem of competition with private industries, and union resistance, are situations of which I am sure you are aware. I merely mention this since legislation of this nature must take these problems into account.

In summary, I feel that such a bill would not be opposed by this department if sufficient protection was provided so that normal General Fund profits would not be diverted to the counties. However, I feel that excess profits due to county business will not be great, and probably will not provide the amount of money you would need to have any great benefits towards strengthening county probation offices. Also at this time, because of the tight revenue situation, we could not support any large capital outlay expenditures from the General Fund to expand existing prison manufacturing facilities.

Sincerely,

ROY M. BELL
Assistant Director

A.B. 1476

LEGISLATIVE COUNSEL'S DIGEST

Department of Corrections Industries.

Amends Secs. 2714, 5091, 5092, adds Sec. 2714.5, Pen.C.

Provides for payment to a county (1) which has purchased goods for services from institutions in Department of Corrections, (2) whose probation officer has filed with the department the reports required by Section 1203c, Penal Code, (3) whose probation personnel preparing such reports meet certain standards prescribed by Director of Corrections, and (4) which has applied for the payment, of 50 percent of amount paid for such goods or services. Increases sum required to be retained in Correctional Industries Revolving Fund.

Provides generally that normal maximum production of industry established by Correctional Industries Commission shall be \$400,000, whereas present formula for maximum is \$350,000 adjusted by institutional population growth and by wholesale price factors.

Requires notice and hearing for establishing industry with production over \$400,000 rather than \$25,000. Eliminates requirement of hearing on increase to amount below usual maximum. Permits commission to require notice and hearing when establishing industry with production not exceeding \$400,000 or increasing production to amount not exceeding that amount.

Provides that in any case in which the actual production of an industry during any year is less than the maximum established for it, the commission shall ascertain the amount of the difference between the actual production and the maximum allowed for such industry and shall, during the next fiscal year, augment the maximum permitted production otherwise permitted for another industry or other industries by the amount of such difference.

An act to amend Sections 2714, 5091, and 5092 of, and to add Section 2714.5 to, the Penal Code, relating to industries in institutions in the Department of Corrections.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 2714 of the Penal Code is amended to
- 2 read:
- 3 2714. There is hereby constituted a permanent revolving
- 4 fund in the sum of not less than ~~seven hundred and thirty~~
- 5 ~~thousand dollars (\$730,000)~~ *eight hundred thousand dollars*
- 6 *(\$800,000)*, to be known as the Correctional Industries Re-
- 7 volving Fund to be used to meet the expenses necessary in the
- 8 purchasing of materials and equipment, salaries, construction
- 9 and cost of administration of the work program of the Depart-
- 10 ment of Corrections in the prisons and institutions under its
- 11 jurisdiction *and to make payments pursuant to Section 2714.5.*
- 12 Such fund may also be used to refund deposits either errone-
- 13 ously made or made in cases where delivery of products cannot
- 14 be consummated. Said fund shall at all times contain the
- 15 amount of ~~seven hundred and thirty thousand dollars (\$730,-~~

1 ~~000~~ *eight hundred thousand dollars (\$800,000)* after it has
2 once reached that amount, either in cash or assets, consisting
3 of raw materials and finished or unfinished products inventory
4 at cost, or both, or proper charges made under this section.
5 Money received from the rendering of services or the sale of
6 products in the prisons and institutions under the jurisdiction
7 of the Department of Corrections shall be paid to the State
8 Treasurer monthly and shall be credited to said revolving
9 fund. At such time as the Director of Corrections or the
10 Director of Finance decide that the balance in said revolving
11 fund is greater than is necessary to carry out the purposes of
12 this section, either shall so inform the State Controller and
13 request a transfer of the unneeded balance from the said
14 revolving fund to the General Fund of the State of California.
15 The Controller is authorized to transfer such balances upon
16 the request of the Director of Finance.

17 The revolving funds created by Sections 2710, 2710.1, 2710.2,
18 2713, 2720, and 2746 of the Penal Code are abolished and the
19 Controller shall transfer the balances in said revolving funds
20 to the Correctional Industries Revolving Fund herein created.

21 SEC. 2. Section 2714.5 is added to said code, to read:

22 2714.5. (a) In any case in which (1) a county did, during
23 the preceding fiscal year, purchase services or products pro-
24 duced in prisons or other institutions under the jurisdiction of
25 the Department of Corrections, and (2) the probation officer
26 of such county did, during such preceding fiscal year, fully
27 comply with Section 1203c by furnishing all reports required
28 by that section, and (3) during such preceding fiscal year all
29 probation personnel (other than clerical personnel) employed
30 in preparing such reports met the standards prescribed pur-
31 suant to subdivision (b) of this section, and (4) the county
32 board of supervisors makes application for the payment here-
33 after described, the Director of Corrections shall, by the close
34 of the first month of the current fiscal year, pay to such county
35 from the Correctional Industries Revolving Fund a sum equal
36 to 50 percent of the amount of the price of purchases by the
37 county during the preceding fiscal year of services and prod-
38 ucts produced in prisons and other institutions under the juris-
39 diction of the Department of Corrections. Such sum may be
40 used only for payment of salaries of personnel in the sheriff's
41 department and probation department of the county and on
42 the staff of the county board of parole commissioners or of the
43 county industrial farm or industrial road camp.

44 (b) The standards of training, experience and competency
45 that probation personnel must meet if the county is to qualify
46 for the payment described in subdivision (a) shall be substan-
47 tially equal to those applicable to comparable categories of
48 state parole agents. Compliance with such standards shall be
49 certified to in the application of the county board of super-
50 visors. The Director of Corrections may request that the quali-
51 fications of any such personnel be verified by the successful
52 completion of an examination by the State Personnel Board
identical to that for certification of state parole agents.

1 SEC. 3. Section 5091 of the Penal Code is amended to read:
2 5091. The Correctional Industries Commission shall:

3 (a) Recommend productive industrial and agricultural en-
4 terprises in the prisons and institutions under the jurisdiction
5 of the Department of Corrections in such volume and of such
6 kinds as to eliminate unnecessary idleness among the inmates
7 and to provide diversified work activities which will serve as
8 means of vocational education as well as of occupation and
9 financial support.

10 (b) Determine the advisability and suitability of establish-
11 ing, expanding, diminishing, or discontinuing any industrial or
12 agricultural enterprise involving a gross annual production
13 of more than twenty-five thousand dollars (\$25,000) value, but
14 less than three hundred fifty thousand dollars ~~(\$350,000)~~ *four*
15 *hundred thousand dollars (\$400,000)* value and authorize or
16 prohibit such action. The Correctional Industries Commission
17 shall determine the gross annual production, within the limit
18 set above, of each new enterprise at the time of its establish-
19 ment. The annual production so set shall not be increased until
20 a public hearing concerning the proposed increase has been
21 held before the Correctional Industries Commission. It shall be
22 the duty of the commission annually, to adjust the maximum
23 gross annual production value of three hundred fifty thousand
24 dollars ~~(\$350,000)~~ permitted for each enterprise, the purpose
25 of such adjustment being to keep said limit in balance with
26 changes in population of state correctional institutions and
27 changes in cost of production. Such adjustment shall be made
28 in the following manner:

29 1. The maximum limitation of three hundred fifty thousand
30 dollars ~~(\$350,000)~~ shall serve as a base figure as of December
31 31, 1954, for such computation.

32 2. The maximum limitation shall be increased or decreased
33 in the same proportion as the population of state correctional
34 institutions shall have increased or decreased in comparison
35 with their population on December 31, 1954.

36 3. The maximum limitation shall be further increased or
37 decreased in the same proportion as the Wholesale Price Index
38 of the United States Bureau of Labor Statistics shall have
39 increased or decreased in comparison with such wholesale price
40 index as of December 1954.

41 The maximum gross annual limitation on production as ad-
42 justed in accordance with the above formula shall replace and
43 serve in lieu of the three hundred fifty thousand dollars ~~(\$350,~~
44 000) limitation until the next annual adjustment is made by
45 the commission. It shall apply to enterprises previously au-
46 thorized as well as to those authorized during the current
47 period, and such adjustment may be made without public
48 hearing.

49 "Population of state correctional institutions," as used in
50 this subsection, is the total number of persons in institutions
subject to the jurisdiction of the Department of Corrections

1 under Section 5003 of the Penal Code and the number of
2 persons in institutions subject to the jurisdiction of the Youth
3 Authority under Section 1000 of the Welfare and Institutions
4 Code.

5 *In any case in which the actual production of an industry*
6 *during any year is less than the maximum established for it,*
7 *the commission shall ascertain the amount of the difference*
8 *between the actual production and the maximum allowed for*
9 *such industry and shall, during the next fiscal year, augment*
10 *the maximum permitted production otherwise permitted for*
11 *another industry or other industries by the amount of such*
12 *difference.*

13 (c) Hold hearings pursuant to Section 5092, and make rules
14 for the conducting of such hearings. However, the commission
15 may, in its discretion, hold public hearings on any subject
16 within its jurisdiction.

17 SEC. 4. Section 5092 of said code is amended to read:

18 5092. No industrial enterprise which involves a gross an-
19 nual production of more than ~~twenty-five thousand dollars~~
20 ~~(\$25,000)~~ four hundred thousand dollars (\$400,000) value
21 shall be established unless and until a hearing concerning the
22 enterprise has been had before the Correctional Industries
23 Commission. Public notice of the hearing shall be given prior
24 to the hearing. *The commission may require notice and hearing*
25 *before establishing an industry with gross annual production*
26 *not exceeding four hundred thousand dollars (\$400,000) or*
27 *when increasing production of an industry to a sum not ex-*
28 *ceeding such amount.*

Committee Recommended Legislation—A.B. 1477**Purpose**

Provide on a statewide basis support for a vocational and remedial education program for county jail prisoners administered by a local school district.

Justification

In 1963 the superior courts of California imposed on felon defendants 6,469 sentences requiring the service of a sentence in jail as a condition of probation. These cases constituted 46 percent of the 13,890 placed under probationary custodial supervision. These defendants could all have been committed to a state prison and there would be entitled to engage in vocational and remedial educational classes. Such courses are conducted under the supervision of duly qualified state certificated instructors from a local contracting school district or civil service employees of the prison.

A basic problem of the county jail in the rehabilitation of marginal workers and youthful offenders, including many school dropouts, is providing suitable vocational or remedial training that both increases employability upon release and reduces the likelihood of return. The intra-state mobility of typical jail prisoners justifies a statewide supported program. The problems posed by this group require professional certificated teachers, which may best be secured through local school districts. The varying needs of the jail population also can be met by part-time, evening instructors, giving short courses similar to a community adult evening school program.

Selected Statements by Hearing Witnesses

SHERIFF CANLIS: Now, as the result of our experience I am prepared to recommend and urge that you restore the state participation in adult education for the untrained. This was removed a few years ago in the interest of economy, and I believe this to be a false economy, because these are training programs, I think, that are greatly needed to start some of these people back to being trained or retrained so that they can be employable and be productive and assume the position in the community that they can handle. (P. 180.)*

. . . For example, take the nurse's aid training program, which is done at the county hospital with female inmates taken from the jail every day. This is a six-week course, eight hours a day, with homework, and is exactly the same course, conducted in the same class given for the other employees of the hospital.

In all these things, gentlemen, I want you to understand that the board of supervisors of my county not only supports this but even encourages it. We have even a blanket resolution to develop programs as we go along. Some of the other things mentioned are tape recordings

* Hearing transcript, office of the chairman.

for the blind. We have well-educated inmates on occasion and can reproduce materials that are not otherwise available in Braille—technical papers, some for students. We even graduated out of the Department of Sociology at the university a blind, Negro, Methodist minister, a fifth-year sociology student, because we gave him a project to do in the jail. Christmas seal mailers, other community-type mailers, 97,000 at one time have been done. We did it the hard way with inmates, people we can't classify into minimum security. Garden projects from a community club, Easter seal mailers, jewelry projects, nursery rhymes, picture projects are all among our projects. The reason for this diversity is because there are a great number of people that are in jail that are just sitters. They are capable of very little, and still some productivity can be made from that. A lot of these people are people from the state hospitals and who are disoriented and who don't have very many skills at all. The manufacture of material for the mentally retarded and physically handicapped, the sewing of clothing and bedding, switchboard training are more projects. We have an old switchboard, reconditioned and installed in the women's jail with extension telephones on it, and we have a young woman who had this training and skill and she's retired because of raising a young family, but she is coming back to give us volunteer hours of teaching these people how to use the switchboard and how to type. We have speech therapy, reading education, office training, first aid classes, culinary training. This is an interesting thing, because I just heard Mrs. Lewis describe it. I'm negotiating now with the union to see if we can't introduce into the jail this training program. We have typing classes. You will see an illustration, there, in which these women are getting quite proficient. We have met some failures, and we have rejected them, and we are also beginning new projects, such as making inquiry as to whether or not we can be helpful in the repair and binding of books for the school departments in the various school districts.

We have seen as a result of all these projects some very encouraging signs such as the great reduction in the recidivism rate among those former inmates who are participating in outside group counselling, conducted by volunteers again, and that have gone through our regular training schedule, and this has prepared them for their job. For instance, my idea on this nurse's aid program was because I began to realize that there were a number of convalescent hospitals and rehabilitation hospitals being built throughout the State of California which I thought would give new employment opportunities, and some of our former inmates are now employed in these convalescent hospitals on a full-time basis. Also, some of these projects were developed because we are now getting the school dropouts. These are the untrained young people, and believe it or not, they still have a deep interest in training once it is put right there before them and they don't suffer the embarrassment of having to go back and compete with the younger age groups. I think this is going to be a clue as to how we can reach them. (Pp. 177, 178, 179.)*

* Hearing transcript, office of the chairman.

CHAIRMAN WINTON: The state has some responsibility for felons who are confined in county jails as a part of probation, because if they were not confined in the county jail, their crimes would call for state prison imprisonment. It has been suggested that perhaps this would be a basis of a state subvention to the counties. Have you any additional thoughts on this, either one of you?

MR. SILVER: I was the one who made this proposal in my statement, and our feeling is that our approach to this problem is more from the standpoint of a problem presented by the county jail than it was from the standpoint of the administration of probation as such. I should think that it might well have some bearing on the administration of probation. I would think it would hardly be a substitute for the type of subvention that Mr. Keldgord is talking about. (P. 148.)*

CHAIRMAN WINTON: Your idea would be that if the subvention were to be offered, there would be certain qualifying aspects that the county should meet and this would probably entail programs, vocational education or something in the jail to go with it. Is this your idea?

MR. SILVER: Right. There are many counties that are really unable to put in more effective and comprehensive programs in the jail because of lack of financial resources, and this would be one way in which they might receive funds for helping to pay for their rehabilitation programs, both during confinement and after.

State of California

MEMORANDUM

August 18, 1964

To: Mr. Walter Dunbar, Director
Department of Corrections
502 State Building No. 1

Subject: Sales Orders Received From California Counties

From: Department of Corrections, Sacramento 14

In accordance with your request of August 12, 1964, we have prepared the attached schedule showing the dollar amount of sales orders received from each of the 58 California counties during the period July 1, 1963, to June 30, 1964.

To the best of our knowledge, the City and County of San Francisco (one entity) is the only county that has a restriction against buying prison-made goods.

ROBERT H. LAWSON
General Manager
Correctional Industries

* Hearing transcript, office of the chairman.

Department of Corrections
CORRECTIONAL INDUSTRIES REVOLVING FUND SALES ORDERS
RECEIVED FROM COUNTIES FOR THE PERIOD
JULY 1, 1963-JUNE 30, 1964

Alameda	\$11,848.79	Placer	\$11,202.89
Alpine	-	Plumas	676.59
Amador	1,102.29	Riverside	17,758.91
Butte	6,501.40	Sacramento	⁴ 24,023.04
Calaveras	410.00	San Benito	-
Colusa	1,141.24	San Bernardino	5,754.90

Napa	310.50	Yuba	269.25
Nevada	3,413.64		
Orange	13,096.38		
		Total 1963-64 fiscal year	\$513,863.65

¹ Approximately \$8,000 of this amount was for jail and courthouse furnishings and equipment.

² \$11,822.65 was for jail beds and bedding.

³ Courthouse furnishings \$12,000.00.

⁴ \$13,797.00 was for jail equipment for the new branch county jail.

⁵ Custom furnishings for judges' chambers \$75,607.00. Clothing for branch jail \$10,945.60.

A.B. 1477

LEGISLATIVE COUNSEL'S DIGEST

County jail school support.

Amends Sec. 4018.5, Pen.C., adds Secs. 11151.5, 17952, Ed.C.

Affords specific authorization to sheriff, with approval of board of supervisors, to enter agreement with school districts for conduct of adult education classes in county jails, industrial farms, or county or joint county road camp.

Prescribes minimum school day and maximum weekly class hours to be utilized for average daily attendance computation purposes regarding such classes.

Provides for a State School Fund allowance to school district, per unit of A.D.A. in such classes, of \$125 as basic state aid plus the same amount in equalization aid as district receives for its regular (non-adult) pupils.

Operative July 1, 1965.

An act to amend Section 4018.5 of the Penal Code and to add Sections 11151.5 and 17952 to the Education Code, relating to adult education programs for county prisoners.

The people of the State of California do enact as follows:

1 SECTION 1. Section 4018.5 of the Penal Code is amended
2 to read:

3 4018.5. The sheriff may, subject to the approval of the
4 board of supervisors, provide for the vocational training and
5 rehabilitation of prisoners confined in the county jail, or any
6 county industrial farm or county or joint county road camp.
7 He may, subject to such approval, enter into an agreement
8 with the governing board of any school district maintaining
9 secondary schools, for the maintenance, by the district, for
10 such prisoners, of adult education classes conducted pursuant
11 to Article 12 (commencing with Section 6351) of Chapter 6 of
12 Division 6 of the Education Code.

13 SEC. 2. Section 11151.5 is added to the Education Code, to
14 read:

15 11151.5. In classes for adults maintained for adults in any
16 county jail, or any county industrial farm or county or joint
17 county road camp, a day of attendance is 180 minutes of
18 attendance; but no pupil in such a class shall be credited with
19 more than one day of attendance in any calendar day, nor
20 with more than 15 clock hours of attendance during any one
21 school week.

22 SEC. 3. Section 17952 is added to said code, to read:

23 17952. The Superintendent of Public Instruction shall
24 allow to each district maintaining classes for adults in any
25 county jail or any county industrial farm or county or joint
26 county road camp, for each unit of average daily attendance
27 in such classes during the current fiscal year, one hundred
28 twenty-five dollars (\$125) as basic state aid and the same

1 amount as state equalization aid as is computed by dividing
2 the allowance computed for the district under Article 7 (com-
3 mencing with Section 17901) of this chapter by the average
4 daily attendance of the district during the fiscal year, exclusive
5 of the average daily attendance in all classes for adults main-
6 tained by the district.

7 SEC. 4. This act shall become operative on July 1, 1965.

Committee Recommended Legislation—A.B. 1478

Purpose

Provide supplemental correctional treatment for offenders in county jail facilities designated as "regional jails" and providing custodial care of state prisoners.

Justification

Each county now provides custodial care and maintenance of offenders whose state parole has been suspended. The suspension in some cases is based on conviction of a minor offense and commitment for service of a jail sentence. In other instances the parolees are being investigated for possible violation of a condition of parole. The provision of counseling and casework services by the state at this critical period may avoid return to the state prison for longer periods at much greater expense. Such services could be provided by contract by private agencies or regular state employees. The services of such employees should also be made available on the basis of individual need without cost to other misdemeanor offenders or felons serving jail as a condition of probation and committed to the custody of the sheriff.

The wide variation in capacity and resources for correctional treatment between counties, as well as the geographical distribution of the need for such facility by the state, would indicate the need for designation of jails eligible for service to be done on a regional basis.

Selected Statements by Hearing Witnesses

MR. TERZIAN: One alternative would be to have the state concentrate on providing institutional care for hard-core delinquents and criminals who are in need of an extended period of training and rehabilitation to emphasize demonstration projects such as half-way houses, group homes, intensive supervision and the like, and to do the practical research and experimentation. The county then would be charged with providing expanded probation services at the local level with the implementation of those state demonstrations which have proven successful along with financial assistance from the state. (P. 61.)*

MR. SILVER: We were organized in 1948 as a nonsectarian, nonprofit agency to provide professional counselling services to the county jail inmate. It was based on the premise that the rehabilitation of the so-called petty offender at the jail level would save the taxpayer money. The State of California has one of the most efficient prison systems in the country. The jails, on the other hand, both the local and the county jails, housing less serious offenders, have in most cases virtually no such programs as the state. This is due to the lack of resources and effective programs.

The Northern California Service League, therefore, employs a staff of qualified counsellors to visit the jail regularly to counsel inmates who request our help. They work with the inmates both in the jail and after release, during the very important period of readjustment to the community.

* Hearing transcript, office of the chairman.

In addition to working directly with offenders on a counseling basis, an effort is made to improve jail standards and administration by working with public officials and the community in general. And I might say that we also are very much concerned with the problem of the attitude of the community toward the offender, particularly the return of the offender, and spend a good deal of time working in this area. (Pp. 138, 139.)*

... Now, as to this same problem about which Mr. Keldgord spoke, that of the coordination between governmental agencies, both county and state, and voluntary or community agencies, it is our conviction that many public programs can be extended and increased in efficiency by wise and careful use of properly qualified voluntary community agencies. In some cases, these agencies are in a position to offer services to public agencies without additional cost. In other cases, because of the increasingly hard-pressed budgets of such agencies, some form of contracting for and paying for services rendered would be necessary. It is the judgment of the Northern California Service League that subvention, as such, is not desirable nor desired by voluntary agencies on the whole but that it is very feasible to work out a satisfactory arrangement with public agencies by contract for paying for services on some acceptable basis. Voluntary agencies are often, with their flexible structure, in a position to offer certain kinds of experimentation and evaluation of demonstration projects which may well be extremely useful to the correctional field on a permanent basis and by other public agencies. Such an arrangement of buying services by public agencies is very adaptable to this kind of experimentation and demonstration.

In summary, the Northern California Service League would make the following recommendations:

1. Purchase by the state of services from voluntary agencies for discharges from the state prisons.
2. Subvention by the state to counties for the care of felons serving jail sentences as a condition of probation, such subvention to be given upon condition of the local jail meeting certain prescribed standards and such subvention to be used for the care of these felons upon release and the authority to contract with private voluntary agencies to provide for this service. (Pp. 144, 145.)*

MR. DUNBAR: Take local correction programs. We have these primarily under the boards of supervisors and sheriffs. Now I know that the sheriffs are trying to do a good job, that the jails are clean. There isn't any brutality any more and there are, in 24 areas, good work camps for working men. But is there any education, academic or vocational? Is there any counsel for the short time offenders, 60 percent of whom are alcoholics? The answer is very, very little. They are sitting in idleness for the most part, and this isn't really control; it is a revolving door. So I would again propose that we do more than provide standards as we are doing now by the Board of Corrections and guidance as to planning jails and offering the program treatment. Why don't we subsidize a local correctional program and really see what we can do in one or two counties with the less serious offenses, and I think this would pay dividends. (Pp. 88, 89.)*

* Hearing transcript, office of the chairman.

SHERIFF CANLIS: Perhaps you could consider legislation that would permit that, at the first symptoms of failure, instead of returning parolees to the prisons—which seems rather harsh for some minor violation or some misconduct—they be committed for a term to the county jail—10, 15, 20, 30 days—which would permit their re-entry into the community at the level in which they are expected to be absorbed. (Pp. 180, 181.)*

* Hearing transcript, office of the chairman.

A.B. 1478

LEGISLATIVE COUNSEL'S DIGEST

Jails.

Adds Ch. 1.3 (commencing with Sec. 4040), to Title 4, Pt. 3, Pen.C.

Authorizes Director of Corrections and county board of supervisors to agree that county jail or industrial farm or road camp shall be designated "regional jail," that director shall assign thereto personnel to provide counseling and casework services, and that board shall provide necessary facilities. Such counseling and casework services shall be provided to following classes in order of priority listed, as practicable:

- (a) Persons on parole from state prisons who are confined in jail because of suspension or revocation of parole;
- (b) Persons serving a term of confinement in the jail as a condition of probation granted upon conviction of a felony;
- (c) Other persons confined in the jail.

An act to add Chapter 1.3 (commencing with Section 4040) to Title 4, Part 3 of the Penal Code, relating to jails.

The people of the State of California do enact as follows:

- 1 SECTION 1. Chapter 1.3 (commencing with Section 4040)
- 2 is added to Title 4, Part 3 of the Penal Code, to read:

3

4

CHAPTER 1.3. REGIONAL JAILS

5

- 6 4040. The Director of Corrections and the board of super-
- 7 visors of any county may enter into an agreement providing
- 8 that a county jail or industrial farm or road camp of the
- 9 county shall be designated a "regional jail," that services
- 10 authorized by this chapter shall be provided by the director at
- 11 such institution, and that the facilities necessary therefor shall
- 12 be provided by the board at such institution.

- 13 4041. The director shall assign personnel of the Depart-
- 14 ment of Corrections to a regional jail to provide counseling
- 15 and casework services to the following classes of persons, giv-
- 16 ing priority to such classes in the order listed, as practicable:

- 17 (a) Persons on parole from the state prison who are con-
- 18 fined in the jail because of a suspension or revocation of
- 19 parole;
- 20 (b) Persons serving a term of confinement in the jail as a
- 21 condition of probation granted upon conviction of a felony;
- 22 (c) Other persons confined in the jail.

Committee Recommended Legislation—A.B. 1479

Purpose

Provide a form of "service subsidy" by the state for the county superior courts by eliminating any state charges for diagnostic reports prepared at county request by the Department of Corrections.

Justification

Existing law permits the court to conditionally refer cases to a reception center of the Department of Corrections for a diagnostic report prior to the determination of the sentence. The measure originally adopted in 1959 was not utilized by many counties, because of the requirement of a fee and the existence of a contract. In 1961 a two-year moratorium on such charges was enacted by the Legislature with the following result:

The Department of Corrections processed 280 cases under this section between September 15, 1963, and June 30, 1964. It recommended 52 percent or 147 for probation, and in only 21 cases was probation not granted. The following table presents an analysis of the disposition of all cases processed by the department.

In view of the response by the counties in expanding their utilization of this service by the state, and the undeniable benefits to the state, elimination of such charges appears warranted.

Selected Statements by Hearing Witnesses:

MR. MULL: Section 1203.03 in the *Penal Code* which now authorizes a judge to send a person who has pleaded guilty for diagnostic study by an institution and for a report back to the court within a period of 90 days recommending what should be done. This has been used now a little more extensively because there is no more cost upon the county. The state pays for this study. (P. 27.)*

MR. DUNBAR: In presentence investigation, I would add to this a presentence diagnostic study. You passed a law in 1959, and we have some experience with it now, whereby the courts send to us cases in which they want more information on what he is and why he did it as a basis for determining disposition, probation or prison. We have done this and the results were reported to you last year and they indicate, in my opinion, a better disposition of the person as to control and correction.

From the state's point of view, this is a saving in tax dollars. From the patient's or criminal's point of view, it was better control or correction at the local level with his family at less cost. This last year you passed a moratorium on this program and so now we are proceeding to do this without cost to the county. I must admit, and I think this is quite revealing, of the need for this information by the court because we have literally been flooded with requests, and this last month I had to set a quota on the state basis to provide this information to the courts.

This is what we are doing. I would recommend that on the basis of our experience this year that we bring this to you for consideration of

* Hearing transcript, office of the chairman.

expanded presentence diagnostic study in selected cases so that we can provide better control and protection. (Pp. 87, 88.)*

LEGISLATIVE COUNSEL'S DIGEST

Sentencing.**Amends Sec. 1203.03, Pen.C.**

Eliminates entirely the provisions, now suspended until September 15, 1965, requiring that, as prerequisite to presentence placement of defendant in diagnostic facility of Department of Corrections, pursuant to Sec. 1203.03, Pen.C., there must be in effect a contract between state and county pursuant to which county reimburses state for cost.

1 *An act to amend Section 1203.03 of the Penal Code, relating*
2 *to diagnostic facilities in the Department of Corrections.*

3
4 *The people of the State of California do enact as follows:*

5
6 SECTION 1. Section 1203.03 of the Penal Code is amended
7 to read:

8 1203.03. (a) In any case in which a defendant is convicted
9 of an offense punishable by imprisonment in the state prison,
10 the court, if it concludes that a just disposition of the case re-
11 quires such diagnosis and treatment services as can be provided
12 at a diagnostic facility of the Department of Corrections, may
13 order that defendant be placed temporarily in such facility for
14 a period not to exceed 90 days, with the further provision in
15 such order that the Director of the Department of Corrections
16 report to the court his diagnosis and recommendations concern-
17 ing the defendant within the 90-day period.

18 (b) The Director of the Department of Corrections shall,
19 within the 90 days, cause defendant to be observed and exam-
20 ined and shall forward to the court his diagnosis and recom-
21 mendation concerning the disposition of defendant's case.

22 (c) The Department of Corrections shall accept such person
23 if it has adequate staff and facilities to provide such services
24 ~~and if there is in effect a contract made, pursuant to subdivi-~~
25 ~~sion (f) of this section, with the county of the referring court.~~
26 No such person shall be transported to any facility under the
27 jurisdiction of the Department of Corrections until the director
28 has notified the referring court of the place to which said per-
29 son is to be transported and the time at which he can be re-
30 ceived.

31 (d) The sheriff of the county in which an order is made
32 placing a defendant in a diagnostic facility pursuant to this
33 section, or any other peace officer designated by the court, shall
34 execute the order placing such defendant in the center or re-
35 turning him therefrom to the court. The expense of such sheriff
36 or other peace officer incurred in executing such order is a
37 charge upon the county in which the court is situated.

38 (e) It is the intention of the Legislature that the diagnostic
39 facilities made available to the counties by this section shall

1 only be used for the purposes designated and not in lieu of
2 sentences to local facilities.

3 (f) The Director of Corrections may enter into contracts,
4 with the approval of the Director of Finance, with any county
5 of this state, upon request of the board of supervisors thereof,
6 wherein the Department of Corrections agrees to provide diag-
7 nostic and treatment services and temporary detention during
8 the period of study, to the county for selected cases of persons
9 eligible for commitment to the Department of Corrections. The
10 county shall reimburse the state for the cost of such services;
11 such cost to be determined by the Director of Finance or in
12 lieu of the Director of Finance by the Director of General
13 Services if such office is created at the 1963 Regular Session
14 of the Legislature. Each county auditor shall include in his
15 state settlement report rendered to the Controller in the
16 months of January and June, the amounts due under any
17 contract authorized by this section and the county treasurer,
18 at the time of settlement with the state in such months, shall
19 pay to the State Treasurer upon order of the Controller the
20 amounts found to be due.

21 (f) (g) In any case in which a defendant has been placed
22 in a diagnostic facility pursuant to this section and, in the
23 course of his confinement, he is determined to be suffering
24 from a remediable condition relevant to his criminal conduct,
25 the department may, with the permission of defendant, ad-
26 minister treatment for such condition. If such treatment will
27 require a longer period of confinement than the period for
28 which defendant was placed in the diagnostic facility, the
29 Director of Corrections may file with the court which placed
30 defendant in the facility a petition for extension of the period
31 of confinement, to which shall be attached a writing signed by
32 defendant giving his consent to the extension. If the court
33 finds the petition and consent in order, it may order the ex-
34 tension, and transmit a copy of the order to the Director of
35 Corrections.

36 (h) Any other provisions of this section notwithstanding,
37 until September 15, 1965 it shall not be a prerequisite to com-
38 mitment of a defendant or acceptance of the defendant by the
39 Department of Corrections, pursuant to this section, that there
40 be in effect a contract as described in subdivision (f), and
41 there shall be no charge to the county for services under this
42 section for a defendant accepted during such period.

Committee Recommended Legislation—A.B. 1480

Purpose

Continue the felony penalty for issuance of a check without sufficient funds only when the check, or checks, exceed a total of \$200. This is the same dollar value which determines an offense to be grand theft or petty theft. Also, this measure removes the mandatory requirement that all such persons with a prior felony and convicted of issuance of NSF checks receive a minimum prison sentence of two calendar years.

Justification

The report, *Crime in California, 1963*, presents in Table VI-21 data concerning commitments to prison for the various types of criminal offenses. It may be noted that the two groups, "forgery and fictitious checks" and "NSF checks" (not sufficient funds) together accounted for 1,182 commitments or 26.4 percent of the total intake. This number was exceeded only by the offense of burglary, which constituted 26.9 percent, or 13 more offenders. The cost to the state for these persons serving a median sentence of 18 months at a rate of \$1,800 per year will amount to \$3,190,400 and will occupy beds equivalent to one prison, which would cost, at \$10,000 per unit, \$11,820,000.

Of the total of 1,182 commitments for violation of the check laws, a total of 378 were committed for the offense of a violation of Penal Code Section 476a, or the issuance of a check without sufficient funds but with their correct name and address.

Prior legislative inquiries have revealed that the majority of check violations occur in groceries and other stores. Present law exempts such stores from licensing under the *Check Sellers and Cashers Law* (Fin.C. Sec. 12101).

In the event adoption of this recommended measure does not alert merchants to the need to tighten their check cashing procedures, serious consideration can well be given to amending the law to require state supervision of store check cashing procedures. All the taxpayers of the state share the cost of imprisonment of offenders able to take advantage of business practices of individual merchants.

Statement of Witnesses

MR. DAVIS: Most studies of recidivism have shown that a high proportion of forgery and check offenders fail on probation or parole. However, these offenders are not generally considered as threats to the community and therefore are seldom singled out for specialized treatment. This is an area that needs intensive study as to what better methods could be used in handling this type of offender short of state prison commitment. (P. 125.)*

MRS. E. LEWIS †: We have many of our women, for example, in the California Institution for Women who are in there on "NSF" check offenses, women who have no other pattern of criminality at all. They are not hard-core criminals. (P. 160.)*

* Hearing transcript, office of the chairman.

† Chairman, Board of Trustees of the California Institution for Women.

MR. DUNBAR: . . . Of concern to us is the problem of the matter of the length of terms. I think that they should be reexamined within the framework of the existing law. I think on the one hand we are harming rather than helping individuals if we are keeping them in too long when they are ready to go now—to satisfy justice or some guidelines that we may have set up arbitrarily because it makes our work easier. (P. 94.)*

MR. J. BREWER †: With respect to the laws governing California's handling of the adult offender, we first note that California's Indeterminate Sentence Law provides that "the court in imposing sentence shall not fix the term of duration of the period of imprisonment." The defendant is sentenced by the trial judge for the "term prescribed by law," with the duty of actually determining the term and considering the question of parole left to the Adult Authority. California's Indeterminate Sentence Law is a modified rather than a true Indeterminate Sentence Law, which would be zero years to life. Minimum and maximum terms for each offense category are fixed by the Legislature. Examples are 6 months to 5 years, 1 to 20 years, 5 years to life, 15 years to life, etc. (About 35 states have some form of indeterminate sentence.)

One may assume that any agency assuming a portion of the sentencing responsibilities once resting exclusively with the courts would be bound by the same basic principles which guide the courts in their deliberations. The right to a just, fair verdict, the equal application of justice under the law, the protection of society, the protection of the individual, these should be no less important to a paroling agency than to a judge. Since there is a large degree of freedom possible under the Indeterminate Sentence Law, the Legislature has, from time to time, placed certain restrictions on its application. One writer states, "The California system for sentencing persons convicted of crimes is the most elaborate and perhaps the most disorganized in any American jurisdiction." He further argues that the provisions of the *Penal Code*, Section 3024, providing for aggravated minimums, are inconsistent with the Indeterminate Sentence Law.

Your committee may wish to give some thought to the multiplicity of sentencing possibilities contained in the various sections of the *Penal Code* which have emerged at different times and out of varying circumstances some of which may have been more related to emotion than to a careful analysis of the objectives of modern penology. (Pp. 75, 76, 77.)*

CHAIRMAN WINTON: I have some questions for both of you. You talked about Mr. Brewer, the aggravated minimums on some crimes, some of the sections of the *Penal Code*. I assume there you mean those where there is a minimum term of a sentence, is that correct?

MR. BREWER: Yes, sir. I believe that the range is from 6 months to 15 years, except for those cases where the person is not admissible for parole consideration.

* Hearing transcript, office of the chairman.

† Chairman, California Adult Authority.

CHAIRMAN WINTON: I assume that it is your feeling that with some of the people that receive those sentences, society would benefit by the savings in dollars of taxes and the individual would benefit by an earlier release because he would be better able to adjust himself to the community at an earlier release, and you feel that we should not put this arbitrary road block in the way of your authority in judging whether he is ready to go back into society or not. Is that a fair statement?

.

Mr. Thelin dissents from this recommendation. He does not agree that the statutes on issuance of checks without sufficient funds should be liberalized, and he opposes the repeal of the mandatory two-year minimum sentence for a second conviction on the issuance of NSF checks with a prior felony. He feels that punishment should be more certain in these cases and that complaining witnesses should be required to follow through once a complaint has been filed.

Mr. Henson dissents from this recommendation.

A.B. 1480

LEGISLATIVE COUNSEL'S DIGEST

Bad checks.**Amends Secs. 476a, 3024, Pen.C.**

Provides that when total amount of checks, drafts, or orders defendant is charged with and convicted of making, drawing, or uttering does not exceed \$200, rather than \$100, the offense is (unless defendant has any of certain specified prior convictions) punishable only as a misdemeanor.

Makes Section 3024, relating to minimum terms for armed or prior offenders, inapplicable when the current offense is a violation of Section 476a.

An act to amend Sections 476a and 3024 of the Penal Code, relating to bad checks.

The people of the State of California do enact as follows:

1 SECTION 1. Section 476a of the Penal Code is amended to
2 read:

3 476a. (a) Any person who for himself or as the agent or
4 representative of another or as an officer of a corporation,
5 willfully, with intent to defraud, makes or draws or utters or
6 delivers any check, or draft or order upon any bank or de-
7 pository, or person, or firm, or corporation, for the payment of
8 money, knowing at the time of such making, drawing, uttering
9 or delivering that the maker or drawer or the corporation
10 has not sufficient funds in, or credit with said bank or de-
11 pository, or person, or firm, or corporation for the payment of
12 such check, draft or order and all other checks, drafts or
13 orders upon such funds then outstanding, in full upon its
14 presentation, although no express representation is made with
15 reference thereto, is punishable by imprisonment in the county
16 jail for not more than 1 year, or in the state prison for not
17 more than 14 years.

18 (b) However, if the total amount of all such checks, drafts,
19 or orders that the defendant is charged with and convicted of
20 making, drawing, or uttering does not exceed ~~one hundred~~
21 ~~dollars (\$100)~~ two hundred dollars (\$200), the offense is pun-
22 ishable only by imprisonment in the county jail for not more
23 than one year, except that this subdivision shall not be applic-
24 able if the defendant has previously been convicted of a viola-
25 tion of Section 470, 475, or 476 of this code, or of this section
26 of this code, or of the crime of petty theft in a case in which
27 defendant's offense was a violation also of Section 470, 475, or
28 476 of this code or of this section or if the defendant has
29 previously been convicted of any offense under the laws of any
30 other state or of the United States which, if committed in this
31 state, would have been punishable as a violation of Section
32 470, 475 or 476 of this code or of this section of this code or
33 if he has been so convicted of the crime of petty theft in a

1 case in which, if defendant's offense had been committed in
2 this state, it would have been a violation also of Section 470,
3 475 or 476 of this code, or of this section.

4 (c) Where such check, draft, or order is protested, on the
5 ground of insufficiency of funds or credit, the notice of pro-
6 test thereof shall be admissible as proof of presentation, non-
7 payment and protest and shall be presumptive evidence of
8 knowledge of insufficiency of funds or credit with such bank
9 or depositary, or person, or firm, or corporation.

10 (d) The word "credit" as used herein shall be construed
11 to mean an arrangement or understanding with the bank or
12 depositary or person or firm or corporation for the payment
13 of such check, draft or order.

14 (e) If any of the preceding paragraphs, or parts thereof,
15 shall be found unconstitutional or invalid, the remainder of
16 this section shall not thereby be invalidated, but shall remain
17 in full force and effect.

18 SEC. 2. Section 3024 is amended to read:

19 3024. The following shall be the minimum term of sentence
20 and imprisonment in certain cases, notwithstanding any other
21 provisions of this code, or any provision of law specifying a
22 lesser sentence:

23 (a) For a person not previously convicted of a felony, but
24 armed with a deadly weapon either at the time of his commis-
25 sion of the offense, or a concealed deadly weapon at the time
26 of this arrest, two years;

27 (b) For a person previously convicted of a felony either in
28 this state or elsewhere, and armed with a deadly weapon, either
29 at the time of his commission of the offense, or a concealed
30 deadly weapon at the time of his arrest, four years;

31 (c) For a person previously convicted of a felony either in
32 this state or elsewhere, but not armed with a deadly weapon at
33 the time of his commission of the offense, or a concealed
34 deadly weapon at the time of his arrest, two years;

35 (d) For a person convicted at one trial of more than one
36 felony, and upon whom are imposed cumulative or consecutive
37 sentences the aggregate of the minimum terms of which exceed
38 10 years, 10 years;

39 (e) Such minimum penalties shall only apply when such
40 possession of a deadly weapon or previous conviction of a
41 felony as above specified has been charged and admitted or
42 found to be true in the manner provided by law; ~~and~~ the
43 minimum terms specified in paragraphs (a) and (b) shall
44 not apply in those cases wherein the property stolen or sought
45 to be stolen is an animal or animals and the manner in which
46 such property is taken or attempted to be taken constitutes
47 the crime of theft and the weapon used during the commission
48 thereof is not used or intended to be used against a person or
49 to resist arrest; *and the provisions of this section shall not*
50 *in any case apply where the current offense is a violation of*
51 *Section 476a.*

1 (f) The words "deadly weapon" as used in this section
2 are hereby defined to include any instrument or weapon of
3 the kind commonly known as a blackjack, sling shot, billy,
4 sandclub, sandbag, metal knuckles, any dirk, dagger, pistol,
5 revolver, or any other firearm, any knife having a blade
6 longer than five inches, any razor with an unguarded blade
7 and any metal pipe or bar used or intended to be used as a
8 club.

9 (g) For the purpose of determining whether or not a con-
10 viction for a public offense in another jurisdiction is a pre-
11 vious felony conviction under this section, the word "felony"
12 is defined as a public offense which, if committed in this
13 state, could have been punished as a felony under the laws
14 of this state. Where such an offense is punishable in this state
15 either as a felony or as a misdemeanor, it may be deemed a
16 felony for the purposes of this section.

Committee Recommended Legislation—A.B. 1481**Purpose**

In counties having honor camps for jail prisoners operated under the provisions of the Industrial Road Camp Act rather than by the sheriff, authorization for the superintendent, in addition to his other duties, to be designated as work furlough administrator.

Justification

There are six counties, Fresno, Kern, San Diego, Stanislaus, Tulare and Riverside, in which the honor camps are not operated by the sheriff's department. In communications to the committee, an interest has been expressed extending the work furlough act to San Diego County, in which such eligible offenders would be housed in facilities of the county department of honor camps. In such a situation, it is deemed desirable that in addition to the presently authorized positions of probation officer and sheriff that the superintendent of such industrial road camp facilities also be authorized to be designated as administrator of the work furlough program for that county.

Statement of Witnesses

MR. HENSON: . . . On this work furlough program, how does this generally work? Does a person go out and work during the day and come back at night to the jail and spend the night and then go out and work again the next day?

MR. KELDGORD: Yes, exactly, Mr. Henson. This is a law which was conceived in the State of Wisconsin in 1913. We have had it in California since 1957, and it is presently used by six or seven counties in California. It was piloted in Santa Clara County. The situation is almost exactly as you have described it. A man arises in the morning, while in custody, and goes to his work, and when the workday is over he comes back to custody. He must be in one of three places. He must be going to work, at work, or coming back from work, and if he isn't in one of those three places he must be in custody. He pays the county at a rate of about \$3 per day, at the present rate, for his own care, and the rest of his money goes to the support of his family, or if he has no family, it is held in trust for him. Orange County has had this program for just a year. They have demonstrated savings of some \$26,000 the first year.*

The most interesting thing, I feel about their report, is that some 56 percent of the men in custody in the county jail under work furlough would have had families on welfare had it not been for work furlough.

CHAIRMAN WINTON: I understand one of the problems in working out the work furlough program is the fact that this takes additional jail personnel. Have you had experience with that?

MR. KELDGORD: Orange County, in their \$26,000 figure, had already allotted expenses for increased (probation) personnel. Santa Clara County has a staff of four rehabilitation officers who ad-

* See Appendix B for report on second year of operation with estimated savings of \$49,305.

minister the program, and I believe the program which they support is a savings of \$600,000 in five years, so you are quite correct, though, I think it is unwise for the county to try to implement the program without providing adequate personnel support for it.*

MR. HENSON: What other problems, what other objections have counties raised to going into the work furlough program other than lack of personnel, administration problems and so forth?

MR. KELDGORD: One of the most common problems that is recited to us, and I think this is a very genuine problem, is simply geography, and I would submit to you that Alameda County is a pretty fair example here in that the labor market is in Oakland and the county jail—the honor farm—is at Santa Rita which is some 30 miles away. On the other hand, Santa Clara County has found this to be no problem. The bus line goes right by their honor farm in Milpitas. In many instances, they let the inmate have his automobile, and he takes the car and drives to work. In some cases, we get into the intangible benefits, the number of marriages which have been saved, the number of homes that are preserved, etc., and in some cases the wives have come to the jail in the mornings to get their husbands, take them to work and then drop them back. Geography is a very definite problem, since many of our honor farms are out of the central labor market. There is also some hesitancy, some question on the part of sheriffs, on the question of contraband. Again, Santa Clara County indicates this is not a real problem. On the issuance of violations, there is every indication that the plan is about 90 percent successful. When I say 90 percent, I am taking a situation where they have a very strict standard of violation. For example, a man makes an unauthorized phone call or he stops off for a drink at the neighborhood bar before going back to jail. Then he has violated. He is taken off the program, and still they have about a 90 percent success factor. This comes to me from Marin County, where the program is administered by the probation officer. As you know, under the code it may be administered by the sheriff or the probation officer. If you have a restricted violation procedure, in other words, the only way the man has violated is if he takes off or he commits a new offense or a gross violation not because of telephone calls or such, they feel that the violation rate is less than 1 percent. In Wisconsin, I believe it runs about 13 percent on a strict violation basis.

MR. HENSON: What kind of work do these men usually do?

MR. KELDGORD: Some of them are professionals. They have had a dentist, for example, in one case. Many of them are in the so-called blue collar category. The cooperation by organized labor and the cooperation by employers has been outstanding. The employers particularly like it, because, first of all, they know the man is going to show up for work; secondly, they know he is going to be sober, and; thirdly, these fellows are anxious to participate in the program. I think a good example and answer to your question is the Santa Clara situation where the Ford Motor Company, which conveniently happens to

* See Appendix "B." p. 89 Program did not require additional jail personnel in Orange County.

be located just across the field from the county honor farm, has employed many of the fellows, so it runs the whole range in terms of occupations. (P. 148.)*

(See Appendix B page 93 for listing Orange County occupations.)

MR. MULL: There is another procedure which is available in California but is very slightly used—it is called the work-furlough concept. Under Section 1208 of the *Penal Code*, California courts are empowered to utilize work-furlough in connection with commitments to the county jail. We feel that this program has tremendous value and its use should be encouraged. Under the law, the program may be administered by either the sheriff or the probation officer. Despite the tax savings and human savings represented by the program, it is used in only a few California counties, principally Santa Clara, where it is administered by the sheriff, Marin, where it is administered by the probation officer, and Orange where it is also administered by the probation officer. Santa Clara County, which pioneered the program in California in 1957 (the concept originated in Wisconsin in 1913 and is presently used in 51 of Wisconsin's 71 counties) reports savings of some \$600,000 in five years. Orange County, which has used the program for only one year, reports savings of more than \$25,000. Orange County has also estimated that 56 percent of the inmates would have had families on welfare if it were not for the work-furlough program in that county.

There are many, many counties in the state that have studied this program but have not put it into effect, sometimes because of the active opposition of members of the sheriff's department or active opposition of the members of the boards of supervisors. Yet this program has one of the best potentials for saving human values of any program which, in the studies of the California Council on Crime and Delinquency, should be put into effect, and we feel that grand juries in several counties of our State should insist upon serious study being made of this work-furlough concept so that a serious report may be made to the public of the savings that could be instituted and whether the work-furlough concept should be put into effect.

* Hearing transcript, office of the chairman.

A.B. 1481

LEGISLATIVE COUNSEL'S DIGEST

Work Furlough Rehabilitation Program.**Amends Sec. 1208, Pen.C.**

Provides that superintendant of a county industrial farm or industrial road camp, as well as the sheriff or probation officer, may be designated by board of supervisors as work furlough administrator.

An act to amend Section 1208 of the Penal Code, relating to work furlough rehabilitation of prisoners.

The people of the State of California do enact as follows:

1 SECTION 1. Section 1208 of the Penal Code is amended to
2 read:

3 1208. (a) The provisions of this section shall be operative
4 in any county in which the board of supervisors by ordinance
5 finds, on the basis of employment conditions, the state of the
6 county jail facilities, and other pertinent circumstances, that
7 the operation of this section in that county is feasible. In such
8 ordinance the board shall prescribe whether the sheriff ~~or~~, the
9 probation officer, *or the superintendent of a county industrial*
10 *farm or industrial road camp in the county* shall perform the
11 functions of the work furlough administrator.

12 (b) When a person is convicted of a misdemeanor and sen-
13 tenced to the county jail, or is imprisoned therein for nonpay-
14 ment of a fine, for contempt, or as a condition of probation
15 for any criminal offense, the court may direct that such person
16 be permitted to continue in his regular employment, if that is
17 compatible with the requirements of subdivision (d), or may
18 authorize the person to secure employment for himself in the
19 county.

20 (c) If the court so directs that the prisoner be permitted to
21 continue in his regular employment, the work furlough admin-
22 istrator shall arrange for a continuation of such employment
23 so far as possible without interruption. If the prisoner does
24 not have regular employment, and the court has authorized the
25 prisoner to secure employment for himself, the prisoner may
26 do so. Any employment so secured must be suitable for the
27 prisoner. Such employment must be at a wage at least as
28 high as the prevailing wage for similar work in the area where
29 the work is performed and in accordance with the prevailing
30 working conditions in such area. In no event may any such
31 employment be permitted where there is a labor dispute in
32 the establishment in which the prisoner is, or is to be, em-
33 ployed.

34 (d) Whenever the prisoner is not employed and between the
35 hours or periods of employment, he shall be confined in the jail
36 unless the court directs otherwise.

37 (e) The earnings of the prisoner shall be collected by the
38 work furlough administrator, and it shall be the duty of

1 the prisoner's employer to transmit such wages to the admin-
2 istrator at the latter's request. Earnings levied upon pur-
3 suant to writ of attachment or execution or in other lawful
4 manner shall not be transmitted to the administrator. If the
5 administrator has requested transmittal of earnings prior to
6 levy, such request shall have priority. In a case in which the
7 functions of the administrator are performed by a sheriff, and
8 such sheriff receives a writ of attachment or execution for the
9 earnings of a prisoner subject to this section but has not yet
10 requested transmittal of the prisoner's earnings pursuant to
11 this section, he shall first levy on the earnings pursuant to
12 the writ. When an employer transmits such earnings to the
13 administrator pursuant to this subdivision he shall have no
14 liability to the prisoner for such earnings. From such earnings
15 the administrator shall pay the prisoner's board and personal
16 expenses, both inside and outside the jail, and shall deduct
17 so much of the costs of administration of this section as is
18 allocable to such prisoner, and, to the extent directed by the
19 court, shall pay the support of the prisoner's dependents, if
20 any. If sufficient funds are available after making the forego-
21 ing payments, the administrator may, with the consent of the
22 prisoner, pay, in whole or in part, the preexisting debts of the
23 prisoner. Any balance shall be retained until the prisoner's
24 discharge and thereupon shall be paid to him.

25 (f) The prisoner shall be eligible for time credits pursuant
26 to Sections 4018, 4019, and 4019.2.

27 (g) In the event the prisoner violates the conditions laid
28 down for his conduct, custody, or employment, the work fur-
29 lough administrator shall report such fact to the court which
30 directed or authorized employment pursuant to this section,
31 and the court may then order such prisoner returned to it and,
32 if it finds that the violation has occurred, may order the bal-
33 ance of the prisoner's sentence to be spent in actual confine-
34 ment.

35 (h) Willful failure of the prisoner to return to the place of
36 confinement not later than the expiration of any period during
37 which he is authorized to be away from the place of confine-
38 ment pursuant to this section is punishable as provided in
39 Section 4532 of the Penal Code.

40 (i) This section shall be known and may be cited as the
41 "Work Furlough Rehabilitation Law."

Committee Recommended Legislation—A.B. 1482

Purpose

Establish as a requirement for parole supervision in excess of two years, following release from prison, that the authorities must make an affirmative finding of the need for the continuation of this state expense.

Justification

The committee heard considerable testimony concerning the importance of small caseloads for parole agents and of the constant increase in numbers of persons entering prison or being released on parole. Reports were submitted indicating the increase in number of hearings conducted by the paroling authorities with individuals *still in prison*. The only interviews held with parolees appear to be with those returned to prison for some violation of law or the conditions of their parole.

There has been no appreciable decrease in the median length of the parole supervision period over the past 15 years although caseloads have seen considerable reduction. It also appears that over 90 percent of California parolees who will violate will do so in less than two years and would not be affected by this legislation. The balance will presumably need and receive only minimal supervision but will still remain a number in the caseload until discharged. The discharge date which ends supervision is determined in the prison before actual release on parole and no existing procedures require review after release from prison. Good behavior in prison is a requirement for release on parole, and it would seem equally desirable that response to better supervision and good behavior in the community be recognized in establishing a date for discharge from custodial control. Such actions are now the exception rather than established procedure.

The adoption of this measure will simply emphasize the importance of a two-year postinstitutional evaluation and will not prevent, *on the basis of verified need*, continued supervision.

The adoption of this measure should result in more effective utilization of the services of parole agents. In order to achieve this result it will be necessary for the present Department of Finance formulae for determining the ratio of parole agents to parolees to be modified. The possible reduction of caseloads, following the two-year evaluation of parolee's adjustment, should *not* result in a proportionate reduction of parole agents since this would continue the high caseloads for the remaining officers. The parolees remaining on parole after this screening present an evaluated need for careful continued supervision.

The new formulae should include parolees under *suspension* since in fact they require parole agents attention for investigating the need for return to prison or alternatively restoration to parole. The present procedure excludes such cases from the caseload formulae.

A second weakness of the present procedure is that no time is authorized for locating parolees under suspension because their whereabouts are unknown. The relocation and return to controlled supervision of such parolees may well provide better protection for the community by preventing additional criminal activity.

A third time factor now excluded from the formulae but demanding a considerable allocation of parole agents time is the prerelease investigation concerning the suitability of the proposed parole plan for a prisoner about to be returned to the community under parole. It would certainly seem that this important function warrants inclusion as a workload factor in the formulae.

Statement of Witnesses

DEPARTMENT OF CORRECTIONS REPORT:* The time served on parole before discharge is about the same for male felons as it was in 1950: 24 months then, as opposed to 25 in 1962. It is considerably longer for women felons than it was in 1950: 21 months then, as opposed to 37 months in 1962.

MR. DUNBAR: Before the Legislature now is the proposal that we classify parolees. Some of them will require special supervision—the closest. Rather than two points of contact per month, we propose nine points of contact. Rather than 30 minutes a month, we propose three hours of contact with one kind of person, a person who has a background of instability which resulted in violence but appears to us now to be all right to be in the community. We find another person, a person who has been a narcotic addict but now is sufficiently recovered for trial in the community. But we know that we are not talking about cure, and we need careful control. And then we found through research that there is another kind of person, a person who will do well if he is given a lot of attention, and we propose to give these persons special supervision. On the other hand, there are those who will do all right with regular supervision. Here we propose five points of contact and $1\frac{3}{4}$ hours a month. *And those that will do well in spite of us or with little attention, we propose only to give them about three-quarters of an hour with a couple of points of contact.* (P. 97) †

DEAN LOHMAN: I served for a time as Chairman of the Illinois Parole and Pardon Board and as Chairman of the Division of Corrections, and I conducted at that time studies through the Division of Research. The findings in those studies are confirmed by studies in other parts of the country, then and since that time. Sixty-five percent—roughly two-thirds of parole violators—will violate within the first 18 months of their release from the penitentiaries, and another 20 percent will violate in the succeeding 18 months. By the end of three years, 85 percent of all those who will violate will have violated and from then on only a sporadic, occasional case occurs through the years. (P. 39) †

Mr. Henson dissents from this recommendation.

* On file, office of chairman.

† Hearing transcript office of the chairman.

A.B. 1482

LEGISLATIVE COUNSEL'S DIGEST

Terms of imprisonments.

Adds Sec. 2943, Pen.C.

Provides that notwithstanding any other provision of law, when any person (other than a person imprisoned under a life sentence) has been released on parole from the state prison, and has been on parole continuously for two years since release from confinement, the Adult Authority, in the case of a male prisoner, and the Board of Trustees of the California Institution for Women, in the case of a female prisoner, shall, within 30 days, determine whether or not, by the standard of his rehabilitation, such person's term of imprisonment shall terminate on the expiration of such 30-day period.

Provides that the authority or board shall make a written record of its determination and transmit a copy thereof to the parolee.

An act to add Section 2943 to the Penal Code, relating to terms of imprisonment.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 2943 is added to the Penal Code, to
- 2 read:
- 3 2943. Notwithstanding any other provision of law, when
- 4 any person (other than a person imprisoned under a life sen-
- 5 tence) has been released on parole from the state prison, and
- 6 has been on parole continuously for two years since release
- 7 from confinement, the Adult Authority, in the case of a male
- 8 prisoner, and the Board of Trustees of the California Institu-
- 9 tion for Women, in the case of a female prisoner, shall, within
- 10 30 days, determine whether or not, by the standard of his re-
- 11 habilitation, such person's term of imprisonment shall termi-
- 12 nate on the expiration of such 30-day period. The authority
- 13 or board shall make a written record of its determination and
- 14 transmit a copy thereof to the parolee. If the authority or
- 15 board so determines that such person's term shall be termi-
- 16 nated, he shall be deemed completely discharged at the end of
- 17 such 30-day period.

DEPARTMENT OF CORRECTIONS
Sacramento, November 5, 1964

MR. A. LAMONT SMITH, *Consultant*
California Legislature
Assembly Committee on Criminal Procedure
State Capitol, Room 5159
Sacramento, California

Dear Mr. Smith:

On October 20, Mr. Dunbar discussed your memo of August 24 with you and me, and reviewed the purpose for your request of data on male felon parolees whose sentence had been suspended or cancelled by the Adult Authority.

We have studied the male felons released to parole during 1958 and 1959. Of the men paroled during:

Suspended or canceled	1958	1959
Number of men paroled.....	3,739	5,751
Number who were suspended or canceled from active parole by December 31:		
1962.....	1,863	
1963.....		3,034
Percent of suspended or canceled to total paroled.....	49.8	52.8

A study of the time from parole to suspension or cancellation indicates:

Of those paroled in 1958 who were suspended—

50 percent had been suspended by the 9th month after parole

90 percent had been suspended by the 24th month after parole

Of those paroled in 1959 who were suspended—

50 percent were suspended by the 11th month

90 percent were suspended by the 23rd month

Your telephone call on October 29 requested some information on the number and percent of men on active parole after a certain lapse of time.

Of the 1958 parolees:

3,119 men, or 83.4 percent, were on active parole as of 12-31-58

1,899 men, or 50.8 percent, were on active parole as of 12-31-59

Considering this line of thought, the following table indicates the number and percent on parole at the end of each calendar year after the year of parole.

Months after parole	Men				Women			
	1958 paroles		1959 paroles		1958 paroles		1959 paroles	
	Still on parole	Percent on parole	Still on parole	Percent on parole	Still on parole	Percent on parole	Still on parole	Percent on parole
Total paroled.....	3,379	-----	5,751	-----	320	-----	359	-----
0-12.....	3,119	83.4	4,626	80.4	265	82.8	280	78.0
12-24.....	1,899	50.8	2,987	51.9	176	55.0	186	51.8
24-36.....	745	19.9	1,099	19.1	125	30.1	132	36.8
36-48.....	188	5.0	270	4.7	68	21.3	79	22.0
48-60.....	99	2.6	109	1.9	29	9.1	38	10.6

If we can be of further service, please do not hesitate to call us.

WALTER DUNBAR
Director of Corrections

By: Marie Vida Ryan

DEPARTMENT OF THE YOUTH AUTHORITY
Sacramento, November 13, 1964

HONORABLE GORDON H. WINTON, JR.
*Chairman, Assembly Interim Committee on
Criminal Procedure
Room 5159, State Capitol
Sacramento, California 95814*

Attention: Dr. A. LaMont Smith, Consultant

Dear Assemblyman Winton:

Dr. A. LaMont Smith, consultant to your committee, has asked the following questions:

1. What section of the Welfare and Institutions Code provides for a two-year examination of Youth Authority cases?
2. Why did the Youth Authority change its policy from a two-year review to an 18-month review?
3. How was this change implemented?

1. Section 1764 of the Welfare and Institutions Code provides, as follows:

“Failure of the Authority to examine a person committed to it, or to re-examine him within two years of a previous examination, shall not of itself entitle the person to discharge from the control of the Authority, but shall entitle him to petition the superior court of the county from which he was committed for an order of discharge, and the court shall discharge him unless the Authority satisfies the court of the need for further control.”

2. Early in 1960 in studying the parole figures prepared by our Division of Research and Statistics, we found that the median time for the discharge of nonviolators appeared to be about 27 months. This indicated to us that these cases might just as well have been discharged at the end of the required two-year period rather than after 27 months. These cases were of no further danger to the public and were the very best cases of youths committed to the Authority. We reasoned that if we could reduce the number of months on parole for these exceptional cases, we would be able to cut down on the number of parole agents needed to supervise our caseload that was increasing at that time, with no harmful results to anyone.

Since the time we adopted a new policy of an 18-month review instead of a 24-month review, we have reduced the median number of months that nonviolators were on parole from 27.5 months to 22.3 months, which is a little over 5 months. When we consider that in the calendar year 1963, 2,869 nonviolators were discharged, this means over 14,000 months of supervision of this type of case.

3. Section 60 of our Board Policy Manual provides, as follows:

"Length of Parole, 18-Month Summary. All releases on parole will automatically carry a continuance of 18 months from the date of release on parole for an 18-month summary, or to expiration of commitment unless the Board enters its order calling for a report on employment, foster home report, report on missing parolee, etc. at an earlier date. If the case is considered by the Board in the interim and there has been a suspension, revocation or restoration to parole or an order approving a change in parole plans, foster home report or missing parolee report, the next 18-month summary will not be due until 18 months from the date of the order."

If we can be of further assistance to your committee at any time, please let me know.

Sincerely,
HEMAN G. STARK, Director

Committee Recommended Legislation—A.B. 1483

Purpose

Require recording of the recommendation on the issue of parole as made by hearing representatives to permit evaluation of their utilization by the paroling authorities.

Justification

The concept of using case hearing representatives was advocated in the 1957 report of the Governor's Special Study Commission on Correctional Facilities and Services (p. 43). At that time the wisdom of continued expansion of the membership of the paroling authorities to meet the demands of increased workload by virtue of the increasing population of the state was questioned. The precedent in the operation of other administrative boards seemed to be in the direction of delegation, subject to review, of some of the workload to hearing representatives and retention of a smaller board for establishment of policies. The paroling authority for men has been increased from three part-time members to seven full-time members plus eight hearing representatives. The board for adult women remains at five part-time members but the number of days available for conducting hearings has been increased. The authority for youthful offenders has been increased from three to six members, plus five hearing representatives.

The actual functioning of the hearing representatives is something less than that of a full member with voting powers. The statutory authority (Section 5076.1 Penal Code and Section 1711.5 of the Welfare and Institutions Code) for making *recommendations* is apparently not as clear in intent as is Section 1203 of the Penal Code with respect to recommendations made by probation officers to the courts.

"... The probation officer . . . must make a written report to the court . . . and must accompany said report with his written recommendations, including his recommendations as to the granting or withholding of probation to the defendant and as to the conditions of probation if it shall be granted . . ."

The current administrative bulletin of the Department of Corrections, No. 64-92, in Attachment 1, Paragraph E, states "Recommendations made by representative panels will not be recorded as such in the minutes of the Adult Authority . . ." A review of the minute actions of the Adult Authority, therefore, would not reveal the extent to which *recommendations* of hearing representatives "for" or "against" parole are being accepted by the paroling authorities.

The former chairman of the Adult Authority, as noted in his statement which follows, requested guidance in this regard from the Legislature. The proposed legislation is based on long established practice with respect to recommendations of probation officers. The statute requires a "yes or no" recommendation regarding probation and the degree of acceptance or rejection by the courts is annually published in the report *Delinquency and Probation in California*, compiled by the Bureau of Criminal Statistics of the California Department of Justice. The proposed legislation does not expand the voting power of the hearing representatives. It only insures that there can be a legislative audit

of the value of their services as seen by the reaction of the paroling authorities. (See AB 1485, which provides for mandatory reports to the Bureau of Criminal Statistics by the paroling authorities for this purpose.)

Selected Statements by Hearing Witnesses

MR. BREWER: As to the question of the use of the Adult Authority representative, I might state that first, in an agency task force report which was published December 28, 1962, a recommendation was made that approximately 80 percent of the Adult Authority workload could be handled by case hearing representatives. Almost simultaneously, a report of an Assembly Committee on Institutional Costs, which, I believe, was chaired by Assemblyman Crown, with a subcommittee by Assemblyman Petris, questioned the extent and manner in which the Adult Authority was using representatives at that time. The procedure generally at that time was for one hearing representative to meet with one member of the Adult Authority as cases were considered, and thereafter a second member of the Adult Authority would review the action of the hearing representative and countersign it. I have already indicated that similar questions were raised when the Adult Authority requested budgeting for additional representative positions.

It is obvious that if we are to plan ahead, we must have clarification as to the intent of the Legislature in establishing the case hearing representative category. (P. 81.)*

A.B. 1483

LEGISLATIVE COUNSEL'S DIGEST

Parole.

Amends Secs. 3325, 5076.1, Pen.C.

Specifies that recommendation by case hearing representative to the Adult Authority or Board of Trustees, California Institution for Women, that a prisoner be granted or be denied parole shall be in writing.

An act to amend Sections 3325 and 5076.1 of the Penal Code, relating to parole.

The people of the State of California do enact as follows:

1 SECTION 1. Section 3325 of the Penal Code is amended to
2 read:

3 3325. The board shall have such powers, perform such
4 duties and exercise such functions, respecting such females
5 convicted of felonies as the Adult Authority exercises over
6 male prisoners, and the superintendent shall, subject to the
7 control of the director, have such powers, perform such duties
8 and exercise such functions, respecting such females convicted
9 of felonies, as the wardens now exercise over male prisoners.

10 The Board of Trustees of the California Institution for
11 Women may advise the Director of Corrections in the estab-
12 lishment of general policies for the operation and maintenance
13 of the California Institution for Women and for the establish-
14 ment of general policies for the care, custody, treatment, train-
15 ing, discipline and employment of those confined in the insti-
16 tution.

17 The director may advise the Board of Trustees of the Cali-
18 fornia Institution for Women in the establishment of general
19 policies relating to the functions and duties of the Board of
20 Trustees of the California Institution for Women.

21 The director shall attend at least once annually a regular
22 meeting of the board of trustees while the board is fixing
23 sentences and release dates.

24 The board may employ case hearing representatives who
25 shall participate with the board in the hearing of cases relat-
26 ing to term fixing and paroles. The case hearing representative
27 assigned to participate in the hearing of any such case shall
28 prepare a case study and evaluation which he shall submit to
29 the board. *A recommendation by a case hearing representative*
30 *that a prisoner be granted or be denied parole shall be in writ-*
31 *ing.*

32 SEC. 2. Section 5076.1 of said code is amended to read:

33 5076.1. The Adult Authority shall meet at each of the state
34 prisons at such times as may be necessary for a full and com-
35 plete study of the cases of all prisoners whose terms of im-
36 prisonment are to be determined by it or whose applications
37 for parole come before it. Other times and places of meeting
38 may also be fixed by the Adult Authority. Each member of the

1 Adult Authority shall receive his actual necessary traveling
2 expenses incurred in the performance of his official duties.

3 The Adult Authority may meet and transact business in
4 panels. Each Adult Authority panel shall consist of at least
5 two members of the authority. Two members of the Adult
6 Authority shall constitute a quorum for the transaction of
7 business. No action shall be valid unless concurred in by a
8 majority vote of the members present.

9 The Adult Authority may employ case-hearing representa-
10 tives to whom it may assign appropriate duties, including that
11 of hearing cases and making recommendations to the Adult
12 Authority. Such recommendations shall be made in accordance
13 with policies established by a majority of the total membership
14 of the Adult Authority. Such policies may provide that the
15 recommendations of a case-hearing representative or panel of
16 case-hearing representatives shall be either final or subject to
17 review by a panel of the members of the Adult Authority, ex-
18 cept that no recommendation of a case-hearing representative
19 or representatives for the granting or denial of a parole, can-
20 cellation or revocation of a parole, the determination or rede-
21 termination of a term of imprisonment, or the discharge from
22 a commitment, shall become final until approved by a panel of
23 members of the Adult Authority. *A recommendation by a case*
24 *hearing representative that a prisoner be granted or be denied*
25 *parole shall be in writing.*

Committee Recommended Legislation—A.B. 1484

Purpose

Provide the paroling authorities with a recommendation from the Director of Corrections through the institutional staff concerning their evaluation as to the readiness of a prisoner for release on parole.

Justification

The Youth Authority has for years requested and received evaluative reports on the issue of parole for wards in the Department of Corrections institutions. Historically, this procedure has not been viewed with favor by the Adult Authority with respect to their receiving similar reports. The parole field agents that investigate, evaluate and recommend approval of the proposed release plans for parolees were administratively placed by legislative action under the Director of Corrections in 1957. Such action was taken following study and recommendation by the Governor's special study commission on correctional facilities and services (p. 44). It appears equally desirable that institutional staff be similarly reporting their evaluation of an individual to the paroling authorities in advance of release. In order that such recommendations can be evaluated, the reaction of the paroling authorities should be recorded.

The Legislature should also receive from the Board of Corrections pursuant to their statutory responsibility recommendation concerning needed statutory revisions. Particular attention should be directed to the net effect of mandatory restrictions on the use of parole procedures as would be possible by the adoption of this measure.

Selected Statements by Hearing Witnesses

MR. BREWER: I feel that good communication is essential in this instance to the intelligent exercise of this judgment by the Adult Authority in all matters concerning parole, because if we don't have a good thorough understanding of what parole consists of in California, we cannot very intelligently make decision as to who should or should not be released to that kind of supervision. (p. 84.)*

MR. DUNBAR: Another area in which we should do more in terms of progress is knowing more about the plan of release. If the man is coming before the Parole Board, we should have a specific plan of where he is going, what work he will be doing, whom he will be associating with and the like. We are not doing this now except on a selected basis. Its value was already demonstrated to us in terms of result. We go out there and find out who he is going to be associating with in terms of family and relationships, what kind of a job he will have and what kind of a community he will be residing in, and this is the really important information for decision making as to release and under what kind of conditions as set by the Parole Board. Now you see, we recognize this as a problem. We have been doing something about it on a selected basis for addicts and it is paying off. I recommend that we extend this and provide more meaningful information to the Parole

* Hearing transcript, office of the chairman.

Board. More than this, when a man does come up, I think we should do something in addition, and this is the sixth point.

The people who know the inmates best through the years are the institutional staff under the warden's direction, and I think it is about time that we get our heads together and that we reach conclusions about this man and that we make the warden and his staff responsible for evaluating the man and making a recommendation to the Parole Board as to how he is now in attitude and behavior and whether he is ready for release or not. We are not doing this now, and I think we should.

(p. 92.)*

* Hearing transcript, office of the chairman.

A.B. 1484

LEGISLATIVE COUNSEL'S DIGEST

Parole of prisoners.

Amends Secs. 3042, 5077, Pen.C.

Requires Adult Authority to advise Director of Corrections of meeting to consider granting of parole to prisoner at least 30 days before meeting.

Provides that within the 30 days before a meeting of the Adult Authority to consider the granting of a parole to any prisoner, the director shall submit to the authority his written recommendation on such matter.

The director shall, twice each year, prepare and submit to the Board of Corrections a study indicating the number of prisoners confined in the state prisons who would be suitable subjects for parole but for a statute or statutes rendering them ineligible for parole and indicating the particular statutes having such effect and the number of such prisoners affected by each such statute.

An act to amend Sections 3042 and 5077 of the Penal Code, relating to parole of prisoners.

The people of the State of California do enact as follows:

1 SECTION 1. Section 3042 of the Penal Code is amended
2 to read:

3 3042. At least 30 days before the Adult Authority shall
4 meet to consider the granting of a parole to any prisoner the
5 authority shall send written notice thereof to the Director of
6 Corrections and to each of the following persons who has made
7 request therefor: the judge of the superior court before whom
8 the prisoner was tried and convicted, the attorney for the
9 defendant and the district attorney and the sheriff of the
10 county from which the prisoner was sentenced.

11 SEC. 2. Section 5077 of said code is amended to read:

12 5077. The Director of Corrections shall cause each person
13 committed to a state prison to be examined and studied. This
14 includes the investigation of all pertinent circumstances of his
15 life and the antecedents of the violation of law because of
16 which he has been committed to prison. Any person may be
17 reexamined to determine whether existing orders and disposi-
18 tions should be modified or continued in force.

19 Upon the basis of the examination and study, the Director
20 of Corrections shall classify prisoners and determine the prison
21 in which the prisoners shall be confined.

22 The granting and revocation of parole and the fixing of sen-
23 tences shall be determined by the Adult Authority; provided,
24 that the Adult Authority or one member thereof shall inter-
25 view each prisoner at least once before the Adult Authority
26 determines his sentence.

27 *Within the 30 days before a meeting of the Adult Authority*
28 *to consider the granting of a parole to any prisoner, the di-*

1 rector shall submit to the authority his written recommenda-
2 tion on such matter.

3 The director shall, twice each year, prepare and submit to the
4 Board of Corrections a study indicating the number of prison-
5 ers confined in the state prisons who would be suitable subjects
6 for parole but for a statute or statutes rendering them ineli-
7 gible for parole and indicating the particular statutes having
8 such effect and the number of such prisoners affected by each
9 such statute.

Committee Recommended Legislation—A. B. 1485

Purpose

Insure availability of statistical data for evaluation of the utilization by paroling authorities of recommendations recorded by their hearing representatives and the staff of the Director of Corrections.

Justification

The Bureau of Criminal Statistics of the California Department of Justice, in their annual report, *Delinquency and Probation in California* publishes a statistical analysis of the extent to which the courts follow the recommendations made by county probation officers. Such reports must be made in writing and specifically state, in accordance with Section 1203 of the *Penal Code*, a recommendation concerning the granting or denial of probation.

In 1963 it was reported,

“Of the 22,624 total dispositions during 1962, 1,388 had no recommendation or the recommendation was not stated, thus leaving a total of 21,236 cases where there was a definite recommendation either for or against probation. Of this total, the probation officers recommended probation in 41.0 percent of the cases. Some counties tended to recommend more probation than others, and of the counties where there were 50 or more total recommendations, the highest percentage of favorable recommendations was in Merced County (55 percent) and the lowest percentage was in San Joaquin County (18 percent). *Of the total defendants recommended for probation, 96.5 percent were subsequently granted probation by the court.* This left only 3.5 percent of the defendants who were denied probation in face of a favorable recommendation. Of all defendants who were not recommended for probation, 82.6 percent were subsequently denied. Thus, 17.4 percent of the defendants were granted probation in face of a recommendation for denial. These figures continue to point out what has been shown in the past that the judges almost always concur with favorable recommendations for probation, however, in a substantial number of cases they grant probation in spite of a recommendation for denial.”

The last publication of the Department of Corrections concerning parole actions with respect to release of offenders is the report, *California Prisoners, 1960*. It does not contain this information with respect to recommendations of the hearing representatives of the parole authority. In order that the Legislature may have more readily available such data essential to evaluating the budgetary implications of the paroling authorities or department's procedures, this measure is considered desirable. It is limited to a two-year study and the extent to which the data is publicized or made available to the Legislature will depend upon the resources of the Bureau of Criminal Statistics. This measure simply mandates the department and paroling authorities to submit workload data to an agency whose primary function is concerned with regular issuance of statistical reports.

A.B. 1485**LEGISLATIVE COUNSEL'S DIGEST****Adult Authority.****Adds Sec. 5076.2, Pen.C.**

Provides that to assist the Bureau of Criminal Statistics in performance of its duties the Adult Authority shall, at least annually, report to the bureau, in such form as the bureau may prescribe, its actions in parole matters and the recommendations of case hearing representatives and of the Director of Corrections in such matters.

In effect until Jan. 1, 1968.

An act to add Section 5076.2 to the Penal Code, relating to the Adult Authority.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 5076.2 is added to the Penal Code, to
- 2 read:
- 3 5076.2. To assist the Bureau of Criminal Statistics in the
- 4 performance of its duties under Section 13012, the Adult
- 5 Authority shall, at least annually, report to the bureau, in such
- 6 form as the bureau may prescribe, its actions in parole matters
- 7 and the recommendations of case hearing representatives and
- 8 of the Director of Corrections in such matters.
- 9 This section shall remain in effect until January 1, 1968,
- 10 and shall have no force or effect after that date.

Commentary: It is intended that pursuant to Section 3325 of the Penal Code this measure will equally apply to the Board of Trustees of the California Institution for Women.

Committee Recommended Legislation—A.B. 1486

Purpose

Authorize the Bureau of Criminal Statistics to collect data concerning the administration of county parole and the Work Furlough Law.

Justification

The Legislature in 1957 changed the composition of the County Board of Parole in the belief that this might result in expanding its proper use. No specific responsibility has been fixed upon any agency to accumulate data concerning county parole in the same manner as county probation. The Bureau of Criminal Statistics would be an appropriate agency to undertake this responsibility pursuant to Legislative direction. A similar problem is also present in evaluating the usefulness of the Work Furlough Rehabilitation Law and the extent of its utilization.

In 1961 administration of the Department of Youth Authority and Department of Corrections was placed in a new unit, the Youth and Adult Corrections Agency. It is therefore consistent to include the supervisory agency along with its subordinate units.

In the 1963 Regular Session Senate Bill 1394 was introduced to accomplish this purpose. After approval by the Senate and by this committee it was also approved by the Assembly Committee on Ways and Means being given a "do pass" recommendation. It was on the second reading file for passage when the Legislature adjourned.

Recommendation

There was no opposition to this measure and the need still exists for regular accumulation of the facts concerning these two important elements of the correctional system. The present bill is identical to the 1963 S.B. 1394 and is recommended for adoption.

A.B. 1486

LEGISLATIVE COUNSEL'S DIGEST

Recordkeeping of public officials.

Amends Sec. 13020, Pen.C.

Specifies that Youth and Adult Corrections Agency, county boards of parole commissioners, and work furlough administrators are among the public agencies and others required to maintain records needed for correct reporting of statistical data required by Bureau of Criminal Statistics, to report such data to bureau as prescribed by Attorney General, and to give Attorney General or agent access to such data for purposes of law relating to criminal statistics.

An act to amend Section 13020 of the Penal Code, relating to recordkeeping and reporting by public agencies and officials.

The people of the State of California do enact as follows:

1 SECTION 1. Section 13020 of the Penal Code is amended to
2 read:

3 13020. It shall be the duty of every constable, city marshal,
4 chief of police, railroad and steamship police, sheriff, coroner,
5 district attorney, city attorney and city prosecutor having
6 criminal jurisdiction, probation officer, *county board of parole*
7 *commissioners, work furlough administrator*, the Department
8 of Justice, *Youth and Adult Corrections Agency*, Department
9 of Corrections, Adult Authority, Department of the Youth
10 Authority, and the Board of Trustees of the California Insti-
11 tution for Women, Department of Mental Hygiene, Depart-
12 ment of Public Health, Department of Social Welfare, State
13 Fire Marshal, Liquor Control Administrator, and every other
14 person or agency dealing with crimes or criminals or with de-
15 linquency or delinquents, when requested by the Attorney
16 General:

17 (a) To install and maintain records needed for the correct
18 reporting of statistical data required by the bureau;

19 (b) To report statistical data to the bureau at such times
20 and in such manner as the Attorney General prescribes;

21 (c) To give to the Attorney General, or his accredited agent,
22 access to statistical data for the purpose of carrying out the
23 provisions of this title.

CHAPTER III

TOPICAL COMMENTARIES

CHAPTER III

TOPICAL COMMENTARIES

The special consultant to the Committee on Parole and Probation has prepared a series of topical commentaries dealing with various problems in the field. These commentaries are analyses of various lengths and incorporate both testimony presented to the committee and additional information developed by Dr. Smith and the Committee staff. For the sake of economy and as in Chapter I of this report, these commentaries are not reprinted here. However, they are available through the office of the chairman of the committee.

The subjects of the commentaries are:

- A. Laws governing eligibility for parole.
- B. Laws governing sale of products of correctional industries.
- C. Contracts with private agencies for operation of "halfway houses" and to provide counseling services for discharged prisoners.
- D. State action to reinforce local probation services and programs.
- E. Employment for paroled prisoners—men and women.
- F. Camps and employment on public works for parolees.
- G. State-sponsored institute on sentencing practices and procedures.
- H. Recall of commitment pursuant to Penal Code, Section 1168.
- I. Restoration of civil rights for parolees.

APPENDICES

APPENDIX A

STATE OF CALIFORNIA, OFFICE OF LEGISLATIVE COUNSEL
Sacramento, August 24, 1964

HONORABLE GORDON H. WINTON, JR.
Shafter Building, Room 10
Merced, California

ELIGIBILITY FOR PROBATION AND FOR PAROLE—No. 6773

Dear Mr. Winton:

Pursuant to your request we have prepared the following list and discussions of statutes limiting eligibility for probation and for parole.

I. LIMITATIONS ON ELIGIBILITY FOR PROBATION

Although not strictly a matter of eligibility, we have included under "C" those provisions we are aware of that require that imprisonment be a condition of probation for certain offenses.

This compilation includes the basic restrictions on eligibility found in Section 1203 of the Penal Code, and we think that it includes any other important restriction on eligibility, such as the restrictions in the narcotics laws. We had to rely, for the most part, on indexes to lead us to lesser restrictions, and as indexes are not perfect, this compilation cannot be guaranteed to be complete.

A. *Absolute Prohibitions* (as provided by Section 1203 of the Penal Code, except as otherwise indicated)

- (1) Any person convicted of burglary with explosives, rape with force or violence, murder, assault with intent to commit murder, attempt to commit murder, train wrecking, kidnaping, escape from a state prison, conspiracy to commit any one or more of the aforementioned felonies, and who at the time of the perpetration of said crime or any of them or at the time of his arrest was himself armed with a deadly weapon (unless at the time he had a lawful right to carry the same).
- (2) A defendant who used or attempted to use a deadly weapon upon a human being in connection with the perpetration of the crime of which he was convicted.
- (3) A defendant who, in the perpetration of the crime of which he was convicted, wilfully inflicted great bodily injury or torture.
- (4) A defendant twice previously convicted of a felony in this state or twice previously convicted in any other place or places of public offenses which would have been felonies if committed in this state.
- (5) A defendant convicted of the crime of burglary with explosives, rape with force or violence, murder, attempt to commit murder,

assault with intent to commit murder, train wrecking, extortion, kidnaping, escape from a state prison, violation of Sections 286 (sodomy), 288 (lewd act on child) or 288a (oral copulation) of the Penal Code, or conspiracy to commit any one or more of the aforesaid felonies, who has been previously convicted of a felony in this state or previously convicted in any other place of a public offense which would have been a felony if committed in this state.

- (6) A defendant previously convicted of a felony in this state or convicted in any other place of a public offense which would have been a felony if committed in this state if at the time of the perpetration of said previous offense or at the time of his arrest for said previous offense he was himself armed with a deadly weapon (unless at the time he had a lawful right to carry the same) or he personally used or attempted to use a deadly weapon upon a human being in connection with the perpetration of said previous offense or in the perpetration of said previous offense he wilfully inflicted great bodily injury or torture.
- (7) A public official or peace officer of the state, county, city, city and county, or other political subdivision who, in the discharge of the duties of his public office or employment, accepted or gave or offered to accept or give any bribe or embezzled public money or was guilty of extortion.
- (8) (Sec. 11715.6, H. & S.C.)
 - (a) Any person who was of the age of 21 years or over at the time of the commission of the offense, who is convicted for the first time of selling, furnishing, administering or giving a narcotic other than marijuana to a minor or inducing a minor to use such a narcotic in violation of law.
 - (b) If prior felony conviction under Div. 10, H. & S.C. (re narcotics) or conviction under laws of the United States or other state if punishable as felony under Division 10, no probation may be granted for violation of:
 - Sec. 11500, H. & S.C. Possession of narcotic other than marijuana.
 - Sec. 11500.5, H. & S.C. Possession for sale of narcotic other than marijuana.
 - Sec. 11501, H. & S.C. Sale, administering, importation, transportation, furnishing, giving away, etc., narcotic other than marijuana.
 - Sec. 11502, H. & S.C. Person 21 or over soliciting, encouraging, etc., a minor knowingly to violate certain more serious provisions of narcotics laws or provision re use; person 21 or over hiring, employing, or using minor knowingly and unlawfully to transport, carry, sell, give away, prepare for sale, or peddle narcotic other than marijuana; any person 21 or over selling, furnishing, administering, giving, or offering to sell,

furnish, administer, or give narcotic other than marijuana to a minor.

Sec. 11503, H. & S.C. Agreeing to sell, etc., narcotic and delivering something else.

Sec. 11530, H. & S.C. Growing, etc., possessing marijuana.

Sec. 11530.5, H. & S.C. Possession for sale of marijuana.

Sec. 11531, H. & S.C. Selling transporting, etc., marijuana.

Sec. 11532, H. & S.C. Person 21 or over hiring, employing, or using minor in unlawfully transporting, carrying, selling, giving away, preparing for, or peddling marijuana, or unlawfully selling, furnishing, administering, giving, offering to sell, furnish, administer, or give marijuana to a minor, or inducing minor to use marijuana in violation of law.

Sec. 11540, H. & S.C. Growing, harvesting, drying, processing peyote.

Sec. 11557, H. & S.C. Opening or maintaining a place for the purpose of unlawfully selling, giving away, or using a narcotic.

Sec. 11715, H. & S.C. Forging or altering prescription, or issuing or utilizing altered prescription, or issuing or utilizing prescription bearing a forged or fictitious prescription, or obtaining a narcotic by forged, fictitious, or altered prescription, or having possession of any narcotic so obtained.

(9) (Sec. 654.3, Pen.C.) Violation of Sec. 654.1, Pen.C., prohibiting sale, etc., of transportation by carrier not having certificate or permit from regulatory agency, if three prior convictions.

B. *Qualified Prohibitions* (Sec. 1203, Pen.C.)

(1) It is the policy of the state that, except in unusual cases where the interest of justice demands a departure from such policy, probation shall not be granted to any person who is convicted of robbery, burglary, or arson and who:

- (a) At the time of the perpetration of said crime or any of them or at the time of his arrest was himself armed with a deadly weapon (unless at the time he had a lawful right to carry same); or
- (b) Used or attempted to use a deadly weapon upon a human being in connection with the perpetration of the crime of which he was convicted; or
- (c) In the perpetration of the crime of which he was convicted willfully inflicted great bodily injury or torture; or
- (d) Has previously been convicted of a felony in this state or of an offense in another place which would be a felony in this state.

C. Jail Term as Condition of Probation

- (1) Sec. 11721, H. & S.C. It must be a condition of probation for the offense of being unlawfully under the influence of or unlawfully using narcotics that the offender be confined in the county jail for at least 90 days.
- (2) Sec. 14601, Veh.C. For second or subsequent conviction within seven years of offense of driving a motor vehicle knowing that license is suspended or revoked, it must be a condition of probation that defendant be confined in jail for at least five days.
- (3) Sec. 23102, Veh.C. For second or subsequent offense within seven years of misdemeanor drunk driving, it must be a condition of probation that defendant be confined in jail for five days to one year (and pay a fine as prescribed).

II. RESTRICTIONS ON PAROLE

NOTE: This discussion is limited to parole from state prisons. It does not deal with parole from the Youth Authority institutions or "parole" or its equivalent from institutions in which the person was confined under civil commitment. It does not deal with parole of misdemeanants from local facilities, which is largely a matter subject to local control (see Secs. 3075-3083, Pen.C.).

The basic rules provide for eligibility as follows:

- (1) Term of years with minimum not exceeding one year—eligibility after minimum served.
- (2) Term of years with minimum exceeding one year—eligibility after one-third of minimum served.
- (3) No prisoner serving two or more consecutive sentences may be paroled before two years (Sec. 3043, Pen.C.).
- (4) Life term—eligibility after seven years.

However, as indicated below, there are many qualifications.

A. Minimum term does not exceed one year.

Eligible for parole after minimum term served (Sec. 3049, Pen.C.). Note qualification in Sec. 3043, Penal Code, re two or more consecutive terms, previously referred to.

B. Minimum term of imprisonment is less than life and exceeds one year.

- (1) Generally, the prisoner is eligible for parole after serving one-third of the minimum (Sec. 3049, Pen.C.). (Note qualification in Sec. 3043, Pen.C., re prisoner serving consecutive terms, previously referred to.) However,
- (2) If the prisoner was serving a sentence on December 31, 1947, he became eligible for parole after one-half of the minimum term, "with benefit of credits," but in no case until he served one calendar year.
- (3) For numerous narcotics offenses, more than a third must be served before the prisoner is eligible for parole. These are:

- (a) Unlawful possession of narcotic other than marijuana. Eligible for parole after minimum served. (Sec. 11500, H. & S.C.) (Minimum is variously 2, 5 or 15 years.)
- (b) Possession for sale of narcotic other than marijuana (Sec. 11500.5, H. & S.C.)
 - (i) Where no prior felony narcotics conviction,* prisoner eligible for parole after $2\frac{1}{2}$ years, which is one-half of minimum.
 - (ii) Where one prior felony narcotics conviction, prisoner eligible for parole after six years, which is three-fifths of minimum.
 - (iii) Where two or more such priors, prisoner eligible for parole after minimum (15 years) is served.
- (c) Sale, other unlawful transfer, transportation, importation, of narcotic other than marijuana (Sec. 11501, H. & S.C.)
 - (i) Where no prior felony narcotics conviction, prisoner eligible for parole after three years, which is three-fifths of minimum.
 - (ii) Where one or more such priors, prisoner eligible for parole after serving minimum (variously 10 or 15 years).
- (d) Person 21 years or over in voluntary manner soliciting, inducing, encouraging, or intimidating minor with intent that minor shall knowingly violate, with respect to narcotics other than marijuana, any of certain narcotics statutes, sale to minor, use of minor, etc. (Sec. 11502, H. & S.C.)
 - (i) Where no prior felony narcotics conviction, prisoner is eligible for parole after five years, which is one-half of minimum.
 - (ii) Where one or more such priors, prisoner eligible for parole after minimum is served (variously 10 or 15 years).
- (e) Unlawful possession, planting, cultivating, harvesting, drying, processing, marijuana (Sec. 11530, H. & S.C.)
 - (i) Prisoner eligible for parole after minimum served (variously one, two, or five years).
- (f) Possession for sale of marijuana (Sec. 11530.5, H & S.C.)
 - (i) No prior felony narcotics convictions. Prisoner eligible for parole after minimum served (two years).
 - (ii) One such prior, prisoner eligible for parole after three years (three-fifths of minimum).
 - (iii) Two or more such priors, prisoner eligible for parole after six years (three-fifths of minimum).

* Under these narcotics laws, prior "felony" convictions are convictions for offenses which could have been punished as felonies though, in the particular instance, they were not so punished (Secs. 11504, 11533, H. & S.C.).

- (g) Selling, transporting, importing, etc., marijuana (Sec. 11531, H. & S.C.).
 - (i) No prior felony narcotics conviction. Prisoner eligible for parole after three years, which is three-fifths of minimum.
 - (ii) One or more such priors, prisoner eligible for parole after minimum served (variously 5 or 10 years).
- (h) Selling marijuana to minor, using minor in marijuana offense, etc. (Sec. 11532, H. & S.C.). (Offender 21 or over.)
 - (i) No prior felony narcotics convictions. Prisoner eligible for parole after five years, which is one-half of minimum.
 - (ii) One or more such priors. Prisoner eligible for parole after serving minimum (variously 10 or 15 years).
- (4) Escape by force or violence from state prison, prison camp, custody of officer while in transit to state prison (Secs. 3044, 4530, Pen.C.). Prisoner eligible for parole after serving two years from date of return to state prison following convictions. Minimum term for offense is one year, but does not commence until time when prisoner would otherwise have been discharged for previous offense.

C. Sentence of Life Imprisonment

- (1) Basic rule: Prisoner eligible for parole after seven years (Sec. 3046, Pen.C.).
- (2) Assault by life-term prisoner where victim does not die within year and a day (death penalty is alternative). Prisoner eligible for parole after nine years (Sec. 4500, Pen.C.).
- (3) Habitual criminals. Depending on whether prisoner has two or three priors, and whether received at a state prison before or after January 1, 1948, and whether under Section 644, Penal Code, as it read before or after 1945 amendment, no parole before 7, 9, 12, 15, or 20 years (Secs. 3047, 3047.5, 3048, 3048.5, 3050, 3051, Pen.C.).
- (4) Certain life terms are "without possibility of parole." They are:
 - (i) Kidnapping for ransom, robbery, or reward, with bodily harm (alternative is death penalty) (Sec. 209, Pen.C.).
 - (ii) Attempted train wrecking (Sec. 218, Pen.C.).
 - (iii) Train wrecking, where no bodily harm (alternative is death penalty) (Sec. 219, Pen.C.).

Very truly yours,

A. C. MORRISON
Legislative Counsel

By TERRY L. BAUM
Deputy Legislative Counsel

APPENDIX B

COUNTY OF ORANGE, PROBATION DEPARTMENT
Santa Ana, August 26, 1964

*Subject: Work Furlough Program Annual
Report July 1963 to June 30, 1964.*

THE HONORABLE BOARD OF SUPERVISORS
*Courthouse
Santa Ana, California*

Gentlemen:

The second annual report of the Work Furlough Administrator is submitted herewith.

While a two-year experience is not of sufficient length to make long-range predictions it appears that our comments in the first annual report regarding the effectiveness of Work Furlough may have some validity—particularly in the areas of tax savings where work furlough prisoners pay part of the cost of their maintenance; the social and economic advantages of keeping the families of these prisoners off the relief rolls of the county; and the continuity of employment which is achieved so that these men, when released from custody, will have gainful employment immediately available.

Many inquiries from other jurisdictions have been answered regarding the operation of work furlough in this county and your administrator has been privileged to speak before two statewide groups—the Municipal Court Judges Association and at the County Government Institute sponsored by the County Supervisors Association of California, discussing this county's experience with work furlough.

From an administrative standpoint, the success of this program is due to the fine relationship that exists between the three agencies involved—the courts, the sheriff's office and the probation department.

Respectfully submitted,

DAVID R. McMILLAN
*County Probation Officer and
Work Furlough Administrator*

To: David R. McMillan
Work Furlough Administrator
From: David DeYoung
Supervising Probation Officer
Date: August 17, 1964
Subject: Work Furlough Program
Second Annual Report
July 1, 1963, to June 30, 1964

This report is a summary of our second year's experience with work furlough. It also includes significant information on the full two years' experience with this program, which officially began operation on July 1, 1962. The legal basis for work furlough is Section 1208 of the Penal Code and Section 12.084 of the codified ordinances of the County of Orange.

During this second year, 208 defendants, all males, were granted work furlough sentences. The municipal courts sentenced 137, compared with 71 by the superior courts. Ninety-seven out of 208 served on work furlough as a condition of informal probation, 95 were on formal probation, 11 were placed for violation of probation and 5 were direct commitments. The commitments ranged from 15 days to one year, with an average of 94 days. The average monthly caseload was 38, with 41 active cases at the close of the year.

Investigations

The assigned officers, one full-time and one on a half-time basis, completed 141 Work Furlough Officer's Reports. Our adult investigation staff completed many other work furlough investigations as part of regular presentence reports.

Offenses

As noted in the attached table entitled "Type of Offense," a wide variety of misdemeanor and felony offenders were tried on work furlough, with the most frequent being driving with a suspended or revoked license (42) and drunk driving (34). Narcotics, escapes, and certain sex offenders continue to be exempt from placement at the branch jail and hence from work furlough.

Employment

It can be observed from the attached table, "Type of Employment," that the jobs of the prisoners cover an extensive range of job classifications—from laborers (the most frequent) to the professional categories.

Removed for Violation

The courts removed 11 inmates for violations—9 for using intoxicants, 1 for going to place of residence rather than work, and 1 for committing a new offense (misdemeanor drunk driving). This represented a failure rate of only 5 percent.

Wages and Disbursements

The 208 prisoners worked a combined 9,993 workdays at their places of employment outside of the jail. This was an increase of 140 percent

over the first year's total of 4,167. Their employers transmitted \$172,-565.85 in net wages to the work furlough administrator. The lowest weekly salary was \$25.71 (auto washer) and the highest was \$1,354.72 per month (carpet layer).

The families of the prisoners received \$115,241.25—the largest wage disbursement. The prisoners reimbursed the county in the sum of \$29,913 to pay in part for their own confinement costs. Other wages went to pay the prisoners' preexisting debts (union dues, income taxes, etc.), to pay for the personal expenses of the prisoners (gasoline, tools, work clothes), to pay court fines, to restitution victims, and to inmates upon release from custody.

Operating Costs vs. Financial Savings

In analyzing costs, we are advised by the sheriff's office that the work furlough program has not made it necessary to increase jail staff. There have been no additional jail costs, since the prisoners would have been in confinement anyway. All the costs may then be charged to assigned probation staff. It has been determined that it cost \$13,000 a year to sustain a deputy probation officer. This figure, which includes salary, clerical support, maintenance and operation, and capital outlay, would equal \$19,500 for the 1½ officers.

The financial savings would include \$29,913 for county charges plus \$1,288 for court fines, or a direct saving of \$31,201. It is estimated another \$37,604 was conserved in welfare moneys that would have been paid to 65 families had the prisoners been in straight confinement. The 65 families actually received \$49,746.02 from the prisoners' earnings. Financial savings, including county charges, fines, and what welfare would have expended, equaled \$68,805 as compared with \$19,500 in operating costs. The resultant savings of \$49,305 was a substantial benefit to the taxpayer.

Rehabilitative Advantages

Work furlough was a meaningful and productive experience for almost all of the prisoners—the exception being the 11 violators and a few who were laid off their jobs. Most were able to retain their jobs, their job skills, their work habits, and complete their sentences with gainful employment.

Conclusions

Many of the conclusions stated in our first annual report can be stated with equal or more emphasis today in the light of this additional year's experience.

First of all, work furlough continues to gain momentum as evidenced by the fact that 208 defendants were granted work furlough as compared with 117 the first year—an increase of 78 percent. The number of prisoner workdays was 140 percent higher than the previous year, with a corresponding increase in prisoner earnings. The two-year cumulative totals are set forth in the following table. For the second straight year the taxpayer has substantially benefited because of the work furlough program, with financial savings exceeding operational costs.

There is ample evidence here that partial confinement can be safely substituted for total confinement for a large number of selected criminal offenders and that both the offender and society benefit by this method of sentencing.

APPENDIX C

September 15, 1964

HONORABLE GORDON WINTON

Chairman

Assembly Committee on Criminal Procedures

State Capitol

Sacramento, California

Attention: Dr. A. LaMont Smith, Consultant

Dear Chairman Winton:

Since Chairman John W. Brewer's appearance before the Assembly Committee on Criminal Procedures, the Adult Authority has in fact revised its Resolution 184. Beginning September 1, 1964, all persons received by the Director of Corrections will come under the newly revised resolution. For your information, a copy of the resolution is attached. Also attached is a copy of Administrative Bulletin 64/92, dated August 25, 1964, which places into effect the procedures for the revised resolution.*

If we can be of additional assistance at any time, please do not hesitate to contact this office.

Yours very truly

FRED R. DICKSON

Chairman, Adult Authority

By JOSEPH A. SPANGLER

Administrative Officer

* Committee files, office of chairman.

RESOLUTION NO. 184

Revised and Reissued: September 1, 1964

RESOLUTION OF THE ADULT AUTHORITY

SUBJECT: *Calendar Appearances of Inmates*

WHEREAS, It is the policy of the Adult Authority to maintain a uniform procedure for initial calendar appearances of inmates, in conformity with statutory provisions;

Now, therefore, be it resolved, That it shall be the policy of the Adult Authority to order the initial calendar appearances of men in the state prisons according to the following procedure:

- | | |
|---|--|
| (1) Men with commitments of life without possibility of parole. | Review by representative panel every three years. Initial board hearing 10 calendar years from date of commitment. |
| (2) Men serving sentences as habitual criminals and men serving life sentences under Section 245b P.C. W/PFC, 4500 P.C., also 11502, 11500, 11501, 11530 and 11532 H&S Code (where minimum is more than 5 years). | Review by representative panel every three years. Initial parole consideration hearing one year prior to minimum eligibility for parole release. |
| (3) Men serving sentences for murder first degree, or mandatory life sentences with possibility of parole (except persons adjudged habitual criminals) and who may or may not also be serving indeterminate sentences. | Review by representative panel every three years. Initial parole consideration hearing seven calendar years from date of commitment. |
| (4) Men serving sentences for murder second degree. | Eighteen months from date of commitment. |
| (5) Men whose minimum term is 10 years or more. | Three calendar years from date of commitment. |
| (6) (a) Men serving consecutive sentences or (b) men whose minimum term is five years or more. | Eighteen months from date of commitment. |
| (7) Men whose minimum terms are less than five years. | One month prior to minimum eligibility for parole release. |
| (8) All men receiving additional concurrent commitments after having commenced their term of imprisonment, for crimes committed prior to their reception. | To appropriate calendar in conformity with the type of commitment. |
| (9) Imprisoned men receiving additional consecutive commitments for crimes committed prior to original commitment shall be placed on the appropriate calendar in conformity with the aggregate sentence resulting from the additional commitment. | |

(10) Imprisoned men receiving additional concurrent or consecutive commitments for crimes committed after reception at prison.

On the appropriate calendar in conformity with the type of commitment, such as murder first degree, habitual status, escape, etc.

(11) All cases not covered in items 1 to 10, inclusive.

One month prior to minimum eligibility for parole release.

Be it further resolved, That in cases where one of several crime partners is to appear on a calendar, and one or more of his crime partners will appear on a calendar within the next two months at the same institution, those who are to appear later shall be advanced on the earlier calendar with their crime partner;

Be it further resolved, That notwithstanding the provisions of this resolution, an earlier initial calendar appearance may be ordered for any inmate whenever the Adult Authority so decides;

Be it further resolved, That if any cases are worthy of consideration earlier than specified herein, a recommendation for such earlier appearance may be made to the Adult Authority by the institutional staff after consultation with their associate superintendent, taking into consideration the inmate's present emotional adjustment, outlook and attitude, as well as all other related factors;

Be it further resolved, That this resolution shall be effective immediately and shall apply to all prisoners received after September 1, 1964, in any state prison under the jurisdiction of the Director of Corrections and the Adult Authority;

Be it further resolved, That this resolution shall rescind Resolution No. 184, revised and reissued August 27, 1959, provided, however, that any calendar appearance date provided by said resolution shall remain in full force and effect and shall be considered as having been granted pursuant to this resolution.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE
ON CRIMINAL PROCEDURE

Sacramento, January 1, 1965

HON. JESSE M. UNRUH, *Speaker of the Assembly*,
and Members of the Assembly,
Assembly Chamber, Sacramento, California

Gentlemen :

In accordance with the rules of the Assembly, the Interim Committee on Criminal Procedure herewith submits a report on a number of subjects assigned to it for interim study. This volume and its eight reports constitutes, along with three reports submitted in separated volumes, the final report of the committee for the 1963-65 interim period.

One of the reports in this volume (The Use of Bail and Citations in the Administration of Justice in California) is informational in nature. The committee believes it will be of interest to the Legislature and of use to many individuals and groups who are vitally concerned with these two tools for the administration of justice in our state. The other seven reports in this volume contain a number of recommendations for legislative action in the 1965 session of the California Legislature. We commend them to you for your consideration in the coming months.

Respectfully submitted,

GORDON H. WINTON, JR., *Chairman*

ARREST RECORDS

Report and Recommendations
on
ERASURE OF ARREST RECORDS
by the

ASSEMBLY INTERIM COMMITTEE ON CRIMINAL PROCEDURE

I—A. COMMITTEE RECOMMENDED LEGISLATION A.B. 976

Purpose: Authorize the Attorney General to restrict the release of data by the Bureau of Criminal Identification and Investigation to bona fide law enforcement needs. Regular salaried peace officers of a city or county sheriff's department will continue to receive, upon their request, such information but any disclosure of it for other than bona fide law enforcement data will be a misdemeanor.

Justification: The consensus of witnesses indicated that under the present procedures of accumulation of data concerning arrests and their disposition, complete eradication of all such records would be impossible. The basic problem appeared to be related to the distribution of such data and that more control should be exercised by the responsible agencies to ensure its legitimate use in the work of law enforcement.

STATEMENT OF WITNESSES

MR. O'CONNELL:¹ . . . it is presently a misdemeanor for information about the arrest record of any individual to be furnished to other than law enforcement people by C.I.I. I think that's a good law, and we shouldn't disturb it. I think, however, that it ought to be extended to the local law enforcement agencies who are presently under no such disability. There is no stigma or no crime involved when the local police agency tells John Doe, the baker down the street, or just anybody, all he wants to know that may be in the knowledge of that local police agency. I don't suggest either that local agencies are trying to harass anybody. I think they're trying to be helpful to employers who want to know something about some guy that is looking for a job, so they call the sergeant who happens to be a friend, and he tells him. I don't think this information ought to be published, particularly where no conviction ever resulted from the arrest. I think that the approach in a couple of these bills of sealing records may be a much more practical approach than requiring the erasure of a record or the expunging of the record. The sealing of the record, the holding of the information from people who are not authorized law enforcement people, I think, would go a long way to accomplish the same result, and I think that anyone in good conscience would have to admit that the only fair thing to do in a case of the arrested person who

¹ Member, California Industrial Accident Commission and former chairman, Assembly Committee on Criminal Procedure.

is innocent of the offense for which he was arrested is to restore him to his former status as nearly as we possibly can.*

ASSEMBLYMAN DONOVAN: You heard Mr. O'Connell then in his dissertation before the committee relative to the disabilities that are imposed on some persons as a result of some of these arrest records. Do you feel that we could possibly achieve the objective of protecting these individuals without disrupting the recordkeeping situation, such as by possibly a statute which prevented the dispersal of such information to persons outside of law enforcement agencies?

MR. COMBER:² I believe that if there were some statutory definition of the confidentiality—the confidential nature of police records as such, something spelled out rather clearly, defining the proper use of such information and disposition of it, it could help law enforcement tremendously.

VICE CHAIRMAN BEILENSEN: In other words, then, you feel we would be more on the right track if we try to remove the disabilities without destroying the records?

MR. COMBER: That is correct. That would be my feeling, sir. I think for the best interests of society as a whole, this would work to the advantage of all.

MR. COLEMAN BLEASE:³ I don't think we have to face any problem with respect to the destruction of anything so far as we can devise a system which indicates in some way that the information contained in the records is not to be used for certain purposes, and I would agree with Mr. Comber that really the task before the committee is to deal in some detail with the precise question of circumstances in which it is desirable to disclose at all. More specifically, we would like you to include the eliminating of the question to be asked by public agencies, and, secondarily, restrict the examination of arrest records by nongovernmental agencies. Those two recommendations, I think, could be pursued at this point without concerning one with the record-keeping problem at all.

ASSEMBLYMAN DONOVAN: I just want to say that it appears from your testimony that you agree with what I was discussing with the previous witness that what we are seeking is the protection of the individual without disruption of the existing service.

MR. BLEASE: Yes, I think that is the central problem. Really the question comes down to under what circumstances do we think disclosure is desirable.

MR. DON DAVISON:⁴ I would like to state that if there is abuse or misuse of criminal records, let's take steps to correct it. However, let's not throw out one of the finest tools of the peace officers and the investigators.

ASSEMBLYMAN DONOVAN: Mr. Davison, how do you feel about the idea that we discussed previously that perhaps we could formulate a statute which would protect the innocent individual and more or less make these records confidential so they couldn't be disclosed to outside agencies? Do you feel that this would be a step in the right direction?

* Hearing transcript, office of the chairman.

² Director of Criminal Information, San Francisco Police Department.

³ Legislative Representative, American Civil Liberties Union of Southern California.

⁴ Representative, Fresno County Police Officers Association.

MR. DAVISON: I certainly do.

MR. DERALD GRANDBERG:⁵ The Legislature might take steps to limit the accessibility of information concerning arrests that is in the possession of law enforcement agencies, and this, of course, would take a form similar to that which is now existent with regard to the Bureau of Criminal Identification and Investigation. At this time, there is no real limitation on the local law enforcement agencies—the sheriff's office, the police departments—with regard to their divulging such information. Certainly under the existing law, it is not viewed as a public record and a person cannot make demands for it. There is nothing to eliminate the divulging of such information. This might afford something that is as effective as sealing.

ASSEMBLY BILL 976

Legislative Counsel's Digest

Criminal records.

Amends Sec. 11105, Pen.C.

Requires Attorney General to furnish upon request criminal records to regular salaried peace officers of city police departments and sheriff's offices in this state, and permits him to furnish such information to other classes of peace officers and other persons listed in section if he is satisfied that bona fide law enforcement duties would be served, whereas section now makes no distinction among such persons, each of whom can receive such information upon written application to Attorney General.

Makes it a misdemeanor for one who receives such information to use or disclose it for other than bona fide law enforcement duties.

An act to amend Section 11105 of the Penal Code, relating to criminal records.

The people of the State of California do enact as follows:

SECTION 1. Section 11105 of the Penal Code is amended to read:

11105. *The Upon request of a regular salaried peace officer of a city police department or county sheriff's office in this state, the Attorney General shall furnish; upon application, all information pertaining to the identification of any person, a plate, photograph, outline picture, description, measurement, or any data of which person there is a record in the office of the bureau.*

The information shall be furnished to all peace officers of the State, If it appears to his satisfaction that a bona fide law enforcement need would be served, the Attorney General may furnish such information to United States officers or officers of other states, territories, or possessions of the United States, or peace officers of other countries duly authorized to receive the same, and to any public defender or attorney representing such person in proceedings upon a petition for certificate of rehabilitation and pardon pursuant to Section 4852.08, upon application in writing accompanied by a certificate signed by the officer, public defender, or attorney, stating that the information applied for is necessary in the interest of the due administration of the laws, and not for the purpose of assisting a private citizen in carrying on his

⁵ Deputy Attorney General of California.

personal interests or in maliciously or uselessly harassing, degrading or humiliating any person.

Any person who receives such information and uses or discloses it for other than bona fide law enforcement duties is guilty of a misdemeanor.

I—B. COMMITTEE RECOMMENDED LEGISLATION A.B. 977

Purpose: Clearly distinguish the disposition following the filing of fingerprints by (1) reporting the known action filed in accordance with law or by (2) the notation "identification only" if the disposition has not been filed by the submitting law enforcement agency.

Justification: A master copy of fingerprints received on any person is filed by the C.I.I. in a central index. Additional prints may be filed in a "dossier" or individual folder. In the central files the indexing is by the classification coding of the fingerprints and there is no separation on the basis of whether the source of the print was a law enforcement or civilian agency. Many fingerprints are received in connection with applications for various licenses or credentials. The committee was informed that if a fingerprint card was on file with a notation of an outstanding warrant and fingerprints for this person were received for civil or noncriminal clearance, the law enforcement agency with the warrant would be notified.

Since enactment of the law ⁶ requiring dispositions in the case of all persons whose fingerprints are filed with the C.I.I. the agency is currently still not receiving such reports on 15 percent of the filings. If such agencies do not file the required information then it would appear reasonable to simply report to any inquiry that the person's prints had been filed for "identification only" by the submitting agency. If additional information is required it can be secured directly from the agency filing the original prints.

STATEMENT OF WITNESSES

A. L. SMITH: ⁷ Are fingerprints taken in connection with employment by the state filed separately from those submitted by local authorities on criminal offenders? (p. 103) *

A. L. COFFEY: ⁸ At this time they are not, sir.

We have a single fingerprint file down there, with the exception of the fact that during the early war years there were two files set up. We did have, at that time and for some period of time at least, a civilian file and a criminal file.

MR. SMITH: What procedures are followed if an applicant for state employment is wanted by authorities on a criminal charge?

MR. COFFEY: The wanting agency is notified.

MR. SMITH: Then, in your opinion, would it be possible to treat fingerprints of arrested persons in the same manner as civilian identification prints until such time as the notice of conviction was received?

MR. COFFEY: I am not sure that I know what you mean.

* Hearing transcript, office of chairman.

⁶ See Appendix A for text of statutes.

⁷ Special Consultant, Committee on Criminal Procedure.

⁸ Chief, California Bureau of Criminal Identification and Investigation.

MR. SMITH: Well, if you treat them as "identification prints only," or "detention only," until . . . the reports that you get of dispositions are actually received . . .

MR. COFFEY: It would be extremely costly. What you would necessarily do would be to process the prints first, as you indicate, as a civilian . . .

MR. SMITH: I mean do they go in the same file? They are handled as you would applicants for state employment. They go in the same files, don't they?

MR. COFFEY: That's right.

MR. SMITH: And if a warrant is outstanding, the agency is notified?

MR. COFFEY: If we come across . . . (a warrant—yes).

MR. SMITH: Well, then, if an "arrest" or a "detention only" print is received, wouldn't that have the same treatment? Wouldn't the agency still be notified of any warrants outstanding and anything of this sort?

MR. COFFEY: We notify in the event of any fingerprints . . .

MR. SMITH: Well, then, there would be no change in your existing procedure? You would just treat them as a noncriminal print? They would be treated for "identification only" purposes?

MR. COFFEY: Except that it costs us as much or more to get a civilian print into the files as it does a criminal print because of the higher number of nonmakes on a name check.

ASSEMBLYMAN DONOVAN: These are arrested prints that you are receiving now, and you are filing them in the same file with the noncriminals? I see.

MR. COFFEY: That's right, but the thing you are not taking into account is the fact that as soon as we did get the disposition and then got the additional information, it was necessary to go out and strip the files, bring them back and do the whole job over again to get the criminal information on the print.

MR. SMITH: In other words, it would be a duplication of the record.

MR. COFFEY: That's right. We would have to go back and pull them out.

MR. SMITH: How do you handle the print procedure in applications for gun licenses, or carrying concealed weapons? You get two prints on gun license applications, don't you?

MR. COFFEY: Normally, yes.

MR. SMITH: One goes to you and one to the FBI?

MR. COFFEY: Yes.

MR. SMITH: Do you treat those as non-criminal prints, as you would state employment I mean?

MR. COFFEY: Well, they are treated as civilian prints, but we have two categories, criminal and noncriminal.

MR. SMITH: If a person applied for a gun application and was wanted elsewhere, would the local agency be notified of the same?

MR. COFFEY: If we found a record and identified it as a person who is wanted for homicide and he came in for an application for a gun license, we would notify the wanting agency.

ASSEMBLY BILL 977
Legislative Counsel's Digest

Arrest records.

Amends Sec. 11105, Pen.C.

Provides that in any case in which the Bureau of Criminal Identification and Investigation has record of an arrest made in this State on or after September 15, 1961, but, with respect to such arrest, no report of release without filing of a complaint or accusation has been filed pursuant to Sec. 11115, Pen.C., and no report of disposition has been filed pursuant to Sec. 11116, Pen.C., any information furnished pursuant to Sec. 11105, Pen.C., on or after 90 days following the arrest, may not refer to such arrest, although it may indicate, as of the date of the arrest, an inquiry "for identification only" by the agency that made the arrest.

An act to amend Section 11105 of the Penal Code, relating to arrest records.

The people of the State of California do enact as follows:

SECTION 1. Section 11105 of the Penal Code is amended to read:

11105. The Attorney General shall furnish, upon application, all information pertaining to the identification of any person, a plate, photographer, outline picture, description, measurement, or any data of which person there is a record in the office of the bureau.

The information shall be furnished to all peace officers of the state, to United States officers or officers of other states, territories, or possessions of the United States, or peace officers of other countries duly authorized to receive the same, and to any public defender or attorney representing such person in proceedings upon a petition for certificate of rehabilitation and pardon pursuant to Section 4852.08, upon application in writing accompanied by a certificate signed by the officer, public defender, or attorney, stating that the information applied for is necessary in the interest of the due administration of the laws, and not for the purpose of assisting a private citizen in carrying on his personal interests or in maliciously or uselessly harassing, degrading or humiliating any person.

In any case in which the bureau has record of an arrest made in this state on or after September 15, 1961, but, with respect to such arrest, no report of release without filing of a complaint or accusation has been filed pursuant to Section 11115 and no report of disposition has been filed pursuant to Section 11116, any information furnished pursuant to this section on or after 90 days following the arrest, may not refer to such arrest, although it may indicate, as of the date of the arrest, an inquiry "for identification only" by the agency that made the arrest.

II. WITNESSES PROPOSAL FOR LEGISLATION, ASSEMBLY BILL 978

Purpose: Prohibit an employer, public or private, from asking a prospective employee whether he has ever been arrested, detained or held by the police or other law enforcement agency, but which specifies that the employer is not prohibited from asking the prospective employee about convictions he has suffered.

MR. J. O'CONNELL:⁹ I might say that I first became interested in the general problem when in 1956 I was the Democratic county chairman in San Francisco and I received a call one day from the Postmaster of San Francisco who asked me if I would be interested in sending to him to work during the Christmas rush some deserving young man. He said, however, "please don't send me anyone who is under the age of 18 or anybody who has ever been arrested." Well, I thought the Postmaster was making a small error, and I said, "You mean who has ever been *convicted*, don't you," and he said, "No, I mean what I said. Don't send me anybody who has ever been arrested . . ." I said, "Well, why is that," and he said, "Well, this is the Christmas rush, and we hire lots of extra people, and we don't have time to check everybody and so we just don't want to be bothered with anybody who has ever had any record of an arrest." (P. 4.)* . . . Essentially, they (legislative measures) all try to accomplish the same thing, and that is to restore the innocent person who is unfortunate enough to get arrested and should not have been arrested in the first place or who later, it develops, was innocent of the offense, to restore him to his former status. I think that the chief handicap that this person has is that for the rest of his life, when he seeks employment, he will have, in many cases, in perhaps most cases, to admit to the prospective employer that yes, indeed, he was at one time arrested, and he will, perhaps, try to explain the circumstances. Perhaps the employer will be satisfied with the explanation, but many times, I think, you will find that the employer doesn't want to be bothered, just as the Postmaster of San Francisco didn't want to be bothered. Many employers, particularly in the situation where the labor market was very loose, where there are two or three people around for every job that is available—and I think it's just human nature, I'm not criticizing the employer at all—if he has two or three men for a job and their qualifications are otherwise equal, I think it is human nature on his part to hire the guy whose record is perfectly clean. (P. 5.)*

Incomplete Arrest Data

The judge who looks at this "rap" sheet may see half a dozen different arrests for various offenses. As one of the judges who is now on the district court of appeals told me one time, a judge is human also and when he sees a "rap" sheet, it's human nature for him to think that there is something wrong with this man. Some of the arrests may have taken place in Kansas City or Portland or somewhere else, and it's difficult for the judge or for the probation department really to make an adequate check to find out whether these were arrests of an innocent man, as the guy is no doubt claiming, or whether this guy is kind of a professional lawbreaker. And so the man with the prior record, even if it's only one arrest, is at a disadvantage when it comes to the determination of whether he is a good candidate for probation. (P. 6, 7.)*

I think in the nature of things, however, that it's unlikely that we've had anything like full compliance with the statute . . . the point is

* Hearing transcript, office of the chairman.

⁹ Member, California Industrial Accident Commission, and former chairman, Assembly Committee on Criminal Procedure.

that the onus is on the local agency to comply, to provide C.I.I. with the disposition whenever they've sent the record of arrest. I think that, as a practical matter, not everybody who is *supposed* to do this *does* it. I'm not suggesting that there is any malice or anything like that. I do suggest, however, that it's an extra responsibility that I'm sure a good many people just don't want to be bothered with or they overlook it, and I understand that you will hear later today from C.I.I. so they can tell you what's happened under this new law. (See Appendix A, Penal Code Section 11115.) (P. 7.*)

Employment Application Forms

Another thing that we tried to do . . . was to outlaw the use of the question by an employer, "Have you ever been arrested," and limit the employer to the question, "Have you ever been *convicted* of any crime other than a traffic offense?" There was opposition to this, and I can understand why there is opposition. In the first place, the employer jealously guards his prerogatives. He thinks that he has a right to know as much as he can possibly know about the man he is thinking about hiring, and he thinks he has a right to the security that comes with a thorough investigation into the man's background, and any law which says that he can't ask this certain question tends to limit that prerogative. It takes something away from him. However, I think in view of the larger social purpose that's involved here, we may have to come to this. I wasn't even able to persuade the Personnel Board of the State of California that it should take the lead in this kind of approach, but it's a suggestion which I don't think should be scrapped or overlooked. (P. 8.)*

R. PRESTON:¹⁰ One of the purposes behind sealing of records has been already identified, and many persons arrested for crimes find that their arrest records have been damaging to them, more damaging than is warranted. The illustrations that have been used include examples wherein employers have refused to hire persons with criminal records of arrest or conviction. Since almost every employment application form contains the question "Have you ever been arrested or convicted?" the employer actually gains knowledge of the individual's previous arrest or conviction and refuses to hire him. Another illustration that has already been alluded to is that this has done harm to people who are in debt or who are signing up in the armed forces, and it is probably true, as the first speaker pointed out, that there are employers today who, without further questions, upon receiving a response that a person has been arrested, simply refuse to employ the applicant. It is likewise true that there are individuals with criminal backgrounds who are not hired in one place or another because of a wide variety of other reasons, that they are quick and eager to use this rationalization of their supposed criminal histories as a reason for their **not being employed**. This rationale I have personally heard employed many times or extended, rather, into the justification for continued or increased criminal conduct.

In Oakland we conducted a brief pilot study among private industry and organizations, and we found that none of the organizations have

* Hearing transcript, office of the chairman.
¹⁰ Deputy Chief of Police, City of Oakland.

a set policy concerning the hiring of persons with criminal records. I can't name for you the specific organizations, but these were all large employers. Each case is, as a matter of fact, decided upon its own individual merits. The decision to hire is based on a number of factors pertinent to the exact nature of the position involved, and it would be an important consideration as to whether the police record should be considered. Candidly all employers stated that in most jobs, their firms counted the criminal history as playing an insignificant role or a secondary role or relegated further to the rear than that. The major concern is the previous work history of the individual, how he performed in other jobs, other things that relate to personal integrity, truthfulness, et cetera.

I submit to the committee also that in the statutes that exist, there is no complete expungement having been demonstrated, I believe, as being totally efficient. So this kind of legislation creates a situation where the fact of arrest is ultimately revealed, and the person conducting the background investigation is then in a position of having to depend on the type of information that they gather from the neighbor who, in many instances, is either misinformed, prejudiced, or any number of things and has discriminatory feelings toward this applicant for employment. Sealing records places this background investigator, speaking or acting in behalf of the employer, in a position of having to depend on rumors and gossip in order to make this decision.

ASSEMBLY BILL 978

Legislative Counsel's Digest

Employment practices.

Adds Ch. 9 (commencing with Sec. 1150), Pt. 3, Div. 3, Lab.C.

Provides that every person who, in any employment questionnaire that an applicant for employment is required to execute, or in any other written or oral inquiry directed to such applicant, asks whether such applicant has ever been arrested or has been detained or held by the police or other law enforcement agency, is guilty of a misdemeanor.

Specifies that section does not prohibit inquiries relating to convictions. Specifies that section applies to both public and private employers.

An act to add Chapter 9 (commencing with Section 1150) to Part 3 of Division 3 of the Labor Code, relating to hiring of employees.

The people of the State of California do enact as follows:

SECTION 1. Chapter 9 (commencing with Section 1150) is added to Part 3, Division 3 of the Labor Code, to read:

CHAPTER 9. INQUIRIES RELATING TO ARREST

1150. Every person who, in any employment questionnaire that an applicant for employment is required to execute, or in any other written or oral inquiry directed to such applicant, asks whether such applicant has ever been arrested or has been detained or held by the police or other law enforcement agency, is guilty of a misdemeanor.

This section does not prohibit a person from inquiring whether an applicant for employment has ever pleaded guilty to a crime or been otherwise convicted of a crime, or, if the applicant answers in the affirmative, from inquiring further about the particulars of such convictions.

This section applies to both public and private employers.

* * * * *

Mr. Henson does not approve of this legislation.

III. ERASURE OF ARREST RECORDS

A. Collection of Data by Bureau of Criminal Identification and Investigation

1. Classification of Information

MR. ROMNEY P. NARLOCH:¹¹ Basically, we receive two types of information from various agencies in the state who are involved in processing arrests and felony filings on defendants. At the basic level and the broadest level, the information that we receive is that information received from the law enforcement agencies. This is received in two categories: (1) a report on adult felony arrests, which is the top form that I had passed out, and (2) a report on misdemeanor arrests. A third category is juvenile arrests, juveniles being youths under 18 years of age. All of this information is presented to us, directed to us, in summarized form. Such details as name, identification number, race, sex, and other factors of individuals who might have been involved in these arrests are not sent to us. They are represented by numbers and summarized totals. Along with a report of the arrest, we receive also the police disposition of this arrest, and only four categories of this. These are whether the individual arrested was released, whether he was turned over to another jurisdiction, whether a misdemeanor complaint was filed, or whether a felony complaint was filed. We receive these reports each month, and quarterly we summarize them on IBM machines, and at the end of the year, we compile them and distribute them in our publication. That's the law enforcement level.

In addition to the summarized statistical law enforcement report, we also receive, in a specialized study undertaken under the direction and sponsorship of the Legislature, a study of narcotic arrests in California. This information is received in a different form than that describing felony arrests and juvenile arrests. In this process, the information is received on several cards, and the individual or the subject of the arrest is identified by number, by name, by age, by sex, and various other descriptive factors. These are represented in the cards that represent narcotic arrests that have been passed out to you.

We also receive through C.I.I. a special arrest form covering narcotics. It's a detailed technical report descriptive only of those individuals who are subject to narcotic arrests. In addition, we also may receive from C.I.I. arrest reports in which a narcotic offense may have been supplementary to the central arrest and involves some other type of offense. Whenever narcotics are also involved, we will get that report. We will process it, obtain the information from it that we need, and then it will be submitted back to C.I.I. for their files. We do not retain these reports.

¹¹ California Bureau of Criminal Statistics.

The third class of information we receive is that information covering felony filings and adult probation in the superior court and a limited category of lower court probation cases.

In the area of prosecution, we receive identification by name, number, type of offense, charge filed, and various other legal information describing the legal processes in regard to each individual who is filed on at this level in California. We also receive a report covering the outcome of this filing—whether it was dismissed, whether the person appeared in superior court, the type of sentence, and the disposition. In addition to this, we receive information on whether the individual was granted probation. If the individual was granted probation, we receive further identifying information on this. We retain this information in our files until probation is terminated, and, two years after termination, we destroy the file. None of this information is reported or published in any other form but the summarized statistical form.

And the last category of information we receive is that information covering juvenile probation, and it's the same type of information that we receive covering adult probation. We receive a name, we receive identification, we receive the date that the wardship occurred, the date that the referral occurred, the disposition, if any, and also the outcome of probation. When the case is terminated and the ward is discharged from probation, the information that we have on him is destroyed immediately. That covers the range of information which we get and publish.

(Pp. 11-13.*)

2. Workloads

MR. A. L. COFFEY:¹² Mr. Chairman, I'm Al Coffey, Chief of the Bureau of Criminal Identification and Investigation. Because of the manner in which the agenda has been arranged here today, it has been suggested that initially I present to the committee only the factual information and the C.I.I. Bureau procedures which might be of interest to the committee at this time.

I received a copy of the published agenda on the erasure of records, and in response to that agenda, as nearly as possible, I have information which I think will provide the information which the committee desires.

Under filing categories for fingerprints and reports received, we can consider criminal files, and I suppose that the volume would be the first thing that the committee would be interested in hearing. For our own activity report, the period of January 1 through December 31, 1963, the bureau received from contributing agencies throughout the state a total of 756,905 criminal fingerprints. That's a combination of felony and misdemeanor prints. Noncriminal prints received were a total of 273,813, and of these noncriminal prints, the great majority of them, as you gentlemen well know, are derived from certificated and noncertificated personnel, all of the rest of the people who are licensed by the state where fingerprinting is a necessary prerequisite to issuance of a license. This is responsive to legislation which

* Hearing transcript, office of chairman.

¹² Chief, California Bureau of Criminal Identification and Investigation.

has been passed and enacted into the law at the present time. Additionally we receive, responsive to recent legislation, the fingerprints of 9,177 unidentified dead persons submitted to us by local agencies, coroners, and so forth, for a grand total throughout the state of 1,039,895 total fingerprints received.

The committee might be interested in knowing that of this 1,000,000 figure, a total of 727,920 of those people were already in the file. The breakdown on the criminal fingerprints is of the 756,000 we received, we identified 633,000 of those people as having prior records in our files for a percentage total of 83.7 percent. On the noncriminal fingerprints, we received 233,000 and in round figures, we identified 89,000 for a percentage of 32.7 percent. On the unknown dead persons, we received 9,000. We identified 3,900, almost 4,000 for a percentage figure of 42.9 percent. So, as I say, we received over 1,000,000. We identified 727,000, with an identification factor of 69.9 percent of people already in the file. (Pp. 13, 14.*)

MR. COFFEY: We have no single modus operandi (MO) file in the Bureau of C.I.I. down there. Actually, the working of the special services section which handles MO is in some fashion comparable to the makeup of the municipal agency or a county department where they have burglary details, robbery details, sex details, homicide, fraud, and the rest of them. We have the same thing in the Bureau of C.I.I. and each of the sub-units there handle their specialized type of offense and maintain their own MO files for that particular offense for offenders within the State of California who specialize in that type of crime.

Let me give you a rundown on this file just in the Special Services Section. . . . First of all, recognize, gentlemen, that because of the nature of the work we do, we must maintain our records in many cases for as long as the life of the individual who has committed the offense or, in the case of an unknown murderer, for instance, we keep them much longer. In other types of offenses, we maintain our files for 30 years, 20 years, depending on what we anticipate that we might be called upon to provide. I have a copy here of all of the files, different types of files, sizes of files and so on. I say, it's purely statistical in nature. I can provide it to the committee subsequently without going over three pages of our various types of files. The point that I make is that there is no single MO file as such, but every file within the bureau contributes to a modus operandi search and, if possible, a tentative identification of persons who might have been responsible for a given offense. (P. 15.*)

MR. COFFEY: . . . we have a total fingerprint file of about six and a half million individuals, because we leave only one master print in the fingerprint file, and the rest of the fingerprint cards are placed in the individual folders for lack of a better term, the dossier on the individual whose record we have. So we may have one fingerprint card in the file and, in extreme cases, ten or twelve fingerprint cards in this folder. We have, as I indicated, about six and a half million fingerprints in the file and about two and a half million folders on individuals who have more than a single arrest, in other words, who have a criminal history. (P. 19.*)

* Hearing transcript, office of chairman.

3. *State cost for filing fingerprint records*

MR. COFFEY: We receive approximately 756,000 criminal fingerprints per year, or we did in 1963. Based on time and motion studies confirmed by the breakdown of the bureau's overall budget and the division of budgetary funds, it costs us in the neighborhood of approximately two dollars per fingerprint to process it into the files. By the time we get the fingerprint classified, researched in the fingerprint file, the necessary additions to the records made, all the clerical processing which is entailed here, our cost will average out at not less than \$2 per print.

So far as reversing these things out, reversing the process and expunging the print or destroying it, it is a more costly process because we are reversing a procedure which is standard, and it's the same problem setting up a production line in an automobile factory and reversing it and taking the car apart. We'd have a somewhat comparable situation. As nearly as we've been able to establish a cost figure on the reversal of the process and the expungement or the destruction of the records involved, we hit a minimum figure of \$2.50 per print per individual to expunge a record, to pull the index cards, to pull the master record, and delete the entry . . . (P. 16.*)

B. *Expungement of Arrest Data*

1. *Problems of Definition*

R. PRESTON: . . . the existing sections that relate to sealing and expunging, Welfare and Institutions Code Section 781,¹³ for example, are indexed in one way or another, and in some code books it is "expungement of records." In the language of the section itself, however, they never use the term "expungement." The only words that are used are "seal," "sealing of the records," and similar terms. *Penal Code*, Section 1203.45,¹³ the other existing section, makes no remark about expungement at all and only uses the word "sealing."

The conclusion to be drawn from the existing statutes is that arrest records should not be expunged or erased in the sense of being physically erased or obliterated or destroyed, but rather that they should be sealed and that this accomplishes "expungement of the record."

Unfortunately, there is no agreement or possible total understanding as to what the sealing of the record entails—I mean the enormity of it and the magnitude. Commonly, the practice of pulling the various documents from existing files, placing them into an envelope, sealing the envelope and refiling it, either in the same file, or perhaps in another file, supposedly accomplishes the sealing of a record. (Pp. 22, 23 *)

2. *Bureau of Criminal Identification and Investigation Procedural Problems*

MR. COFFEY: When we reverse this process and get a court order which orders us to expunge a record, we have a name only, and if we get a name like David L. Brown or John L. Thompson, or Jose Fernandez, we have an index of about 9,000,000 names which we must search through, and in this index we probably would have anything

* Hearing transcript, office of the chairman.

¹³ See Appendix B for text of statutes.

from 15 to 30 to 50 of the common names, and from these 50 names or 30 names or 15 names, we would have to establish which one is the man we are talking about or which one is the person to whom this court order applies, and on the basis of the present law, the sealing orders that we have had, we have sometimes entered into long and extensive correspondence in an effort to positively identify the person who is named so that we are not in danger of sealing the wrong record and letting a record stand which should be sealed. We have even, on occasion, encountered this kind of a situation where a court order will be issued requiring the sealing of the record—in the particular case that I have in mind the Los Angeles Police Department received the sealing order before we did. When we got the sealing order, we contacted them for a verification of identification, and they tell us that they can't mention it to us, they can't tell us anything about it because their record has been sealed before ours, so we are sitting here with a court order requiring us to do something, and we are not able to positively do it because we are not positively able to establish the identity of the person whose record should be sealed.

3. *State Cost*

A. SMITH:¹⁴ The comment that I wanted to add, Mr. Beilenson, is that . . . we mentioned the minimum \$2.50 figures to reverse our process and to expunge from our files once we get something into it to expunge a record completely. Statistically, I think that the Bureau of Criminal Statistics will bear me out on the overall number of arrests.

We have probably something in the neighborhood of a 40 percent conviction in court, either by plea or by trial. The other 60 percent of the total arrest figure is either dismissed without action or they are cases where a complaint is filed and the individual is tried and found not guilty or there is a hung jury and a decision is made not to retry, or something of that sort. So this points up to us something in the neighborhood of 375,000 or 400,000 fingerprints or records which we would need to expunge or destroy annually, on the basis of overall receipts. So we would be confronted with the necessity of expending that much money, that much manpower to pull from our files the information which has been entered there on the basis of yearly arrests. So we would have, we estimate, something in the neighborhood of a minimum of a one and a half million dollar additional requirement to do this job. (Pp. 19, 20 *)

4. *Location of Data Beyond Jurisdictional Control of Local Police Agencies.*

R. PRESTON:¹⁵ . . . I would like to show charts which depict the complex nature and the size of the total procedure that is police recordkeeping, and this applies to any one single individual who is actually taken into custody. The charts portray three main categories. *The Most Common Documents on Which a Defendant's Name Will Appear From Perpetration to Disposition.*

* Hearing transcript, office of the chairman.

¹⁴ Arlo Smith, Chief Assistant Attorney General of California.

¹⁵ Deputy Chief of Police of the City of Oakland.

On the left side of Chart No. 1, "Crime, the initial report . . . This is when a criminal act of one kind or another occurs. There are a number of reports that develop and flow from this initial action. These are both reports used within the police department itself that are involved, and, on the left side of the center line in each case, is a brief indication of the number of other agencies that are to receive reports from the police department. (P. 26.*)"

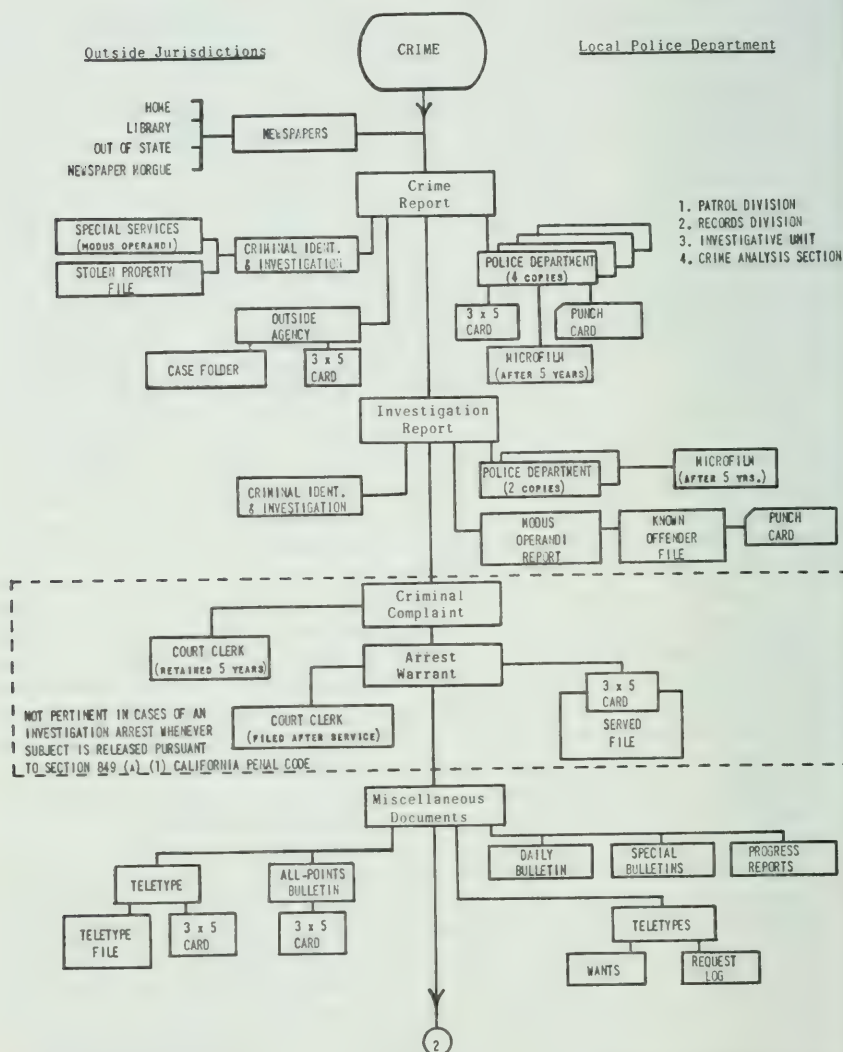

Continuing on the left side of the report we see the reports that go to the *Bureau of Criminal Identification and Investigation* in *Sacramento* and become or assist in the development of their MO files under the special services section and have to do with the development and maintenance of their stolen property files also. Each of these reports would either initially or later have the record of the fact that this person had been arrested. The white copy of the report would go to an *outside agency* in this particular case because it is of such a nature that other municipal jurisdictions are interested and concerned even though the initial arrest of the moment and the ultimate prosecution is within the city of arrest. A filecard, of course, of some sort would be maintained in that outside agency also. Over on the right-hand side of the report are reports that would normally remain in a local police department. You will notice that there are a total of four copies of this report, including one that is in our department and our department is not basically different than the general run-of-the-mill department throughout the state. Most of the departments would operate the same way. One copy of the report would go to Crime Analysis, the second to the Investigative Detail involved in developing the case and the prosecution in the courts. A copy would go to the Records Division for filing in the records, and a copy of the report would go to the Patrol Division for the current information of the man operating on the street. At the same time, additional reports, if you will, in the form of 3 x 5 filecards are developed to provide the means of getting at the basic files that are ultimately created out of all of these reports . . .

An IBM card becomes more and more a part of every police operation and certain of this information is recorded on an IBM card and is located in our statistical section. The crime having occurred goes to an investigative detail. The investigation report, a copy of it goes to *Sacramento* to acquaint C.I.I. with the status of developments in the investigations. The copies of these reports are retained in our own files, other files relating to *modus operandi*, the patterns of operation of the criminal, are developed. Other IBM cards are developed. Known offender filecards are developed. All of these reflect the fact that this man has at one time been arrested. If the case be handled in this particular way, it would make very little difference, but the next procedure involved is the acquisition of the criminal complaint. Presuming that the prosecuting attorney and the investigating officer agree that evidence is there to warrant prosecution, a criminal complaint is issued. A record of the existence of this form is in the *district attorney's* office, and an arrest warrant results from this. This naturally has the arrested person's name on it. A record of the fact that the warrant is served when it is served, a record of the fact that a subpoena is served with, again, the name of the people of the State of California versus

* Hearing transcript, office of the chairman.

MOST COMMON DOCUMENTS ON WHICH A DEFENDANT'S NAME WILL APPEAR FROM PERPETRATION TO DISPOSITION

CHART NO. 1

whoever the individual is . . . if the case is of some newsworthiness, certainly the newspaper is going to record this fact and locate it in all of the number of possible places that have already been mentioned. Arrest reports are prepared naming the individual arrested. Copies of these go to the appropriate *outside agencies*, the *prosecuting attorney* and to the *court*. All three of these receive copies of the fact of arrest. Within the police department itself, a copy goes to our crime analysis section, our identification section, to the fugitive detail, to the refer-

ence division, filecards and so forth. Other logs maintained in the jail division reflect the fact that this man has been arrested and is in custody. These are not all the possible logs. Almost every time he moves from one particular dormitory, perhaps in a jail, whenever he requests to see a doctor, when it is necessary to transport him to a hospital because of illness, all of these things are recorded on some kind of report and reflect the fact that he has, in fact, been arrested.

This information, I might point out, is presented in the vein that it is presumed that people who are not totally and completely and frequently connected with police operations themselves might not have total knowledge of the wide variety of papers and activities involved.

Having been arrested, and this is before prosecution, mind you, fingerprint cards are made. Copies of the fingerprint cards go, as has already been mentioned, to the *C.I.I.* in *Sacramento*, go to the *F.B.I.* and go into our own files. At the same time that the fingerprint card is prepared, a personal appearance card is prepared, a report, rather, is prepared. This is a personal thing in our own department designed to aid us investigatively. Again, all of these documents contain his name and the charge. The same thing is true with the property forms that are given to him indicating that we have taken his properties from him. We file copies of them and he has copies of them.

In this particular situation, he has gone this far and the investigation has revealed that he should not be prosecuted in the courts. All of these things have come into being, however, that we have previously discussed. At the time that he is released, this information must be recorded on the back of the reference division's copy and the Identification Bureau's copy of the arrest report. A duplicate report is prepared indicating the disposition of the case, and this has already been referred too. A copy of the disposition report goes both to Sacramento and to the FBI and identifies the most important thing of all about the sealing of records. The most important thing is the disposition of the case, and we submit that it is not the existence of a record per se that may have caused any discrimination in employment in the past, but rather the interpretation of it, or absence of interpretation. If the man is eligible for bail, he must submit a request for bail in the jail. A report of the fact that he is in custody and arrested comes into being. Case reports are prepared by the investigator. These are the documents on which the prosecutor in court bases his actual prosecution of the defendant. These, of course, identify clearly that he has been arrested.

In Chart No. 2, under the heading of "Arrests," is the situation in which, either at the same time of the creation of the initial report or later on as a result of investigation, the arrest actually occurs. Each of these several branches and leaves on the tree are representative of additional places where pieces of paper, if you will, or recordings of one kind or another of the fact that this person has been taken into custody exist. Again, on the right side are the local jurisdictions and on the left side are the outside agencies including *C.I.I.*, *FBI* and any other local municipal agencies that might be involved.

Finally, Chart No. 3 . . . in the area of "Trial and Disposition," these again are the agencies, presuming that the case goes beyond the point of dismissal under the provision of Section 849, or dismissal at

CHART NO. 2

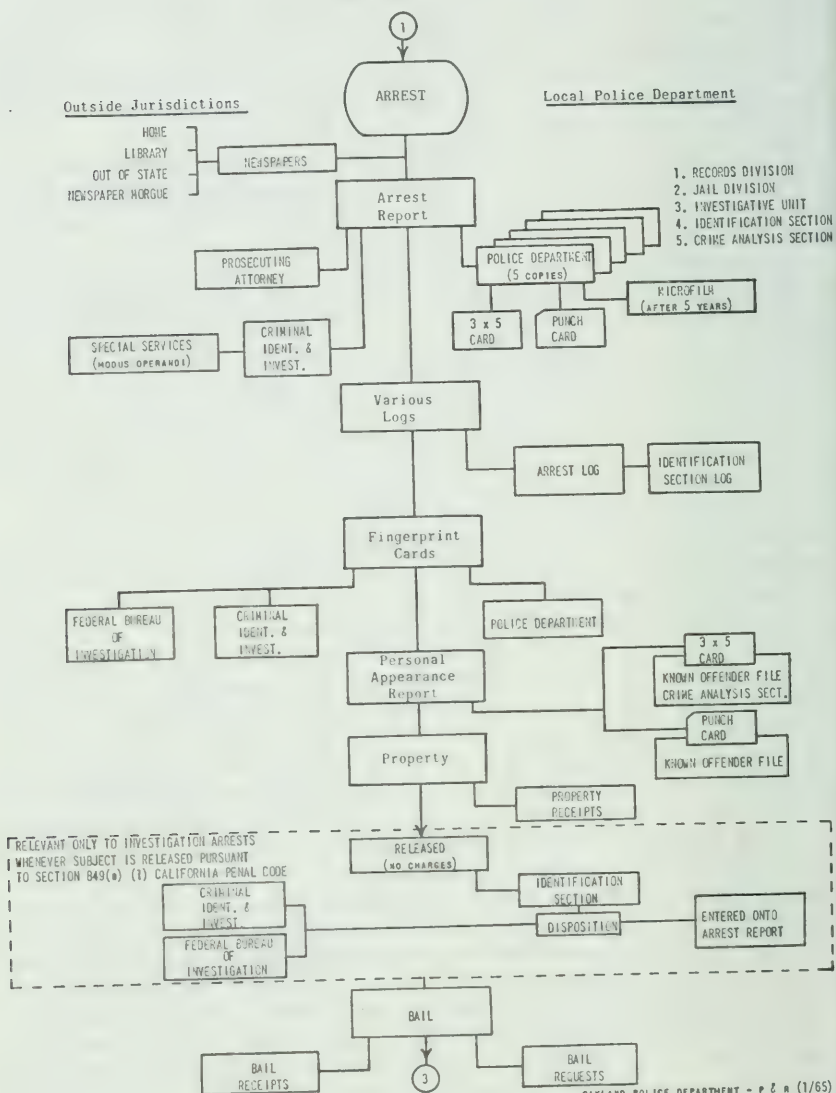

CHART NO. 3

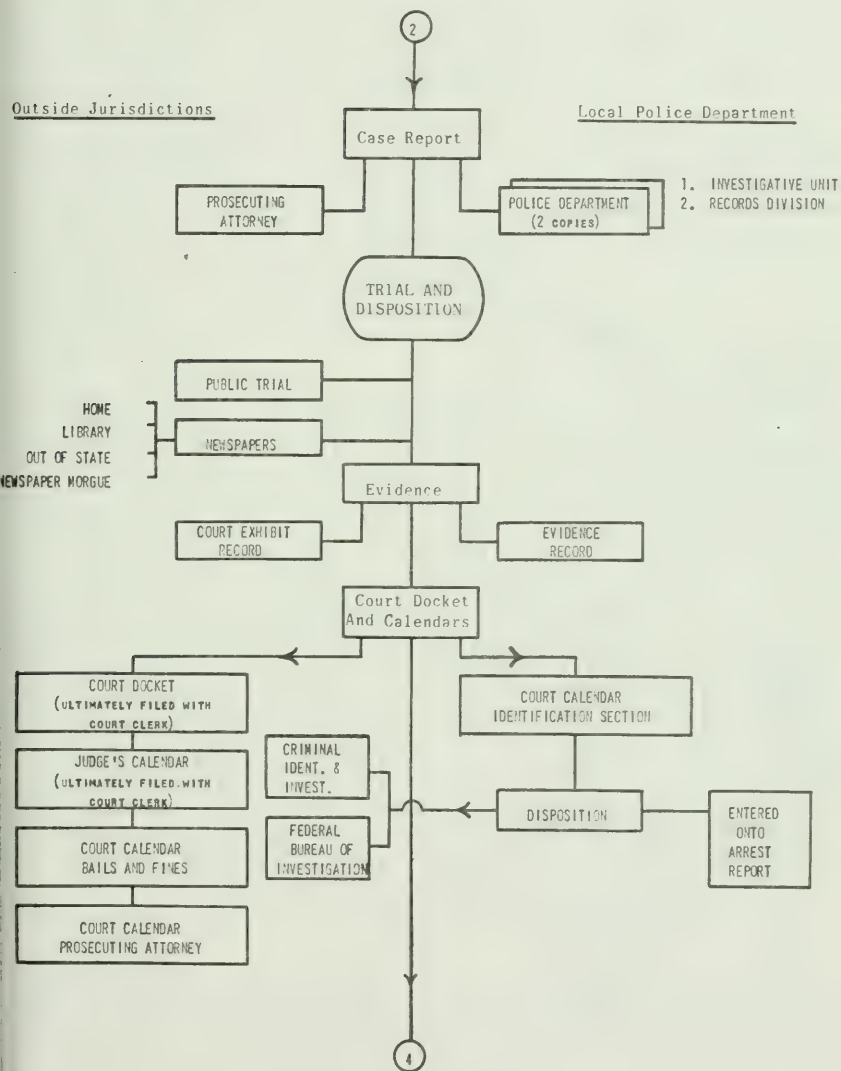

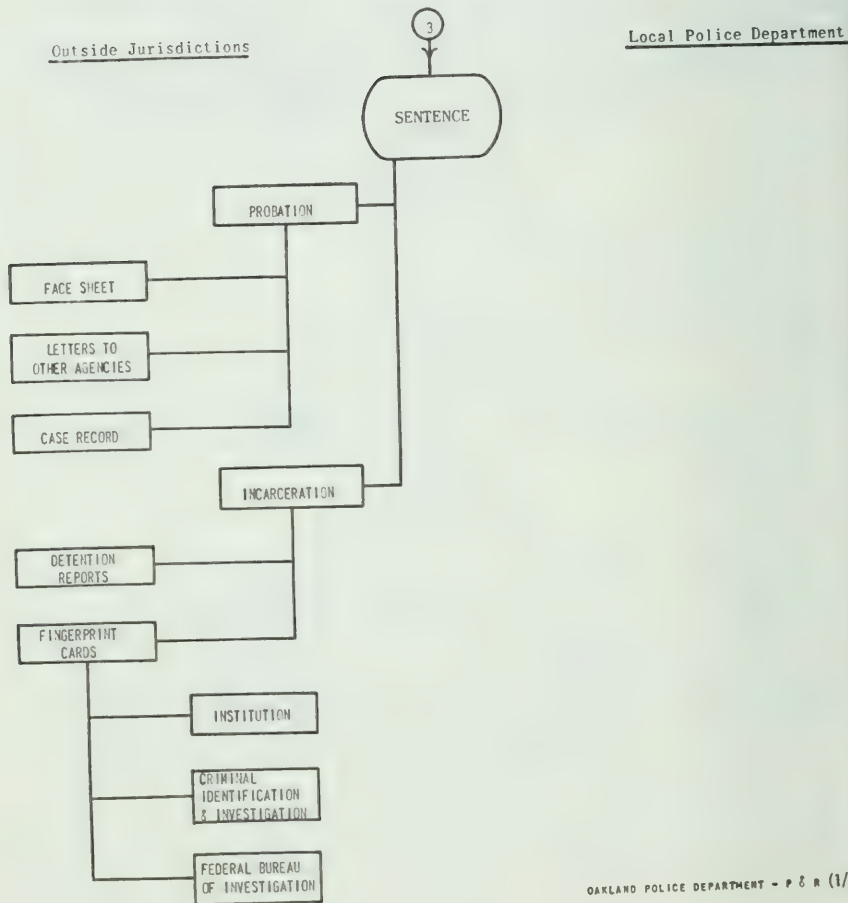

CHART NO. 4

some time prior to actual trial, and a trial is actually held as shown in Chart No. 4, "Sentence." These again are the various reports and records, if you will, of the fact that this man has been arrested. The actual trial occurs and again, if it is newsworthy, it will be recorded one way or another in the newspapers. At this point, and prior to this point, of course, a number of other reports are prepared that are evidence in the case. These identify the defendant and the charges against him and so forth. Other documents are prepared in court or in the county jurisdiction identifying this evidence also and identifying this defendant and identifying the charge. He goes into court. As you can see on Chart No. 3, some five or six calendars are prepared, filed in a number of different places, several of them winding up ultimately in the court clerk's office. At this same time, regardless of whatever the disposition may be, a disposition sheet is prepared which finds its way to the Identification Bureau and, again, this information is noted on the back of the arrest report. The two reports are prepared and sent to *Sacramento* to the *C.I.I.* and finally to the *FBI*.

I believe that when we view the charts, we perhaps get our first indication of that which is known to many of us, that total expungement in all cases is nearly impossible, probably. We did not touch on the individual areas involved. You will note, . . . that some of the first places where a record of the events exist are newspapers. Newspapers keep files also. They have a newspaper morgue. If a story is large enough, it goes out on some kind of wire service. Libraries file copies of this case. Whether the crime as it has occurred appears in a newspaper story or not is certainly going to vary from city to city, and we are all aware of this, but nevertheless, this record comes into being. The first thing the police department does is prepare a crime report. Having prepared the initial crime report, either initially or in a supplementary document, we will, in fact, identify this arrestee by name. All of these pieces of paper, if you will, that are implied or held here are pieces of paper that amount to records of the fact that this individual is arrested.

The volume of the total picture that is police recordkeeping in a local or municipal police department is of such enormity that I think that the message comes into being that there is not room for total efficiency in expunging records. I submit to the committee also that in the statutes that exist, there is no complete expungement having been demonstrated, I believe, as being totally efficient. (P. 28.)*

5. Newspapers

B. MARTIN:¹⁶ Newspapers . . . have printed . . . stories at the original time of the arrest or the trial. It would be in their morgues and, as the previous gentleman said, in a lot of other morgues. The libraries keep certain records. Not only would it be in our morgues, but in the case, say, of the Los Angeles Times, a million people would have read that story and many of those might have kept a clipping or record for some purpose. (P. 39.)*

* Hearing transcript, office of the chairman.

¹⁶ California Newspaper Publishers Association.

6. *Court Records*

ASSEMBLYMAN DONOVAN: As a matter of practical effect, the court records are never destroyed even where there is an order of expungement. It is a record entry that is made, but the permanent journals that we call dockets of court activities cannot be destroyed by law. It is a felony for anybody to destroy them. These things are bound permanently, and while subsequent entries can be made, they cannot be destroyed. They always remain the court records. So expungement, . . . is merely an entry into the record. It is not, in effect, tearing a sheet out of a book because this cannot be done. Therefore you would always have the court record.

MR. MARTIN: The previous speaker brought up the fact that there is some controversy over semantics in this area.¹⁷

ASSEMBLYMAN DONOVAN: There is, and there's a general misunderstanding throughout the state by various agencies as to exactly what expungement means and what acts are required, but the overlying provisions of the Penal Code absolutely forbid the court clerk to destroy any permanent record of the court. (P. 40.*)

7. *FBI*

VICE CHAIRMAN BEILENSEN: The next people whom we have scheduled here to testify were representatives of the Federal Bureau of Investigation. However, that is not to be. I would like to read into the record a letter from J. Edgar Hoover in response to a letter from the chairman of this committee, Mr. Winton, dated June 5. (P. 41.*)

"DEAR MR. WINTON:

"I have received your letter of June 3rd, with enclosures, requesting a representative of the bureau to appear before your committee.

"Although I would like to be of service, it has been my longstanding policy to refrain from injecting this bureau into legislative matters.

"For your information, however, the Identification Division operates by specific congressional enactment and is a repository for identification data transmitted to it by law enforcement agencies. The FBI serves merely as a custodian of such data, and the records contained therein are considered to be the property of the agency which transmits the information. If requests are received from the contributing agency, fingerprint cards are returned or changes made thereon.

"I regret we are unable to help you but trust you will understand our position.

Sincerely yours,

/s/ J. EDGAR HOOVER"

* Hearing transcript, office of the chairman.

¹⁷ See Appendix C for letter extending statement of witness.

APPENDIX A

California Penal Code

§ 11115. [Report or arrested person's transfer or release, or of disposition of case.] In any case in which a sheriff, police department or other law enforcement agency makes an arrest and transmits a report of the arrest to the Bureau of Criminal Identification and Investigation or to the Federal Bureau of Investigation, it shall be the duty of such law enforcement agency to furnish a report to such bureaus whenever the arrested person is transferred to the custody of another agency or is released without having a complaint or accusation filed with a court.

When a complaint or accusation has been filed with a court against such an arrested person, the law enforcement agency having primary jurisdiction to investigate the offense alleged therein shall receive the disposition of that case from the appropriate court and shall transmit a report of such disposition to the same bureaus to which arrest data has been furnished. [Added by Stats. 1961, ch. 1025, § 1.]

§ 11116. [Same: Report by clerk or judge of disposition of case: Report to law enforcement agency: "Disposition": Report to Bureau of dismissal under § 1203.4.] Whenever a criminal complaint or accusation is filed in any superior, municipal or justice court, the clerk, or, if there be no clerk, the judge of that court shall furnish a report of the disposition of such case to the sheriff, police department or other law enforcement agency primarily responsible for the investigation of the crime alleged, in a form and manner prescribed or approved by the Bureau of Criminal Identification and Investigation.

"Disposition," as used herein, includes any discharge or commitment of the defendant in a preliminary hearing and any judgment after conviction, judgment of acquittal, order of dismissal or other order or judgment which terminates a criminal case.

Whenever a court shall dismiss the accusation or information against a defendant under the provisions of Section 1203.4 of this code, the clerk, or, if there be no clerk, the judge of that court shall furnish a report of such proceedings to the Bureau of Criminal Identification and Investigation and shall include therein such information as may be required by said bureau. [Added by Stats. 1961, ch. 1025, § 1.]

§ 11117. [Same: Bureau's prescribing and furnishing procedures and forms: Record of disposition: Time for forwarding reports.] The Bureau of Criminal Identification and Investigation shall prescribe and furnish the procedures and forms to be used for the reports required in this article and shall establish uniform classifications of dispositions, which shall include the reason for such disposition in those cases where an arrested person is released without having been brought to trial or without having entered a plea of guilty. The bureau shall record the disposition on the criminal record of such arrested persons.

The reports required in this article shall be forwarded to the Bureau of Criminal Identification and Investigation and the Federal Bureau of Investigation within 30 days after the release of the arrested person or the termination of court proceedings. [Added by Stats. 1961, ch. 1025, § 1.]

APPENDIX B

Penal Code Section 1203.45

§ 1203.45. [Petition for order sealing record of conviction and other official records in the case: Effect of issuance or order: Application of section.] In any case in which a person was under the age of 21 years at the time of commission of a misdemeanor, and such person is eligible for, or has previously received, the relief provided by Section 1203.4, such person, in a proceeding under Section 1203.4, or a separate proceeding, may petition the court for an order sealing the record of conviction and other official records in the case, including records of arrests resulting in the criminal proceeding, and including records relating to other offenses charged in the accusatory pleading, whether defendant was acquitted or charges were dismissed. If the court finds that such person was under the age of 21 at the time of conviction, and is eligible for relief under Section 1203.4 or has previously received such relief, it may issue its order granting the relief prayed for. Thereafter such conviction, arrest, or other preceeding shall be deemed not to have occurred, and the petitioner may answer accordingly any question relating to their occurrence.

This section applies to convictions which occurred before, as well as those which occur after, the effective date of this section. This section shall not apply to offenses for which registration is required under Section 290 of this code or to violations of Division 10 (commencing with Section 11000) of the Health and Safety Code, nor does it apply to a person convicted of more than one offense. [Added by Stats. 1961, ch. 2054, § 1.]

Welfare and Institutions Code Section 781

§ 781. Petition for expungement of records in custody of juvenile court and probation officer, etc.: Effect of order to expunge records.

In any case in which a [1] *petition has been filed with a juvenile court to commence proceedings to adjudge such person a dependent child or ward of the court*, such person, or the county probation officer, may, five years or more after the jurisdiction of the juvenile court has terminated as to such person, petition the court for sealing of the records, including records of arrest, relating to such person's case, in the custody of the juvenile court and probation officer and such other agencies, including law enforcement agencies, and public officials, as petitioner alleges, in his petition, to have custody of such records. The court shall notify the district attorney of the county and the county probation officer, if he is not the petitioner of the petition, and such district attorney or probation officer or any of their deputies or any other person having relevant evidence may testify at the hearing on the petition. If, after hearing, the court finds that since such termination of jurisdiction he has not been convicted of a felony or any misdemeanor involving moral turpitude and that rehabilitation has been attained to the satisfaction of the court, it shall order sealed all records, papers, and exhibits in such person's case in the custody of the juvenile court, including the juvenile court record, minute book entries, and entries on dockets, and other records relating to the case in the custody

of such other agencies and officials as are named in the order. Thereafter the proceedings in such case shall be deemed never to have occurred, and such former ward may properly reply accordingly to any inquiry about the events, records of which are ordered sealed. The court shall send a copy of the order to each agency and official named therein, and each such agency and official shall seal records in its custody as directed by the order, shall advise the court of its compliance, and thereupon shall seal the copy of the court's order for sealing of records that it or he received. The person who is the subject of records sealed pursuant to this section may petition the superior court to permit inspection of the records by persons named in the petition, and the superior court may so order. Otherwise such records shall not be open to inspection. [Amended by Stats 1963 ch 1761 § 8.]

1. Deleted: "person became a ward of the juvenile court for the reasons described in Section 601 or Section 602,"

HON. GORDON H. WINTON, JR., *Chairman*
Assembly Committee on Criminal Procedure
State Capitol—Room 5159
Sacramento, California

Dear Gordon:

We appreciate the opportunity to supplement my brief statement before your committee on the question of erasure of arrest records, and to answer the specific questions you've asked.

Please accept my answers in good faith, as I give them. Some will argue that some of my points are specious, that I imagine problems which would never exist, or that proposed legislation could easily be amended to solve the problems that concern us.

I would strongly disagree with them.

To save you or others the task of reading the lengthy details which follow, I'll summarize at the beginning.

We feel that newspapers, in California in particular, are careful about the use of stories relating to arrest, detention and trial. Many cases are such that the public should know of them, and our responsibility is to provide this knowledge. We do not feel we abuse the "right" or the responsibility to publish certain crime news, nor do we abuse the personal rights of individuals merely because they have a police record of arrest and trial.

We oppose erasure legislation as it has been presented to date on the simple, basic grounds that it is impossible to "unprint" a news story which has been printed; that it creates insurmountable problems and libelous dangers to attempt to change history and declare officially that an event which once happened legally did not happen. We are concerned over lawsuits, or even criminal charges against us because we once printed an item—then quite true—which later is legally declared never to have happened.

It's unfortunate that we must become so deeply involved in this long controversy. As I understand the aim of the erasure legislation, it is to protect the innocent from having to live with a police record when in fact he was never convicted of a crime. Testimony usually focuses on employment—applicants having to report they have been arrested or investigations showing a record of arrests.

We are not concerned as employers. We commend for use by our publishers a two-page employment application form prepared by the Newspaper Personnel Relations Association. It asks no question about an applicant's police record.

As a service to publishers and job seekers, we maintain a free employment referral service in our three offices. We never inquire of an applicant if he has a "record."

As a matter of fact, tomorrow I'm having lunch with our association president and the Director of the Department of Corrections. Part of our discussion will be on our long-standing participation in a program to help inmates learn the printing trade and parolees find employment.

But, we get caught in the middle on expungement legislation, between law enforcement agencies and those who express concern over the rights of an innocent person.

Erasure of arrest, detention and trial records create what we feel are insurmountable problems in our day-to-day operations.

The major point of my verbal testimony was our concern over possibility of libel suits, after expungement, because of stories we printed which were true at the time. If, in the routine day-to-day business of publishing a newspaper, a story appears that a certain "John Doe" has been arrested and charged with a crime, and subsequently he is acquitted and his arrest, detention and trial records are officially erased, the newspaper publishing the original story would have no legal defense in proving the truth of its story—which you well know is the basic defense in libel.

What an embarrassing, as well as expensive, situation for a newspaper—Mr. Doe sues, he has a copy of the *Podunk Press* stating that he was tried for murder, but official records and the newspaper's own records (if the mechanical problems are overcome) do not show that he was ever tried for murder. We'd have to plead *nolo contendere* to every such case, or hope a judge would accept hearsay evidence that such a trial actually had happened, even though there were no official records to prove it.

It might be possible to amend other laws to relieve newspapers and other media from liability of libel in such cases. If this is possible, then we get to the specific question you've raised—the "practical problems" of expunging newspaper files.

Here are some of the problems. Others could be presented.

(1) The law enforcement agency requesting a particular record be expunged would have no way of knowing which of some 800 California newspapers might have carried some part of the story at some stage in its proceedings—some might have reported the arrest, those and/or others might have reported the arraignment, the jury selection, an argument over change of venue, the actual trial, verdict, etc. Nor would the agency know on what dates such stories appeared.

For the Sacramento Sheriff's office, for example, to request newspapers to expunge the record of Mr. Doe on his arrest, trial and acquittal on the murder charge, they would have to send the request in some official notification to every newspaper in the state. Each newspaper, to comply, would have to know the dates of the various stages which might have created some newsworthy event.

The Sacramento *Bee*, for example, which runs from 60 to more than 100 pages daily, seven days a week, would have to check each page of each of three daily editions (which vary as to news content) from the initial arrest through the trial in order to make certain each reference to the trial was "expunged" from its records.

Multiply this by some 125 daily newspapers in California which carry stories by Associated Press and United Press International and compound it by considering that many metropolitan papers have five or six editions daily and you have a cumbersome mechanical problem even to locate the record to be expunged—and then you've found it only in that newspaper's own official file.

Physically "erasing" a story out of a printed page poses some slight problem, especially for the many larger newspapers which convert their official files onto microfilm.

According to testimony from the CII before your committee, there are 400,000 arrests each year which do not result in conviction. Certainly, not all of these make the news columns, but, in order to properly enforce expungement law, each of these would require notification and search of newspaper files.

(2) Supposing this mechanical problem of finding and erasing the newspapers' own records were solved, let's consider some other places where more than 10 million copies of California's daily newspapers go.

Libraries, for example. The California State Library in Sacramento subscribes to 178 newspapers, 150 of them California newspapers. The California newspapers they keep, because of their proven importance and value to historians and public officials, and the public.

To completely expunge Mr. Doe's arrest, detention and trial records, the library would have to institute the same page-by-page, edition-by-edition search as did the individual newspapers—only they would do it in 150 newspapers. Many of these, too, are on microfilm.

The Sacramento City Library subscribes to some 70 newspapers and keeps them all for two to four months. They maintain permanent files, some on microfilm, of the Sacramento *Bee*, the Sacramento *Union* and the *Wall Street Journal*.

Every city and county library receives certain newspapers and I'm sure you'd find that every library keeps permanent files of its local newspapers.

(3) Clipping services—this is big business. Thousands of people, firms, organizations and associations subscribe, seeking copies of newspaper articles on countless subjects.

We get clippings about newspaperboys getting beaten and robbed, newsracks being stolen or broken into, or, on occasion, newspaper personnel getting into trouble with the law.

How can agencies or courts know who has clippings about any given arrest, detention or trial?

Gordon, it seems to me that the whole aim of this controversial legislation is to allow jobseekers to avoid the stigma of reporting they've been arrested on a charge for which they were never found guilty. Is this really a problem? Do many application forms ask if a person has ever been "arrested," or do those which have any reference at all to the subject actually ask about "convictions"?

BEN D. MARTIN

PART 2

HOME FURLOUGHS FOR PRISONERS

I. BASIS OF REPORT

A. Resolution

The following House Resolution Number 284 was introduced by Assemblyman Tom Carrell in May, 1963:

House Resolution No. 284

Relative to a study relating to prisoners.

WHEREAS, The maintenance of family stability is important to rehabilitation of persons convicted of criminal offenses, and effective rehabilitation of such persons is vital to the long-range protection of society; and

WHEREAS, Distinguished penologists recognize that sexual tensions create a major disciplinary problem in penal institutions and that the separation of families by commitment to prison creates a problem in the family adjustment to both the individuals concerned and to society in general; and

WHEREAS; Certain foreign nations and the State of Mississippi have established policies which permit conjugal visits under certain conditions; and

WHEREAS, Programs of work and home furlough and halfway houses are receiving increased attention; now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is directed to refer for study to an appropriate interim committee the subject of establishment of a system of conjugal visits to prisoners, or a system of work or home furloughs and halfway houses, or other means of alleviating the sexual and other problems incident to separation of a criminal offender from his family; and that such interim committee shall report its findings and recommendations to the Assembly no later than the fifty legislative day of the 1965 Regular Session of the Legislature.

Resolution read, and referred by the Speaker pro Tempore to the Committee on Rules.

C. Objectives

At the outset, three primary objectives were envisioned:

1. Preservation of the family unit in the interests of the family of the incarcerated individual, and of society which would otherwise be required to "pick up the pieces" in the form of welfare and second generation delinquency.
2. Preservation of the family unit as a base for rehabilitation efforts in contemplation of returning offenders to the community with the least possible friction.
3. Alleviation of sexual tensions said to be responsible for major disciplinary problems in penal institutions.¹

D. Modalities

To attain the enumerated objectives, investigation of three concepts was undertaken:

1. Conjugal visitation in or near prisons.
2. Home furlough for purposes preparatory to parole.
3. Halfway houses.

II. IMPRACTICABILITY OF CONJUGAL VISITS IN PRISON

A. Background

In South America, particularly Argentina, Brazil, and Mexico, conjugal visits are the rule rather than the exception.² In Europe, Sweden seems to be the only country in which conjugal visits as such take place.

The social climate of those countries differs considerably, in many respects, from that to be found here. Dr. Norman S. Hayner, of the University of Washington Department of Sociology, who visited Mexico for a period of 18 months, points this out:

[The practice of conjugal visits] in Mexican prisons is a realistic method of meeting the sex problem. Not only does it combat homosexuality; it often changes the entire behavior of a convict. It should be remembered that Mexico has a very strong family tradition. Even more than in the United States the family is regarded as a fundamental institution. Anything that tends to destroy the family meets with opposition; anything that strengthens it is supported. It is believed that conjugal visits keep couples together.³

Where conjugal visits have been tried in this country, most extensively in Mississippi, there has been less than enthusiasm about their success in "meeting the sex problem." The feeling of Columbus Hopper, writing about conjugal visits in Mississippi, is that they tend to increase sexual difficulties among prisoners, especially those not married at time of incarceration.⁴ He also states that it has not been proved that conjugal visits reduce the problem of homosexuality. His conclusion is that more experimentation has to be done in the area of home furloughs, as well as with conjugal visitation, in order to really uncover advantages and disadvantages.

³ Reference source No. 2 at 137.

⁴ See reference source No. 4.

B. *Rejection of Concept*

Evidence to date suggests strongly that a system of furlough visits be developed in preference to conjugal visiting on institution grounds. The reasoning for this is as follows:

1. Sex is only part of the healthy marital relationship. Our aim in this proposal should be to promote all the constructive elements of a reasonable stable family life. This can best be done by permitting the inmate some time in his own home with all members of his family wherein he cannot only benefit from a sexual relationship with his wife, but also reaffirm his relationship with other family members.

2. This approach would also permit reactivation of other constructive family and social relationships the inmate may have had in his home situation. Renewal of contacts with previous employers and prospective employers would be a valuable adjunct here.

3. Some inmates, equally deserving of this type of opportunity to reaffirm their family/social/economic ties, but who are not now married, will be excluded from any scheme based solely on conjugal visiting basis.

4. Our American mores would find more acceptable the generalized concept of home leaves, rather than the limited sex relief purpose of conjugal visits.

5. The cost of providing suitable facilities in the diverse penal institutions of the state could be prohibitive.

It should be pointed out that the concept of conjugal visits need not be entirely abandoned. Although home furloughs or visits, as a part of gradual reintroduction to normal living, are preferable, there may be prisoners working in forestry camps and road camps, far removed from their families, for whom conjugal visits could be arranged. Week-end visiting, for example, could take place in accommodations constructed by the men themselves.⁵

III. CANDIDATES FOR HOME FURLOUGH

A. *Limitations on the Program*

It may be anticipated that home furloughs will generate problems. There will certainly be a need for strengthening both community and institutional family counseling programs. These would be functioning prior to release and after. Involvement of the Parole and Community Services Division of the Department of Corrections would appear both necessary and desirable.

Initially, eligibility for home leave should be restricted to inmates:

1. Who have an established parole date.
2. Whose past history and institutional conduct clearly indicate that benefits would accrue from a visit home.
3. Where there is indisputable evidence of a valid marriage prior to imprisonment with probability of its continuance after release from prison.
4. With family structures which would benefit from such visits.
5. Who have no histories of violence in their background.

⁵ See "Tulare Jurist Inaugurates Sex Leaves For Prisoners," *The Sacramento Bee*, September 6, 1964.

B. *Additional Guidelines*

The following considerations would seem applicable where other circumstances suggest home furlough would serve a useful purpose:

1. Investigation of family composition and domestic environment by a field parole agent should receive priority.
2. The home visits should be of specified duration in the interest of injecting maximum stability into the otherwise experimental situation.
3. Initially the program should be structured so that the entire cost of the home visit would be borne by the inmate and/or his family. Very early, though, there should be provision for the state to participate financially in deserving cases.

IV. ROLE OF THE HALFWAY HOUSE

A. *Auxiliary Function*

Returning the prisoner to the community has often been compared to pushing a man into cold water. Even temporary leaves might require an adjustment on the part of the prisoner and his family too great to make without substantial supervision. The advantages inherent in these dormitorylike facilities is obvious. Basic needs of food and shelter could be met while more significant adjustment was taking place. In addition, many deserving prisoners with unstable or non-existent family situations would, nevertheless, benefit substantially through gradual exposure to the outside community.

Thus, where either the prisoner or his family were not on the firmest of ground, the halfway house could prove a middle step of the highest utility.

B. *Experience*

Experimentation has already begun in this area. In "The Community-centered Correctional Residence,"⁶ Professor Gilbert Geis relates experiences had by the East Los Angeles Halfway House, a facility for former narcotics addicts operated by the Department of Corrections.

One of the initial difficulties was, as might be suspected, selecting an appropriate location. Located in Boyle Heights, "an area having an extremely high rate of narcotics addiction," Dr. Geis reports that "community opposition to the house was virtually nonexistent. Located amongst institutional buildings, and not far from a downtown business section, the house blended with relative inconspicuousness."⁷ Whether the environment was of a sort most conducive to rehabilitation is not certain. In this case, failure to locate in an area having a lower crime rate sacrificed one value in the interest of building upon a common background between the addict and the community. This also exposed the addict to temptations such as he would likely encounter upon release, and relapse into narcotics usage was fairly easy to detect.

⁶ Reference source No. 8.

⁷ *Id.* at 22-3.

Another halfway house project is underway, described in an editor's note:

The Department of Corrections is currently preparing to open a "Community Correctional Center" in Oakland. As at the East Los Angeles Halfway House, it will provide a residence for parolees and an office for parole agents. The center concept goes further, however, and proposes to ultimately include a sheltered workshop, special presentence diagnostic services which would be made available to local courts, outpatient psychiatric services for those parolees in the area as well as in the center, placement services, and a community correctional information service. It is seen as a "halfway back" house as well as a "halfway out" house. A parolee faltering in the community could be ordered into the more controlled environment of the center to forestall a return to crime. Thus, it would provide an intermediate alternative to return to prison.⁸

C. *Conclusions Indefinite*

Evaluation of the program has thus far been hampered by (a) shortness of experience, and (b) the large number of variables present in so experimental a program. Dr. Geis, however, apparently feels that continued experimentation is justified:

There are immediate risks to the community in correctional endeavors located within it, but it does not seem unreasonable to expect that in the long run community-based residential programs will produce correctional results of a magnitude adequate to prove the initial calculated risk to have been a sound social investment.⁹

V. GENERAL CONCLUSIONS AND SPECIFIC RECOMMENDATIONS

A. *Toward Future Prospects*

It is difficult to evaluate the advantages and disabilities of programs that have never been tried under circumstances peculiar to, and on the scale of, California's penal system. For this reason, the following recommendations are for possible *future* comprehensive legislation, on the assumption that a system of halfway houses and home furloughs is workable, but on the further assumption that it would be best to move slowly at this time:

1. A fundamental purpose of this program would be to promote all the constructive elements of family life. In this connection it would be recommended that family counseling programs be strengthened in every institution, to plan, coordinate and promote programs, as the best method of preparing inmates and their families for reunion. In addition, this recommendation would minimize the misuse and abuse of the furlough privilege.

2. It would be recommended that legislation eventually be introduced designating halfway houses established by the Department of Corrections as branches of California penal institutions. This would permit the Director of Corrections to transfer deserving inmates within a speci-

⁸ *Id.*, at 28.

⁹ *Ibid.*

fied time of a scheduled release date to a halfway house situation for optimum planning of furloughs home and/or sound release preparation.

3. That financial provision be made to:

- a. Permit Parole Division participation in the prior investigation and supervision of furloughs home.
- b. Provide for the added workload institutions will have in terms of preparing and processing selected inmates for furloughs home.
- c. Permit the state to participate financially in deserving cases where the inmate or his family lack resources to finance a furlough home.

4. There should be provision for the inmate to check in with parole authorities upon arrival home and prior to departure back to the institution.

5. The operational plan should contain provisions for the inmate to meet with family members at some midpoint or in the community near the prison in cases where the distance from the prison is substantial, and where it is easier for the family to come halfway.

B. *Committee Recommended Legislation*

As indicated, whether the total program envisioned will be beneficial cannot be accurately predicted at this time. It is nevertheless strongly urged initial experimentation be undertaken. It is therefore recommended that a system of home or work furloughs, similar to the work furloughs in use in the various counties, be instituted. This could be accomplished by amending Section 2690 of the *Penal Code* to include the "removal for purposes preparatory to parole" concept. Passage of the following bill amending said section is recommended by this committee:

(Mr. Henson does not approve this recommendation.)

ASSEMBLY BILL 872

*An act to amend Section 2690 of the Penal Code,
relating to state prisoners.*

The people of the State of California do enact as follows:

SECTION 1. Section 2690 of the Penal Code is amended to read:

2690. The Director of Corrections may authorize the temporary removal under custody from prison or any other institution for the detention of adults under the jurisdiction of the Department of Corrections of any inmate, for the purpose of employing said person in any work directly connected with the administration, management, or maintenance of the prison or institution in which he is confined, ~~or of furnishing to the person medical treatment not available at the prison or institution,~~ or for purposes of cooperating voluntarily in medical research which cannot be performed at the prison or institution, ~~or for the purpose of arranging parole placement programs at any time within 90 days of scheduled parole release at the request of the Adult Authority governing male prisoners and at the request of the Board of Trustees, California Institution for Women, governing female prisoners.~~

The director may also authorize temporary removal or temporary release of any inmate under custody or under such other conditions as he prescribes, for the purpose of furnishing to the inmate medical treatment not available at the prison or institution or for purposes preparatory to a scheduled parole. Removal or release for purposes preparatory to a scheduled parole shall not be effected earlier than 90 days before the parole release date unless such removal or release is requested by the Adult Authority, in the case of a male inmate, or by the Board of Trustees, California Institution for Women, in the case of a female inmate. When an inmate is temporarily removed or temporarily released for a purpose preparatory to parole, the director may require the inmate to reimburse the state, in whole or part, for expenses incurred by the state in connection therewith.

Except in the case of removal for medical treatment or for a purpose preparatory to release on parole, such removal shall not be for a period longer than one day.

Legislative Counsel's Digest

Amends Sec. 2690 Pen.C.

Authorizes temporary release of state prisoners for purpose preparatory to parole, rather than purpose of "arranging parole placement program." Specifies that such release may be effected on director's own initiative as well as on request of parole agency and may be under conditions prescribed by director as alternative to being under custody. Excepts such release from general one-day limit on temporary removals. Authorizes director to require reimbursement, in whole or part, to state of expenses incurred in connection with such a release or removal. Permits temporary release for medical treatment also to be under conditions prescribed by director as alternative to being under custody.

PART 3

NARCOTICS AND DANGEROUS DRUGS

I. WITNESSES BEFORE THE COMMITTEE ON CRIMINAL PROCEDURE
AT ITS HEARINGS ON NARCOTICS AND DANGEROUS DRUGS
LEGISLATION CONDUCTED NOVEMBER 15, 16 AND 17
IN SAN DIEGO, CALIFORNIA

The following witnesses appeared before the Criminal Procedure Committee in San Diego to discuss problems relating to narcotics and dangerous drugs in California. (Witnesses are listed in order of appearance.)

Honorable William Munnell	Dr. Frank McCarthy
Walter Barkdull	Dr. William McGee
Claude B. Brown	Dr. H. P. Groesbeck
O. J. Roed	Dr. I. Myron Vigran
John Storer	Arlo E. Smith
Arthur K. Beckley	Edward K. Distler
Arnold Lohman	Charles Savage
Thorvald T. Brown	Donald Abbott
Honorable Louis Drucker	Albert E. Hederman
William Peeples	William T. Low
Walter Dunbar	Robert L. Dodge
Arthur Holzman	Joseph H. House
William Quinn	William Robbins
David L. Klein	Barry Bunshoft
Dr. Robert J. McKenna	Charles Bridges
Dr. Leopold Tuchman	

Copies of the transcript with appendices of the November 15-17 hearings are available through the office of the Chairman of the Committee on Criminal Procedure.

II. COMMITTEE RECOMMENDATIONS AND
RECOMMENDED LEGISLATION

The committee was authorized during the 1963-65 interim period to study a broad range of problems in the area of narcotics and dangerous drugs. Pursuant to this authority, the committee conducted three days of public hearings in San Diego in late 1963. The transcript of this hearing with appropriate appendices has been prepared and reviewed by the committee.

It is the feeling of the members of the committee that, having prepared themselves through these hearings to respond to legislative proposals that will be presented to them in the 1965 session and in view of the great volume of legislative reference materials already published in this area, the most useful thing that the committee can do at this time is to enunciate their recommendations on the specific bills presented to them for interim study. Those recommendations follow.

BILLS STUDIED BY THE COMMITTEE

A.B. 242 (1963)	A.B. 2553 (1963)
A.B. 537 (1963)	A.B. 2710 (1963)
A.B. 2004 (1963)	A.B. 2884 (1963)

Recommendations

I.

ASSEMBLY BILL 242 (Gonsalves)

Bill Provides: Defines dangerous drug addict and provides that such addicts be committed to the Department of Corrections for detention, treatment, and rehabilitation.

Committee Finding: There is a legitimate and pressing need for additional consideration by agencies of the State of California of the illegitimate use of so-called dangerous drugs. However, Assembly Bill 242 approaches the problem in a way that creates problems within the Department of Corrections that it is not, at this time, prepared to meet. It is, further, seriously questioned whether or not so-called dangerous drug addicts should be treated in the same manner and in the same place as narcotics addicts.

Recommendation: That this or similar legislation should *not* be passed by the 1965 Regular Session of the California Legislature pending an in depth study by appropriate medical and correctional groups to determine the most effective approaches to the treatment of dangerous drug addicts.

II.

ASSEMBLY BILL 537 (Gonsalves)

Bill Provides: For allocation of certain fines to a dangerous drug addict rehabilitation account.

Committee Finding: This is a sister bill of A.B. 242 to provide funds for partial payment of the expense of that program.

Recommendation: That this bill should *not* be passed by the 1965 Session of the California Legislature.

III.

ASSEMBLY BILL 2004 (Ferrell)

Bill Provides: For control of L.S.D. by withdrawal of tax exempt status from nonprofit corporations using the drug but failing to comply with federal and state regulations. It also authorizes the California Board of Medical Examiners to adopt rules governing the authorization to use L.S.D. in the treatment of human beings.

Committee Finding: As far as testimony before the committee developed, there is only one corporation within the State of California that would be substantially affected by this bill. No clear necessity for this legislation as it pertains to that corporation was established.

Furthermore, there is serious doubt that the means of eliminating drug abuse is through the device of a withdrawal of tax exempt status.

Recommendation: That this bill or any of substantially the same nature should *not* be passed by the 1965 Session of the California Legislature.

IV.

ASSEMBLY BILL 2553 (Donovan)

Bill Provides: For nondisclosure of identity of informants in narcotics cases, when the informants are not material witnesses, for the purpose of showing reasonable cause for making an arrest or search.

Committee Finding: The committee recognizes a legitimate concern among law enforcement officials for protection of their informants. Furthermore, since the use of informants is especially valuable in narcotics prosecutions, there is a special need to shield those informants from disclosure to as great a degree possible compatible with the constitutional rights of the defendant.

The committee is anxious, however, that the evidence presented to justify the reliability of the informant be substantial evidence presented in open court and not in closed proceedings, and it has added language to the bill to that effect.

Recommendation: That the following amendment be made to Section 1881 of the *Code of Civil Procedure*:

ASSEMBLY BILL 979

*An act to amend Section 1881 of the Code of Civil Procedure,
relating to privileged communications.*

The people of the State of California do enact as follows:

SECTION 1. Section 1881 of the Code of Civil Procedure is amended to read:

1881. There are particular relations in which it is the policy of the law to encourage confidence and to preserve it inviolate; therefore, a person cannot be examined as a witness in the following cases:

1. A husband cannot be examined for or against his wife without her consent; nor a wife for or against her husband, without his consent; nor can either, during the marriage or afterward, be, without the consent of the other, examined as to any communication made by one to the other during the marriage; but this exception does not apply to a civil action or proceeding by one against the other, nor to a criminal action or proceeding for a crime committed by one against the other, or for a crime committed against another person by a husband or wife while engaged in committing and connected with the commission of a crime by one against the other; or in an action for damages against another person for adultery committed by either husband or wife; or in a hearing held to determine the mental incompetency or condition of either husband or wife.

2. An attorney cannot, without the consent of his client, be examined as to any communication made by the client to him, or his advice given thereon in the course of professional employment; nor can an attorney's secretary, stenographer or clerk be examined, without the consent of his employer, concerning any fact the knowledge of which has been acquired in such capacity.

3. A clergyman, priest or religious practitioner of an established church cannot, without the consent of the person making the confession, be examined as to any confession made to him in his professional

character in the course of discipline enjoined by the church to which he belongs.

4. A licensed physician or surgeon cannot, without the consent of his patient, be examined in a civil action, as to any information acquired in attending the patient, which was necessary to enable him to prescribe or act for the patient; provided, however, that either before or after probate, upon the contest of any will executed, or claimed to have been executed, by such patient, or after the death of such patient, in any action involving the validity of any instrument executed, or claimed to have been executed, by him, conveying or transferring any real or personal property, such physician or surgeon may testify to the mental condition of said patient and in so testifying may disclose information acquired by him concerning said deceased which was necessary to enable him to prescribe or act for such deceased; provided further, that after the death of the patient, the executor of his will, or the administrator of his estate, or the surviving spouse of the deceased, or if there be no surviving spouse, the children of the deceased personally, or, if minors, by their guardian, may give such consent, in any action or proceeding brought to recover damages on account of the death of the patient; provided further, that where any person brings an action to recover damages for personal injuries, such action shall be deemed to constitute a consent by the person bringing such action that any physician who has prescribed for or treated said person and whose testimony is material in said action shall testify; and provided further, that the bringing of an action, to recover for the death of a patient, by the executor of his will, or by the administrator of his estate, or by the surviving spouse of the deceased, or if there be no surviving spouse, by the children personally, or if minors, by their guardian, shall constitute a consent by such executor, administrator, surviving spouse, or children or guardian, to the testimony of any physician who attended said deceased.

5. A public officer cannot be examined as to communications made to him in official confidence, when the public interest would suffer by the disclosure.

6. *In any preliminary hearing, criminal trial or other criminal proceeding for violation of any provision of Division 10 (commencing with Section 11000) of the Health and Safety Code, evidence of information communicated to a peace officer by a confidential informant, who is not a material witness to the guilt or innocence of the accused of the offense charged, shall be admissible on the issue of reasonable cause to make an arrest or search without requiring that the name or identity of the informant be disclosed if the judge or magistrate is satisfied, based upon evidence produced in open court, out of the presence of the jury, that such information was received from a reliable informant and in his discretion does not require such disclosure.*

7. A publisher, editor, reporter, or other person connected with or employed upon a newspaper, or by a press association or wire service, cannot be adjudged in contempt by a court, the Legislature, or any administrative body, for refusing to disclose the source of any information procured for publication and published in a newspaper.

Nor can a radio or television news reporter or other person connected with or employed by a radio or television station be so adjudged in

contempt for refusing to disclose the source of *any information procured for and used for news or news commentary* purposes on radio or television.

Mr. Beilenson, Mr. Crown, and Mr. Knox dissent from this recommendation.

V.

ASSEMBLY BILL 2710 (Ashcraft)

Bill Provides: For detention of a person who police officer has reasonable cause to believe is addicted to narcotics or is in imminent danger of such addiction for 24 hours pending the filing of a petition for involuntary commitment. Provides further for jurisdiction over a person not present in the county when a petition for involuntary commitment is filed.

Committee Finding: This bill provides a tool by which law enforcement agencies can retain for a short time persons who are suspected of being narcotics addicts and hold them pending the filing of a petition for involuntary civil commitment. The committee feels that such a provision is useful in helping to make more effective the present involuntary commitment procedures. It further feels that the inclusion of a reasonable cause requirement offers protection to the person being held under the provisions of the bill.

Recommendation: That Sections 6500.5 and 6500.7 be added to the *Penal Code* as provided in the following bill, provided that the committee reserves the right to review its recommendation at the regular hearing on the bill as far as it provides for specific time periods for detention and for filing of petitions.

ASSEMBLY BILL 975

*An act to add Sections 6500.5 and 6500.7 to the Penal Code,
relating to narcotic addiction.*

The people of the State of California do enact as follows:

SECTION 1. Section 6500.5 is added to the Penal Code, to read:

6500.5. Any peace officer who has reasonable cause to believe that a person is addicted to narcotics or in imminent danger of addiction to narcotics may take such person into custody and cause him to be held in custody for 24 hours pending the filing of a petition pursuant to this article in the superior court of the county in which such person is held.

SEC. 2. Section 6500.7 is added to the Penal Code, to read:

6500.7. In any case in which a petition is filed pursuant to this article within 48 hours after the person sought to be committed was present in the county, the court shall have jurisdiction to order commitment though the person was not present in the county when the petition was filed.

VI.

ASSEMBLY BILL 2884 (Gonsalves)

Bill Provides: For an increase in penalties for the unlawful possession of certain drugs.

Committee Finding: The committee has serious doubts that increasing penalties as provided in this proposed legislation will be of any substantial assistance in dealing with the problem of the unlawful use or possession of dangerous drugs. The committee is willing to consider additional legislative proposals for attacking the problem of dangerous drug use and recognizes this as an area for serious legislative inquiry during the next session. However, the committee is not convinced of the usefulness of the particular proposal of A.B. 2884 at this time.

Recommendation: That this or similar legislation should not be passed by the 1965 Regular Session of the California Legislature.

(Mr. Thelin does not agree with the committee finding or recommendation on this legislation.)

III. BIBLIOGRAPHY OF LEGISLATIVE PUBLICATIONS ON NARCOTICS AND DANGEROUS DRUGS PUBLISHED SINCE 1952

The following list represents publications by the California Legislature since 1952 concerning narcotics and dangerous drugs. It is reproduced in this report both as an aid to researchers in the field and also as a suggestion that perhaps the future course of legislative action might be directed less at studying and investigating the problem and more toward the translation of already available information into new programs to meet growing legal, social and individual needs and problems in this area.

PART 4

**PROBLEMS OF THE CALIFORNIA
GRAND JURY SYSTEM**

PROBLEMS OF THE CALIFORNIA GRAND JURY SYSTEM

I. BACKGROUND TO THE RECOMMENDATIONS

The Committee on Criminal Procedure was assigned the following bills and resolutions for study during the 1963-65 interim period.

A.B. 102 (Dannemeyer and Belotti)

A.B. 1236 (Henson)

H.R. 193 (Waldie)

H.R. 266 (Dymally and Quimby)

The subject matter of the two resolutions assigned to the Committee was broad in scope, referring to it "the subject of grand juries, with particular reference to the matters of size, tenure, staff assistance and compensation, and including all laws relating thereto" (H.R. 193) and "the question whether present methods of selection result in impanelment of grand juries reflecting a cross-section of the community or whether new laws should be enacted or new procedures adopted . . . to achieve such an end" (H.R. 266).

Faced with the practical necessity of limiting the scope of their inquiry and in the hope of coming to some conclusions that were both useful and realistic, the committee scheduled a hearing on the subject of the California grand jury system for September 30, 1964, in Santa Monica, to be held in conjunction with the annual convention of the California Bar Association. The two bills assigned to the committee for study (A.B. 102 and A.B. 1236) each were representative of types of legislation presented to attempt to give specific answers to the general questions raised by House Resolutions 193 and 266. The hearing was, therefore, structured around the two bills, and testimony and comment was solicited on those two specific pieces of legislation in the hope that this would tend to generate more concise and pertinent information in less time than would have been required for a more comprehensive and less directed approach.

II. COMPOSITION OF THE HEARING

The following witnesses appeared before the committee and presented testimony on the grand jury legislation before it. (Witnesses listed in order of appearance.)

Fred Henderson

Deputy District Attorney of Los Angeles County and Legal Advisor to the Los Angeles Grand Jury

William Ritzi

Deputy District Attorney of Los Angeles County and Chief, Santa Monica Office

Arlo E. Smith

Chief Assistant Attorney General of the State of California

Thomas G. Neusome

Counsel, National Association for the Advancement of Colored People of Los Angeles and Chairman, Law Enforcement Committee of the United Civil Rights Committee

Jack Brown

Representing the Mayor of the City of Los Angeles

Honorable Joseph A. Wapner

Judge of the Superior Court of California, Los Angeles County, and Presiding Judge of the Criminal Department

Howard Brace

Past President, Past Grand Juror's Association of Los Angeles

Jack Cooper

Foreman, San Bernardino County Grand Jury

Richard Levi

Representing Warren B. Jones, Foreman, San Diego County Grand Jury

J. Leslie Steffensen

Foreman, Orange County Grand Jury

Gregory Stout

Member of the San Francisco Bar

Herb Ellingwood

Representing J. Frank Coakley, Chairman, Law and Legislative Committee of the District Attorneys and Peace Officers Association

Copies of the complete transcript of the hearings are available through the office of the chairman.

III. COMMITTEE RECOMMENDATIONS

The following recommendations pertaining to changes within the California grand jury system have been adopted by the committee on the basis of their consideration of the legislation presented to them for interim study.

THE CALIFORNIA GRAND JURY SYSTEM COMMITTEE RECOMMENDATIONS

A. RECOMMENDATION NUMBER ONE

ASSEMBLY BILL 102 (1963—Dannemeyer and Belotti)

Bill Provides: That a county grand jury may employ an independent investigator the cost not to exceed \$5,000 per year to be a county charge.

Committee Finding: Testimony before the Committee on Criminal Procedure has not indicated either the need for independent investigative assistance for the grand juries or the desirability of the particular type of assistance suggested by this bill. At the present time, adequate assistance is available through the offices of the district attorneys and, when necessary, through the Attorney General of the State of California.

Furthermore, the mechanics already exist for obtaining independent auditors for the inspection of county financial records.

Committee Recommendation: That this bill should *not* be passed by the 1965 session of the California Legislature.

B. COMMITTEE RECOMMENDATION NUMBER TWO

ASSEMBLY BILL 1236 (1963—Henson)

Bill Provides: For selection of grand jurors on a supervisorial district basis in counties where the superior court so desires.

Finding: The committee is aware that the present method of selection of grand jurors may, at some times and especially in the urban areas of the state, result in grand juries whose composition is not entirely representative of the ethnic, cultural and socioeconomic ranges of the community that it represents. However, the committee is hesitant to tamper with the mechanics of selection of grand jurors until it has before it (1) more comprehensive evidence of the sort of problems that, in fact, exist; and, (2) convincing evidence that legislation proposed will effectively address itself to those problems.

Committee Recommendation: That A.B. 1236 should *not* be passed by the 1965 Regular Session of the California Legislature but that an in-depth study of the composition of California grand juries be sought for the 1965-67 interim period.

C. COMMITTEE RECOMMENDED LEGISLATION

ASSEMBLY BILL 566

Bill Provides: That a grand jury may employ the services of an expert for the purpose of implementing its authority to examine the books of special purpose assessing or taxing districts located wholly or partly in the county.

Justification: At the present time, the Legislature has directed grand juries to make a "careful and complete examination of the accounts and records . . . of all the officers of the county . . ." *Penal Code*, Section 925. It has also authorized the grand juries to employ an expert for the purpose of assisting them in the implementation of this mandate (*Penal Code*, Section 926).

The Legislature has, furthermore, authorized the grand juries to "examine the books and records of any special purpose assessing or taxing district located wholly or partly in the county." *Penal Code*, Section 933.5. However, the Legislature has not granted authority, similar to that given under Sections 925 and 926, to employ expert assistance in such examinations.

It is the feeling of the committee that if Section 933.5 of the *Penal Code* is to be effectively implemented by grand juries desiring to do so, expert assistance should be available to them for that purpose.

Recommendation: That Section 926 of the *Penal Code* be amended to allow grand juries to employ expert assistance for the purpose of implementing Section 933.5 if they so desire.

*An act to amend Section 926 of the Penal Code,
relating to grand juries.*

The people of the State of California do enact as follows:

SECTION 1. Section 926 of the *Penal Code* is amended to read:

926. If, in the judgment of the grand jury, the services of an expert are necessary for the ~~purpose~~ purposes of Section 925 or Section 933.5 or both such sections, the grand jury may employ one, at an agreed compensation, to be first approved by the court. If, in the judgment of the grand jury, the services of assistants to such experts are required, the grand jury may employ such assistants, at a compensation to be agreed upon and approved by the court.

Legislative Counsel's Digest

Grand juries.

Amends Sec. 926, Pen.C.

Authorizes employment of experts to aid grand jury in the examination of books and records of any special purpose assessing or taxing district located wholly or partly in the county.

D. COMMITTEE RECOMMENDED LEGISLATION

ASSEMBLY BILL 567

Bill Provides: That an indictment can be returned by a grand jury with the concurrence of a simple majority of the members of the grand jury.

Justification: The committee feels that there is a logical persuasiveness to a provision for allowing a simple majority rather than the present simple majority plus two to return an indictment from the grand jury. It also feels that this will, to some degree, facilitate the work of the grand jury.

The committee recognizes that, in reducing the number required for indictment, it also, to some degree, increases the ease with which such indictments may be obtained, and it proposes a compensating safeguard for potential defendants in the recommended legislation following this bill.

Recommendation: That *Penal Code*, Section 940 be amended to allow a simple majority of a grand jury to return an indictment.

An act to amend Section 940 of the Penal Code, relating to grand juries.

The people of the State of California do enact as follows:

SECTION 1. Section 940 of the Penal Code is amended to read:

940. An indictment cannot be found without concurrence of at least ~~14~~ 12 grand jurors in a county in which the required number of members of the grand jury prescribed by Section 888.2 is 23, and at least ~~12~~ 10 grand jurors in other counties. When so found it must be endorsed, "A true bill," and the endorsement must be signed by the foreman of the grand jury.

Legislative Counsel's Digest

Grand juries.

Amends Sec. 940, Pen.C.

Provides that an indictment cannot be found without concurrence of at least 12, rather than 14, grand jurors in a county in which the required number of members of the grand jury prescribed by Sec. 888.2, Pen.C. is 23, and at least 10, rather than 12, grand jurors, in other counties.

E. COMMITTEE RECOMMENDED LEGISLATION

ASSEMBLY BILL 565

Bill Provides: That a witness in a grand jury proceeding may retain counsel to be present during any examination or attempted examination of the witness for the purpose of advising the witness of the extent to which he is or is not obligated to testify or produce papers or other material.

Justification: At the present time, there is no provision for legal counsel on the part of persons called before the grand jury to appear as witnesses. The committee feels that this is a serious deficiency in the present criminal law. It feels that this deficiency becomes even more critical in light of recent court decisions involving the issues surrounding the right to counsel and in view of its own recommendation to lower the number of jurors necessary to return an indictment. The committee wishes, therefore, to insure that any person called before a grand jury who is or, even remotely, might be, put in an accusative position has the benefit of proper legal counsel at all stages of his appearance before the grand jury.

The committee views with favor the recent California Supreme Court holding in the case of *People v. Sharer*, 61 A.C. 969, and it does not intend, by this legislation, to in any way diminish the implications of

that case as they may pertain to the right to counsel before grand juries.

Recommendation: That Penal Code, Section 939 be amended to allow counsel on the part of witnesses before a grand jury as provided in the following legislation.

An act to amend Section 939 of the Penal Code, relating to grand jury proceedings.

The people of the State of California do enact as follows:

SECTION 1. Section 939 of the Penal Code is amended to read:

939. No person other than those specified in Article 3 (commencing with Section 934), Chapter 3 of this title and in Section 939.1 is permitted to be present during the session of the grand jury except the members and witnesses actually under examination *and, as hereafter provided in this section, counsel for such witnesses*. No person shall be permitted to be present during the expression of the opinions of the grand jurors, or the giving of their votes upon any matter before them.

A witness may retain counsel to be present during any examination or attempted examination of the witness for the purpose of advising the witness of the extent to which he is or is not obligated to testify or produce papers or other material.

Legislative Counsel's Digest

Grand jury proceedings.

Amends Sec. 939, Pen.C.

Provides that a witness in a grand jury proceeding may retain counsel to be present during any examination or attempted examination of the witness for the purpose of advising the witness of the extent to which he is or is not obligated to testify or produce papers or other material.

PART 5

REPORTING OF CHILD ABUSE

I. BACKGROUND

A. *Public Outrage*

Paul Coates, of the Los Angeles *Times*, wrote as follows in a recent article:

... [W]e are infuriated by the occasional stories of child abuse. But we would be far more infuriated if we realized that these are not just occasional crimes.

The awful truth is that this is a widespread offense. The vast majority of the cases never come to public attention.¹

It is widely felt that love is the normal and natural consequence of having children. Thus, primary responsibility for protection of the defenseless child rests with the parent. When so absolute a trust is violated, when innocence inspires violence, when protector turns into predator, public outrage is inevitable.² Such emotion can be a spur to action, but it should not be permitted to obscure available solutions to the problem.

B. *Immaturity of Parents*

The possibility that a parent can produce a child for whom he cannot fulfill even minimal responsibilities of parenthood contains threatening aspects...³

Some insight into the character of the problem has been acquired in recent studies conducted by the Children's Division of the American Humane Association:

We see abuse to result from parental inadequacy, from immaturity, and from lack of capacity for coping with the pressures and tensions which beset the modern family. With rare exceptions, these are parents with problems—problems which run the full range of human experience. They frequently are people with personality defects; they are neurotic; emotionally disturbed or mentally ill. The outer symptoms of their disorganized state are manifested in deviant behavior and bursts of violence and anger directed at other people, including their children.

Parents who abuse children are parents who react violently to their own unmet needs—needs which may be in conflict with needs of their children. They are people with a low level of frustration tolerance, with hair-trigger controls which any irritant can set off into emotional violence. With few exceptions, these parents are not sadists. They do not take cruel delight in mistreating children. They can be described more accurately as people who can't help themselves. They are incapable of providing adequate care for their children without outside help.⁴

¹ Paul Coates, *L.A. Times*, Sept. 23, 1964.

² See article by Lester David, *Good Housekeeping*, April 1964, p. 87.

³ Helen E. Boardman, "A Project to Rescue Children from Inflicted Injuries," 7 *Social Work* 43, 47 (January 1962).

⁴ Vincent DeFrancis, *Child Abuse*, pp. 2-3 (May 19-24, 1963). See also, for a breakdown of parental factors behind abuse, James D. Delsordo, "Protective Casework for Abused Children," *Children*, pp. 213-218 (Nov.-Dec. 1963).

C. *Size of the Problem*

The American Humane Association's study discloses somewhat the gravity of the situation.⁵ More than one out of four of the children in the cases investigated, cases recorded in newspapers throughout the country, succumbed to their injuries. Of those who died, over 80 percent were under four years of age and over 50 percent were children under two years of age.⁶

Precisely how many children are seriously abused annually is well beyond determination at present. Only estimates are available:

Dr. Katherine Bain, Deputy Chief of the U.S. Children's Bureau in Washington, estimates that in the past 12-month period between 50,000 and 75,000 children have been grossly mistreated, most of them repeatedly.⁷

Probably most cases never come to the attention of any one other than members of the family. Of the rest, many are treated by physicians without anything more of a preventative nature being done. In California, statistics on reported cases are not presently accumulated in any central index.

D. *Types of Families*

As Mrs. Helen Boardman, director of social services at Children's Hospital in Los Angeles, points out:

There has been no identification in the multicultural population of Los Angeles, of any significant incidence of injury-inflicting relating to race, cultural background, or religion, nor is it restricted to families with low income.⁸

At the same time, there is hope statistical studies of such factors as composition of the families involved, degree of marital solidarity, health of the members, occupational status or absence thereof, etc., could prove informative.

Beyond the need for statistical development lies the need for acquiring experiences with such families on an individual basis. This would entail prudent deemphasis of punitive social machinery and its selective use only.

The need for understanding is again underlined by Mrs. Boardman when she states that we have thus far "learned little more than superficial facts about those adults who . . . inflict injuries. . . ."⁹

E. *Background of the Report*

Public clamor that something be done has reached a high pitch. Organized research into the problems of mistreatment of children is on the increase. Experiences with inflicted injuries to children have (unfortunately) multiplied in recent years. Advanced medical techniques have improved ability to recognize true abuse cases.

⁵ See DeFrancis, *supra*, note 4.

⁶ *Id.* at 4.

⁷ David, *supra*, note 2, at 184.

⁸ Boardman, *supra*, note 3, at 44.

⁹ *Id.* at 47.

Concern for the welfare of children subject to abuse has been expressed at all levels. In recognition of this concern and in response to specific needs such as are documented in this report, Assemblyman Don Allen introduced House Resolution No. 354 on May 19, 1964. This study of the Committee on Criminal Procedure was undertaken pursuant to Assemblyman Allen's Resolution.

II. MANDATORY REPORTING; IMMUNITY FOR PHYSICIANS

A. Medical Responsibility

If victims of child abuse are discovered by anyone outside the immediate family, it is almost invariably a physician. To him, the parents frequently relate a nervous history of injury, often inconsistent, but fairly spontaneous, since there is usually no thought of prosecution at the time. Such evidence may well be all that is available to initiate action on behalf of the child.

It is physicians, also, who have access to radiological facilities which are proving increasingly useful in substantiating initial suspicions of "battered-child syndrome."¹⁰

It is thus appropriate that responsibility for primary identification of child abuse cases be imposed upon the doctor. It follows from this that he must be given every opportunity to execute his responsibility and every aid in establishing a positive identification of abuse where it is present. Three of the recommendations which follow are directed toward these ends:

- (a) Immunity for physicians from civil suit,
- (b) Eliminating the accusatory posture of reporting, and
- (c) Establishing a registry to which physicians can go to check previous similar occurrences.

B. Present Law Inadequate

An agency study conducted by the Massachusetts Society for the Prevention of Cruelty to Children indicates that, among cases studied, less than one-third of those child abuse cases involving physicians were referred to an appropriate protective agency.¹¹

The language of California Penal Code, Section 11161.5, appears on the surface to mandate physicians and surgeons to report all suspected violations of Penal Code, Section 273(a), dealing with child abuse. However, the last paragraph of the former Section, added in 1963, provides that "the physician and surgeon shall not be required to report as provided herein if in his opinion it would not be consistent with the health, care, or treatment of the minor." As authorities who had previously commended the California reporting law quickly pointed out, "This provision negates the whole concept of mandatory reporting."¹²

The reason for insertion of what amounts to an escape device is that involvement of the parents with the criminal law enforcement authorities is an almost inevitable consequence of reporting in California.

¹⁰ But see Elizabeth Elmer, "Identification of Abused Children," *Children*, pp. 180-184 (Sept.-Oct., 1963).

¹¹ Edgar J. Merrill, *Physical Abuse of Children*, p. 3 (May 31, 1962).

¹² Vincent DeFrancis, *Review of Legislation to Protect the Battered Child*, p. 12 (1964).

C. Physician's Dilemma

A hypothetical case will illustrate the physician's dilemma under present law: A badly bruised infant is brought in for treatment. The parents report the child toppled its highchair, hitting the floor, as well as the kitten table on its way down (or fell down a flight of stairs, etc.). Unless the physician knows of prior similar injuries to the same child, or a sibling, or X-rays by chance reveal old suspicious fractures, the physician must decide, on a bare minimum of evidence, whether the parents are to be believed. The physician will frequently identify with the parents¹³ and fail to initiate police action. Under present law, he may decide that the story given by the parents is sufficiently plausible and that the case ought not to be reported, but he is forced to live with the fact that nothing has been done to prevent recurrences, possibly fatal.

D. Immunity From Suit for Physicians

If reporting under Penal Code, Section 11161.5, compels the physician to do "all or nothing," the balance is clearly in favor of doing nothing. If the physician consults his attorney about the problem, his attorney must advise that the physician who reports pursuant to Section 11161.5 may be subjected to civil suit by the parents for invasion of privacy, malicious prosecution, defamation, etc. The physician would probably win, but he does not know this when he ponders his dilemma, nor does his insurance carrier, which might be inclined to drop coverage after several such suits.

Also, because physicians depend so heavily on their reputation, they are peculiarly vulnerable to all law suits brought against them, even those which lack substantial merit. If doctors are to be heavily depended upon for administration of a system of child protection, as they must be, the handcuffs must be removed. The doctor must not have to bare the burden of substantiating in court abuses which he honestly believes have occurred; otherwise, his suspicions will go unreported. Immunity of physicians and surgeons from civil suit for making reports pursuant to a mandatory reporting law is an absolute necessity.¹⁴

E. Nonaccusatory Reporting to County Departments of Social Welfare

There are a number of important functions other than prosecution of offending parents to be served by reporting to a central registry.¹⁵ Reporting—and recall the reporting is of *suspected* violations of Penal Code, Section 273(a)—must therefore, be encouraged by creating alternatives to prosecution. For this purpose, we can draw upon various ingenious devices now dormant, and often entirely unavailable, under present methods of handling cases of suspected child abuse.

Prosecution of parents may well be inevitable in some cases of serious and willful child abuse. But if welfare of the child is to be the paramount objective, prosecution will in many cases be unnecessary and in others undesirable. There are a host of alternatives to prosecution, ranging all the way from education of the parents by way of community

¹³ See Boardman, *supra*, note 3, at 46; Philip R. Dodge, *Medical Implications of Physical Abuse of Children*, p. 23 (May 31, 1962).

¹⁴ See generally *Public Hearing Before the New Jersey Assembly Committee on Institutions, Public Health and Welfare on Assembly Bill No. 514*, March 26, 1964.

¹⁵ These functions are considered more fully in Section III *infra*.

social services to removing the child from an unfit environment by way of the juvenile courts.

While the physician may be best situated for initially uncovering the problem, this leaves unanswered the question of who should then channel it to an appropriate remedial agency. If the punitive aspects of reporting are to be deemphasized, in the interest of getting doctors to report and of helping emotionally ill parents to whom prosecution will be no deterrence, then law enforcement agencies would not appear to be suitable.

County departments of social welfare, already engaged in dealing with many child welfare problems, and experienced with intervention into difficult family situations, would appear to be best equipped to intelligently determine what is to be done with a reported incident. Under the recommendations for legislation which will follow, they may merely investigate. They may rely on child protective services where available. They can, as can the physician, notify the sheriff of police in serious cases, and they may do so where the physician has delayed acting; they must do so where there is a history of two prior reportings. They can request juvenile court jurisdiction.¹⁶ They will, under any circumstances, consult with the reporting physician. They will, at all times, have immediate access to the proposed statewide central registry. *In short, they can act immediately, with the best information available, and can select any one of an arsenal of weapons at their disposal.*

III. FUNCTIONS OF A CENTRAL REGISTRY

A. Statistical Function

It has been evident for some time that the magnitude of the problem we are dealing with is not understood. The statistics which are available are limited and, as has been pointed out, represent a very small segment of a very large picture. A statewide central registry of suspected cases would help to correct this shortcoming.

Besides informing the public generally, and medical people specifically, of the full magnitude of the problem, the information compiled would provide a pool of data upon which interested researchers could draw. This statewide "laboratory" would be of immeasurable benefit to the youth of California and a model for the rest of the nation. Incidents which are now brought to light only in the heat of public emotion could be transformed into valuable statistics generating intelligent research and understanding.

B. Identification Function

It has been the experience of hospital groups engaging in experimentation with central registries that parents usually do not bring abused children back to the same hospital (or physician) for treatment. This is obviously done out of shame or fear of the consequences. Such parents cannot presently be identified except by sheer chance. Also, the children of transient families, where home life is characteristically unstable anyway, are particularly susceptible to this inadequacy. A statewide central index would, for all practical purposes, eliminate the possibility of concealment of prior abuses.

¹⁶ California Welfare and Institutions Code, Sec. 600 (b) (Deering 1963),

The importance of documenting the various suspicions is based upon a significant conclusion of all experts in the field. *This crucial conclusion is that the most definitive evidence of child abuse is repetition characteristic of compulsive illness.*¹⁷

The nature of the injuries, an implausible story given by the parents, and questionable X-rays, may all contribute to a doctor's suspicions. However, it is previous incidents, similar in kind, which will convince him that his suspicions are justified. A single extraordinary incident is a possibility; the parents may be blameless. But repetition is the giveaway. Thus, access to a central registry would provide the physician with an invaluable diagnostic tool.

C. Remedial Function

Whether the abusing parent will be identified is not the only important factor. Equally important is *when* he will be identified. If immediate action is not taken, it is entirely possible that the remedy will be too late to protect the child from permanent or fatal harm.

In the more serious cases, where drastic remedies to protect the child ought to be contemplated, but where substantiation of suspicion is limited, the problem is compounded. More than mere suspicions will be necessary to initiate action to permanently remove a child from a home or subject the parent to the possibility of a prison term. A mistake would forever disrupt the family involved and thus constitute a social tragedy of the highest order. A central registry would help to justify drastic action where needed, with a minimum of delay and a minimum of error.

D. Parent-protective Function

The hazardous situations in which young children can place themselves are as unlimited as their imaginations. This can be attested to by any parent. Injuries occur in ways which are scarcely credible to most adults.

Many injuries to children are the product of unavoidable accident. Many others may be attributable to a parental slip. As individual incidents, these are virtually impossible to distinguish from injuries which have been inflicted. In such cases, it is the parent who needs protection from legal action, not the child who needs protection from the parent. Since deliberate abuse is an habitual disease, the absence of prior reportings in a central index would help to protect the innocent parent. He is not so protected under present law.

¹⁷ David, *supra*, note 2 at 196.

IV. COMMITTEE RECOMMENDED LEGISLATION

The following bill, which embodies the above recommendations relating to mistreatment of children, is respectfully submitted with the recommendation that it be adopted:

(Mr. Henson does not approve the recommendation to add Section 11161.7 to the Penal Code.)

ASSEMBLY BILL 277

An act to amend Sections 273a and 11161.5 of, and to add Section 11161.7 to, the Penal Code, and to add Section 114.8 to the Welfare and Institutions Code, relating to mistreatment of children.

The people of the State of California do enact as follows:

SECTION 1. Section 273a of the Penal Code is amended to read:

273a. Any person who willfully causes or permits any child to suffer, or who inflicts thereon unjustifiable physical pain or mental suffering, and whoever, having the care or custody of any child, causes or permits the life or limb of such child to be endangered, or the health of such child to be injured, and any person who willfully causes or permits such child to be placed in such situation that its life or limb may be endangered, or its health likely to be injured, is punishable by imprisonment in the county jail not exceeding one year, or in the state prison for not less than one year nor more than 10 years.

When any person is arrested for or convicted of a violation of this section, the arresting law enforcement agency, in the case of an arrest, and the prosecuting agency, in the case of a conviction, shall report such occurrence to the county welfare department (or other agency in a chartered county which administers public social services) and to the State Department of Social Welfare.

SEC. 2. Section 11161.5 of said code is amended to read:

11161.5. In any case, in which a minor is brought to a physician and surgeon for diagnosis or treatment, or is under his charge or care, and it appears to the physician and surgeon from observation of the minor that the minor may have been a victim of a violation of Section 273a, he shall may report such fact by telephone and in writing to the head of the police department of the city or city and county, if the observation is made in a city or city and county, or to the sheriff, if the observation is made in unincorporated territory, or to the nearest child welfare agency offering child protective services. The report shall state, if known, the name of the minor, his whereabouts and the character and extent of the injuries.

~~The physician and surgeon shall not be required to report as provided herein if in his opinion it would not be consistent with the health, care, or treatment of the minor.~~

~~No physician and surgeon shall incur any civil or criminal liability as a result of making any report authorized by this section.~~

SEC. 3. Section 11161.7 is added to said code, to read:

11161.7. In any case in which a minor is brought to a physician and surgeon, in his office or in a hospital or in such other place in which he is practicing medicine, for diagnosis or treatment, or is under his

charge or care, and it appears to the physician and surgeon that there are any grounds for suspecting that the minor may be a victim of a violation of Section 273a of this code, he shall report such information immediately, both by telephone and in writing, to the welfare department of the county in which the minor was diagnosed, treated or received care, stating the character and extent of the minor's injuries and, if known, the name of the minor and his parents and any other pertinent facts.

Upon receipt of such report, the county welfare department shall determine whether previous reports of suspected violations of Section 273a or arrests or convictions for violating such section, concerning the same minor or other minors in the same family, have been made in the county. Copies of all written reports received by a county welfare department shall be forwarded by the county welfare department to the State Department of Social Welfare. If the records of the State Department of Social Welfare maintained pursuant to Section 114.8 of the Welfare and Institutions Code reveal any reports of suspected violations of Section 273a, or arrests or convictions for violation of such section, in other localities on the same minor or other minors in the same family or other pertinent information, the county welfare department shall be notified immediately of such information.

Upon receipt of the physician and surgeon's report, the county welfare department shall immediately consult with such physician and surgeon and shall determine whether, by the standards of the best interest of the child, the case is one that it should investigate by itself or in collaboration with an agency offering child protective services or is one that should be referred to law enforcement authorities. It may, in any case, refer the case to the district attorney or to the police department or sheriff's office having jurisdiction to investigate offenses where the minor is then present, and must do so if records of the county welfare department or of the State Department of Social Welfare or both include reports of two incidents of suspected violation of Section 273a, or arrests or convictions for violation of such section, in the same family. The county welfare department may also, where it believes such action appropriate, request the juvenile probation officer to file a petition in the juvenile court to commence proceedings to have such minor declared a dependent child of the court.

No physician and surgeon shall incur any civil or criminal liability as a result of making any report authorized by this section.

As used in this section "county welfare department" includes such other agency of a chartered county as is designated by charter to administer public social services.

SEC. 4. Section 114.8 is added to the Welfare and Institutions Code, to read:

114.8. The department shall maintain records of all reports of suspected violations of Section 273a of the Penal Code and reports of arrests for, and convictions of, violation of such section. On receipt from a county welfare department or other county agency administering public social services of a copy of a report of suspected violation of Section 273a received from a physician and surgeon, the state department shall transmit to the county department or agency information detailing all previous reports of suspected violations of Section

273a and reports of arrests for, and convictions of violation of Section 273a, concerning the same child or other children in the same family.

The state department may adopt rules governing recordkeeping, reporting, and requests for information by counties under Section 11161.7 of the Penal Code.

Counsel's Digest

Mistreatment of children.

Amends Secs. 273a, 11161.5, adds Sec. 11161.7, Pen.C., and Sec. 114.8, W. & I.C.

Makes it permissive rather than mandatory that physician report suspected violation of such section to police or sheriff, but requires physicians to report suspected violations to county welfare department and requires law enforcement agencies to report arrests for and convictions of violations of such section to such department and State Department of Social Welfare. Specifies that physicians incur no liability when reporting pursuant to foregoing provisions. Requires county welfare department to transmit copies of such reports received by it to state department, and requires state department to maintain records of such reports and to advise county of reports of suspected violation of Sec. 273a, or arrests for, or convictions of violation of such section, in other counties, involving same minor and other minors in same family. Provides that county department may report incident to police or prosecuting authorities and must do so when there were two such incidents involving same minor or other minor.

PART 6

TELEPHONE MONITORING DEVICES

I. BASIS FOR THE STUDY

Early in 1964, staff physicians in a San Francisco Bay Area hospital complained that the hospital superintendent was monitoring their private telephone calls. Although the charge was denied, the telephone company withdrew the monitoring equipment.

Some question naturally arose regarding a possible need for regulation of monitoring equipment. The following resolution was offered by Assemblyman John T. Knox:

House Resolution No. 267

Relative to an interim study of the practice of monitoring telephone conversations

WHEREAS, It has been brought to the attention of this Assembly that numerous California business and other private establishments may be making a practice of monitoring telephone conversations to such establishments without the knowledge of either or both of the participants to the conversation; and

WHEREAS, Telephone companies are able to install monitoring devices for a relatively small fee, and there apparently is no legal prohibition against installation or use of such equipment; and

WHEREAS, An investigation is necessary to determine the extent of this practice, its legitimate uses, if any, and to determine whether the right of privacy of employees or others is being unduly invaded; now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is directed to refer the subject matter of this resolution to an appropriate interim committee for study, including the laws relating thereto, and to direct such committee to report its findings, together with its recommendations for needed legislation, to this Assembly not later than the fifth legislative day of the 1965 Regular Session of the Legislature.

The California Public Utilities Commission held a hearing on October 14, 1964, to consider the same problem. Staff Counsel Eleanor Charles conducted a revealing cross-examination of telephone corporation personnel.¹ No decision has been reached as of this time.

II. RECOMMENDATIONS

A. We recommend that no legislation be considered until such time as findings and decision of the Public Utilities Commission issue on Case No. 7915.

B. We recommend, in the event of the Public Utilities Commission's failure to take action with respect to this problem, that legislation be drafted requiring decal stickers, conspicuously located and phrased in clear and concise language, on all telephones subject to monitoring.

C. We further recommend that no action be taken at this time with reference to the mere possibility that monitoring equipment might be installed in private residences, subject to later reconsideration of unwarranted uses.

¹ Transcript available at California Public Utilities Commission Office in San Francisco.

III. LEGITIMATE USES OF MONITORING EQUIPMENT

The practice of "monitoring" should be distinguished from certain other well-known practices of interfering with telephone privacy. "Wiretapping" usually refers to a clandestine operation, unauthorized by the telephone subscriber and against his interests; recording devices may be used to unlawfully assist the wiretapper. Monitoring equipment, on the other hand, is specifically requested by the subscriber and, if installed in conjunction with recording equipment, must conform to federal requirements.

At the Public Utilities Commission Hearing referred to above, Mr. Clifford F. Goode, General Commercial Engineer for the Pacific Telephone and Telegraph Company, testified as to the purposes of monitoring equipment:

Monitoring or service observing equipment is used by business subscribers for two basic purposes.² The first of these is the training of employees.

Telephone usage for sales, service and other dealings with customers is an important part of many business operations. Information on prices, rates, products, travel and delivery schedules, and numerous other matters is routinely furnished by telephone. Courteous and efficient handling of telephone calls in connection with sales and service undertakings is important to establish and maintain good customer relations. Service observing is a valuable method for training employees in good telephone usage.

Examples of service observing applications are use of such equipment by airline companies to train employees handling ticket reservations and flight schedule information, and by department stores to train employees who take customer orders by telephone, and who handle billing and other business office problems. Many other businesses have similar applications of service-observing equipment.³

. . . The second purpose can be generally described as supervisory, to permit evaluation of an improvement in the overall quality of service being rendered by employees of a business. Review of the actual handling of telephone contacts with customers enables business supervisors to determine the overall quality of service that is being given and to make sound recommendations for better performance. Once again, such use of the equipment is made by a range of different businesses.

Thus, the *intended* uses of monitoring equipment are commercially valuable, and are limited to telephone conversations related to an employer's business operations. The equipment has been widely offered for over twenty years, during which time complaints sufficient to receive public notice have been virtually nonexistent. However, the potential for misuse of such equipment is considerable. Moreover, the sum of individually insignificant invasions of privacy may be indicative of a socially undesirable trend.

² See Appendix I.

³ See Appendix II.

IV. POSSIBLE ABUSES

Assuming monitoring equipment is successfully restricted to commercial uses, the interests of the subscriber, the employer, seem adequately protected by knowledge of the monitored equipment. There is an additional argument that the employer assumes the risk of having the equipment and may reduce that risk by appropriate supervision and hiring practices.

The outside party to the conversation has only so much of an interest in privacy as the other party chooses to respect. The same is true of a face-to-face conversation. There is no guaranty that one of the parties will not repeat widely what was intended for his ears alone. Thus, the most protection that can be given is to ensure that *one* of the parties to a conversation is aware that privacy is not certain.

The employee who is not informed that a particular telephone is subject to monitoring, and the party to whom he is speaking, are the most likely victims of monitoring abuses. Private recording devices, not utilizing the required "beep tone," magnify the dangers involved.

It is not enough to say that a business telephone should not be used for private purposes, when in many places such is the custom, and management assents by silence.

Use of monitoring equipment in private homes is a related problem. The telephone companies have stated that installation in private residences is against their policy, is inconsistent with intended uses of the equipment, and, more importantly, does not occur. There are, however, no legal restrictions on offering the equipment to noncommercial subscribers.

The crux of the problem is that proper use of monitoring devices, wherever employed, cannot be assured. "Policing" of the equipment is a practical impossibility.

V. CONSIDERED SOLUTIONS

There is a wide spectrum of suggested resolutions of the dilemma. These range from taking no action to outlawing the equipment.

In view of the aforementioned legitimate uses for monitoring devices, and their apparent commercial utility, a total ban would seem socially unjustified. On the other hand, taking no action in view of the gravity of potential misuse appears equally unjustified.

As indicated, informing one of the parties to a conversation that conditions of absolute privacy do not exist may well constitute the maximum of protection that can be offered. Merely informing employees at the inception of their employment, or even periodically, represents a routine gesture likely to be soon forgotten. Confusion is likely to result in large commercial operations where only some small portion of the equipment is subject to monitoring. Moreover, the cost to such employers of informing *all* employees might discourage the limited use of monitoring devices among employees in positions of public contact.

The most practicable solution at this time would require the placing of decal-stickers on all telephones subject to monitoring equipment, thereby notifying the user of this fact. The cost to either the telephone

company or the subscriber would be minimal. The employee would be made conscious of the fact that the telephone was "off-limits" to confidential conversation. The outside party would then be protected.

VI. CONCLUSION

There is definite evidence of a degree of commercial utility in the practice of telephone monitoring. On the opposite side of the balance is the social interest in protecting the right of privacy. It is believed that the included recommendations represent a compromise solution preserving and protecting both interests.

APPENDIX A

The Pacific Telephone and Telegraph Company Schedule Cal.P.U.C. No. 32-T
San Francisco, California Revised Sheet 25-C

SPECIAL CONDITIONS UNDER WHICH EQUIPMENT OFFERED

1. The Company furnishes service observing and training equipment to enable business subscribers to train their employees in providing service by telephone, and to observe and improve the quality of service rendered by their employees in handling telephone communications incident to the subscribers' businesses.
2. Orders for service observing and training equipment shall be made by the business subscriber in writing, and shall include a statement of the subscriber's intended use of the equipment. Each business subscriber shall sign an agreement respecting the use of service observing and training equipment on a form provided by the Company.
3. Service observing and training equipment is for use only by business subscribers in connection with telephone calls related to the business of the subscriber. It is not furnished for residential or other personal use.
4. Service observing and training equipment is furnished to hotels, hospitals and other subscribers which may allow public use of telephone service only for administrative purposes, and only for observing business telephone conversations to which an employee of the subscriber is a party.
5. The business subscriber shall keep those employees whose telephone conversations are subject to observation advised of that fact.
6. The business subscriber shall require each of its employees who uses the service observing and training equipment to sign a statement that he has read these special conditions, section 605 of the Federal Communications Act, sections 619, 640 and 641 of the California Penal Code, and General Order No. 107-A of the California Public Utilities Commission, and understands the penalties for violating secrecy of communications. The business subscriber shall file and retain such employee statements throughout the period during which the employees use the equipment or are subject to observation.
7. The Company shall furnish to each business subscriber to service observing and training equipment a copy of these special conditions and a copy of the Federal and California statutes and the California Commission general order relating to secrecy of communications. The business subscriber shall have a copy of this material available at each service observing installation, and shall post a notice of the penalties for misuse of the equipment.

8. The Company may remove the service observing and training equipment and discontinue the service if the business subscriber fails to comply with any of the conditions applicable to this service.
9. Service observing and training equipment at the rates stated above is furnished on the same premises (or on different premises of the same business subscriber in the same building) as those on which the service observed is located. Where facilities and operating conditions permit, service observing and training equipment is furnished on premises of the same business subscriber in a different building from that in which the service observed is located at the rates stated above, together with mileage rates for the lines extended for observing purposes equal to the mileage rates applicable to off-premises station lines or private lines, and an installation and monthly charge based on the cost or any additional equipment furnished or special work performed in furnishing the service observing and training equipment in a different building. The rates and charges for Key Equipment Service set forth in Schedule Cal. P.U.C. No. 22-T apply in addition to the rates and charges stated in (2)(d) above; each Key Equipment Service station provided in connection with service observing and training equipment shall be arranged to observe at least one central office line, private branch exchange station line, private line, extension station line, telephone answering equipment station line, or intercommunicating line.
10. The business subscriber releases, indemnifies and holds the Company harmless from any and all claims, demands, losses and liabilities, whether suffered or asserted by the business subscriber or by any other person, which arise directly or indirectly from use of the service observing and training equipment.

THERAPEUTIC ABORTION LEGISLATION

THERAPEUTIC ABORTION LEGISLATION

The Interim Committee on Criminal Procedure has studied the problems inherent in the California abortion law extensively during the 1963-1965 interim period. This study has included major legislative hearings on the subject in the northern and the southern parts of the state. Transcripts of these hearings are available through the office of the chairman. The following statement represents the current position of the committee.

STATEMENT OF COMMITTEE POSITION

California's existing abortion law, now more than 100 years old, which allows abortions only when necessary to preserve the woman's life, is unduly restrictive.

The stringency of the law outlaws abortions in some instances of such great potential tragedy for the women involved and their families that it no longer commands either the respect or the support of a great many of the state's citizens—especially women. This lack of respect and support is reflected in the estimated 100,000 illegal abortions performed each year on California women.

Many California groups, including responsible medical organizations, have urged that the law be amended to allow properly performed, hospital-approved abortions in certain carefully prescribed instances.

It is the consensus of the committee that serious problems exist with respect to the present law and that serious thought must be given to modifying it to some extent.

(Mr. Deukmejian concurs in the statement except for parts of the second paragraph.)

(Mr. Thelin abstains.)

PART 8

**USE OF BAIL AND CITATIONS IN THE
ADMINISTRATION OF JUSTICE
IN CALIFORNIA**

Report and Recommendations

on

BAIL AND CITATION PROCEDURES

by the

ASSEMBLY INTERIM COMMITTEE ON CRIMINAL PROCEDURE

Several resolutions concerned with problems related to citation, arrest, detention, bail, court and jail procedures were referred for interim study. Although some agencies view these areas as presenting separate administrative problems, they are in fact closely interrelated. The committee found that statistics concerning these subjects are not routinely collected and many that are available cannot be correlated due to variations in definitions, time of collection and population basis.

The first phase of inquiry was therefore directed towards collection of basic, comparable data. This was accomplished by directing questionnaires to all California chiefs of police and the courts.

I. SUMMARY OF FINDINGS

Citations: Police departments, responding to a questionnaire, reported a total of 2,351 citations issued between January 1, 1963, and June 30, 1963. The number of citations issued by departments ranged from 1 to 470. If the citations for traffic violations, local ordinances and state codes other than the *Penal Code* are excluded, the total number is reduced to 375. In order to appreciate the significance of this figure it should be noted that for an equivalent six-month period in 1963 there were about 297,996 misdemeanor arrests in California, and 375 is one-tenth of 1 percent of this number. It may be safely concluded that there is minimal use of the citation procedure in California under Penal Code Section 853.6. It is used exceptionally and experimentally by very few police departments and does not constitute a regular and definite procedure for law enforcement in general.

The problem is not one of legislation, but rather of local implementation and education. The enactment of Section 853.6 in 1959 had no practical significance for the majority of police departments. The survey, however, has demonstrated that certain police departments are willing to experiment with citations for misdemeanors under state law, provided that enough interest, concern and cooperation can be secured from responsible state agencies. The few law enforcement agencies which have attempted to implement the section complain generally about the lack of standard procedures and the problems of statistical reports.

Bail: Bail schedules were received from 67.9 percent (286) of the 421 judges queried, and this indicated a response of only 56.9 percent

(33) of our 58 counties. The request was mailed on July 7, 1964, and all replies prior to September 14, 1964, were tabulated. In the intervening time, followup letters were sent endeavoring to increase the response, and to clarify reported data. No firm conclusions can be drawn from the replies. It does appear that the wide variation in the amount of bail established for identical offenses is due to the purpose the various judges feel should be served by the procedure.

The comments of a number of judges indicated an interest in securing information concerning the amount of bail established for various offenses by other jurisdictions. The data received by the committee is presented in the report. It is not complete and no existing statute requires the regular collection of this information. In view of the apparent need for facts in this important area in the judicial process, the committee recommends fixing this responsibility with the Judicial Council by adoption of the legislation proposed in Appendix I of this report.

The committee commends the issuance by the Judicial Council of the State of California of Rule 850 which provides a recommended bail schedule for traffic offenses and urges similar action with respect to criminal offenses.

II. CITATION SURVEY

Origin: On February 28, 1963, Assemblymen Greene, Winton, and Danielson jointly introduced House Resolution No. 121 relative to bail, fines, and sentencing. A portion of the resolution stated "Whereas, almost no use is being made of the procedure provided in Section 853.6 of the Penal Code for citations and forfeitures of bail in misdemeanor cases, etc., it is resolved by the Assembly of the State of California, that it is appropriate, at this time that a study be undertaken of the law and practices in the state regarding bail, fines, and sentencing." The Penal Code section referred to in the resolution was enacted following the introduction of Assembly Bill 2492 by Mr. L. P. Francis on April 15, 1959. This permissive section provides:

"In any case in which a person is arrested for an offense declared by State law to be a misdemeanor, and does not demand to be taken before a magistrate, the arresting officer may, instead of taking such a person before a magistrate, issue a citation." (Section 853.6a.)

A citation was further defined as a process of arrest by which the arresting officer:

"shall deliver a copy of the notice to appear to the arrested person, and the arrested person, in order to secure release, must give his written promise so to appear in court by signing the duplicate notice which shall be retained by the officer. Thereupon the arresting officer shall forthwith release the person arrested from custody." (Section 853.6d.)

Some concern for the effectiveness of this particular statute was voiced at public hearings of the Assembly Interim Committee on Criminal Procedure held in February 1960 and December 1961. All of the discussants welcomed the enactment of Section 853.6 and suggested

many diverse situations in which it could be effectively and efficiently operated. Few participants, however, knew of actual cases or places where it was incorporated into the working procedure of police departments. The 1963 resolution then charged the committee with a study of the use of citations pursuant to this section as a part of the larger problem concerning bail and sentencing procedures.

Police Reports: One portion of the survey was devoted to collection of data directly from police departments. In this connection a research assistant at the School of Criminology, University of California, Berkeley, was employed on a part-time basis to draft a suitable questionnaire, test it with seven police departments, and revise the questionnaire on the basis of the pilot survey responses. It was then sent to 388 city police departments in California with an accompanying letter from the committee chairman.

The response from the seven police departments furnished information which suggested that a statewide survey would prove both useful and instructive. Furthermore, the initial survey did provide a means of clarifying and improving the questionnaire which was subsequently utilized. The questionnaire was mailed on June 1, 1964, with an accompanying letter from Chairman Winton of the Assembly Committee on Criminal Procedure. The purpose and objective of the survey was described in this letter which stated:

"The Assembly Committee on Criminal Procedure is interested, as you know, in the problems of law enforcement and police administration, especially in the field of arrest where increased police duties and a growing population make it difficult for police departments to function efficiently and economically. As you know, Section 853.6 of the *California Penal Code* encourages the extension of the citation system. We believe that the citation system may offer an opportunity to improve police efficiency and reduce police work loads. The Legislature, too, is interested in learning what problems may exist in extending the citation system and they have referred the subject to us under House Resolution 121 of February 28, 1963.

Our committee would appreciate your help and advice in our study. Will you please complete the enclosed questionnaire and return it to us together with a sample form of citation? A second copy of the questionnaire is attached for your own use and reference.

We will, of course, be happy to send you the results of our statewide survey when it is completed. If you have any questions concerning this request, please do not hesitate to write or call our committee consultant at 445-8528 in Sacramento."

Court Reports: The other method was designed to seek information from the courts. The Bureau of Criminal Statistics of the State of California Department of Justice in the Division of Law Enforcement annually publishes reports concerned with crime in California. The data which was desired by the committee was not routinely collected by the Bureau of Criminal Statistics but because of well established lines of communication with the court and the necessary data

processing equipment it was felt that with some small assistance from the committee a special study could be made concerning both the use of citations and of bail schedules. Chairman Winton by letter to Justice Stanley Mosk formerly Attorney General and Director of the Department of Justice outlined the committee's interest and accordingly four questions related to the use of citations were incorporated in a larger pilot survey of California bail procedures. A staff associate was employed on a part-time basis to compile the special data being requested by the committee.

Limitations: The findings and observations based on the findings are limited to the data contained on questionnaires which were actually returned by the departments. By October 1964 a total of 174 replies from the police survey had been received. The number returned then constituted 44.85 percent of the total sent, and a second followup letter had been used in an endeavor to secure a higher return.

A higher percentage of return was received from the questionnaires sent to the courts. A total of 421 were sent and there were 286 responses or about 68 percent. A return by July 22, 1964, was requested, but actually returns were tabulated until September 14, 1964. Of possible related interest, in spite of the followup letters copies of bail schedules could not be obtained from 25 out of 58 California counties.

Further, in response to the question

“Does a schedule exist within your jurisdiction which designates types of offenses, for which citations other than traffic may be utilized?”

95 judges answered “yes” and 158 “no.” In only 2 of the 24 counties in which their courts were located was this practice uniform. For example, in one county four responded “yes” and five with a “no.” The lack of uniformity may not indicate that such a schedule does not exist since a “no” response leaves the possibility that the schedule simply includes traffic offenses. Nevertheless, it may explain why in the police survey confusion was often expressed concerning the specific offenses for which citations could be utilized. In fact, 12 cities in 2 counties indicated an established procedure for using citations and yet the judges answered the above question negatively.

Interpretations of data from the police survey were complicated by the fact that some respondents listed a variety of local and city ordinances as well as those offenses specified as misdemeanors under the state law sections in the Penal Code. Some departments also listed citations issued for offenses contained in state codes other than the Penal Code, such as the Vehicle Code and Business and Professions Code which includes violations of the Alcoholic Beverage Control Act.

The actual population of the 174 cities which returned the questionnaire amounted to 8,068,836 of the total state population or 45.6 percent. The unreported population areas in addition to covering the 214 police jurisdictions that did not respond to the inquiry also included the 58 sheriffs' departments with responsibility over the unincorporated areas. Some portion of this latter area was, however, covered by the inquiry to the courts through the Bureau of Criminal Statistics. The Juvenile Court Law provides for a separate citation procedure to be

utilized for juveniles; therefore, that portion of the state population under 18 years of age might also well be excluded from any interpretations of the use of Penal Code based citations.

Findings: Compilations of data from the 174 returned questionnaires revealed that very few police departments in California have either used or formulated a working procedure for implementation of Penal Code Section 853.6. A total of 72 departments stated that they had established a procedure for arrest by citation, but only 58 or one-third of those responding had actually used it. It might well be assumed that a department which was not using the citation procedure, did not respond. If this is true, then only 15 percent of all police departments in the state had used the process.

The questionnaire requested a report on the number of citations issued between January 1, 1963, and June 30, 1963. The departments reported a total of 2,351, ranging from a single citation to 470. If the citations for traffic violations, local ordinances, and state codes other than the Penal Code are excluded, the total number is reduced to 375. In order to appreciate the significance of this figure it should be remembered that for an equivalent six months' period in 1963 there were about 297,996 misdemeanor arrests in California, and 375 is one-tenth of 1 percent of this number. It may be safely concluded that there is a minimal use of the citation procedure in California under Section 853.6. It is used exceptionally and experimentally by very few police departments, and it does not constitute a regular and definite procedure for law enforcement in general. A review of the Penal Code offenses for which citations were issued again indicates wide variation and includes 15 misdemeanors as follows:

<i>Number of Departments</i>	<i>Offenses</i>	<i>Penal Code Section</i>
24	Petty theft -----	488
21	Disturbing the peace -----	415
17	Disorderly conduct, intoxication -----	647f
8	Larceny (theft) -----	484
7	Malicious mischief -----	594
3	Disorderly conduct -----	647
2	Crimes against the public health and safety -----	374
2	Battery -----	242
1	Assault -----	240
1	Refusing to disperse upon lawful command -----	416
1	Issuing bank check with intent to defraud -----	476a
1	Indecent exposure -----	314
1	Gaming -----	330
1	Sending letters threatening to expose another -----	650
1	Trespass -----	602a

Dishonored Citations: The extensive use of citations for overtime parking violations and as "traffic tickets" may have lowered in the public mind the status of this procedure particularly considering the number of "dishonored" citations for such offenses. On the other hand, from the data received from the questionnaires it appears that for citations which departments claim to have issued on state law misdemeanors the number of actual appearances has been exceptionally high. The departments in reporting the number of citations, and this figure includes all the citations issued for all offenses reported on the question-

naires, was 2,351. Out of this number the departments reported only 110 did not result in an appearance which is 4.6 percent.

Police Comments: Some of the general comments attached to the questionnaires include the following statements from different departments:

- A. "The reason we do not use the citation in lieu of arrest is that our local district attorney prefers that we do not. It is my opinion that it could be used to advantage in many cases, however, we bow to his request."
- B. "The statute serves its purpose by permitting hardship cases, where person unable to raise bail for their release, to be released by a police officer when he believes that the defendant would abide by the rules of the statute."
- C. "Citations are issued for traffic offenses and for juveniles only. Issuing citations for other offenses will in my opinion lead to more warrants being issued for failure to appear and this department is overburdened with warrant service."
- D. "It is my opinion that this procedure is very convenient to the recipient as well as being a very effective time-saving tool for law enforcement. I feel quite strongly that the section should remain as it is in regard to giving the officer the option."
- E. "Many circumstances arise wherein a person arrested for violation of a state law could, very properly, be released immediately upon his written promise to appear. However, if an immediate release is made, we are precluded from obtaining the definite identification provided by fingerprints, etc."
- F. "Our law enforcement association has agreed to participate in a survey of trial enforcement under Section 853.6. Therefore, we will become a part of this program in our future arrest procedures."
- G. "We are at a loss to determine what offenses under Penal Code, Business and Professions Code, Health and Safety Code, etc., on which we would be authorized to write such citations and under what circumstances."
- H. "It appears to me that courts and district attorneys are not particularly interested in placing this system in operation."
- I. "We do not have any specific form to use even if citations were to be issued in this area."
- J. "This is good legislation. We have found it useful. Also I feel that it is *fair* to the first offender."
- K. "Our instructions are to use the citation method in cases of misdemeanors committed by persons whose reputations or community standing would be seriously damaged if arrested, constituting an undue hardship."
- L. "The citing procedure should not be used on persons that the officer believes will not appear, or when the officer believes justice will be better served if the person were detained."
- M. "We have found this section to be very satisfactory as it now stands. This section saves us a 25-mile round trip to the jail, and 25-mile round trip to the district attorney. Our record of guilty pleas has been very good on citations."

- N. "There are court jurisdictions who resist, to a degree, because of crowded agendas and lack of personnel."
- O. "We do not use it in cases where the accused is not a resident of the city and where, because of a failure to appear in compliance with the citation, it would be necessary to secure a warrant and return him from another part of the state."
- P. "It still provides us with a procedure which speeds the arrest and which is more equitable wherein the citizen is believed to be of reputable character and who it appears will comply with the appearance date on the citation rather than requiring a posting of bail before his release."
- Q. "We feel it far more effective to fingerprint and photograph persons arrested prior to their release and thereby avoid the possibility of missing a wanted person."
- R. "A conflict in reporting may arise as credit would not be received by departments for arrests recorded on citations in the monthly reports to the California Identification and Investigation Bureau and to the Federal Bureau of Investigation."

Court Comments: The following responses by various judges were taken from statements contained on the questionnaires returned with the bail schedules.

- 1. "This court takes issue with Section 853.6 P.C. In this court most misdemeanors are by people living in other sections of the state; quite often the mileage to their homes is 150 to 300 miles. For the arresting officer to release the violator to go home, after having had him in custody, merely on his promise to appear, without first requiring that bail be posted in adequate amount, is, in this judge's opinion, ridiculous. Many violators are wholly irresponsible. The ends of justice do not lie in acceptance of bail without court procedure."
- 2. "Bail and citations in my opinion should be left to the discretion of the jurisdiction."
- 3. "A jurisdiction on the border of another state faces a problem of failure to appear on a citation on their release on their own recognizance. The California Highway Patrol in lieu of returning the violator to the court or sheriff's office for the purpose of posting bail instructs him to communicate with the court, but rarely does he comply. Consequently, we have hundreds of warrants of arrest at issue."
- 4. "The police department has authority to 'OR' defendants, under state law, and in my area they are just beginning to use it."
- 5. "I feel that release on written promises to appear should be greatly expanded and the use of bail reduced, in the case of responsible residents within the district. Registration to vote might be a criteria for release without bail. Punishment for non-appearance should be severe."
- 6. "I believe that citations for nontraffic offenses should be used more often (minor misdemeanors) than is the practice currently in this area."
- 7. "This community has a rather large turnover of population due to the military base and the type of person who follows such

establishments. We have a heavy violation of written promises to appear on citations due to transfers and just plain trying to get away without appearing. It has been my experience that posting of bail is very important in this jurisdiction."

8. "Regarding citations, they are used in practically all cases involving violation of the Fish and Game Code. Except in extreme cases, bail forfeiture is permitted."
9. "In my opinion all law enforcement agencies should use the citation system rather than having various agencies differing. This is on the low misdemeanor level."
10. "It is our feeling, however, that citations could and should be used in all the areas where booking is now used in cases of non-violence. However, the booking procedure should not be used in crimes of violence and narcotics."

OBSERVATIONS ON FUTURE NEEDS

Guidance: The following comments from the police survey appear indicative of a feeling of need for some direction:

"We do hope that some uniform procedure will be adopted for the issuance of the specific citations and that a uniform set of citation forms will be developed."

"We suggest that an Attorney General's opinion be drafted and directed to all law enforcement agencies, including district attorneys' offices, wherein the legal processes should be outlined and any court cases in question be brought to attention. That a *sample procedure* be drafted by the Attorney General's office and submitted to all law enforcement agencies for recommended adherence. Departmental policy and procedure appears to be the problem area as on one occasion a disturbing the peace arrest by this department under the citation system did not meet with the approval of the district attorney's office."

Experimentation: This survey indicates that, in regard to citations for misdemeanors under state law, no further legislative action would be appropriate at this time. The problem is not one of legislation, but rather of implementation and education. The enactment of Section 853.6 in 1959 had no practical significance for the majority of police departments. The survey, however, has demonstrated that certain police departments are willing to experiment with citations for misdemeanors under state law provided that enough interest, concern and cooperation can be secured on a statewide level. The few law enforcement agencies which have attempted to implement the section complain generally about the lack of standard procedures and the problems of statistical reporting.

Additional studies in depth of individual departments for the purpose of understanding and appreciating the basis for resistance to this type of procedure might provide valuable factual data.

Institutes: The Administrative Office of the Courts of California recently conducted a conference, an institute, attended by municipal court judges. More experimental data such as has only been briefly touched upon in these surveys is needed to provide the basis for real-

istic discussions at these institutes. The staff of the Judicial Council and the Administrative Office of the Courts are well qualified to direct and participate in the preparation of such study materials. The conclusions from the proceedings of such conferences may well lead to more uniformity in practice and procedures as well as in an expanded use of the citation system.

Research: The very simple old-fashioned "pick-and-shovel" type of research which was the methodology of these surveys should point the way towards developing of electronic data processing techniques in the recording of all aspects of the administration of justice. Modern equipment will lead toward more rapid analysis, more valid and reliable results. Law enforcement agencies of the nine San Francisco Bay counties have been working on the applications of electronic data processing to problems of law enforcement for the past several years and within the past few months the County of Alameda has computerized its warrant file. It has also offered to make available to other jurisdictions the filing and servicing of a central warrant index. In its application to citations it should be self-evident that if there is a concern that a "wanted" person might escape apprehension an almost instantaneous identification clearance can be obtained by the officer on the basis of an inquiry processed through the computer. The International Business Machines office in Oakland has a specialist working on applications to law enforcement and from the Sacramento district office special state teams are working on applications to other aspects of law enforcement of concern to the Sacramento bureaus. They have equipment that can optically read forms, sort, classify, store, and evaluate information needed by law enforcement.

Legislative Action: The surveys briefly reported should be but the beginning of much larger research projects into the revealed administrative problems to the end that more facts can be made available for study by conferences of the courts and law enforcement agencies. Progress can be based, not on projections from small samples, but actual experimentation by the operating team, the police and the courts. Then and only then should legislative action take place; action oriented toward improving the functioning of the law and the administration of justice.

III. BAIL SURVEY

Scope: Operational research in New York City in the Manhattan Bail Project and in several other eastern and midwestern cities indicated considerable success with pretrial release of defendants on their own recognizance (O.R.). The committee felt that as a necessary prerequisite to any legislative action in this area, factual data concerning bail procedures in California should be accumulated and evaluated. The project was divided in two parts. One which examined in detail court dispositions for a two-week period in San Francisco and the second portion was an attempt to gather on a statewide basis data concerning bail schedules established for criminal offenses.

San Francisco: The San Francisco Bar Association and the municipal courts, with the cooperation of the police department and the

office of the district attorney, secured financial support from the San Francisco foundation for an analysis of the practices and procedures in San Francisco related to use of bail. The specific aims of this project are:

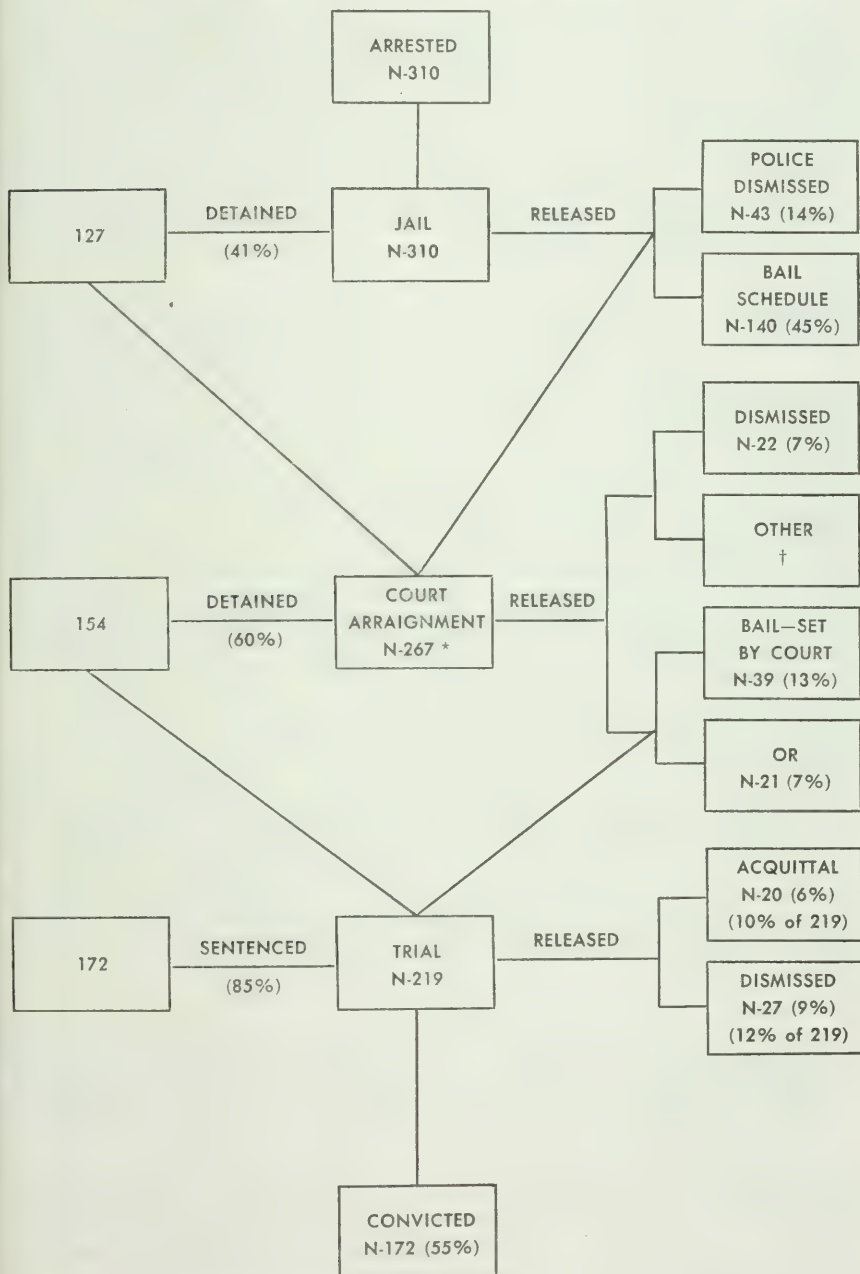

1. *Extend* the preliminary findings of the Manhattan Bail Project to an evaluation of bail procedure in California.
2. *Explore* the value of other selected criteria in accordance with the characteristics of the arrested population in California.
3. *Record* demographic data concerning a section of the population who has by their arrests given evidence of possible antisocial behavior.
4. *Develop* a computer program primarily for (a) manipulation of the data for this project by electronic processing and (b) suitable for replicating this study for other time periods or geographical areas.

In order that facts could be obtained concerning the use of pretrial O.R. releases prior to the establishment of the new project, an analysis was made of court actions over a two-week period in August of 1963.

The data recorded concerned those misdemeanors and felonies, including traffic, which would be of primary interest to the bail project. As a further limitation, mental cases, drunks, persons arrested on bench warrants, having detainers or booked on route to another jurisdiction were excluded. The committee provided student research assistance for correction, recording and tabulation of data.

DISPOSITION

San Francisco Misdemeanor and Felony Arrests (Male and Female)
(Excluding Traffic)—Two Weeks, August 1963

* Arraignment and Trial may occur at same session.

† There were 26 "unknowns" and Bench Warrants which reduced this figure.

In Table, p. 105, the disposition of San Francisco misdemeanor and felony arrests for approximately a two-week period in August 1963 is reported. It can be noted that there was a 25 percent increase in the number detained after court arraignment. At the time of arrest, 45 percent were able to be released in accordance with a bail schedule, but only 39 or 13 percent were able to afford release on bail as set by the court at time of court arraignment. All studies have indicated a direct relationship between the number of persons retained in jail and the amount of bail that it was necessary to have posted for their release pending trial. The second portion of this survey, then, turned to an examination on a statewide basis of not only the range of bail established for various offenses but how the exact amount was determined and some indication as the purpose the court felt should be served by the bail procedure.

Statewide: The committee, through the office of the Attorney General, secured the assistance of the Bureau of Criminal Statistics of the Department of Justice in the collection of facts relative to the administration of bail in the courts of the state. In view of the fact that such data is not routinely collected by the bureau, the committee provided additional research assistance for the purpose of recording and tabulating the questionnaire responses. The cover letter, questionnaire and followup letter are shown in Appendices III and IV. The return of bail schedules was incomplete, even after followup letters, and many schedules were incomplete for various offenses. Because some of these schedules failed to specify bail for intoxication as being either ordinance or Penal Code violations, it is shown apart from the other codes. The felony bail schedules were few in number and were not posted for that reason. The misdemeanor bails shown include the state assessment.

Questionnaire Results: Some of the responses to questions are shown in Table, pp. 114-117. The letters in the left margin refer to a specific question in the questionnaire shown in Appendix IV. The numbers 1, 2 and 3 and the headings under municipal court and justice court indicate the volume of work of the particular court. The first four questions, A through D, are related to the citation portion of the survey previously discussed in this report. The responses related to bail practices begin with Question E. In the following commentary, the query is shown in bold face type preceding the statement concerning the response.

Commentary

- E. Does the misdemeanor bail schedule adopted by your jurisdiction provide for fixing a minimum and maximum amount of required bail, as opposed to one fixed amount for each class of offense?**
(1) Yes. (2) No.

A fixed amount for each offense was established in the bail schedule by only 10 percent of the responding courts, and 21 of these 25 were justice courts. In the other 90 percent, a sliding bail schedule fixing a minimum and maximum amount of required bail was the practice. There was almost a 100 percent response to this question, since only 7 out of the 252 responses to this question were left blank.

F. If a misdemeanor sliding bail schedule is used, at the point of a defendant being booked who decides the actual amount of bail to be imposed? (1) Jailer. (2) Arresting officer. (3) Other—please specify.

This question was used to determine how the exact amount, along a permissible sliding scale, was determined as the appropriate amount for bail. At the outset it should be noted that with respect to this particular question, 78 percent of the judges failed to answer this question. The 57 (22 percent) that did, in one-half of their responses indicated that the jailer fixed the amount. In 12 percent the arresting officer, and in 36 percent of the time some other person.

G. Is it your observation in using a sliding bail schedule, that bail tends to be set toward the (1) Maximum? (2) Minimum?

There was an even poorer response to the above question since 80 percent of the time this question was left blank. The 47 responses were divided 60 percent towards the belief that bail would be set towards the maximum and 40 percent towards the minimum.

H. Does your jurisdiction provide a felony bail schedule applicable to a felony arrest made without a warrant having been issued? (1) Yes. (2) No.

There was a reasonably good response to this question with over 80 percent, however, indicating a negative response and only 18.5 percent of the courts apparently having a bail schedule for felony cases where arrests are made without warrants having been issued.

I. If your jurisdiction does not have a felony bail schedule, is bail set by the court in a session held prior to the time of preliminary hearing? (1) Yes. (2) No.

There were about 75 percent of the courts that responded to this question and almost 90 percent indicated an affirmative answer. The majority of the courts not setting bail prior to the preliminary hearing were justice courts.

J. Do superior court judges within your jurisdiction customarily modify prearrestment bail following superior court arraignment? (1) Yes. (2) No.

The response to this question again was poor as only 65 percent of the courts replied and they were divided with 18 percent indicating modification of the prearrestment bail and 82 percent reporting no modification. It can thus be seen that with a sliding bail schedule the method of initial determination of the amount of bail becomes extremely important to the defendant.

K. If bail is customarily modified at that time, is the modification usually in the direction of (1) Bail increase? (2) Bail decrease?

Again in this question we find an extremely poor response from the courts wherein 80 percent (28) did not wish to venture an opinion concerning this question. Of the 51 responses, 12 percent felt that bail would be increased, but 88 percent indicated the modification would be in the direction of a bail decrease.

L. What are the criteria used for establishing/revising the bail schedule in your jurisdictions?

The responses to this question have been grouped under general factors and will be discussed more completely at the conclusion of this commentary.

M. Are the opinions of persons other than judges considered in establishing/revising bail schedules in your jurisdictions? (1) Yes. (2) No.

There was good response to this question, 58 percent (139) indicating that the judges alone without the opinions of other persons establish the bail schedules. There were 42 percent, however, that did seek the opinions of other persons.

N. If persons other than judges are consulted in relation to bail schedule revision, are they (check one or more) (1) Court clerks? (2) Law enforcement agencies? (3) District attorney? (4) Public defender? (5) Other? (Please specify.)

This question was left blank by about 60 percent (153). Several alternate questions could be checked in the response, so the rank order of importance as determined by the total number of checks appears to be first consultation with law enforcement agencies closely followed by district attorneys, then court clerks, public defenders and other persons when other judges are excluded.

Own Recognizance

O. Does your jurisdiction grant releases on own recognizance for misdemeanor offenses? (1) Yes. (2) No.

There were only 9 out of 259 courts that did not respond to this question, and 97 percent indicated an affirmative reply concerning the use of releases on persons' own recognizance.

P. If your jurisdiction grants the release of misdemeanor defendants on own recognizance, will the release be authorized (1) Either prior to or following court appearance, depending on circumstances? (2) Never prior to court appearance?

A similar high response was received on this question with about one-third indicating that an OR release is not permitted prior to court appearance. It is this type of release that the Manhattan Bail Project in New York City has demonstrated can be successfully utilized and that the San Francisco project is in the process of confirming as a successful procedure in that area.

R. If your jurisdiction permits the release of a felony defendant on his own recognizance, will the release be authorized (1) Either prior to or following court appearance, depending on circumstances? (2) Never prior to court appearance?

Again, there is only about a 50 percent response to this question of which two-thirds indicated that a felony defendant would never be released prior to his court appearance and on his own recognizance.

S. Will your jurisdiction authorize daytime release (with nighttime custody) of defendants awaiting trial? (1) Yes. (2) No.

The responding courts in 87 percent of the cases indicated that daytime release with nighttime custody would not be permitted.

T. Will a third party be permitted to assume responsibility for appearance of a defendant without being required to file a cash or property bond? (1) Yes. (2) No.

A third party assumption of responsibility for the appearance of a defendant without a bond or cash surety would not be authorized in about three-fourths of the responding courts.

U. If your jurisdiction permits release on defendant's own recognizance, is this done (1) Formally—with established procedures for assessing risk of releasing the defendant? (2) Informally—without established procedures but with reliance on information provided by police, prosecuting and defense attorneys?

The procedure for releasing a defendant on his own recognizance is formally established in about 30 percent of the cases and is only informally handled in 70 percent of the responding courts.

V. If your present procedures for granting OR releases are informal, do you believe that a formal screening agency, by providing more information, might help you in your assessment of the desirability of an OR release? (1) Yes. (2) No.

The responding courts were about equally divided as to the desirability of having the benefit of a more formal screening or assistance from an agency in determining OR releases.

W. If in your opinion a screening agency would be of value, which of the following would be best qualified to provide the factual data you need to properly assess the risk in "own recognizance" releases? (1) Probation department. (2) Police department. (3) Prosecuting attorney. (4) Public defender. (5) Other—please specify.

Again, in this question, a little less than half of the courts left this question blank. The 193 that responded suggested the probation department (41.5 percent); police department (29.0 percent); prosecuting attorney (17.6 percent); public defender (6.7 percent); and other (5.2 percent).

CRITERIA FOR BAIL SCHEDULES

The following are verbatim statements which were made in answering Question L, "What are the criteria used for establishing or revising the bail schedule in your jurisdiction?" The responses are grouped under categories determined by selecting key words out of the phrases used by the courts. Each quoted statement is from a different court though not necessarily from different counties or court districts. The most frequently named criteria was the type of offense with comments as follows:

The principal criterion in establishing the bail schedule is the seriousness of the particular *offense*.

Current trend in types of violations being committed; seriousness of the alleged *offense*.

Seriousness of *offense* from the standpoint of threat to public's safety.

The gravity of the statutory *offense* against society commensurate with penalty set forth in the Code.

Gravity of the *offense*. Bail customarily being synonymous with the fine ultimately imposed.

Seriousness of *offense*, frequency of violations, causes or factors involved in local traffic problems and accidents. Check bail schedules of other areas throughout the state and usually use an average bail.

Based upon the seriousness of the *offense*.

Depends on the nature of the *crime*.

Adequacy of bail to effect compliance—severity of *offense*.

Nature and gravity of the *offense*.

Type of *offense*; severity of offense; minimums and maximums set by governing codes; what a fine might be for same offense if there were a plea of guilty and after consideration of circumstances. In most cases, bail is the same as a *fine* would be. However, after circumstances are known, fine might be higher or lower than bail.

Serious nature of *offense*; approximate usual fines in traffic categories.

In traffic cases where bail forfeitures are generally accepted, bail is generally set at a maximum of a fine. In other cases they are set upon the basis of the seriousness of the crime based upon the consensus of the experience of the judges.

Consideration is given to the seriousness of each *offense* and if a possible bail forfeiture is to be permitted.

Nature of *offense* and bail as set by other courts in similar cases.

Judges in joint session classify *offenses* in terms of gravity, based on potential hazard to public and the extent of antisocial venture—ment evinced by offense.

The next most frequently mentioned criteria was the frequency of violation, some listed in combination with seriousness of the offense, as is shown by the following comments:

Frequency of violation incident, both as to repeaters individually and general.

Experience as to frequency of *offenses*, seriousness and traffic conditions.

Severity and frequency of *offense*.

Bail schedules of other counties; seriousness of section involved; and review of sections in each judicial district which are most frequently *violated* and/or are the cause of accidents.

We usually try to conform to other statewide courts. We take into consideration the *volume of occurrences* of each *offense*.

Seriousness of offense; frequency of violation.

The *frequency* of the *offense*; whether it is accident causing in traffic situations; the potential for injury or physical harm; the willfulness of the *offense*.

Next in order of apparent importance was the question of equating the amount of bail with the fine which would be imposed after determination of guilt of the defendant. This position is reflected by the following comments:

Average of usual *fine* imposed.

Usually keep it at about the same amount the *fine* would be.

The amount which if the defendant fails to appear will be adequate as a maximum *fine*.

Basically to parallel the *fine*.

Bail is set in relation to the average *penalty* that may be imposed in a given case.

In two instances, the criteria for the bail schedule was conditioned by area considerations as is indicated in the following comments:

Since this is the only justice court in this county, this judge feels that in fairness to the public the bail schedule should be established by more than one judge. Therefore, this court has adopted and uses the bail schedule prepared by the justice court judges of our sister county (named).

Conditions peculiar to this *area*. For example, condition of local roads; distance from nearest jail; traffic conditions on the river.

In one instance, it was reported that one criterion for changing the bail schedule might stem from offending citizens.

Changes are not made unless some substantial dissatisfaction has been expressed as to a particular bail amount. The expression of dissatisfaction might come from anyone including citizens who have had to post bail.

Another interesting purpose for bail is apparently the belief of one court of its deterrent effect on crime. The court indicates in the following statement that the amount of bail is increased in relationship to higher accident incidents.

Bail schedule primarily relates to traffic violations. In revising schedule account is taken of increase or decrease in particular type of offense and the relationship of the offense to accidents in the jurisdiction e.g. Failure to yield and higher accident incident equals increased bail (based on the hope of *deterrent effect*). The foregoing factor is considered in situations where it is likely that the defendant will forfeit bail rather than appear. Consideration is also given to whether a mandatory appearance is necessary e.g. drunk driving, comparison with bail in other jurisdictions, and where personal information is available concerning defendant, his ability to post bail.

A number of comments combined several of the above criteria in an attempt to relate these to the probability of a defendant appearing in court, as indicated by the following comments:

To insure defendant's *appearance in court*; severity of offense. Based entirely on need to assure appearance in court and to indicate the minimum *fine* to the defendant.

We try to set bail at the very minimum that will guarantee the subjects *appearance in court*.

The experience that we have had during the past year in non-appearance of defendant's where it has been necessary to increase bail and issue bench warrants to guarantee appearance.

Seriousness of charge, information or lack of information on accused. Certainty or lack of certainty of his likelihood *to appear*.

Risk of failure to appear in view of seriousness of charge; gravity of average offense where bail can be forfeited without appearance.

There is an annual meeting of judges countywide and a uniform bail schedule is adopted. Criterion depends on type of *crime* and past experience of success of defendants showing for court appearances.

Seriousness of *crime*; relation, if any, between nature of offense and possibility of defendant's appearance in court as required; and in the revising of schedule, past performance of defendants appearing is considered.

Uniformity—to other jurisdictions. Seriousness of violations and frequency of occurrence in jurisdiction. Character of *individual* and record dictate what to apply.

The response from one superior court was unique in that it linked factors other than the offense together with the probability of the appearance in court such as social or family ties in the community.

Superior court does not use a schedule. We consider the offense, employment and length of residence of defendant in the area, his ownership of property, family and other *ties* in considering the risk of nonappearance and fixing bail.

A considerable number of the responses by the courts indicated that there were meetings of judges held for the purpose of establishing the bail schedules as required by Section 1269b of the *Penal Code*. Since the code requires such an annual meeting, it is difficult to understand why copies of such schedules could not be obtained from every county of the state. One explanation might be found in the following comment which was received from one judge:

"Undersigned appointed to bench September 1962. Since that time to my knowledge there have been no formal meeting of justice court judges and municipal court judges for specific purpose of revising or amending bail schedule. *We are using one dated May 1964, however.*"

The National Conference on Bail and Criminal Justice in the publication, *Bail in the United States: 1964*, stated:

“The bail system in the United States determines whether an accused person in a criminal proceeding will be released or jailed in the period between his arrest and trial. In the typical case, the accused is brought by the police before a committee magistrate or judge who will set bail in a monetary amount. The legal theory underlying this procedure is that the bail will be sufficient to insure the appearance of the defendant at trial. If he is able to post bond in the bail amount, or to pay bondsman to post it for him, the accused is released. If he is financially unable to make bail, he is detained in jail.

Each year, the freedom of hundreds of thousands of persons charged with crime hinges upon their ability to raise the money necessary for bail. Those who go free on bail are released not because they are innocent but because they can buy their liberty. The balance are detained, not because they are guilty, but because they are poor. Though the accused be harmless, and have a home, family and job which make it likely that—if released—he would show up for trial, he would still be held. Conversely, the habitual offender who may be dangerous to the safety of the community, may gain his release.” (V.I.I.)

The California *Penal Code* in Section 1275 provides:

“In fixing the amount of bail, the judge or magistrate shall take into consideration the seriousness of the offense charged, the previous criminal record of the defendant, and the probability of his appearing at the trial or hearing of the case. No bail bond shall be accepted unless the judge or magistrate be convinced that no portion of the consideration, pledge, security, deposit or indemnification paid, given, made, or promised for its execution was feloniously obtained by the defendant.”

BAIL PROCEDURES **By Item, Court, and Caseload With Percentages of Total Response**

APPENDICES

APPENDIX I

Committee Recommended Legislation, A.B. 871

An act to amend Section 1269b of the Penal Code, relating to bail.

The people of the State of California do enact as follows:

SECTION 1. Section 1269b of the Penal Code is amended to read:
1269b. The officer in charge of a jail wherein an arrested person is held in custody and the clerk of the justice or municipal court of the judicial district in which the offense was alleged to have been committed and the clerk of the superior court in which the case against the defendant is pending shall have authority to approve and accept bail in such amount as fixed by the warrant of arrest or schedule of bail or order admitting to bail in cash or surety bond executed by a certified, admitted surety insurer as provided in the Insurance Code, to issue and sign an order for the release of the arrested person, and to set a time and place for the appearance of the arrested person before the appropriate court and give notice thereof, as follows:

(a) For appearance before the court of an arrested person who has been arrested for having committed a misdemeanor and is being held in custody prior to the filing of a formal complaint, and for appearance before the court of a defendant charged with a misdemeanor by a formal complaint filed in the court. If a defendant has appeared before a judge of the court on the charge contained in the complaint the bail shall be in the amount fixed by such judge at the time of such appearance; if no such appearance has been made the bail shall be in the amount fixed in the warrant of arrest or, if no warrant of arrest has been issued, the amount of bail shall be pursuant to a schedule of bail in such case previously fixed and approved by the judge or judges of the court of the judicial district in which the offense is alleged to have been committed.

(b) For appearance before the court of a defendant charged with a felony by a formal complaint filed in court. If a defendant has appeared before a judge of the court on the charge contained in the complaint, the bail shall be in the amount fixed by such judge at the time of such appearance; if no such appearance has been made the bail shall be in the amount fixed in the warrant of arrest.

(c) It is the duty of the municipal and justice court judges in each county to prepare and adopt, by a majority vote, a schedule of bail for all misdemeanor offenses. It shall contain a list of such misdemeanor offenses and the amounts of bail applicable thereto as the judges determine to be appropriate, and, if it does not list all misdemeanor offenses specifically, it shall contain a general clause providing for a designated amount of bail as the judges of the county determine to be appropriate for all misdemeanor offenses not specifically listed in the schedule. The schedule of bail may be revised from time to time by the judges of the county, and the senior judge at each county seat shall call not more

than two or less than one meeting each year of all municipal and justice court judges in the county for the purpose of establishing or revising a countywide uniform bail schedule. A copy of the schedule shall be sent to the officer in charge of the county jail ~~and~~, to the officer in charge of each city jail within the county, *and to the Judicial Council of the State of California.*

Upon posting such bail the defendant or arrested person shall be discharged from custody as to the offense on which the bail is posted.

All money and surety bonds so deposited with such officer shall be transmitted immediately to the judge or clerk of the court by which the order was made or warrant issued or bail schedule fixed.

If a defendant or arrested person so released fails to appear at the time and in the court so ordered upon his release from custody, the court before which he was ordered to appear may forfeit the cash bail or surety bond, with or without issuing a warrant, and if the bail is a surety bond the surety company is obligated as provided by Section 1306 of the Penal Code, subject to the right of the court to set aside the forfeiture as provided by law.

Legislative Counsel's Digest

Amends Sec. 1269b, Pen.C.

Requires copy of bail schedule for all misdemeanor offenses to be sent to Judicial Council of State of California, as well as to the officers in charge of city and county jails within the county.

APPENDIX III

STATE OF CALIFORNIA

Stanley Mosk
Attorney General

Fred A. Knoles
Chief of Bureau

BUREAU OF CRIMINAL STATISTICS
DEPARTMENT OF JUSTICE
2700 Meadowview Road, Sacramento

Mail Address:
P.O. Box 1583
Sacramento 95807

August 3, 1964

The California State Assembly Committee on Criminal Procedure is very anxious to have the benefit of the experience and thoughts of the California judiciary on the subjects of bail and OR release. A large number of responses to our letter of July 7 asking for the answers to several specific questions and for general comments have been received from justice, municipal and superior courts. Compilation of the returns has commenced.

You will realize that the value of the results of an inquiry of this kind (in a field in which practices are quite variant) is in direct proportion to the volume of responses. We need yours.

We hope that you may be able quite soon to return the questionnaire and a bail schedule.

FRED A. KNOLES
Chief of Bureau

Stanley Mosk
Attorney General

STATE OF CALIFORNIA

Fred A. Knoles
Chief of Bureau

BUREAU OF CRIMINAL STATISTICS
DEPARTMENT OF JUSTICE
2700 Meadowview Road, Sacramento

Mail Address:
P.O. Box 1583
Sacramento 95807

July 7, 1964

The California State Assembly Committee on Criminal Procedure has sought the assistance of Attorney General Mosk, through the agency of this bureau, in collecting a few basic facts relative to the administration of bail in the courts of this state.

Bail practices are presently the subject of inquiry and controlled experiment in a number of jurisdictions at federal and state level. In their consideration of the matter, the committee found themselves hampered by the fact that there is no up-to-date body of objective information relating to bail practices in California. This lack, the bureau hopes to meet with the assistance of the public officers directly responsible—the judiciary.

The inquiry is intended to be factual and noncritical. Responses will be accorded the utmost confidentiality possible in the light of the public positions of inquirer and respondent.

The enclosed questionnaire has been prepared for your convenience. We shall appreciate your response to the questions and any comments you may care to make relative to the present inquiry or the situation that it is designed to explore. We hope you will be able to reply before July 22, 1964.

FRED A. KNOLES
Chief of Bureau

Chief of Bureau

BUREAU OF CRIMINAL STATISTICS
DEPARTMENT OF JUSTICE
2700 Meadowview Road, Sacramento

Mail Address:
P.O. Box 1583
Sacramento 95807

July 7, 1964

We are enclosing a questionnaire and cover letter which have been sent to the presiding judges of municipal courts and to the individual judges of justice courts.

This inquiry has been generally directed to judges of the judicial district courts, as courts of original jurisdiction in misdemeanor offenses. However, since your court has original jurisdiction over the so-called "high" misdemeanors, it becomes appropriate to ask you to fill out the questionnaire, which deals largely with misdemeanor bail practices.

However, we have also directed copies of the inquiry to the presiding judge of each superior court so that the committee may have the benefit of their comments, even though their response to the detailed questionnaire might be repetitive in their county.

FRED A. KNOLES

Sacramento 95807

July 7, 1964

We are enclosing a questionnaire and cover letter which have been sent to the presiding judges of municipal courts and to the individual judges of justice courts.

While the area under examination appears to be most appropriately studied through the judicial district courts, we wish to avail ourselves of the experience of the superior court judges. We would very much appreciate your response to the items asking for comments, as well as your comments on any other factors in the bail situation, whether covered by questions in the schedule or not.

FRED A. KNOLES
Chief of Bureau

APPENDIX IV

State Department of Justice Bureau of Criminal Statistics

PILOT SURVEY OF CALIFORNIA BAIL PROCEDURES

The Bureau of Criminal Statistics will tabulate your response to the following questions. While this material is related primarily to municipal and justice courts, the section on felony bail and release practices involve superior courts who will be sent a separate questionnaire.

One further tabulation will involve bail schedules, and the bureau asks that you submit, with the completed questionnaire, a copy of the current bail schedule used by the various detention facilities in your jurisdiction.

Any other comments that you wish to make will be collated and forwarded verbatim to the legislative committee.

Citations

- A. Are citations for other than traffic offenses ever used in lieu of physical detention for misdemeanor arrests within your jurisdiction? If so, how frequently? (Check appropriate line.)
- ☐ 1. Less than one citation for every 10 arrests.
 - ☐ 2. Less than one citation for every 100 arrests.
 - ☐ 3. Less than one citation for every 500 arrests.
 - ☐ 4. Never.
- B. Does a schedule exist within your jurisdiction which designates types of offenses for which citations other than traffic may be utilized?
- ☐ 1. Yes.
 - ☐ 2. No.
- C. If there is a schedule, which of the following general offenses are included in citation use?
- ☐ 1. Assaults.
 - ☐ 2. Disturbing peace.
 - ☐ 3. Petty thefts.
 - ☐ 4. Drunk.
 - ☐ 5. Drunk driving.
 - ☐ 6. Other minor misdemeanors.
 - ☐ 7. Ordinances.
- D. If misdemeanor citations for other than traffic arrests are used, indicate in the appropriate box as to whether bail forfeitures without further proceedings are permitted on misdemeanor citations checked in question (3).
- ☐ 1. All?
 - ☐ 2. Some?
 - ☐ 3. None?

Bail Practices

- E. Does the misdemeanor bail schedule adopted by your jurisdiction provide for fixing a minimum and maximum amount of required bail, as opposed to one fixed amount for each class of offense?
- ☐ 1. Yes.
- ☐ 2. No.
- F. If a misdemeanor sliding bail schedule is used, at the point of a defendant being booked, who decides the actual amount of bail to be imposed?
- ☐ 1. Jailer.
- ☐ 2. Arresting officer.
- ☐ 3. Other—please specify _____
- G. Is it your observation in using a sliding bail schedule, that bail tends to be set toward the
- ☐ 1. Maximum?
- ☐ 2. Minimum?
- H. Does your jurisdiction provide a felony bail schedule applicable to a felony arrest made without a warrant having been issued?
- ☐ 1. Yes.
- ☐ 2. No.
- I. If your jurisdiction does not have a felony bail schedule, is bail set by the court in a session held prior to the time of preliminary hearing?
- ☐ 1. Yes.
- ☐ 2. No.
- J. Do superior court judges within your jurisdiction customarily modify prearrestment bail following superior court arraignment?
- ☐ 1. Yes.
- ☐ 2. No.
- K. If bail is customarily modified at that time, is the modification usually in the direction of
- ☐ 1. Bail increase?
- ☐ 2. Bail decrease?

Bail Schedules

- L. What are the criteria used for establishing/revising the bail schedule in your jurisdiction?
- _____
- _____
- _____
- _____
- _____
- M. Are the opinions of persons other than judges considered in establishing/revising bail schedules in your jurisdiction?
- ☐ 1. Yes.
- ☐ 2. No.

N. If persons other than judges are consulted in relation to bail schedule revision are they (check one or more)

- ☐ 1. Court clerks?
- ☐ 2. Law enforcement agencies?
- ☐ 3. District attorney?
- ☐ 4. Public defender?
- ☐ 5. Other? (Please specify) _____

Own Recognizance

O. Does your jurisdiction grant releases on own recognizance for misdemeanor offenses?

- ☐ 1. Yes.
- ☐ 2. No.

P. If your jurisdiction grants the release of misdemeanor defendants on own recognizance, will the release be authorized

- ☐ 1. Either prior to or following court appearance, depending on circumstances?
- ☐ 2. Never prior to court appearance?

Q. Does your jurisdiction permit releases on own recognizance where bailable felony charges are involved?

- ☐ 1. Yes.
- ☐ 2. No.

R. If your jurisdiction permits the release of a felony defendant on own recognizance, will the release be authorized

- ☐ 1. Either prior to or following court appearance, depending on circumstances?
- ☐ 2. Never prior to court appearance?

S. Will your jurisdiction authorize daytime release (with night time custody) of defendants awaiting trial?

- ☐ 1. Yes.
- ☐ 2. No.

T. Will a third party be permitted to assume responsibility for appearance of a defendant without being required to file a cash or property bond?

- ☐ 1. Yes.
- ☐ 2. No.

U. If your jurisdiction permits release on defendant's own recognizance, is this done

- ☐ 1. Formally—with established procedures for assessing risk of releasing the defendant?
- ☐ 2. Informally—without established procedures but with reliance on information provided by police, prosecuting and defense attorneys?

Comments

V. If your present procedures for granting OR releases are informal, do you believe that a formal screening agency, by providing more information, might help you in your assessment of the desirability of an OR release?

- ☐ 1. Yes.
- ☐ 2. No.

HOUSE RESOLUTION NO. 500

(ASSEMBLY JOURNAL, JUNE 11, 1963, PAGE 5232)

Relative to constituting certain standing committees of the Assembly as interim committees

Resolved by the Assembly of the State of California as follows:

1. The following standing committees of the Assembly are hereby constituted Assembly interim committees and are authorized and directed to ascertain, study and analyze all facts relating to (1) the subjects and matters assigned to them by this resolution; (2) any subjects or matters referred to them by the Assembly; (3) any subjects or matters related to (1) or (2) which the Committee on Rules shall assign to them upon request of the Assembly or upon its own initiative:

(1) The Committee on Judiciary is assigned the subject matter in the Civil Code, the Code of Civil Procedure and the Probate Code, uncodified laws relating to civil matters, and other matters relating to the civil law and procedure of the State.

LETTER OF TRANSMITTAL

ASSEMBLY JUDICIARY COMMITTEE
January 11, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly, and
Members of the Assembly
Assembly Chamber, State Capitol
Sacramento, California

Gentlemen:

Your Interim Committee on Judiciary, in accordance with your instructions, herewith respectfully submits a report on the following matters:

Discovery in Administrative Proceedings
Nomination of Administrators of Estates
Proposed Statute of Limitations Affecting Improvements to Real Property
Court Reporter Compensation
Comparative Negligence
Reduction of Jurors in Civil Matters
Repeal of Guest Statute
Court Consolidation—Los Angeles County Municipal and Justice Courts Attachments, Garnishments and Exemptions

Respectfully submitted,

GEORGE A. WILLSON, *Chairman*
HARVEY JOHNSON, *Vice Chairman*

WILLIAM T. BAGLEY ¹
GEORGE E. DANIELSON
WILLIAM E. DANNEMEYER
JOHN F. FORAN ¹
MILTON MARKS ¹
NICHOLAS C. PETRIS

ALFRED H. SONG ²
WILLIAM F. STANTON
ROBERT S. STEVENS ³
JAMES E. WHETMORE ³
PEARCE YOUNG ⁴
EDWIN L. Z'BERG

¹ Dissents from the recommendation that the Guest Statute be repealed, pages 11 and 36.

² Dissents from the recommendation on consolidation of Los Angeles County courts, pages 12 and 46. Assemblyman Song believes that the Legislature should make a decision on this issue on the basis of the information presently before it.

³ Agrees with the recommendation that proposed revisions of the California exemption laws should be studied, but dissents from the conclusion stated on pages 12 and 50.

⁴ Agrees with the recommendation that proposed revisions of the California exemption laws should be studied, but dissents from the conclusion stated on pages 12 and 50. Mr. Young believes that the exemption laws should be revised, but he also believes that the committee has not studied the problem in sufficient depth to arrive at a conclusion on what direction the revision should take.

PART ONE

SUMMARY OF RECOMMENDATIONS AND FINDINGS ON SUBJECT STUDIED DURING THE INTERIM

I. DISCOVERY IN ADMINISTRATIVE PROCEEDINGS

Recommendation. The committee recommends that the following three discovery techniques be made applicable to administrative proceedings:

1. The right of either party to freely use interrogatories to the adverse party;
2. The right to take depositions if stipulated by the parties or ordered by the hearing officer in his discretion;
3. The requirement that the agency shall list the last known address of all persons named in its accusatory pleadings.

Findings. Discovery has become a basic tool used by parties in preparing their arguments in legal controversies. California has statutory discovery provisions applicable to civil litigation and judicial doctrines applicable to criminal proceedings, but it does not have discovery provisions which apply to administrative proceedings. The committee found that it would be desirable to establish limited discovery provisions applicable to administrative proceedings in order to give administrative litigants the benefit of these important legal tools, and at the same time preserve the speed and efficiency of administrative proceedings.

II. NOMINATION OF ADMINISTRATORS OF ESTATES

Recommendation. The committee recommends that Probate Code Section 423 be amended to require that the nomination of administrators be granted when requested by a nonresident who is otherwise entitled to letters of administration.

Findings. Present California law does not allow nonresidents to nominate the administrator or administratrix of an estate. (Probate Code 420 and 423.) AB 2496 (1963, Willson) proposed to amend Probate Code 423 to require that the nomination of administrator be granted when requested by a nonresident who is otherwise entitled to letters of administration. The amendment will not change the requirement that the administrator himself must be a resident of the state.

The committee concluded that a nonresident heir should have the right to nominate the administrator. In some cases, it will be a nonresident heir who has the crucial interest in the estate, and to prevent him from nominating the administrator is unjustified, as it is the administrator upon whom he will rely to preserve the assets. It concluded that there would not be a great danger of the dissipation of assets or the encouragement of "heir hunters." It was not convinced that there would be an increased tax burden because of reduction of income with only slight reduction in workload.

The committee recommended in favor of passage of a bill similar to AB 2496 (1963).

III. PROPOSED STATUTE OF LIMITATIONS AFFECTING IMPROVEMENTS TO REAL PROPERTY

Recommendation. The committee recommended against the adoption of AB 648 (1963), which provided essentially that no action for property or personal injury damages shall be brought against a designer, planner, supervisor or builder of an unsafe and defective improvement to real property more than six years after any of these persons has performed his services.

Findings. The proposed statute of limitations would relieve the burden of protecting against potential tort actions arising out of making an improvement to real property, but in doing so it would establish a general limitation which would bar the commencement of actions which might fully warrant a day in court or a recovery. The committee concluded:

- a. That the proposal would bar the pursuit of justifiable claims of damage;
- b. That the proponents have adequate legal protections against stale claims and against false claims under existing law; and
- c. That the proponents' burden of protecting themselves against potential liability does not warrant enacting a statute of limitations which would bar legal actions which may fully warrant a day in court.

IV. COURT REPORTER COMPENSATION

Recommendation. The committee recommends that the counties be given full authority to set the compensation of superior court reporters, and that they be given authority to set salaries of municipal courts according to a standard, such as a maximum and minimum, established by the Legislature.

Findings. The Legislature has not provided a general schedule for compensating municipal and superior court reporters, but has established separate pay scales for individual counties or groups of counties. This approach has left the Legislature with the tedious job of considering a series of bills each year which propose modification to specific Government Code pay provisions. This approach is a difficult one for the legislators and it was feared that it may cause some difficulties throughout the state.

The committee has considered several alternative approaches to the present method of establishing court reporter compensation. In its consideration, it has kept in mind the constitutional requirement that it prescribe municipal court reporter salaries. The five alternatives which offered the greatest merit are:

1. Establish a statewide salary schedule with cost of living advances or periodic general reviews by the Legislature.
2. Establish such a schedule with some provision for county leeway.
3. Make the court reporters fully subject to civil service practices and procedures.
4. Delegate the responsibility for setting compensation to the Administrative Director of the Judicial Council.

5. Allow the counties a very large measure of control over the compensation, e.g., the Legislature might simply set a maximum and minimum.

In considering these alternatives the committee was concerned with the need to assure that the various communities throughout the state have adequate court reporter services. It was also aware that the local entity, the county, bears the burden of paying the compensation of the reporters. It concluded that it would be desirable to allow the counties the maximum authority permitted by the Constitution.

V. COMPARATIVE NEGLIGENCE

Recommendation. The committee recommends that there be further study of the possibility of adopting the rule of comparative negligence.

Findings. The basic notion of the doctrine of comparative negligence is that damages are reduced in proportion to the plaintiff's fault. The main argument in favor of adoption is that a fair division of damages will replace the harsh all or nothing approach which results from the doctrine of contributory negligence. The negative arguments are that comparative negligence is too difficult for the jury to determine, and that a certain kind of comparative negligence is available through settlement of cases out of court.

VI. REDUCTION OF JURORS IN CIVIL MATTERS

Recommendation. The committee recommends that ACA 7 (1963, Willson), an Assembly-sponsored constitutional amendment, receive further consideration.

VII. REPEAL OF THE GUEST STATUTE

Recommendation. The committee recommends that the guest statute be repealed for a period of four years.

Findings. The present guest statute provides that a gratuitous vehicle passenger has no right of action against the driver of that vehicle unless the proximate cause of the passenger's injury or death was the driver's intoxication or willful misconduct. (Vehicle Code 17158.)

The committee has concluded that the driver of a vehicle should be under a duty of reasonable care for the safety of his passengers. The guest statute relieves the driver of this legal duty by insulating him from suits by gratuitous passengers. The committee believes that this encroachment on the general duty of care is not justified by the alleged dangers of collusive suits and increased insurance costs, or by the argued difference between compensated and uncompensated drivers. The committee notes that there are other safeguards against collusion and fraud in our courts. It believes that the duty of care and attendant tort liability should be reinstated in the case of the driver who carries a gratuitous passenger. It is recommended that the guest statute be repealed for a period of four years and that at the end of that period there be a determination of whether the guest statute should be repealed permanently.

VIII. CONSOLIDATION OF LOS ANGELES COUNTY MUNICIPAL AND JUSTICE COURTS

Recommendation. The committee recommends that the Legislature defer action on consolidation of Los Angeles County Municipal and Justice Courts until there has been a firm recommendation by the Los Angeles County Board of Supervisors that the courts should be re-organized.

IX. ATTACHMENTS, GARNISHMENTS AND EXEMPTIONS

Recommendation. The committee recommends that the various proposals contained in the report and any additional proposals which come to light be studied carefully in order to arrive at a suitable revision of the exemption laws.

Findings. The committee concluded that a revision of the law which will increase the debtor's protection by way of exemption and which will make that protection more modern and equal will be of benefit to both debtors and creditors. This conclusion reflects the underlying fact that neither the debtor nor the creditor benefits when the debtor is financially crippled. A more powerful exemption law will help keep the debtor from sinking further into a financial abyss and losing his job. At the same time it will protect the creditors to the extent that it allows the debtor to keep going and avoid bankruptcy.

PART TWO

DISCOVERY IN ADMINISTRATIVE PROCEEDINGS

"Discovery" is the term for various legally enforceable methods of obtaining evidence and other information in preparation for trial.

California has statutory discovery provisions applicable to civil litigation and judicial doctrines applicable to criminal proceedings. Now, the state faces the question of extending discovery into administrative proceedings.

Is discovery already provided for in existing law? An examination of the Administrative Procedure Act (APA) shows that it does not provide for discovery. Assistant Attorney General E. G. Funke, a witness before a hearing held by the committee in San Diego on June 24, 1964, explained his understanding that the APA requires accusations and statements of issues to be set out in full particulars, and that this in itself is sufficient to cover all the discovery problems. (Government Code 11503, 11504, and 11506.) The requirement that the respondent be charged by way of a concise statement of his alleged acts or omissions is a feature intended to give the respondent a fair opportunity to defend, but it is not discovery as we have come to know the term. Since the civil and criminal rules of discovery have not been carried generally into the administrative field by court decision, the committee started with the notion that discovery is not yet a tool in administrative procedure.

Is discovery desirable? The laws which are administered and enforced by the administrative agencies of the State of California govern a vast number of the people's activities. The procedure which is used by the agencies in enforcing these laws is thus extremely important. Mr. Roderic Duncan, an attorney testifying to the committee, stated: "The Administrative Procedure Act, as I am sure most of you know, vitally affects the lives and livelihoods of hundreds of thousands of California citizens . . . and when you handle these things (administrative proceedings) day in and day out, as I did for a couple of years, you get a real feeling for the vital importance of administrative law . . . and the need of the respondent who is charged with something by his licensing agent to have a fair hearing—and to be able to present his case under the best possible circumstances."

The argument in favor of discovery is that individuals who must face government agencies in an administrative proceeding need discovery in order to adequately prepare their cases. Often it is a lone individual with very limited resources who faces the government agency with its legal and investigatory staffs and its large accumulations of information. Discovery would allow the individual to say, "wait a minute, what have you got there?" This will not put the agency at a disadvantage on the merits of the case, but will open the case so that each side can get the merits and thus allow the administrative tribunal to arrive at the correct decision.

Some of the agencies have replied that the introduction of discovery into administrative proceedings would cause the proceedings to be unnecessarily lengthened. A memorandum from the Attorney General's

office states that license suspension proceedings "are intended to be handled expeditiously so as to speedily remove from the professions licensees who have proved unworthy of the trust reposed in them."

The Department of Insurance has taken the position that the present provisions are generally adequate in that "an administrative hearing under the Administrative Procedure Act is, generally speaking, a discovery procedure per se." The Department of Education has indicated its opinion is that direct application of the Code of Civil Procedure provisions would be unduly time consuming, but that incorporation of certain discovery techniques might be valuable.

In reviewing the materials which were submitted, the committee has discovered that it is in the interest of both the licensee and the public that the licensee have the necessary legal tools to prove that he is worthy of the public trust and to adequately defend the license which is his livelihood. Though the need for legal tools and the need for sufficient speed are competing considerations in this problem, the committee believes that each need can be met through a well-tailored discovery bill. Since discovery is proving to be a positive force to assure fairness and the production of truth in other adversary proceedings, it is desirable to extend it to administrative proceedings.

Discovery Techniques. The following discovery techniques are available under the Code of Civil Procedure: depositions, interrogatories, motions for inspection, motions for physical examination, requests for admissions and conferences. A bill on discovery could include any combination of these techniques. The right to use any given technique can be made either absolute or conditional. Conditioning the right can be a means of guarding against abuse. One draft considered by the committee requires a showing of "specific facts justifying discovery" as a condition to the use of certain techniques. One of the committee members suggested that the normal costs of using techniques such as depositions would discourage abuse without conditioning the right in any other way.

Discovery Proposals. The committee has had four proposals placed before it:

1. AB 3067 (1963). This bill introduced by Assemblyman Petris provided that any party may take testimony of any person by deposition and may serve any adverse party with written interrogatories pursuant to discovery provisions of the Code of Civil Procedure. (Code of Civil Procedure 2016, 2018, 2019, 2020, 2021, 2024, 2030, 2032 and 2034.) This bill does not provide for inspections, mental or physical examinations, requests for admissions, or conferences.

2. Draft B. A draft administrative discovery act prepared by three Boalt Hall law students was submitted to the committee for consideration. In two senses, this proposal is broader than AB 3067. First, it extends discovery procedure to all adjudications which are "to be determined on the record after opportunity for a state agency hearing." AB 3067 would apply only to enumerated agencies and other specially designated agencies. (Government Code 11501(a) and Government Code 11500(a), definition of "agency.") Second, Draft B provides for more discovery techniques than AB 3067. It provides for demands for admissions, demands for production and inspection of

documents or other things, and physical and mental examinations, as well as for depositions and interrogatories.

On the other hand, Draft B has attempted to narrow the availability of certain discovery techniques by requiring a showing of "specific facts justifying discovery," in addition to the normal requirements of relevancy and absence of privilege.

The draft is unique in several respects. It proposes to add an entire new chapter to the APA. With this chapter it establishes a branch of administrative procedural law which extends beyond the coverage of the APA adjudication provisions. In accomplishing its object, the proposal sets up a body of definitions which differs substantially from the similar body in the APA adjudication provisions. This variation of definitions might be the source of confusion. The proposal sets up discovery procedures and enforcement procedures which differ in some respects from those included in the Code of Civil Procedure. (P. M. Little, M. W. Tripp and D. H. Melnick were the students who prepared the draft.)

3. Office of Administrative Procedure's Proposals. The Office of Administrative Procedure proposes that some form of legislation be adopted which would give the respondent the right to inspect, copy or analyze documentary or written statements in the possession of the agency. It also proposes that the agency should be required to list the last known address of all persons mentioned in its accusatory pleadings.

4. Department of Education's Suggestions. The Department of Education has suggested that the following techniques of discovery might prove of value: (a) motions for production and inspection of documents, (b) requests for admissions of genuineness of documents or truth of matters of fact from adverse parties, and (c) possible interrogatories to the adverse party, if limited to the ascertainment of identity of witnesses and parties.

Conclusions and Recommendations. The committee concluded that it is desirable to extend limited discovery to administrative proceedings. Recognizing the need for a proper balance between the availability of discovery tools and the maintenance of sufficient speed in administrative proceedings, the committee recommended in favor of a law which would incorporate the following three discovery techniques:

1. The right of either party to freely use interrogatories to the adverse party;
2. The right to take depositions if stipulated by the parties or ordered by the hearing officer in his discretion;
3. The requirement that the agency shall list the last known address of all persons named in its accusatory pleadings.

NOMINATION OF ADMINISTRATORS OF ESTATES

Introduction

Present California law does not allow nonresidents other than the surviving spouse of the decedent to nominate the administrator or administratrix of an estate. (Probate Code 420 and 423.) AB 2496 (1963, Willson) proposed to amend Probate Code 423 to require that the nomination of administrator be granted when requested by a non-resident who is otherwise entitled to letters of administration. The amendment will not change the requirement that the administrator himself must be a resident of the state.

Arguments favoring and opposing the amendment

The main argument in favor of the amendment is that interested nonresident heirs should be allowed to nominate the administrator, who is the party charged with the responsibility of preserving the assets.

It is also argued that this revision might result in reductions of staff in public administrator's offices, and a consequent savings in public administration costs.

The following arguments were submitted in opposition to the change:

The change would delay the handling of decedent's remains, postpone the otherwise immediate preservation of assets for protection of the estate and creditors, as well as create hardship in handling business affairs on behalf of decedent's estate. The delay would result from waiting for both the nomination and the issuance of letters.

There would be a decrease in the few large estates handled by public administrators, but not in the small ones which create most of the workload. This would mean a reduction of income to the county treasury from fees, with slight reduction in workload. Thus a tax burden would result in order to provide for continued public service.

The change would encourage "heir hunters," genealogists who seek out foreign heirs to secure nomination.

Conclusions and recommendation

The committee concluded that a nonresident heir should have the right to nominate the administrator. In some cases, it will be a nonresident heir who has the crucial interest in the estate, and to prevent him from nominating the administrator is unjustified, as it is the administrator upon whom he will rely to preserve the assets. The committee noted that the amendment will retain the requirement that the administrator be a resident. It concluded that there was not a great danger of dissipation of assets or encouragement of "heir hunters." It was not convinced that there would be an increased tax burden because of reduction of income with only slight reduction in workload.

The committee recommended in favor of passage of a bill similar to AB 2496 (1963).

APPENDIX

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2496

Introduced by Mr. Willson

April 18, 1963

REFERRED TO COMMITTEE ON JUDICIARY

An act to amend Section 423 of the Probate Code, relating to nomination of an administrator of estate.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 423 of the Probate Code is amended to
2 read:
3 423. Administration ~~may~~ shall be granted to one or more
4 competent persons, although not otherwise entitled to the
5 same, at the written request of the person entitled, *or who*
6 *would be entitled but for his nonresidence in California*, filed
7 in court. If the person making the request is a child, grand-
8 child, parent, brother or sister of the decedent, the nominee
9 shall have priority next after those in the class of the person
10 making the request; otherwise the court, in its discretion, may
11 appoint either such nominee or a person of a class subsequent
12 in rank to that of the person making the request; but other
13 persons of the class of the person making the request shall
14 have priority over such nominee.

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2496, as introduced, Willson (Jud.). Nominating administrators of estates.

Amends Sec. 423, Prob.C.

Authorizes appointment of administrator of estate on nomination of nonresident otherwise qualified to serve as administrator.

PROPOSED STATUTE OF LIMITATIONS AFFECTING IMPROVEMENTS TO REAL PROPERTY

Introduction

When a contractor makes an improvement to real property, he generally incurs a duty to exercise reasonable care to prevent damage to third parties who may reasonably be expected to be affected by his work.¹ Architects, engineers and contractors have expressed the view that this duty exposes them to suits and liability long after they have performed their services.

In order to relieve themselves of the extended period of liability, the architects, engineers and contractors advocated the adoption of AB 648 (1963) which provided essentially that no action for property or personal injury damages shall be brought against a designer, planner, supervisor or builder of an unsafe and defective improvement to real property more than six years after any of these persons has performed his services. This bill was referred to the committee for interim study. The committee received memoranda concerning the problem and held a hearing on the bill on October 20, 1964.

Discussion of the merits of the proposed statute of limitations

The proponents argued that the long-extended period of liability results in suits which are long delayed and thus are practically impossible to defend. They stated that they are compelled to maintain extensive records over a long period of time, and that the long period of potential liability makes it difficult or impossible to obtain insurance. It was urged that these burdens are excessive and that there must be some point in time when they can be assured that former work will not give rise to tort liability.

In evaluating these arguments, the committee found that it was true that the potential liability did create a burden of maintaining records, and that long-delayed suits are difficult to defend. It appeared that insurance costs may be higher than if there was a more confined liability, but it also appeared that adequate insurance could be obtained.

The principal argument against the proposal was that if it can be proved that an architect or contractor's negligence caused damage, then the injured party should have a remedy so long as he does not delay too long after discovering his damage. The general rule with respect to statutes of limitation is in agreement with this contention, that is that a tort statute of limitations will not begin to run until the plaintiff is damaged or discovers the damaging condition. This general rule is derived from the code provision that civil actions can only be commenced within specified periods "after the cause of action shall have *accrued*," (Code of Civil Procedure 312). The proposal is a departure from this general rule as it specifies a statute of limitations which would begin to run *on the date of construction or performance of other services*, without regard to date of damage or discovery by the plaintiff.

¹ Prosser, William L., *Law of Torts*, 2nd ed., p. 514; Witkin, B. E., *Summary of California Law*, p. 1480.

The committee noted that probably every type of tort action arising out of an unsafe condition to real property would be covered by the statute, e.g., actions by owners of the improved property, and of adjacent property, actions by nonowners, and actions for indemnity. An example of an action which would fall within the scope of the proposed statute is the following: Assume that a gas heater was installed in a home with no safety valve in 1964. This was an unsafe and defective condition when installed, but the owner did not know about it and had no reason to suspect it or inspect the installation himself. The owner has no trouble with the heater until 1974, when for the first time, the pilot light blows out. The kitchen fills with gas and the owner ignites the gas when lighting a cigarette. Both the owner and a friend are injured and the kitchen is greatly damaged. Owner and friend will be barred from suing under the proposed statute. This basic fact situation has many variables: The architectural design of a staircase in a department store with employees and shoppers injured; a lathe installed in a factory with workers injured; a home in which not a single electric outlet has been grounded and a resident or friend is shocked.

The committee found that under existing law the proponents are protected against stale claims by statutes of limitations running from the date of damage. (Code of Civil Procedure 338, subdivision 3, and 340, subdivision 3.) The committee found further that when an architect, engineer or contractor is sued within the presently applicable periods of limitations, he has existing protections against false claims of liability. Negligence must be proved, for these persons are not generally liable without fault. The plaintiff generally bears the burden of proof and is subject to the defenses of assumption of risk and contributory negligence. The proponents can make contractual provisions excluding themselves from certain liabilities.

Conclusions and recommendations

The proposed statute of limitations would relieve the burden of protecting against potential tort actions arising out of making an improvement to real property, but in doing so it would establish a general limitation which would bar the commencement of actions which might fully warrant a day in court or a recovery. One member felt that the bar was so extreme in its effect that it should be characterized as an extinction of a cause of action even before it arises, rather than a statute of limitations. The committee concluded:

a. That the proposal would bar the pursuit of justifiable claims of damage;

b. That the proponents have adequate legal protections against stale claims and against false claims under existing law; and

c. That the proponents' burden of protecting themselves against potential liability does not warrant enacting a statute of limitations which would bar legal actions which may fully warrant a day in court.

The committee recommended against the passage of a bill in the form of AB 648 (1963), or any bill substantially embodying its provisions.

COURT REPORTER COMPENSATION

PART ONE

Introduction

The California Constitution provides that the Legislature "shall prescribe . . . compensation of . . . attachés of municipal courts . . ."¹ Thus the Legislature is required to prescribe the compensation of court reporters in municipal courts. However, no such constitutional requirement exists requiring the Legislature to fix the compensation for either superior court reporters or justice court reporters. By Government Code 71600, the Legislature has delegated the authority to establish compensation for justice court reporters to the county boards of supervisors. However, the Legislature has retained the task of establishing the compensation for reporters in the superior courts.

The Legislature had not provided a general schedule for compensating municipal and superior court reporters, but has established separate pay scales for individual counties or groups of counties. This approach has left the Legislature with the tedious job of considering a series of bills each year which propose modification to specific Government Code pay provisions. This approach is a difficult one for the Legislators and it was feared that it may cause some difficulties throughout the state. Recognizing the problem, the Legislature resolved to study the area of court reporter compensation. (HR 168, 1964—Dannemeyer.)

General conclusions derived from the study

The study which was completed by the committee is somewhat detailed, and a summary of its findings has been included in this report as Part Two. The two main conclusions established by the study are: (1) Municipal and superior court reporter compensation varies widely throughout the state. (2) The variation in compensation may cause some pressure to the counties to raise their compensation to keep pace, but the system has apparently not resulted in critical shortages of personnel to any counties.

Possible approaches

The committee has considered several alternative approaches to the present method establishing court reporter compensation. In its consideration, it has kept in mind the constitutional requirement that it prescribe municipal court reporter salaries. The five alternatives which offered the greatest merit are:

1. Establish a statewide salary schedule with cost-of-living advances or periodic general reviews by the Legislature.
2. Establish such a schedule with some provision for county leeway.
3. Make the court reporters fully subject to civil services practices and procedures.

¹ California Constitution, Article VI, Section 11, "Except as such matters are otherwise provided in this article, the Legislature shall prescribe the manner in which, the time at which, and the terms for which the judges, officers and attachés of municipal courts and of justice courts shall be elected or appointed, the number, qualifications and compensation of the judges, officers and attachés of municipal courts, and provide for the manner in which the number, qualifications and compensation of the judges, officers and attachés of justice courts shall be fixed."

4. Delegate the responsibility for setting compensation to the Administrative Director of the Judicial Council.

5. Allow the counties a very large measure of control over the compensation; e.g., the Legislature might simply set a maximum and minimum.

Conclusion and recommendation

In considering these alternatives, the committee was concerned with the need to assure that the various communities throughout the state have adequate court reporter services. It was also aware that the local entity, the county, bears the burden of paying the compensation of the reporters. It concluded that it would be desirable to allow the counties the maximum authority permitted by the Constitution. The committee recommends that the counties be given full authority to set the compensation of superior court reporters, and that they be given authority to set salaries of municipal courts according to a standard, such as a maximum and minimum established by the Legislature.

PART TWO

The committee wished to determine the variation of court reporter compensation throughout the state, and also to determine whether the variations produced any hardships on the counties or reporters. The committee wished to determine whether there was heavy salary competition which caused financial burdens or shortages of reporters to given counties. To answer these questions, the committee conducted studies of the following three areas: (1) Survey of current Government Code requirements on court reporter compensation. (2) A direct questionnaire survey of the counties in the state. (3) A direct questionnaire survey of individual court reporters in the state. The results of these studies are summarized in this part.

1. Government Code requirements

The statutory requirements on court reporters comprise a good portion of one volume of the Government Code. These provisions have been tabulated by the Legislative Counsel. Based on this tabulation, the various salaries and per diems paid in the superior courts throughout the state have been classified. The classification reveals the wide variation in the compensation paid around the state. A similar wide variation exists with respect to the municipal courts also.

CLASSIFICATION OF PRESENT SUPERIOR COURT REPORTERS' COMPENSATION

The table set forth below lists the counties in order of their total population. In columns 3 and 4 are listed the salaries and per diems paid in the county, based on the present Government Code requirements. Column 5 classifies the salaries and per diems paid as follows:

<i>Class</i>	<i>Salary</i>	<i>Per Diem</i>
A	880+	40+
B	800+	36+
C	700+	32+
D	600+	27+
E	500+	23+
F	400+	18+
G	350+	16+

A county is always classed according to salary it pays one. Where a county has a range of salaries, it has been classed according to the arithmetic mean between extremes. Thus, Los Angeles was classed at a salary of 895, the average of 797 and 992. Counties are classed according to per diems only when no salary is paid.

In parentheses next to the salary and per diem figures are symbols "R," "PT," and "all," which indicate what type of reporter is earning the listed salary:

R = regular official court reporter

PT = pro tempore court reporter

All = all official reporters

* Salaries paid to court reporters. Where a yearly salary is prescribed in code, it has been stated as a monthly in the chart.

† Daily compensation paid to reporters in lieu of salary.

2. County questionnaires

Questionnaires were submitted to all the counties to determine the salaries and per diems paid, the supplies and office space furnished, sick leave and vacations allowed, the number of hours worked and the number of vacant reporter positions in the county.

From these questionnaires, it appears that the salaries paid in both municipal and superior courts range from a low of \$350 per month to a high of \$889 per month, with an average of \$571. The largest spread in any one county was in Fresno, where municipal reporters are paid \$350 and superior reporters are paid \$800 per month. Per diems ranged from \$30 to \$52 per day with an average of \$38.

Court reporters receive items of support in their work ranging from the bare grant of an office to a complete complement of a furnished office, telephone, typewriter and stationery supplies. Only one-sixth of the counties indicated that reporters were granted any sick leave. In these counties, the average provision was 12 days per year. One-fifth of the counties indicated that any paid vacation was granted. The vacation periods varied from 10 to 15 days per year. The questionnaires did not indicate whether or not the counties were providing health insurance or retirement plans for the reporters. The Legislative Counsel's office has stated that there is no generally applicable provision of law which would require that the reporters be members in a public retirement system. Thus, it appears that there is wide variation among the counties as far as what is granted in the way of retirement and health insurance.

The counties indicated that the reporters spent an average of six hours a day on their county-compensated services. Sonoma County volunteered the comment that its reporters worked seven hours a day, but that these hours were "long hours." This comment may be true of other counties, and it may mean either that the hours of work are grueling, or that there are hidden hours of homework, or it may mean both. One individual court reporter commented that the reporters' profession required her to do "moonlighting" whether she wished to or not, since court business must be accomplished. She said: "Nights, weekends and holidays mean nothing to a reporter, except, perhaps, an opportunity to 'catch up' on work." The elements of time and effort required by the job are not objectively clear, but probably, once again vary widely from county to county.

The questionnaires do not support the notion that competition in salaries among the counties has caused a troublesome shortage of reporters in some counties. Only one current vacancy was reported in the 37 counties which returned the questionnaires. Only two of the counties reported that this lack of vacancies was unusual.

The counties were asked whether they were "subject to considerable pressure to match increases paid to court reporters by other counties." Fourteen counties replied that they were subject to such pressure, while nine said they were not. Fourteen counties made no comment. The counties were also asked for suggestions as to improving the present court reporter system. About half of the counties made some suggestion, but their ideas did not fall into any pattern. One county suggested that the reporters should be within the civil service system. Two counties indicated that reporters throughout the state should be on a salary scale. One county suggested that the Judicial Council provide a pool of trained reporters from which the counties could draw new reporters as they needed them.

3. Individual court reporter questionnaires

Questionnaires were sent to certified shorthand reporters throughout the state. Fifty-four percent of the questionnaires which were returned were from individuals who were currently engaged as official court reporters, or as pro tem court reporters. These 249 replies form the basis of our statistical survey of the individuals in the profession.

These questionnaires supplied some information which was not obtained through the county questionnaires. For one thing, more light was shed on the issue of fringe benefits. Eighty-two percent of the replies indicated that the reporter was a member of a county or state retirement plan. The majority of the surveyed reporters had less than five days of sick leave per year. The answers indicated that the paid vacations earned varied from five to more than 25 days per year.

The reporters indicated that they, rather than the public entity, paid for most of the supplies, equipment and utilities required by their job. In one specific expense item, there was a sharp division in the replies. Fifty-four percent of the reporters reported that less than five percent of their office space rental was paid by the public entity. On the other hand, thirty-seven percent reported that more than seventy-five percent of their office space rental was defrayed by the public entity.

The replies showed that there is some variation among the reporters as to the relative importance of depositions, recording, and transcribing as a source of income. However, the statistics did not provide a firm answer as to how important these sources of income are to the reporters. The majority of the reporters were earning a total compensation of between \$10,000 and \$16,000 per year. However, there were substantial numbers who earned less than \$5,000 and substantial numbers who earned more than \$19,000.

A great majority of the reporters had more than six years' experience and had worked in more than one county. They obtained their current jobs in a wide variety of ways, but a very large number found the job "through a judge." A majority felt that there were vacant court reporter positions in their county. This contradicts the reply made by the counties that vacancies were generally rare. Most of the

reporters had no opinion as to whether the current number of vacancies is high or low compared with the past.

Conclusions

The study confirmed the fact that there are wide variations in reporter compensation around the state. The variation of compensation perhaps causes pressure upon the counties to raise compensation to keep pace, but it has not caused any undue financial burden to the counties, nor has it caused any critical shortages to individual counties.

COMPARATIVE NEGLIGENCE

Pursuant to HR 162 (1963 Zenovich) the committee has studied the adoption of comparative negligence. The basic notion of this doctrine is that damages are reduced in proportion to the plaintiff's fault. The main argument in favor of adoption is that a fair division of damages will replace the harsh all or nothing approach which results from the doctrine of contributory negligence. The negative arguments are that comparative negligence is too difficult for the jury to determine, and that a certain kind of comparative negligence is available through settlement of cases out of court.

The committee has considered the arguments favoring and opposing the adoption of comparative negligence and has concluded that further study and public hearings should be scheduled on this matter. The committee had decided that it will be beneficial to publish at this time the following brief summary of arguments it has received on the subject.

Arguments opposing comparative negligence

1. The rule of comparative negligence favors the plaintiff.
2. Contributory negligence may be harsh in theory. But, in fact, juries just don't decide against plaintiffs who were only slightly negligent.
3. The rule is difficult to administer. It is impossible to weigh the negligence of plaintiff and defendant with any degree of precision. Jurors will simply respond by granting awards based on emotion rather than law.
4. The rule is simply another step along the short road to liability without fault.
5. Only rural states have adopted the rule.
6. Over 90 percent of negligence actions are settled. Settlement is actually comparative negligence in operation. Our system presently then accomplishes what the proponents seek and should not be altered.
7. The rule of comparative negligence discourages safe driving by allowing one who is grossly negligent to recover.

Arguments favoring comparative negligence

1. The present rule of contributory negligence is unjust. It places the entire loss caused by the fault of both on the plaintiff and allows the defendant to escape scot free. Even when the negligence of the defendant is grossly disproportionate to that of the plaintiff, the plaintiff still is visited with the entire loss.
2. Estimating the relative degrees of negligence is no more difficult than the estimate that results in an award of \$3,000 to the plaintiff for pain and suffering in connection with his broken arm. A division of damages, based on the relative degrees of negligence, will still be more accurate than visiting 100 percent on the plaintiff.
3. Comparative negligence has nothing to do with liability without fault. It merely corrects the effect of contributory negligence which allows the defendant to be at fault without liability.

4. Comparative negligence is not an exotic doctrine. The United States is the last stronghold of contributory negligence. It has disappeared from continental Europe, Turk, "Comparative Negligence on the March," 28 Chi-Kent Rev. 189 (1950) and from Great Britain, Williams, "The Law Reform Act," 9 Mod. L. Rev. (1945). Comparative negligence is used in the United States in the F.E.L.A. and in Admiralty Law, although damages are divided between the negligent parties. The California Employer's Liability Act (Labor Code 2801) also uses comparative negligence.

5. Settlement is not comparative negligence since the defendant's counsel would seldom settle with a plaintiff who was clearly contributorily negligent.

6. Opponents of comparative negligence argue that the rule discourages safe driving. But it makes just as much sense to argue that contributory negligence encourages recklessness since the defendant, even though negligent, is not liable.

7. Finally, Dean Prosser, writing of the rule of contributory negligence, says, "No one ever has succeeded in justifying that as a policy, and no one ever will." Prosser, "Comparative Negligence," 41 Cal. L. Rev. 1 at 4 (1953).

REDUCTION OF JURORS IN CIVIL MATTERS

The committee has studied ACA 7 (1963, Willson), an Assembly-proposed constitutional amendment to require reduction of number of jurors in civil actions from 12 to 8. Perhaps the chief advantage offered by this proposal is the possibility of savings in time and money, in that fewer prospective jurors would have to be called, the *voir dire* might be shortened and fewer jurors would have to be maintained through the trial.

Several objections to the change were explored by the committee. The first of these is the general notion that the reduction would tamper with the essence of a valued American legal institution. The jury of 12 is grounded in history and tradition, though Professor Hazard pointed out that the exact number of jurors has varied through time and that the final selection of 12 "is simply an historical accident." A second objection was that by reducing the number of jurors, you also reduce the cross section of people represented in the box. A third objection was that a "strong juror" would have more sway in a smaller jury. These objections were considered in relation to the need to keep up with increased caseloads and to keep the courts up to date in terms of desirable modern trends.

Proposed further study

Study of the proposed amendment has led the committee to conclude that the subject deserves further consideration. One specific suggestion is that the Legislature take steps to have the State Bar cooperate in a poll of the attitudes of lawyers and judges around the state.

Summary of points raised at committee hearing

The committee held hearings on ACA 7 (1963) on December 4, 1963. Those who testified included judges of the superior and municipal courts, defense and plaintiffs' attorneys and law professors. The following summary of the main points covered at the hearing is included as part of this report:

1. Small Jury by Stipulation

Code of Civil Procedure Section 194 permits parties to stipulate to a smaller jury.

Several of the witnesses were asked whether a jury of less than 12 had been used:

Judge McRoberts: Not to my knowledge.

Mr. John Foran: No. I have never seen it happen.

Mr. Ira Price: . . . there have been very few occasions when the parties and the counsel have stipulated to a jury of less than 12.

Judge Dalsimer: On several occasions I have had counsel so stipulate. I have tried several cases with eight and nine jurors. The results insofar as I am concerned are not different than those cases which were tried with the customary complement of 12.

Mr. Don Bercu: I had . . . three or four experiences on criminal cases . . . by stipulation . . . I could detect no difference in the re-

sults of a smaller number . . . The verdicts appeared to me to be no different . . . It wouldn't bother me in the slightest on a civil case particularly to try the typical case in front of a jury of 8 rather than 12.

2. *General Reactions*

Some witnesses were asked what they thought the general reactions to a smaller jury would be:

Mr. Foran: . . . we found that in the states in which they are known . . . that these are acceptable to judges as well as the citizens . . . [But] from the viewpoint of the insurance industry, we would want the present setup . . . On a 12-man jury we have to get 4 jurors, from the defense viewpoint; that is, one-third of 12 or $33\frac{1}{3}$ percent. On an eight-man jury we have to get three to hang a jury; that is, three-eighths or 40 percent. So $33\frac{1}{3}$ percent to 40 percent, that is $6\frac{2}{3}$ percent, which again increases the odds in favor of the plaintiff and against the defendant.

Judge Dalsimer: . . . I have found that by and large defense counsel in personal injury cases are the ones who want the jury . . . usually the plaintiff's counsel is willing to go along.

Professor Hazard: . . . I rather suspect that the public . . . will probably be generally indifferent . . . judges are hep today on reform . . . the lawyers . . . they'll scream.

Comment

All six of the states polled by the committee staff found that their smaller jury is satisfactory to lawyers, judges and citizens.

3. *History and Tradition*

Professor Hazard: . . . It is perfectly obvious that the number varied over time. Sometimes they were using 16. I have read some cases where it is obvious that the parties are agreeing on a particular number, 11 or 13 or 7 . . . The selection of 12 . . . is simply an historical accident . . . The fact is that convention gets established in such casual ways . . . It seems that there is no lesson from history here except that it sometimes has no lesson.

Mr. Henry Schultz: . . . While the number 12 . . . is not a magic number, still it has been the size of juries from time immemorial almost . . .

A litigant comes into court and it is a strange place to him. This is a new experience for most of them, but they do see one thing that is familiar to them and that is 12 jurors sitting there.

Mr. Price: I suppose the first reason that led the State Bar Association Committee on the Administration of Justice to oppose ACA 7 might be called "flag waving." But in any event, we were cognizant of the history and the tradition in favor of a 12-man jury . . .

Judge Dalsimer: . . . we have just allowed ourselves to become hidebound by tradition. Perhaps when society moved at a slower pace there was no pressing reason to have less than 12 . . . [but now that we have]—this constant increase in caseload . . . we must take every step that we can possibly take to reduce the time spent in litigation.

4. *Cross Section*

Mr. Foran: . . . I think that if you cut a jury down from 12 to 8 you are reducing the base. By so doing, you are exposing yourself to the possibility of not getting a fair cross section of the society in which we live.

Mr. Schultz: . . . [W]hen we are faced with a decision or problem where we have to decide, we like to talk to as many people as possible, to get as many viewpoints as possible . . . [T]he more people you can get together to talk over a problem to make a decision, I think, frankly, will aid in the administration of justice.

Chairman Willson: Would you be in favor of increasing the size of the jury say from 12 to 14?

Mr. Schultz: I had not given it any thought . . . my thinking in preparation for today was solely with respect to the bill which is proposed here.

Comment

Legal writers tend to discount objections to the reduction of the size of the jury based on arguments that the cross section is reduced. They argue that realism would indicate that jurors are a product of the adversary system. Few attorneys seek a real cross section, but rather, jurors who are favorable to their side of the case. They argue that the accuracy of the cross section depends not upon the size of the jury but rather upon the scope of the exclusions from jury duty.

5. *Strong Juror*

Judge McRoberts: The more you narrow the base, the more possibility there is that in jury deliberations one person or two persons might well be able to carry the jury along with their thinking.

Mr. Price: . . . if you have a strong dominating type of individual . . . he has a great effect upon the thinking of the jury and many times in the verdict that the jury reaches, and if a jury is reduced from 12 persons to 8 . . . it would seem logical that the influence that the strong juror would have upon the jury would be enhanced.

Professor Hazard: . . . my conjecture would be that you would tend to polarize . . . [A] very strong personality . . . might . . . feel very strongly that the plaintiff ought to win . . . I think that there would be a tendency . . . to adhere to his views; if . . . he feels that it ought to be a defense verdict there will be a tendency to compromise and have a lower plaintiff's verdict . . .

6. *Savings in Time and Costs*

Judge Whelan: . . . reducing the number of trial jurors . . . will be a saving also to the taxpayer in that it will not be necessary to summon to court for the trial of any case as large a number of prospective jurors as are presently called for.

Chairman Willson: The reduction in the overall time of selecting jurors . . . is an additional possible savings?

Mr. Leach: Absolutely!

Judge Dalsimer: . . . [I]f you have a lesser number then . . . there is less work involved in selecting the names, drawing the names . . . it speeds up the *voir dire* part . . .

Professor Hazard: . . . [W]hen you get to the *voir dire* stage you have an apparent saving of a substantial magnitude, but I would like to suggest that this has to be diminished somewhat if you look at it carefully. You would think that if you had 8 jurors rather than 12 that you would cut down by one-third the amount of *voir dire* questioning, but . . . it is . . . not going to be anywhere near 30 percent because . . . *voir dire* is only half questioning—most of it is lecturing. The lawyer is selling himself.

There is no question that . . . [you will] save money. To the parties of course you have the reduced jury fee; to the public it is a simple question of mathematics. Most counties, if you are going to pick a 12-man jury, will send out 24 to 30 jurors . . . if you are going to have an 8-man jury . . . you draw . . . 14 to 20 people to pick a panel, and this is about a 30-percent reduction in the number of people that have to be paid . . .

Comment

According to the figures of the Auditor of the County of Los Angeles, an eight-man jury would have saved litigants \$184,000 in Los Angeles County in 1962-63 and the county itself would have saved \$142,000.

7. Increased Use of Juries

Mr. Stevens: . . . [I]f we reduce the number of jurors from 12 to 8 . . . this might result in an increase of the use of juries in civil actions and therefore might offset the cost savings . . .

Judge Sprankle: Yes, it very well could happen . . . It effects all the benefits that you are gaining—if you are talking only in dollars and cents.

Judge Whelan: I think so far as the superior court in San Diego County is concerned, that would be a negligible effect because a jury is asked for in nearly every negligence case . . . and nearly every condemnation case . . .

Judge Dalsimer: I concur with Judge Whelan . . . [I]t is my experience that . . . in . . . the great bulk of negligence actions . . . maybe as high as 97 or 98 percent . . . the defense demands the jury and posts the fees and will not give up the jury.

8. Peremptory Challenges

Chairman Willson: . . . [S]ince the law now requires that before pretrial a request may be made for eight peremptories, has experience shown whether that is being exercised?

Judge McRoberts: More and more . . . and I would say at the present time that at least three-fourth of the cases I pretry now, one side of it will request eight peremptories.

Professor Hazard: I feel very strongly . . . about . . . raising [the number of peremptory challenges] from six to eight. That strikes me as a mistake . . . Six already in California is more than most states have. Most states have three.

Judge Sprankle: . . . the size of the jury and the peremptories [should] be reduced on a pro rata basis.

Judge Whelan: The number of challenges might well be reduced.

Mr. Goodwin: The recommendation of the special study commission [appointed by the Los Angeles County Board of Supervisors] was to reduce the number of peremptory challenges—if you reduce the number of jurors . . . that is.

Judge McRoberts: . . . you must necessarily reduce the number of peremptories. It follows like night follows day.

9. Conclusion

Mr. Bercu: I don't think that the number particularly has any significance. It would be neither a plus nor a minus as far as I am concerned.

Mr. Foran: . . . [T]he present system that we have in California works beautifully as far as I am concerned; I know of no reason to upset it; I feel as a trial attorney that we are playing with fire here; that this is just a short cut.

We are doing away with a trial by jury and, gentlemen, when you do that we are going to run into a commission system here so fast that we won't know what hit us and at that point the trial attorneys are going to disappear.

Professor Hazard: I think one ought to face the plain fact, and I don't say this with any hostility, it is simply a question of fact, that the bar takes a very conservative view toward procedural reform, and the reason is very simple.

This is the way that these fellows make their living, and any change in the techniques of the trade are disruptive of their routine. I think that it is as simple, as uncomplicated as that.

I think that any of these objections, and particularly objections founded on dire predictions, ought to be taken with at least two grains of salt, and rather seriously discounted. I don't think that the record would support these fears.

Assemblyman Foran: . . . [W]hat your basic position comes down to with respect to California is that the devil you know is better than the devil you don't know . . .

Mr. Foran: That is exactly it.

Professor Hazard: No improvement, no reform in the administration of justice is going to have any great significance . . . This cuts two ways though. It means that no single reform can achieve very much. It means also that nothing very much can be achieved without a great many small reforms . . . [N]othing in this complex field will make *much* difference. It will all make *some* difference.

10. Proposals

The proposed methods by which the civil jury could be reduced are:

(1) Mandatory reduction

(A) ACA 7—reduce the number of civil jurors from 12 to 8 by constitutional amendment.

(2) Voluntary reduction

(A) Encourage stipulations for a smaller civil jury

Ira Price: [I]t would seem to me that it might be possible for the presiding judge to launch a little educational project . . . to try to get lawyers to stipulate to juries of eight . . . so that we have a period when we can judge the results of a smaller jury . . . We wouldn't be saddled with a constitutional provision that would make it mandatory . . .

(B) The first eight jurors are free of any charge to the litigants. Any party can request 12. However, the per diem charge for the additional four is to be \$60.

(i) The \$60 per diem charge for the additional four is not recoverable as costs.

(C) The first eight jurors costs the same as they do now. Any party can request 12. However, the charge for the additional four is to be \$60 per diem.

(i) Neither the charge for the first eight nor the charge for the additional four is recoverable as costs.

(ii) The charge for the first eight is recoverable as costs but the charge for the additional four is not.

APPENDIX

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

Assembly Constitutional Amendment No. 7

Introduced by Mr. Willson

January 28, 1963

REFERRED TO COMMITTEE ON JUDICIARY

Assembly Constitutional Amendment No. 7—A resolution to propose to the people of the State of California an amendment to the Constitution of the State, by amending Section 7 of Article I thereof, relating to trial by jury.

- 1 *Resolved by the Assembly, the Senate concurring, That the*
2 *Legislature of the State of California at its 1963 Regular*
3 *Session commencing on the seventh day of January, 1963,*
4 *two-thirds of the members elected to each of the two houses*
5 *of the Legislature voting therefor, hereby proposes to the*
6 *people of the State of California that the Constitution of the*
7 *State be amended by amending Section 7 of Article I thereof,*
8 *to read:*
9 *SEC. 7. The right of trial by jury shall be secured to all,*
10 *and remain inviolate; but in civil actions three-fourths of the*
11 *jury may render a verdict. A trial by jury may be waived in*
12 *all criminal cases, by the consent of both parties, expressed in*
13 *open court by the defendant and his counsel, and in civil*
14 *actions by the consent of the parties, signified in such manner*
15 *as may be prescribed by law. In civil action and cases of mis-*
16 *demeanor, the jury may consist of 12, or of any number less*
17 *than 12 upon which the parties may agree in open court. In*
18 *civil actions the jury shall consist of eight, or of any number*
19 *less than eight upon which the parties may agree in open*
20 *court.*

LEGISLATIVE COUNSEL'S DIGEST

A.C.A. 7, as introduced, Willson (Jud.). Trial by jury.

Amends Art. I, Sec. 7, Const.

Provides that in civil actions jury shall consist of 8, rather than 12, or such lesser number as agreed upon by parties in open court.

GUEST STATUTE

Present law

The present guest statute provides that a gratuitous vehicle passenger has no right of action against the driver of that vehicle unless the proximate cause of the passenger's injury or death was the driver's intoxication or willful misconduct. (*Veh. Code* 17158.)

Proposal

AB 2727 would repeal the guest statute. A guest would then be able to recover against the driver of the vehicle in which he was riding for ordinary negligence.

Arguments against the proposal

1. The repeal of the guest statute will open the door to fraudulent and collusive suits by one member of the family or friend against another. If the passenger is a good friend of the driver, who is insured, the driver may not make a very vigorous defense if sued by the passenger since it is the driver's insurance company which will satisfy any judgment against driver. The insurance companies allege that such collusive suits are almost impossible to defend.

2. A driver who is not being paid for his services should not be subject to the same liability as one who does receive compensation. If the statute is repealed, drivers will no longer be protected from suits by ingrates who are provided with free transportation. Also, the potential liability will cause a driver to resist carrying a full load of passengers during peak commuting hours, and he will hesitate to "assist the weary traveler."

3. If the statute is repealed the potential liability of insurance carriers will be broadened. More causes of action will be created and premiums will be forced up.

Arguments for the proposal

1. The arguments of the insurance carriers skirt the real issue: Who should pay for the injuries of a vehicle passenger caused by the negligence of the driver? Should the passenger, who incidentally is free from any fault whatsoever, bear the entire burden of paying large medical bills? Or should the driver's insurance company, representing the negligent party, be asked to assume some responsibility for the injuries caused by its insured? Adopting the first alternative makes the passenger twice cursed. Completely free from any negligence, the passenger has suffered injuries. And in addition, he is now denied all relief against the driver and must search his own shallow pocket for the money to pay his medical bills. Adopting the second alternative lifts this unjust burden from the injured passenger and places it on the insurance carrier for the negligent party. The loss then is distributed among a wide class of people through the premiums charged by the insurance companies. The principle of loss distribution is, after all, the social justification for insurance companies.

2. Dragging in the specter of fraudulent and collusive suits is misleading. It is misleading because the insurance companies would have

you believe they are at the mercy of their crafty and avaricious clients. The insurance companies have the full protection of court procedure, including cross-examination. If fraud was used to obtain the judgment, it can be set aside. In addition the carrier can either cancel or increase the premiums on their insured's policy. Finally, we hear no complaints from insurance companies about other areas where fraud, always a possibility, may also be present. A small businessman whose store is covered by a personal liability insurance policy has just as much "incentive" to encourage a collusive personal injury suit by a friendly patron as an auto driver by his passenger. The fact that such insurance is written suggests that the number of fraudulent suits is not staggering.

3. Finally, whether one is paid for performing a service should have no bearing on whether he be held accountable for his wrongful acts which cause injury to others.

Conclusions and recommendations

The committee has concluded that the driver of a vehicle should be under a duty of reasonable care for the safety of his passengers. The guest statute relieves the driver of this legal duty by insulating him from suits by gratuitous passengers. The committee believes that this encroachment on the general duty of care is not justified by the alleged dangers of collusive suits and increased insurance costs, or by the argued difference between compensated and uncompensated drivers. The committee notes that there are other safeguards against collusion and fraud in our courts. It believes that the duty of care and attendant tort liability should be reinstated in the case of the driver who carries a gratuitous passenger. It is recommended that the guest statute be repealed for a period of four years and that at the end of that period there be a determination of whether the guest statute should be repealed permanently.

APPENDIX

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2727

Introduced by Messrs. Zenovich, Young, Powers, Burton, Beilenson, Booth, Deukmejian, Dymally, Henson, Johnson, Knox, Lunardi, Marks, Miliias, Moreno, Petris, Song, Stanton, Stevens, and Warren

April 25, 1963

REFERRED TO COMMITTEE ON JUDICIARY

*An act to repeal Section 17158 of the Vehicle Code,
relating to automobile guest statute.*

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 17158 of the Vehicle Code is repealed.
- 2 17158. No person riding in or occupying a vehicle owned
- 3 by him and driven by another person with his permission and
- 4 no person who as a guest accepts a ride in any vehicle upon a
- 5 highway without giving compensation for such ride, nor any
- 6 other person, has any right of action for civil damages against
- 7 the driver of the vehicle or against any other person legally
- 8 liable for the conduct of the driver on account of personal in-
- 9 jury to or the death of the owner or guest during the ride,
- 10 unless the plaintiff in any such action establishes that the in-
- 11 jury or death proximately resulted from the intoxication or
- 12 willful misconduct of the driver.

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2727, as introduced, Zenovich (Jud.). Automobile guest statute.

Repeals Sec. 17158, Veh.C.

Repeals provision that precludes recovery by guest or person riding in vehicle owned by him for damages in civil action unless he can establish intoxication or willful misconduct of driver.

COURT CONSOLIDATION

LOS ANGELES COUNTY MUNICIPAL AND JUSTICE COURTS

Over the last eight years there have been a considerable number of studies and reports made on the subject of municipal and justice court consolidation in Los Angeles County.¹ This one is another in the long series of comments and remarks about that situation.

Before discussing the arguments set forth on the merits of any reorganization, it is necessary to establish the constitutional and statutory framework in which the courts there are now organized.

Constitutional and statutory provisions

Certain strict requirements and limitations are expressed in California Constitution, Article IV, Section 11 regarding municipal and inferior courts. This controlling section of the constitution specifies, among other things;²

- (a) A county shall be divided into judicial districts as prescribed by the Legislature but in no case can there be an incorporated city or city and county within two districts.
- (b) In any district with a population less than 40,000 there shall be a justice court; wherever the district population exceeds 40,000 there *shall* be a municipal court district.
- (c) That the judges for each such court shall be elected "by qualified electors of the *district*." (Emphasis added.)
- (d) The Legislature must provide for these courts as well as the powers, duties and responsibilities of such courts and judges by general law, and
- (e) The Legislature shall prescribe the manner, time, and terms which judges, officers and attachés shall be appointed, elected, and further for the number, qualifications, and compensation of judges of these courts.

The constitution expressly provides that the Legislature shall prescribe the manner in which judicial districts are to be set up within a county,³ as well as for complete regulation of the courts⁴ and its personnel⁵ by general law.

The constitutional limitations are part of the agony of reform particularly as to the question of district lines and election of judges. This will be discussed later in relation to the arguments of the proponents and opponents of consolidation.

Government Code Section 71040⁶ is the fulfillment of the constitu-

¹ *A Survey of Metropolitan Trial Courts, Los Angeles Area*, James G. Holbrook, University of Southern California Press, 1956; Chief Administrative Office, Los Angeles County Reports, December 14, 1959, February 25, 1961, April 5, 1963, May 5, 1963, and October 30, 1963; Second Partial Report of Joint Judiciary Committee on Administration of Justice, California State Legislature, 1959; Judicial Council Report, December 1, 1959; Los Angeles County Municipal Court Judges' Association, 1959 and 1962.

² California Constitution, Article VI, Section 11.

³ *Ibid.*

⁴ *Ibid.*

⁵ *Ibid.*

⁶ As public convenience requires, the board of supervisors shall divide the county into judicial districts for the purpose of electing judges and other officers of municipal and justice courts, and may change district boundaries and create other districts. No city or city and county shall be divided so as to lie within more than one district.

tional mandate that the Legislature shall prescribe manner in which county should be divided into districts. The county board of supervisors is responsible for this districting and this shall be done "as public convenience requires."⁷ Thus as to any change in the districting within Los Angeles County it must be accomplished by both the local board of supervisors and the Legislature.⁸

Because of this dual relationship between the county and the state, joint action is essential to any reorganization of these courts. The interests of the county are not only to provide for efficient functioning of the courts but also to care for the costs in running the municipal and inferior courts and the payment of salaries.⁹ It is the county that sustains the financial burden¹⁰ while the State Legislature has the control over the number and compensation of judges, officers and attachés of each municipal court.¹¹

Prior studies made

As pointed out by the Joint Judiciary Committee on Administration of Justice in its second partial report,¹² the balkanization of Los Angeles County has caused many significant problems. Although the characterization there was only in terms of two major problem areas¹³ the inefficiencies and problems are in fact far greater.

The expression of concern that many problems exist is easily seen by the number of studies made of the Los Angeles situation.

Holbrook Report. The first major study of recent years was the Holbrook Report.¹⁴ That study was made for the purpose of analyzing the methods and procedures of metropolitan area courts as a part of an overall program by the American Bar Association section on Judicial Administration. The report was comprehensive indeed, employing such methods as research of statutes, ordinances, court rules and records, personal interviews with various attorneys and officials, personal observation of courts in session, and questionnaires.

This often cited study has gained substantial recognition and is considered a basic research tool in understanding the structure and problems of the metropolitan trial courts in Los Angeles.

Los Angeles County Studies. The Los Angeles County Board of Supervisors has been active in calling for administrative studies to be made of the municipal court problems of congestion. On March 25, 1958, the board of supervisors instructed the chief administrative officer to study the problem and submit a report. On March 10, 1959, the chief administrative officer was ordered to submit a report regarding the redistricting of the municipal courts. On March 17, 1959 the board requested the State Judicial Council to study the same problem.

⁷ *Ibid.*

⁸ Because existing law requires staffing and salary control of local courts to be prescribed by the Legislature and the change of districts to be accomplished by the local board of supervisors the joint relationship is set up.

⁹ California Constitution, Article VI, Section 11; Government Code, Title 8, Chapter 1-2, 6-11.

¹⁰ Except for small contribution to the Judges' Retirement Fund by the state. Also see Government Code Section 71002, 71220.

¹¹ See Government Code Section 72000. The Legislature has provided, however, that such control as to justice courts are to be in the local board of supervisors. See Government Code Section 71600.

¹² Joint Judiciary Committee on Administration of Justice (2nd partial report, 1959) at p. 34.

¹³ Disparity of workload among judges and gross delay in getting a jury trial.

¹⁴ *Supra*, n. 1.

And finally on December 1, 1959, the board ordered a detailed report be submitted by the chief administrative officer.

In addition to these basic reports, the chief administrative officer¹⁵ has presented his findings to various legislative committees several times.

Legislative Studies. The Joint Judiciary Committee on Administration of Justice¹⁶ as a part of a broad survey on the operation of courts in California devoted its efforts partly to the problems of the Los Angeles County Municipal Courts. That study quoted at length from the Holbrook Report¹⁷ and from Chief Justice Phil S. Gibson.¹⁸

During the last general session there were two Assembly bills introduced which attempted to reorganize the municipal court structure within Los Angeles County.¹⁹ The first of these measures²⁰ called for a reduction of the 23 municipal and three justice court districts to a total of 9. The second bill²¹ sought to maintain the existing districts but superimpose over the existing county structure a new administrative organization. The plan envisioned an administrative judge with authority to appoint staff and an executive officer who would have power to do certain specific tasks.²² However, AB 3085 expressly excluded the Los Angeles Municipal Court District, which challenged the credibility of the plan.

Both of these measures were sent to this committee for interim study for the purpose of trying to explore the conflicts and aid in the resolution of any local differences in order to arrive at a clear understanding of what is really needed. Thus hearings have been held and this report seeks to now provide a record of what the present state of affairs is.

All of the reports submitted and studies made have recommended some form of reorganization. The Holbrook Report suggested that "for administrative purposes all municipal courts of Los Angeles County should be integrated into one Los Angeles County Municipal Court" . . . And that "this consolidation should make for more effective use of all municipal court judges in the county".²³ Yet the report went on to suggest that notwithstanding such recommendation for integration of municipal courts for purposes of administration, it "does not contemplate disturbing existing municipal court districts."²⁴

Holbrook regards integration as desirable although only in terms of administrative reorganization. But there are considerable hurdles which must be met before even this can be done, such as election of judges, assignment of cases, transfer of judges, power to make uniform rules.

¹⁵ Most recently to the Assembly Interim Committee on Judiciary on October 30-31, 1963 and December 3, 1963.

¹⁶ Senate Concurrent Resolution 34 (1957 Regular Session).

¹⁷ *Supra* n. 1, at pp. 36-38.

¹⁸ *Id.*, at 34.

¹⁹ AB 2659—Willson; AB 3085—Flournoy.

²⁰ AB 2659.

²¹ AB 3085.

²² (1) Expedite judicial business.

(2) Assign judges temporarily to adjust to caseload with a 30-day limit during any six-month period.

(3) Establish procedure for transfer of cases within such district.

(4) To establish a central prior traffic offense record for the district in cooperation with Los Angeles Judicial District.

(5) To provide for appropriate number of jury commissioners in district to assist clerks.

²³ *Supra* n. 1, at 278.

²⁴ *Id.*, see also pp. 281-285.

The report of the Judicial Council called for a single district with various regional administrative areas.

The reports of the chief administrative officer for Los Angeles County recommended a reduction of existing districts and a thorough reorganization variously from nine districts to a single district for the entire county.

Both reports submitted by the Los Angeles County Judges' Association favored a change in the present county municipal and inferior court structure.²⁵

Present Status

Three public hearings were held on this matter by this committee during the interim period.²⁶ An attempt was made to locate these hearings in order to make it convenient for all areas of the county affected to attend. Nine individual cities, their bar associations, and judges from seven judicial districts testified. Many letters were received from cities not presenting oral testimony.²⁷ Furthermore, lengthy testimony was taken from representatives of the chief administrative office, the League of California Cities (Committee on Municipal Court Consolidation—Los Angeles Division), and the Los Angeles County Judges' Association.

The committee posed several questions to the witnesses before the hearings in order to elicit a response. The statements presented here are representative; were taken both from oral testimony and written statements submitted by each person.²⁸

What would be achieved by consolidation?

Cities. There was a flat denial that anything would be accomplished. Alleging that those things sought to be accomplished by way of consolidation could be done by other means of reform without upsetting present court structure.

County. Four specific benefits are suggested:

1. Maximum utilization of judicial manpower.
2. More effective use of clerical manpower.
3. Uniform court procedures and rules.
4. Greater auxiliary administrative benefits.

What are the comparative merits of a single court consolidation plan and some other lesser consolidation (e.g., nine-court) plan?

Cities. No merits of either is suggested. In fact the danger of consolidation to lessen the number of districts would begin eventual movement toward complete consolidation, not only of districts but also of municipal and superior courts. This position points to rationale which was suggested by proponents of consolidation based on efficiency and savings.

²⁵ 1959 vote of the judges favored a single court plan. 1961 vote of the judges favored a nine-court plan.

²⁶ October 30, 1963, at Huntington Park; October 31, 1963, at Beverly Hills; and December 3, 1963, at El Monte.

²⁷ See respective transcripts on file in Assembly Judiciary Committee office, Sacramento.

²⁸ The testimony attributed to cities was presented by Mr. Leonard Horwin, Mayor pro tem, Beverly Hills, and Chairman of the Committee on Municipal Court Consolidation, Los Angeles Division of California Cities. The testimony attributed to the county was presented by Mr. John R. Leach, Assistant Chief Administrative Officer, Los Angeles County.

Specific objections to consolidation :

1. Cases would be transferred to centralized courts and existing outlying facilities would cease to operate as "people's courts."
2. Courts under consolidation would be less accessible to litigants, witnesses, jurors and lawyers, thereby offsetting any alleged savings.
3. Jurists would be unfamiliar with local environment.
4. No presentation of facts to substantiate the assertion of increased efficiency.
5. Proposed plans would not solve administrative problems.

County. As to the single court plan, the county position is:

1. It would permit a single administrative or executive officer to supervise and administer the clerical and housekeeping.
2. It would permit maximum benefits and services with greatest savings to county.
3. Permit absolute uniform procedures for the county.
4. Avoid necessity of adjusting district boundaries each time a new incorporation where such incorporation crosses more than one district boundary.

With respect to the nine-court plan, their position is:

1. Alleges that it is less desirable than the single-court plan.
2. The existing problems of 23 districts would be reduced to a multiple of whatever number lesser districts would be determined, that is, the same problems would exist only on a smaller scale.

What would be the effect on local autonomy?

Cities. The cities feel that their local autonomy would be infringed upon by any change in the districting. The specific objections raised were:

1. Great inconvenience to parties, counsel, witnesses and police departments.
2. That local election of judges would be affected in that the districts would be larger and that there would be a loss of responsiveness by the bench to the electorate.
3. The fear that physical location of the courts would be changed.
4. Loss of close administrative control by centralization.

County. The county position takes a little different approach to the question of effect on local autonomy.

1. There is a denial that there is any relation of the arm of the state court system as a committed integral part of the local government scene.
2. An admission that there certainly would be a loss of local administrative control over certain court procedures and personnel.
3. Denial of validity of familiarity of local environment as an argument to sustain autonomy position.
4. Cites statistics of traffic court to dispel fiction that majority of those experiencing court involvement are residents within that court jurisdictional district.

What are the local needs that would not be served if a consolidation became effective? Would a plan work a hardship on litigants, attorneys or police departments because of consolidation?

Cities

1. There would be a loss of closeness to the people who should be served as well as possible loss of physical location.
2. Populace would be less familiar with judge since district would be larger and, therefore, would not be able to vote with as much knowledge of his performance.
3. Also would be a lessening of identification of the judge to the district.
4. More costly to local city police departments, litigants, witnesses who must travel to facility farther away.

County

1. Categorical denial of above objections.
2. If there would be a single court plan, subareas could be organized on same geographical basis as superior court districts.
3. Would be a change in election of judges because of change in size of the district, but analogized to the election of superior court judges.
4. No hardship on police departments because county sheriff comes to local court after arraignments and provides the transportation for prisoners.
5. There is no physical movement of court facilities contemplated under any consolidation proposal.
6. As to hardship on litigants, most cases involve traffic matters and statistics supplied from a recent sampling show over half are not residents within judicial districts where cited.

Is there now proper and efficient use of judicial and clerical manpower? What would be the effect of some form of consolidation plan on the use of such personnel?

Cities

1. Agree better use might be possible but need not consolidate to accomplish such result.
2. Admit uniformity of rules and procedures is desirable.

County

1. Reiteration of position under first question.
2. Alleges that same people would be doing greater amount of work.

Would there be an increase in savings or costs to the county local districts by implementation of a consolidation plan?

Cities. The cities allege that there is no supporting data or evidence either way as to savings or increase in costs. However, they present the position that consolidation would create more administrative costs.

County. The county has supplied figures which seek to support their position that costs would decrease by approximately \$410,000 annually by consolidation to at least a nine-court plan. This figure

is based on projected use of judges and clerical personnel and court-room space.

General comments from representative cities is illustrative of the attitudes on the local level by various municipal entities and their officers.²⁹

"The location and number of these courts should be based on convenience to people and convenience to local police . . ." F. W. Sharp, administrative officer, Pomona.

"Any form of consolidation would reduce local autonomy . . . The electorate from a local community or area has some chance of being so informed; this is not true when judges are elected on a countywide basis". Robert D. Ogle, assistant city attorney, Santa Monica

"Convenience in terms of distance . . . is a very important factor for the proper administration of justice . . . I mean people called for jury duty should not be required to travel any great distance to fulfill this function." Lyle W. Alberg, city coordinator, Montebello

"As to whether we should or should not adopt a court consolidation plan, it would appear to us that the following three questions must be resolved: (1) Does consolidation improve the cause or ends of justice? (2) Will consolidation provide greater efficiency in the handling of justice? and (3) Would court district consolidation be more economical to the people? The City Council and I believe the answer to all three questions would be 'no' ". Gifford W. Miller, city manager, Monrovia

The written statement to the committee presented by Mr. Leonard Horwin, chairman of the Court Consolidation Committee of the Los Angeles Division of the League of California Cities offered nine specific considerations to be made by an independent study of the court problem. Most of these were subjects of the Holbrook Report, which was an independent study. All of these matters were items considered by both this Committee and a special local Los Angeles County conference committee.

SPECIAL LOCAL, LOS ANGELES COUNTY COMMITTEE³⁰

In addition to the public hearings, a small conference group³¹ met a number of times in an effort to discuss the allegations made by both proponents and opponents to consolidation. It was the purpose of this group to sit down and amicably and intelligently discuss the areas of conflict in an effort to understand the situation, and to present some agreed upon change of existing court organization and procedures. Such task is a noble endeavor and vital to any change from the system which now exists.

²⁹ Excerpts from written testimony addressed to committee from Mr. Leonard Horwin.

³⁰ The individuals who formed this committee at the beginning were: Hon. Joseph A. Sprinkle, Judge, Pasadena Judicial District, and Chairman of the Municipal Court Judges' Association, Los Angeles County, Mr. John R. Leach, Assistant Chief Administrative Officer, Los Angeles County, Mr. Leonard Horwin, Mayor pro Tem, Beverly Hills, and Chairman of the Committee on Municipal Court Consolidation, Los Angeles Division of California Cities, Mr. Eugene Didak, Attorney, Administrative Office of the Courts, Mr. Jay Michael, Assistant to the Director, League of California Cities, and Mr. Bernard B. Nebenzahl, Consultant, Assembly Interim Committee on Judiciary.

³¹ *Ibid.*

Diligence and dedication are the hallmark of that special group. Each view was well represented. Although no organizational or municipal approach has been reached at this writing of those items discussed, it is worthwhile to point out areas that were identified as those which the group felt were basic to the municipal court problems in Los Angeles:

1. Maintenance of existing physical location wherever possible. Retention of the existing number and boundary of districts except from time to time, as circumstances require (population, caseload) to permit a change upon the approval of majority of municipal judges in county including those within the area affected where there is also consent of city government affected. The board of supervisors shall decide where there would be less than unanimous consent of cities affected by greater than two-thirds consent was obtained.

2. Desirability of countywide uniformity where needed.

- a. Court rules.
- b. Uniform bail schedule.
- c. Personnel rules.
- d. Mutual traffic indexing system.
- e. Jury selection and instructions.
- f. Indexing and recordkeeping.

Areawide transferability of,

- a. Contested cases of long duration.
- b. Judges to adjust to judicial surplus time.

The areas of tentative exploration also set forth the manner for possible implementation of changes:

1. Obligatory effect of uniform rules changes as set out in 2 above, upon agreement of majority of judges.

2. Selection of a presiding judge to so implement with sufficient staff.

3. Desirability of making areas in which transfers of cases and judges can be made coextensive with superior court branches.

4. Suggestion of presiding judge for areas who could transfer within area where appropriate to gain prompt trial and full use of judicial manpower, assignment of judge to other court within same areas.

It should be pointed out that there were several points of basic conflict. The representatives of the cities insisted that the constitutional provision requiring election of judges from the district would be diluted and ineffective if the district became coextensive with the county. The fear expressed was that the judge would not then be as responsive to public reaction as he would in smaller districts, and that in effect it would be almost guaranteeing an incumbent lifelong tenure.

Another concern was there would be too great a centralization and too extensive a control exercised over judges and cases. Such centralization would promote inefficiency and reduce the quality of justice. These objections are value judgments and do not necessarily seem to be supported by factual evidence presented.

Conclusion and Recommendation

This committee, while recognizing its responsibility pursuant to the California Constitution and appropriate statutes requiring the Legislature to set salaries, qualifications, and determine the number of judges, officers and attachés, also recognizes the statutory responsibility placed on the boards of supervisors to determine the districting for municipal court purposes within the respective counties, and further, that it is the county that must sustain the financial burden of operation of these courts and payment of the personnel who operate them including the judicial staff.

Thus, with an appreciation for the dual relationship that exists between the county and the State Legislature, it is the recommendation of this committee that it defer any specific suggestion of change of the local municipal and justice court structure of Los Angeles County until there has been a firm recommendation by the Los Angeles County Board of Supervisors based upon public hearings and conferences held by this committee and a local working committee with a clear indication that it is within the judgment of the board that the courts should be reorganized in order to achieve maximum efficiency in the county administration of justice.

ATTACHMENTS, GARNISHMENTS AND EXEMPTIONS

Introduction

House Resolution 268 (1963) called for study of the existing California laws exempting personal property from attachment and execution of judgment, and for a study of the changes in California's population and credit structure which may have a bearing on revision of the law.

Credit simply allows people to acquire and use items before they make full payment. As is the case with everything else, credit can be used and abused. Extension of credit in the United States and California has expanded tremendously in the past two decades. According to the Federal Reserve Bulletin, the total consumer credit outstanding in 1962 was 16.6 percent of the total disposable income, while in 1940, the figure was only 10.9 percent. Increase of personal or consumer bankruptcies in the United States indicates that the extended use of credit is accompanied by abuse. The Consumer Counsel of California, Mrs. Helen Nelson, has noted that between 1946 and 1963 the total number of all bankruptcies in the United States rose from 10,000 to 147,780, and that 9 out of 10 of the 1963 bankruptcies were family bankruptcies. Mrs. Nelson cited the following five factors as contributing to the bankruptcy problem: (1) Consumers try to live beyond their means. (2) Merchants are extending too much credit because of their desire to sell. (3) Finance companies make loans without full investigation of the applicant. (4) Manufacturers are forcing dealers to accept low down payments. (5) Credit extenders use some misleading practices when granting credit and loans.

A change in the law of exemptions cannot be a comprehensive program to deal with the factors named by Mrs. Nelson. However, exemption law can be tailored to accomplish three things:

1. Adequately protect the debtor from sinking to an even more hopeless financial position because of seizures of his property and wages.

2. Encourage the creditor to be more careful in selection of his credit risks.

3. Aid the debtor to work out a financial program which will liquidate his present debts.

Summary of suggestions and proposals submitted

The committee held a hearing in June 1964, and in addition it received comments through the mail and reviewed recent articles and studies on credit problems. Some people feel that the primary need is simply to modernize the code by eliminating many of the "horse and buggy" specific exemptions. Others believe that a modernization should be accompanied by increases in the protections given to the debtor. On the other hand there have been some statements that even the present protections are too great. It was suggested that the basic procedures of attachment should be modified to require that the creditor give the debtor more adequate notice of his exemption rights, and that the overextended debtor be given simplified means

of declaring his existing debts and obtaining protection as he attempts to liquidate them.

The following 14 proposals were received and considered by the committee:

1. A comprehensive revision of the exemption law which would give all persons the same basic exemptions in place of the numerous specific exemptions under the present code. Each person would be granted a basic exemption of \$4,000 property plus half of his earnings. This exemption would *increase to \$20,000 property plus all earnings* if he files a debt liquidation plan with a court. No creditor could avail himself of attachment, execution or garnishment remedies unless he has notified the debtor of his rights.

2. Exempt *all* earnings of a judgment debtor. (Assemblyman Foran, AB 2332, 1963, and Assemblyman Ferrell, AB 2808, 1963.)

3. Exempt *75 percent of a debtor's earnings*. (Assemblyman Foran, AB 2278.)

4. Exempt the *minimum wage* from attachment and garnishment. (Vincent Thorpe, Assistant Attorney General in charge of consumer frauds.)

5. *Limit* the creditor's attachment of wages to 10 percent of debtor's wages every month, with the provision that there will be automatic reattachment every month until debt is paid. This is similar to New York law. (Assemblyman Willson, hearing June 23, 1964.)

6. *Limit successive attachments* to once every 30 days. (Robert C. Kopriva, Associated Credit Bureaus of California, at hearing on June 23.)

7. *Exempt all wages if required for necessities* regardless of the type of the previous debt, including those cases where the debts are for common necessities of life. (Amend Civil Code 690.11, 2nd paragraph, suggested by Elwood M. Rich, Municipal Court Judge, Riverside, in a letter to the committee.)

8. *Exempt a straight \$5,000* worth of property rather than specific exemptions. (Mr. Kopriva, June 23.)

9. Enact some *legal prohibition* against the employer's *firing* of the employee because of wage garnishment. (Assemblyman Marks, June 23.)

10. *Repeal the savings and loan exemption* (Code of Civil Procedures 690.21). (Mr. Kopriva, June 23, and Assemblyman Thelin, AB 1458, 1963.)

11. *Prohibit garnishment of wages* or make it substantially more difficult. (George Brunn of the Association of California Consumers.)

12. *Repeal the special exemption for seaman's wages* and make it part of Section 690.11. (Sherman, Weissman and Meyers, counsel.)

13. Establish a *dollar* rather than a percentage exemption in Code of Civil Procedures 690.11. (Richard Don Agay, attorney.)

14. Establish a way for the creditor to be able to reach expensive leased automobiles. (Richard Don Agay.)

Arguments favoring and opposing greater protection to debtors

The committee discovered a definite conflict of views on whether the debtor's protections by way of exemptions and notice requirements should be increased.

One of the arguments in favor of great protection is that the debtor who is liable to have his assets reached is usually in bad shape financially and that to take what he has will make his financial condition worse. This is particularly true with respect to wages, where the debtor's ability to continue to support himself and his family is cut back by attachments or garnishments. Attachment of wages presents a special problem, and that is loss of employment. The California Labor Federation research director, Don Vial, stated, "... it is common knowledge that attachment (of wages) frequently leads to discharge of employment and loss of ability to pay debt. The fear of this consequence of attachment is a real factor that causes a debtor to take the course of bankruptcy . . ." Creditor organizations are aware of the problem, also. Robert C. Kopriva of the Associated Credit Bureaus of California stated, "I certainly agree that I don't think you should push the poor debtor against the wall and just keep hitting him, all the time. I would say you might want to consider whether or not an attachment on wages should be limited to, say, once every 30 days or once every 45 days or once every 20 days."

Present law gives the debtor's wages some protection, but in most cases only 50 percent of the wages are exempt. California law does not protect the debtor against the dire consequence of loss of job because of garnishment, although a recent amendment to the Code of Civil Procedure 690.11 does give the debtor some help in that it at least requires notice to him prior to a filing for garnishment.

Another argument in favor of greater protection is that it will encourage the creditors to be more careful in selection of credit risks. If the creditor knows that he will not be able to apply extreme pressures to the overextended debtor, he will be more careful to select debtors who are not liable to become overextended.

An argument against establishing greater protections by way of exemptions is that this will cut back on the ability to grant credit. Mr. Kopriva stated his view that "no doubt the consumer credit economy is one of the things that makes California one of the greatest states, and it is (because of) the laws that enable creditors to safely grant credit that we have a real surging economy in this state. I feel that if we make more exemptions in our laws, what would actually happen is that the people that are entitled to credit would be unable to get it because the credit grantor . . . is not going to be able to grant credit."

Closely tied in with this argument is the second one which emphasizes the increase in bad debt losses which the creditor will suffer with increased exemptions. Commercial credit grantors and incidental credit grantors such as small businesses and professionals both express concern that they will not be able to collect their bills. A San Diego dentist stated in a letter, "Debtors' wages are not attached indiscriminately, but only after considerable time and effort has been expended attempting to collect by other means. The bad debt rate in California is extremely high and I feel that action such as this (increasing exemptions) would certainly accelerate it."

Equal exemption protection and notice to debtors of their rights

Two other problems were of particular concern. One was the lack of equality and uniformity in the present exemption law. The Code of Civil Procedure presently contains a list of specific exemptions which sprawls over 10 pages. A look at the code section headings reveals the following exemptions as examples of the present approach: household furniture, farm equipment, mechanical equipment, prosthetic appliances, fisherman's equipment, poultry, seamen's wages, nautical instruments, arms and uniforms, and so forth. The specific exemptions do not guarantee everyone a certain minimum which will be protected, but only protect persons depending upon what type of items they own. This scheme protects in varying measures rather than equally.

The second problem is apprising debtors of their rights. A member of the Attorney General's office pointed out that many debtors do not know what rights they presently have. In some cases this can be attributed to lack of education, but the more fundamental reason which would apply in almost every case is that the laws are complex and difficult to understand. Thus the committee has received suggestions that the procedures for obtaining exemption protection be simplified and that improved means for giving notice of rights be established. One suggestion was that the debtor be allowed to file a very simplified claim of exemption with the clerk of the court rather than file an affidavit specifying code sections with the levying officer, as is presently required. It has also been suggested that the creditor be required to give the debtor notice of his exemption rights prior to commencing any action involving attachment, garnishment, or execution.

Conclusion. The committee concludes that a revision of the law which will increase the debtor's protection by way of exemption and which will make that protection more modern and equal will be of benefit to both debtors and creditors. This conclusion reflects the underlying fact that neither debtor nor creditor benefits when the debtor is financially crippled. A more powerful exemption law will help keep the debtor from sinking further into a financial abyss and losing his job. At the same time it will protect the creditors to the extent that it allows the debtor to keep going and to avoid bankruptcy. Incidental credit grantors such as doctors, lawyers and small businessmen lose when a small loan company garnishes wages and causes the debtor to be fired or run for bankruptcy. A law with more exemption protection will encourage the commercial credit grantors to be more careful in choosing their credit risks. If the creditor will do this, he will reduce his bad debt losses. This induced care may result in some reduction of overall credit granted, but the reduction will probably be small and will be justified by the decrease in human misery caused by extreme credit problems. Finally, an exemption law can be tailored to encourage the debtor to find a program which will help him to find his way out of a bad financial situation and into a better one.

Recommendation. The committee recommends that the proposals contained in this report and any additional proposals which come to light be studied carefully in order to arrive at a suitable revision of the exemption laws.

ASSEMBLY INTERIM COMMITTEE on JUDICIARY

GEORGE A. WILLSON, *Chairman*

January 11, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly and
Members of the Assembly
Assembly Chamber, State Capitol
Sacramento, California

Gentlemen:

Pursuant to House Resolution No. 500 of the 1963 Regular Legislative Session, the Assembly Interim Committee on Judiciary submits herewith its final report on Domestic Relations.

To all those who contributed to its deliberations, the committee wishes to express its gratitude.

Respectfully submitted,

GEORGE A. WILLSON, *Chairman*
HARVEY JOHNSON, *Vice Chairman*

WILLIAM T. BAGLEY
GEORGE E. DANIELSON
WILLIAM E. DANNEMEYER

HOUSE RESOLUTION NO. 500

(Assembly Journal, June 11, 1963, page 5232)

Relative to constituting certain standing committees
of the Assembly as interim committees

Resolved by the Assembly of the State of California as follows:

1. The following standing committees of the Assembly are hereby constituted Assembly interim committees and are authorized and directed to ascertain, study and analyze all facts relating to (1) the subjects and matters assigned to them by this resolution; (2) any subjects or matters referred to them by the Assembly; (3) any subjects or matters related to (1) or (2) which the Committee on Rules shall assign to them upon request of the Assembly or upon its own initiative:

(1) The Committee on Judiciary is assigned the subject matter in the Civil Code, the Code of Civil Procedure and the Probate Code, uncodified laws relating to civil matters, and other matters relating to the civil law and procedure of the State.

PREFACE

In the preparation of this final report on domestic relations an attempt has been made, in each of the several parts down to the section entitled *Findings and Recommendations*, to reflect accurately not only the testimony presented to the committee but also the basis for many of the positions taken by the witnesses in their testimony. Thus in several of the parts of this report, data and viewpoints referred to by the witnesses have been included in order to more adequately support and explain their position. The views advanced by the various witnesses or the background support referred to do not necessarily reflect the position of the committee. Footnote documentation has been utilized as much as possible to permit the reader to extend his study in the various areas considered in the hearings. The committee was fortunate to have appear before it many leading authorities on matters pertaining to family life and law. On occasion some of their statements appear without documentary support, relying on their source as adequate support.

The following members have expressed reservations or dissents from certain aspects of this final report as follows:

Mr. Johnson does not concur in the proposal for a certificate of divorce registry.

Mr. Johnson and Mr. Marks do not agree with the proposal for a waiting period for youthful applicants for marriage licenses, and Mr. Foran has expressed his reservation.

Mr. Dannemeyer does not concur in the proposal for encouraging family life education in the public schools.

Mr. Z'berg has expressed his reservation and Mr. Stevens his objection to the proposed amendment of the statutory rape law designed to reduce the coercive effect of that statute toward the contracting of undesirable marriages.

DIVORCE REGISTRY CERTIFICATE *

I. INTRODUCTION

Adequate, accurate and accessible information about divorces, annulments, and legal separations¹ is of vital importance to the persons involved, legislators who must make important decisions relating thereto, and scholars and researchers attempting to aid the solution of marriage and divorce problems through collection and analysis of relevant data. Beyond the legal importance of information for individual cases, there has been and continues to be a growing demand from many professional fields, including the law, for statistical information on the trends and general characteristics of marriage and divorce in this country and in California. Unfortunately, both the United States in general, and California in particular, have less adequate marriage and divorce statistics than most other countries of the western world to aid in obtaining objective facts about trends and problems related to marriage and divorce, and to measure the effects of changes in matrimonial laws upon the family.

Two systems of filing divorce records are used in the United States.² In all states, the basic documents pertaining to divorces are kept in the dockets of the court by which the decree was granted. In approximately 15 states, the local system of filing divorce records is the only source of information. In the other states the law requires a "statistical record" of each divorce, which may contain basic identifying information relating to the decree, to the marriage being dissolved and to the parties concerned. This record is preserved in central files maintained by the state in the state office of vital statistics, as are central files of birth, death and marriage records.

As against a system of local filing of divorce records, a system of statewide files has several important advantages. First, it provides either a central reference service for persons who need documentary evidence of the decree from the county in which it occurred or it permits a single agency to certify to the fact of a divorce. Secondly, it makes statistical information from the public divorce records more readily available to public and private agencies, groups and individuals who are in need of such information for policy formulation, legislation and scientific research.

For these reasons the National Office of Vital Statistics in recent years initiated a comprehensive program aimed at the improvement of

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Sacramento, August 13, 14, 1964.

¹ Hereafter divorces, annulments and legal separations will all be referred to as divorces.

² Much of this information was taken from Rheinstein and Plateris: "The Importance of Central Files of Divorce Records," *American Bar Associated Journal*, December 1960.

national divorce statistics. Beginning in January 1958 a Divorce Registration Area (DRA) was inaugurated, along the same basic lines previously developed for Birth, Death and Marriage Registration Areas. The maintenance of statewide central files of divorce records, however, lags markedly behind that of records of other vital events, resulting in inconvenience, delay, and unnecessary expense to the legal profession and the public in verifying the occurrence of a divorce. Today the Birth and Death Registration Areas include all states, the Marriage Registration Area includes most states, and the Divorce Registration Area includes approximately 18 states. In October 1961 the Board of Governors of the American Bar Association adopted a resolution, at the recommendation of its family law section, (1) endorsing the establishment and maintenance of state files of marriage and divorce records in all states, (2) urging all states to take steps to qualify for participation in the Marriage and Divorce Registration Areas, and (3) supporting the adoption in all states of necessary legislation to accomplish these purposes.³

II. PRESENT CALIFORNIA SITUATION

Although the vital statistics registration of births, deaths and marriages has been in effect in California since 1905, the void of substantive information relative to divorcees is conspicuous by its absence. While the majority of states have procedures for the central registry of divorcees, the State of California *does not have* basic vital statistics information relative to divorce actions occurring within the state. The present reporting system in California gives little more than a total count of final decrees entered for each county. It does not serve effectively *either* the purpose of a statewide index or to furnish basic vital statistics data relative to this important event in our society. From the standpoint of national vital statistics reporting, California is one of several states which is not considered to have adequate basic vital statistics information relative to divorcees so as to permit its participation in the National Office of Vital Statistics Divorce Registration Program.

In order to be included in the National Divorce Registration Area, each state must meet certain established criteria concerning the records and the reporting of divorce decrees. These criteria are:

1. A state must maintain central files of divorce records.
2. All local areas within the state must report regularly to the central state office.
3. A record form containing a specified minimum set of statistical items must be employed.⁴
4. An agreement between the state office and the National Office of Vital Statistics in joint testing of registration completeness and accuracy.

³ Proceedings of the Board of Governors, American Bar Association, October 19, 20, 1961, p. 18 and Exhibit H.

⁴ The items required were developed by the Public Health Conference on Records and Statistics, a cooperative conference of the Public Health Service and the several state departments of health.

While approximately 35 states maintain central state files of divorces, California is one of those states which does not have an acceptable report form, as required by the third criterion. A glance at California's present reporting form⁵ clearly indicates its inadequacy. Seven items only are solicited: (1) the name of the husband, (2) the maiden name of the wife, (3) the date the decree was entered, (4) the case number, (5) the county, (6) the date of the report, and (7) the name of the county clerk and the deputy who executed and filed the form. Execution of this form is performed by the county clerks, based on the information contained in the various documents filed by the parties to a divorce action. The maiden name of the wife is seldom obtained in these documents and hence cannot be inserted by the clerks. The bound volumes prepared from these forms by the Bureau of Vital Statistics and distributed to each county, listing all final divorce decrees granted each year, are therefore unable to record this information.

Some additional items are required to be set forth in the complaint, according to Section 426a of the Code of Civil Procedure, "for the statistics required to be collected by the State Bureau of Vital Statistics" but these items of information remain in the files in the county clerk's office and are not transmitted to the Bureau of Vital Statistics. These latter items are six in number: (1) the state or county in which the parties were married; (2) the date of marriage; (3) the date of separation; (4) the number of years from marriage to separation; (5) the number of children of the marriage, if any, and if none a statement of that fact; and (6) the ages of the minor children.

III. INADEQUACIES OF PRESENT PROCEDURES

Testimony received by the committee in its interim studies of marriage and divorce problems indicated there is a *minimal* number of things which can be said about divorce in California. Among these are the statements first, that we have a high divorce rate, and second, that we know practically nothing about it. The second statement is illustrated with reference to the first. Although we know we have a high divorce rate, which we share with the other western states, we don't know exactly how high it is. We don't know the rate exactly because a divorce rate is a complicated matter. Measuring the number of divorces granted against the number of marriages which occurred in the same time interval among a group with the characteristics of the California population is a perilous undertaking. So is any attempt to compare such a ratio to another state for it must be noted that California's population is comprised of a large influx of people already married and a substantial but temporary efflux of residents migrating to sister states for the purpose of marriage. While we presumably know the number of divorces granted in this state, we do not know how many of these are resident here only for the minimal period required for jurisdictional purposes,⁶ nor how many Californians get divorces else-

⁵ State of California Department of Public Health, Form VS-243.

⁶ "A divorce must not be granted unless the plaintiff has been a resident of the state one year, and of the county in which the action is brought three months, next preceding the commencement of the action . . ." Civil Code Sec. 128.

where, such as in Mexico and Nevada. Divorce rates must be calculated against the population exposed to the risk of getting a divorce—namely the married population—not against the total population, which includes many single and widowed or divorced persons. The rate, then, should include those divorces obtained by Californians who temporarily sojourn to neighboring states or countries for the purpose of obtaining a divorce.

If the sheer rate itself is difficult to know from the information we presently have, most other things about divorce in this state are either extremely difficult or impossible to know accurately. We do not know, for example, with scientific, statistical accuracy, to what extent those getting divorces have been divorced before, the number of cases contested, the ages of the parties, what economic groups they represent, what part of the country they have come to California from, how long they have been in California, etc. We have no information about those individuals who file for a divorce and then do not proceed any further, nor about those who obtain an interlocutory decree and then do not return to obtain the final decree. In short, we do not have even the most elementary knowledge of divorce in California, although the civil status of the population and its regulation is an important part of the state government. The fundamental difficulty is that our information machinery does not match our jurisdictional powers and responsibility. Since the state governments have jurisdiction over marriage and divorce, it is their duty, if they are to carry out their responsibilities in this matter effectively and fairly, to see that basic information is obtained on marriages and divorces as these occur in the state.

In a recent study of marriage and divorce in San Francisco during 1963⁷ only four variables were available to the sociologist: place and duration of marriage and number and age of children. Even from this limited data, however, a number of useful, though tenuous, conclusions could be drawn. When considering the effects of hasty migratory marriage on domestic divorce problems, legislators are aided by even the limited data revealed by the San Francisco study. This research indicated that there was a 13 percent greater chance of divorce within one year if the marriage was contracted in Reno (as compared to all of the marriages terminated in San Francisco during 1963) and a 10 percent greater chance of divorce within one year if the marriage was contracted in Reno as compared to those marriages which were contracted in San Francisco.⁸ It can be hypothesized that most of the Reno marriages which ended in divorce in San Francisco were contracted by San Franciscans, who sojourned briefly in that city for the purpose of marriage, as opposed to the view that the parties involved were Reno residents who later migrated to San Francisco. The data on stability of Reno marriages, then, supports the contention that marriages contracted in a hasty fashion, with little or no serious preparation, do not involve a substantial commitment to the marriage by the parties and hence are highly unstable.

While 7,000 marriage licenses were issued in San Francisco in 1963 and 3,000 divorce actions filed, it is clear that 3,000 of 7,000 San Francisco marriages do not end in divorce. But as the data situation exists

⁷ See Appendix A.

⁸ See Appendix A, Table IX.

now, we have no way of knowing exactly how many San Francisco marriages do end in divorce, at what ages they occur, in general, what kind of population is involved. Not only is such information vital for those in the social sciences who are trying to understand social problems of this nature, but any attempts to reform divorce laws, to take preventive measures before marriages come to the courts or to provide conciliation services once they have reached the courts can only be successful if we know for *whom* such measures need to be tailored. Faced with a problem as complex as marriage and divorce, legislators need much additional information than is presently available from our existing forms and procedures. A single additional item, such as "age at marriage" would permit the sociologist to readily document and summarize the extent of the "teenage marriage" problem.

Our present system of recording information about divorce in this state also denies California the benefit of scholarly research on a comparative basis. Testimony was received about a noted anthropologist who came to California for a year's study of divorce in the American culture. Beginning his work by perusing the official records which we keep at county and state levels, he found the data so sketchy he soon gave up this part of his research and went directly to the field for personal interviews. Had our records been more complete, he may have been able to establish a broad foundation of solid information about the entire state on which to build his more intensive analysis. As it is, his work is proceeding much more slowly than anticipated and is thus far more limited than had been anticipated.

Most special studies, aiming to answer some specific question or set of questions about divorce, need information which could be readily obtained wholly or in part from the registration statistics, if these were available. For example, a four-year study of the impact of early marriage upon college achievement and occupational preparation of youth is just beginning at one of our northern California colleges. Seeking to test the hypothesis that the earlier the marriage the less chance there is for talented youth to move through a full and complete college career and on to their anticipated occupational goals, and hypothesizing that the relationship between early marriage and college will vary by social class, size of town and high school, and the character of the kinship families, this study will need a broad base of statewide information against which to make meaningful comparisons and projections. In essence, any study needs to know the extent to which it reflects the statewide population or differs from it. It needs to know the extent to which its highly selected sample is representative of the state as a whole. A "bench mark" is needed for every study, either for the purposes of selecting a representative sample or comparing the sample population actually used with the statewide population.

In addition, if basic data is available through more adequate registration procedures it would be possible to match the divorce, the marriage, and the birth records. One could in this way obtain information, for example, on the question whether premarital pregnancy is a predisposing condition of divorce, whether the presence of children is or is not a deterrent, and whether the place and circumstances of marriages are related to marital disruption. In short, without basic data on divorce, little research is possible. With such data, a great deal is pos-

sible. Avenues are opened up to getting much more information on causes and trends, both in terms of government, university and private research which would enable legislation with respect to divorce to be much more enlightened and hence much more effective.

IV. PROPOSED ALTERNATIVE PROCEDURE

A. *Information to Be Obtained*

The California Department of Public Health, Bureau of Vital Statistics, working in conjunction with the committee's special consultant on domestic relations, the California State Bar Family Law Committee, and the California Association of County Clerks, has proposed that the following basic vital statistics information relative to divorce be obtained:

1. *Case identification*
 - a. Type of complaint
 - b. County of filing
 - c. Date filed
 - d. Case number
2. *Husband and wife*
 - a. Full name (maiden name of wife)
 - b. Date of birth (age)
 - c. Present address
 - d. Length of stay in California (in years)
 - e. Birthplace (state or foreign country)
 - f. Social Security number
 - g. Occupation—industry
 - h. Highest school grade completed
 - i. Color or race
 - j. Religious denomination
 - k. Number of previous marriages dissolved by death, divorce, or annulment
3. *The marriage*
 - a. Place and date of marriage
 - b. Names, birthplaces, and birthdates of living children of this marriage (born or adopted)
 - c. Usual residence at time of separation
 - d. Date of separation
4. *Legal grounds on which complaint filed*
5. *Certification of above facts (2, 3 and 4) by plaintiff*
6. *Name and address of attorney for plaintiff*
7. *Information relative to decree (to be completed by county clerk)*
 - a. Type of decree or other disposition
 - b. Date entered
 - c. To whom decree granted
 - d. Action contested (yes or no)
 - e. If divorce decree, date interlocutory decree granted
 - f. Certification of court action by county clerk

The format and content of the proposed forms is included in Appendix B. Drafts of the enabling legislation are set forth in Appendix C.

B. Reporting Methodology

The methodology to be used in this reporting system is a modification of that presently being used effectively in other aspects of California's vital statistics registration system, i.e., in the reporting relative to adoptions and marriages.

The information is furnished by the individuals involved at the time of filing the original complaint (together with the required fee) in a three-part document (original and two carbons):

Original—Certificate of Registry of Final Decree of Divorce, or Final Decree of Annulment or Separate Maintenance

Duplicate—Clerk of Court's Record

Triplicate—Preliminary Report of Filing of Complaint for Divorce, Annulment or Separate Maintenance

The above three-part record is to be completed in Sections 1 through 6 above, i.e., case identification, information relative to the husband and wife, the marriage, the legal grounds on which complaint is filed, the certification of above facts by plaintiff, and the name and address of attorney for plaintiff, utilizing information furnished by the plaintiff to the attorney prior to the filing of the action.

This three-part record is to be required to be filed at the time of the filing of the original complaint, upon record forms required to be prescribed and furnished by the State Registrar of Vital Statistics.

The *Preliminary Report of Filing of Complaint for Divorce, Annulment or Separate Maintenance* (triplicate copy) would be transmitted currently by the county clerk to the State Registrar of Vital Statistics to serve as current information on the characteristics of actions filed.

The *Certificate of Registry of Final Decree of Divorce, or Decree of Annulment or Separate Maintenance* (original copy) is to be completed by the county clerk at the time the final decree or dismissal, if any, is entered and transmitted to the Bureau of Vital Statistics, and would serve as the permanent legal record of the action.

The *Clerk of Court's Record* (duplicate copy) would serve as the local record.

In addition, the county clerk will forward monthly to the Bureau of Vital Statistics, a listing of all interlocutory decrees entered in that county the prior month. Thus inquiry to the Bureau of Vital Statistics would reveal the existence of any interlocutory or final decree entered anywhere in the state, a matter to which the bureau could certify based on the information contained in their records. A similar certification, of course, could be obtained from the local county clerk's office.

In any event, certifications would exclude information relative to occupation, highest school grade completed, color or race, religious denomination, previous marriages, and children and provision is made that none of these records will be open to public inspection. Maintaining this degree of confidentiality of the information reported on the certifi-

icate was considered essential to the acquisition of complete, accurate information. The records and the information contained on the certificates will be accessible to qualified persons with a valid educational or scientific research interest upon approval of the State Registrar of Vital Statistics and without cost to the state or local offices concerned.

C. Costs

Examination of the costs of financing this proposal by both the Department of Public Health, Bureau of Vital Statistics and the California County Clerks' Association indicates that an increase of \$1 in the present \$1 filing costs for a final decree would cover the administrative costs connected with this proposal. County clerks and members of the bar are presently having considerable difficulty resulting from omissions of the \$1 filing fee for final decrees. The county clerks cannot file such final decrees until the \$1 fee is obtained and handling costs and inconvenience to attorneys and the public in the many cases where the filing fee is omitted exceeds the monetary amount involved. Hence it is proposed that the new \$2 filing fee be paid at the time of filing the initial complaint, under the new reporting procedure which is applicable to those cases in which the initial complaint is filed after January 1, 1966, and that the \$1 fee and the old reporting procedures remain as is for cases in which the initial complaint action was filed prior to January 1, 1966, and on which final decrees may eventually be entered. When a request to enter the final decree is subsequently made, both the county clerks and the bar will be spared the inconvenience of tendering the modest fee required at that time as is now required under the present law.

It is recognized that a substantial number of cases do not proceed to the entering of the final decree or dismissal. This group of individuals is of especial interest to those concerned with marriage and divorce problems and the filing methodology outlined above will permit identification of this group, determination of its size and will facilitate research designed to ascertain the factors involved in the change of direction which occurred subsequent to the original filing for divorce.

V. BENEFITS TO BE REALIZED BY PROPOSAL

A complete understanding of the causes of and cures for marital discord will not be forthcoming from acquisition of the basic, vital statistics information to be gathered pursuant to this proposal. However, the professional opinions voiced at its hearings indicated to the committee that not even a beginning can be made along the road to such understanding unless systematic data is collected about the people experiencing marital problems in California. With relation to such other vital events in the lives of our citizens as birth, marriage, adoption, and death we are already collecting in this state, as in most states of the United States, much more extensive information which has provided the basis for very significant social research and judicious legislation. The information requested, none of which represents an innovation in data collection at the federal, state or local level will enhance immeasurably the value of studies in the area of divorce.

The data requested is unequivocal in a legal or demographic sense. It will enable comparison of California trends, characteristics and developments with other states, which cannot be done now. But, in addition, this basic system of judicial and vital statistical reporting will give much more understanding of California trends and cases in themselves. It will permit ascertaining the extent to which divorce is chronic; whether the popularized Hollywood divorce practices are typical; to what extent different occupational, educational and social groups have different proclivities for divorce; to identify and obtain a profile of these individuals who start divorce actions but do not carry them through to an interlocutory or final decree. Such information will permit assessment of the role of the small town and rural environment on marital success as compared with the larger city and metropolitan area. Occupation and educational data will permit comparative analysis of the relation of social class to divorce. Marital age data will permit documentation of the effects of youthful marriage on marital stability. An effective central index will permit economical proof of divorces granted within the state, a necessary fact in establishing freedom to remarry, and a frequent important item in determining succession of property, pension rights, insurance claims, social security benefits, wrongful death awards, and numerous tax considerations. Business organizations, chambers of commerce and institutions for marketing research constitute a large percentage of the users of marriage and divorce statistics in order to make estimates of the future demand for various types of merchandise requiring information about the number and characteristics of families and married couples.

A study of the persons engaged in research using divorce statistics, reported in the American Bar Association *Journal*,⁹ indicated the largest percentage were affiliated with colleges or universities, on the faculties teaching sociology, law, political science, business, psychology, economics, social work and home economics. The largest group among the college and university teachers were sociologists; the second largest, teachers of law. The same study indicated that divorce statistics are used in at least seven different categories of research. These include jurisprudence and sociology of law; development of legislative proposals; the combined field of demography and sociology encompassing studies on demographic trends in family formation and dissolution, and in the number of households and families, demographic and social factors associated with divorce trends, characteristics of the divorced population, children affected by family dissolution, participation of women in the labor force, and composition of households and families. Another substantial group was involved in sociopsychological research dealing with attitudes or detailed personal problems associated with family dissolution. Others use divorce statistics in training and teaching programs, studies concerning administrative policy, program needs, projections of program loads, community service needs, judicial and court programs, family counseling, and child welfare programs.

⁹ See footnote 2, *supra*.

VI. FINDINGS AND RECOMMENDATION

Findings:

1. Present reporting procedures for divorce, annulments, separate maintenance are wholly inadequate to serve the basic needs of the individuals concerned, legislators, scholars and researchers who require accurate, accessible information.
2. The absence of a proper reporting process precludes obtaining adequate insight into the many ramifications of our marriage and divorce problems and results in excessive costs to the legal profession and their clients.

Recommendation:

1. The committee recommends that legislation be enacted which will obtain the necessary information in an economical and efficient manner, through the utilization of a certificate of divorce registry which is similar to the certificates which elicit vital information about other important events in life such as birth, marriage, adoption, and death.

The reporting procedure recommended by the committee has been worked out in conjunction with the State Bar Family Law Committee and the Bureau of Vital Statistics. The increased cost of administering this program will be offset by a \$1 increase in the filing fee for a final divorce decree, raising the current cost from \$1 to \$2. These funds will also cover the cost of the Bureau of Vital Statistics preparing various reports reflecting the data collected.

In order to insure a review of the utilization which is made of this document, the committee recommends an initial adoption period of four years.

Part 1

Appendix A

DIVORCE IN SAN FRANCISCO: 1963

By: Dr. Ralph Lane

Chairman: Department of Sociology
University of San Francisco

During the year 1963 approximately 3,000 cases of divorce, separate maintenance and annulment were brought to the courts of the City and County of San Francisco. In that same year 7,022 marriage licenses were issued. As the accompanying tables indicate, not all the cases suing for divorce, separation or annulment were brought by those married in San Francisco, but it might very well be inferred that a minimum of one out of seven marriages between San Franciscans is likely to end in divorce. And, if one makes certain assumptions about the number of San Franciscans who go to Reno to be married, the number of potential marriage failures might be significantly higher. Suffice it to say that the size of the divorce "problem" is of a large enough order to warrant systematic investigation of the conditions under which it occurs.

The tables which serve as an appendix to these remarks present data on 664 (20 percent) of the divorce, separation and annulment cases selected at random from the files of the county clerk's office.¹ The purpose of the study was to establish, on the basis of the limited data available,² some kind of a profile of the population which ends up in the courts with a view to termination of marriage. It is hoped that the findings presented will be of value to those in the domestic relations department in whatever preventive program they may be able to undertake.

THE FINDINGS

It can be seen from Table I that there are two significant populations about whom some further assertions should be made, that is, those married in San Francisco (31.0 percent) and those married in Reno (22.0 percent). Now Table II indicates that those married less than one year (20.0 percent) are greater terminating risks, and similarly those married over two but less than five years (20 percent), than those married for other periods of time. One might add the 15.0 percent married over five but less than eight years to the latter category to dramatize the importance of some kind of adjustment which apparently takes place between the third and ninth years of marriage.

¹ The data was collected by Miss Mary Bischoff and Miss Mary Judge under the supervision of Dr. Jack Curtis and Dr. Ralph Lane, Department of Sociology, University of San Francisco. Thanks are due to Mr. Lewis Ohleyer, Domestic Relations Commissioner, for his assistance and to the county clerk's office for their cooperation.

² As with all official records, the items for study which are available are limited to the legal purposes for which they are collected and are not intended to provide the sociologist with a readymade laboratory, as desirable as that state of affairs might be.

Table III adds another dimension to the profile, for here we see that childless marriages are poor risks since they account for 48 percent of the cases. Adding those with one or two children, it appears that the overwhelming number of cases (82 percent) are associated with low fertility populations to begin with.

Now turning to the case of the duration of San Francisco marriages, it appears from Table IV that the first year is slightly less stable (23.2 percent) than the average and similarly the two- to five- and five- to eight-year marriages are less stable. But as is seen in Table V the instability of the first year of marriage is even more striking in the case of those who are married in Reno, 33.0 percent as opposed to the average of 20.0 percent for all the cases. See Table IX for a recapitulation comparing San Francisco and Reno marriages with the data for all marriages computed together. On the other hand, once the Reno marriages have gone beyond the first year, unlike those from San Francisco, the risk of termination seems to be about the same or slightly less than those married elsewhere.

With regard to the third to eighth year of marriage it has been hypothesized that childlessness might be a more crucial factor here, but Table VIII indicates that in the over two years and under five years neither the San Francisco nor the Reno marriages are characterized by lower fertility.

Finally, if one looks at Table VI it can be seen that San Francisco marriages ending up in court are roughly as childless as those from other localities. Table VII indicates that Reno marriages among these cases have much lower fertility but that is a function, of course, of so many marriages terminating in the first year.

What remains to be said, then, in summation is that considerably more needs to be known about the crucial period from over two years to less than eight years. Why this should be a time of particular adjustment cannot be inferred from the data at hand. One suspects that childlessness might have a significant influence but it is obviously not the sole force since childlessness all throughout married life seems to be very highly correlated with termination action. If one believes Reno marriages are contracted in a hasty fashion, with little or no serious preparation, then this is apparently borne out by the data, and one suspects that this same hastiness accounts for so much of the termination in the first year for all marriages. Other studies have indicated that teenage marriages have a high termination rate in the first year for this very reason.

It is hoped that much more data than that which is contained in legal briefs can be made available to investigators so that more than these tenuous generalizations might be drawn from them.

PROCESSING DIVISION

Part 1
Appendix C

SUMMARY OF BILL FORM DRAFT—DECEMBER 7, 1964

An act . . . relating to divorce, annulment and separate maintenance reports.

Sec. 1 provides that effective date is January 1, 1966.

Sec. 2, Sec. 4, and Sec. 6 provide that the old reporting procedure is limited to actions in which initial complaints were filed prior to January 1, 1966, and makes other minor revisions.

Sec. 3 amends Code of Civil Procedure to provide authority for revised reporting procedures, which will apply to actions in which the initial complaint is filed on and after January 1, 1966.

Sec. 5, Sec. 7, and Sec. 12 provide that the filing fee under the revised reporting procedure is \$2 and that it is legislative intent for this to substantially cover the costs of administration of this program in state and local offices and clarifies related matters.

Sec. 8 and Sec. 9 provide for minor revisions in present code sections.

Sec. 10 provides authority for disposition of preliminary reports after they have served their purpose.

Sec. 11 provides that certain items are excluded from certified copies or other certifications.

Sec. 13 provides basic outline for revised reporting procedures.

Article 1 covers general provisions and more specifically:

- a. Provides that the records are not open to public inspection;
- b. Provides that such records and all the information thereon are to be made available under stated conditions to appropriate educational and scientific research interests;
- c. Describes the general program of the office of the State Registrar of Vital Statistics in this field.

Article 2 covers duty of furnishing information.

Article 3 sets forth information to be reported.

Article 4 covers reporting procedures from the local offices to the office of the State Registrar of Vital Statistics.

BILL FORM DRAFT—DECEMBER 7, 1964

An act . . . relating to divorce, annulment and separate maintenance reports.

The people of the State of California do enact as follows:

SECTION 1. This act shall be effective January 1, 1966.

SEC. 2. Sections 89 and 134 of the Civil Code are amended to read:
89. No final judgment of annulment shall be entered after January 1, 1962, for cases in which the initial complaint was originally filed

prior to January 1, 1966, unless or until the party seeking the entry of the judgment has paid to the county clerk a fee of one dollar (\$1) for services of the clerk and the State Registrar of Vital Statistics in connection with the reports of annulments pursuant to Section ~~10360~~ 10372 of the Health and Safety Code.

134. No final judgment of divorce shall be entered after January 1, 1962, for cases in which the initial complaint was originally filed prior to January 1, 1966, unless and until the party seeking the entry of the judgment has paid to the county clerk a fee of one dollar (\$1) for services of the clerk and the State Registrar of Vital Statistics in connection with the reports of divorces pursuant to Section ~~10360~~ 10372 of the Health and Safety Code.

SEC. 3. Section 426a of the Code of Civil Procedure is amended to read:

426a. ~~(Statement of statistical facts in divorce complaint.)~~ In an action for divorce, annulment or separate maintenance, there shall be furnished by the plaintiff at the time of filing of the initial complaint, or within 10 days thereafter and before the date of the first hearing, that information ~~the complaint must set forth for the statistics~~ required to be collected by the ~~s~~ State ~~bureau~~ Registrar of ~~v~~ Vital ~~s~~ Statistics in the manner and as specified in Division 6 of the Health and Safety Code. If the required information is not furnished by the plaintiff, the defendant may instead furnish such information. The court may decline to hear any matter encompassed within the action or order that judgment not be entered therein, if such information has not been furnished and good cause for such failure has not been shown. Such report and the contents thereof shall not be admissible in evidence and shall not be inquired into in any action. ~~Among other matters as near as can be ascertained the following facts:~~

- (1) The state or country in which the parties were married.
- (2) The date of marriage.
- (3) The date of separation.
- (4) The number of years from marriage to separation.
- (5) The number of children of the marriage, if any, and if none a statement of that fact.
- (6) The ages of the minor children.

SEC. 4. Section 26859 of the Government Code is amended to read:

26859. Upon the payment of a fee of one dollar (\$1) the county clerk shall issue a receipt to any party in an action for divorce or annulment stating that such party has paid to him the fee of one dollar (\$1) for his services and the services of the State Registrar of Vital Statistics in connection with the reports of divorce or annulment pursuant to Section ~~10360~~ 10372 of the Health and Safety Code.

The county clerk by the 10th day of each month shall pay to the State Registrar of Vital Statistics ~~for deposit in the General Fund~~, one-half of all such fees collected during the immediately preceding month.

SEC. 5. Section 26860 of said code is added, to read:

26860. The fee for the filing of the vital statistics information required to be collected by Division 9 of the Health and Safety Code is two dollars (\$2) and shall be paid at the time of filing of each initial complaint action for divorce, annulment or separate maintenance.

The county clerk by the 10th day of each month shall pay to the State Registrar of Vital Statistics one-half of all such fees collected during the immediately preceding month.

SEC. 6. Section 10360 of the Health and Safety Code is renumbered and amended to read:

~~10360~~ 10372. The county clerk of each county shall make a report monthly to the State Registrar of every final decree of divorce or annulment which is filed with him after January 1, 1962, *for decrees in which the initial complaint was filed prior to January 1, 1966*. The report shall contain the names of the parties and the date the decree was entered.

SEC. 7. Section 10613 of said code is added, to read:

10613. *It is the intention of the Legislature that the amounts received under authority of Sections 26859 and 26860 of the Government Code shall substantially cover the costs of administering the requirements of Chapter 6.5 of this division by the offices of the State Registrar and the county clerks and that this matter be periodically reviewed in order that such adjustments as may be indicated can be made by the Legislature.*

SEC. 8. Section 10000 of said code is amended to read:

10000. Each live birth, fetal death, death, and marriage which occurs in the state shall be registered as provided in this ~~& D~~ division on the prescribed certificate forms. ~~In addition, a report of every final divorce or annulment decree shall be filed with the State Registrar, as provided in this division.~~

SEC. 9. Section 10000.1 is added to said code, to read:

10000.1. *In connection with each action for divorce, annulment or separate maintenance, there shall be filed with the State Registrar those reports and information as provided for in this division.*

SEC. 10. Section 10038 is added to said code, to read:

10038. *Notwithstanding any other provision of law relating to retention of public records, the State Registrar may cause the preliminary reports required to be reported under Chapter 6.5 of this division to be disposed of after five years from the date of filing of the initial complaint providing the final decree of divorce or decree of annulment or separate maintenance or dismissal has been filed as required.*

SEC. 11. Section 10584 is added to said code, to read:

10584. *Certified copies or certification of abstract information required to be filed under authority of Chapter 6.5 of this division in the offices of the State Registrar and county clerks shall not include information relative to occupation, highest school grade completed, color or race, religious denomination, previous marriages ended by death, divorce or annulment, and children.*

SEC. 12. Section 10601.1 is added to said code, to read:

10601.1. *The amounts received by the State Registrar relative to divorce, annulment and separate maintenance actions as provided under Sections 26859 and 26860 of the Government Code shall be deposited with the State Treasurer and shall be used to reimburse the support appropriation for the State Department of Public Health for costs of administering the requirements of Chapter 6.5 of this division.*

SEC. 13. The title of Chapter 6.5 of said code is amended to read:

CHAPTER 6.5. DIVORCE ~~AND~~, ANNULMENT AND SEPARATE
MAINTENANCE REPORTS

SEC. 14. Sections 10360, 10631, 10362, 10363, 10364, 10365, 10366, 10367, 10368, 10369, 10370, 10371 are added to said code, to read:

Article 1. General Provisions

10360. Preliminary reports of filing of complaint action for divorce, annulment or separate maintenance, information relative to interlocutory divorce decrees entered, and certificates of registry of final decrees of divorce and decrees of annulment and separate maintenance or dismissal shall be reported to the State Registrar upon forms prescribed and furnished by the State Registrar and in the manner prescribed in this division.

10361. The information required to be filed under this chapter in divorce, annulment, or separate maintenance actions, shall not be open to public inspection in the offices of the State Registrar or the county clerk. Nothing in this section shall be construed to preclude qualified persons with a valid educational, legislative or scientific research interest from having access to the records and the information included thereon, upon approval of the Office of the State Registrar of Vital Statistics and without cost to the state or local offices concerned.

10362. In addition to the general requirements of this division, the State Registrar shall prepare and publish such reports and information, conduct and cooperate in conducting such research and study as is necessary to appropriately report the facts as are required to be furnished under authority of this division and chapter relative to the subject of divorce, annulment and separate maintenance actions.

Article 2. Duty of Furnishing Information

10363. It shall be the duty of the plaintiff in any such action to furnish the required information in the prescribed manner to the county clerk at the time of filing the initial complaint action, or within 10 days thereafter and before the date of the first hearing.

Article 3. Information

10364. The preliminary report shall contain insofar as can be determined and ascertained the following and such other items as the State Registrar may designate:

(a) Type of complaint, county in which action filed, case number and date complaint filed;

(b) For husband and wife—full name (maiden name of wife), date of birth, present address, length of stay in California, birthplace, social security number, occupation, highest school grade completed, color or race, religious denomination, number of previous marriages dissolved by death, divorce or annulment;

(c) Place and date of marriage;

(d) Names, birthplaces and dates of birth of living children (born or adopted) of this marriage;

- (e) *Place and date of separation;*
- (f) *Legal grounds on which complaint is filed;*
- (g) *Certification of above facts by plaintiff;*
- (h) *Name and address of attorney for plaintiff; and*
- (i) *Certification of the county clerk.*

10365. *The information on interlocutory divorce decrees shall include the county in which complaint filed, case number, last name of husband, date initial complaint filed, and date interlocutory decree entered.*

10366. *The clerk-of-court's record and the certificate of registry of final decree of divorce, or the decree of annulment, separate maintenance or dismissal shall include, in addition to information specified in Section 10364, the type of decree, date decree entered, to whom decree granted, whether action was contested, date interlocutory decree entered if divorce action.*

10367. *In cases where more complete or accurate information required by this chapter becomes available to the plaintiff subsequent to the filing of initial complaint, complete revised information shall be filed with the county clerk. Such reports shall be handled in the same manner as had the information been furnished correctly as initially required.*

Article 4. Reporting to State Registrar

10368. *The county clerk shall transmit to the State Registrar on or before the fifth day of each month the preliminary reports of divorce, annulment or separate maintenance complaints accepted for filing by him during the previous month.*

10369. *The county clerk shall transmit to the State Registrar on or before the fifth day of each month the certificates of registry of final decrees of divorce, decrees of annulment, separate maintenance or dismissal on all such actions entered by him the previous month.*

10370. *The county clerk shall transmit to the State Registrar on or before the fifth day of each month that information as required for interlocutory divorce decrees entered during the previous month.*

10371. *In cases where a judgment of final decree of divorce or decree of annulment is vacated, the county clerk shall complete a report to this effect to the State Registrar, who shall file this report with the final decree of divorce or decree of annulment.*

Part 2

YOUTHFUL MARRIAGE AND PARENTHOOD: A THREAT TO FAMILY STABILITY *

I. INTRODUCTION

The family is a basic institution in our society. During the 19th century the family derived its strength from the multitude of functions that it performed for its individual members—economic, social, and cultural. In the last half-century many of these familial functions have disappeared entirely or have been seriously curtailed. The whole drift of a modern technological society appears at times to be away from the family as a fundamental social unit.

At the same time, it would seem that no other social unit or social organization is able to assume the most important function of the family, the nurture of the young. It is to this institution we entrust the most important responsibilities of life. Reliance is placed on the family to perform the functions of production, preparation, and guidance of our future generations, to establish the necessary and proper moral, social, and interpersonal framework for our society. The home and the family is the first social organization into which a child is brought. The sanctity, serenity, freedom, and organization of that unit will have a marked effect upon the personality and development of the child and upon his ability to become an effective and operative part of the community. A child first learns who he is through his relationship to his family. His mental and moral growth thereafter depends upon the stability of personal relationships, which only the family, at the present time, seems able to provide. To the extent that the family fails and degenerates, so shall our society, as we have known it, fail and degenerate.

From the present perspective, however, we seem to be witnessing the rapid dissolution of an institution which is yet indispensable. The seriousness of the problem is reflected in the many centers for the study of the family and in the many groups professionally concerned with sustaining it. But no social institution so complex as the family can be a matter for professionals only. In the last quarter-century much has been learned by professional investigators of familial problems, and much has been accomplished. But society as a whole must decide how it proposes to act upon the knowledge that modern research makes available. Knowledge cannot be automatically applied. It can only clarify the choices that must be made. Ultimately, the future of the family depends upon our ability to articulate, in some collective sort of way, our wishes in regard to it, in the light of the best knowledge available.

* This part of the final report is based on testimony presented before the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Sacramento, August 13 and 14, 1964, and upon a report on education and counseling by a CORO Foundation Intern in Public Affairs.

Such decisions must be made with concern for the generations of the future and with the bearing that choices made today will have upon these generations.

II. THE PROBLEM

The family in today's world of complexity, mobility, urbanization, and confusion is definitely in need of assistance to assure that its proper role in the functioning of a free society be maintained. Its problems are many and its stability is constantly being threatened. The 1960 White House Conference on Children and Youth recognized that "in our complex society no family can be entirely responsible for its own destiny, and that marriage is a joint career requiring preparation to achieve success."¹

(A) Divorce Rates

One criteria of family success or failure is found in the rate at which the family unit is disrupted by divorce.² Our country has the highest divorce rate in the world—six times that of Canada, five times that of Great Britain, and four times that of France.³ Nationwide one out of every four marriages ends in divorce.⁴ In California there is one divorce for every two marriages,⁵ while in Sacramento County there are more than 6 divorces for every 10 marriages⁶ and in Napa County the divorce rate is more than 7 for every 10 marriages.⁷ If divorce *filings* are utilized as the indicia of family disorganization the rate for the entire State of California rises to 81 percent.⁸ For qualification of all of these figures see the discussion in Part I of this report. While it is true that many people migrate to California and then divorce, the resultant amelioration of our divorce rate does not diminish the magnitude of the problem which this state faces. If people who have failed in marriage migrate to California the task and the challenge becomes even more important because of the propensity toward divorce upon subsequent generations, i.e., upon the increased probability of divorce by the children of divorced parents.⁹

(B) Youthful Marriage and Premarital Pregnancies

Studies of census data show that the family is going through the family life cycle earlier today than ever before. Examination of the family life cycle—birth, courtship, marriage, the birth of children, children leaving home, grandparenthood—reveals that each stage of the cycle has been moved to an earlier age.¹⁰ People are marrying at younger and younger ages throughout the country.¹¹ The marriage rate has gone up for each age group, that is, the number of married 15-year-

¹ For the recommendations of the 1960 White House Conference on Children and Youth, see Appendix A.

² Annulment and separate maintenance is included within the term of divorce as indicative of family disruption.

¹¹ See Appendix C.

old girls has risen, the number of married 16-year-olds has risen, and so forth.¹²

The speeding-up of the life cycle has far-reaching implications for those interested in strengthening family life. The census data reveal that on an average women who divorce were married two years younger than women who do not divorce.¹³ That would mean that the typical divorcee first married at the age of 18. The highest divorce rate is in the age group married at 15 to 19. The divorce rate is three to four times higher among those married in their teens than among those married at later ages.^{13A} According to our measures of personality and family adjustment, teenagers who marry are more apt to reflect greater emotional instability than teenagers who do not marry. It is clear that teenage marriages tend to be the unstable marriages.¹⁴

Teenage marriages are also the most fertile marriages.¹⁵ With child marriages there is the problem of child parenthood. In 1962 57,500 babies were born to "child" mothers 12-19 years old in California.¹⁶ A substantial percentage of California marriages between two high school students involved premarital pregnancy. Studies place the incidence of premarital pregnancy among teenage brides from 30 to 50 percent. Pregnancy and marriage constitute a substantial cause of school drop-outs.

A generation ago two-thirds of divorcing couples in the United States had no children because having children was postponed for a few years after marriage. Today almost two-thirds of divorcing couples have children.¹⁷ The fact that more families are breaking up through divorce when the wife is between the ages of 20 and 25 than at any other 5-year period in life¹⁸ is evidence that young people are marrying and having children too soon and at such young ages they cannot cope with the responsibilities involved.

Nearly 300,000 children are being supported by the AFDC (formerly ANC) program in California and the majority of these are under 12 years of age.¹⁹ Of these families, three-fourths of the parents were estranged. Only one-twentieth (5 percent) of the families on ANC was due to death of the father. Of the disrupted families on ANC due to

estrangement, slightly more than 50 percent were due to divorce, separation, and desertion. Slightly less than 50 percent had never married.²⁰

(C) *Divorce Foredooms Divorce and Failure*

All studies of the growth and development of children and of the functioning of adults in society show a close relationship between the individual's functioning in society and the quality of the relationships within his family. Statistical studies of delinquency, crime, suicide and mental illness show that all these indices of personal failure that create problems for society are closely associated with the damaging relationships in failing families. Similarly, studies reveal those who are able to develop competence in coping with their personal problems and to handle their own crises in life are more likely to come from successful families.

According to all reliable research, those who have failed in one marriage are much more likely to fail in a second marriage, and if two people marry who have both been married two or more times before, close to 100 percent of these couples will fail in that third or fourth marriage. Not only do couples who fail in one marriage tend to fail in the second, but failing couples tend to condition their children in such a way that their children are more likely than others to fail in marriage.²¹

Evidence of the fact that families pass on success and failure is found in the history of divorce in families. Family histories of 2,000 students at the University of California, Berkeley, were collected, obtaining the marital histories of the grandparents, parents and aunts and uncles. The study revealed that if neither set of grandparents had divorced, 15 percent of their children had divorced; if one set of grandparents had divorced, 24 percent of their children had divorced; but if both sets of grandparents had divorced, 38 percent of their children had divorced.²² Other studies have shown a very close relationship between the failure of parents in marriage and failure of their children in marriage.

While divorce is not a very accurate measure of the success or failure of families, it is used because it is one objective criterion that does give some light in studying families. Another recent study emphasizes this point. In studying the maturation of 3,000 students, it was found that those youths from unhappy homes had received about the same adverse conditioning as had those from divorced homes.²³ In some respects those who had been reared in unhappy but unbroken homes had received more handicaps. Considering all the evidence, the conclusion is unassailable that unhappy homes and divorce predispose the offspring of the marriage to divorce and failure.

²⁰ State of California, Department of Social Welfare, *Characteristics of Recipients of Aid to Needy Children*, July 1962. The figure for 1962 was 249,318 children being supported by ANC; by October 1963 there were 268,540 children; the figure of 300,000 is the author's estimate for 1964.

(D) Costs of Family Failure

The committee received testimony that 75 percent of California families on AFDC are families that have failed and that it will cost the taxpayers over \$234,000,000 to support these families this year alone!²⁴ This expense can be expected to snowball because problem families repeat the pattern generation after generation. In 1950 and again in 1960 the University of North Carolina studied families who were recipients of the ANC program nationally. The researchers found that the majority of the recipients of ANC had grown up in families which had also received public assistance.²⁵ It was suggested that even a state with as many resources as California cannot afford this expenditure of human and economic wealth.

Certainly the state must consider the human values as well as monetary costs. A very substantial number of youth and adult delinquents who come into contact with the law enforcement agencies, before the judiciary, and to our correctional agencies come from broken homes. While the suffering inflicted by marital disintegration cannot be measured neatly in dollars and cents, the emotional cost is great. The economic cost to the state is staggering when measured in terms of the costs of the many services which are furnished to the fragmented members of a family which has failed. A four-year prison term, for example, costs the taxpayer three times more than it costs to educate a child completely through four years of high school.²⁶

III. PROPOSED SOLUTIONS

(A) Long-term Solutions

1. INCREASED EMPHASIS ON EDUCATIONAL COURSES ON MARRIAGE AND FAMILY LIVING

In considering solutions to the vast divorce problem confronting this state, the committee was fortunate to have suggestions submitted to it which were based on several decades of research and study of the factors associated with successful marriage and parenthood. Testimony was received during the course of the committee's hearings that if the only approach to marriage problems is one of remedial efforts such as the conciliation courts, fine as that may be, the state will be fighting a losing battle. Whether the illness is physical or marital the time to confront that illness most successfully is before it occurs. But examination of the existing programs which are presently being carried out in the State of California in both private and public institutions, such as the church, family service agencies, conciliation courts, juvenile courts, Department of Social Welfare, schools, interested organizations, commissions and conferences leads to the generalization that all are extremely limited by one of several means: lack of time, insufficient use, insufficient funds, insufficient staff, insufficient interest, lack of emphasis or just outright ignorance of the problems involved.

²⁴ State of California, Department of Social Welfare, *Characteristics of Recipients of Aid to Needy Children*, July 1962, p. 20. The costs during July 1962 were \$14,000,000 or \$161.40 per family per month. In October 1963 the costs were \$15,000,000 per month or \$180,000,000 per year (note Statistical Series, PA3-49).

²⁵ M. Elaine Burgess and Daniel O. Price, *An American Dependency Challenge*, Durham, North Carolina: Seeman Printing, 1963, p. 235.

²⁶ 1961-1962: It costs on the average of \$536 for a student in high school for a year, or \$2,144 for four years (Research Division, Department of Education). It costs on the average of \$1,717 a year for a ward in the prisons, or \$6,868 for four years. (Department of Corrections, Fiscal Officer.)

As a positive approach to building better marriages it was asserted that one of the greatest needs today is education which will delay youth in their rush to pseudomaturity, marriage and parenthood before they are old enough to cope with either. It was suggested that California launch upon a program designed to aid youth in making successful marriages and in becoming intelligent parents, on the basis that the greatest hope lies in prevention through a program of education rather than in rehabilitation after a marital relationship has degenerated. The view taken was that in considering programs to strengthen family life in California, especially when considering long-term programs, emphasis should be placed on the goal of helping our people build better marriages since it is the unhappy home which destroys children. Whether these unhappy marriages are ended by divorce or continue is not the key consideration. Divorce reform, conciliation courts, AFDC programs, homes for delinquents, etc., are necessary to take care of the end product of unhappy and divorced families. But if more stable and wholesome marriages could be obtained many of the rehabilitative and supportive efforts could be reduced or eliminated. Since disintegration of the family becomes a serious social problem, society can no longer rest content to allow each family the sole privilege of preparing its children for the complexities of marriage.

(a) *Primary Responsibility*

Primary responsibility for educating youth about those factors which are related to more successful marriages without question lies with the parents. But all research confirms the common knowledge that a great void exists in communication between parent and child in this important area. The closeness of the relation and the sensitive nature of the subject seem to effectively preclude transmission of whatever knowledge and experience is possessed by one generation to their offspring. The problem has been compared to the abortive efforts of a husband attempting to teach his wife how to drive, compounded many times over. It may well be that education of one's children in this area is best accomplished by competently trained strangers. It was also noted that the nuclear family is already required by law to discharge its obligation to educate its children in other areas by sending them to state-approved schools.

(b) *Secondary Approach*

The second line of defense would normally be the churches. The clergy has long been relied upon to assist and counsel families and individuals in need. And many clergymen offer premarital counseling services of one sort or another. But a fundamental problem lies in the fact that many of our residents do not have any church affiliation, a situation which we share with the other western states. And of those with church affiliations, many do not attend regularly or contact their minister or rabbi concerning problems in this area. Unfortunately, also, is the fact that many clergy are untrained and inexperienced in offering effective family counseling. In too many cases a premarital conference amounts to nothing more than a rehearsal of the wedding procedures. The clergy in recent years has recognized its own shortcomings in this regard and much hope

can be placed in the fact that recent seminary graduates are required in their educational curriculum to participate in some clinical or other internship programs in pastoral counseling. And many religious groups are instituting comprehensive family life education programs such as the Catholic Cana and pre-Cana conferences designed for married and engaged couples.

Family service agencies offer a variety of services to the community in the area of marriage and family counseling, but while most of these agencies provide premarital counseling, few individuals utilize this service. The major portion of the staff time is spent in postmarital counseling, psychotherapy, child guidance, etc., although they make speakers available for schools and clubs.

(c) *Tertiary Approach*

The result of the existing situation, then, is that the third line of defense appears to be the only effective method of meeting the problem. This is our schools, which have a regular, structured relationship with youth over an extended period of time. It was on this foundation that it was recommended to the committee that a major step in coping with California's family failure problems is more adequate family life education for young people and adults in our school system. Adequate preparation for marriage and parenthood was deemed essential in a state characterized by high family failure. The available evidence suggested that the only way to educate the entire society for more successful marriage and parenthood is through a consistent, widespread program in the schools. This was grounded on the fact that even good homes often prove inadequate and a failing home cannot educate *against* its own failure, but unfortunately, educates its children *for* future failure.

2. THE SCHOOLS

* (a) *Past and Present Programs*

Within the public school system can be found a wide variety of approaches and reactions to family life education. Several years ago its popularity was extensive and many schools incorporated a unit on family life in a required senior problems course. However, more recently with increased attention to "pure" academics and the separation of academic disciplines brought about by the Casey Bill in 1961, many of these programs have either disappeared or diminished in emphasis.

(b) *Junior and Senior High Schools*

Continuing programs at the junior and senior high school level, however, can be found in various districts under many names in a numerous variety of departments. Some schools have retained some aspects of the senior problems course (social science department) with a brief unit on the family. In other schools one can find some sex education being offered in physical education or science courses, some money and home management in home economics courses, some concern for the total area in health education courses, and some consumer economics in business or social science

curriculums. Also there are a few senior homemaking courses which are offered coeducationally and deal with the total area. Furthermore, a few schools offer orientation courses to freshmen which include discussions of personal and family problems. Often the inclusion of any family life education is dependent upon the individual teacher and/or school administrator. (Parochial schools require four years of family life education for girls and a course for boys at the senior year as part of a religion course.)

In the October 1963 report of the Department of Education, a survey showed that in 1,061 junior and senior high schools, with a total of 1,014,316 students in attendance, only 42,575 students were exposed to courses in family life education in various areas of the social sciences.²⁷

(c) *Grammar Schools*

At the grammar school level there has been some development of family life education included in parts of the curriculum by use of more subliminal or subtle approaches. Some schools use play houses, animals, films, and comparative culture information to teach family life to this age group. Some have teaching guides which offer a problem solving approach for discussion at the elementary level (Alameda has such a program).

Some districts utilize films for parents and children in the area of sex education. A few districts emphasize the importance of parent, student, and teacher counseling in this area. The Berkeley school district offers a summer course to senior girls entitled "Philosophy for Senior Girls," which utilizes lectures and discussions. Part of this course touches upon the area of family life education under the general headings of "Choices, Inevitabilities, and Sources of Inner Strength." In many schools the P.T.A. is the sole moving force to sponsor family life programs.

(d) *Special Projects*

Special projects in the school system have given some attention to the counseling of youth in personal and family problem areas. One such project in San Bernardino involves special school counseling services for married students. Some schools employ trained social workers to assist in general noncurricular counseling matters. Such employment at present is extremely limited, however.²⁸

An interesting pilot project was recently done in Oregon to involve several school districts in a comprehensive family life education program. This project made use of special consultants from the staff of Dr. Lester Kirkendall of Oregon State University's Department of Family Life and Home Administration to assist teachers and communities in establishing family life education programs. In 1949, the California State Department of Education had on its staff a consultant in parent education, Dr. Ralph Eckert, who prepared a suggested program for family life education. Little, however, was done in terms of implementation.

²⁷ See Appendix E.

²⁸ The results of a survey in April 1964 of 11 school districts concerning programs in family life education, defined as referring primarily to the psychological, sociological, and economic aspect of family living as opposed to merely sex education is reported in Appendix F.

(e) *Present Problems*

In the area of family life education there are many problems at present, problems not only in terms of a lack of emphasis but also in terms of practical implementation. Materials and teaching aids are frequently lacking in depth and are often unrealistic in content. Most teachers are not sufficiently prepared to teach a family life program. Home economics teachers and candidates for pupil personnel and guidance credentials are the only ones required by law to include family life courses in their college curriculum, although some state colleges require this for elementary teachers also.²⁹ When courses are offered in home economics, the number of students reached is quite small and comprised almost entirely of girls. Curricula are crowded with required courses—no room for “frills.” Many communities do not understand or support family life programs. To complicate this there are many different definitions of family life education with differing views on appropriate content. With the present emphasis in education on “pure” academics, so that our youth are prepared to compete in a world of Sputniks and satellites, the importance of education for adequate living in a competitive society of individuals in which interpersonal relationships are vital for effectiveness seems to be neglected.

i. *Diminishing Emphasis*

Testimony presented to the committee was of the view that it is a disturbing fact that during the very time when California problems associated with failures in marriage and family living have been increasing at an alarming rate, the California schools have been decreasing their teaching in preparation for marriage and parenthood. In March 1964 a study done 10 years ago³⁰ of student marriages in high schools in California, and of the teaching of marriage and family living courses in the schools, was repeated.³¹ A questionnaire was sent to all 590 public senior high schools in the state. Of the 321 schools reporting, all but 35 had had one or more student marriages from September 1963 to mid-March of 1964. By March 1964 1,773 girls and 228 boys (in grades 9–12) had married. Many of these marriages were forced by pregnancy.³² Of the marriages, 314 were 9th- and 10th-grade girls and 12 were 9th- or 10th-grade boys. By mid-March 1,584 boys and girls had dropped out of school because of marriage. Thirty-three percent of the schools reported an increase in premarital pregnancies during the past 10 years and only 9 percent reported a decrease. Only 166 schools were able to furnish data on student pregnancies, and these reported 393 premarital pregnancies among girls who did not marry, and 436 premarital pregnancies among girls who did marry.

Although the problem of teenage marriages has intensified during the past 10 years the survey revealed a decreasing emphasis on family life education in the high schools of California. Of the

³¹ See Appendix H.

³² Data from unpublished study. Complete report forthcoming from Dr. Landis, University of California, Berkeley, in *Journal of Marriage and Family Living*.

235 schools that have in the past offered or do now offer courses in family living, 77 schools, or 33 percent, have reduced courses in family living, and 33 schools have discontinued their course offerings altogether. The reason given by 60 percent of the schools for decreasing their emphasis on family living was the new state requirement (the Casey Bill) necessitating a reorganization of the social studies program. Only 56 schools, or 24 percent, had increased their emphasis on family life education and this increased emphasis was most likely to be in home economics departments where the courses usually have small enrollments and are directed to girls.³³ The committee was advised that if courses are to meet the needs of youth they must be taught in the social studies departments where both boys and girls will register for them, for boys probably have a greater need for education for marriage and parenthood than do girls.

ii. *Popular Misconceptions*

The committee was advised that many people do not distinguish between what is deemed in the popular vernacular as "sex education" and what the professional educator means when he talks about education for marriage and family living. The educator's concept embraces the entire role of the spouse, of which the purely sexual aspects comprise but one segment of the spectrum. Certainly the spectrum would not be complete without the sexual aspects. But certainly, too, it is equally incomplete with only the sexual aspects. Hence the educators are speaking in terms of the sociology of marriage, the psychology of marriage, and the economics of marriage, as well as the biology of marriage. They are referring to the interpersonal relationship which exists between any two people who regularly come into contact with each other but which differs by virtue of the relationship between them, differing whether that relationship is one of friend to friend, employer to employee, teacher to pupil, husband to wife, or parent to child.

The educators noted that many parents are resistant to family life courses because of this erroneous view of them as "sex courses," and they point out that even if the local school has no "sex education courses" formally designated as such, sex education is going on every day in every school in the state. It is going on in the locker rooms, in the hallways, in the lunchroom. But when restricted to such circumstances it is never carried on in a scientific, accurate way as it would be if done by trained teachers. It is sex "miseducation" wherein the errors and mistakes of one youth are conveyed to another without a stable testing board in the form of a competent teacher to use in making proper appraisals and evaluations.

One of the marriage counselors who testified before the committee indicated a very serious problem area in marriage is economics. He felt there was a great need for education in consumer practices, specifically installment buying and interest costs. A

³³ For the national age distribution of illegitimate births in 1959 and the percentage increase in illegitimate births compared to total deliveries in one county in California see Appendix I.

substantial number of couples who came to him for aid got themselves into serious difficulty time after time because they simply didn't know what they were signing; how to interpret it; what the actual costs really were. It was indicated how difficult it is to be really understanding of marital problems when the couple hardly has beans for the table. His experience revealed that financial problems were one of the great contributing causes to divorce and that many are directly brought on by the practices of some people in the business community who exploit ignorance, conceal interest rates, etc.

3. SPECIFIC PROPOSALS

It was proposed to this committee that a realistic program in family life education would require a comprehensive approach. That is, from kindergarten through 12th grade, during which time family life would be stressed in appropriate courses and at appropriate age levels, dependent upon the maturity of the child and the readiness for certain information. What is an appropriate age level for what kind of information would be determined by the expert professional personnel in the schools and the Department of Education. Particularizing such a program, it was suggested that in terms of sex education, a course be given in the eighth or ninth grade for boys and girls separately, so that it could be taught frankly and without embarrassment. The experience of other educators indicates this type of information can be imparted equally as well in mixed classes. In either event, the course would lay a basis for moral decision making and not teach morals as such. It would consider the emotional aspects of sex education whereas the reproductive aspects would have been touched upon at the grammar school levels.

A coeducational course in the 11th or 12th grade was recommended which would deal with family responsibility, the social, the psychological, the financial and the interpersonal aspects of married life. This course would expose children to existing community agencies, agencies which are available for assistance to married couples, and would also expose them to divorce and divorce problems, and what a divorce means to a family and to the children of any family. It would also tie together some of the previous bits and pieces of information which have been sort of filtered into various appropriate courses throughout the curriculum.

Testimony recommended that the Department of Education, with the assistance of sociologists, doctors, marriage counselors, and social welfare personnel, develop a comprehensive curriculum guide. This would include, within its text, an outline of teaching aids and teaching materials and how they might be utilized in the course approach.

This comprehensive approach was based on investigation which found that many teachers are really not prepared to teach in this area. They have nothing but their own experience and in some cases, a bad experience, to draw upon. Most do not have anything in their formal training which prepares them for this kind of education opportunity. In conjunction with this observation it was suggested that teacher workshops be conducted in preschool and inservice training programs to assist teachers in feeling more comfortable with the subject matter.

It was proposed that encouragement should also be given to colleges and universities to offer required teacher training in this area and to develop closer cooperation between the school personnel and the Social Welfare Department for the purpose of considering problem children and total family counseling. Very frequently the Social Welfare Department can give a realistic approach to certain socioeconomic levels which cannot be ascertained in a total classroom picture in which there are mixed socioeconomic levels and mixed problems.

The committee was informed that much of what our young people believe about marriage is fiction. Rather than being cautious about marrying they tend to think that marriage can be an escape from personal or parental problems. Without courses in school, young people get their marriage education from teenage songs, movies and newsstand magazines, which mislead them, and from the example of failure in their own families. Good family life education in the schools creates realistic attitudes. It includes discussions of danger signals in courtship which should warn youth against making marriages which cannot possibly work. It considers the difficulties of continuing an education while married, the economic aspects of married living, the maturity necessary to make the many adjustments required in marriage, and the physical and emotional energy needed to be a good parent. Adequate courses in family living create in students some caution about marrying hastily. Young people who get a realistic understanding of what marriage means realize that it is not a quick and easy escape from problems in life. The well-prepared young person will be more inclined to take a longer look before he goes into a very youthful marriage.

Adequate preparation for marriage also should improve the student's chances for success when he does marry. If he gains some conception of the responsibilities and obligations that marriage involves he should become better able to assess and improve his ability to meet the requirements for building a good marriage. Experience in working with high school and university students convinced the witnesses appearing before this committee that our greatest hope in building stronger family life is in educating people before they marry or become parents and before they are confronted with problems and frustrations which may block their learning processes. In fact, they testified, the education must come before they are involved in choosing a mate. Regarding courses in preparation for marriage, concern was expressed about the students' children who are not yet born, on the basis that they must necessarily be the long-range goal of any legislation dealing with families in California. Helping the family achieve a higher level of success and cutting down the social wastage from family failure is not a short-term project.

Recognition was also given to the fact that proposals such as these concerning educational courses in the school systems are also properly the subject matter of study and investigation by the Education Committee of the Assembly. Testimony was received on these issues by the Judiciary Committee on the basis that it is properly charged with the responsibility of regulating the circumstances surrounding marriage and divorce. Such proposals go to the essence of that responsibility since they are concerned with improving the quality and duration of marriages in California and reducing the disruptive effects of divorce which is a matter of vital concern to the state.

(B) Short Term Solutions**1. WAITING PERIODS FOR YOUTHFUL APPLICANTS:**

Since it was recognized that educational programs are long-term solutions to marriage and divorce problems, it was suggested that for an immediate response this committee consider a 30-day waiting period before the "child marriages" of boys and girls who wish to marry before they are 18 or 21 years of age.

The view was advanced that anything which slows down, delays or postpones the all too often hasty and unconsidered youthful plunge into matrimony would be a positive step in the right direction. Such a preventive program would emphasize making it more difficult to get married.³⁴

In regard to waiting periods it should be noted that California is in the minority group of approximately 19 states which do not require some type of waiting period.³⁵ Three states vary the waiting requirements if minors are involved. In Georgia if one of the parties is under 21 the waiting period is three days unless the female is pregnant. If both parties are under 21 the waiting period is five days unless the parents consent to the marriage. Oklahoma, which has no waiting period generally, imposes a three-day delay if either applicant to marry is a minor. And Tennessee, which also does not have a general waiting period, imposes a three-day delay if either party is under 21. Among those states utilizing a waiting period, one state imposes a one-day delay; one state a two-day wait; 15 jurisdictions require a three-day wait; two states a four-day delay; six states require a five-day reflection period and one state a seven-day wait.

Any restrictions of this nature which California might impose on its youthful citizens seeking to marry could be circumvented by an evasatory marriage in a neighboring state or country.³⁶ The committee was advised that if it felt the imposition of such a delay was a reasonable restriction on youth in their best interests, as well as for the society in which they live, the committee should recommend the delay notwithstanding the possibility of evasion, and ground that recommendation on the basis that it is the right and correct thing to do in the circumstances. It was pointed out that probably most youths and their parents, confronted with this expression of legislative interest and concern for their well being, would acquiesce in that judgment.

In addition, there are several practical considerations. Many youths and their parents want to have the marriage in their own local church or community. Parents, relatives and friends, whose attendance at this important event is usually desired, will normally travel great distances if necessary to attend a ceremony in the home community of the couple or the bride, but are reluctant to travel the same distance to another state to attend an evasatory marriage. Since research documents a greater stability in those marriages where there is a greater commitment to the marriage, as indicated in part by the ceremony being performed in a church or before other responsible officials in the presence

³⁴ For the statement of a nationally recognized authority on marriage and family life education, directed to this and several other sections of this part of the final report see Appendix J.

³⁵ See Appendix K.

³⁶ For a positive reaction to this fact see the discussion and proposal in Part VII of this report.

of family, relatives and friends, the committee was advised not to impose an excessive restraint on youthful marriage to the point where evasatory action would be encouraged. It was suggested, however, that the proposed 30-day waiting period would not be excessive, even in those cases where a premarital pregnancy is involved.

a. *Waiver*

Another consideration in regard to the suggested delay in youthful marriages is a provision for waiver of the 30-day waiting period upon application to the presiding judge of the conciliation court, if one exists in the county, and if not, to the presiding judge of the juvenile court, which exists in every county. In either event, waiver could be granted only upon the showing of such necessity as to warrant the dispensation in the discretion of the judge. It should be noted that females under 16 and males under 18 already must obtain judicial consent to marry.

b. *Restriction on Judicial Consent*

In this latter regard, it has been suggested that the granting of such consent should be restricted to the presiding judge of the conciliation court, if one is located in the county, and if not the presiding judge of the juvenile court. The reason advanced for localizing responsibility to one judge rather than having it spread among the entire superior court bench in a county is to concentrate such cases before a jurist who, by virtue of his present assignment, is most sensitive to the best contemporary methods of handling the needs and problems of youth.

2. PREMARITAL CONFERENCES

After an extensive study in which the views and suggestions of a large number of knowledgeable individuals were elicited concerning the problem of family stability, especially as it relates to our youth, the proposal was advanced that as a stopgap measure, pending the time when a larger portion of our youth are more adequately prepared for marriage, something additional be done than merely marking time for the 30 days of a waiting period. It was suggested this period be used as one in which the young people be required to have a session or two with a qualified marriage counselor. This would be to discuss the implications of their anticipated entrance into the marriage relation, the basis for their decision, the alternatives which are available to the couple, the problems which are likely to be encountered, the ways in which many other people have successfully dealt with those problems, and the various resources which are available in the community to aid any couple, and especially the youthful couple, to work out problems which are part of marriage and parenthood.³⁷ If a premarital pregnancy is involved, the goal would be to see whether there is any basis for a good marriage and if not, to encourage the couple not to marry. A divorce cannot follow a bad marriage which doesn't occur in the first instance.

There already is a legal and professional structure by which a program of premarital counseling can practically be executed. Since there is already a substantial segment of our youthful population which

³⁷ See footnote 34, *supra*.

must obtain judicial consent to marry, it was suggested that a beginning or pilot program of premarital counseling be commenced with this group: boys under 18 and girls under 16. If the proposal is enacted and proves successful it could later be expanded to include youths under higher age limits.

(a) *Benefits*

Some of the benefits which could be realized from such a conference were suggested in testimony presented to the committee. These include:

- i. Couples in situations in which a marriage would seem inadvisable could be helped to rethink their decision.
 - a. The couple itself—through concrete evaluation of potential adjustments.
 - b. Discussion with parents or guardians.
 - c. The judge—more basic information upon which to make his decision. It is essential to avoid becoming quasijudicial.
- ii. Where the marriage is brought about by pregnancy—the real motive could be established.
 - a. Where the boy is marrying the girl as the honorable thing to do.
 - b. Where parental insistence is involved.
 - c. Where infatuation is mistaken for love.
- iii. Those couples who have thought through their position and approach marriage in positive manner may be helped to avoid pitfalls, establish communications and advance toward a wholesome relationship.
- iv. A relationship could be established with a marriage counselor which would make it possible for the couple to return early enough to be helped at any future time of friction.
- v. It would provide an unbiased third party to help them meet realistically their situation apart from the prejudices of friends and relatives.

(b) *Organizational Location*

Where conciliation courts already exist in a county, it was suggested that they be responsible for such premarital counseling for several reasons:

- i. Their close proximity and relationship to the superior court.
- ii. Their ability to see such parties on a preference basis and avoid a five- to six-week wait.
- iii. A governmental agency whose longevity could insure a permanent supportive role to the marriage.
- iv. A referral source for both reputable private and public marriage counseling and their adjunct services for those couples whose problems were either more specialized or complex than could be handled in a short-term setting.
- v. For educational services that could be provided to the community through the experience of the court.
 - a. Youth want to be prepared for marriage.
 - b. Youth want to speak with competent, understanding adults.

- vi. Control over the competence of the counselors. Not everyone authorized by California state law to do marriage counseling is fully qualified to work in the area of premarital counseling.

It was suggested that in those counties which do not have conciliation courts the best location for control and supervision of the premarital counseling would be the juvenile court because of their extensive contact with young people and their experience in working with them in the resolution of their problems. Under present California law, any judge of the superior court may grant consent to marry to this age group, resulting in excessive disparity. In many counties most requests for consent are already directed to the presiding judge of the juvenile court who uses members of his staff to conduct a preliminary interview with the couple and advise him whether or not he should grant such consent. It was suggested that such a discussion with the couple, however brief, has much to commend it as compared to the pro forma consent which is granted with little or no evaluation in other counties.

(c) Recommendation to Judge

Under the operation of the premarital conference the counselor could inform the youthful applicants at the outset of their discussion that one function to be served by the conference is for him to formulate an evaluation to present to the judge whose consent is requested. In many cases of coerced applications for marriage licenses, where parents are placing unwarranted pressures on the children to marry, the intervention of these interested but uninvolved third parties may benefit the children who themselves may be reluctant to marry notwithstanding the fact of pregnancy. It was also suggested that counseling of parents should be included when a premarital pregnancy is involved which is known to the parents or which the couple is willing to have disclosed to them. This would present an opportunity for emotions to be released, for parents and children to understand the situation better, and for exploring other solutions to the situation which might be more desirable in particular cases than marriage.

(d) Limitations

Inquiry and study by those recommending the premarital conferences described above indicates the Legislature would have to establish some minimum and maximum limits in terms of the amount of time to be devoted to such counseling, permitting the counselor to use his discretion within such limits.

(e) Waiver

It was also suggested that in order to encourage local decisions to institute family life courses in the school systems, and to recognize their benefits, the requirement of a premarital conference be waived for those applicants who satisfactorily completed an accredited family life course in the high school level.

3. PREMARITAL PREGNANCIES, ALCOHOL AND AUTOMOBILES

Testimony was given to the committee to the effect that one area where much can be done by way of prevention of divorce is with regard to teenage marriages, particularly those which were founded on what was deemed the worst possible basis for a marriage beginning—a forced marriage to save the honor of the family name. Witnesses experienced in counseling couples having marital problems indicated that frequently the combination of alcohol and automobiles had contributed to the existence of a pregnancy which, in turn, caused a marriage which never should have taken place. The error of the marriage was often not ascertained, unfortunately, until after another child or two had been conceived. Testimony was received about the substantial number of premarital pregnancies which were associated with alcohol (20 percent). Of these it was asserted that 95 percent involved driving or intoxication or intoxicated driving at some point or another during the evening. It was suggested that the problem of drunk driving should be viewed more seriously than it is on the basis that the only thing worse than automobiles or worse than alcohol is the two in combination. It was also noted that conception did not occur in a fifth of whiskey—it takes place in the back seat of somebody's car. Thus it was felt that if greater control were exercised by parents over their children when they reach the age of using automobiles, inroads could be made on this problem.

As a countermeasure to the practice of practically emancipating the children as soon as they get a driver's license it was suggested that the parents of every juvenile who is in an automobile which is in any way involved in a law violation should be notified by mail that his child was at that particular place at that particular time. It was felt that parents should know every time any of their children are involved or present when a law violation occurs, even if they are with another family or in the presence of another adult. A tally of these notices could be maintained and when some arbitrary number was reached the parents could be called into the juvenile court for a discussion of the sorts of things their child had been involved in, that they appeared to be recurrent, and perhaps there was a problem with which the parents needed help.

4. STATUTORY RAPE STATUTES

Testimony presented to the committee indicated that it was not only parents who were coercing bad marriages into taking place. The tendency of some judges to make very strong suggestions to a defendant male that if he didn't want to serve a term for statutory rape, he had better get married occasions a good number of paper marriages which then turn up as paper divorces. They are deceptive, misleading and unfortunate affairs for all concerned but some judges feel they must do this to save the child the stigma of illegitimacy. Attempting to avoid the barbaric stigma of illegitimacy was seen as the cause of many poor marriages. It was suggested that the committee reexamine the age of statutory rape and its effect on coerced marriages. It was suggested the age of consent be lowered to 16 from the present 18 years of age. It was noted that anyone who has been observing 16-year-old girls lately

can tell that they are certainly mature. And it was observed that full control is given them at 16 of the most effective mass murder machine in history (the American automobile) but that they are denied the responsibility of taking care of their own bodies. So any boy who cooperated with them in what they obviously wanted to do was a rapist. This approach didn't make sense to the witness.

It was brought to the committee's attention that the real basis behind the statutory rape statutes was to punish abnormal sexual conduct, that is, the inducement into sexual relations of an immature female by a male of substantially older age.³⁸ This is reflected in the statutes of many other jurisdictions³⁹ which specify that statutory rape occurs only when the male is a specified number of years senior to the female, as relations between a girl under 18 by a male over 21. Voluntary sexual experimentation by parties of approximately the same age is not designated with the severity of present California law but is handled in more lenient ways, as for example, through the juvenile court. This removes the coercive effect presently being realized by the California statutory rape statute.

5. *Emancipation and Parental Consent to Marry*

The present California law permits marriage of a girl 18 years of age without her parents' consent,⁴⁰ resulting in her emancipation from their control. It was brought to the committee's attention that a number of undesirable marriages are brought about simply for the reason that the girl wants to get away from what she feels, and what might in fact be, an undesirable or impossible home situation. She cannot simply move out of the home and into the home of another or share an apartment with a girl friend, unless she has the consent of her parents. Consent in these circumstances is usually withheld, or there would be no problem. But she can effectuate a move out of the house through the agency of marriage. Such a marriage has little foundation or support and hence is found to collapse quite readily.

On the basis of these cases it was suggested to the committee that either the age of emancipation for females ought to be lowered to the present age at which they can marry without parent consent or the requirement of parental consent ought to be imposed until the female reaches age 21 at which age she is legally entitled to emancipation.

(C) *Implementation of Educational Program*

In order to implement the suggestions received concerning a broad scale approach to marriage and family problems through education the following attack was suggested.

Being realistic, and given the crowded status of the present curriculum, and also given the present outlook by many school districts and by some people in the Department of Education as to this matter, an approach which would allow the greatest amount of local autonomy and voluntary adoption of courses and content would be the most successful at this point, particularly regarding placement into the curriculum. A strong suggestion from the Department of Education to incorporate

³⁸ See Foster and Freed: Offenses Against the Family, 32 Kansas City Law Review 33, 35 (1964).

³⁹ Such as New York.

⁴⁰ Civil Code Section 56.

this into already existing subject matter would be very helpful. A demonstration project, if proven successful, could be expanded to other districts. Other means include a mandate from the State Legislature itself or a graduation requirement as stated from the State Board of Education, but these are secondary in terms of a realistic approach and were not advocated.

In essence, the approach advocated was one of the state offering every encouragement to the various local school boards and districts to voluntarily adopt an educational program embracing a rich and extended exposure to the problems of marriage and family living. It was suggested that the State Department of Education should by special contract or grant retain specialists to review curricula already prepared in family life education as well as aid in the preparation of new curricula; that establishment of pilot programs be undertaken in those school districts requesting them; and that financial aid be given those school districts which include family life courses in their curriculum, either by direct grant or by the furnishing of teachers and materials.

(D) Financing

In order to finance the additional costs which would be incurred by enactment of a requirement for premarital counseling and the other proposals relating to family life education, it was suggested that the ancient cost of a marriage license be increased from \$2 to \$5. A similar proposal was to increase the filing costs of divorce complaints in order to help finance studies of, or establishment of, conciliation courts in the various counties. In essence these proposals are grounded on payment for services by those likely to need them with premarital counseling analogous to preventive medicine programs and the establishment of conciliation courts similar to prepaid medical plans. A combination of these two proposals would be to increase both marriage license fees and divorce filing fees and use the money thereby realized for both preventive premarital counseling and education, as well as rehabilitative conciliation efforts.

As an example of financing on this basis, using Los Angeles County as the location and the figures for 1962, the following data was submitted: 44,922 marriage licenses were granted in 1962 in Los Angeles. Six percent of these involved individuals under the age of 17. This number is close enough to compute financing statistics. Utilizing the Los Angeles Conciliation Court statistics, salary and number of filings per month which can be handled, Los Angeles County would need three counselors to counsel the 5,391 individuals involved. Counselors at approximately \$8,000 a year would require \$24,000 in additional revenue. Where would this revenue come from? Two or three possible areas were suggested, all under the heading of fees. An increase in the marriage license fee of one dollar alone would yield \$44,922 in added revenue. The excess beyond the salary of the counselors could go to research as to how this program is being carried out, how effective it is and perhaps for teaching aids in the school program in family life education. Or, it is possible to increase marriage license fees, divorce and annulment filing fees by fifty cents to yield \$30,760. By increasing the divorce and annulment filing fee \$1.50, the yield would be \$31,708.⁴¹

⁴¹ A recapitulation of these figures is set forth in Appendix L.

Smaller counties which would not require the use of a full-time counselor might establish cooperative agreements with other counties whereby one counselor could serve two or three counties, or they might contract for the part time services of a community agency within the county.

IV. FINDINGS AND RECOMMENDATIONS

Findings:

1. The family, our basic social institution, exercises a critical influence on the type of individuals it develops for society. Inadequate families tend to seriously damage their offspring in their ability to establish and maintain satisfactory relationships.
2. Youthful marriages are a source of great trouble for our society because they are so unstable and yet so fertile. When they disintegrate they predispose the children involved to a much higher incidence of marital discord in their own lives, all at tremendous costs both in dollars and in human suffering.
3. Educational programs in our schools which are directed to solving the problems of marriage and family living appear to be a strong and reasonable means of attacking the critical problem of youthful marriage and parenthood.
4. Conciliation courts as an adjunct service to domestic relation courts have demonstrated their usefulness in rehabilitating many couples having marital difficulties, by short-term counseling or referral to community resources. Other couples, who have nevertheless proceeded to divorce, have been aided in understanding and adapting to the fact of divorce and its procedures, often to the great benefit of the children who are involved.
5. The highest incidence of divorce is found among those who marry at extremely young ages. Unfortunately, this is also a group which is highly fertile, producing many children who are adversely affected by the marital disruption of their youthful parents.
6. A brief waiting period before youthful applicants could be married appears to be a reasonable means of reducing the incidence of hasty, ill-advised youthful marriages.
7. The objective of statutory rape statutes is to restrain and punish sexual relations entered into by a more mature and knowledgeable male with a considerably younger, less mature female.
8. In many cases, as an alternative to a criminal prosecution for statutory rape, young men are being coerced into marriages which have little foundation for their being contracted. These marriages, many in name only, frequently result in divorce, all too often after children have been conceived or born which children would not have been involved had the coerced marriage not occurred.

Recommendations:

1. In order to encourage and help finance the voluntary development of marriage and family life programs in the schools, the committee recommends an increase in the cost of marriage licenses from \$2 to \$5 and a \$5 increase in divorce filing fees, with the funds

thereby realized to be utilized *in part* for developing curricula and materials and for implementing the institution of such courses in the public schools. Such development should include summer and inservice training programs to aid in teacher development for teaching in this area, and the utilization of consultants who are experienced in this field, to work on local curricula and other problems with local school administrators.

2. To encourage the development and strengthening of conciliation courts and their philosophy of utilizing the insight of the behavioral sciences to aid the resolution of marital conflict, the committee recommends that the *other portion* of the funds be utilized for the benefit of the various counties to study the feasibility of establishing, to aid in the initiation or strengthening of such a court, and for research relating to conciliation courts in this state.
3. The committee recommends that a waiting period be established for all youthful applicants seeking to marry. While making no specific proposal, the committee is thinking in terms of a 15- to 30-day delay for all youths under 21 with provision for judicial waiver upon a showing of necessity.
4. The committee recommends that the age of the male who is guilty of statutory rape be specified in the statute and that the age of such males be designated as 21 years of age or over.

Part 2

Appendix A

RECOMMENDATIONS FROM 1960 WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH

THE FAMILY

In General

That it be recognized that—

The family as the basic unit of our society has primary responsibility for developing values, freedom, initiative and self-discipline in children. (IV, VI, XIV)

The development of the child's potential is vitally affected by the nature and quality of family relationships. (IV)

The individuality of each family and each member of the family must be acknowledged and preserved. (IV)

Each family must ultimately determine solutions to its own problems in the light of its own goals and philosophy within the context of the community's goals and values. (IV)

That it be recognized that the absence of a strong sense of values in the individual, the home, and the community is a primary cause of many social problems that limit opportunities for children and youth; and that we must encourage the use of our resources to achieve long-term satisfactions, to build stability into family life, and to assure our children and youth of their full share of security and opportunities in the best American tradition. (V, III)

Family Life Education

That it be recognized that in our complex society no family can be entirely responsible for its own destiny, and that marriage is a joint career requiring preparation to achieve success. (III)

That family life courses, including preparation for marriage and parenthood, be instituted as an integral and major part of public education from elementary school through high school (IV, V, XI, XVIII); and that this formal education emphasizes the primary importance of family life and particularly the child-rearing role of the mother. (III)

That religious institutions and other community services, as well as the schools strengthen their family life education programs, with materials suitable to each age level from the early years and marriage preparation courses at the junior high level; and that these programs include counseling in personal relations, boy-girl relationships, problems and the sacred nature of marriage, and methods of nurturing in children moral, spiritual and ethical values. (IV)

That trained social workers be added to school staffs to provide counseling and guidance to families. (XVIII)

That existing facilities for parent education be expanded; and that family agency services include parent education beginning in the prenatal period and emphasized in well-baby clinics. (IV, XVIII)

That community planning councils collaborate with the medical profession to establish discussion groups, to which expectant couples would be referred, preferably by physicians, for intensive study of the physical and psychological aspects of childbirth, early child development and parent-child relationship. (XVII)

That schools take the initiative in broadening general educational opportunities for adults to enable them to help children and youth more effectively. (V)

That educational institutions and communities provide systematic training, with sound and practical materials, in the developmental changes and problems of early adolescence for all parents and future parents, as well as for physicians, teachers, and others who work with young people. (XI)

Counseling Services

That public and private marriage and family counseling services such as those of social agencies, mental health clinics, clergymen, and physicians—be instituted or expanded. (X, XI, XVIII)

That counseling services for the solution of domestic relations problems be available in the courts, and that hearings in such cases should be held in chambers. (XVII)

Community Resources

That each community create a body representative of all professions, organizations and agencies concerned with a family life to—

Coordinate programs and services;

Survey family needs;

Insure adequate education for marriage, parenthood, and family life, including counseling;

Stimulate professional growth and cooperation;

Develop a community atmosphere favorable to family life. (IV)

That all community resources for health, welfare, housing and recreation focus on the family as a unit. (V)

That religious and community agencies give increasing emphasis to family recreation and study the role of recreation in developing moral and spiritual values in family life. (VI)

That schools, religious institutions, youth-serving agencies, and all other community agencies cooperate to create a favorable atmosphere for understanding the dignity and sanctity of the role of sex in human relationships. (XVII)

That central referral services be set up so that families needing help in caring for children may be guided to the appropriate agency. (X)

Problem Families

That one community agency be responsible for working with multi-problem families and for bringing to bear on their treatment the resources of churches, schools, employment and vocational rehabilitation services, protective casework services, courts, mental health services, homemaker, day care and foster care services, home management counseling, premarriage and marriage counseling for early detection of problems; and that the services be expanded. (IV)

That caseloads in public agencies be substantially reduced, to the point where effective work with problem families is possible. (IV)

That the high costs involved in the rehabilitation of chronic problem families be recognized and interpreted to the public as an ultimate saving in human values. (IV)

Family Size

That planning for the size of families is desirable in order to relieve the deprivation of children, and that facilities and programs on a local, public, or private basis be available to married couples, providing medical advice and services for child spacing consistent with the creed and mores of the families being served. (Vote: 233-65.) (IV)

Minority report: “. . . the proposal would be acceptable if so worded as to be conditioned upon the necessity of first determining that planning the family size is desirable . . . by inserting the word ‘when’ in the opening phrase, so that it would read: ‘. . . that when planning. . . .’

“Also that facilities and programs for family planning should be outside the province of public bodies and kept within the exclusive province of private agencies, particularly church groups.” (IV)

That it be recognized that the function of the family is to carry out its responsibilities to children according to the primary obligation of marriage in accord with divine and natural law; and that, therefore, the size of the family and the age at which people marry are in themselves not the fundamental factors in successful family life. (Vote: 134-119; 47 abstaining; no minority report.) (IV)

Family Economic Conditions

That the income tax exemption for child dependents be increased to enable families to provide more adequately for their children's total needs. (Vote: 166-135; 28 abstaining.) (IV)

Minority report: “. . . the recommendation to increase the income tax exemption for children is unworthy of this conference. It represents a narrow view of the total demands

on our national budget and offers no assurance that the income thus remaining in the family would be used to the benefit of children and youth." (IV)

That a minimum annual wage be established for every worker as a means of strengthening family life. (Vote: 108-52.) (III)

That the possibilities of undergirding family life economically through a system of family allowances be studied. (III)

That a program of children's allowances be developed to offset the inverse relationship between income and size of family. (Vote: 125-35.) (III)

Minority report: "There is no showing that a system of child allowances is necessary if present social insurance and public assistance programs are improved . . .

"A child allowance system would drastically increase the involvement of government in family life with consequent threats to individual and family independence." (III)

Research

That appropriate government and/or voluntary agencies sponsor and conduct research in critical areas of family life; and that foundations, educational institutions, and government and private agencies develop better methods for interpreting, using, and coordinating the findings of completed research and make them readily available to the helping professions. (XIV)

That research be undertaken in the following areas:

The reasons for early marriage. (XI)

Family roles and relationships and their influence on members. (IV)

The adequacy of one-parent families to rear children from infancy through the teens. (XVIII)

The effects on children of all ages of a mother working outside the home (III) multiproblem and hard-to-reach families (early identification, prevalence, causation, treatment). (IV)

Methods of teaching family life education and of training teachers. (IV)

Curriculum content of family life education. (IV)

Methods of helping more parents gain valid concepts of family living and child rearing. (IV)

Attitudes, concerns and values of parents of various ethnic, social, economic, and religious groups—with assistance in research planning by qualified members of the groups studied. (IV)

Effective techniques of stimulating small group discussions at the neighborhood level to promote better relationships between preadolescent children and their parents. (X)

30 schools at the 12th grade reaching 2,380 students.

Hanna, *Facing Life's Problems*:

Used by 24 schools at the 12th grade reaching 5,948 students.

Gavien and Gregg, *Our Changing Social Order*:

Used by 10 schools in the 12th grade reaching 198 students.

Twelve other titles:

Used by 21 schools at the 9th grade reaching 5,833 students.

One school at the 11th grade reaching 50 students.

28 schools at the 12th grade reaching 3,678 students.

This use is based on a total of 1,061 junior and senior high schools in the state with 1,014,316 students in grades 9 through 12. The number of students exposed to all of the above classes totals 42,575.

Part 2

Appendix H

The following study is appended to supplement the testimony of Professor Judson T. Landis.

A Study of High School Student Marriages, Pregnancies, and School Policy, by Judson T. Landis, Professor of Family Sociology and Research Associate, Institute of Human Development, University of California, Berkeley

Questionnaires were mailed to 590 California public senior high schools in March 1964. The questionnaire was addressed to the person responsible for receiving educational materials, usually the principal.

A letter accompanied the questionnaire explaining the purpose of the study. Anonymity of the respondents and the high schools was assured.

Usable questionnaires returned before May 18, 1964, are included in the following analysis. The number of usable questionnaires is 321, or 54.4 percent of the total mailed to schools.

To determine whether certain sampling biases are present, distributions of community size of high schools which received questionnaires and those which returned completed questionnaires are compared in Table I. Approximately the same percentage of questionnaires were returned from the three categories of cities under 50,000 in population size, but considerably fewer questionnaires were returned from cities of over 50,000.

Table I
Number of Questionnaires Mailed and Number Returned, by Size
of Community of Senior High School

<i>Size of community</i>	<i>Number of questionnaires</i>		<i>Percent returned</i>
	<i>Mailed</i>	<i>Returned</i>	
Town of less than 2,500; country; farm-----	140	90	64
2,500-10,000 -----	121	70	58
10,000-50,000 -----	165	102	61
Over 50,000 -----	153	59	39
No census figures available-----	11 *	—	—
	590	321	54

* Eleven communities receiving the questionnaire but not returning it were not included in the 1960 census. A superficial check indicates these communities to be rural, thus more likely to fall into the category "town of less than 2,500" than the other categories.

Table II
Number of Students in Each Grade (9-12) Who Have Married This Year
(September 1963-March 1964)

	<i>9th</i>	<i>10th</i>	<i>11th</i>	<i>12th</i>	<i>Total</i>
Girls -----	46	268	516	943	1,773
Boys -----	1	11	53	163	228
Totals -----	47	279	569	1,106	2,001 students from 265 schools

* Of the students who married, 2.3 percent were in the 9th grade, 14 percent in the 10th grade, 28 percent in the 11th grade, and 55.4 percent were in the 12th grade.

Table IIIa
Number of Schools in Which at Least One Student From 10th-12th Grades Has
Married Since September 1963 (As Reported During March 1964)

	<i>Schools</i>
Number of schools reporting one or more student marriages-----	265
Number of schools reporting no students have married since September 1963 (as of March 1964)-----	35
No information on number of student marriages since September 1963 (as of March 1964) *-----	21

* Schools which were unable to provide information on number of students married during this school year were more likely to be large city schools in which at least one student had married during the school year, but exact records as to how many were married were not available for the survey. Six of the 21 schools indicated directly that several students had married, but the exact number was unknown. The remaining 15 schools had an enrollment of over 500 students in the 10th to 12th grades, and indicated policies with regard to married students that would indicate they had had student marriages.

Table IIIb

Number of Married Students Who Have Dropped Out of School (Since September 1963)
Either Because They Were Asked to Leave or They Chose to

	9th	10th	11th	12th	Total
Girls -----	55	291	462	666	1,474
Boys -----	1	13	33	63	110
Totals -----	56	304	495	729	1,584 students

Table IV

Types of Action Taken by Schools When a Student Marries During the School Year

<i>Type of school action when a student marries</i>	<i>Number of schools taking action</i>	<i>Percent (319) *</i>
Student suspended or expelled from school-----	3	1
Student placed on probation (conduct, attendance, grades)-----	34	11
Student advised to transfer to adult evening school-----	38	12
Student advised to withdraw from school-----	16	5
Student brought in for special conference—school policy and expectations explained-----	140	44
Counseling provided in marriage and/or school adjustment-----	81	25
Student excluded from honors and/or student offices-----	14	4
Student excluded from extracurricular activities-----	19	6
Student encouraged to continue school for diploma-----	215	67
Other actions taken (i.e., if girl pregnant, advised to transfer, etc.)-----	63	20
No action taken at all-----	54	17

* Two schools did not provide data on school actions taken when a student marries.

NOTE: 27 percent of the schools made exceptions for married students, such as permitting student to attend part-time (if student was working, pregnant, or had too much housework) or providing exemption from certain classes, such as physical education for pregnant girl.

Table V

Ways in Which Married High School Students Are Reported to be a Problem in the School

<i>Problem in school created by student who is married</i>	<i>Number of schools reporting type of problem</i>	<i>Percent (317) *</i>
Irregular attendance -----	97	31
Sexual experience discussed with nonmarried students-----	26	8
Low interest in schoolwork-----	50	16
Parents of unmarried students criticize school for permit- ting married students to attend-----	37	12
Married students seem to encourage other students to marry-----	16	5
Extra administrative and counseling work caused by married students -----	30	9
Special privileges expected-----	23	7
Married students become discipline problems-----	6	2
Married students reported to be no problem in the school-----	205	64

* Four high schools did not provide data on problems created by married students.

Table VI

Trend of Premarital Pregnancies Among High School Girls During the Past
10 Years Per 100 Girls by Size of Community

Size of community	Number of premarital pregnancies has—						Total (286) *
	—increased (95 schools)		—decreased (26 schools)		—remained same (165 schools)		
	number of schools	percent	number of schools	percent	number of schools	percent	
Town less than 2,500; country; farm -----	14	18	10	13	55	70	79
2,500-10,000 -----	17	27	9	15	36	58	62
10,000-50,000 -----	39	42	4	4	50	54	93
Over 50,000 -----	25	48	3	6	24	46	52
Totals -----	95	33	26	9	165	58	

* Thirty-five schools did not provide information on trend of premarital pregnancies; 11 of the 35 schools did not answer the question because they were less than 10 years old.

The largest increase in premarital pregnancies appears to be in the schools in the largest communities. This may, perhaps, be partially due to more accurate recordkeeping presently as compared to the past.

Table VII

Reported Pregnancies Among High School Girls in 166 Schools
(September 1963-April 1964) *

Number pregnancies known to be premarital—

—that resulted in marriage-----	436	38%
—did not result in marriage at the time of reporting-----	393	35%

Number pregnancies—not known to be premarital—

—girl married, pregnancies were postmarital or it is not known when pregnancy occurred-----	306	27%
--	-----	-----

Total ----- 1,135 100%

The 1,135 pregnancies occurred among 73,122 girls in grades 10-12, a rate of 1.55%.

* Of the 321 schools in the sample, only 166 schools were able to furnish any data on high school pregnancies. Data on pregnancies were not always complete or accurate. However, it can be assumed that the figures underestimate rather than overestimate the actual number of student pregnancies. High schools in small communities (under 2,500) were more likely to furnish complete and accurate information on student pregnancies.

Table VIII

School Policies for Married and Unmarried High School Girls Who Become Pregnant
While Still in Student Status (School Year 1963-64)

School policy	Number of high schools reporting policy for—			
	—married girl		—unmarried girl	
	number	percent	number	percent
Girl suspended if becomes pregnant-----	27	8.5	87	27.4
Girl may stay in school until pregnancy shows -----	60	18.8	43	13.6
Girls may stay in school during most of pregnancy -----	102	32.0	48	15.1
Indefinite policy as to how long girl may stay -----	45	14.1	20	6.3
Home instruction provided-----	166	52.0	158	49.8
Transfer suggested to adult education, correspondence courses, other special courses or classes-----	29	9.1	28	8.8
Total -----	319 *		317 †	

* Two schools did not provide information on school policy for pregnant girls.

† Four schools did not provide information on school policy for pregnant girls.

NOTE: More than one answer could be checked, i.e., home instruction might be provided for girl who is required to leave school early in pregnancy.

High schools in small communities (less than 2,500) were more likely to suspend girls who became pregnant, especially unmarried girls. Schools in larger communities were more likely to be able to offer home instruction than schools in small communities.

Table IX

Family Living Courses in California Public Senior High Schools (1963-64)

Number of schools offering :

One course or unit on family living	130	40.5%
Two courses or units on family living	71	22.1
Three courses or units on family living	13	4.0
Four or more courses or units	2	0.6
Total	216	67 %
Number of schools which do not now offer courses, but have offered family living courses or units in the past	39	12 %
Number of schools which have never offered family living courses or units on family living	60	19 %
No information provided on whether or not family living courses offered	6	2 %
Grand total	321	100 %

Table X

Role of Family Living Courses in the High School Educational Program Over the Past Five Years
 As Reported by 199 Schools Presently Offering Courses or Units on Family Living, and 33
 Schools Which Have Discontinued Courses on Family Living

<i>Role of family living over past five years</i>	<i>School offers course or unit</i>	
Increasing role	56	24%
Decreasing role	77	33%
About the same	102	43%
Totals	235	100%

Table XI

Reason Given by School For Discontinuing Family Living Courses or For "Decreasing Role" of
 Family Living Courses by Whether School Offered Courses at the Present Time

<i>Reason</i>	<i>Courses offered, decreasing role</i>		<i>Courses discontinued</i>	
State mandate to replace "adjustment" courses with more "civics" and government courses	17	43%	11	30%
Indirect reference to mandate: "academic pressure"; "too many requirements"; "emphasis on civics"	12	30%	11	30%
Parental or community pressure; against "sex education in mixed classes"; religious objections	6	15%	5	14%
Lack interested or qualified teachers	1	3%	4	11%
Lack student interest; not meeting student needs	1	3%	2	5%
Other reasons	3	8%	4	11%
Totals	44	102%	37	101%

Part 2
 Appendix I

ILLEGITIMATE BIRTHS

<i>Age of mother</i>	<i>Total number births out of wedlock—1959 reported</i>
All ages	220,600
Under 15	4,600
15-17	43,100
18-19	41,500
20 and over	131,600

SOURCE: Children, March-April 1963: "Their stated source," National Division of Vital Statistics, Public Health Service.

Santa Clara County Hospital—1955-1962

Increase in illegitimate births	874.41%
Total deliveries 1955-1962 increase	170.8 %

Part 2

Appendix J

The following statement was submitted by Prof. Lester A. Kirkendall of Oregon State University, a nationally recognized authority on marriage.

August 12, 1964

TO: MR. ROBERT E. FURLONG

FROM: LESTER A. KIRKENDALL

I feel that the findings which have been developed in the research of Burchinal, Landis, Moss-Gingles and others on early marriage make it possible to support several recommendations which might be implemented by legislative action. As I would see it, these recommendations might be:

1. To provide safeguards against hasty marriages. Many of the early marriages are entered into by youth who are under the pressure of peer behavior and are so contracted at the time and under circumstances which provide a very unsound basis for the subsequent marriage. Therefore, waiting periods, public knowledge of intent to marry and provisions for premarital counseling should be provided, particularly for couples which would fall into the youthful marriage category.
2. There is no question but that many of these marriages are contracted either because the couple are sexually curious and are eager to enter into intercourse, or are involved in intercourse and fear premarital pregnancy, or are actually premaritally pregnant. This suggests that a very much more open and direct attack on the sex education problem both at the youth and at the adult level is needed. It is easier to implement at the youth level as far as mechanics are concerned. The schools and various other serving agencies are available. Programs of this kind, however, are likely to be thwarted by adult fears of the consequences which they expect to grow from an open discussion of sex. Unfortunately our society is obsessively preoccupied with and fearful of sex, and conducts itself in such a way that the very dangers which adults expect are made certain by their actions. Therefore, legislative action and encouragement of a much more open and straight-forward approach to matters of sex instruction is vitally needed. I think that this should take the form of encouraging workshops and in-service education opportunities for teachers and others working with youth. If at all possible, this ought to be accompanied by an adult education program which will help to ameliorate the fears which prevent action in this area.
If evidence is wanted to substantiate this point of view, I think it can be marshalled quite easily.
3. The provision of community mental health facilities which would provide counseling facilities for parents and youth on these problems would be quite important.
4. I would like to suggest that the ages of youth who would be involved in early marriage should be considered as boys under 20

and girls under 18. If the present ages are held (boys under 18 and girls under 16) you will, of course, get the more serious cases, but I do feel that the divorce rate and the amount of marital instability which characterizes marriages in which the boy is under 20 and the girl is under 18 are serious enough to warrant consideration of raising the age limits.

LESTER A. KIRKENDALL

WAITING PERIOD REQUIREMENTS

Alabama	None
Alaska	3 day waiting period, can be waived (25.05.091)
Arizona	None
Arkansas	None
California	None
Colorado	No (90-1-6)
Connecticut	4 day waiting period, can be waived (46-5)
Delaware	None; except where both parties are nonresidents, then they must wait 2 days (13-107)
District of Columbia	4 day waiting period (30-109)
Florida	3 day waiting period (741.04)
Georgia	3 day waiting period, except if both the parties are over 21, or the female is pregnant. 5 day waiting period if both the parties are under 21 unless the parents consent or there are extraordinary conditions (23-204)
Hawaii	None
Idaho	None
Illinois	None
Indiana	3 day waiting period (44-201)
Iowa	3 day waiting period (595.4)
Kansas	3 day waiting period, can be waived (23-100)
Kentucky	3 day waiting period (KRS 402.080)
Louisiana	None
Maine	5 day waiting period
Maryland	2 day waiting period, can be waived (Art. 62, Sec. 6-7)
Massachusetts	3 day waiting period (c. 207 sec. 28; 1941 c. 601, 1959 c. 118)
Michigan	3 day waiting period (Sec. 551.103a; 1955 No. 227)
Minnesota	5 day waiting period, can be waived (517.08 amended 1963 c. 795)
Mississippi	3 day waiting period, can be waived (461.5b)
Missouri	3 day waiting period, can be waived (451.040)
Montana	5 day waiting period, can be waived (48-118.1)
Nebraska	None
Nevada	None
New Hampshire	5 day waiting period, can be waived (c. 457, sec. 26)
New Jersey	3 day waiting period, can be waived (Tit. 37, c. 1 sec. 4-5)
New Mexico	None
New York	3 day waiting period (D.R.L. sec. 13b)
North Carolina	None
North Dakota	None
Ohio	5 day waiting period (3101.05)
Oklahoma	3 day waiting period if parties under 21 (43-5)
Oregon	7 day waiting period, can be waived (106.077)
Pennsylvania	3 day waiting period
Rhode Island	None; except 5 day waiting period if both parties are non-residents (15.2.1 as amended 1961 c. 100)

South Carolina	1 day waiting period (20-22)
South Dakota	None
Tennessee	3 day waiting period if parties are under 21 (36-405)
Texas	None
Utah	None
Vermont	5 day waiting period, can be waived (18-5145)
Virginia	None
Washington	3 day waiting period (26.04.180)
West Virginia	3 day waiting period (c. 48, Art. 1, Sec. 4-6c)
Wisconsin	None; except a 5 day waiting period for nonresidents
Wyoming	None

SOURCE: Martindale Hubbell Law Directory, 1964.

Part 2

Appendix L

FINANCING FOR MANDATORY PREMARITAL COUNSELING

Plan A

Los Angeles County, 1962

Marriage licenses granted, 44,922

6 percent of parties involved were 17 or under

$6 \text{ percent} \times 2 \times 44,922 = 5,391$ individuals under 18

Conciliation Court Counselor receives between \$7,500 and \$9,000 per annum, 1. Can handle 75 filings/month, or 150 individuals or 1,800 individuals/year.

To counsel 5,391 individuals, need 3 counselors: $3 \times \$8,000 = \$24,000$, additional revenue needed.

Increase in marriage license fee of \$1 would yield \$44,922 added revenue.

Increase in marriage, divorce, annulment filing fee of 50 cents will yield \$30,760.

Increase in divorce and annulment filing fee by \$1.50 would yield \$31,708.

Los Angeles, 1960, total divorce, marriages, annulment filings, 61,521.

(Revenue in excess of the amount needed for counselors could be utilized for research and followup on program effectiveness.)

Plan B

MANDATORY COUNSELING FOR ALL INDIVIDUALS UNDER 20

California—1961-62 total divorce, separate maintenance and annulment filings = 89,212.

1961 total marriages, 109,703.

Of these 15,607 involved one party under 20.

Marriage Counselor, 75 cases/month, 900/year.

Approximately 18 counselors would be needed in the entire state to offer counseling to 15,607 cases (2 party).

Eighteen counselors at \$8,000/year: \$144,000, additional revenue needed.

An increase of \$1 for all filings and marriage licenses would yield \$198,915.

An increase of \$2 for all filings excluding marriage licenses would yield \$178,424.

An increase of \$1.50 in marriage license fee would yield \$164,554.

(Note Appendix B for source)

Part 3

EXISTING AND ALTERNATIVE JUDICIAL PROCEDURES FOR FAMILY PROBLEMS *

I. INTRODUCTION ¹

Adversary procedure, similar to the legal process we know today, had evolved in the time of the Roman Republic. In both Rome and medieval England (where it was a replacement and substitute for trial by *battel* and *ordeal*) the technique of pitting opposing counsel in a forensic contest before a neutral arbiter was a great improvement and advance over earlier systems. Judged by democratic values, it will compare favorably with the alternative "inquisitorial" system which is employed in some European countries. Throughout the centuries it has proved so successful that lawyers are loath to abandon the process. Unfortunately, however, the law tends to fit all subjects to the same procedure.

Certain problems simply cannot be handled by such procedures. Partisan procedure is ill-adapted to the treatment or solution of problems of an intensely personal nature; those matters so surcharged with emotion that a neutral judge or jury is almost impossible to find; and those issues as to which no community consensus has been formed. Adversary procedure is a dubious technique where a problem does not permit leisurely consideration or where its formal and dilatory procedures are too expensive for one of the parties.

The key to understanding the difficulties in attempting to adapt family problems to solution under our adversary system is an understanding of family law ancestry. In England, the two shaping influences were feudalism and the church. Due to feudalism, the husband-father had the status of lord and master of his household. In the eyes of the law, wife and children were not *sui juris*.² Due to the church, the concept of sin permeated the canon law and the sacramental or indissoluble nature of marriage became a dogma. The church did not heed the wisdom of Spinoza who once said: "He who tries to fix and determine everything by law will inflame rather than correct the vices of the world."³ Rather, the church attempted to regulate, with indifferent success, the minutiae of these intimate relationships, and do so upon the basis of ideal, if not ascetic, notions of morality.

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, January 8-9, August 13-14, and October 8-9, 1964, and on material submitted to the committee or otherwise brought to its attention.

¹ Some of the material in this section is taken from a paper by Professor Henry H. Foster, Jr., New York University Law School, which was delivered as a lecture before the Pittsburgh Neuropsychiatric Institute as part of its program on "The Psychiatrist and the Attorney Look at Family Law Problems" on March 19, 1962. It is reprinted in 2 *Journal of Family Law* 85 (1962).

² Lat. Of his own right; possessing full social and civil rights; not under any legal disability, or the power of another, or guardianship. *Black's Law Dictionary*, Fourth Edition.

³ Spinoza, *Tractatus Theol. Polit.*, Chap. 20.

In America, we took over much of the substantive ecclesiastical law of England as developed in the church courts manned by bishops and clerics, enacted some of it into statutes, and adopted more by court decision. The result has been that much of our law reflects theological thinking rather than a realistic balance of interests, or a spirit of compromise, or any sense of limitation.

By a balancing of interests is meant that to be workable the law must consider both the private and public aspects of marriage, and must acknowledge that there are different levels of legal, religious, and social validity and significance. Selfinterest engenders selfhelp when satisfaction cannot be obtained through regular channels.⁴ If the law obstructs, or religion inhibits, either custom will arise to compete, or legal and religious institutions will adapt in fact, if not in theory, to answer urgent and pressing human needs. Such has been our history as to both the formalities of marriage and the means for its termination.

In short, it is this failure to weigh and balance that gives rise to the gap between law in theory and that "living law" that actually is practiced. The religious or public aspects of marriage, important as they may be, cannot be its exclusive or sole concern if the law would be pragmatic. The law must remember that human beings are the subjects of its controls and their individual interests must be reckoned with.

The uncompromising nature and black-or-white assumptions of much of the law pertaining to marriage and divorce emanates from the ecclesiastical tribunals of England which were established by William the Conqueror and survived until the middle of the last century. Their rules for judicial separations were applied by us to absolute divorces. During the Reformation the teachings of Luther and Calvin regarding justification for divorce were incorporated into English law and the notion of marital fault became the focal point of inquiry for both parliamentary divorce and separations. In effect a decree became an award for an innocent and injured spouse and a punishment for serious marital misconduct. The mythical "innocent and injured" spouse was a fiction⁵ and such rules did not preclude the *de facto* dissolution of intolerable marriages. Desertion for centuries has been the most common method of terminating marriage, and even today desertions outnumber divorces.⁶

The sense of limitation mentioned above refers to the consideration that in reality what the law says may be of relatively minor significance insofar as marriage stability is concerned since there are many larger forces at work. War, economic depression, and many other factors have

⁴ See Foster, *Common Law Divorce*, 46 Minn. L. Rev. 43 (1961) and Mueller, *Inquiry Into the State of a Divorceless Society*, 18 U. Pitt. L. Rev. 545 (1957).

⁵ See Bradley, *The Myth of the Innocent Spouse*, Selected Essays on Family Law 937 (AALS ed. 1950).

⁶ Rheinstein, *The Law of Divorce and the Problem of Marriage Stability*, 9 Vand. L. Rev. 633 (1956), reports that in the United States over a million spouses disappear annually. Zukerman, *The Role of the Public Agency With the Deserted Family*, 15 Public Welfare 101 (1957) cites public assistance figures to show that in 1955 there were 1,900,000 deserted wives in this country and 1,500,000 deserted unwed mothers, as compared with 1,200,000 divorced or legally separated wives. It is estimated that in June 1961, there were over 9,000,000 women and children in the United States affected by the estrangement of the fathers. See 1961 Report, Family Location Service, Inc. It should also be noted that with the exception of "cruelty" in its many forms, "desertion" is the most commonly used statutory ground for divorce in the United States.

been shown to have more to do with divorce rates than a theoretical severity or laxity in divorce law. In Oklahoma, for example, the divorce rate actually declined after "incompatibility" was made an "honest" ground. The popular or individual image of marriage may have far more to do with the divorce rate than what statutory grounds are available. This is the basis for the position that sound education for the responsibilities and adjustments of marriage probably would accomplish much more to cut down the incidence of divorce than any model law of divorce.

Although it is true the law may hamper or impede the treatment or solution of family problems, by and large its crime is that of non-feasance rather than misfeasance, i.e., the law does nothing constructive to help families in trouble. This is because 90 to 95 percent of divorce cases are uncontested and the "innocent and injured" spouse's allegation of grounds are undenied, unexamined, and rubberstamped. On the one hand, the factfinding apparatus does not work where there is no contest and unwarranted divorces are granted. On the other hand, little or no effort is made to save the marriage or to effect a workable reconciliation. Occasionally, live marriages are pronounced dead by divorce decrees. The other side of this dismal picture is that all too often the contesting spouse, in the 5 to 10 percent of litigated cases, is actuated by hatred, spite, or greed, rather than a sincere effort to save the marriage. A denial of a decree in such cases is hardly a victory for public morality.

Although the failure of our courts to give affirmative help and constructive aid to families in trouble is the most serious indictment of the adversary process in divorce cases, the system also works positive harm. In all states, and especially in states such as New York where there are narrow grounds for divorce, perjury and adultery are promoted by the law's intransigence. The system engenders further bitterness and animosities are intensified. Both the procedure and the substance of contemporary family law contribute substantially to many of the domestic problems facing our contemporary society.

II. A BEHAVIORALLY ORIENTED ANALYSIS OF THE ADVERSARY APPROACH TO DIVORCE

A. *Basis for and Effects of Punitive Attitude Toward Divorce*

The adversary philosophy behind our present legal system has been reinforced by prevalent social concepts and through legislative action. This has been applied inappropriately and destructively to the area of domestic relations to make the acquisition of a divorce an excessively difficult and disturbing process from a behavioral viewpoint. The primary social concept which has perhaps served as the rationale for maintaining the adversary philosophy in the area of domestic relations is based on the assumption that keeping the couple together or "saving" the marriage will stabilize the family, most adequately meet the physical and emotional needs of the children, and best serve the social and economic welfare of society.

Most professional opinion embraces the belief that the development of "good" family relationships is the most important single goal any individual or society could endeavor to attain. The "good" family is

seen as the fountainhead of our individual and social health, freedom and progress. But this same professional opinion seriously questions the validity of the assumption that by simply keeping families together the welfare of the family members has been served. This viewpoint is based on clinical evidence which indicates that marriages which are held together, for whatever period, primarily or solely by social, economic, or legal pressures, contribute to our society an excessive number of disturbed and destructive individuals.

There is a growing body of clinical and research material which supports the thesis that children are damaged more emotionally by the excessive overt and covert conflict between parents during the marriage than they are by the divorce. It is suggested further that the extent of emotional trauma which may result from a divorce is largely determined by the emotional disturbances experienced prior to the divorce action.

Such testimony was not intended to make a case for divorce nor to in any way encourage legislation that would allow divorce by whim or reaction. But it was submitted that divorce legislation should not be based upon the precept of simply saving marriages, but oriented toward broader, long-range individual and social considerations.

It was suggested that the overall welfare of the individual and society would best be served if the primary consideration in creating legislation were oriented toward reducing the interpersonal conflict, the emotional upset, and the deep sense of rejection and/or failure that frequently accompanies this experience, both during and after the divorce. There was a firm conviction that the preservation of whatever emotional stability exists in the personalities of both parties in the marriage will contribute substantially to many immediate and long-term values for the individuals involved, the children, the court, and society. Some of the following benefits would be derived from such an orientation:

1. There would be less tendency to retaliate over the hurts and/or injustices sustained during the marriage and divorce experience, as well as less fear of retaliation, both of which encumber efforts to create and maintain some measure of congeniality during subsequent contacts.
2. There would be less displacement of hostility from the mate to the children or the tendency to use them destructively in an on-going struggle.
3. There would be less motivation or justification for either party to reject the relationship entirely, which excludes the other from seeing the children or by refusing to assume responsibilities for the children.
4. There would be less antagonism to complicate the questions of custody, property settlement, visitation, or other aspects of their subsequent contacts, most of which cannot be controlled by legal methods.
5. There would be less emotional need to rush into another marriage as an escape from the feelings of insecurity or aloneness that oftentimes follows a divorce or as a balm to damaged feelings of worth and acceptableness. Such marriages are usually particularly prone to be a repetition of the first one, with the ultimate result being further damage to everyone involved.

6. There would be greater capacity to function effectively in the economic, social, and parental roles after the divorce.

B. Disruptive Effects of the Adversary Procedure

Approaching marriage relationships and divorce by utilizing the adversary philosophy is inappropriate and destructive to those involved, often requires dishonesty, and always creates disrespect for the law. Some of the disruptive effects of the adversary procedure which makes change most desirable are:

1. Intensifies Undesirable Feelings, Attitudes and Conduct

Family members are automatically pitted against one another suddenly as opponents. The acting out of their aggression one upon the other is encouraged. In fact, the law actually suggests that they "fight" one another to the finish, and until one is judged officially as the good one, the right one, and the other is by authority declared publicly to be the bad one, or the wrong one. This in itself is an aggressive and vicious procedure. The law provides for certain personalities, professional and otherwise, to act in such a way as to take out their aggression on the participants in various ways. It encourages the clients to act out their aggression in terms of various asocial and even antisocial behaviors.

This is not a healthy system. It is not realistic, since it is practically a human impossibility for any human to take in the aspect of omnipotence to the extent that he judges any person either "right" in all respects, or "wrong" in all respects as the law frequently suggests, and particularly in cases where the fundamental problems are in the emotions of the individuals involved.

Inasmuch as the very nature of the adversary proceedings require one mate to prefer charges against the other as a basis for obtaining a divorce, it gives both support and justification to the usually longstanding destructive pattern of overt or covert projection of blame for the difficulties onto the mate. This is a pattern that has usually already contributed substantially to the emotional disturbances experienced by both individuals during the disintegration of the relationship. The result is almost inevitably an increase in the basic feelings of failure, inadequacy, unacceptableness, and/or guilt in the accused person. These feelings comprise the emotional basis and impetus behind the anger that is then projected outward onto the mate in the form of blame, retaliation and punishment.

Such hostility may express itself in an attitude of direct antagonism, through noncooperation, or in other destructive forms. Anger and projection are used as defense mechanisms as well, as the accused person seeks to allay his anxieties, cover his hurt, and protect his sense of worth and emotional stability. The ultimate effect of these disturbed feelings and defense patterns is usually one of further blocking the person's capacity to understand or respond constructively to the situation, whether it causes him to focus his efforts on exonerating himself for blame or to protect himself through withdrawal or denial of caring, or escap-

ing through drinking, another relationship, or even leaving the area.

While it supposedly brings some individuals to their senses and others to their knees, such results are usually short-lived as the person soon reverts to his previous patterns of behavior and the hurt, fear and hostility created find expression in forms that ultimately make the situation more difficult than before.

2. *Gives Court Restricted and Distorted View*

The adversary procedure demands that a very restricted and/or distorted picture of the marriage relationship be presented before the court. While one partner may have functioned less adequately and/or more destructively than the other in the marriage, both persons have inevitably contributed consciously or unconsciously to the difficulties or conflicts in the marriage. At the same time it is not infrequent that the one who appears to be the more capable and/or blameless actually contributes most significantly to the destructive interaction. In turn, the one who files for the divorce and is placed in the position of appearing to be the offended person is not infrequently the worst offender.

It is on the basis of this distorted picture, however, that the court must mete out its justice and deal with vital questions that could and will have profound effects upon the lives of all those involved—emotionally, socially, and economically.

3. *Unnecessarily Complicates Attorney's Task*

Due to some extent to the adversary procedure, attorneys are frequently in the position of having to cajole, persuade, manipulate, even threaten their clients in an effort to bring about agreement on questions of custody, property settlements, support, etc. before the case goes before the court. Done in the face of the hostility and hurt that usually exists, their job is often unnecessarily difficult and demanding on their time and patience, often beyond feasible economic remuneration.

At the same time, the position in which they find themselves oftentimes forces them to function in ways which serve to intensify the anger of their client toward their mate, the attorney, the law, the court, and even the state. The position they hold, also grants the attorneys power which is used in inappropriate and destructive ways on occasion, to the detriment of all concerned.

4. *Limits or Deters Reconciliation Efforts*

The struggle imposed by the adversary procedure along with the legal principles of condonation often result in attorneys placing strong taboos on any contract between their client and their client's mate. Such restrictions oftentimes not only serve to limit or deter reconciliation efforts that may be desired by one or both parties, but contribute to their sense of frustration and anger.

5. *Produces Diverse and Conflicting Judicial Interpretations*

The adversary procedure is interpreted in very diverse ways by the various judges who function in the area of domestic rela-

tions. Some judges interpret the law very strictly and require each case be decided solely on the basis of evidence presented in open court, while others are desirous of obtaining any and all information they can about the case from other sources, to assist them in making their decisions. They will seek and use help from other professional persons freely, as well as seek private sessions with the partners and oftentimes with the children where it seems appropriate and desirable. Some judges protect the confidentiality of information given by a patient to a professional person when he is called before the court, and others do not.

The removal of the adversary procedure from the domestic relations proceedings would do away with these conflicting attitudes on the part of judges and allow the free use of the services of various professional groups in seeking to arrive at the optimum solution to many complex domestic relations problems. It would in turn free the litigant to make full use of professional help which might be available to help him resolve his personal problems and/or marital difficulties without fear of information given in confidence being betrayed and used against him. Such assurance is absolutely essential if a counselor is to work with a person in the intimate, intense fashion requisite to providing significant help for him with his problems.

In general, however, the fundamental factor behind the destructiveness of the present adversary system lies in the necessity of proving guilt and making one person the object of all blame. This tends to not only further undermine the accused person's desire and capacity to function constructively in dealing with the crucial situation with which he is faced, but to disrupt or interfere with his emotional capacity and effectiveness in functioning as a parent or as a productive person in other aspects of his life.

C. The Concept of Fault and Guilt in Divorce Litigation

1. *A Malevolent Inheritance*⁷

The divorce courts appear to have inherited from the ecclesiastical courts, Anglican as well as Roman, not the basic Christian philosophy of love and forgiveness, but the ancient pagan doctrine of guilt and punishment. Perhaps early bishops in granting their separations *a mensa et thoro*⁸ were impelled by considerations of theology to call down the wrath of God upon a spouse who broke his marriage vows and punish him by depriving him of his marital status. There are several things slightly wrong with that concept when applied to this day and age of absolute divorce: it is utterly ridiculous to call it punishment for the offending spouse when more times than not he too is anxious to be free from the hypothetically innocent spouse. And if there be such a thing as a truly innocent spouse, and if legal recognition that a marriage is defunct be indeed punishment, it would appear anomalous to

⁷ Much of the following is taken from an address given by Judge Paul W. Alexander before the International Association of Legal Science, "The Family Court—An Obstacle Race?" reprinted in 19 U. Pitt. L. Rev. 602 (1958).

⁸ A partial dissolution of the marriage relation. Black's Law Dictionary, Fourth Edition.

punish the innocent spouse along with the guilty one. It is suggested that applying these concepts, the innocent spouse should be left married while punishing only the guilty one by divorce!

It was also suggested that perhaps the early bishops simply found it less distasteful to grant separation of what they believed God had joined together if they could blame it on some form of marital sin. There was ample precedent for putting a spouse away for cause, some of it dating back to the beginnings of history. Of course, the bishops did not realize they were setting such an easy, withal paradoxical pattern for divorce *a vinculo*⁹ in the secular courts in the years to come.

Thus the divorce court's function became mainly to adjudge guilt and administer pseudopunishment. Yet the American society, speaking through its state legislatures and the Congress, recognizes something inherently evil in marriage which is no longer a marriage but a legal fiction. Whether out of considerations of equity and justice or just plain sympathy for the suffering spouses, or as a prophylactic against the socially septic mess generated by the defunct and decaying marriage, society has decided to clean up the domestic debacle and provide for the legal interment of the potentially infectious remains by the issuance of a burial certificate in the form of a divorcee decree.

2. *The Anomalies of the Guilty Spouse and the Accusatory Approach.*¹⁰

The issuance of a marriage license or the presiding at a marriage are considered purely administrative functions. But within the past century or so the revocation of a marriage license, the unmarried of a still legally married couple, has been transformed into a judicial function by our legislatures. Whether the legislatures intended divorce to follow more or less the established patterns of the law of contracts, torts, property, partnership or nothing at all, they have succeeded in making divorce a misbegotten action sounding in criminal law. All that is needed to win severance of the bare marriage bond is to prove the defendant *guilty* of a statutory ground for divorce, ordinarily something commonly regarded as another name for some form of sin.

One trouble with guilt as the criterion of divorce is that it virtually assures the mortally feared and hated "divorce by mutual consent." Few things are easier of proof than the fault of the other spouse—especially if he isn't there to answer the charge, as is true in 85 percent to 95 percent of cases. This is why it is proclaimed with such verisimilitude that we now have divorce by mutual consent in almost all jurisdictions. One almost never hears of an earnest divorce seeker being thwarted. Plaintiff usually has little trouble recalling a plethora of nasty things to say about defendant spouse, with witnesses to verify them, and if, as happens once in a great while, the vital vitriol is in short supply and the court is

⁹ Divorce *a vinculo matrimonii*: a divorce from the bond of marriage, a total divorce, dissolving the marriage tie, and releasing the parties wholly from their matrimonial obligations. 1 *BLComm.* 440; 2 *Bish. Mar. and Div. Sec.* 225.

¹⁰ See footnote 7 *supra*. In addition there are also extensive parts from Rutman, *Departure From Fault*, 1 *J. Fam. L.* 181 (1961).

unconvinced, plaintiff merely profits by the experience and comes back later to the same or another court, with the same or another lawyer, and this time loaded with enough evidence of atomic efficacy to divorce a whole regiment. In those relatively few cases where a divorce is denied because the fault appears to lie with the plaintiff, it is not infrequent that the defendant comes in later seeking the divorce.

When domestic discord strikes at family life, few things could be better calculated to intensify antagonism than the cruel and senseless system which requires one spouse to attack the other in pleadings open to the public press, to bring witnesses into court to expose sin and shame, and to air his own unsavory accumulation of dirty linen.

Nor do the grounds for divorce represent the true causes of marriage failure, which is a process of disintegration and cannot be attributed solely to a specific act. Divorce is only the formal recognition of marriage failure. It is the effect and not the cause, and to pretend that in the case of rejecting a request for divorce, the parties will return to each other is in most cases illusory. Most sociologists would be hostile to the argument that easy grounds for divorce would lead to individuals taking marriage lightly, for most people intend, on entering the relationship, to make the partnership last for life. Certainly there is no evidence to support the contrary view. Marriage failure does not represent a question of guilt or innocence, for these concepts cannot be measured or evaluated. It is the conflict of personalities which may lead to the necessity of giving either or both parties aid in a mental breakdown or sickness, rather than attaching a label of guilt and giving the price of a divorce to the innocent victor. If guilt can be invoked at all, then both parties may be called guilty.

Where the parties are caught up in a negative pattern, it is better to release them from the bonds of matrimony, both for their own good and that of society which can only be harmfully affected through the hostile behavior of the parties and the reflection on their children. The argument that the state has an interest in maintaining the family relationship is meaningless where the family is no longer performing any useful function in promoting orderly adjustment between the sexes and rearing children. In fact, at this stage the family becomes a liability.

We must note the changing function of marriage in the light of the rise of liberal thought, altered sex attitudes, alterations in the economics of the family, the change from external necessity to internal affection as the basis for marriage, and the increase in behavior conflicts amongst individuals in contemporary society.¹¹

The present system, because of its adversary nature, simply adds to the division between the parties. It raises issues and revives wounds which debase their relationship to no value either for them or society. This emphasis on the past is not the problem for the court, for what is in issue lies between the future relationship for the parties within the marriage and their hopes of beginning a fresh and independent life.

¹¹ Lichtenburger: Divorce—A Social Interpretation.

Adversary procedures mean that no spouse may with impunity neglect the slightest grievance or overlook the smallest offense. He must store them up in his memory and harbor them no matter how much they may fester, for if worst comes to worst and his marriage turns out to be one which is destined for the divorce court, he will fare ill unless he can dredge up from his storehouse of iniquities enough raw material to be worked over by a skillful lawyer into grounds for divorce. The minute they quit tearing at each other's throats and sit down to talk things over sensibly so as to settle the conflict peaceably, they risk losing out entirely through the doctrine of collusion.

Of course, forgiveness may be fatal. The Christian principles of confession, repentance, forgiveness have no place in divorce court and their exercise in the interpersonal relationships which constitute the marriage may be fraught with risk. The husband who has strayed off the reservation and repented, and now wants to confess and seek forgiveness gets scant encouragement from the law. He would be furnishing his wife with a devastating weapon against himself simply because the law makes evidence of such guilt a ground for divorce. And on the other side of the picture the wife may be damaging her position by forgiving the husband, thus affording him the defense of condonation to use against her.

The instant either of them looks to the law for relief he must put aside all thought of confession, of making amends, of concession, of forgiveness. He must start out with accusation. Then he must maintain an attitude of antagonism. The stricter the law the more he must pile accusation on accusation.

Each fresh accusation drives the wedge deeper. But that is the only way to meet the law's demands. Guilt! That is what the law wants to hear about, to ferret out and to punish. Sin! That is at once the cornerstone and the keystone of the structure of the conventional divorce court. It has no room for, indeed it penalizes such simple virtues as kindness, sympathy, magnanimity, understanding, mercy, considerateness, unselfishness, honesty. The more the evidence of guilt piles up the more fully is the law satisfied. And honest efforts at marriage mending or amicable adjustment will continue to be frustrated by the law itself as long as the criterion of guilt prevails with its twin syndromes of the accusatory approach and the adversary procedures.

D. Detrimental Effects on Custody, Support and Visitation Determinations.

Inasmuch as the man in our culture has been expected to gallantly play the role of the offender in divorce cases, the woman has been placed in the position of being the one who is usually allowed to get the divorce. At the same time, under the adversary procedure the person who gets the divorce is assumed to be the more worthy individual, which almost automatically places them in the favored position for being given custody of the children. It would appear that subsequently over the years a strong judicial bias favoring the woman with regard to custody of children has developed except when serious extenuating circumstances exist.

This judicial bias has both reflected and received support from the family patterns and social concepts of the past, but in our present culture it is neither appropriate, judicious, nor fair. It tends to disregard the tremendous changes in family life structure and relationship today. It imposes perfunctory and arbitrary decisions in matters of custody that frequently disregard the actual welfare of the children. Some relevant factors that should be recognized in the legislative approach to the question of custody are:

1. A commonly accepted concept of the past, which no longer receives general acceptance in professional circles, is the belief that there is something innate about being a mother that gives her a special capacity or insight into the proper way to raise her children.
2. Educational, social and economic changes in our culture have brought about a tremendous increase in the number of married women with children in our work force. This has resulted in the mother frequently being gone from the home as many hours a day as their husbands. An even higher percentage of divorced women are found in the labor market due to the necessity for supplementing their income from their former husbands. Yet, another reason frequently given for granting custody of the children to the mother, is the fact that she is home with the children.
3. The rapidly changing roles in family life during the past hundred years have created a condition wherein many men today play as active a role in relating to and caring for their children as do their wives. There is no question but what some men are more conscientious and effective in their role as a parent than are their wives. In case of divorce, many of these men would provide more adequately for their children, give more time and concern to them, and maintain a more meaningful relationship with their children than would their wives. Yet, with relatively rare exceptions, no matter how effectively he has functioned as a parent, unless he can prove his wife's behavior to be in radical opposition to the social or moral values of our culture and/or of a severely destructive nature to the children, the man is ill-advised to seek custody of his children.

Even when it might be possible to obtain such information, the emotional upheaval that would result from such action for himself, his wife and the children, along with the large monetary outlay involved, dissuades many men from seeking custody of their children when such action might be most desirable in terms of the children's welfare. At the same time, there are a substantial number of cases wherein the wife has fought for and received custody of her children only for economic reasons, as a retaliatory measure, or because of the social expectation, rather than because of any real desire on her part for the children.

While there is no question but what women as a whole tend to prepare themselves for child-rearing more than men, spend more time with their children, provide a more meaningful emotional relationship and are usually more capable of caring for their overall welfare than their husbands, it is by no means as generally true

as might be suggested by the number of women who are given custody of their children upon being divorced.

It is because of these inappropriate and unjustified inequities, as well as the intensification of conflict that results from the present adversary process involved with divorce and custody that the need for removing custody from the adversary procedure and establishing it as a separate function from the divorce process is clearly indicated. This action becomes particularly desirable if the divorce process is not taken out from under the adversary procedure.

E. Some Observations Taken From Clinical Practice Might Emphasize the Possibilities of Further Study.

1. First of all, most persons don't really want the divorce as the solution to all of their personal problems.¹² The divorce is a defeat. It is hard on the self image whether the person is legally judged either the "winner" or "loser." They would rather succeed in their adjustment to life if they could perceive a better way.
2. Secondly, people lean back upon divorce, as a solution, in a "last ditch" desperate attempt at self preservation. They become so threatened by the aggression of others, professional and otherwise, and by their own tension and anxiety, that they will do anything to escape this threat. If divorce is offered as the solution, they will snap this up as "the answer" in lieu of any further understanding. This is a deprived and primitive state of affairs for a society that "knows better."
3. A third observation, from clinical experience, and worthy of research, is that divorce will not solve problems, but even perpetuate them. People who get divorced frequently remarry a person with a personality practically identical with that of their ex-mate. The problems are continued, and divorce is continued.
4. Another observation relates to the present type of counseling that most people are forced to rely on. Usually, friends, relatives, neighbors, acquaintances are involved as advisors or counselors. These people frequently try to do their best. However, they are not trained in scientific counseling procedures. It is difficult for them to be objective. Relatives and friends easily read their own problems and aggressions into the marital relationship, and they take their own feelings out in an unhealthy manner by setting up an adversary system, choosing sides, and "fighting it out" so that the opponent person becomes the scapegoat in the situation. In lieu of professional counselors, and, in their insecurity, marital couples in strife snap up such counseling services. They could

¹² After having presided over approximately 4,000 hearings or conferences since the inception of the Washington family court in the first three years of its operation, the supervisor of the King County Family Court stated that she was "... convinced that at least half of the people who start divorce suits are really hoping that something will stop them before it is too late. They insist they want a divorce, but at the same time they are wishing that somebody will step in and straighten things out. The tragedy is that in most cases nobody does. The vast majority obviously go into divorce without thinking through what it may entail; they think that divorce will automatically solve all their problems, but they are shocked and bewildered when they discover that it not only failed to cure everything but started a whole new set of problems and heartaches." Ralls, *The King County Family Court*, 28 Wash. L. Rev. 22, 26.

just as well have been referred to competent, trained, objective, and neutral professional workers.

III. ALTERNATIVE SUBSTANTIVE AND PROCEDURAL TECHNIQUES FOR HANDLING FAMILY PROBLEMS

A. Preliminary Processes

1. *Style of Case:*

As indicative of the new, behaviorally oriented approach to marital discord, the style of the case no longer needs to identify the parties as pitted against one another. Instead of John Jones *versus* Mary Jones the action would be styled "In the matter of John and Mary Jones" or "In the matter of Jones Family." It will also indicate that if a decree is granted, it will be granted not to one or the other, but to both or in regard to the Jones family.

2. *Notice of Intent to Commence a Divorce Proceeding:*

The experience of all those dealing with couples undergoing divorce procedures is uniform that once the actual complaint is filed, with its various assertions of fault and deficiency against the other spouse, the parties become committed to the roles in which they are cast by the legal language so that they are much harder or impossible to reach by counseling or other therapeutic techniques which will lessen the trauma of the experience. It was therefore suggested that when the situation has reached the point that one party feels he must take formal action, indication of that fact be accomplished by merely filing a "Notice of Intention to File a Divorce Complaint." This document says in substance nothing more than that the situation is critical and that if it is not relieved, it will be terminated by a divorce. A three-month period could then ensue during which neither party would be permitted to file a complaint for divorce. During this time, evaluation of the marriage status and, if indicated, reconciliation efforts would take place. A brief hearing could be held at the outset of this period, or whenever requested, to handle the usual questions of temporary custody, support, visitation, etc.

3. *Evaluation of Marriage Status; Reconciliation; Counseling for Divorce:*

Merely marking time during the three-month waiting period following the filing of the notice of intent has certain benefits in and of itself. It allows time for those actions based upon transitory emotional reactions of anger, despair, etc., those being used as manipulatory tools to bring about concessions, or those designed to bring home the seriousness of the situation, to resolve themselves. But more importantly, it would permit time for a required professional evaluation of the marriage viability to be made. This is not a reconciliation effort. It is an investigation made to furnish to the court a report of the character, family relations, past conduct, earning capacity and financial worth of the parties to the action.

During this time the parties can also explore with a professionally trained, experienced marriage counselor whether or not the

marriage is viable and whether or not they wish to attempt to keep it alive. If it is dead, the parties can be helped to understand the emotional conflict, the guilt feelings, the failure and the other upheavals they have been experiencing. They can be helped to recognize that while the divorce will terminate the legal relationship between them the social involvement by the parties with each other's lives will continue after the divorce becomes final, particularly if there are children. They can be helped to understand these things and to understand why it is so vital for the benefit of their children that they conduct themselves in such a way as to minimize the possible harmful effects on their children.

If either party voluntarily desires to explore a reconciliation attempt such counseling could be undertaken at this time. By restricting this effort to those who voluntarily desire it staff personnel are not impeded by having to try to reconcile parties who are not interested. The mandatory divorce investigation effort helps those families where divorce is certain to adjust to the fact of divorce. In any event, at least the opportunity was presented to all to have some help when it might have done some good. Towards the end of this period the question of custody, support, visitation and property settlement could be considered or worked out by the parties, or their attorneys, so the divorce procedure is not unduly prolonged.

B. Nonadversary, Nonfault Hearings

California has already recognized that under certain conditions a divorce may be granted which is not based on fault. Thus, as Justice Traynor pointed out in *DeBurgh v. DeBurgh*, 39 Cal.2d 858 (1952), "The rising divorce rate in the United States has compelled a growing recognition of marriage failure as a social problem and correspondingly less preoccupation with technical marital fault. This trend is strikingly exemplified by the recent amendment of Section 92 of the Civil Code designating incurable insanity as a ground for divorce. Formerly, no matter how vicious the conduct of an insane spouse, he could not be divorced, for the law refused to find in him the guilt essential to a marital offense. . . . The Legislature has come to realize, however, that when a union is dominated by insanity, fulfillment of the normal purposes of marriage is hopeless. What was once a bar to divorce is now recognized as a justification for divorce."

1. Incompatibility¹³

A realistic attitude recognizes the end of the *de facto* marriage, and appreciates there can be no purpose in continuing the outward form where the contents have been destroyed. "When it appeared that the purpose of matrimony had been destroyed to the extent that further living together was intolerable, it was in accordance with the court's duty and prerogative to grant the plaintiff a divorce. It is not the policy of the law that a man and a wife should be required to live together or be held in a marital relationship when they have come to regard each other as mere

¹³ Much of the following is taken from Rutman, *Departure from Fault*, 1 J. Fam. L. 181 (1961).

strangers.”¹⁴ This has been the policy which lies behind the incompatibility statutes.

Incompatibility was introduced as a ground for divorce in the Virgin Isles in 1920,¹⁵ in New Mexico in 1933,¹⁶ Alaska two years later, and more recently Oklahoma adopted it as a ground for divorce in 1953.¹⁷

Ideally, the court is now examining a state of affairs in which the marriage due to the hostile interaction of the parties has broken down. It should not attempt to lay guilt or innocence at the door of either spouse. However, it has not yet arrived at the stage of seeking the emotional motivations for the breakdown, although these may well be suggested during the inquiry. It would seem almost selfevident that if the court finds there is a maladjustment between the parties and that this is due to their psychological makeup, then it must continue its analysis along similar lines where it is confronted with the problems of alimony, custody of the child, and property rights. It is at this stage that the introduction of “fairness” or “injustice” which resolves future problems in terms of past behavior becomes ludicrous.

Incompatibility has been developed as a ground for limited divorce in three jurisdictions—Kentucky,¹⁸ Rhode Island,¹⁹ and Minnesota. The courts have interpreted this discretion broadly, and perhaps this is because of the nature of judicial separation, which seems to represent in the eyes of the court a less fundamental attack on the marriage relationship than in the case of absolute divorce.²⁰ This has given rise to the more liberal approach of the judiciary.²¹

The more subtle method of introducing a marriage failure basis was involved in a number of cases where lip service is paid to the existing law by attributing the divorce to a specific statutory ground, and pointing out that one spouse is at fault, whereas the fact situation has established a mutually inconsistent pattern between the parties, and no specific “cause” can be found. Such was the decision in *Ohligschlager v. Ohligschlager*,²² a California decision, where the rejected ground was mental cruelty, but their behavior pointed to the conclusion that such was their mutual disagreement over many issues that they were unable to live together, and that any further efforts to save the marriage would be futile.

²² 125 CA 2d 458, 270 P. 2d 577 (1954).

A similar approach was adopted in Utah in *Wilson v. Wilson*,²³ where, although the alimony issue was based on fault,²⁴ the question of granting the divorce was placed on the ground of the inability of the parties to carry on living together.²⁵

2. Voluntary Separation²⁶

The ideal in both incompatibility and voluntary separation suits is similar, although it may take a different form. Where incompatibility is concerned, we look at the whole context of the marriage and adopt incompatibility as a general clause to discover if the marriage has broken down to an irreparable extent. Voluntary separation has, or should have, the same basis, but we are limited to the extent of having as the evidence of this breakdown, separation for a number of years. This represents the essential aspect of the parties' incompatibility, and it may well be more suitable for the court to be granted discretion to see that the divorce cannot be obtained where the separation is due to an accidental parting or a reason such as military service or imprisonment, and that in fact the parties are irreconcilable.

The principal distinction between voluntary separation and incompatibility lies, however, not so much in the indicia which go to establish the existence of the cause, but in the implications of voluntary separation. Granting a divorce upon the latter basis is to recognize divorce by mutual consent.

It is unrealistic to fail to recognize that in practice numerous divorces are carried out under circumstances of mutual consent. It is one of the factors which has brought law into disrepute that it continues to regard the litigation as an adversary proceeding, and, not as it is in many cases, a mutual arrangement. The number of undefended cases is but further evidence which goes to prove this now well-accepted statement.²⁷

There are, at present, 21 jurisdictions which have some form of voluntary separation as a ground for divorce.²⁸ The period of years involved varies from 2²⁹ to as much as 10 years.³⁰ It is

²³ 5 Utah 2d 76, 296 P. 2d 977 (1956).

²⁴ "The court considers the relative loyalty or disloyalty of the parties to their marriage vows, and the relative guilt or innocence in causing the breakup of the marriage."

³⁰ Rhode Island.

not only in interpretation that the laws differ from each other, but also in the construction of the individual statutes.

The living apart statutes express, on the surface at least, an exclusion of fault considerations in about half of the states. In practice this has not been the case. The introduction of technical terms, the reiteration of traditional jargon and the lack of continuity in thought are apparent in almost all the cases. In some instances, where it seemed that the policy of the Legislature or at least the apparent policy, has been carried out in the granting of the decree, this has not been followed through with reference to alimony or property rights.

What has replaced this is a course which looks at the marriage as a whole and blurs the line between fault and **nonfault**. It is in fact a method which falls in the middle, at times vaguely aware that blame or guilt is not the ideal approach, at others slipping back into the traditional patterns of thinking and analysis.

3. *Eliminate Fault-Oriented Defenses*

The third part of a new approach to divorce hearings is to remove from the code those defenses to divorce which presuppose the issue of fault. The decision of *DeBurgh v. DeBurgh* has already done away with the harmful effects of the defense of recrimination. The remainder of the doctrine should be eliminated by repealing Civil Code Section 111 (4) and Civil Code Section 122.

The proposed Pennsylvania code goes much farther: It provides in Section 304 that

"Except as otherwise provided in this act, the defenses of recrimination, condonation, connivance and collusion are hereby abolished; provided, however, that where adultery is charged, if it be established that the party alleging such offense either conspired to procure its commission or willingly forgave the offense, the court may refuse to grant a divorce on that ground but may consider such offense in determining whether other grounds exist for termination of the marriage."

The "otherwise provided" clause seems to have been intended to refer to Section 406, where the act states that

"Collusion shall be found to exist only where the parties conspired to fabricate grounds for divorce or annulment, agreed to and did commit perjury, or perpetrated fraud on the court."

It must be recognized that incompatibility and voluntary separation *per se* stand in a different category to other divorce grounds. They are subject to different considerations than other grounds for divorce. Hence defenses which presuppose the issue of fault have no application to these grounds. "The power of the court to decree divorce where it is found that the parties are incompatible, i.e., can no longer live together, is inconsistent

with the application of the doctrine of recrimination.”³¹ At long last there has been some judicial recognition of the strength of the criticisms which emanated from sociologists and psychiatrists alike: The denial of divorce did not bring to life again a family which was sociologically dead. “I cannot feel that when the parties are living separate and apart, and one or other, or both, are guilty of adultery, that the courts can serve any good purpose by forcing them to live for the rest of their lives as husband and wife, separate and apart, and thereby create a situation which can do nothing but cause sorrow and unhappiness.”³²

Incompatibility and voluntary separation as grounds for divorce cut across all the other offenses, and tend to replace them. Adultery, desertion, and cruelty are but the resultant external characteristics of hostile interaction. The criticism that nobody will seek a divorce on any other ground when these are on the statute books is misplaced, for any other ground may only represent one facet of a situation in which the parties are unable to live together. The basic premise behind this position is that by allowing incompatibility or voluntary separation to be interpreted in a liberal manner we shall be opening the floodgates for easy divorce, that marriage as an institution will be finished in a society where divorce by consent goes hand in hand with a multitude of promiscuous relationships. Such a view clings to the traditional pattern of divorce law and finds its central thesis in the proposition that divorce law affects behavior in society.³³

The proposed Pennsylvania Divorce Code, drafted after a long study under the supervision of Professor Harry Foster (now of New York University), contains this nonfault ground for divorce:

“Living apart for a continuous period of two years because of estrangement due to marital difficulties.”

The legal theory of divorce based on separation is not fault, but marriage failure.

The newly enacted Family Code in Wisconsin does not go quite as far as the proposed Pennsylvania code. A divorce may be granted in Wisconsin, at the suit of either party, whenever they have lived apart for five years pursuant to a judgment of legal separation. While it is unnecessary to establish a fault basis in the divorce action, it still is necessary to do so in the separation action.

C. Separate Matters

In furtherance of the previous proposals, several matters should be treated separately and apart from the decision of awarding the divorce. These include:

1. *The Division of the Community Property*

Civil Code Section 146 has been interpreted to require an award of more than half the community property to the prevailing spouse if the divorce was granted for cruelty or adultery. (See *Enslinger*

³¹ *Chavez v. Chavez*, 39 N.M. 480 1950 P. 2d 264, 272 (1935).

³² *Pavletich v. Pavletich*, 50 N.M. 224, 174 P. 2d 826, 829 (1946).

³³ *Supra* note 13 at 186.

v. *Enslinger*, 47 Cal. 62.) If the divorce was granted for incurable insanity the property may also be divided unequally. But if the divorce is obtained on the ground of desertion, willful neglect, habitual intemperance, or commission of a felony, the community property must be divided equally.

The question of division of community property should not be connected with the issue of fault in such a way as to make a moral judgment that adultery is worse than desertion, or cruelty than habitual intemperance, the distinction based on the grounds for divorce ought to be removed from Section 146. The Legislature must then choose between allowing the court to divide the property as it deems just in all cases or dividing it equally in all cases. An equal division is more compatible with the theory of Section 161a of the Civil Code that the parties' interest in the common property is equal. If we assume that the contribution of both to the acquisition of the property is equal, and this is the theory of the community property system, then it should follow that the vested interest should not be divested by the commission of marital fault. The fault principle thus would be entirely eliminated if the property were divided equally in all cases.

In the *DeBurgh* case, of course, where divorces were granted to both parties, the court held that the community property should be divided equally because neither was innocent.

2. *The Award of Alimony*

Civil Code Section 139 provides in part that :

"In any interlocutory or final decree of divorce or in any final judgment or decree in an action for separate maintenance, the court may compel the party against whom the decree or judgment is granted to make such suitable allowance for support or maintenance of the other party for his or her life, or for such shorter period as the court may deem just, having regard for the circumstances of the respective parties . . ."

California courts have already substantially modified the apparent meaning of this section. Thus, in *Hudson v. Hudson*, 52 Cal. 2d 735 (1959) the Supreme Court awarded alimony to a California wife following an ex parte divorce procured by her husband in a sister state. And in *DeBurgh v. DeBurgh*, *supra*, the court held that where divorces are granted to both parties, alimony may be awarded to either. These cases were followed and extended in *Salvato v. Salvato*, 195 Cal. App. 2d 869 (1961). In that case the wife filed for separate maintenance and the husband crossfiled for divorce. The trial court granted a divorce to the husband and awarded alimony to the wife, and the district court of appeal affirmed, holding that the trial court had power to grant alimony to the wife when she had proved a cause of action for separate maintenance against her husband, even though the divorce was granted to him. The *Salvato* case was recently followed in a situation where the trial court, not content with merely granting the wife alimony, granted her a decree of separate maintenance as well, and at the same time awarded the husband a divorce. (*Barton v. Barton*, 230 A.C.A. 43 Sept. 29, 1964).

Other states have, under special circumstances, awarded alimony to a "guilty wife." Thus, in 1963 Oregon enacted the following statute: (Rev. Sta. 107.100)

"Whenever a marriage is declared void or dissolved, the court has power to decree as follows:

"(c) For the recovery from the party at fault, or under unusual circumstances in the discretion of the court, from the party not at fault, such amount of money . . . as may be just or proper for such party to contribute to the maintenance of the other; provided that in case recovery from the party not at fault is allowed, the decree must contain special findings of the facts constituting the unusual circumstances . . ."

Anno., 34 A.L.R.2d 313 (1954) discusses this issue and lists the following states which permit alimony to be awarded to a wife even though the husband procured the divorce:

- a. In states which have statutes permitting the court to award alimony when it grants a divorce, the statute does not refer to fault and the court is therefore authorized to award alimony to either party. States having such statutes include: Arkansas, Colorado, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, New Hampshire, and New Mexico.
- b. In other states, the courts are permitted by statute to award alimony to a wife when the divorce is procured by the husband, unless the ground of divorce is the wife's adultery. Such states are:

Michigan, Minnesota, Nebraska, and Wisconsin.³⁴

In both the proposed Uniform Divorce Act and the proposed Pennsylvania Divorce Act, the question of alimony is separated from the issue of fault. Thus, the uniform act provides in Section 17.01 "In any proceeding brought under this act, the wife or husband, when it is just and equitable, shall be awarded temporary or permanent alimony . . ." and the proposed Pennsylvania act expressly states in Section 504 that "the marital fault of either party as it appears in the annulment or divorce proceeding shall not preclude nor affect the granting of such an allowance where both need and ability to pay are established."

3. *The Child Custody Decree*

The child custody decision is not connected in legal theory to the grounds of divorce. But the adversary system is used to make the decision and the dominant parental right doctrine is used to require a finding of unfitness whenever the child is removed from a parent and awarded to a nonparent. Changes in the law of child custody which would remove the decision in that area from the adversary system are set forth in another part of this report.

³⁴ (The statutes of these states have not been researched to see whether the laws and case decisions under those laws remain unchanged since 1954).

D. Time of Hearing and Interlocutory Period

1. Time of Hearing

For those couples where divorce is the indicated answer to their problems, the three-month period provided for constructive re-evaluations and problem resolution should enable the actual divorce hearing to be expedited. A special calendar might be considered for these couples in order not to unduly prolong the process, which is usually destructive for everyone involved.

2. Interlocutory Period

Following the granting of the divorce decree, an interlocutory period of three to six months should elapse before the divorce becomes final. Inasmuch as divorce action usually has a disturbing impact on both parties, it oftentimes precipitates reactions that cause both parties to face their roles in the relationship more honestly and motivates them to seek a solution in a more serious and realistic fashion than has been previously true. There are also some individuals who quickly find the single life to be something less than the "ball" they visualized and are moved toward a reevaluation of the marriage in a few months. There are in addition, a few persons who somehow seem to feel the need to punish their mate or free themselves by totally rejecting the other, by way of obtaining a divorce decree before they are emotionally ready to recommit themselves to the relationship. The interlocutory period would allow time for such reactions and reevaluations without unduly restricting or punishing those individuals who wish to rebuild their lives and establish other sustained relationships.

IV. INTERMEDIATE REMEDIES IN JUDICIAL ORGANIZATION

A. The Problem

1. The Bar

Family law has long suffered from an absence of interest and engagement by the better minds of the legal profession. The elite of the profession were too busily involved in the more remunerative tasks of legal ministers officiating at corporate marriages, juridical midwives at the birth of subsidiaries, and counselors at intracompany proxy fights to contribute their professional skills to the human counterpart. Marital litigation is distasteful and unpleasant to most attorneys. While the medical profession has not ignored the treatment of venereal disease and cancer, the legal profession has generally turned to more lucrative areas which do not exact such a high toll of one's emotions. Without justification the legal profession has generally shirked its duty and denied our society the expertness of its professional competence in this vital area. The number of people experiencing marital and family problems in this country is so large that the manner in which we deal with them and their children is no longer the problem of an aberrant minority.

A prominent jurist has observed that it would appear unduly optimistic to look to the bar to screen out the unwanted, unneces-

sary and undesirable divorces. In contrast to members of the "divorce bar," the scrupulous, conscientious lawyer is rarely besought for divorce. When he is, he brings to bear a world of common sense and sagacity along with his strategic and purely legal abilities. Above all when *he* is stymied he does not hesitate to call upon exponents of other social sciences. But sad to relate, most of the truly high-grade lawyers disdain divorce; even for the daughter of a wealthy client they prefer to leave it for one of the younger to handle.

There is some evidence to indicate that about 8 percent of the lawyers handle about 80 percent of the divorce business in some cities. For them divorce is their rent, their stenographer's salary, their baby's shoes, sometimes their solid-gold Cadillac. The simplest uncontested case is generally worth a couple of hundred dollars; a case involving even a moderately well-to-do husband accused (not necessarily guilty) of infidelity is ordinarily worth a few thousand to the lawyers. How unrealistic to expect them to forego anything like that for mere considerations of ethics or morals.

2. *The Bench*

The problem of inadequacy bordering on incompetency is not restricted to the practicing bar. Almost uniformly in this country, judges take turns in sitting for the briefest of periods on the domestic relations bench. An eminent jurist cogently observed that this is one of the greatest problems: family law matters are handled, perhaps shuffled is a more descriptive term, in sort of an orphan court. One judge will take them for three months, then another one takes it for three months and the assignment is like going to the salt mines of Siberia. No judge has any chance to really start to understand the problems. Many of these judges never handled domestic relations cases when they practiced law. They are never in the court long enough to understand the problems and procedures or to develop programs for saving marriages or ameliorating the trauma of dissolution. The typical lack of unified procedure in the administration of matters of domestic relations in the California court system is readily seen in divorce proceedings in the County of San Francisco.³⁵ All judges of this court hear divorce proceedings except those assigned to specialized divisions such as criminal, probate, juvenile and domestic relations. The domestic relations judge does not hear questions of divorce, separation or annulment. This court hears preliminary motions for alimony and child support, delinquent payment charges, change in custody or support, violation of visitation agreements and the like—10 to 15 cases a day are disposed of. In the domestic relations court the judge serves on limited rotation, usually six months. The appointment of judge to this division is often avoided as "a kind of K.P."³⁶ since it is considered as a "garbage court."

³⁵ Virtue, M., *Family Cases in Court*, Durham, Duke University Press, 1956.

³⁶ *Ibid.*

Another disturbing aspect of the present situation generally prevailing in this state and throughout the country is the wide disparity in the handling of substantially identical cases. Great disservice is done to both the legal profession and the public when there is violation of one of our basic jurisprudential concepts that persons in similar situations shall be treated similarly. No one with full comprehension of the problems involved advocated removal of discretion from the judges. There was general concurrence that an enlightened and concerned bench, working with members of the bar possessing similar attributes, is the most desirable arrangement. But serious concern was expressed about the lack of guidelines and uniform policy, especially in the larger, multijudge courts. It was suggested that the administration of family justice would be no better than the quality of the members of the bench and bar who are involved.

B. Proposed Solution

1. Judicial Reorganization

One method of increasing the competence of the bar in family matters is to increase the competence of the bench before which they practice. Highly competent jurists can and do hold practitioners to higher standards than do inferior colleagues. It was suggested that assignments to the domestic relations bench be of longer-than-minimal periods. It was noted that in the multijudge courts there were numerous specialties among the jurists: criminal law, torts, law and motion, probate, etc. It was suggested that a similar arrangement should be developed for family law matters.

Note was taken of the extensive use of commissioners in the Los Angeles Domestic Relations Division. With supervision and policy establishment originating from one source there was great uniformity. This contrasted sharply with what the practitioner faced when his cases were assigned to other judges for hearings. It was suggested that this organizational structure be enlarged to encompass all of the various parts of a divorce hearing instead of the limited portions presently under such an arrangement. As an alternative in other courts, where the commissioner approach might be suitable or desirable, it was suggested that the presiding judge establish policies for the other members hearing domestic relations or that a separate department of the court be created for domestic relations matters, with a presiding judge to establish more uniform procedures.

V. SOPHISTICATED REFINEMENTS IN JUDICIAL ORGANIZATION: THE FAMILY COURT

A. Evolution of the Concept

The idea of a family court grew out of experience with the juvenile court and its philosophy of protecting and rehabilitating children instead of punishing them. Thus, in California, when a child is referred to the juvenile court for the commission of an act which, if it had been committed by an adult would be a crime, there is no trial by jury in an adversary setting to determine guilt and assess a penalty as there

would be in an adult criminal case. For example, if a minor is picked up by the police for stealing a car and sent to juvenile hall, the probation officer will secure a social study of the child, his family, and his background. The probation officer then may file a petition on behalf of the minor, not adverse to him, setting forth the facts that indicate that the minor has stolen the car and thus comes within the juvenile court's jurisdiction. At the hearing before the juvenile court judge where the minor and his parents may be represented by counsel, a determination whether the minor comes within the court's jurisdiction is made. If the determination is in the affirmative, the court considers the social study and decides whether to place the child with a family of good character, in a foster home, a child care institution, a public agency organized to care for children, or a county juvenile home, ranch, camp, forestry camp, or the youth authority. Throughout the proceedings and the subsequent treatment, the emphasis is on helping the child to become a valuable member of society.

Judge Paul Alexander of Ohio has pointed out the relationship between the lesson taught by the juvenile court and the idea of the family court:

"The question in the juvenile court is: what is best for the individual child? What are we going to do *for* the child, not *to the* child? Why can we not apply that same logic, same philosophy, same diagnostic and therapeutic approach to the family when the family comes to court? Why can we not ask what is best for this family, diagnose the case, find out what caused the rift, and then apply all the skills of all the professions we can bring to bear on the problem? It is not going to make divorce easier or make divorce harder. It is going to stop divorces that should not be granted, and if, from a sociological viewpoint, the divorce must be granted, the court will act without the necessity of a public trial. We will not harass the parties by forcing them to accuse each other and consequently, do damage to themselves and the children." (Emphasis added.)³⁷

The conclusion drawn from the juvenile court experience by some who have worked with it is that the problems there encountered are family problems that should be solved in a family court.

B. Major Characteristics

The commonly accepted definition of a true family court embraces three major characteristics.

1. *Specialist Judge and Integrated Jurisdiction*

A true family court is headed by a specialist judge and has an integrated jurisdiction over all legal problems that confront the family in conflict. This requirement means three things. It means that the family court should be a single court, if possible in a single plant. It can either be a special court or a court of general jurisdiction with specialized duties, such as the present juvenile and probate courts. It means also that the court should have a

³⁷ Alexander, "The Therapeutic Approach," *The University of Chicago Law School Conference on Divorce*, University of Chicago Law School Conference Series, No. 9 (1952) pp. 51-54.

judge with a permanent, or at least lengthy, appointment to enable him to develop specialized skills in handling family problems. Finally, the specialized court should handle all legal problems of the family in conflict. That is, it should handle, to quote Judge Alexander again,

"... abandonment (of child, pregnant woman, spouse), abuse of child, adoption, alimony claims, annulment of marriage, assault and battery (intrafamilial), bastardy, consent to marry, contributing (to delinquency, dependency, or neglect), custody of children, declaratory judgments, dependency of children, divorce, filiation proceedings, habeas corpus (intrafamilial, husband and wife), juvenile delinquency, neglect of children, nonsupport (of child, parent, spouse), parent and child, partition of real estate (intrafamilial) separate maintenance, and visitation of children."³⁸

In addition to the benefits of the nonadversary proceeding, the family court system would provide immediate practical benefit in other areas, by eliminating much of the duplicated effort and congestion of calendars which characterizes our present process. Consider the following hypothetical case—which would by no means be typical:

After some months of increasing family friction and discord, the wife obtains an interlocutory decree of divorce, and is given custody of the minor child, a boy aged 11. Upset by the discord between his parents, the boy develops more and more problems at school, and finally refuses to attend at all. He is then referred to the juvenile court as a truant, and is made a ward of the juvenile court. After the final decree, the father petitions the court for appointment as guardian of the minor's estate, feeling that the mother is incapable of sound business management. Shortly thereafter, the mother remarries and her second husband wishes to adopt the boy through a stepparent adoption. After some time, mother and her second husband seek to adopt another child.

Involved in this case are five separate divisions of the superior court, and at least as many ancillary agencies.³⁹ The reports of one are not readily available to another; much testimony is repetitive; investigations are duplicated; calendars are clogged; and parties as well as taxpayers are put to needless expense and confusion. Since a marital severance proceeding frequently generates one or more such "collateral" actions, such as petitions in juvenile court, attention should be given to the possibilities of combining them within a single division of the court.

³⁸ Alexander, *The Family Court—An Obstacle Race?* 19 U. of Pittsburgh L. Rev. 602 (1958).

³⁹ When the issue of the child's custody is first raised, the court may order a custody investigation by the probation officer under Section 582 of the California Welfare and Institutions Code (1963). (This may be done by domestic relations investigators in counties having such a system.) At the hearing in juvenile court, the probation officer will present another report. If it wishes, the probate court may order an investigation (also under Section 582) at the time of the hearing of the guardianship petition. This will be a third report. The step-parent adoption would be investigated by the juvenile probation officer, and finally the "straight" adoption report would be prepared by the State Department of Social Welfare.

2. *Interdisciplinary Staff Assistance*

The second major characteristic of the true family court is that it is assisted by a staff of specialists, trained in social work, psychology, psychiatry, and sociology. Information gathered about the court's "clients" from the various disciplines helps to give the court the complete, undistorted picture of the actual situation. Persons in the respective professions work together and pool their combined resources to deal with the complete family situation.

An interdisciplinary approach promises a more efficient and productive direction of available potential in the handling of divorce cases. An interdisciplinary approach is valuable in several important respects. This type of an approach would foster greater understanding of the basic mechanics of divorce in terms of information available through the behavioral sciences regarding such things as the interpersonal nature of marriage, the feelings, the emotions. An interdisciplinary approach would facilitate a more responsible handling of the cases through the courts by providing the legal profession with substantial information that would permit a more objective handling of facts in any given case. This is a more dignified approach to divorce problem cases by responsible people who are "in the know." This approach permits increased use of knowledge gleaned from experience and research by behavioral scientists. This area of study, practice, and research does not have the tradition of the legal profession from an applied standpoint. However, it has developed to a point where it has accumulated valuable insights and findings that are now pertinent to further efficient handling of divorce by the legal profession. The behavioral sciences have progressed to a point where they are in advantageous position to make a real contribution in the more humane handling of divorce cases. The behavioral scientists now have information that is usable in facilitating the study of divorce more objectively on a natural level, and in terms of the feelings and emotions experienced by husband, wife, and children. Information gathered about the court's "clients" by the staff should be kept in central files and be available to the court and its staff each time a family member appears in court.

3. *Therapeutic Orientation*

The true family court is a therapeutic institution: It exists for the purpose of providing help for families in trouble and employing the resources of the community to that end. This promotes a more objective and realistic approach to the handling of divorce cases. Since the difficulty in these cases is rooted in the emotional and interpersonal nature of the relationships in the family unit, a more humane and positive legal approach is necessary. The legal profession can promote this. The legislators can provide this.

The legal profession has done much to provide this. This is the case at least in some quarters. There has been a departure from the practice of a strictly Napoleonic Code in the treatment of such human relations cases. There has been movement away from an adversary system of case handling. There has been movement toward more conciliatory legal procedures. However, this move

has not progressed to the extent that it might in many quarters, and there is little promise that progress will come quickly. In most instances, the handling of these family relationships is only in terms of education in justice, legal counsel, and the practice of jurisprudence.

4. *Psychosocial Evolution in Reconstructing Marital Relationships*

Clinical practice in the behavioral sciences has produced experience, in the handling of marital relationships, that suggests a natural psychosocial evolution important to a legitimate and realistic effort at reconstruction of such a relationship. This provides a natural groundwork for a positive effort at working out the relationship on a nonfault level with understanding.

It is also the wife who usually agrees to try some kind of professional counseling service. The husband usually says "yes" to this, but it is the wife who acts first (that's probably the husband's problem—dependency problem) and he'll swing in if mama leads the way. She has more empathy for psychological emotional aspects of life somehow—probably through female intuition—she's closer to it—a better understanding of this. Usually the wife comes in. If the husband notes any kind of change, through insight in the woman, he trails in after her.

Another point: After the wife gets the attention she wants for her feelings from a substitute husband for a period (for example, a counselor who understands feelings, who can give her support) she can approach her husband more realistically and give him support: give him advantage of the insights and usually he becomes curious. It is difficult for him to initiate an appointment; seeking help is unflattering to the male ego in our culture. They would rather flunk or just kind of disappear than to be sought out and pinpointed as a child inadequate in the marriage situation. It is more manly to play games at maintaining a stiff upper lip. However, actually the man is dependent and usually sighs with relief when he can actually admit this out in the open before a counselor not in authority. He usually follows in counseling, after observing the spontaneous relief feelings of the wife, and when encouraged by some other professional authority figure who he can take confidence in, and who understands his feelings of helplessness.

C. *Approximations to These Criteria*

1. *Domestic Relations Court, Toledo, Ohio*

The court that comes closest to approaching the true family court on all three counts is the domestic relations court of Toledo, Ohio. The court has for some years been under the leadership of Judge Paul Alexander. A study of the court conducted by Maxine Virtue in 1953⁴⁰ indicated that the court's outstanding characteristics were a structure combining jurisdiction over juvenile, divorce, and domestic-criminal cases; a specialist judge with skills developed through study and long-term contact with domestic re-

⁴⁰ Virtue, Maxine, *Family Cases in Court* 182-201 (Duke University Press, 1956).

lations cases; and a staff trained in nonlegal professional skills valuable in diagnosing personal problems and in supervising the carrying out of the court's plan. The personnel of the staff included, in 1953, one child support referee, two intake interviewers, four boys' referees, eight boys' counselors, one girl's referee, four girls' counselors, one home finder, five marriage counselors, one service administrator, and three divorce investigators. Of these persons, one was a lawyer and one a law student, eight had masters' degrees in social work, social service administration, or a similar field; three had masters' degrees in psychology; four had masters' degrees in education; five have taken some graduate work in the social work field; all but two have A.B. degrees and two have Ph.D. degrees.

A 1951 law required investigations by the staff in all divorce cases involving children under 14. The staff reports that in many of these investigations it finds prior information about the parties in its own files, gathered at the time of investigations under its juvenile jurisdiction. Although the law makes no special provision for conciliation in divorce cases, the court has five marriage counselors who work with couples before and after the divorce as well as during the court proceedings. Maxine Virtue made these observations about the conciliation activities of the court in her book, *Family Cases in Court* (1953):

"With respect to the objectives of the entire department, it is said that if the marriage is viable, it is the job of the court, through any available personnel, to give the parties what help they need and the court can give, or if possible to transfer the couple to another agency for help in the marital relationship or in the parent-child relationship.

"If the marriage is dead, then it is the goal of the department to aid the litigants to respond as mature adults to the difficult experience of the divorce. If the department, by relieving tensions or offering comfort or interpretation, can enable the litigants to respond less hysterically or vindictively and more reasonably to the experience of divorce, the legal positions can be more intelligently and constructively analyzed by the judge and attorneys, and the court may more easily develop final orders which will operate to the best interests of all parties involved."⁴¹

Once we turn from the Ohio court to other courts, the term "family court" cannot strictly be applied. Judge Alexander pointed out in 1958 that "quite a number of courts calling themselves family courts and domestic relations courts do not have as extensive a jurisdiction as outlined above. With a few exceptions, they are juvenile courts enlarged to apply social service principles to other family members and matters. The most conspicuous omission from their jurisdiction is divorce, which, next to juvenile delinquency, presents the greatest challenge to the integrated

⁴¹ *Id.*, at 192-193.

court.⁴² We should notice developments, however, in several states: New York, Pennsylvania, Wisconsin, Texas, and the marriage counseling experiments in Washington and Utah.

2. *New York Family Court Act of 1962*

The New York Family Court Act of 1962⁴³ was based on studies undertaken in 1953 by the Tweed Commission, and continued in 1958 by the judicial conference. The judicial conference recommended the establishment of a statewide family court. Although the court was not given the power to grant divorces, annulments, or marital separations (these powers remaining in the supreme court—New York's lower court of record), the family court was to have jurisdiction over the following classes of cases:

- (1) The protection, treatment, correction and commitment of children who are in need of the exercise of the authority of the court because of the circumstance of neglect;
- (2) The custody of minors in all cases except actions for divorce, marital separation, annulment, and also excepting habeas corpus actions;
- (3) Adoption;
- (4) Support of all dependents, except for support incidental to actions for divorce, marital separation, and annulment;
- (5) Paternity suits,
- (6) Conciliation of spouses;
- (7) Guardianship; and
- (8) Crimes and offenses, except felonies, against or by children or between spouses, or between parent and child, or between members of the same family or household.

In addition to these specified areas of jurisdiction, the family court has jurisdiction to determine certain matters that may be referred to it by the supreme court (the trial court). These matters are:

- (1) Habeas corpus proceedings for determining custody of children; and
- (2) The granting, enforcing and modifying of orders relating to child custody and support in actions for divorce, marital separation, or annulment.

It will be seen that jurisdictionally the New York family court is more than a mere juvenile court, although it exercises full jurisdiction over all juvenile matters. It is not a true family court, however, because it lacks jurisdiction over divorce and, except where special referrals are made by the supreme court, it lacks jurisdiction over child custody and child support matters relative to divorce actions. Judges will be appointed for 10-year terms. The court is provided with a probation service in each county, and it has power to require persons within its jurisdic-

⁴² Alexander, *supra* note 2, at 602.

⁴³ See generally, *Symposium on the New York Family Court Act of 1962*, 12 Buffalo L. Rev. 409 (1962-63).

tion and parents of children who come before it to be examined by a physician, a psychiatrist, or a psychologist if such examinations would be useful. The probation service, in addition to its normal juvenile work, is authorized to confer with spouses in divorce cases with a view toward conciliation. The conciliation proceedings are not compulsory, and the aims of this part of the new act are simply to promote a conciliation conference under the auspices of the court and to encourage the parties to consult with appropriate voluntary social or religious agencies. Another duty of the probation service is to act for the court in securing data in adoption cases. The probation service is again called upon to investigate custody cases for the court.

3. *Proposed Pennsylvania Divorce Code*

The proposed Pennsylvania Divorce Code⁴⁴ was drafted by the subcommittee on domestic relations of the Advisory Committee to the Joint State Government Commission. Professor Henry H. Foster, now of New York University, acted as reporter. Parts of the proposed code were separated from the completed draft and enacted separately in 1959. The entire draft is expected to be submitted to the Legislature in 1965. Professor Foster says of the proposed code that it does not establish a true family court. He points out that "there is no complete integration of family matters under the jurisdiction of one court, and no special courts are created. Instead, the proposed codes establish the framework for a possible family court type staff on a local option basis, and various devices are employed to promote the social philosophy of family courts. These somewhat limited objectives were impelled by a realistic appraisal of the local court structure, the willingness of the public to support reforms, and the attitudes of bench, bar, and the legislature." The Pennsylvania courts, in contrast to the New York courts, will have jurisdiction over divorce, annulment, custody, support, maintenance, property settlement, and related matters, but no jurisdiction over juvenile matters. Thus the Pennsylvania courts will not have an established probation staff to aid them in carrying on investigations and conciliation work. The proposed code, therefore, creates a "domestic relations division" for each county, but leaves the number of probation officers to be added to the staff up to the particular county.

The proposed code makes provision for attempts at reconciliation and marriage counseling. It describes the functions of probation officers to include consultation and referral, and marriage counseling. The court may require conferences if there are children under 14, as in Ohio, and it may grant conferences in cases where there are no children. Parties are required to provide such information as is requested by the probation officers and to meet with them or with counselors of their own choice, in order to determine whether a reconciliation is practicable. Before the court can grant a divorce, it is required to find that "attempts at reconciliation would be impracticable or futile and not to the

⁴⁴ Foster, *Spadework for a Model Divorce Code*, 1 J. of Family Law 11 (1961).

best interests of the family." If the court finds that attempts at a reconciliation are practicable, it may delay the divorce proceedings up to 6 months if there are children under 14, and up to 60 days where there are no children. If at the end of the delayed period no reconciliation has been achieved, the court must grant the divorce.

The Pennsylvania proposed divorce code also recommends substantive reforms in the law of divorce. Thus, it adds a new ground, called by Professor Foster, an "honest ground" for divorce,⁴⁵ under which the court must find that "disruption of the marriage is irreparable and that attempts at reconciliation would be impractical or futile and not to the best interests of the family." If the court so finds, and where there has been a "living apart for continuous period of two years because of estrangement due to marital difficulties" the court may grant a divorce without proof of guilt or fault.

4. *Family Code of Wisconsin, 1960*

The Family Code of Wisconsin became law in 1960.⁴⁶ Like the proposed Pennsylvania code, its "family court branch" has jurisdiction over marriage, annulment, divorce, legal separation, and support but no jurisdiction over juvenile matters. Nor does it have jurisdiction over adoption or assault cases involving husbands and wives. Thus its jurisdiction is much more restricted than that of the true family court. But Wisconsin departs in another major way from the family court philosophy: Its rejection of the specialized staff supporting the court in favor of traditional legal skills. The Wisconsin act creates a "family court commissioner" who must be "some reputable attorney, of recognized ability and standing at the bar." No requirements are imposed to insure special ability or skill in family law problems. The commissioner is required in every case to "cause an effort to be made to effect a reconciliation between the parties." The statute also establishes a department of family conciliation, under the direction of a director of family conciliation who has a staff of "men and women investigators" to assist him.

5. *Texas, 1949*

In 1949 legislation was passed in Texas⁴⁷ which in effect turned the juvenile courts of the larger counties into family courts. The combined courts had jurisdiction in all children's cases, including adoption and custody, desertion and support, and divorces involving children. The Dallas court by 1953 had employed three divorce custody investigators and one divorce counselor. The judge is assigned for an indeterminate period.

6. *Washington Family Court of Conciliation, 1949*

Several states have experimented with marriage counseling services attached to the divorce courts without attempting to deal

⁴⁵ Foster, *An "honest ground" for divorce in Pennsylvania*, 34 *Pennsylvania Bar Association Quarterly* 646 (1963).

⁴⁶ Foster, *supra* note 7.

⁴⁷ Chute, *Divorce and the Family Court*, 18 *Law and Contemporary Problems* (full issue on *Divorce*) 49 (1953).

with juvenile cases or even to extend their social work staff into the areas of child custody or adoption. Thus, in 1949, the State of Washington created the family court of conciliation as a branch of the superior court.⁴⁸ The act covers controversies between spouses having minor children and includes controversies arising prior to, during, or after divorce, annulment, or separate maintenance. The counseling service may also be used by spouses who do not have children if the case load is not too great. The director of the King County court reports that chances for conciliation are greater before the divorce action has been filed. Reference is voluntary, and cases are retained by the conciliation court for a minimum period of 30 days. If conciliation appears impossible, the case is sent back to the divorce court. Information gathered by the staff is not revealed to the divorce judge, and all proceedings are strictly confidential.

7. *Utah Marriage Counseling Law, 1957*

A similar attempt to the Washington experiment was tried and rejected in Utah.⁴⁹ A marriage counseling law was enacted in that state in 1957 and repealed in 1961. Domestic relations counselors were chosen by the State Department of Public Welfare and attached to the district courts. The counselors were to interview and counsel the parties in divorce actions upon request of either party and in all cases where minor children were involved, if so directed by the court. The counselors were also available before a divorce complaint was filed if requested by the spouses in writing. The staff thus handled both court and noncourt cases. The counselors also investigated in custody and support cases. Several problems beset the Utah experiment. For one thing, no adequate screening procedure was established, with the result that appointments were greatly delayed to the annoyance of the parties and their counsel. Another problem was that the counselors came to the same conclusion found in Washington, namely, that success in achieving reconciliations was much greater in noncourt cases. The final statistics from the entire operation showed that the staff had a 9 percent record of reconciliation in cases referred by the court and a 44 percent record in cases where the referrals were voluntary or through attorneys, doctors, and churches. The overall rate was 19.4 percent. The experiment was marked throughout by misunderstanding on the part of professionals on both sides of the professional skills and goals of each. The judges did not choose the social workers on their staffs, and did not feel in control of the situation. The social workers, for their part, did not understand the demands of legal procedure, and were understandably impatient with the judges' attempt to "talk moral sense" to the parties. Brigitte Bodenheimer, commenting on the experiment in the *Utah Law Review* in 1961, pointed out that there are several lessons to be learned from Utah's efforts. The major lesson, she feels, is that

⁴⁸ Ralls, *The King County Family Court*, 28 Washington L. Rev. 22 (1953).

⁴⁹ Bodenheimer, *The Utah Marriage Counseling Experiment: An Account of Changes in Divorce Law and Procedure*, 7 Utah L. Rev. 443 (1961).

"A new approach to family litigation cannot be imposed on an unprepared and unwilling judiciary. The statutory scheme remains meaningless and empty unless filled with life and spirit by a judge who assumes leadership. The judge must determine how to build the contributions which other professions can offer into the judicial process. The other professions can be of service, but they cannot decide how justice is to be administered in the courts."⁵⁰

She adds that "needless to say, the relationship between (the judge and his aides) must be one of trust and respect for the professional competence of the assistant, coupled with a recognition on both sides of the value the law as well as the other social sciences have in the solution of family problems."⁵¹

8. *California: Children's Court of Conciliation*

There is no true family court now in existence in California. The children's court of conciliation in Los Angeles⁵² has established a conciliation service for spouses who voluntarily use the services of the court. It is quite similar to the court in Washington and to the Utah experiment. Similar courts are presently in operation or are beginning to operate in Sacramento, San Diego, San Mateo, San Bernardino, Imperial and Alameda Counties.⁵³ The conciliation service is an important adjunct to an integrated family court, as has been seen.

However, the problems of the family involve the problems of child custody and visitation after the divorce has been granted, as well as problems of continuing therapeutic help for the divorced couple.

D. *Report of San Francisco Bar Association Committee on Family Law, 1962*

In its report in 1962, the San Francisco Bar Association Committee on Family Law proposed the adoption in San Francisco of a modified family court. The following are three paragraphs of its proposal:

"By family court we mean a court with its own staff of judges, marital counselors, social workers, investigators, psychologists, and psychiatrists who handle all family cases.

"Our committee feels such a family court is greatly superior to the present structures in San Francisco, where preliminary, modifying, and enforcement orders are handled in one department, but all other contested and uncontested matters are handled by the other departments.

"Although family courts throughout the United States usually include the juvenile court, we feel that to begin with, in San Francisco, the juvenile court should not be a part of such family court. We think the initial, more feasible approach would be a family court handling all divorce, separate maintenance, annulment, support, custody, visitation, enforcement, and paternity cases. Such court would, however, cooperate closely with the existing juvenile court."

⁵⁰ *Id.*, at 472.

⁵¹ *Ibid.*

⁵² Pfaff, *The Children's Court of Conciliation* (Pamphlet, Los Angeles Superior Court).

⁵³ Pfaff, *Testimony Before California Assembly Interim Judiciary Committee*, Los Angeles, California, January 8-9, 1964.

The report includes a recommendation that "marital counseling services for families in domestic difficulties should be made available . . . not only after divorce is filed, but also earlier when problems arise." The report goes on to recommend that the counseling service be attached to the domestic relations commissioner's office, in order to insure greater direct control and consistency. The report also asks for reliable, adequate investigative services to be attached to the court and be made available "in all cases where children are involved."

E. National Support

The movement for family courts has not been limited to the states. The children's bureau has for some time shown great interest in and support for the establishment of family courts. In 1960, the bureau published a pamphlet called "*Family Courts—An Urgent Need.*" And in 1957, William Sheridan and Edgar Brewer, of the children's bureau published an article on the family court.⁵⁴ The last two paragraphs of their article summarize in pointed terms the problems to be faced by those who advocate family courts as well as the gains to be achieved if the hurdles standing in the way of this much-needed reform can be achieved. They say:

"Pressing legal and social reasons call for the establishment of family courts. The legal arise from the need for a more effective judicial organization for the administration of justice in relation to interpersonal family problems. The social grow out of society's concern for the protection of children and family life and recognition of the need to use the scientific knowledge and skills available to accomplish these objectives.

"It seems doubtful whether much progress will be made until the various professional persons involved—judges, social workers, attorneys, doctors, and others—more carefully think through the issues and problems involved, some of which were presented in this article. In moving toward the establishment of a family court, it is important for a community to give careful thought not only to immediate problems, but also to long-range objectives, including the development of the broad, comprehensive, and coordinated community programs which are necessary to strengthen family life and thus to solve at least in part, the serious problem which divorce presents in our society."⁵⁵

VI. FINDINGS AND RECOMMENDATIONS

The committee did not conclude its study on this subject and hence has recommended continuance for further study.

Part 4

INTEGRATED PROPERTY SETTLEMENT AGREEMENTS *

I. HISTORICAL DEVELOPMENT OF THE INTEGRATED PROPERTY SETTLEMENT

A. General Introduction

Public policy in California favors agreements between spouses that attempt to settle property disputes amicably. In *Hill v. Hill*, 23 Cal. 2d 82 (1943), the court stated:

“ . . . public policy does not discourage divorce where the relations between husband and wife are such that the legitimate objects of matrimony have been utterly destroyed. . . . In the absence of fraud, collusion or imposition upon the court, public policy does not prevent parties who have separated from entering into a contract disposing of their property rights which shall become effective only in the event one of the parties obtains a divorce, even though such a contract may be a factor in persuading a party who has a good cause for divorce to proceed to establish it.”

In the *Hill* case the parties were separated on a permanent basis; there appeared to be no prospect of reconciliation; and a ground for divorce existed. Under these circumstances, the court held that the agreement was not void even though the agreement itself might be a factor in persuading the party having a cause of action for divorce to establish her action.

Given the encouragement of the *Hill* case, the parties began negotiating property settlement agreements. The first major case in the long line of cases establishing the concept of the integrated property settlement followed within a few years.

B. Integrated Property Agreements: The Case Law

Of all the Supreme Court cases dealing with the integrated property settlement agreement, the first two stand out by establishing the underlying pattern that was followed by the rest. The first case to be noticed is *Adams v. Adams*, 29 Cal. 2d 621 (1947).

In the *Adams* case the parties executed an agreement after their separation. The agreement contained the following important provisions:

- (a) The wife received the major share of the community property;
- (b) In exchange for her share of the community property; waived all support rights after eighteen months; and
- (c) The parties stated that they intended to settle all their rights against each other in the agreement.

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its Hearing on Domestic Relations at the California State Bar Convention in Santa Monica September 30, 1964.

The wife then brought suit for divorce on the ground of mental cruelty. The trial court refused to approve the waiver of support and advised defendant's counsel to stipulate to an order that the support would continue indefinitely, until further order of the court. The defendant refused to stipulate to this change; plaintiff filed an amended complaint in line with the court's wishes; and the court in granting the divorce ordered that the support payments should continue until further order of the court. The defendant appealed, urging that the agreement should have been approved by the court as written in the absence of a finding that it was inequitable or had been procured by fraud. The Supreme Court, agreeing with defendant, modified the judgment to conform to the property settlement agreement and affirmed the judgment as modified.

In its opinion the Supreme Court set forth a three-part division of property settlement agreements, stating the limits of the trial court's power over each type of agreement. The categories there established are:

- (1) Agreements in which the support provisions are in the nature of alimony and severable from the division of community property. The trial court may modify the support provisions if the agreement is presented to it for approval. If the agreement is merged into the judgment, the court may modify the payments after the divorce under its general power over alimony.
- (2) Agreements in which the support provisions are in lieu of a division of the community property. These agreements may not be modified by the court since they represent a contract between the parties dealing with their property rights. But the court may add an alimony provision to the agreement since the parties have not contracted with respect to alimony themselves.
- (3) Agreements in which the support provisions represent both a division of the community property and alimony and in which the parties have made the amount of the payments in consideration for their agreement. The court's language is as follows: "The third category includes contracts in which the wife waives all support and maintenance, or all support and maintenance except as provided in the agreement, in consideration of receiving a more favorable division of the community property." The trial court's power over this type of agreement, which has come to be known as an integrated agreement, is limited to approving or disapproving its terms. If it approves the agreement, it may not add an alimony provision since that would change the agreement arrived at by the parties. The *Adams* agreement was found to be integrated; therefore the court could not add an alimony provision as it tried to do.

Two points bear noticing about this case. First, the case did not involve a question of modification of the support payments after divorce. It presented instead the question of the trial court's power to add an alimony provision to an integrated agreement. Second, although the facts of the case presented the situation where the wife had taken a larger share of the community property in exchange for smaller alimony payments, the reasoning of the case extends to the converse situation

where the wife takes a large alimony settlement in exchange for giving her husband the larger part of the community property.

The second leading case to be noticed is *Dexter v. Dexter*, 42 Cal 2d 36 (1954). This case differed from *Adams* in that the parties had divided the community property equally between them. The agreement provided for monthly payments of \$150 for the support of the wife, son and adult daughter. The following clauses were included: (a) the parties stated that they desired to divide the community property and to provide for support "by friendly agreement" instead of by resort to the court; (b) the parties stated that they intended to finally settle all their rights against each other in the agreement and promised to release each other from all obligations except as provided in the agreement.

Several years later, the wife petitioned to modify the agreement by increasing the support payments to \$800 per month. The trial court held that it lacked jurisdiction to modify the agreement, and the Supreme Court affirmed.

The agreement was held to be integrated, relying on the clauses specified. Two arguments were put forth by the wife to the effect that the agreement was not integrated. Both were held not controlling by the court. The first argument was that the community property had been divided equally. The court, however, pointed out that since the wife had gotten the divorce on the ground of mental cruelty she could have been awarded all the community property by the court and perhaps been given less alimony than the agreement provided. The wife was entitled, said the court, to trade a lesser part of the community property for the security of payments that could not be reduced. Moreover, the parties may not have been certain how the trial court would characterize their property; and they were entitled to make a bargain that saved from chance that characterization.

The second argument made by the wife was that the monthly payments were called alimony in the agreement and shared two characteristics of alimony: They were to terminate on her death or remarriage. The court pointed out that in an integrated agreement the payments share both the characteristics of alimony and a property division; they have a dual character. The presence of alimony characteristics was to be expected and was not controlling.

Since the agreement had been an integrated one, the payments represented an agreement of the parties that could not be modified by the court without changing the bargain struck by the parties.

The principles set forth in *Adams* and *Dexter* were sharpened and refined in the cases that followed, but the underlying pattern remained constant. Thus, in *Flynn v. Flynn*, 42 Cal. 2d 55 (1954), it became clear that a provision inserted in the agreement permitting modification of the monthly payments if the husband's salary fell below a stated figure did not mean the agreement was not integrated. It merely meant that the parties had consented to a modification under certain conditions which had to be respected by the trial court. In *Messenger v. Messenger*, 46 Cal. 2d 619 (1956), the court pointed out that in determining whether the property and alimony provisions were in consideration for each other, the court must look to the value placed on their assets by the parties, not the value established by the trial court at the time of a

modification hearing. It was the intent of the parties as expressed in their agreement which was controlling on the issue of integration versus nonintegration.

Finally, by the time of *Plumer v. Plumer*, 48 Cal. 2d 820 (1957), the court had reduced the holdings of its prior cases to a single sentence. The court stated:

"An agreement providing that the purpose of the parties is to reach a final settlement of their rights and duties with respect to both property and support, that they intend each provision to be in consideration for each of the other provisions, and that they waive all rights arising out of the marital relationship except those expressly set out in the agreement, will be deemed conclusive evidence that the parties intended an integrated agreement."

The court went on to point out that even in the absence of one or more of the foregoing provisions other evidence may exist indicating that an integrated agreement was intended. The court said:

"Thus, the parties may be uncertain as to the value or legal ownership of property. They may be uncertain which of them is entitled to a divorce and on what grounds and therefore uncertain as to their legal rights with respect to support and division of property. An agreement for a specific division of property and specified support payments settling such uncertainties is integrated in the absence of convincing proof that the parties intended it to be severable."

After the *Plumer* case, the question for counsel was not how to draft an integrated agreement, but how to draft any other kind of agreement. The court had arrived at an agreement that, if carefully negotiated, offered security for the wife and predictability for the husband. She had payments that could never be reduced and that could be enforced, if the agreement had been merged into the judgment, as a judgment is enforced: by civil contempt. The husband could plan his affairs, including a new family, in the knowledge that the payments could not be increased.

The court had, however, made two significant concessions along the way. The first, in *Hough v. Hough*, 26 Cal. 2d 605 (1945), was that the agreement, if merged into the judgment, lost its standing as a separate contract and became a part of the judgment. This meant that the normal contractual enforcement remedies were lost. Since contempt enforcement was available for the judgment, however, the contract action may have seemed a small loss. The second concession came in *Messenger v. Messenger*, a case which has already been noticed. In that case, the court held that the 1951 amendment to Civil Code Section 139 providing that orders made under that section "may be enforced by the court by execution or by such other order or orders as in its discretion it may from time to time deem necessary" meant that execution itself was available only in the discretion of the court. In *Messenger* the trial court had denied execution against the husband, a doctor, because it felt the use of execution might impair or damage the doctor's practice and make it harder for him to meet the payments. Thus, if

the agreement was merged into the judgment, contract remedies were not available under *Hough* and execution was available only in the discretion of the court. But contempt was still available in a proper case.

In *Bradley v. Superior Court*, 48 Cal. 2d 509 (1957), however, the contempt enforcement of the integrated agreement became unavailable. In that case, a majority of the court held that if the agreement was integrated, so that the monthly payments were "contractual and negotiated" instead of "marital and law-imposed" then the use of contempt to enforce their payment would violate the provisions of the California Constitution against imprisonment for debt. Mr. Justice (now Chief Justice) Traynor dissented, pointing out (correctly in the view of many) that the division of marital property was so closely akin to marital support that both types of payments, united in the integrated agreement payment, should share the exemption from the debt clause.

Matters grew worse. It is now, happily, of historical interest only that the court next held (again over Justice Traynor's dissent) that child support payments in an integrated agreement also could not be enforced by the contempt powers of the trial court. This legislation, by amendment to Civil Code Section 139 in 1959, changed the ill-starred decision in *Plumer v. Superior Court*, 50 Cal. 2d 631 (1958). But in *Hull v. Superior Court*, 54 Cal. 2d 139 (1960) the court held that a husband who was not making the payments required by an integrated agreement could not be spurred on to comply by having the trial court delay entry of the final decree of divorce. While the *Hull* decision is not generally considered to be wrong, since a dead marriage should not be kept alive merely to collect support, the case illustrates the predicament faced by wives after *Bradley* and *Plumer*. The *Hull* case also stated, in apparent contradiction of the earlier *Hough* case, that the wife could enforce the agreement by normal contract remedies.

The final spectre is the possibility that payments under an integrated agreement will be held to be dischargeable in bankruptcy. If *Bradley* is adhered to, and the court shows no signs of abandoning it, then the "contractual and negotiated" payments to the integrated agreement may well be held to be a debt dischargeable in bankruptcy.

C. Legislative Actions

In 1961, the Legislature amended Civil Code Section 139 to read:

"That portion of the decree or judgment making any such allowance, and the order or orders of the court to enforce the same, including any order for support of children, *or order for support of the other party*, based on a provision for such support in an integrated property settlement agreement, may be modified or revoked at any time at the discretion of the court except as to any amount that may have accrued prior to the order of modification or revocation. *This paragraph shall not be construed to render an integrated property settlement modifiable when there are no minor children of the parties to the agreement.*"

What did this amendment, which was removed in 1963, mean? No appellate case has as yet construed its terms, so only professional opinions are available. A substantial segment of that professional

opinion feels that the amendment seems to mean that integrated property settlement agreements as they have been understood in California, cannot be executed by parties who have minor children; or, if executed that the agreements will not be treated as integrated agreements by the courts. The last sentence seems clearly to exempt childless couples from its provisions; but what of persons who had minor children at the time they executed their agreement and who seek modification of the agreement after the children reach their majority? Or what of persons whose children have reached majority but remain dependent upon the parents for support either because of physical or mental incapacity? The amendment does not answer these questions. The policy of permitting modifiability, and so hopefully contempt enforcement, of agreements entered into during the minority of children seems clear. But there are many peripheral questions that are not answered by the amendment.

II. PRACTICAL HAZARDS AND IMPLICATIONS OF CURRENT SITUATION

A. *General Introduction*

It is necessary to discuss some of the practical aspects in the application of California law to property settlement agreements in order that you may know what situations create the need for new legislation. It is also desirable to know what portions of our law are working well so as to know what not to change.

One situation which exists in the California law is an uncertainty on the part of the practitioner as to whether he has an integrated or a severable property settlement agreement. To clarify this statement we must define the two basic types of agreement. An integrated agreement is one in which the division of the property and the setting of support are so closely linked as to be inseparable. As a practical matter, this encompasses a great many property settlement agreements drafted by counsel. The very process of drafting one of these agreements involves a certain amount of horse trading back and forth. For example, one attorney may indicate: "We will give you less alimony if the wife gets the house." It could be argued that every situation in which horse trading goes on involves an integrated property settlement agreement. The courts have sometimes hinted that this results. But the courts do continue to construe agreements as being both integrated and severable agreements under the law and so they have obviously recognized the severable agreement as a continuing entity.

A severable agreement has a negative definition. It is an agreement which deals with property and support and which is not integrated.

B. *Judicial Construction of Marital Settlement Agreements*

When the courts construe a marital settlement agreement, they cannot inquire into the basic state of mind of the party at the time they drafted the agreement. Neither can they go back and reconstruct the course of negotiations. To do so would be to open the floodgates of memory, but memory distorted by self interest. So the courts look at the text of the agreement and try to determine whether the parties intended an integrated agreement or a severable agreement. Several guidelines of construction have developed over the years to determine

whether the agreement is integrated or severable. The courts will look to three causes in the agreement—the finality clause, the consideration clause, and the waiver clause.

First, consider the finality clause. This clause indicates that the agreement is final and takes care of all the rights of the parties. If the court finds that this clause is final as to all aspects of the parties' relationship, including alimony, then they find that the agreement is integrated. The reasoning is that the parties intended a complete and final settlement as to every aspect of their relationship, including alimony. They further reason that any possibility of the modification of alimony must have been traded off against other considerations, such as a larger division of property. On the other hand, if alimony is left flexible and subject to future adjustment, the courts reason that the parties did not contemplate a final disposition of all rights. Therefore, changes in alimony have not been bargained away for a more substantial division of property. Therefore, the agreement is severable.

The next clause which the courts look to is the consideration clause. This clause is particularly revealing. A clear-cut consideration of the clause would provide that the setting of the support payments was made in consideration of the division of property under the agreement. Such a clear-cut clause would be a strong aid in establishing the intention of the parties to create an integrated agreement. On the other hand, an absence of such a clause might lead the courts to the conclusion that the parties intended a severable agreement.

Finally, the courts look to the waiver clause which is generally found in marital settlement agreements. If the agreement provides that the parties waive all future rights, except as set forth in the agreement, the courts take this as an indication of intention that the agreement is integrated. If, on the other hand, the agreement waives all rights except that it reserves the right to future modification of support, this is an indication that the agreement is severable.

C. Sources of Uncertainty

Uncertainty arises as to whether an agreement is integrated or severable for two reasons. First, lawyers often neglect to state in the agreement whether they want an integrated or severable agreement. Secondly, though the courts use the three criteria described above, they refuse to be bound by any rigid formulas. For example, the absence of the consideration clause, which is the best indicator of an integrated agreement, will not automatically lead the court to conclude that the agreement is severable. The court may go on to find an intent to draw an integrated agreement even in the absence of such a clause. The court has constantly stated that its only absolute guide is the intention of the parties. And on occasion the court has found an intent to draw an integrated agreement by the very fact that the parties traded off an income-producing asset for a support provision. In *Di Marco v. Di Marco* (1963) 33 Cal. Repr. 610, the court found that the fact that the husband had retained the business, which was the only income-producing asset in exchange for a broad support provision, was evidence that the agreement was integrated.

D. Consequences of Integrated or Severable Agreements

1. Modification

Depending on whether the attorneys have drafted an integrated or a severable property settlement agreement, certain legal results will follow. One such result is that a provision for alimony, when found in an integrated agreement, will not be modifiable unless the agreement states that alimony is modifiable. The danger, of course, is that the attorney will draft an integrated agreement but overlook the need to make alimony modifiable. The case of *Di Marco v. Di Marco*, *supra*, is an excellent illustration of the kind of problem that can arise. An integrated agreement was drafted, apparently without conscious knowledge of the attorney for the husband. The agreement contained a provision that alimony would be revised upward automatically each time the husband's income increased. The husband's income rose, but in the meantime he had acquired a whole new family, including a new wife and three children. The court of appeals tried to relieve him of the automatic upward escalation in the alimony by determining that the agreement was severable, and therefore that alimony was modifiable. The California Supreme Court disagreed, found the agreement integrated, and found that alimony could not be modified.

The same problem is not present with regard to child support. Since the 1959 amendment to Civil Code Section 139, child support is always modifiable, and this regardless of any intent by the parties to make it nonmodifiable.

2. Contempt Enforcement

Perhaps the most serious consequence of drafting an integrated agreement is the loss of the contempt remedy. To state the matter as simply as possible, support orders arising out of an integrated agreement are deemed contractual. Being contractual, they are in the nature of debt. Article I of the Constitution of the State of California forbids imprisonment for debt. Since the court's contempt remedy is enforceable by imprisonment, it cannot be available where a debt is involved. Thus the contempt remedy is lost where it arises out of an integrated agreement. Much to the surprise of many practitioners, the contempt remedy is lost not only as to alimony but as to child support. *Bradley v. Superior Court* (1957) 48 C.2d 599. Where a husband of limited means is involved, and this is in most of the cases, contempt is the only effective remedy. The remedy of execution is relatively useless where the husband has nothing but a small salary. Thus, in losing the contempt remedy, the court may lose the only effective remedy against a nonsupporting husband or father.

3. Bankruptcy Discharge

Another problem which may arise is the possibility of discharging both alimony and child support obligations in bankruptcy, where these payments arise out of an integrated property settlement agreement. Support payments, such as alimony and child support, are not dischargeable under the bankruptcy rules.

But payments which arise out of an integrated agreement stand on different ground. This is because support payments arising out of an integrated agreement are a "debt" and debts are dischargeable in bankruptcy. It is clear that back alimony is dischargeable. Whether bankruptcy discharges the entire alimony obligation, including the obligation to pay future alimony, is open to question. The right to discharge child support obligations is also unclear. A strong public policy argument can be made against discharging child support payments in a bankruptcy proceeding. Child support payments are always modifiable under Civil Code Section 139. The power to fix these payments is reserved to the courts, regardless of the intention of the parties and notwithstanding the fact that the payments are embodied in an integrated property settlement agreement.

Thus, it can be argued, that these payments are law-imposed rather than contractual, even when they are found in an integrated agreement. While decisions are not available on the subject, it is likely that this is the probable line decision.

4. *Execution and Exemption*

A remedy available to the husband to fend off alimony and child support obligations may arise where the husband has acquired a whole new set of family obligations. Thus, where the husband marries again and has a new family, he may fend off an execution against his salary by filing a claim for exemption under Code of Civil Procedure Section 690.11. Under this section, the salary of a breadwinner may be exempted from execution if the debt with which he is charged has not been incurred for the common necessities of life. While relief afforded by this section does not apply to alimony, it would be available against a contractual indebtedness. It may be argued that the section is applicable here. Whether an earlier alimony or child support obligation is an obligation for the common necessities of life may constitute a question of fact in any given instance.

Another interesting situation, which may apply to either integrated or severable agreements, arises out of the discretionary power of the court to either grant or withhold execution in divorce actions. In 1951, Section 139 of the Civil Code was amended to provide that the court *may* enforce its support order by a writ of execution. In the case of *Messenger v. Messenger* (1956) 46 C.2d 61, 630, it was held that the trial court had discretion to determine in each case whether execution is an appropriate remedy for enforcing its order. In the case of *Tobin v. Tobin*, 181 C.A.2d 789 (1960), it was held that the court retain its jurisdiction to issue a writ of execution or appoint a receiver regardless of whether the agreement is integrated or severable. The husband, in a distress situation, presently may ask the court to exercise its discretion in his favor and withhold the remedy of execution.

While the areas discussed are only some of the problems arising out of integrated and severable agreements, they represent some important background areas which must be considered by the Legislature when evaluating proposals for remedial legislation.

III. PROPOSALS FOR REMEDIAL LEGISLATION

A. General Introduction

The concept of integrated agreements and the myriad problems of negotiation, drafting, bargaining, and enforcement reflect clearly the present adversary nature of the divorce laws. To the extent that the Legislature deals with these problems it is dealing only in legal procedures and not with the grave social problems that are inherent in every marital disturbance. This is but a part of the Assembly's overall study of the real reasons that disturb the delicate relationship between husband and wife and parent and child. It is the hope of those conducting the study that at its conclusion the law will be able to deal with basic solutions to family problems and stop concerning itself merely with improving procedures or dealing superficially with the symptoms of basic marital and family discord.

B. Jurisprudential Query

On rereading *Adams v. Adams*, 29 Cal.2d 621 (1947); *Dexter v. Dexter*, 42 Cal.2d 36 (1954); *Fox v. Fox*, 42 Cal.2d 49 (1954); *Flynn v. Flynn*, 42 Cal.2d 55 (1954); and the other landmark cases involving integrated property settlement agreements, one is struck by the court's lack of regard for the provisions of the Civil Code. Section 155 provides that a "husband and wife contract toward each other obligations of mutual respect, fidelity and support," and Section 159 provides that "a husband and wife cannot by any contract with each other alter their legal relations except as to property and except that they may agree in writing to an immediate separation and may make provision for the support of either of them and of their children during such separation."

If the parties cannot alter their legal relation and can only contract with each other with reference to property, it is difficult to understand why a court would be bound by the agreement of the parties which alters the support obligations and permits them to be made part and parcel of a property division. However, this puzzlement is entirely academic since Justice Traynor, in *Adams*, stated that "a property settlement agreement . . . that is not tainted by fraud or compulsion or is not in violation of the confidential relationship of the parties is valid and binding on the court." (*Adams*, p. 624.)

C. Conceptual Framework

While there may be little uncertainty in the law as to what constitutes an integrated property settlement agreement, questions may be raised of the social desirability of such agreements. The solutions proposed to several of the problems raised by integrated property settlement agreements are grounded on the following premises:

1. Any support order contained in a divorce decree, whether subject to modification or not, and whether or not reflecting an agreement of the parties, integrated or otherwise, should in all instances be enforceable by contempt.
2. All orders for the support of minor children should be subject to modification by the court at any time regardless of any contract between the parents.

3. All orders for support of a husband or wife should be subject to modification by the court unless the husband and wife have expressly provided otherwise.
4. No obligation for support of a spouse or of a child should be subject to discharge in bankruptcy merely because the order for support reflects or is based on an integrated agreement.

D. Specific Proposals

1. *Ability of court to enforce support orders by contempt.*

Payments for support of a wife or children contained in an integrated property settlement agreement, even though made part of an interlocutory decree under Civil Code Section 139, are not enforceable by contempt because they fall within the constitutional proscription against imprisonment for debt. *Bradley v. Superior Court*, 48 Cal.2d 509 (1957).

The remedy of contempt is not available even though the integrated agreement has been merged in the decree and even though the payments are subject to modification by the express terms of the agreement. *Plumer v. Superior Court*, 50 Cal.2d 631 (1958).

Based on the *Bradley* and *Plumer* cases, one would conclude that no support payments finding their source in an integrated property settlement agreement can be made punishable by contempt short of an amendment to Article I, Section 15, of the California Constitution, to provide an exception to the prohibition against imprisonment for debt in cases of divorce, annulment, separate maintenance, paternity and child support.

Such amendment of the Constitution is the obvious, and probably foolproof, solution to the problem raised by the *Bradley* and *Plumer* cases. However, it does not appear to be a practical solution.

During 1964, a committee of the Conference of the State Bar Delegates considered this problem and concluded that an amendment to Civil Code Section 139 could achieve the socially desirable result of providing contempt as a means of enforcing support obligations. A copy of the report of the committee is attached as Exhibit "A" and contains the proposed amendment to Civil Code Section 139.

This amendment expressly provides that support orders may be enforced by contempt as well as execution and other appropriate orders. It also provides that all agreements for child support and support of either party shall be deemed separate and severable from all provisions of any agreement between the parties relating to property and that when ordered by the court such provisions for support shall be deemed to be law-imposed and made under the power of the court to make such orders and shall not be dependent or based upon any agreement of the parties.

The amendment also spells out that all orders for support of children shall be subject to modification and that all payments for support of either husband or wife shall be subject to modification unless the parties by agreement expressly provide that such orders shall not be subject to modification or revocation by the court.

One cannot predict what the Supreme Court will do to this amendment but, from a practical standpoint, a statutory change of this nature should be tried before resorting to the more difficult solution provided by constitutional amendment.

2. *The court should always have the power to modify payments for support of children.*

Prior to the 1959 amendments to Section 139 of the Civil Code, the law seemed clear that payments for the support of minor children contained in an integrated property settlement agreement could be revised upward but not downward. *Puckett v. Puckett*, 21 Cal.2d 833 at 843 (1943).

As to integrated agreements executed after 1959, Civil Code Section 139 specifically provides that orders for support of children, even though based on a provision contained in an integrated property settlement agreement, may be modified or revoked at the discretion of the court except as to amounts accrued prior to the order of modification or revocation.

The Legislature undoubtedly felt that a constitutional question would arise if the 1959 amendment were given retroactive effect so as to apply to integrated property settlement agreements existing prior to the amendment.

Although Civil Code Section 139 has been amended in 1961 and in 1963, the power of the court to modify child support payments under appropriate circumstances has not been and should not be changed.

3. *Modification of payments for support of wife provided in integrated property settlement agreements.*

The law is clear that payments for the support of a wife contained in an integrated property settlement agreement are not subject to modification even though a decree of divorce approves the agreement, incorporates the same into the decree, and orders compliance therewith. *Dexter v. Dexter*, 42 Cal.2d 36 (1954).

If the parties specifically provide in the agreement that the payments can be modified under certain circumstances, the court has the power to order modification but can do so only in accordance with the conditions set forth in the written agreement. *Fox v. Fox*, 42 Cal.2d 49 (1954).

There is a legitimate difference of opinion as to whether the husband and wife should be free to freeze payments for support or whether a wife in any instance should be free to waive all support by contract.

Without solving the merits of this dispute, there can be little dispute over the proposition that problems of interpretation would be minimized if payments for support contained in an integrated property settlement agreement should be subject to modification unless the parties otherwise specifically and expressly agree in writing.

As pointed out above, the modifiability of the support payments does not solve the enforcement problem because a provision for modification does not change the character of the payments as

being part of an integrated property settlement agreement and therefore contractual. *Plumer v. Plumer*, 48 Cal.2d 820 (1957).

4. *Discharge in bankruptcy of support obligations.*

A discharge in bankruptcy does not discharge liabilities for maintenance or support of a wife or child. (Bankruptcy Act, Sec. 17; 11 U.S.C.A. 35.)

However, in view of the decision in *Bradley v. Superior Court*, 48 Cal.2d 509 (1957), holding that support payments contained in an integrated property settlement are solely contractual, it is possible that support payments provided in an integrated property settlement agreement may be dischargeable in bankruptcy. See *Yarus v. Yarus*, 178 Cal.App.2d 190 (1960); *Smalley v. Smalley*, 176 Cal.App.2d 374 (1959); *Tropp v. Tropp*, 129 Cal. App. 62 (1933); *Remondino v. Remondino*, 41 Cal.App.2d 208 (1940); *Fernandes v. Pitta*, 47 Cal.App.2d 248 (1941).

One would assume that the court has continuing jurisdiction over a minor child and under present law would be able to make a new order for support should a contractual provision be discharged in bankruptcy.

However, the status of the obligation to support a divorced wife is not so clear. If she has waived all statutory right to alimony and has only a contractual obligation to receive periodic payments, the discharge of the contractual obligation will probably not revive the former statutory obligation which she has waived.

To eliminate uncertainty a section could be added to the Civil Code to provide:

"In the event obligations for the support of a spouse and/or child or children contained in an integrated property settlement agreement are discharged in bankruptcy the appropriate court of this state shall thereupon be vested with jurisdiction to make proper orders for the maintenance and support of such spouse and/or child or children, as the court may deem just, having regard for the circumstances of the respective parties."

5. *Miscellaneous problems of enforcement.*

a. *Execution.*

Section 139 of the Civil Code, by 1951 amendment, provides that the court "may" enforce its support orders by execution. The Supreme Court, in *Messenger v. Messenger*, 46 Cal. 2d 619 at 630 (1956), held that the trial court has discretion to determine in each case whether execution is an appropriate remedy for enforcing its orders. In *Tobin v. Tobin*, 181 Cal. App. 2d 789 (1960), it was held that the trial court in its discretion might also appoint a receiver in aid of execution under Civil Code Section 140, even though the support payments are part of an integrated property settlement agreement. No statutory changes seem required to deal with these odd judicial rulings.

b. *Separate action on contract.*

Despite the decision in *Hough v. Hough*, 26 Cal. 2d 605 (1945), holding that the merger of an integrated agreement in a decree results in the decree superseding the contract, the case of *Hull v. Superior Court*, 54 Cal. 2d 139 (1960), indicates that even though the agreement is merged in the decree a separate contract action will still lie. Such result seems illogical but not of legislative concern.

c. *Exemptions.*

It has been assumed that one of the characteristics of a judgment for alimony is that as against such judgment debtor's earnings are not exempt from execution. (*Bruton v. Tearle*, 7 Cal. 2d 48 at 57 (1936).) However, if the husband's obligation to make support payments is purely contractual (*Bradley v. Superior Court, supra*), the exemption of his earnings from attachment or execution under the circumstances described in Code of Civil Procedure Section 690.11 is probably applicable. With the constant increase in the amount of wages which are exempt from execution this problem calls for legislative consideration.

E. Report of California Bar Committee on Modification and Enforcement of Support Orders

The following is the report of the 1963 State Bar Conference Committee:

**REPORT OF COMMITTEE ON 1963 CONFERENCE
RESOLUTIONS NOS. 22, 40 AND 61
(Modification and Enforcement of Support Orders)**

I. SUMMARY OF COMMITTEE'S ACTION

The 1963 conference adopted a resolution referring to Conference Committee Resolutions Nos. 22, 40 and 61, proposing amendments to Civil Code Section 139. The amendments proposed sought to insure that the remedy of contempt would be available to enforce provisions in an interlocutory decree for support of minor children and support of either party even when based on an integrated agreement and whether or not modifiable. The amendments also sought to render modifiable provisions for the support of either party unless the parties agreed in writing that such support provisions were to be nonmodifiable.

The committee to which this study was referred has concluded that the objectives of Resolutions 22, 40 and 61 can be achieved by an amendment to Civil Code Section 139 in the form attached as Exhibit "A".

The committee members concurred with the objectives of the proponents of Resolutions 22, 40 and 61 and unanimously agreed that:

- (1) All support orders, whether for children or for wife or husband, should be enforceable by contempt;
- (2) All support orders should be subject to modification, except that
- (3) A husband and wife should be free to enter into a nonmodifiable agreement for the support of the husband or wife, regardless of whether minor children are involved; and

- (4) The husband and wife should not be competent to make non-modifiable child support payments.

There was some division of opinion as to whether or not a constitutional amendment might be necessary to make all support payments enforceable by contempt in view of the decisions in the cases of *Bradley v. Superior Court*, 48 Cal. 2d 509 (1957); and *Plumer v. Superior Court*, 50 Cal. 2d 631 (1958). The committee, however, was unanimous in concluding that it would be more practical to attempt achievement of the objectives of the resolutions by amendment to Civil Code Section 139 rather than by seeking an amendment to Article I, Section 15, of the California Constitution, to provide an exception to the prohibition against imprisonment for debt in cases of divorce, annulment, separate maintenance, paternity and child support.

II. DISCUSSION

A. Discussion of the Problems

Payments for support of a wife or children contained in an integrated property settlement agreement, even though made part of an interlocutory decree under Civil Code Section 139, are not enforceable by contempt because they fall within the constitutional proscription against imprisonment for debt. (*Bradley v. Superior Court*, 48 Cal. 2d 509 [1957].)

The remedy of contempt is not available even though the agreement has been merged in the decree and even though the payments are modifiable by the terms of the agreement. (*Plumer v. Superior Court*, 50 Cal. 2d 631 [1958].) The court in *Plumer* reasoned that the obligations sought to be enforced are contractual and negotiated, as distinguished from marital and imposed by law, even though the contract relates to marriage obligations. The court seemingly rejected the theory of Justice Trayner contained in *Dexter v. Dexter*, 42 Cal. 2d 36 (1954), to the effect that payments provided in an integrated property settlement agreement have a dual nature and are in part a division of property and in part a discharge of court obligations.

The committee agreed with the proponents of the resolutions that all provisions for child support should be modifiable by the court even though based on a provision contained in an integrated property settlement agreement, leaving the law as it has been since the 1959 amendment to Civil Code Section 139.

However, the committee concluded that even though child support payments contained in agreements drawn after the 1959 amendments to Civil Code Section 139 are modifiable, the courts, following the *Plumer* decision, will probably find that such payments are contractual if they find their source in an integrated property settlement agreement and are therefore not enforceable by contempt. The same result would probably be reached with reference to payments for support of a wife which by virtue of the agreement give the court unrestricted power to modify.

The committee also agreed with the proponents of the resolutions that one of the most effective means of enforcing support obligations is the remedy of contempt and that it is socially desirable that such remedy be available whether or not the support provisions are modifi-

able and even though such provisions find their source in an integrated property settlement agreement.

The committee also agreed with the proponents of the resolutions, and with the conference committee report on 1959 Conference Resolution No. 3, that so long as integrated property settlement agreements are possible, the problems of interpretation would be minimized and it would be more desirable if payments for support of the husband or wife were subject to modification under Civil Code Section 139, unless the parties otherwise specifically agreed in writing.

The 1963 Resolutions Committee approved the three resolutions in principle but was not certain that the resolutions would adequately accomplish their objectives.

The report stated:

"The Resolutions Committee agrees that orders for support should be enforceable by contempt and subject to modification (Resolutions 22, 40 and 61) and that it should be competent for a husband and wife to enter into a non-modifiable agreement for alimony even though they have minor children (Resolution 40).

"However, the committee felt that Resolutions 22, 40 and 61 as drawn do not satisfactorily meet the constitutional problems raised in the *Plumer* and *Bradley* cases, the Legislature cannot by statute eliminate the constitutional impediment to contempt described in *Bradley*, nor is the problem properly answered by taking away from the parents the right to contract with each other for child support. Reference is made to the report of the Conference Committee on 1959 Conference Resolution No. 3 for discussion of these problems."

B. Discussion of the Solutions Proposed by 1963 Conference Resolutions 22, 40 and 61 and the Solutions Suggested by the Committee

While the committee agreed with the objectives of the resolutions under study, it did not believe the resolutions offered adequate solutions to the problems discussed.

(1) Resolution 22

(a) Deficiencies of Proposal.

As submitted, Resolution 22 sought to make all provisions for support of minor children enforceable by contempt by amending Civil Code Section 139 to add language rendering void any agreement of the parties for support of minor children. The validity of the remainder of such agreement would have been saved by making the remaining provisions severable. Although void, the provision for child support would be *prima facie* evidence of what is reasonable and necessary for child support.

Resolution 22 did not take into account the necessity for valid contractual obligations between parties where there are trial separations without divorce or prolonged separations prior to submission of a support agreement to a court.

(b) Alternative Suggestions by Committee.

The objectives of Resolution 22 can be achieved if the husband and wife are able to contract with each other for support or custody of children, provided they are not able to make such provisions part of, or dependent on, a division of property rights in an integrated property settlement agreement and provided further that the parties by agreement between themselves are not permitted to limit the power of the court to enforce by contempt or to modify such payments.

Hence the committee recommends that provisions for support of children, while valid and binding on the parties, should in all instances be deemed separate and severable from any other part of a property settlement agreement and when integrated into an interlocutory decree should be subject to enforcement by contempt, and subject to modification or revocation from time to time by the court as the financial circumstances of the parties and the needs of the children require.

(2) *Resolutions 40 and 61*

(a) Deficiencies in the Resolutions.

Resolution 40, according to its proponents, sought to clarify the court's right to use contempt as a means to enforce alimony and child support provisions in judgments not based on integrated property settlement agreements by adding language which would specifically permit enforcement by contempt "regardless of whether or not the order or orders are subject to modification." The resolution further added language to Section 139 to provide that orders for support of either party would be subject to modification unless the agreement expressly provided that such orders would not be subject to modification. Provisions for support of minor children would be modifiable regardless of the agreement of the parties. The statement of reasons is not clear as to whether or not nonmodifiable alimony payments based on an integrated agreement should be enforceable by contempt.

Resolution 61 appeared to be identical with Resolution 40, except that it referred to agreements of the parties "whether written or oral." The proponents of Resolution 61 stated that the purpose of the amendment was to remove the term "integrated agreement" and to permit alimony orders to be modifiable unless the agreement specifically provided to the contrary. The proponents further stated that they felt that the remedy of contempt would thereby become available to enforce *all* court orders for support. The use of the term "oral" obviously took into account the case of *Lipka v. Lipka* (1963), 60 Cal. 2d 472, 386 P.2d 671, holding a payment "for support and maintenance" contained in an interlocutory decree to be in effect "an integrated property settlement" under the circumstances

of the case and the oral statements of counsel in open court (p. 479).

Both resolutions seem to assume that modifiable orders are enforceable by contempt whether or not based on integrated agreements. This overlooks the plain language in *Bradley v. Superior Court*, *supra*, 48 Cal. 2d 509 (1957), and *Plumer v. Superior Court*, *supra*, 50 Cal. 2d 631 (1958). The test is not whether the payments are modifiable but rather whether they are part of an integrated agreement and hence merely contractual in nature.

(b) Solution Offered by Committee.

The committee believes that only if support orders are law-imposed and based on the power of the court to make such orders do they become subject to enforcement by contempt, and the constitutional questions raised by the *Plumer* and the *Bradley* cases eliminated.

Therefore, in the amendment proposed by the committee orders for support of the husband or wife, contained in an interlocutory decree, as in the case of child support orders, would be deemed separate and severable from the other provisions of an integrated agreement in which they found their source. Such support payments would be subject to modification unless the agreement expressly provided otherwise, thus leaving to the parties the right to contract with reference to the modification of such payments. Where there is no written agreement between the parties, it would be competent for the parties to stipulate in open court that support payments would not be subject to modification, taking into account the *Lipka* case. However, all orders for support, whether of child, wife or husband, would be subject to enforcement by contempt regardless of the agreement or stipulation of the parties.

III. CONCLUSION

It is felt that the attached proposed amendment to Section 139 accomplishes the objectives of the proponents of the 1963 Resolutions 22, 40 and 61 and the recommendations of the committee on 1959 Conference Resolution No. 3, which was adopted by the conference in 1960.

The amendment would make all provisions for child support and for support of either husband and wife separate and severable from all other provisions of an integrated agreement and would make orders for support law-imposed under the power of the court to make such orders and therefore subject to modification or revocation by the court and enforceable by contempt. The amendment would leave to the parties the right to agree to nonmodifiable support provisions for a husband and wife.

This amendment would avoid the objectionable feature of Resolution 22 which would make any agreement for support of minor children void, and the committee believes it would also eliminate the constitutional problems raised by the *Bradley* and *Plumer* cases.

The committee points out that the problems herein discussed are being considered for study by the Assembly Interim Committee on Judiciary, Subcommittee on Domestic Relations, under the chairmanship of Assemblyman Pearce Young of Napa.

It is the recommendation of this committee, therefore, that the proposed amendment be approved by this conference and referred to the State Bar with the recommendation that the proposal be submitted to the Legislature so that the Assembly Judiciary Committee will have before it the comments and recommendations of this conference in dealing with proposed amendments to Civil Code Section 139.

Dated: July 30, 1964.

Respectfully submitted,

IV. FINDINGS AND RECOMMENDATIONS

Findings:

1. The public policy of California favors agreements between spouses which attempt to settle property disputes amicably. Heretofore a husband and wife facing divorce could contract with each other in regard to settlement of their respective rights and duties arising from their marriage, with security for the wife and predictability for the husband.
2. A lengthy course of judicial interpretations has impinged upon effective use of integrated property settlement agreements. Under the present state of the law, based in part upon interpretation of the California Constitution, a California wife, who might be forced to deal with a recalcitrant husband, now finds herself in the position of no longer having a contract to enforce, precluded from use of the remedy of contempt, unable to coerce by withholding the final decree, solely dependent upon the discretion of the court for execution, and facing the possibility of discharge of the obligation by a proceeding in bankruptcy.
3. Use of the enforcement remedy of contempt is socially desirable.

Recommendation:

1. The committee acknowledges that a constitutional amendment may be necessary to restore the socially desirable enforcement remedy of contempt but recognizes the difficulties of that approach and feels that an attempt should be made to meet the objections of the California Supreme Court by statutory amendment of Section 139 Civil Code.

2. The committee further recommends that all orders for the support of minor children should be subject to modification by the court at any time, regardless of any contract between the parents, and that all orders for support of a husband and wife should be subject to modification by the court unless the husband and wife have expressly provided otherwise.
3. To accomplish these purposes the committee recommends that the proposals developed by the California State Bar Committee on Modification and Enforcement of Support Orders, as submitted to and adopted by the Conference of State Bar Delegates, be enacted by the Legislature.

Part 4

EXHIBIT "A"

SECTION 139. [PROVISION IN DECREE OR JUDGMENT FOR SUPPORT, ETC., OF SUCCESSFUL PARTY AND MINOR CHILDREN; ENFORCEMENT: MODIFICATION, REVOCATION, OR TERMINATION OF OBLIGATION: EFFECTIVE DATE OF AMENDMENT AS TO PROPERTY SETTLEMENT AGREEMENT.]

In any interlocutory or final decree of divorce or in any final judgment or decree in an action for separate maintenance, the court may compel the party against whom the decree or judgment is granted to make such suitable allowance for support and maintenance of the other party for his or her life, or for such shorter period as the court may deem just, having regard for the circumstances of the respective parties and also to make suitable allowance for the support, maintenance and education of the children of said marriage during their minority, specifying in such judgment or decree the name, age and amount of support for each child, and said decree or judgment may be enforced by the court by execution, *contempt*, or by such order or orders as in its discretion it may from time to time deem necessary.

That portion of the decree or judgment making any such allowance or allowances, and the order or orders of the court to enforce the same, ~~including any order for support of children [1] based on agreement,~~ may be modified or revoked at any time at the discretion of the court except as to any amount that may have accrued prior to the order of modification or revocation. [2] Except as otherwise agreed by the parties in writing, the obligation of any party in any decree, judgment or order for the support and maintenance of the other party shall terminate upon the death of the obligor or upon the remarriage of the other party.

The provisions of any agreement for child support shall be deemed to be separate and severable from all other provisions of such agreement relating to property and support of the wife or husband. All orders for child support shall be law-imposed and shall be made under the power of the court to make such orders. They shall not be dependent or based upon any agreement of the parties. All such orders for child support, even when there has been an agreement between the parties on the subject of child support, may be modified or revoked at any time at the discretion of the court except as to any amount that may have accrued

prior to the order of modification or revocation and may be enforced by the court by execution, contempt, or by such other order or orders as the court in its discretion may from time to time deem necessary.

The provisions of any agreement for the support of either party shall be deemed to be separate and severable from the provisions of the agreement relating to property. The provisions of any agreement for the support of either party shall be subject to subsequent modification or revocation by court order unless the agreement expressly provides that they shall not be subject to modification or revocation by the court. All orders for the support of either party to an action shall be law-imposed and shall be made by the court under its power to make such orders. All such orders, even where there has been an agreement between the parties on the subject of the support of either party, may be modified or revoked at any time at the discretion of the court except as to any amount that may have accrued prior to the order of modification or revocation, provided, however, that the parties in person or by counsel may stipulate in open court that the order for payment of support shall not be subject to modification or revocation or shall be subject to modification or revocation only as provided by the terms of the stipulation made in open court. All orders of the court for support, even if there has been an agreement or stipulation of the parties, may be enforced by the court by execution, contempt, or by such other order or orders as the court in its discretion may from time to time deem necessary.

The amendments to the second paragraph of this section enacted at the 1959 Regular Session of the Legislature are effective only with respect to property settlement agreements entered into after the effective date of such amendments.

The 1963 amendments to Section 139 of the Civil Code apply only with respect to property settlement agreements entered into after the effective date of such amendments.

The 1965 amendments to Section 139 of the Civil Code apply only with respect to property settlement agreements entered into after the effective date of such amendments.

NOTE: So that no possible conflict might remain, it is suggested that Civil Code Section 159 should be amended to provide that its provisions are subject to the provisions of Civil Code Section 139.

Part 5

MANNER OF HOLDING TITLE BETWEEN HUSBAND AND WIFE IN CALIFORNIA AND DISPOSITION OF PROPERTY RIGHTS UPON DIVORCE *

I. BACKGROUND

"A husband and wife may hold property as joint tenants, tenants in common, or as community property." Civil Code Section 161.

A husband and wife may agree between themselves as to how their property will be held, and the only consideration necessary for such an agreement is the "mutual consent of the parties." Civil Code Section 160, Sections 158, 159.

The agreement between husband and wife transmuting property from one form to another may be an oral agreement. *Woods v. Security-First National Bank*, 46 Cal.2d 697 (1956) (agreement between husband and wife to transmute wife's separate property into community property).

When property is acquired after marriage, it is presumed to be community property (Section 164); and the burden is on the person asserting that it is separate property to prove that fact by tracing (Civil Code Sections 162, 163) the source of the funds to separate property or by proving an agreement between husband and wife that the property shall be held as separate property.

When property is held by the spouses under a joint tenancy deed (which must be in writing) there arises a different presumption which has been created by judicial decisions in California to the effect that such property is held by each of them as separate property and not as community property. This is because the incidents of community property are inconsistent with the incidents of joint tenancy. (*Siberell v. Siberell*, 214 Cal. 767 (1932).)

II. PAST APPLICATION RE JOINT TENANCY

In *Siberell*, the record showed only that the property was acquired with community funds and was deeded to the husband and wife as joint tenants. The wife argued that *Dunn v. Mullan* applied and that she held her joint tenant's share as separate property while her husband held his as community property. This would mean that she had a greater interest in the property than her husband. The court held that a joint tenancy must have the four unities present. There must be the unity of *interest* (as well as time, title and possession). The two interests would be unequal if the wife held as separate property while the husband held as community property. The court therefore held that joint tenancy and community property were inconsistent and could not

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Sacramento, August 13-14, 1964.

subsist together at the same time in the same property. Furthermore, it interpreted Civil Code Section 164 (which at that time presumed that husband and wife took as tenants in common, unless a different intention was expressed in the instrument) as meaning that the joint tenancy deed itself expressed the intention that the interests were separate but equal: both separate property. The court said:

"The use of community funds to purchase the property and the taking of title thereto in the name of the spouses as joint tenants is tantamount to a binding agreement between them that the same shall not hereafter be held as community property but instead as a joint tenancy with all the characteristics of such an estate."

Later that same year, the Supreme Court in *Delanoy v. Delanoy*, 216 Cal. 23 (1932) reduced the "binding agreement" to an inference: In *Delanoy* also the property had been acquired with community funds and the deed taken in joint tenancy. The wife made the same argument as the wife in *Siberell*. The court said:

"This court has recently determined that *in the absence of any evidence of an intent to the contrary*, where property is purchased with community funds and the title is taken in the name of the husband and wife as joint tenants, the community property must be deemed severed by consent, and the interest of each spouse therein is separate property."

In *Tomaier v. Tomaier*, 23 Cal. 2d 754 (1944) which is still the leading case on the subject in California, the court (Traynor) reviewed the effect of *Siberell* and *Delanoy*. This was another case where the property was acquired with community funds and held as joint tenancy. The court below had held that property was joint tenancy and would not admit evidence tending to show that it was community. This judgment was reversed, and the California Supreme Court held that evidence of the parties' intention is admissible. The court reviewed the rules as to property holding in California, pointing out that property may be shown to be community property even though the record title is held as separate property, joint tenancy, or tenancy in common. As to *Siberell* and *Delanoy*, the court said:

"The statement that 'The use of community funds to purchase the property and the taking of title thereto in the name of the spouse as joint tenants is tantamount to a binding agreement between them that the same shall not thereafter be held as community property . . .' should be understood as stating the applicable rule, only 'in the absence of any evidence of an intent to the contrary.' (*Delanoy v. Delanoy*.) In its holding, as distinguished from its language, the *Siberell* case established only that whether such property is a joint estate or community property, the trial court in a divorce proceeding has the power to divide the property equally."

The result of *Siberell*, *Delanoy* and *Tomaier* has been to create in the joint tenancy deed a presumption that the property has been changed from community property to joint tenancy and to require

the parties to overcome that presumption by contrary evidence before the property can be held as community property again.

In *Huber v. Huber*, 27 Cal. 2d 784 (1946), the Supreme Court permitted the husband to prove that property acquired with his separate property and taken in joint tenancy with his wife was intended to remain his separate property because he did not intend to make a gift to his wife of one-half of the property as her separate property.

(A) Type of evidence: When the property is taken in joint tenancy, however, the evidence necessary to show that it is really community property must be evidence of a mutual agreement not to hold the property as joint tenancy. A secret intention, undisclosed to the other party, not to make a gift is not sufficient to overcome the joint tenancy deed. *Socol v. King*, 36 Cal. 2d 342 (1950); *Gudelj v. Gudelj*, 41 Cal. 2d 202 (1953).

III. PAST APPLICATIONS RE TENANCY IN COMMON

When property is held by spouses as tenants in common the cases have worked together to indicate that the husband holds his half as community property whereas the wife holds her half as separate property (Section 164 presumption). The leading case establishing this curious rule of law is *Dunn v. Mullan*, 211 Cal. 583 (1931). In that case the property was acquired from funds of an undisclosed source (therefore presumptively community property) deeded to husband and wife as husband and wife. At that time the presumption of Section 164 was that the married woman "takes the part conveyed to her, as tenant in common, unless a different intention is expressed in the instrument." That was before the amendment to Section 164 which provided that if the husband and wife were described as husband and wife, the presumption would be that the property was held as community property. The court held that under *Miller v. Brode*, 186 Cal. 409 and *Estate of Regnart*, 102 Cal. App. 643, this meant "that deeds naming as grantees both husband and wife presumptively vest property in spouses as tenants in common, the half interest conveyed to the wife being presumed under Section 164 of the Civil Code to be her separate property and that conveyed to her husband the community property of the marriage . . ." since the husband did not have a similar presumption in Section 164 operating in his favor.

In *Miller v. Brode*, the property was acquired partly from wife's separate property and partly with community property; title was taken in the names of both husband and wife. The court said:

"We can see but one conclusion that can be rationally drawn from these facts, and that is that the one-half interest which the conveyance on its face operated to convey to the decedent wife was taken and held by her as her separate estate, and that the other half was taken and held by her husband as community property. Such was the presumption on the face of the deed (Civil Code Section 164; *Pabst v. Shearer*, 172 Cal. 239) . . ."

In *Pabst v. Shearer* (1916), the property was acquired by deed to husband and wife as husband and wife. The court said that this creates a presumption of tenancy in common per 164, and went on to

say "Under the express provision of Section 164 of the Civil Code, as amended in 1897, the presumption is, therefore, that the undivided one-half interest in the other three lots, was vested in Margaret Pabst as her separate property."

Dunn v. Mullan was followed in 1962 by *Speer v. Speer*, 209 ACA 255, 25 Cal. Rptr. 729 (Lillie, J.). The facts in this case are really rather odd and respectable opinion is found to support the decision under the technical presumptions of the law even though the result may not be that which all would prefer to see. In *Speer*, the property was originally held by husband and wife in a deed describing them as joint tenants. Thus wife owned one-half as her separate property and husband owned one-half as his separate property. The husband then conveyed his half to a third party, thus making the wife a tenant in common with the third party. The third party later reconveyed to husband and no source of funds is shown for the reconveyance. Therefore, again, the presumption was that it was acquired by community property funds. This meant that the husband and wife were tenants in common since their interests had not been created by the same document. Under these circumstances, as the court said:

"*Dunn v. Mullan* is controlling. That case holds that where, as here, there is no evidence as to the source of funds procuring the second conveyance, the presumption created by statute (Civil Code Section 164) must prevail; namely, one joint tenant (the wife) held as undivided one-half interest therein as her separate property, while the remaining half was the community property of the husband and wife. The trial court correctly so held."

Therefore, the court could award, in the divorce action, three-fourths of the property to the wife, leaving one-fourth to the husband.

IV. PRESENT LAW

Civil Code Section 164 establishes the following presumptions (as amended, 1961) which are governing presumptions in the absence of any proof of tracings to the contrary:

"All other real property situated in this state and all other personal property wherever situated acquired during the marriage by a married person while domiciled in this state is community property; (this is the basic community property presumption) but whenever any real or personal property, or any interest therein or encumbrance thereon, is acquired by a married woman by an instrument in writing, the presumption is that the same is her separate property, and if acquired by such married woman and any other person (which would include her husband) the presumption is that she takes the part acquired by her, as tenant in common, unless a different intention is expressed in the instrument; (this is the situation in *Dunn v. Mullan* and *Speer v. Speer*) except, that when any of such property is acquired by husband and wife by an instrument in which they are described as husband and wife, unless a different intention is expressed in the instrument, the presumption is that such property is the community property of said husband and wife.

In cases where a married woman has conveyed, or shall hereafter convey, real property which she acquired prior to May 19, 1889, the husband, or his heirs or assigns, of such married woman, shall be barred from commencing or maintaining any action to show that said real property was community property, or to recover said real property from and after one year from the filing for record in the recorder's office of such conveyances.

As used in this section, personal property does not include, and real property does not include leasehold interests in real property."

From the above it is seen that the *Dunn v. Mullan* and *Speer v. Speer* situations arise only (1) where it is clear that the property is tenancy in common as it was under the facts in the *Speer* case, or (2) where the property has been acquired by husband and wife by an instrument in writing in which they are not described as husband and wife.

There has been some speculation in the law reviews and some of the treatises about the situation when people are not described as husband and wife. Professor Armstrong in her California Family Law treatise, which is probably the leading textbook in the state, makes the argument that if the description is Mr. and Mrs. John Doe, obviously there is no problem. But if the description merely says "John and Mary Doe," the presumption may not be established. If they are described as "John and Mary Doe, husband and wife" then clearly the presumption would be established. It appears to depend upon how well the parties are described.

V. PROBLEMS OF TITLE HOLDING BETWEEN HUSBAND AND WIFE

The problems arising from the manner in which property is held between husband and wife come up not only in the situation of divorce and death, but also in the basic question of what is the fundamental public policy of the state as to how property should be held between married persons. Our law has traditionally been said to favor the existence of the community property system. This, of course, means that the husband and wife have a present, existing and equal interest in the community property; that that property is under the management and control of the husband; that the creditors of the community may look to that property for payment of community debts incurred by the husband or by the wife with the husband's consent. Community property may be divided upon divorce between the spouses in cases of mental cruelty, adultery, and insanity "in such proportions as the court . . . may deem just." In all other cases it is divided equally. Upon death of either spouse, the surviving spouse owns half the community property and, in default of testamentary disposition by the decedent, takes the other half subject to the claims of creditors.

The joint tenancy deed, however, is very widespread in the state, particularly as a manner of holding residential property. If the property is true joint tenancy, as we have seen, each spouse owns an undivided half as his separate property. Thus, either may convey without the consent of the other; the property may not be divided other than equally upon divorce (thus making it impossible for the court to award the residence to the wife); and upon death the joint tenancy property

may not be transmitted by will but automatically goes to the survivor ahead of the claims of unsecured creditors.

The tax treatment of joint tenancy may not be as favorable to the survivor as the tax treatment of community property, as in a rising real estate market for upon death the community property achieves a new basis, while the joint tenancy property achieves a new basis only as to half.

For these and other reasons, proposals for change have been made in the past and continue to be made.

VI. PROPOSALS FOR CHANGE

1. In a recent law review article, entitled *Community Property in Joint Tenancy Form*, (14 Stanf. L. Rev. 87 (1961)) it was argued that the effect of the California decisions has been to create a hybrid form of property: community property held in joint tenancy. It was suggested that this new form should be given legislative or judicial help by reversing the *Siberell* presumption: Property should be presumed to be community property when purchased by husband and wife even if it is held in joint tenancy form "for all purposes except situations involving third persons who have relied on the joint tenancy form when purchasing from the survivor." The proposed amendment to Civil Code Section 164 is as follows:

"When any of such property is acquired by husband and wife by an instrument in which they are described as husband and wife, *whether as tenants in common or as joint tenants or otherwise*, unless a different intention is expressed in the instrument, the presumption is that such property is the community property of said husband and wife. . . . *Property in joint tenancy form is conclusively presumed to be true joint tenancy in favor of any person dealing in good faith and for a valuable consideration with a surviving joint tenant.*"

2. Another suggestion, which is directed mainly at the problem of division of the property upon divorce, is to amend Civil Code Section 146 to provide that the court may dispose of "the marital residence of the parties, whether held of record as community property or as joint tenancy property" upon divorce, or separate maintenance.

The purpose of this proposal is not to make any more favorable the ultimate award granted to the wife but to make it possible, in a proper case, to award the family home to the wife in order that the children may continue their lives with minimal trauma notwithstanding the divorce. Children need the security and stability which continued residence in their family residence is able to afford them in many cases where divorce is undertaken. If the value of the home exceeds the amount to be awarded the wife in the final, total division of the couple's assets, or if the mortgage payments will grossly exceed her ability to maintain regular payments, sale of the residence and divi-

sion of the proceeds thereby realized is the only alternative. However, in many cases where the title is held in joint tenancy the children could be spared the difficult emotional conflicts caused by moving out of the only residence they may have ever known if the court were permitted to make such an award to the wife with full credit for the monetary value of the family residence credited to the husband in the final disposition.

3. The foregoing proposal was addressed to an important problem but concern was expressed that remedial efforts should attack the basic problem of what is meant by a joint tenancy deed and how it works together with community property. In an attempt to do this, it was suggested that Section 164 be amended to provide that all property acquired by husband and wife by an instrument in writing be presumed to be community property, whether or not they are described therein as husband and wife and whether or not the property is held as tenants in common or as joint tenancy. This would overrule *Siberell* and *Dunn v. Mullan* and would put the burden on the party asserting that the property is separate property to overcome the presumption that it is community property.

As part of this suggestion it was proposed that the present provision of Section 164 to the effect that any property acquired by a married woman with another party is here separate property as tenant in common should be amended to provide that she acquires separate property only when title is taken in her name alone or with another person not her husband. The result of these amendments would be that when a married woman takes property with her husband it is presumed to be community property whereas when she takes it in her name alone or with someone not her husband it is presumed to be her separate property. The burden would then be placed on anyone asserting the contrary to assume the proof of their position by rebutting the presumptions. It was felt that this arrangement would most nearly effectuate the expectations intended by the parties. It was asserted that there is no need for a statutory presumption to favor tenancy in common over joint tenancy in a community property state. That may be necessary in a common law state, where tenancy in common is more likely to approach the expectations of the parties. But in a community property state, community property is to be preferred to both common law estates.

A bill to accomplish this latter suggestion was introduced in the 1963 session by Assemblyman Dannemeyer (AB 1464), a member of this committee to which the matter was referred for interim study. The committee's attention was directed to the fact that under the present situation the parties have the burden of proving that notwithstanding the form of the deed the property is nevertheless held by them as community property. The change proposed to the committee, by testimony presented in its hearing and by the Dannemeyer Bill, is to reverse the presumptions to favor the community property concept instead of being against it as under the existing situation. This

would be wholly in accordance with the long established public policy of this state favoring the concept of community property.

The proposal would not preclude a husband and wife from actually holding property as joint tenants. It would merely impose upon them the burden of overcoming the contrary presumption. This same burden is presently upon them in reverse in that they must overcome the presumption the property has been changed from community property to joint tenancy. In either event, proof to rebut the presumption would be by tracing the funds which were used to make the purchase or showing an agreement between the parties.

A suggestion was made to the committee that the standard joint tenancy deed form be amended to provide that such property is taken by the husband and wife as joint tenants with the right of survivorship and not as community property. The only advantage ascertained for this proposal was that it might put people on notice if they read the deed. But the view was expressed that this would get away from the Supreme Court's holdings that the parties could still agree to change the nature of the property from joint tenancy, even in that form, to community property. It was not recommended that agreements between husband and wife to change the nature of property be in writing. If the joint tenancy agreement, established by *Siberell* and *Dunn*, were put in writing, for example, it was suggested that this would merely result in a new deed form, "To husband and wife as joint tenants with right of survivorship and not as community property." The end result suggested was that after a few unsettling years of test cases, the situation would be back to exactly where it is now.

The major problem which is attempted to be solved by these proposals, is the fact that husbands and wives take property in joint tenancy without legal counsel but primarily because deeds prepared by real estate brokers, escrow companies, and by title companies are usually presented to the parties in joint tenancy form. The result is that they don't know what joint tenancy is, that they think it is community property, and then find out upon death or divorce that they didn't have what they thought they had all along and instead have something else which isn't what they intended. On the occurrence of a divorce there is strong motivation to establish the status of the residence as community property notwithstanding the form of the deed since the divorce court cannot award the residence to the wife and children if it in fact is held as joint tenancy.

On death the necessity of the decedent's half interest in the community property being subjected to probate was deemed somewhat undesirable in the majority of cases where the family home constitutes the main asset of the marriage. It was suggested perhaps the automatic aspect of survivorship which characterizes the joint tenancy ought to be made applicable to the decedent's half interest in the community property if he did not utilize his right to dispose of his half by will.

Concern was expressed that the incident of survivorship for community property should not be absolute as it is with joint property since this would preclude one spouse from transmitting his interest for the benefit of his children. For example, if it is the husband who dies first under a joint tenancy, his interest goes automatically to

the wife and he must rely upon her to provide for the children. Many men prefer to establish definite provisions for the benefit of their children lest the wife remarry and subsequently die, leaving, perhaps, the provision for the first husband's children solely within the discretion of her second husband who has no blood ties with those children.

The suggested proposal which was evolved from consideration of these factors was to establish the characteristic of survivorship regarding community property which is not otherwise disposed of by will. This would eliminate the necessity of probate.

Concern was expressed over creditors who, denied an opportunity to be paid through probate procedures, would be relegated to the status of unsecured creditors just as they are with regard to joint tenancy property. It was noted that the unsecured creditor is not relying normally on the property in the first place and that the parties could cut him out by changing the form of the holding from community to joint tenancy. In fact, it was observed that it is mostly in the small estates that the joint tenancy is used. In the larger estates, where estate planning concepts come into play, there are sufficient funds to pay the creditors. It is in the small estates that the creditors are more likely not to get their money and those are the estates which presently are in joint tenancy.

This amended proposal would not preclude the very valuable tools of estate planning since the community property could be put into a trust, for example, by testamentary disposition, for the benefit of the wife during her lifetime, and thereby avoid the double taxation at the wife's death.

VII. RESTRAINT ON TRANSFERABILITY UPON DIVORCE

In addition to the problems previously discussed, joint ownership of property, whatever its form or substance, requires the owners to join in any conveyance in most cases. Thus pending the final decree of divorce the signature of both the husband and the wife must be obtained in most situations before title to real property can be passed or equity in personal property encumbered. This is frequently impossible to obtain with the result that the parties must await a final determination as to the status of the property by the court, all too often with disastrous results.

In considering property rights at the time of divorce, this restraint on the alienation of property during the interlocutory period is perhaps the main problem the plaintiff is faced with after entry of the interlocutory decree.

To put the situation in focus, consider a typical factual situation. The husband and wife are a young couple who own a home, car and furniture; in all of which they have some equity, but none is fully paid for. The wife goes to court and obtains an interlocutory decree by default awarding her all or at least half of the community property and an order directing the husband to make the necessary payments on the home, automobile and furniture during the interlocutory period. If the husband already hasn't done it before this time, he either disappears in the state, or leaves the state and no one can find him. At any rate he

fails to make the necessary payments. Under the law, the wife, much to her surprise, is obligated to make these payments. However, she has three small children, is not working, and has no independent means of income. As time goes on the furniture is repossessed, the car is repossessed and a deficiency judgment obtained on it and the house is foreclosed upon. In the usual situation the repossessed car and furniture would probably be sold for no more than the payments due on them and when the home comes up for sale at the trustee's sale the wife does not even have the opportunity to bid her own equity in the home for she has no means of obtaining the cash. Without the signature of the husband, she has no power to encumber the property. This is not at all an unusual case to be found in our courts today. Many times, superior court judges hearing such a case have called the title companies and pleaded with them to pass title on the real property so that the wife would at least end up with something to start out with. Due to the current status of the law, in most instances title companies are helpless to act.

Consider also some of the case law in this area upon which the refusal to pass title or encumber property is based. The main case relied on is *Luepe v. Luepe*, 21 Cal. 2d 145 (1942). In this case the court decided that the trial court has the power to make an immediate division of the property if put in issue by the allegations or property settlement agreement and that its decree is final on this issue upon the expiration of the time of appeal or the time of relief granted under Code of Civil Procedure Section 473. The court also decided that after the lapse of this time, unless stated in the decree, it has no power to modify these rights. It would seem, then, that after the time for appeal has elapsed and after 90 days have elapsed for the notices provided for in Code of Civil Procedure Section 743, then the property could be encumbered or conveyed.

This is only apparently the situation for there are two factors which serve to abrogate the rule.

First is the situation where the property settlement agreement or the interlocutory decree purports to make final disposition of the property but does not in fact make such a disposition. In *Johnston v. Johnston*, 106 Cal. App. 2d, 775 (1951), the court said that the *Luepe* rule has no application to an interlocutory decree which does not purport to make a present final disposition of property. There are many pitfalls an attorney can fall into in drafting a property settlement agreement or drafting an interlocutory decree which would bring the pleading within the *Johnston* rule. It might give the court the power to modify the interlocutory decree, or the language might not be definite enough. However, if the property settlement made final present disposition of the property and the interlocutory decree did not, title could probably be passed on a conveyance because the party would be estopped in court on the ground of his own contract. The result is that in any set of facts which fall within the *Johnston* rule no title is passed until the final decree is rendered.

Perhaps the most serious problem preventing encumbering of property or the conveying of property during the interlocutory period is that of the possibility of reconciliation. The *Luepe* case did not decide

the question of whether or not a reconciliation canceled the provisions of the interlocutory decree as to the disposition of property rights. In a line of cases running from *Peters v. Peters*, 16 Cal. App. 2d 383, (1936), down to *Tompkins v. Tompkins*, 202 Cal. App. 2d 55 (1962) the courts have dealt with the subject of property settlements and whether or not the provisions of these property settlements were canceled by reconciliation. The courts have ruled in these cases that whether or not the provisions of the property settlement are canceled is a matter of the intent of the parties and inference can be drawn from the fact of reconciliation that they did intend to cancel these provisions of the property settlement agreement. However, in the *Tompkins* case the court said that this alone is not a strong enough inference to justify the cancellation. In a majority of these cases, the court found that the reconciliation did cancel the executory clauses of the property settlement. The question is almost completely unresolved as to whether or not the final present disposition of property in the interlocutory decree is canceled by the reconciliation of the parties. For the purposes of title practices, the recommended rule is to assume that reconciliation does cancel these provisions.

VIII. WHEN CONVEYANCE CAN BE MADE

In light of the foregoing, until the divorce decree becomes final no property should be conveyed or encumbered in the interlocutory period. However, this rule is not consistently followed by banks and title companies. For example, a bank might lend on property if the husband joins in. A title company might look at the factors surrounding the case and decide it can pass title. For example, if the husband has deserted and left the state, an attorney has attempted to locate him without any success and it looks like there is very little chance that he will return, the title company may pass title and take the risk that there will be no reconciliation. Of course, there is the obvious exception to this rule. If one of the parties died during the interlocutory period, and there is a *Luepe* type of decree, then after the appeal period has run, and the time specified in 437 or 437a, the disposition becomes final.

IX. AREAS CLEAR FROM DOUBT

The law in other areas surrounding interlocutory periods seems to be fairly clear. For example, if community property is acquired by the husband in his name alone after the interlocutory decree but before the final decree, title can be passed one year later under Civil Code Section 172a. But absent this it cannot be passed even after the final decree in the absence of an adjudication to the contrary. This result ensues because such property is vested in both parties as tenants in common and the wife must join in the conveyance. On the other hand, property acquired in the same period by the wife is presumed to be her separate property so title can be passed before or after the final decree under Civil Code Section 164. If one of the parties dies before the final decree and the interlocutory decree makes the present final disposition of the property, disposition then becomes final, after the running of the appeal period or the periods as prescribed in Section 473 or 473a. The status of the property, whether it is community or sepa-

rate, if put in issue usually becomes final at the time of the final decree. Also, if there is a property settlement agreement not made in contemplation of divorce, which sets forth the status of the property and makes a final disposition, title can be passed on the property after such an agreement has been entered into. As mentioned previously, a reconciliation may cancel property settlement agreements made in contemplation of divorce. Foreign divorce decrees are treated the same as if the divorce decree was obtained in the state, which does not settle the property rights. Under Civil Code Section 146 the parties hold as tenants in common except where the divorce is granted for adultery, extreme cruelty or incurable insanity. These rights can be later adjudicated into separate proceedings.

X. POSSIBLE SOLUTIONS

If the Legislature retains an interlocutory period, there are several possible solutions to mitigating the above problems.

- (a) The most obvious solution would be to shorten the interlocutory period, perhaps down to six months. At this time, final disposition could be made of the property.
- (b) Another solution would be to provide that any award of community real property made in an interlocutory decree would be final and conclusive in favor of a third party purchaser for value of an interest in that property from the party to whom it was awarded, regardless of reconciliation of the parties, when the time for any direct attack upon the decree has passed. This would mean that in a contested divorce, final disposition could be made when the period for appeals had run. At the other extreme, in a default divorce where service was by publication, final disposition could be made 180 days after the notice provided by Code of Civil Procedure Section 437a had been given. This proposal would also mean that the Legislature could retain the one-year waiting period without adversely affecting the right of alienation. If the parties did reconcile then the decree or property settlement might be canceled by the reconciliation but as to third parties the rights would be final. A bill to accomplish this suggestion was introduced in the 1963 session by Chairman Willson of the Judiciary Committee (AB 2774) and referred to this committee for interim study.

In conjunction with either one of the above suggestions, the time periods required in Code of Civil Procedure Section 437 of 90 days and Code of Civil Procedure Section 437a of the 180 days could be shortened even further. However, since these sections have a broader application than just to divorce actions, serious study would have to be given to shortening these periods. If they were shortened down too far the statute might be vulnerable to attack on the ground of constitutionality for not meeting the requirement of due process.

In summary the problem of restraint on the alienation of property during the interlocutory period is really not a serious problem at all for lending institutions or title companies, but is more

of a social problem because of the hardship caused the wife during this period since she is unable to convey or encumber her property.

XI. RELATED PROBLEMS

There is another area involving real property rights in the divorce decree which sometimes causes a problem. Occasionally the attorney drafting an interlocutory decree, or even the court will describe the real property involved by the street address alone, instead of putting in the proper legal description. The historical background for doing this is that when the homestead exemption was utilized oftentimes the attorney would rush out to file the exemption with the street address of the home alone, just before the judgment attached. There was no time to insert the legal description of the property. This has spread to other areas, including divorce decrees. The problem is that sometimes the attorney will put the wrong street address down so when the wife goes to convey the title to the house she finds that she must go back into court again to quiet title. As a matter of fact, since there is no legal description in the decree, its recordation does not impart constructive notice. Another problem is that sometimes when only the street address is used, the home might turn out to be a duplex or a fourplex or even a condominium in which several residences have the same address. Confusion is created which may result in clouding the title of the owners of the other units. Therefore, it is suggested that a requirement be put in the statute that for interlocutory decrees which do make disposition of real property, a legal description of the property should be utilized.

Attorneys for some of the state's largest banks indicated that they found no major problems in this area of the law. One of the minor problems which has arisen for them periodically occurs when a divorce decree orders the husband to make payments on a loan acquired for an automobile or furniture. If the husband defaults in these payments, the wife is often shocked to learn that she must either make these payments or have the property repossessed. It is probably more of a customer relations problem than anything else. However, the problem could be entirely avoided if this were made perfectly clear in the interlocutory decree.

Other minor problems have arisen around a restraining order or attachment issued under Code of Civil Procedure Section 539a et seq. A common occurrence when an attorney files a divorce action for a wife is to immediately tie up the husband's bank account, not only for the support of the wife, but for attorney's fees. First of all, it is not clear to the banks under the current law whether or not such a restraining order or attachment is valid without the bond required in the statute. They indicate that in some instances such a bond is not posted. They also have administrative problems in complying with the order. In many instances the order will say, if the husband has a business, money is to be disbursed only in the ordinary course of business and for the necessary expenses of living. It is sometimes extremely difficult to ascertain what is in the ordinary course of the business and what is a necessity for the husband. Another problem banks encounter with such

orders is that oftentimes the orders will not specify the branch of the bank. If the bank is a large one, such as the Bank of America, it is a rather expensive process for the bank to circularize all its branches to ascertain if the husband has bank accounts in any other branches. As a practical matter, however, this only has to be done in the case of a rather wealthy person, since the average person has only one bank account.

Apart from the problems of the bank, one banker indicated that he felt under our current laws some attorneys become overzealous and thus kill the goose that laid the golden egg. The committee was informed of a case of a husband who had a steel business which was doing very well. As soon as the divorce was filed the attorney for the wife immediately tied up all the liquid assets of the corporation. Subsequently the court appointed a trustee to administer these assets. As a result of having all his assets being administered by a trustee who knew nothing of the business, the business went into involuntary bankruptcy within six months. It was suggested that perhaps some thought should be given to limiting the use of such restraining orders or attachments so that such businesses could be allowed to efficiently continue to run.

XII. FINDINGS AND RECOMMENDATIONS

The committee did not conclude its study of the problems set forth in this part of the final report and hence recommends continuance for further study.

Part 6

BLOOD TESTS NEGATING PATERNITY *

I. INTRODUCTION

Previous efforts to enact legislation permitting blood tests to negate paternity despite the provisions of Code of Civil Procedure Section 19625(5) failed in the legislative sessions of 1961 and 1963. It was recommended to this committee that it renew its efforts for such legislation because (to quote Justice Fourt of the district court of appeal in his dissenting opinion in *Wareham v. Wareham*, 195 Cal. App. 2d 64, 88) a law or a court's interpretation of it which "bypasses, ignores or disregards a manifest truth should be changed forthwith." To place the following proposals in proper context, it is important to review some of the pertinent historical background with respect to blood tests and their effect in disputed paternity proceedings.

II. BACKGROUND FACTS

By the provisions of Code of Civil Procedure Section 1962(5), it is provided that "the issue of a wife cohabiting with her husband, who is not impotent, is indisputably presumed to be legitimate." This conclusive presumption has been the law of this state, with certain exceptions to be noted hereafter, ever since its enactment in 1872. Some 56 years ago, a scientist known as Landsteiner discovered the fact that human blood possesses some characteristic qualities. Ten years later it was proved that these qualities are inherited according to definite laws. During the past 50 years biological and genetic studies of these qualities have progressed to the point of establishing the following proposition: Since a person's blood type can be ascertained easily, and is inherited according to well defined and simple biological laws, it follows that blood tests are highly suitable as evidence in disputed paternity cases. As is generally known, the blood tests as developed are regarded as conclusive in excluding or negating paternity, but cannot be used positively to establish paternity. Quoting the leading authority in the field on the subject, to wit: Schatkin, *Disputed Paternity Proceedings*, 3d Edition (1953), at page 234:

"As far as the accuracy, reliability, dependability—even infallibility—of the tests are concerned, there is no longer any controversy. The result of the test is universally accepted by distinguished scientific and medical authority. There is, in fact, no living authority of repute, medical or legal, who may be cited adversely. Furthermore, that the weight of enlightened legal authority is in favor of according decisive evidentiary effect to reliably reported blood test exclusions, is shown by the favorable comment on

* This part of the final report is based on testimony presented before the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, October 8 and 9, 1964.

instances of judicial acceptance of exclusions, and the critical deprecatory view of judicial disregard of the exclusions which have appeared in law reviews throughout the country."

In 1963 our Legislature adopted the Uniform Blood Test Act in its entirety, omitting Section 5 thereof, which was and now is the proposed subject of an amendment to the Code of Civil Procedure, which is to read as follows:

"Section 1980.8. The presumption of legitimacy of a child born during wedlock is overcome if the court finds that the conclusion of all experts, as disclosed by the evidence based upon the tests, show that the husband is not the father of the child."

As noted, the purpose of the Uniform Blood Test Act, Section 5 thereof, made the results of accurate blood tests conclusive. The present objective is to do the same thing by the amendment which was originally intended to accomplish the foregoing.

The result of the omission of our legislative enactment to give conclusive effect to blood tests in the 1953 legislation gave rise to the problems that confronted our courts in *Kusior v. Silver*, 54 Cal. (2d) 603; 7 Cal. Rep. 129; and *Wareham v. Wareham*, 195 Cal. App. (2d) 61, 15 Cal. Rep. 463. In both cases blood tests negated paternity of the defendant, who was adjudged the father of the illegitimate child. Both the Supreme Court and appellate court held, among other things, that if the conclusive presumption statute was applicable, (namely, a husband and wife cohabitating) the results of the blood test could not be introduced to overcome the presumption. Justice Fourt, dissenting in *Wareham v. Wareham*, *supra*, criticized this view as follows:

"In this case we have followed the ruling which denies to the husband the most potent, accurate and competent evidence known to man to insure the ascertainment of the truth; because there is no evidence known to the judicial process which is more lucid and scientifically certain than the blood grouping test when used to negate paternity.

"This whole situation is a perfect example of what occurs when truth and justice are not equated. Any law or decision which bypasses, ignores or disregards a manifest truth should be changed forthwith.

"We are placing our stamp of approval upon an outdated fiction of the law in the face of and against inexorable scientific facts. I do so reluctantly because, as a member of an intermediate court, I am constrained to follow the law as it has been stated by the Supreme Court of this state."

III. RATIONALE—PUBLIC POLICY UNDERLYING THE CONCLUSIVE PRESUMPTION STATUTE

Based on the decisions in question, it is well to ask ourselves what public or social policy considerations justify the conclusive presumption that a child born in wedlock is legitimate even in the face of conclusive proof that it is not. Three policy considerations have been most frequently mentioned.

1. The Stigma of Illegitimacy

A refusal to bastardize a child born in wedlock. The stigma of bastardy should be narrowly weighed against values to be achieved in furtherance of social justice, truth and reason. Perhaps the most persuasive answer to this consideration is contained in Justice Fourn's dissenting opinion in *Wareham v. Wareham*, 195 Cal. App. 2d 61, at page 83:

"If the theory of the court is to protect the child from the stigma of illegitimacy, it is a mistaken idea. The child will ultimately know by the very nature of things that in fact and in truth the plaintiff in this action was not her father and that it was an absolute scientific impossibility that the plaintiff in this action could have been her father and yet the law is so declaring that the plaintiff is the father. What respect for the law does such a course build in either the mind of the person who is most directly affected, namely the child or in the mind of the general public from which the support of the law emanates. This brand of so-called justice is not substantial in any sense because it is grounded in hypocrisy and untruths."

2. Financial Burden

There has been an understandable hesitancy to exonerate a husband because a child might become a financial burden upon the state. In the first place, it is submitted that by the very nature of these cases, they are infrequent. When the court has no certain way of knowing who the father is, and the mother was married and cohabiting with her husband at the time of conception, the husband is the obvious choice. Logic and reason would support the applicability of the presumption of legitimacy. But where there can be no doubt as to the husband's status as "father" when he is excluded by scientific tests, no policy reason can justify a denial of the truth simply because there might be some additional burden to the state. This assumes, of course, that the true father cannot be located or financial responsibility imposed on him.

3. Family Integrity

Perhaps the most frequent and consistently argued policy in favor of the conclusive presumption is the reluctance to disturb the sacred integrity of the family unit. One can seriously question as to whether or not there is any "integrity" left when the parties are in court and publicly proclaiming that there has been adultery, infidelity, immorality, etc. Even in the prior California cases applying the conclusive presumptions, certain exceptions have been recognized:

- (a) If a husband was able to prove his potency, this fact could always be shown to eliminate or render inapplicable the conclusive presumption.
- (b) If the husband were residing out of town or absent (e.g., in military service) at the time of conception, such fact could likewise be shown.
- (c) It is assumed that if the husband were proven to be sterile, such fact could be shown.

In effect, what our cases have now affirmed is that if absence, sterility, impotency, were proven, this is all right. On the other hand, if the wife were unfaithful and committed adultery during marriage, we will not permit the use of blood tests to negate the husband's paternity. The inconsistency of the case holdings reaches absurdity. Once again a quote from Justice Fourt in his dissenting opinion in *Wareham v. Wareham*, 195 Cal. App. 2d 64, Page 85, 15 Cal. Reporter 465, 477-478:

"The matter of 'the integrity' of the family has been referred to from time to time as something which should not be impugned and that therefore the conclusive presumption should prevail regardless of truth or fact.

"Integrity is a state of quality of being complete, undivided or unbroken—an unimpaired state, moral soundness, honesty, freedom from corruption—a state of innocence.

"To impugn is to assail, to deny.

"Does anyone believe that there is any integrity in the family where the wife has admitted associating with other men and has given birth to a child which could not possibly in fact be the child of her husband and the husband has so charged such facts in a verified proceeding and has proven his allegations therein set forth beyond a peradventure of a doubt. Where is the moral soundness, the freedom from corruption, the state of innocence to be preserved in such a situation?"

IV. CONSTITUTIONALITY OF CCP SECTION 1962(5)

In a recent comment, Volume 35, Southern California Law Review, the writer raises serious question as to whether Code of Civil Procedure Section 1962(5), is constitutional as applied to facts where blood tests negate paternity. The article points out that the power of the Legislature to enact presumptions has been reviewed in many state and federal decisions, frequently resulting in a holding that the presumption is unconstitutional, especially where it is arbitrary and operates to preclude a party from asserting or presenting his defense to the main fact presumed. As stated by the Supreme Court in *Heiner v. Donnan*, 285 U.S. 312, the court held that a statute creating a presumption which operates to deny a fair opportunity to rebut it violates the due process clause of the 14th Amendment. Is there not serious doubt that a husband excluded by blood tests as the father of a child born to his wife, and who is not permitted to present this evidence to a court to overcome the conclusive presumption, is effectively deprived of due process of law?

V. CONCLUSIONS

A British writer once said: "Maternity is a matter of fact; paternity is a matter of opinion." This statement no longer holds true in certain situations. It is conceded that a blood test cannot determine who the father is, but it definitely can determine who isn't the father. It was suggested that inevitably our Legislature or the Supreme Court of either the State of California or of the United States, if presented with the question anew in the face of the present acceptance of blood tests, will rule that a husband is entitled to equate a scientific truth with justice

where it is urged (and he disputes) that he is the father of an illegitimate child. The Supreme Court of Maine, in a paternity case (*Jordan v. Mace*, 69 Atl. 2d 670) decided in early 1949, recognized the value and conclusive effect of blood tests in a paternity case:

"We are not disposed to close our minds to conclusions which science tells us are established, nor do we propose to lay down as a rule of law that the triers of fact may reject what science says is true; for to do so would be to invite at some future time a conflict between scientific truth and *stare decisis*, and in that contest the result could never be in doubt."

It was therefore urged that this committee recommend passage of Code of Civil Procedure Section 1980.8 reading as follows:

"Section 1980.8. The presumption of legitimacy of a child born during wedlock is overcome if the court finds that the conclusions of all experts, as disclosed by the evidence based upon the tests, show that the husband is not the father of the child."

VI. FINDINGS AND RECOMMENDATIONS

Findings

1. Previous efforts to enact legislation permitting blood tests to negate paternity despite the provisions of Code of Civil Procedure Section 1962(5) failed enactment in the legislative sessions of 1961 and 1963.
2. The conclusive presumption of legitimacy of a child born to a couple during cohabitation has been the law of this state since its enactment in 1872.
3. In the intervening years scientific knowledge and techniques have been developed to the point where it can now be determined with scientific accuracy in certain cases that a particular male could not have biologically sired a certain child of a certain woman. Yet our present law precludes the introduction of this evidence to refute the conclusive presumption that the husband sired his wife's child.
4. Serious question has been raised of the validity and social policy considerations of the present law which has been grounded on the stigma of illegitimacy, and considerations of financial burden and family integrity. Doubt has also been raised regarding the violation of constitutionally protected due process considerations by the present law.

Recommendation

1. The committee recommends that further study be made exclusionary regarding blood tests and conflicts in social policy which are engendered by the present suppression of scientific fact obtained by blood tests which negate paternity in order to effectuate the policy embraced in the conclusive presumption of legitimacy.

Part 7

CONSTITUTIONAL AMENDMENT FOR UNIFORM MARRIAGE AND DIVORCE LAWS *

I. THE PROBLEM

Article IV, Section 1 of the United States Constitution requires the several states to give full faith and credit to the public acts, records and judicial proceedings occurring in neighboring states. In a long line of cases going back to *Pennoyer v. Neff*, cite 95 U.S. 715, 24 L.Ed. 565, decided in 1877-78, the U.S. Supreme Court has established that only those actions taken by court having proper jurisdiction over the person or subject matter of the proceeding are entitled to full faith and credit in the sister states.

II. MIGRATORY DIVORCE

Migratory divorce, i.e., residents of one state going to another for the purpose of obtaining a divorce, did not become popular until late in the 19th century and no authoritative answers to the numerous questions raised by this practice were forthcoming until the U.S. Supreme Court addressed itself to this area in 1901 in the case of *Atherton v. Atherton*, 181 U.S. 155. Beginning with *Atherton* and running down a long line of cases decided periodically since then,¹ culminating with the two *Williams'* cases² in the 1940's it was established that domicile of one of the parties within the state granting the divorce is essential to give that court jurisdiction to dissolve and terminate many aspects of the marital status of the couple notwithstanding that one party did not participate in the action.

Difficulty results because of the requirements of establishing domicile in a jurisdiction. Derived from the Latin, *domus*, meaning home or dwelling house, domicile is the legal conception of "home." It is defined as that place where a man has his true, fixed and permanent home and principal establishment, and to which whenever he is absent he has the intention of returning or that place where there is a present intention of making a permanent home, for an unlimited or indefinite period.³ In order for a competent person to acquire a new domicile all that is required is his physical presence in the new jurisdiction, freely, and with the requisite mental intent that such jurisdiction shall be his domicile.

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, January 8-9, 1964.

¹ *Atherton v. Atherton*, 181 US 155 (1901); *Bell v. Bell*, 181 US 175, 21 S.Ct. 551 (1901); *Andrews v. Andrews*, 188 US 14, 23 S.Ct. 237 (1903); *Haddock v. Haddock*, 201 US 562 (1906).

² *Williams v. North Carolina I*, 317 US 287, 63 S.Ct. 207 (1942); *Williams v. North Carolina II*, 325 U.S. 226, 65 S.Ct. 1092 (1945).

³ *Kurilla v. Roth*, 132 N.J.L. 213, 38 A.2d 862, 864 (19--); in re *Garneau* 127 F. 677, 62 CCA 403 (19--); *Black's Law Dictionary*, Fourth Edition.

If one of the parties, usually the plaintiff, was in fact domiciled in the jurisdiction, and if the other procedural requirements, such as maintaining residence there for the required period of time, are satisfied, a divorce granted by the courts of that jurisdiction is entitled to full faith and credit in the other states, at least as to those elements which the court had authority to determine. The fact of whether or not domicile actually existed may be questioned in a trial *de novo* by a court in another state when the matter of full faith and credit is in issue there if the challenging party did not raise that issue in the first court or participate generally in the merits of the divorce action.⁴

New York and California have led the nation in establishing the concept of "divisible divorce" whereby a spouse, especially a husband, who flees to another state for the purpose of divorce is unable to terminate the property right of support possessed by his wife who does not participate in that foreign divorce.⁵

The result of these cases is important in two main areas: First, if the spouse being divorced participates in the foreign divorce, as by the entrance of an appearance by a local attorney retained for that purpose, the divorce decree is virtually unassailable. This is so despite the fact that neither party actually had a domicile in the divorce-granting state and despite the position taken by the U.S. Supreme Court long ago that the appearance of a nonresident (nondomiciled) defendant could not invest a court with jurisdiction over a suit for divorce instituted by one who had no bona fide domicile in the state.⁶ Parties intent upon obtaining a divorce in contravention of the established policy of their home state are thereby able to thwart the efforts of their home state to regulate the marital status of their citizens. This is one of the main reasons that New York citizens, who are confronted with a restricted domestic policy regarding divorce in New York where adultery is the only permissible grounds and California citizens, who are confronted with a restrictive domestic policy wherein divorce procedures take a minimal period of one year to become final, flock to sister states who gain lucrative economic incentives to continue trafficking in the so-called "quickie" divorces. It is for this reason that New York citizens constitute the largest number of people divorcing in Nevada while California furnishes the second largest number.⁷

⁴ A special appearance to contest the jurisdiction of the original trial court granting the divorce precludes a second, subsequent collateral attack of the divorce decree on jurisdictional grounds in the courts of a sister state where the decree is not susceptible to such collateral attack in the courts of the state which rendered the decree. *Davis v. Davis*, 305 US 32, 59 S.Ct. 3 (1938). The same result ensues from a general appearance since jurisdiction is one of the items which could have been litigated at that time. *Sherrer v. Sherrer*, 334 US 343, 68 S.Ct. 1087 (1948). A stranger to the divorce action who did not participate therein, as a child of the plaintiff, has been held unable to attack the validity of the divorce in a sister state if the law of the state where granted did not permit such a collateral within the granting state. In the only case of this type which has reached the U.S. Supreme Court, a child was not permitted to attack the validity of the father's Florida divorce collaterally in another state since Florida law would only permit such an attack on the decree within the State of Florida by a stranger who would be prejudiced in regard to some pre-existing right. The child was held not to have such a "pre-existing right." *Johnson v. Muelberger*, 340 US 581, 71 S.Ct. 474 (1951).

⁵ *Estin v. Estin*, 234 US 541, 68 S.Ct. 1213 (1948); *Vanderbilt v. Vanderbilt*, 1 NY2d 342, 153 NYS2d 1 (1956) affirmed on certiorari to the U.S. Supreme Court, 354 US 416, 77 S.Ct. 1360 (1956); *Hudson v. Hudson*, 52 Cal. 2d 735, 344 P2d 295 (1959); *Weber v. Superior Court*, 53 Adv. Cal. 405, 348 P2d 572 (1960).

⁶ *Andrews v. Andrews*, 188 US 14, 23 S.Ct. 237 (1903).

⁷ The estimated average cost of a Nevada divorce for a New Yorker is \$3,000 including transportation and six weeks' residency. For Californians the cost would only be reduced by the lower transportation costs.

Secondly, even though a wife does not agree to participate in the divorce desired by her husband, and even if she is protected by the concept of divisible divorce whereby her fleeing husband can only terminate his present inability to remarry by the divorce, she is faced with the difficulty of obtaining support for herself and her children from a man who appears in all respects to be bona fide remarried with its attendant financial demands on him for the second wife and family.

Because many of these divorces in both cases are in fact void for actual lack of the requisite jurisdictional requirement of domicile, they may not be attacked in the first instance because of the actual participation of the defendant spouse, nor in the second instance because of the practical costs and problems of proving the lack of mental intent necessary for the plaintiff to establish domicile in the foreign state. For this reason they are frequently referred to as "valid void divorces," divorces which are technically void because of lack of jurisdiction but which are given the effects of validity because of the inability of anyone to effectively challenge and establish their true status. When attacks are made they are frequently successful, resulting in nullification of the second marriage and often bastardization of the children.

III. EVASIONARY MARRIAGE

A similar but more frequent problem exists regarding evasionary marriages in sister states. Unlike divorce, the U.S. Supreme Court has not spoken to the issue of what minimal contracts are required with a state in order to contract a marriage there. The result is that for most purposes, mere physical presence in another state, coupled with compliance with their marriage regulations is sufficient to contract a valid marriage. The stage is thus readily set for those states which wish to traffic in evasionary marriages. Unlike divorce, the validity of evasionary marriages is usually determined by the rules contained in the doctrines resolving the conflicts of law between sister states. Marriages are usually evaluated under the general doctrine that a contract valid where made is valid everywhere. As applied to marriage, this doctrine results in marriages valid where performed being generally recognized as valid everywhere. The two exceptions are those marriages which contravene established principles of Christian-Judeo morality and that which is expressly prohibited by an articulated public policy of the home state. Thus the general doctrine has the serious disadvantage of completely failing to consider the public policy of any other state, such as the state from which the parties have temporarily sojourned for the purpose of contracting the evasionary marriage and the state to which they normally will immediately return.⁸

An attempt to relieve this situation has been made through the Uniform Marriage Evasion Act which has been subscribed to by a small number of states.⁹ This provision addressed itself, however, primarily

⁸ See 49 Columbia Law Review 693 and 14 ALR2d 624.

⁹ The act has been adopted in five states with slight modification: Illinois, Louisiana, Massachusetts, Vermont and Wisconsin. The National Conference on Uniform State Laws withdrew the act in 1943, stating that it tended to result in confusion because so few states had adopted. (Handbook of the National Conference of Commissioners on Uniform State Laws, 1943, p. 64.)

to the imposition of restraints on marriage upon those who have been finally divorced, such as in New York State where the defendant to a divorce action may not remarry until after three years have elapsed and only then upon the consent of the New York Court. This has been interpreted to be an impediment which applies only to marriage efforts within the state unless an attempt to marry is undertaken in one of the few states which have adopted the uniform evasion act. In those states one is unable to contract a valid marriage if he was unable to do so within his home jurisdiction.

IV. PROPOSED SOLUTION

As a solution to the problems set forth above, and an end to the subordination of the public policy of California and other jurisdictions to that of sister states which traffic in marriage and divorce of out-of-state residents, it has been proposed that the California Legislature pass a resolution memorializing the United States Congress to enact a constitutional amendment for ratification by the several states, granting to the Congress power to prescribe uniform requirements for marriage and the resident requirements and grounds for divorce throughout the United States.

The purpose and effect of this amendment is only to establish minimal requirements for marriage and divorce which will be uniform in the several states, thereby keeping that small majority now trafficking in evasory marriages and divorces from subordinating the public policies of the majority of states to their own economically oriented policies. Such legislation would *not* in any way delegate to the Congress the right to legislate other domestic relations matters such as custody, paternity, and all other matters relating to family law. This proposal is advanced as the only solution to this problem since any attempt at state initiative through uniform statutes will be thwarted by the very small group of states which are creating the problem.

V. FINDINGS AND RECOMMENDATIONS

Findings

1. Present interpretation of the demands of the full faith and credit clause of the U.S. Constitution, coupled with present application of the conflict of laws principles, has resulted in the subordination of the public policy of the several sister states to the economically oriented policies of neighboring states which traffic in evasory marriages and migratory divorces.
2. Attempts to rectify this situation have been abortive since those states which profit by this situation will not join in any effort towards uniform acts which would establish minimal contacts with a state before marriage or divorce could occur there.
3. The only effective alternative appears to be an amendment to the United States Constitution which would delegate to the Congress authority to establish minimal residence requirements for marriage and divorce which will be uniformly applicable throughout the country.

Recommendation

1. The committee recommends that the California Legislature memorialize the United States Congress to enact a constitutional amendment which will authorize Congress to establish minimal residence requirements for marriage and divorce in the various states of this country.
2. Attempts to rectify this situation have been abortive since those states which profit by this situation will not join in any effort towards uniform acts which would establish minimal contacts with a state before marriage or divorce could occur there.
3. The only effective alternative appears to be an amendment to the United States Constitution.

Part 8

ELIMINATION OF NEED FOR STIPULATION TO APPOINT COURT INVESTIGATOR *

I. LEGAL BASIS

One of the most important tools available to attorneys and the court in the determination of a proper child custody award is the use of domestic relations investigators, as provided for by Code of Civil Procedure Section 582 (former Section 638.1). Section 263 provides, in part, that

In any county, or city and county, which is authorized by law to have domestic relations cases investigators, it shall be the duty of such domestic relations cases investigators, in any divorce action then pending wherein the parties thereto have minor children to investigate and to report to the judge of the court wherein such action is to be tried all pertinent information as to the care, welfare and custody of the minor children of the parties to the divorce action.

Welfare and Institutions Code Section 582 provides:

The probation officer shall upon order of any court in any matter involving the custody, status or welfare of a minor, or minors, make an investigation of appropriate facts and circumstances and prepare and file with the court written reports and written recommendations in reference to such matters.

In a significant opinion the Attorney General of California has ruled that under this section: (1) The superior court may require an investigation and report by the probation officer in any matter involving the custody, status, or welfare of a minor and is not limited to those matters arising under the juvenile court law; and (2) the report may be received in evidence over the objection of any or all parties. 27 Ops. Cal. Atty. Gen. 292 (1956).

II. EVIDENTIARY VALUE OF DOMESTIC RELATIONS REPORTS

The purpose of investigators of domestic relations cases is to assist the court by "providing the trial judge with detailed information concerning the existing physical, moral and emotional conditions under which a child is presently living or those under which he will be living if his present custody is changed." Pfaff, Domestic Relations Investigators, 36 L.A. Bar Bull. 192 (1961).

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Los Angeles, October 8-9, 1964.

With respect to the reports it authorizes, Code of Civil Procedure Section 263 provides, in part:

Such report shall be filed not less than 10 days before the date set for the trial of the divorce action with the clerk of the court wherein such action is to be tried, and not less than 10 days before the trial of such action a copy of the report shall be served on each party to the divorce action.

The report of the investigators shall be admitted in evidence upon the stipulation of both parties, and shall be competent evidence as to all matters contained therein.

Such investigator or investigators who have investigated the care, welfare and custody of the minor children as provided for in this section, shall be present at the trial of the divorce action of the parties who are the parents or custodians of such minor children, and may be called to testify by the judge or either party as to any matter which they have investigated. The testimony of such investigator shall be subject to questions direct and cross which are proper, and shall be competent as evidence.

But under the California Constitution, the power of decision vested in trial courts is to be exercised by a judge, and may not be delegated, to investigators or other subordinate officials or attachés of the court. *Washburn v. Washburn* (1942) 49 C.A. 2d 581, 122 P. 2d 96. Thus, it has been held that the investigator under Code of Civil Procedure Section 263 stands in no better position than an ordinary witness, and must be available for complete cross-examination on any matter which he or she reports. *Sanchez v. Sanchez* (1961) 55 C. 2d 118, 10 C.R. 261; *Fewel v. Fewel* (1943) 23 C. 2d 431, 144 P. 2d 592. The court cannot make its decision on the report or recommendation alone but must hear evidence submitted by the parties. *Stanberry v. Stanberry* (1947) 81 C.A. 2d 412, 184 P. 2d 16. It is reasoned that the investigator's report, not being required to be under oath or to be made part of the record, is not competent evidence and is not a proper foundation for an order. *Moon v. Moon* (1944) 62 C.A. 2d 185, 144 P. 2d 596.

However, the report of an investigator may be admitted in evidence upon the stipulation of both parties and then becomes competent evidence as to all matters it contains. See *Exley v. Exley* (1951) 101 C.A. 2d 831, 226 P. 2d 662; *Noon v. Noon* (1948) 84 C.A. 2d 374, 191 P. 2d 35. The report is advisory only and the trial judge has a right to disregard it (*Prouty v. Prouty* (1940) 16 C. 2d 190, 105 P. 2d 295), but this rarely occurs in practice.

Use of trained domestic relations investigators has been praised as "expediting the administration of justice and stabilizing family relationships." Pfaff, Domestic Relations Investigators, 36 L.A. Bar Bull. 192 (1961).

III. PRESENT PRACTICES

By reason of the present provisions of Code of Civil Procedure Section 263, which requires that the report of an investigator can be admitted in evidence only upon stipulation of both parties, it has been the custom of some courts, prior to the appointment of the investigator (and often as a condition of appointment) to require a stipulation from

counsel that the investigator's report may be received in evidence. Without a stipulation, the court refuses or is powerless to appoint an investigator except by the provisions of the Welfare and Institutions Code. Where counsel for arbitrary or personal reasons refuses to stipulate to the appointment of a court investigator, the court is prevented from proceeding with an investigation through use of its own, trained personnel even though an investigation is reasonable and necessary in a particular pending hearing. If the court wishes to be informed nevertheless, it must resort to the use of probation department personnel under Welfare and Institutions Code Section 582. Such personnel are not specifically selected and trained for making child custody investigations, and are not under judicial control as to policy and procedures. But their report can be admitted over objection. The method proposed which would permit the courts to use their own child custody investigators in any case where one party, or the court on its own motion, indicated there was a proper need, is to amend Code of Civil Procedure Section 263 to delete the passage "upon stipulation of both parties" presently necessary for the report to be introduced.

If determination of the best interests and welfare of children require an objective inquiry by a court investigator, trial courts would be well advised on their own initiative to assign investigators to ascertain the facts essential to an intelligent decision. If, after receipt of such investigative report, the attorneys so require, the investigator may be subpoenaed or required to be present at the trial of the action, to give testimony concerning such report, or their appearance can be waived.

Past experience has indicated that in the normal practice most attorneys will accept the reports of investigators without requiring their personal presence at the time of the hearing. Their reports may be received just as the affidavits or declarations of the parties are presently received, by stipulation of the parties or the discretion of the court. (See Code of Civil Procedure Section 2009; *Skouland v. Skouland*, 201 Cal. App. 2d 677, 20 Cal. Rep. 185; *Muller v. Muller*, 141 Cal. App. 2d 722, 297 Pac. 2d 789. See Witkin, Evidence 342-343, on use of declaration in evidence. It was suggested that if it should turn out that counsel insist upon the availability of the investigator for cross-examination, which limits the ability of such investigator to perform his field investigation in an already overburdened situation, then both the legal profession and the judiciary must press for additional investigators or social workers to assist the court in its vital task. The savings of court time, of the time of counsel and the litigants (exclusive of the advantages or benefits to children) can well justify a request for additional appropriation for this purpose.

IV. REMEDIAL PROPOSAL

Based on the prior material, it was proposed that Code of Civil Procedure Section 263 be amended empowering a court for good cause to appoint an investigator without the stipulation of the parties, where a court is so advised in the interests of justice.

V. FINDINGS AND RECOMMENDATIONS

Findings

1. Use of domestic relations case investigators under Section 263, Code of Civil Procedure, to aid the court in making a proper determination in child custody cases is a highly desirable method of bringing all available information to the attention of the court. Such investigators are members of the court's staff, selected and trained according to high standards to do a particular, specialized task.
2. Present use of such investigators, however, is limited to those cases in which there is a stipulation by both parties to the introduction of the report. Where a party for arbitrary or personal reasons refuses to enter into such a stipulation, the court is prevented from using its own expert personnel but must proceed under Section 582 of the Welfare and Institutions Code if it wishes to be informed concerning the circumstances prevailing among the several choices available to the court in determining custody. The report of the probation department personnel may be received in evidence over the objection of any or all parties.
3. The committee believes the court should be able to do directly with its own highly trained staff what it can do by a more cumbersome method if it desires or needs to be fully informed.

Recommendation

1. Since reports by probation department personnel under Section 582, Welfare and Institutions Code, can be introduced, over objection, the committee recommends that Section 263, Code of Civil Procedure, be amended to permit the similar use of a child custody investigation report by the domestic relations investigators, regardless of stipulation of the parties, the investigator to be available, on request, for examination by either party.

Part 8

APPENDIX A

A Résumé of the History, Purpose and Functions of Domestic Relations Investigators Attached to the Los Angeles Domestic Relations Court *

This résumé is based on materials prepared and published by the Honorable Roger Alton Pfaff, Judge Presiding in the Consolidated Domestic Relations and Conciliation Courts.

History

The Superior Court of Los Angeles County, in 1929, first inaugurated the practice of utilizing trained investigators in domestic relations cases, where custody of minor children was a contested issue. In the beginning two assistant probation officers were officially assigned to the court. Since that time, due to rapid population growth and an inevitable increase in domestic relations cases filed, the court's staff of investigators has of necessity been enlarged until at the present time a supervisor and eight full-time investigators are employed.

Court investigators are members of the court's own personnel system and participate in the same retirement plan as the classified civil service employees of Los Angeles County.

Purpose

Trained domestic relations investigators are primarily objective "factfinders" for the court, providing the trial judge with detailed information concerning the existing physical, moral and emotional conditions under which a child is presently living or will be living if its present custody is changed. Investigators' reports save valuable court time, eliminating the necessity of many witnesses appearing to testify, and in many instances avoiding a court trial completely. Tensions and bitterness between the parties are increased by public recitations in the witness box of real or alleged misconduct on the part of the other. By avoiding such formal court hearings, personal animosities are reduced and future amicable relationships between the parents are fostered, thereby providing a more harmonious and stable environment for the children.

In addition to expediting the administration of justice and stabilizing family relationships, such investigations provide a fine public relations program for the bench and bar. The chronic complaint of witnesses who are subpoenaed into court with a consequent loss of wages and frustrating delays is practically eliminated in most cases, the witnesses having been interviewed by the investigator, in most instances at their convenience.

Qualifications

Although no rigid eligibility qualifications have been established for investigators, the court has certain essential and basic requirements.

An investigator must be a college graduate with extensive investigative experience. Although a degree in the behavioral sciences is not mandatory, it is desirable. The present staff are all highly qualified in these respects, which largely accounts for the competent discharge of their duties and the respect given their reports by lawyers and judges.

Professional qualifications and experience, however, are not the only criteria. An investigator should be mature, understanding, patient, meticulous in work habits, discreet, objective, and impartial. Above all, he should be possessed of that most important attribute essential to the successful administration of justice—common sense.

Functions

The investigator is a factfinder for the court. His functions do not include family counseling or becoming involved in psychological or psychiatric therapeutic procedures.

The investigator is an officer of the court and clothed with considerable authority in such position. He is issued a special superior court badge and other credentials which permit him to inspect records and interview individuals. Private investigators do not have this authority.

The investigator is not an advocate of the respective claims of the contestants. His primary concern is the welfare of the minor children.

An investigator's expenses are paid by the County of Los Angeles. The only instance where one of the parties is permitted to pay traveling or living expenses is where both parties stipulate to such payment in court, which becomes a part of the official record.

Where an investigation is to be made in another county in California (other than in a county on the periphery of Los Angeles County, such as Orange, Ventura, or San Bernardino), the probation department in the other county is requested to perform such service unless the trip to the other county is the result of a stipulation between parties, and then is paid for by one of the parties. The word "periphery" means those cities within reasonable distance from the border of Los Angeles County.

Before expenses for any trip to another county (except those counties enumerated above) may be allowed, as a county charge, an order by the board of supervisors is required.

Procedures

Section 263, California Code of Civil Procedure, provides in part as follows:

"... In any county, or city and county, which is authorized by law to have domestic relations cases investigators, it shall be the duty of such domestic relations cases investigators, in any divorce action then pending wherein the parties thereto have minor children, to investigate and to report to the judge of the court wherein such action is to be tried all pertinent information as to the care, welfare and custody of the minor children of the parties to the divorce action.

"Such report shall be filed not less than 10 days before the date set for the trial of the divorce action with the clerk of the court wherein such action is to be tried, and not less than 10 days before

the trial of such action a copy of the report shall be served on each party to the divorce action.

"The report of the investigators shall be admitted in evidence upon the stipulation of both parties, and shall be competent evidence as to all matters contained therein.

"Nothing in this section shall be construed as limiting a domestic relations cases investigator's duty to assist the superior court appointing him in the transaction of the judicial business of said court."

Perhaps the most succinct and clearest way to explain the procedures followed in a contested child custody case where an investigator is appointed would be to delineate the chronological steps taken by attorneys, investigator, and the court.

(1) At the order to show cause hearing relating to child custody, attorneys frequently request the court to appoint a court investigator. This may be done if both attorneys stipulate to such appointment. The court should also inquire in every such case as to the necessity for such appointment. This should be a uniform practice, for in many instances such appointment is simply for delaying tactics on the part of one party to the action. In other cases a brief inquiry by the court will reveal that the issues do not merit the expense of such an investigation; that a short hearing by court or commissioner will solve the controversy.

In some cases the court, by restricting the investigator's report to the one specific facet of the custody conflict in issue, can eliminate the customary overall lengthy investigation and report.

Where one or both of the parties refuse to stipulate to a court investigator, yet the court feels that there should be an investigation in order to properly determine the case, the procedure should then be for the court to order an investigation by the probation department, pursuant to Section 582 of the Welfare and Institutions Code, which requires no stipulation on the part of attorneys.

(2) When the court determines to order an investigation the clerk will ascertain what investigator is available and the continuance date for the hearing, to provide sufficient time for the investigation and the preparation and filing of the investigator's report.

The court also, prior to appointment of the investigator, makes the following statement: "May it be stipulated that the investigator's report may be received in evidence without the necessity of the investigator being personally present at time of hearing." Invariably the attorneys so stipulate.

This stipulation is vital to the efficient administration of the investigative staff and in no wise prejudices either party. It is understood that this stipulation does not preclude either party from calling additional witnesses or the same witnesses interviewed by the investigator to augment or refute the report. Nor does it preclude having the investigator personally present if one of the parties demonstrates to the court that the report is seriously in error.

However, prior to demanding such stipulation, it occurred all too frequently that the party receiving an adverse report would subpoena the investigator (thereby causing him to lose a valuable day in the field investigating), not for the purpose of correcting errors in the report, but simply to harass, embarrass and discredit the investigator on trivial procedural details.

(3) In the civic center the attorneys and clients, immediately after the investigator has been appointed, take the court file and report to the secretary of the domestic relations investigations, where their clients complete information forms, which include the names of the three or four best witnesses to be interviewed. In branch court cases the forms are mailed directly to the attorneys by the secretary of the domestic relations investigations.

(4) After a case in a branch court has been assigned to an investigator, the secretary of domestic relations investigations secures the divorce file from the clerk's office and has it ready and available for the investigator. This saves the investigator time in procuring the file personally from the county clerk's office. With the information forms, court file, and folder with other pertinent information, including the names of the parties' attorneys, the investigator is ready to proceed.

(5) Over half of an investigator's work is in the field, interviewing witnesses and public and private agencies that may provide pertinent information bearing upon the case, the keynote of the entire investigation being directed toward the best interests of the children. Interviews are also held in the investigator's office, the investigator at all times endeavoring to arrange such interviews at the convenience of the witnesses.

At the inception of the proceedings releases are secured from the parties, enabling the investigator to interview and obtain information from public and private agencies, including the parties' doctors, school records, and in cases of emotional disturbances, psychologists and psychiatrists. All of this information not only saves valuable time but is of great assistance in preparing a comprehensive and accurate report.

(6) Armed with all the factual data in the case, the investigator dictates his report, setting forth concisely the facts found, the respective contentions of the parties, and the corroborative statements made by the parties' respective witnesses, together with information from public and private agencies, including schoolteachers, doctors, etc.

(7) Formerly these reports were placed in the court file, which is open to public inspection. This practice has been discontinued, the original report now being filed as an exhibit subject to being opened only by the court. However, a copy is sent to each party's attorney prior to the hearing date, as provided by law.

(8) Where one of the parties appears in *propria persona*, the court has established the policy of notifying such party that the investigator's report has been filed, and inviting him to read same in the domestic relations investigations office. This procedure should be strictly followed. Experience has shown that where a party to the divorce action secures possession of the investigator's report he too often harasses and badgers the witnesses reporting unfavorably, whereas most attorneys, as officers of the court, are much more discreet and circumspect in their use of such reports.

(9) A considerable number of cases assigned for investigation are requested after the interlocutory or final judgment of divorce has been entered. It was discovered that in far too many such cases several investigations had previously been made, the parents continuing a constant series of custody battles, using the children as legal brickbats, to harass the other. In other instances this legal maneuver is made with the hope of getting a new and different investigator appointed, with a different conclusion. It is also not an uncommon practice in divorce cases to find that there have been several substitutions of attorneys, the disgruntled party retaining new counsel who is unfamiliar with prior proceedings and too busy to inspect the voluminous file. In one such case four different investigators had been appointed over a two-year period.

The present practice is to closely question the advisability of authorizing a reinvestigation a short time after a hearing and determination of the question of custody has been made, and if an investigation is warranted the case is assigned to the investigator who previously reported on the matter. This not only saves time, but discourages "shopping" tactics.

(10) The investigator's report customarily restricts itself to the physical and material factors involved in the controversy over custody of minor children. In certain cases the principal area of exploration and investigation is the emotional stability of the parents or children. In such cases, referring one or both parents or child or children to a psychologist or psychiatrist for an examination and report to the court, provides a more satisfactory solution, one of the parties being ordered to pay for such examination. The court maintains an accredited list of psychologists and psychiatrists who will perform such examinations for a nominal amount.

(11) A special note should be made concerning the restriction on witnesses furnished by the parties to be interviewed. The rule is that each party is entitled to three witnesses, never more than four. This of course does not include independent witnesses interviewed, such as school officials, doctors, etc. Experience has shown that a party's three best witnesses will provide adequate information; additional ones are merely cumulative and corroborative. This rule, of course, does not preclude the investigator from exercising his discretion and interviewing additional witnesses, if the facts so indicate.

(12) The conclusion of the investigator is a matter of considerable importance, both to the investigator and the court. No matter how clear, concise and factual a report may be, if the conclusion appears to be unrealistic and motivated by emotional considerations or personal prejudice, the overall effect of what would otherwise be an excellent report is considerably diminished.

Section 138 of the California Civil Code does not give a mother an absolute, undisputed right to the custody of minor children. The law says, and rightly so, that other things being equal, if the child is of tender years, it should be given to the mother; if it is of an age to require education and preparation for labor and business, then to the father.

The principal concern throughout all custody proceedings, of both investigator and court, should be the best interests and welfare of the

child. A case in point will best illustrate the importance of this fundamental concept.

A mother was granted custody of three children three years ago—two daughters, now 14 and 12, and a boy now 9.

The father remarried a year ago and is living in a spacious home, he being employed in an executive position by a large corporation. He has been paying a total of \$550 child support and alimony per month. Mother and children live in a three-bedroom apartment.

The undisputed facts show that the mother has become a chronic alcoholic; permits the children to fend for themselves, and spends her support money at bars and on a ne'er-do-well divorced alcoholic who is not supporting his children of a prior marriage. He stays in the mother's apartment, frequently sleeping there, and the 14-year-old daughter testified she found them in bed, drunk and nude.

The father, alarmed at the situation, instituted proceedings to secure custody of the children. None of the children indicated they wanted to live with the father, all having a protective attitude toward their mother.

A psychologist, from whom the mother was taking treatment for alcoholism, verified the mother's condition, expressing hope there might be some chance for improvement, and suggested that leaving the children with her might aid in her rehabilitation.

The recommendation was accepted by a court commissioner, who volunteered that in his opinion granting custody to the father might aggravate the mother's condition.

It is readily apparent that the commissioner was not only completely ignoring the clear language of the statute, but was not acting in the best interests of the children. We all are concerned with the rehabilitation of weak and unfortunate individuals, but such rehabilitation should not be at the expense and to the detriment of minor children.

Part 9

CHILD CUSTODY DETERMINATIONS *

I. INTRODUCTION

Throughout history, to do justice and receive it have always been considered as fundamental aspirations of man. They are as elemental as the aspirations to live, to be free from the tyranny of other men, to exert power over man and nature, to love and be loved. One of the greatest problems encountered in the process of giving and receiving justice is the constant challenge to find the standards by which we can measure the adequacy of justice.

For many years our marriage and divorce laws have been under continuous criticism. One area of family law which has proven to be unsatisfactory, ineffectual and frustrating to the litigants, the courts and the legal profession is the law and practice as applied to child custody disputes. Constant search and effort has emphasized the need to find the essential truth concerning the best interests and welfare of children. Without truth, justice is denied. Justice must be accomplished not only for the parents, but equally important, for the children and society. Many of those who have experienced and studied the problems are convinced that if our child custody laws and procedures are to be an effective instrument of social justice, it is time that we adopt a realistic approach to the solution of custody disputes, adapting our laws to the facts of life, while utilizing the best known modern day techniques and procedures available. They believe that our child custody laws are in need of reevaluation and change.

II. OUR CHILDREN—CITIZENS OF TOMORROW

While emphasizing the problems of children affected by divorce, it must be noted that children of divorcing parents are far from being the only casualties of marriage failure. They may not even be the most serious casualties. It has been stated repeatedly that it is not so much *legal* divorce but *emotional* divorce which is the destroyer of children. In the broader sense, the problem is not necessarily limited to children of divorce. Parents, more than any other group of citizens, are in a strategic position to decide the development of our nation. They are the link between the past and the future.

The situation of past generations, such as the 19th Century, when progress was relatively slow, or when, by comparison, human society was static and the task of parents was relatively simple stands in contrast to our present society. Previously what parents learned from their parents was transmitted to their children. Today we find that social conditions, moral values, and the ways of everyday living are chang-

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, January 8-9, 1964.

ing very rapidly. Today the social and cultural changes in our society are of epochal consequence. We are living in a so-called Atomic or Nuclear Age, and although from generation to generation mankind has ever sought to achieve freedom and democracy as a basis for harmonious social living, such dreams and aspirations have never materialized. One might ask "What does all this have to do with our problems as parents?" Parents are in trouble because they are caught in a net of confusion which is characteristic of the transistory cultural and social period through which we are passing. We are anxious to live in peace and harmony. We have made repeated efforts to make the world safe for democracy and we have sacrificed greatly in two major world wars. In each critical period of history, we believe that we have achieved the right answers, but we seem constantly to fumble and instead of solving our conflicts, we create new ones. This is quite obvious both in domestic and international relations alike. The conflict between nations, races and creeds, between management and labor, between man and woman, between the generations, between parents and children, is full of confusion and contradictions. The problems which we experience with our children are in a sense quite similar to the problems on a national and international level, whether they be the problems between the United States and Russia, the white man and the colored, between management and labor, or other similar problems.

Raising children is an application of social living. While it is only natural that we tend to be concerned with our children, we should not lose sight of the fact that each generation of parents is the foundation of the future. It is difficult to establish whether we first need better individuals to form a better society, or better society to produce better individuals. Certainly we can say that the two factors work hand in hand; the training of children influences the future social order just as living conditions determines the forms of upbringing.

There are at least three million children of divorce under 18 years of age in the United States today, and the divorce courts are adding about 300,000 more children to this group each year. Perhaps 50 percent of the divorce cases which go through the nation's courts have minor children involved, averaging about two children per couple. The manner in which the courts deal with these victims of domestic catastrophe, has an impact, directly or indirectly, on a substantial proportion of our people. It presents a challenge to the stability of our social institutions and is assuming threatening significance.

III. THE PROBLEM

Lawyers and judges who deal with domestic relations problems are reasonably agreed that no more delicate or difficult problems exist than custody disputes. Under existing laws and procedures the factors to be considered are so variable and the situations so diverse, that the law has been forced to resort to somewhat meaningless generalizations in the formulation of rules. For example, all courts are agreed that the best interests and welfare of a child is a determinative factor. Likewise, the party to whom custody is to be awarded must be a "fit and proper person." Too often these so-called generalizations or cliches are used by our lawyers and judges with basically no real investigation or thought given to what actually is to the best interests of the child.

Moreover, there are often honest differences of opinion concerning a fit custodial parent or the best interests of children. Individual discretion or judgment is not always a sure guide to custody matters. When one considers the fact that our divorce judges have a wide and an almost uncontrolled discretion in these matters, the problem is compounded. The exercise of this discretion cannot be considered simply as a legal function, no matter how learned in the law a judge may be. We must recognize that the discretion exercised by a trial judge is far less a product of his learning than of his personality and temperament, his background and interests, his biases and prejudices, conscious or unconscious. Hence, it is both necessary and practicable to attempt to give more definite substance to the generalizations that creep into our laws and into our cases.

In seeking to change our laws and procedure for handling custody disputes, we desire to substitute substance and reality to modern day conditions while retaining flexibility and discretion to resolve the varied and diverse situations.

IV. THE PERPETUATED PREFERENCE FOR MOTHERS

The United States Supreme Court, in the case of *Prince v. Massachusetts*, 321 U.S. 158 stated:

"It is cardinal with me that the custody, care and nurture of the child reside first in the parents, whose primary function and freedom include preparation for obligations the state can neither supply nor hinder."

All state statutes recognize this custodial preference in parents since parents are the natural guardians of the person of their children. Parents, therefore, have a natural and, *prima facie*, legal right to custody. But our laws in California go further and state that "Other things being equal, when the child is of tender years, custody should be given to the mother and if the child is of an age to require education and preparation for living or business, then custody should be given to the father." In the average situation, no person disagrees with the fundamental fact that the most important person in a child's early life is the mother. It is she who, from the hour of the child's birth is most immediately concerned with the child. The child is most closely attached to his mother unless she fails to function. We are told that many of the patterns of a child's personality are formed by the age of two or three, even though the personality may continue to be influenced throughout life. Therefore, the quality and quantity of the mother's love, companionship and attention in the early years are vital and determinative. Understanding, sympathy, tenderness and attention nurture the child with the basic start in life. Nobody quarrels with these obvious characteristics and nobody doubts that in most instances where young children are involved, the mother will continue to be the custodial parent, unless she is unfit or incapacitated.

Increasingly today we find that there is apparent contradiction between the mother's professed interest in her children and her performance. We see mothers delegating more and more of their parenthood and very little is left of a direct relationship between mother and

children. Because of the increasing freedom of women in our society, and the need and desire to compete with men in the economic world, the increasing stress on financial security or survival, we see mothers relying more and more on day or nursery schools, temporary sitters, relatives or camps to take over their children's rearing. They offer mechanical entertainment as a substitute for shared activities, sitting the children down before the radio or television set, or sending them off to the movies. They crowd their children's days with lessons in music, dancing, or other activities, in every situation introducing a variety of outsiders. Private schools or boarding schools are sometimes thought to be the answers. If not, finishing schools (where they can be afforded) are often introduced. In each area of activity, the mothers seem to pile up superficial accomplishments, and often reject their children. Mothers, and parents generally, delude themselves that they are fitting their children to live a richer life, but in fact, these techniques are merely substitutes for the more important learning which children can acquire in no other way except by shared experience with their parents. How often have we seen children with a playroom full of toys, dolls, bicycles and various contraptions, and the child is totally "bored." In other words, childhood is a time of learning to live as an adult, and the child's way of learning is by way of identification with the parent or parents who have the greatest significance for him. It is not so much the words they say, but what they do and how they feel and the way they face their own lives as adults which are meaningful to the children. Out of these parent images the child or children unconsciously create their own attitudes, their acceptance or rejection of the responsibilities and privileges of adulthood. It is also apparent that to shelter a child from the expected defects of or difficulties of everyday living, or to surround him with delusion and spare him all frustration is to do him no service. He is born into a world with problems, surrounded by dangers, and while he needs physical protection and the protection of his family love, he also needs a gradual acquaintance with reality.

Tested by these standards and by these facts of life, mothers may not be the preferred or best choice as a custodial parent. The proposed statement of policy (Appendix A) seeks to vest in our courts the continued preference in favor of parents. But since the essential role that the modern-day mother assumes is substantially different from the years in which the custody standards were formed, one can seriously question whether the mother is entitled to the same perpetuated preference in the law. Too often we find indifferent or nondeserving mothers who do not meet the intelligent standard of a fit parent. To give her custody frequently amounts to habit or "sentimentality," but is actually harmful to a child. Should not the father have the same or equal status in law to assert his custodial right?

Perhaps in the earlier generations of our grandparents, America was unified by the drives to push back the frontier, found a new nation, welcome pioneers and freedom seekers from all over the world. Certainly we can look with pride to the prodigious feats of our participation in two major wars, making possible for the world, and the people in it, a better future. But with the vast diversity of our population, there has been lacking a firm sense of direction in rearing our chil-

dren, and often there has been outright failure. In this evaluation process, it is time that the rights of the children and society be given equal consideration.

V. RIGHTS OF THIRD PARTIES AS CUSTODIANS

It will be noted that in the proposed statement of legislative policy, attached hereto as Appendix A, it is provided that although custody *shall* in the first instance be awarded to either parent according to the best interests of the child, custody *may* also be awarded to persons other than the father or mother whenever that award serves the best interest of the child. Any person who had had *de facto* custody of the child in a stable and wholesome home and is a fit and proper person shall, *prima facie*, be entitled to an award of custody. Such proposed revision will conflict with and reverse existing law. The law has long recognized that parents are the lawful custodians of their minor children. The right to care and custody of a minor child is treated as one of the natural rights incident to parenthood. The corollary is that the law presumes that the best interests of the minor child will be best served by keeping the child in the custody of its parents or parent. As the Supreme Court of the United States stated in the case of *Meyer v. Nebraska*, 262 U.S. 390 (p.399):

“No court can for any but the gravest reasons, transfer a child from its natural parent to any other person . . . since the right of the parent . . . to establish a home and bring up children is a fundamental one and beyond the reach of any court. Therefore, invariably in all cases involving a contest between a parent and third party (usually a relative) it is the duty of the court to award custody of the child to the parent, unless the parent is found unfit or incompetent to have custody.”

What is wrong with such law? The assertion is that such law stresses a proprietary or property interest in children, and does not in every case conform to or assure the best interests of the children. As was stated by a leading Supreme Court case of the State of California (*Roche v. Roche*, 25 Cal.2d 141, 152 Pac.2d 999):

“In other words the child is regarded somewhat as a chattel and the property interests therein of the parent is made paramount to the best interests of the child . . . With the disruption of the home by divorce the need of the children of that home for the protection of their interests by the state may well become greater and the personal rights of the parents to the custody of the children should, and ordinarily, to some extent at least, must, yield to the welfare of the children.”

It does not make sense to require a court to brand or find a parent or parents to be unfit as a condition of a custody award to a third party. Perhaps a foster parent, a grandparent or a relative who had had physical custody of the child for a period of time is in fact the best choice for the child. Why should a court be deprived of the discretionary right to award custody to a third party if it is in the best interests of the child, without being required to find either or both

parents unfit? As was stated by Judge Schauer of the California Supreme Court, in his dissenting opinion of *Stewart v. Stewart*, 41 Cal. 2d at 453, 260 Pac.2d at 48:

“Neither the law, reason, justice nor socially desirable consequences require that a child’s natural parents be branded in a public and permanent judicial record as ‘unfit’ before custody (always temporary and subject to change, as a matter of law) can be awarded to one not a parent. On the contrary, such a finding will in many cases only result in unnecessary and irreparable harm to both parent and child.”

For several examples of situations where a third party custodial parent may well be considered and should be given *de facto* or *prima facie* right to custody, consider the following statement:

a. A mother and father are in the process of divorce when the mother dies unexpectedly, committing suicide, leaving an eight-month-old daughter to be placed in the care of a maternal grandmother, aged 50. Maternal grandmother raises this child for a period of six years. The father shows casual interest but contributes to the support of the child. Upon remarriage six years later, father seeks custody of his daughter. The relationship between grandmother and granddaughter is wholesome and the grandmother is desirous and anxious to continue raising her grandchild. The child makes good progress with her grandmother and grandfather. Father commences custodial proceedings. The court ruled in this case that it was helpless under the law to continue custody with the grandmother, but on the contrary, under the law, in the absence of a showing that the father was unfit, he must receive custody. The whole hearing was a degrading one involving efforts and attempt to drag up or conjure up evidence in an attempt to brand the father as unfit. The interests of the child were overlooked.

b. Take, for example, a more interesting case that hit newspaper headlines in 1961. An entertainer of repute had custody of two daughters of a prior marriage, ages 13 and 17. His wife, for a period of at least seven or eight years, acted and performed in the role of an excellent substitute stepmother with both girls loving her and having a good relationship with her. On the death of the father, the natural mother of the children came to California and sought custody. In these circumstances, can one justify a law which would give the natural mother preference and right to custody of these girls, irrespective of what is for the best interests of the children, including the complete disruption of their lives? Fortunately for these girls, guardianship was ordered for them and they chose the stepmother as guardian. On this basis the natural parent was denied custody.

We have two striking examples where the children’s custody should be awarded to a third party, but the law cannot accomplish this result without finding the parents unfit.

As harsh as the consequences may seem to parents and others, there are occasions when custody by persons other than parents can better

safeguard and further the best interests of minor children. The drama of divorce is of itself so compelling that parents tend to lose perspective and sight of basic values. It is not so much that parents have been unconcerned about their children during the traumatic experiences incident to divorce, but their concern for or responsibilities to the children have been pushed aside by intense preoccupation with their own struggle.

The vested or proprietary interest of the parent, stemming in part from the concept that "blood is thicker than water," should give way to the realities of the situation. The vital interests of the children and of society are entitled to an equivalent consideration at all times, even if this results occasionally in a custody award to a nonparent. It should not be assumed that a discretion so vested in our courts will be abused, and safeguards for the parents undoubtedly can be achieved. It would appear, however, that a change in basic attitudes in this area of controversy cannot be expected without legislative action, which is the proposal submitted for consideration.

VI. THE USE OF EXPERTS—IMPARTIAL EVALUATION OF CUSTODY DISPUTES VERSUS OUR ADVERSARY JUDICIAL SYSTEM

The prior discussion has centered on the substantive law as it relates to an award of custody to either parent or to third parties. We are continually reminded that the best interests and the welfare of our children are controlling in determining custody disputes, so long as the parent or parents or third parties are fit persons. The principles are simple. And yet, the law has been criticized for many years for not having been effective in dealing with child custody problems. The reasons are not hard to find. Parents, whether divorced or divorcing, who present their unresolved problems concerning their children to their attorneys and the courts rarely find complete or adequate solutions. The children are often caught, as innocent victims, in atmosphere charged with bitter emotions and a pulling and hauling from one temporary solution to another, and perhaps from one jurisdiction to another. In at least 85 percent to 90 percent of the divorce cases filed throughout the country, divorces are granted in default or uncontested hearings where property settlement agreements are presented for court approval. The agreement usually represents many hours of bargaining and compromise (primarily concerning property division and support claims), and the trial court generally grants the divorce and approves the agreement with only a few routine questions concerning whether the parties have understood the agreement and are satisfied therewith. Yet, in one of its most vital aspects, namely, the custody of children, the agreements are not inquired into. Custody of children is customarily granted with little or no evidence concerning the children or their welfare, since the court normally assumes that the parties have taken this into consideration in arriving at their settlement.

Experience has demonstrated that custody awards are never permanent or unchanging, but may be continually modified because of changing circumstances that affect the best interests of their children. Custody battles thus occur before and after a divorce and constitute an area of great difficulty and delicacy for the court. Disputes over custody and controversies over visitation rights often involve painful,

emotion-charged issues concerning the fitness of individuals to bring up children, the psychological and emotional reactions of a child to a proposed custody and visitation arrangement, and the desirability of a particular environment as affecting the stability and security of the child. Too often parties and their lawyers are forced to concede that the law, courts, and the procedures adopted, leave the parties in a state of confusion, frustration and resentment. One of the principal reasons that such dissatisfaction is expressed is that courts proceed in the same type of adversary proceeding as in the ordinary civil or quasi criminal case. Parents thus resume the role of adversaries with respect to their children, and often renew the same divorce battles with respect to each other. The children are helpless pawns. In the welter of conflicting charges, countercharges and recriminations, it is little wonder that a court has difficulty in finding the truth affecting the true welfare of the child. It is time that we realize that custody problems cannot and should not be handled in the traditional adversary type of proceedings.

A unified family court should be staffed and equipped to deal with all problems of the family, including custody matters. Such court should be staffed with personnel (as may be necessary or reasonable in a given community) including psychiatrists, psychologists, social workers, probation officers, investigators. If issues have been raised concerning the fitness of either parent, an investigator may be the answer to inquire into the existing physical, moral and emotional conditions under which the child is presently living. Investigators properly selected and trained as an arm of the court have proven their worth in expediting the administration of justice and in stabilizing family relationships, in many jurisdictions where used. Many lawyers will recommend such procedure to avoid battle where a reasonable solution can be reached.

The emotional or mental health of parents is clearly an important factor to be weighed in an award of custody, along with others, in determining the best interests of the child. With the advent of psychiatry and rapid strides in the field of mental health, no stigma should attach to raising the question of the emotional or mental fitness of either parent in custody proceedings. However, emotions and hostilities seldom rise higher than when the warring parents face each other over the custody of their children. Psychiatrists are sometimes called in, but they respond with reluctance because, in most instances, they are called to support or refute the case of an individual parent. They are infrequently called by the judge as an aid in making a wise and impartial decision for the welfare of the child, for the reason that such personnel are not available and no budgeted funds permit this procedure. When called as witnesses for either party, psychiatrists or psychologists become objects of attack in the so-called arena of battle and they justifiably resist such approach. More important, because of the cost factor most parents are precluded from employing expert help, guidance or opinion.

We must recognize that the need is for expert opinion from psychiatrists, psychologists and social workers as the need may indicate, attached to the court itself rather than to either side. These experts should be entitled to investigate and determine the circumstances of the family, to consult or test the children or any person having pertinent information or opinions concerning the welfare of the children.

These specialists or experts should have an unprejudiced opportunity to explore the custody situation with both parents and should have an obligation to provide, where necessary or reasonable, the psychological basis for decision in the sole interest of the child. The suggestion or recommendation is not revolutionary. No adoption is completed in any state without a very thoroughgoing investigation into the fitness of the prospective adopting parents. Even in criminal or quasi-criminal proceedings probation personnel inquire into the background of defendants before sentence is imposed. Should not we expect at least the equivalent in determining the destiny of our children? It is therefore proposed in the statement of policy that whenever good cause appears therefor, a court may require an investigation and report concerning the care, welfare and custody of minor children in divorce proceedings. It is likewise provided that a court may hear the testimony of any person or expert whose skill, inside knowledge or experience is revelant to a just or reasonable determination of what is the best physical, mental, moral and spiritual well-being of the child whose custody is at issue. Such testimony may be produced by either party or upon the court's motion.

VII. A FAMILY COURT AND THE SELECTION OF FAMILY COURT JUDGES

It has long been an accepted fact that the traditional adversary procedures of the law when used to resolve domestic conflicts tend only to increase and intensify antagonism and hostility in and among the members of the family. Without a properly equipped court and a specialized judiciary trained and skilled in the disposition of custody disputes, all the laws and procedures which we may adopt or legislate may be of little avail. For many years it has been urged that what we need is a family court which would compromise a new single integrated court established for the purpose of resolving all problems and conflicts arising from family relationships. In such court there would be facilities, including the social case work, conciliation services, counselling, probation, clinical psychiatric and psychological services, all able to assist the court. Judges of family courts must be selected on the basis of qualification. They must be specialists in human relations and family problems. Their primary point of view should not be the resolution of legal issues of opposing parties and counsel, but rather analysis and clarification of the human conflicts that have resulted in the case before them.

It is high time that our legal profession, and the population at large, be aroused concerning the seriousness of our problems. In California, and probably in most metropolitan jurisdictions, divorce or family disputes have long outnumbered all other civil actions combined. The statistics are staggering. Each year more than half a million marriages fail. The latest percentage is that one out of four marriages generally, and one out of two marriages between the ages of 18 and 26, result in divorce. Aside from the marriages that fail, there are hundreds of thousands of families who experience emotional divorce, and who are completely disorganized or disrupted without seeking a legal divorce. Broken families breed juvenile delinquency and personality maladjustment and crime, and threaten the family as the very foundation of our

society. At least 15 years ago, Reginald Smith presented a report on the topic of the American Bar Association, in 1948, supported by Judge Paul Alexander, a founder of the Family Law section:

“The cost of our present divorce system in terms of human tragedy has become too high to be tolerated any longer. The American Bar Association has always been sympathetic to the evolution of family courts. The time is ripe to give the movement a great forward push.”

VIII. MISCELLANEOUS

The proposed statute purports to deal with additional considerations in custody awards, such as the right of modification at all times in the best interests of the children, preferably with the same court, if possible, that heard the original issues. The rights of children who achieved an age of maturity sufficient to voice an intelligent preference is preserved. Even as these remedial or constructive measures are proposed, new problems confront us. One serious problem justifies mention: the problem of interstate enforcement of custody disputes. With the tremendous population surge and the frequency with which families move about from state to state, increasingly it is found that the majority of state courts do not consider themselves bound to enforce foreign custody decrees, but will redetermine custody in the best interests of the child so long as the parent seeking such determination is not in contempt of, or in willful violation of, the prior court order. How to deal with the interstate enforcement of such custody decrees presents a real challenge to assure stability.

IX. CONCLUSION

The proposed revisions or changes in child custody laws or procedure do not involve any startlingly new concept. Nor do the suggestions present any magic formula. But they are realistic and of a constructive nature. The purpose is to put into effect, laws and procedures that assure for all children (including children of divorce) the best available tools and opportunity to become emotionally mature parents or citizens of tomorrow. It is not denied that the task is vast, complicated by the conflicting jurisdictions of the individual states, by the lack of enthusiasm for this phase of law and the lack of funds. It is beyond doubt but that the day is coming to improve family law and raise it to the dignity and respect to which it is entitled.

It has been said that beyond nourishing food, clothing and shelter, children need little further that is material. But their needs of the spirit, including love and just treatment, although simple, are absolute. If these needs are not met, and we deprive them of the consideration and justice they deserve, nothing else can serve in their place. On the other hand, if these needs are met, nothing else matters.

The proposed legislative changes in our laws are urged in order that we can give the forgotten and harassed victims of divorce, our children, the maximum opportunity as citizens of tomorrow.

X. FINDINGS AND RECOMMENDATIONS

Findings

1. There is a substantial segment of professional opinion among those who are frequently involved in child custody determinations which feels present law and practice as applied to child custody disputes is particularly unsatisfactory, ineffectual and frustrating to litigants, the courts and the legal profession. This professional opinion advocates a more realistic approach to the solution of custody disputes, utilizing modern knowledge, techniques and procedures to update statutes which were formulated with what is now deemed to be an unwarranted stress on a parent's proprietary or property interest in their children.
2. As between parents there is the view that mothers have been given an unwarranted preference by the present California custody statute which is harmful to the children in an important minority of the cases.
3. The increased freedom of women in our society, the need and desire of some women to compete with men in the economic world, and the evidence that many women spend no more or not as much time with their children as their former husbands could, suggests that since the essential role which the modern-day mother assumes is substantially different from what it was in the years when present custody standards were formulated, the philosophy behind those statutes should be reexamined.
4. The increased incidence of parents with legal custody establishing their children in situations where the *de facto* custody is in another indicates that study should be made of the disruptive effects of removing a child from an established, stable and wholesome environment in order to uphold the preferential claim of a parent which the court is unwilling or unable to declare unfit.
5. Greater use of impartial professional opinion in custody disputes, particularly as this could be accomplished within the framework of a true family court, warrants further study, especially to ascertain the extent to which the interests of children are presently protected within the scope of an adversary proceeding.

Recommendation

1. The committee recommends that an intensive study be made of child custody determinations in this state, with particular emphasis upon the five areas discussed in the preceding findings.

Part 9
APPENDIX A

PROPOSED STANDARDS AND CONSIDERATIONS IN DETERMINING
OR MODIFYING CHILD CUSTODY ORDERS

In actions for divorce, separate maintenance, or any other proceeding where there is at issue a dispute as to the custody of a minor child, the court may, during the pendency of the action, at the final hearing or any time during the minority of children, make such order for the custody of such minor children as may seem necessary or proper. In awarding the custody, the court is to be guided by the following standards, considerations and procedures:

- (1) Custody *shall* be awarded to either parent according to the best interests of the child.
- (2) Custody *may* be awarded to persons other than the father or mother whenever such award serves the best interests of the child. Any person who has had *de facto* custody of the child in a stable and wholesome home and is a fit and proper person shall *prima facie* be entitled to an award of custody.
- (3) If a child is of sufficient age and capacity to reason, so as to form an intelligent preference, his wishes as to custody shall be considered and be given the due weight by the court.
- (4) Whenever good cause appears therefor, the court may require an investigation and report concerning the care, welfare and custody of the minor children of the parties. When so directed by the court, investigators or professional personnel attached to or assisting the court shall make investigations and reports which shall be made available to all interested parties and counsel at least 10 days before hearing, and such reports may be received in evidence if no objection is made and, if objection is made, may be received in evidence provided the person or persons responsible for such report are available for cross-examination as to any matter which has been investigated.
- (5) The court may hear the testimony of *any person* or expert, produced by any party or upon the court's own motion, whose skill, insight, knowledge or experience is such that his testimony is relevant to a just and reasonable determination of what is to the best physical, mental, moral and spiritual well-being of the child whose custody is at issue.
- (6) Any custody award shall be subject to modification or change whenever the best interests of the child require or justify such modification or change, and wherever practicable, the same judge who made the original order shall hear the motion or petition for modification of the prior award.
- (7) Reasonable visitation rights shall be awarded to parents and to any person interested in the welfare of the child in the discretion of the court, unless it is shown that such rights of visitation are detrimental to the best interests of the child.

Part 10

ESTABLISHMENT OF FOREIGN DIVORCE DECREE *

I. THE PROBLEM

Under present practices, when a foreign divorce decree establishes support provisions and there is a supplemental action commenced in this state, the judgment of divorce of the foreign court is first established at an order to show cause hearing wherein temporary orders are sought. Subsequently the same decree must be reestablished in a second hearing on the contested trial calendar or as a default. This second establishing of the same decree is simply a waste of the attorney's and the court's time.

II. REMEDIAL PROPOSAL

All attorneys seem to agree that a foreign judgment in a divorce case should be heard once and for all at the original hearing, usually at an order to show cause hearing in conjunction with the complaint to establish a foreign decree, and that the determination be final at that time. Either it should be established or it shouldn't, and one hearing by a judge should be sufficient.

Accordingly, it is proposed that Section 1913.5 be added to the Code of Civil Procedure to provide that if in any action to enforce support provisions of a judgment of a court of another state of the United States, there is a hearing on an order to show cause why relief *pendente lite* should not be granted, and at such hearing the existence of such judgment is proved, its existence is thereby conclusively established for the purposes of such action and shall not again be litigated in later stages of the action.

III. FINDINGS AND RECOMMENDATIONS

Findings

1. The present duplicating procedure of establishing foreign divorce decrees at order to show cause hearings for relief *pendente lite* and subsequently repeating that procedure at a hearing on the contested trial calendar or as a default is a needless waste of judicial and attorney time, needlessly increasing the cost of litigation.

Recommendation

1. The committee recommends that an amendment to the Code of Civil Procedure be enacted to provide for a single establishment of sister-state decrees at the initial hearing which will be conclusive in all subsequent stages of the action.

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, October 8-9, 1964.

Part 11

MANDATORY APPEARANCE OF DEFENDANT AT INTERLOCUTORY HEARINGS *

I. THE PROBLEM

Many defendants appear at an order to show cause hearing wherein an order is made for temporary custody, child support, and/or alimony. The defendant complies with these orders. Subsequently, no answer having been filed by the defendant, his default is entered. A number of weeks or months thereafter the case is set down as a default hearing and an interlocutory decree is entered. In many cases the interlocutory decree varies substantially from the *pendente lite* order and awards valuable property, real and personal, to the plaintiff.

When the interlocutory judgment is served upon the defendant he immediately, in consternation, rushes to an attorney, complaining that he had no idea that such was to be the order of the court. Or that he had an entirely different understanding with his wife. Or that he thought that the *pendente lite* order settled their property rights. The attorney then files a motion to vacate and set aside the interlocutory decree, on the grounds that it was entered by fraud, mistake, surprise or inadvertence. In most cases the motion is granted. All of this involves a tremendous waste of time both to counsel and to the court.

II. PROPOSED SOLUTIONS

The difficulties described above could be largely avoided by requiring that where a *pendente lite* order has been made after filing of the divorce complaint, and the defendant has defaulted, before any default hearing for an interlocutory decree may be had the plaintiff must mail to the adverse party, at his or her last known address, a notice of the time and place of the default hearing, at least 10 days before said hearing, and a statement that by statute the defendant's appearance is required at that hearing.

A similar arrangement has been established in the new Wisconsin Family Code. Section 247.125 requires that the party in default in divorce actions is to be personally served before trial with an order to appear upon the trial, unless he or she is a nonresident of the state or the court shall for other good cause otherwise order.

A Wisconsin jurist writing about the new Wisconsin Family Code said:

“Among the purposes of having both parties present is that both can be apprised then and there of the judgment granted, to receive the admonishment (of the court) as to the effective date of

* This part of the final report is based on materials submitted to the Assembly Interim Committee on Judiciary during the course of its study of marriage and divorce problems.

the judgment of divorce, if granted, and their conduct in the meantime; if there are children of the marriage, to go into the matters of custody and support, and how any arrearage on temporary orders is to be disposed of." Dreehsler, *The Family Code*, 33 *Wisc. Bar Bull.* 9, 14 (April 1960).

An alternative proposal is to require only that a written notice of the interlocutory hearing be mailed to the defendant without requiring his appearance.

III. FINDINGS AND RECOMMENDATIONS

Findings

1. An excessive number of interlocutory judgments in divorce matters are set aside and reheard, resulting in great loss of time and money for clients, attorneys and the courts.
2. A primary cause of this situation appears to be the fact that many persons erroneously believe the disposition of property, custody of children, alimony and support provided for in *pendente lite* orders will remain unchanged in the interlocutory decree.
3. Divorce is a vital event in a couple's lives and a vital event to the society wherein they live.

Recommendation

1. The committee recommends that further study be made regarding the proposal that defendants be required to be present at the interlocutory hearing unless excused by order of the court. Such study should explore the extent to which the proposal might be expected to reduce the incidence of requests for vacations of interlocutory decrees, and the extent to which the presence of the parties at the hearing will facilitate the court's task of deciding upon custody, visitation, property division, alimony and support. The efficacy of merely requiring an additional written notice to the defendant prior to the interlocutory hearing should be included in such a study.

Part 12

DISCLOSURE OF ATTORNEY'S FEES TO COURT WHEN SEEKING FEE PAYMENT ORDER FROM ADVERSE PARTY *

I. BACKGROUND OF THE PROBLEM

For a number of years judges, court commissioners, the State Bar, family law committees on both the state and county level, and individual attorneys have been struggling with problems arising from private agreements for fees and requests of the court to award fees from an adverse party. There are two aspects to the situation: first, the requirement that an attorney who makes an agreement with his client (usually a wife) for payment of his fees, and then seeks a court order asking an award of fees from the adverse party (usually the husband), without disclosing the arrangements to the court; and, secondly, the 1893 decision of the California Supreme Court which strongly suggests that where a wife has agreed to pay her attorney, the husband cannot be ordered to do so. The State Bar has had numerous complaints about certain unethical practices, many of which are unfortunately well founded, whereby an attorney will prepare an affidavit for the plaintiff in a divorce case to file, alleging that she has no arrangement with her attorney for the payment of court costs or fees, and then immediately thereafter have that client sign a retainer agreement providing for fees on a contingency or other basis. There appears to be no question that such practices are a fraud upon the court and are most certainly unethical. The Los Angeles court is changing its affidavit to provide for specific representations both by the client and the attorney as to this matter, but it appears that it would be good practice to have a state law to provide that such disclosures be made, to remove the present Supreme Court holding which is a deterrent to full disclosure, and perhaps to provide a criminal penalty for violation of the new disclosure statute.

The present difficulty is largely based on an old but still standing California Supreme Court decision, *Mudd v. Mudd*, 98 Cal. 320 (1893) which strongly suggests that where a wife has agreed to pay her attorney, or if he agrees to take her case gratuitously, the court cannot order the husband to compensate her attorney. Actually, the *Mudd* case involved an agreement by the attorney to represent the wife without fee, but the court goes beyond those facts, stating at page 322:

"The object of the above section of the code is to enable the wife to properly present her cause of action or defense to the court, and if she can do this, either by reason of the fact that she has a

* This part of the final report is based on testimony received by the Assembly Interim Committee on Judiciary at its hearings on domestic relations in Los Angeles, October 8-9, 1964.

sufficient separate estate, or has the custody and management of a sufficient portion of the community property, the court would not exercise a proper discretion in directing the husband to defray her expenses in the action. So, too, if her attorney has made an agreement with her that he will take charge of her case in court for a definite amount of money, or gratuitously, the necessity of calling upon the husband for money therefor is removed."

The court seems to base its decision upon the idea that, since the wife can only be awarded fees where the award is "necessary," if the wife has already obtained the services of an attorney by her own agreement to pay, it is not "necessary" to order the husband to make the payment, and such an order is improper. Thus the word "necessary" is taken to mean that the services (or goods) to be paid for by the husband could not possibly be obtained unless he pays for them.

This seems much too strict an application of the word "necessary," employing the word in a sense which has been rejected in analogous situations. For example, to obtain *pendente lite* support under Civil Code Section 137.2, the wife must also show that such payments are "necessary." Often the wife has run up grocery bills and other obligations for living expenses prior to the order to show cause. In such cases, the argument accepted in the *Mudd* case might again be asserted—that is, if the wife has already obtained the groceries on the basis of her own promise to pay and without an order that the husband pay, how can it be "necessary" to make such an order?

Yet, we know the court may require the husband to pay such bills or even to reimburse the wife if she has already paid them, e.g., *Larsen v. Larsen*, 101 CA2d 862, 865 (1951).

Of course, there are circumstances where the husband's payment of fees or support for the wife will not be considered "necessary," as where the wife's separate *income* is sufficient to meet all of her expenses, including the fees or other payments in question. *Loeb v. Loeb*, 84 CA2d 141, 144-154 (1948).

But where the wife's income is not sufficient to meet her expenses and fees, the court may order those items paid by the husband, even though there is another possible source of payment. Thus, even though the wife has substantial separate property, to the extent that her *income* is insufficient to meet her expenses and pay her fees, the husband will be ordered to pay her fees and provide for her support, even though the wife could have sold her property to meet those needs, e.g., *Larsen v. Larsen*, 101 CA2d 862, 866 (1951); *Westphal v. Westphal*, 122 Cal. App. 379, 382 (1932).

It seems plain, therefore, that the word "necessary" in the various subsections of Civil Code Section 137 dealing with alimony, child support and fees does not require a showing that there is no other possible way these needs could be met, as the *Mudd* case suggests.

The fact that the wife has promised to pay her attorney does not mean that it is not "necessary" to order her husband to do so. For example, the wife may have intended to pay the fees by invading her principal, or by reducing her expenditures for rent and food below a reasonable standard for her situation, steps the case law would not require her to take.

Moreover, the *Mudd* case puts the wife's counsel in a most difficult position. Suppose, for example, the husband is the sort who may well leave the country without complying with the court's order to pay fees. The attorney may never be paid, unless he has an agreement with the wife. But if he asks the wife in advance for such an agreement, he jeopardizes her chance to obtain an award of fees from the husband, unless he conceals the agreement from the court which certainly is not an ethical or desirable result.

Ironically enough, this dilemma also faces an attorney for a wife who has income of her own. Perhaps the attorney will be able to convince the court that her income is insufficient to meet her expenses and also pay his fee, but he must face the possibility that he will not be successful, and that the court may not require the husband to pay fees. If the wife has agreed to pay fees, she might well forfeit her chance to make her husband pay them. On the other hand, if there is no such agreement, the attorney may go unpaid entirely, if the wife is not inclined to pay him voluntarily. Perhaps *quantum meruit* recovery from the wife is an answer. But this would seem risky, at best. The wife may well insist that it was never contemplated that she would compensate her attorney, and the attorney would have to admit that he never told her she must pay if the husband did not. If, in fact, he did make such a statement to the wife, and she agreed, there would seem to be a contract which would come within *Mudd*, and, thereby, prevent her from seeking fees from the husband. Accordingly, if the attorney wants to avoid the *Mudd* case, he may have to refrain from telling the wife he expects her to pay if the husband does not, and, if he does fail to tell her this, he may have difficulty recovering from her on a *quantum meruit* theory.

It seems that the approach suggested by the language of the *Mudd* case would be bad law, would produce unfair results and should not be followed. Of course, if this sort of agreement came before the Supreme Court now, the *Mudd* approach might well be rejected without the necessity of legislation. But, with *Mudd* on the books, until a new and contrary decision comes down, it is hard to see how a conscientious attorney for a wife can recommend or even permit her to agree to pay fees, so long as there is any chance of obtaining an order requiring the husband to pay them.

II. PROPOSED SOLUTION

The court should be fully informed of whatever arrangement counsel has with his client for payment of his fees when request is made of the court to order the adverse party to respond with payment of attorney fees. The attorney should be able to fully inform the court of his fee arrangement with his client without having detriment imposed upon him for making full disclosure. Many courts are presently awarding fees notwithstanding full disclosure of arrangements which an attorney has with his client, but they are doing so in violation of the ancient but still standing mandate of the Supreme Court.

It was therefore proposed that whenever an attorney asks for an award of attorney fees he should be required by state law to make a full disclosure of past and contemplated fee arrangements with his

client. This requirement could be established by rule of court, but this procedure would not provide uniformity throughout the state.

It appears necessary for the State Legislature to remove the present holding of the 1893 *Mudd* decision by statutory enactment. For this purpose it was suggested that an addition to Civil Code Section 137.3 be enacted embracing the following principle:

“No payment by a party of attorneys fees or costs, or agreement by a party to pay such fees or costs, shall prevent an order under this section that the other party shall pay such fees or costs or shall reimburse the party making such payment.”

Of course, there are attorneys who take advantage of wives by obtaining their agreement to pay fees and then charging unconscionable amounts, often in addition to those awarded by the court and paid by the husband. Presumably these attorneys do not care about the *Mudd* case, or else rely upon concealing the agreement from the court. They would probably continue their practices under the proposed amendment, although perhaps they would, at least, disclose the agreement to the court, which would, itself, be an advantage. Perhaps such arrangements should be subject to court approval, like fees in probate matters. In any event, continuing the *Mudd* rule is no solution. That approach only encourages the concealment that makes unfair practices easier to accomplish.

III. FINDINGS AND RECOMMENDATION

The committee, having made a study of the foregoing problem, decided to take no further action at this time.

Part 13

SERVICE OF NOTICE AFTER FINAL DECREE UPON ATTORNEY OF RECORD

I. PRESENT LAW AND PURPOSE

Civil Code Section 147 now requires that any notice of modification proceedings, which arises out of a prior order or decree, and after the granting of a final decree of divorce, *shall not be valid* "unless any prior notice otherwise required to be given to a party to the action be served in such manner as such notice is otherwise permitted by law to be served, upon the party himself. For such purpose service upon attorney of record shall not be sufficient."

The purpose of providing for personal service on a party to a domestic relations proceeding after a final decree, as required by the present Section 147, Civil Code, enacted in 1963, is presently viewed by a segment of the bar to eliminate a frequent nuisance to an attorney of record.

II. PRESENT DIFFICULTIES

A segment of the bar, the exact portion being unknown, feels a much greater nuisance has been created for all members of the bar by the present statute which eliminated service on the attorney of record and substituted personal service on the adverse party. It is asserted that in many cases personal service is reduced to service permitted on the county clerk which is asserted to be no service at all in fact. By not requiring notice of such proceedings to the attorney of record he is not entitled to have a copy of the order to show cause or motion served upon him.

It is also asserted that the language of the statute raises ambiguities and uncertainties, such as whether service upon the party is sufficient if compliance is had with Code of Civil Procedure Section 101, subsection 2, providing that service may be personal upon a party by leaving the notice or other paper at the residence of the party between the hours of 8 in the morning and 6 in the evening, with some person of not less than 18 years of age; if the residence is not known, then by delivering the same to the clerk of court or the judge if there is no clerk, for such party. Does the code section require personal service of an order to show cause in the remodification upon the party as though the original summons and complaint were to be served? If the party has left the state, is jurisdiction completely lost? Is the party seeking modification, a resident of this state, prevented from seeking further modification where there is a total inability to serve the party in this state?

It is to be noted likewise under Code of Civil Procedure Section 285.1 that after a final decree of divorce has been entered, an attorney may withdraw from the case but must give notice of the last residence

address of the party. Would service by mail upon this address be sufficient for purposes of this section?

III. REMEDIAL PROPOSAL

On the basis of the above considerations, it was proposed that Section 147 be repealed pending further study and clarification of the section by a committee of the State Bar Conference or by the Legislature.

IV. FINDINGS AND RECOMMENDATION

The committee, having made a study of this area, decided to take no further action at this time.

Part 14

FILING DOMESTIC RELATIONS CASES INVOLVING CHILDREN UNDER 16 IN CENTRAL DISTRICT *

I. THE PROBLEM

Experience has indicated to many attorneys that there is a category of divorce cases where there is a good chance of reconciliation when the parties first come into court, before there is any hearing. When these situations occur in branch courts, where conciliation services are not available, the opportunity to explore the feasibility of reconciliation is frequently lost because the parties do not want to travel to the central district after having come into the branch court. There appears to be some desire to attempt a reconciliation in these cases, although it may be minimal. But that desire is defeated by the physical burden of adjourning to the central district.

II. PROPOSED SOLUTION

In Los Angeles County there are over 200 referrals to the conciliation court each month from commissioners and judges at order to show cause hearings. The data acquired on this group indicates that over half of these referred couples voluntarily file a petition for reconciliation and that the reconciliation of such petitioning couples is larger than any other group. However, 75 percent of such court and commissioner referrals were from the civic center and only 25 percent were from the 10 branch courts. It appears that a large number of potential reconciliations are not occurring because the couples at the order to show cause hearing are not being exposed to the conciliation court as they would be if they were physically present in the same location as the conciliation court. It is suggested, therefore, that at least in those situations where there are children under 16, the parties be required to appear at the central district where their proximity to the conciliation court will enhance the possibilities of their electing to utilize it. It is pointed out that through the utilization of commissioners sitting as judges *pro tempore* and the ability to shift cases among commissioner courts, that OSC (order to show cause) hearings are handled more quickly in the central district and there is greater uniformity of decisions, rulings, and orders.

This proposal is based on the ground that a conciliation court system can only be successfully operated at the central district court and that dispersal of counselors as roving conciliators among branch courts is impractical, inefficient, unproductive of reconciliations, and would create unnecessary and tremendous additional costs of operation. The

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Los Angeles, October 8-9, 1964.

opposing view disputes these assertions and seeks to have counselors assigned to the branch courts.

A further suggestion was to concentrate all domestic relations cases in the central district which would facilitate establishment of a domestic relations department which would utilize a permanent group of judges regularly sitting in these cases, thereby bringing all couples into close proximity to the conciliation court as well as achieving greater uniformity.

III. FINDINGS AND RECOMMENDATION

The committee, having made a study of this proposal, decided to take no further action thereon at this time.

Part 15

LIMITATIONS ON ALIMONY IN CHILDLESS MARRIAGES OF SHORT DURATION *

I. THE PROBLEM

One of the causes for delays in bringing divorce actions to trial is the fact that judges frequently do not award alimony to a plaintiff-wife where the marriage is childless and of two or three years' duration. Therefore there have been attempts to obtain temporary alimony orders followed by delaying tactics to stall the divorce proceedings for 12, 14, or 16 months in order to get as much money from the defendant-husband as possible.

II. PROPOSED SOLUTION

Where orders have been made limiting the duration of temporary alimony in these cases, it has been found by experience that a settlement is promptly reached by the husband and wife and the divorce case proceeds as a default. It is proposed, therefore, that legislation which would limit alimony to a specific period not to exceed six months would largely offset the frequent criticism that alimony is awarded where none is justified. Such a statute would include language to indicate that the limitation is not applicable while there is an affirmative finding by the court that facts exist indicating that the party from whom the extended alimony payments are sought has by his conduct been responsible for serious financial or physical loss or damage to the petitioning party.

III. FINDINGS AND RECOMMENDATION

The committee, having made a study of this proposal, decided to take no further action thereon at this time.

* This part of the final report is based on testimony presented to the Assembly Interim Committee on Judiciary in its hearings on domestic relations in Los Angeles, October 8-9, 1964.

Part 16

CONTINUING STUDY OF MARRIAGE, FAMILY LIFE, AND DIVORCE PROBLEMS IN CALIFORNIA

I. DISCUSSION

The need for continuing a major study and reevaluation of California's marriage and divorce laws, with a view towards remedial statutory legislation, has been amply demonstrated in the various parts of this final report.

The Governor as well as this Legislature has expressed serious concern with this vital area of our society, as indicated in the Governor's message to the Assembly of March 4, 1964, and the enactment of House Resolution 46 on May 21, 1964. (See Appendix A and B respectively.) The Legislative Advisory Committee on Family Life and Law was appointed August 6, 1964, and is comprised of many of the outstanding citizens of this state. (See Appendix C.) Their recommendations are anxiously awaited by the Judiciary Committee and should prove to be a helpful source for solutions to many of these complex problems.

II. FINDINGS AND RECOMMENDATION

Findings

1. Marriage, family life, and divorce problems continue to be a major area of concern in California. The number of people affected, and the potential disruption to the stability of future generations, constitutes a serious threat to our society.
2. The incidence of family instability and inadequacy, as reflected in the voluminous number of judicial proceedings which are instituted as a result of family failure, warrants a thorough study of our existing judicial structures and procedures, as well as our statutory enactments, to ascertain methods and laws which will ameliorate present deficiencies.

Recommendation

1. The committee recommends continuance of its present study of marriage and divorce laws, with adequate staff and resources to permit a complete and comprehensive examination.

Part 16
APPENDIX A

STATE OF CALIFORNIA

GOVERNOR'S OFFICE
Sacramento

March 4, 1964

*To the Members of the Assembly,
California State Legislature:*

Last January 8 in a statement before the Assembly Judiciary Committee, I said that I planned to follow its hearings on California's domestic relations law very closely with a view to possibly asking that you expand this committee study to include a citizens' advisory committee composed of judges, lawyers, clergymen, sociologists and psychologists.

I said at that time that it appeared that divorce, with its tragic by-products of crime, alcoholism, and dependency upon the state, is an ever-growing problem in California. The testimony offered at your Judiciary Committee hearings certainly supports that premise.

I am therefore asking the Assembly to take steps to expand the Judiciary Committee's study.

I believe members of your Judiciary Committee will agree with me that, although there is apparent need for change in our divorce laws, we should not act hastily. Before we can intelligently recommend change, we must first have serious and purposeful investigation into the declining stature of the married state.

In reviewing testimony given before the committee, and in private conversations with judges and lawyers, with sociologists and educators, I find general agreement that we lack a reliable body of knowledge of the forces that are at work in the field of domestic relations.

Statistics developed before your Judiciary Committee seem to show clearly how divorce erodes the very foundation of our society—the family. The statistics indicate that some 75 percent of our juvenile delinquents and more than 50 percent of the inmates of our penal institutions come from broken homes.

These are shocking statistics. They tell of an erosion of our precepts and institutions which are so dependent on the endurance, stability and sanctity of the home.

Consider them in another light—the drain on our dollar resources. A four-year prison term costs the taxpayers of California three times more than it does to educate a child through four years of high school.

Add to this the cost of welfare aid to child victims of broken marriages. In 1962 we spent \$192.5 million on aid to needy children, most of which can be directly traced to our growing divorce rate.

The dollar cost of divorce—apart from legal fees, alimony, child support and court costs—is overwhelming.

I know that for you, elected representatives, hardly a day goes by without complaints about the cost of welfare, mental health, and school dropouts and their cumulative effect on our society. I get these too. We form commissions and councils to investigate these social problems, but we investigate them for the most part as individual problems. Not enough is known about the basic causes of dependency of which these problems are but byproducts.

There are no easy answers. That is an inescapable fact. I believe that for the health, sanity, and future of our society we must undertake the monumental task of seeking answers to these pressing problems.

What the Judiciary Committee has done thus far is just a beginning. A great deal of research is necessary before the Legislature can enact laws in this delicate and personal area of human relations.

Neither the husband nor the wife, as parties to a divorce, are the most damaged of the many victims. The most damaged are their children, this state's, this nation's future. Seven million American youngsters under the age of 18 live in one-parent homes. What is their future?

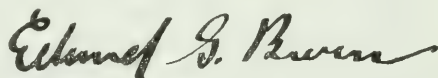

For too many of them, it is one of quitting school, wandering our streets and ending up in our juvenile halls. For others, it is the beginning of the path to a cell in one of our penal institutions. To others, deprived of love, firm guidance and understanding, it is but a way to a life of continual insecurity. In some cases, it leads to abject poverty and complete dependency upon the state for minimal survival.

If our concern here is truly to build a better, more stable society, we have an inescapable duty to make a serious inquiry into this festering social problem.

Great civilizations have faltered and ultimately perished and vanished from the earth through moral decadence. These were civilizations without our capacity to communicate. We must utilize our talents and facilities to probe and expose the core of this growing social problem.

I urge you to take the steps available to you to undertake this research.

Sincerely,

A handwritten signature in dark ink, reading "Edmund G. Brown". The signature is fluid and cursive, with a long, sweeping underline that extends to the right.

EDMUND G. BROWN, *Governor*

ASSEMBLY JOURNAL

The following resolution was offered :

By Assemblymen Willson, Young, Dannemeyer, Bagley, Danielson, Foran, Johnson, Marks, Petris, Song, Stanton, Stevens, Waldie, Whetmore and Z'berg.

House Resolution No. 46

*Relative to the creation of a Special Legislative Advisory Committee
on Family Life and Law*

WHEREAS, A need for examination and analysis of existing laws in the field of domestic relations was realized at the 1963 Regular Session; and

WHEREAS, Pursuant to that realization several resolutions were introduced to accomplish such purpose; and

WHEREAS, As a result of several conferences and hearings on the general problems which appear abundant in this field; and

WHEREAS, It is the desire of this Legislature to seek the resolution of social problems and combat the evils apparent; and

WHEREAS, There was action taken by the Assembly Interim Committee on Judiciary at its hearing on January 9, 1964, at Los Angeles which called for the creation of an advisory committee; and

WHEREAS, The function of such advisory committee would be to assist the Assembly Interim Committee on Judiciary to find solutions for identified problem areas with a view toward developing a legislative program to strengthen family relations; and

WHEREAS, The Governor has shown great concern for this matter as evidenced by his public statements and considers it to be one of the urgent areas in need of study and reform; now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Interim Committee on Judiciary is authorized to create a Special Legislative Advisory Committee on Family Life and Law to assist and advise the Assembly Interim Committee on Judiciary in its deliberations as to the field of domestic relations. The number of members of the special committee shall be designated by the Assembly Interim Committee on Judiciary. The members of the special committee shall be appointed by the Speaker of the Assembly. The special committee shall report its findings and recommendations to the Assembly Interim Committee on Judiciary which shall report thereon to the Assembly not later than the fifth legislative day of the 1965 Regular Session, including its recommendations for appropriate legislation.

The Members of the special committee shall serve without compensation but each member shall be allowed actual expenses incurred in the discharge of his duties, including travel expenses. The members of the special committee shall serve without compensation or expenses. The

Assembly Interim Committee on Judiciary shall provide the special committee with the necessary staff, equipment and supplies to carry on its work. ~~All expenses of the special committee including the expenses of its members shall be paid from any money appropriated either for the expenses of the advisory committee or for the expenses of all advisory committees created to assist and advise Assembly Interim committees.~~

The existence of the committee shall terminate 90 days after the termination of the 1965 Regular Session of the Legislature.

Resolution read, and referred by the Speaker pro Tempore to the Committee on Rules.

Deleted portions indicated by ~~strikeout type~~ in original.

Additional portions indicated by *italic type*.

Introduced March 9, 1964.

March 9—Referred to Committee on Rules.

April 27—From committee: Be adopted, as amended.

April 28—Read and amended. To third reading.

May 21—Read and adopted, page 1258 of the Assembly Journal.

LETTER OF TRANSMITTAL

January 5, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly, and
Members of the Assembly
Assembly Chamber—State Capitol
Sacramento, California

Gentlemen:

Pursuant to House Resolution No. 500 of the 1963 Regular Legislative Session, the Assembly Interim Committee on Military and Veterans Affairs submits its final report covering its functions and activities during the 1963-65 interim.

Assemblyman Paul J. Lunardi resigned as Chairman of the Committee on December 20, 1963, upon his election to the State Senate, and Assemblyman Walter W. Powers was appointed chairman May 15, 1964, to fill this vacancy.

Respectfully submitted,

WALTER W. POWERS, *Chairman*

WILLIAM E. DANNEMEYER, *Vice Chairman*

HOUSE RESOLUTION NO. 500

(Assembly Journal, June 11, 1963, page 5231)

Relative to constituting certain standing committees of the Assembly as interim committees

Resolved by the Assembly of the State of California, As follows:

1. The following standing committees of the Assembly are hereby constituted Assembly interim committees and are authorized and directed to ascertain, study and analyze all facts relating to (1) the subjects and matters assigned to them by this resolution; (2) any subjects or matters referred to them by the Assembly; (3) any subjects or matters related to (1) or (2) which the Committee on Rules shall assign to them upon request of the Assembly or upon its own initiative:♦

(o) The Committee on Military and Veterans Affairs is assigned the subject matter of the Military and Veterans Code, uncodified laws relating to veterans and the military, and other matters relating to military and veterans affairs.

A.B. 1563 RELATING TO THE REPEAL OF THE PROVISION PROHIBITING THE DEPARTMENT OF VETERANS AFFAIRS, UNDER THE VETERANS FARM AND HOME PURCHASE ACT OF 1943, FROM ACQUIRING A HOME IN WHICH A VETERAN HAS AN INTEREST OF RECORD

INTRODUCTION

The committee met on November 8, 1963, at the City Hall in Whittier, and on December 5, 1963, at the State Building in San Francisco, to consider Assembly Bill No. 1563, which would repeal Section 987.15 of the Military and Veterans Code.

FINDINGS

The prohibition against the refinancing of homes as provided by the Military and Veterans Code should be modified. The committee noted that Governor Brown signed Senate Bill No. 81, May 13, 1964, which provides for a system of priorities for a limited program of refinancing of homes by the Department of Veterans Affairs. This program should be allowed time to demonstrate its effectiveness.

RECOMMENDATION

No legislation.

SCOPE

Testimony was received from the Department of Veterans Affairs and from representatives of various veterans' organizations concerning the desirability of repealing the present code provision.

Section 987.15 of the Military and Veterans Code prohibits the Department of Veterans Affairs from refinancing homes in which veterans have an interest of record. Prior to 1958, such authority was provided in Section 986.6 of the Military and Veterans Code. Concurrently with the addition of Section 987.15 in 1958, Section 986.6 was amended to remove authority insofar as home properties were concerned, leaving in the statutes authority to refinance farm properties.

Mr. John Handsaker, Administrative Deputy Director of the Department of Veterans Affairs, sent the committee a letter in which he stated, "Before they were discontinued, applications for refinancing were two-to-one over those for new or original purchases. Thus, to reopen the Cal-Vet program to refinancing would exhaust our available resources within two years and guarantee that additional bond issues would be needed beginning with the next general session of the Legislature."

Mr. Walter Thompson, testifying in behalf of the Veterans of Foreign Wars, stated before the committee that his organization is opposed to the bill because the present available funds would be depleted.

Mr. W. R. Smaker of the California Association of Service Officers, in a letter to the committee, stated that, "The prohibition of refinancing (Section 987.15) should never have been placed in the code. The administration of the farm and home program falls under the pervasion of the board and the director (985.3) Sections 70, 84 and 700. Consequently, finding a solution to the farm and home problems was their responsibility. The conditions which prompted this change in 1957 were purely administrative problems, and were not problems which called for action of the Legislature. It was a situation where the board and the director did not apply their administrative duty to administer the farm and home program and passed it on to the legislators. Why the Legislature accepted this problem is not understood. Why it was not referred back to the board for solution is unknown."

Assemblyman Phillip Burton, author of A.B. 1563, testified in favor of the bill. He stated, in part, "To me, it seems unfair that these veterans who previously had not been able to take advantage of our Cal-Vet program are not given this opportunity to do so. I don't think that any of us contemplated that a whole section or category of veterans would be denied the right to take advantage of this program, and I think that this amendment, the eliminating of the present restriction, therefore permitting veterans to get loans to refinance their homes would be a step in the right direction."

"As I understand the law, Mr. Farber and the appropriate authorities in his department either have or could be granted the authority, as I stated earlier, to set up priorities to see to it that equity was done, but certainly I think we are all in agreement that the present situation is inequitable, and I think that some change in the law is in order and should be accomplished."

A.B. 2813, RELATING TO THE REPEAL OF THE PROVISION PROHIBITING THE DEPARTMENT OF VETERANS AFFAIRS, UNDER THE VETERANS FARM AND HOME PURCHASE ACT OF 1943, FROM ACQUIRING A HOME IN WHICH A VETERAN HAS AN INTEREST OF RECORD

INTRODUCTION

The committee met on November 8, 1963, at the city hall in Whittier, and on December 5, 1963, at the State Building, in San Francisco, to consider Assembly Bill No. 2813, which would repeal Section 987.15 of the Military and Veterans Code.

FINDINGS

The prohibition against the refinancing of homes by the Legislature should be modified. The committee noted that Governor Brown signed Senate Bill No. 81, May 13, 1964, which provides for a system of priorities for a limited program of refinancing of homes by the Department of Veterans Affairs. This program should be allowed time to demonstrate its effectiveness.

RECOMMENDATION

No legislation.

SCOPE

A.B. 2813 is identical to A.B. 1563, also before the committee. The same oral and written testimony, pro and con, were heard regarding A.B. 2813 at the same time as A.B. 1563 was being considered.

A.B. 2704, RELATING TO THE PURPOSE OF THE CALIFORNIA VETERANS EDUCATIONAL INSTITUTE

INTRODUCTION

An opportunity to testify on this bill was given at the committee hearing in Whittier, on November 8, 1963. The testimony on the bill was heard at the December 5, 1963, hearing in San Francisco.

FINDINGS

The committee found that the intent of the present regulation is sufficiently clear. Veterans receive state support until they have completed a course of study that enables them to assume a productive role in society.

Veterans who are continuing their job training for any entry level position of any occupational field are not affected by the Administration's curtailment of this program. The present program also allows exceptions for hardship cases arising from economic factors as determined by the Department of Veterans Affairs.

The committee felt that once the state had provided the veteran with the education and training to qualify for employment, then the veteran should be able to pay for additional training out of his earnings. This permits widows and dependents of disabled or deceased veterans to receive more state support. This arrangement permits state support to go to those most in need.

The committee felt that the present program should be allowed time to demonstrate its effectiveness before any changes are made.

RECOMMENDATION

No legislation.

SCOPE

A.B. 2704 would amend Section 981 of the Military and Veterans Code to broaden the statement of purpose concerning the California Veterans Educational Institute to declare that the purpose of the Institute is to provide opportunities for veterans to "maintain," as well as to continue, their education.

The California Veterans Educational Institute provides educational opportunities for veterans whose educational program is interrupted by war service. The State of California assists them to the maximum of \$1,000 towards either tuition or subsistence, or a combination of both, to complete their educational program which was interrupted.

The words "and maintain" are intended to restate the policy of the Legislature as encouraging veterans to keep abreast of the times with current technological advances as they happen within a special field by attending noncredit courses beyond the college degree.

Mr. Martin Iorns, Manager of the Division of Educational Assistance, Department of Veterans Affairs, stated before the committee that the problem is not one of more words but of more dollars, and that the division's annual appropriation must cover two programs: veterans education and educational assistance for dependents. The children of the veterans who died or were totally disabled as a result of active service are now coming of school age and the division is having to shift its funds towards that program and to cut back on the veterans program.

Assemblyman Charles W. Meyers, author of A.B. 2704, testified in support of the bill.

Since the last hearing on A.B. 2704, Governor Edmund G. Brown signed the 1964-65 Budget Bill after making cuts in the budget adopted by the Legislature. Among those items deleted from the budget was Item 287, an appropriation of \$1,225,683 for educational assistance to Korean veterans in the Department of Veterans Affairs.

"It is now more than 10 years since the end of the Korean War", the Governor said in his press release announcing the new budget. "The veterans of that war have had ample opportunity to take advantage of the educational benefits of our program. There has been a significant decline in applications, allowing this cutback in expenditures. We have allowed for hardship cases arising from work interruption or economic factors. The approved appropriation totals \$1,904,800 for dependents and \$600,000 for veterans. I did not reduce the educational program for dependents of veterans."

The Governor pointed out that veterans in California still are receiving benefits which rank among the finest in the nation. In all, the Governor said he has signed into law 101 bills for veterans, none of which deleted a right or a benefit.

A.B. 2707, RELATING TO THE CONVERSION OF A DOMICILIARY BUILDING AT THE VETERANS HOME TO A FACILITY FOR INTERMEDIATE AND LONG-TERM NURSING HOME CARE FOR VETERANS ELIGIBLE FOR ADMISSION TO THE HOME

INTRODUCTION

An opportunity for testimony on A.B. 2707 was given at the committee hearing in Whittier, on November 8, 1963, and at the hearing in San Francisco, on December 5, 1963.

FINDINGS

Since the administration is considering the conversion of an empty building into a useful facility at the Veterans Home, legislation is not necessary. It was suggested to the committee that the possibility be explored of turning the operation of the State Veterans Home over to the federal government.

RECOMMENDATION

No legislation.

SCOPE

A.B. 2707 would add Section 1050 to the Military and Veterans Code. Section 1050 would require the Department of Veterans Affairs, subject to appropriation therefor, to convert a domiciliary building at the Veterans Home to a facility which would provide intermediate and long-term nursing home care for veterans eligible for admission to the home. The department would also be required to provide for adequate staffing for such facility.

There are approximately 400 vacant beds in the domiciliary facilities at the California Veterans Home. One entire building is unoccupied with some vacancies existing in each of the other six domiciliary sections. Studies have already been made by the Department of Veterans Affairs to determine the cost of converting the vacant domiciliary building to intermediate-type care. A request for \$378,000 for this purpose was included in the department's capital outlay budget request for 1963-64 fiscal year. The item was not approved in the budget. A similar request for \$315,450 was made in the 1964-65 prebudget conference between the Department of Veterans Affairs and the Department of Finance. The request was deleted pending outcome of federal legislation which would provide federal funds on a matching basis for the construction of state homes for veterans.

The Department of Veterans Affairs, the California Association of Veterans Service Officers, as well as various veterans' organizations, testified before the committee. Resolutions favoring A.B. 2707 were received from the delegates to the 43rd annual convention of the Department of California, Veterans of Foreign Wars of the United States, and from the 1962 annual department convention of the Disabled American Veterans.

In a memorandum to the committee, Mr. Handsaker, Administrative Deputy Director of the Department of Veterans Affairs, stated that as of June 1, 1964, there were 75 names on the waiting list for intermediate care, and the number of names on the hospital waiting list was 153.

In a letter to the committee, Mr. Handsaker further stated that, "While this bill is superfluous, as far as the Department of Veterans Affairs is concerned, it may exert some influence in having the item placed in the budget."

No testimony was presented opposing A.B. 2707.

A.B. 2984, RELATING TO THE CREATION OF A SOUTHERN CALIFORNIA VETERANS HOME IN THE DEPARTMENT OF VETERANS AFFAIRS

INTRODUCTION

Testimony relating to A.B. 2984 was heard at the committee hearings in Whittier, on November 8, 1963, and at San Francisco, on December 5, 1963.

FINDINGS

The federal government, through the U.S. Veterans Administration, has the primary responsibility to provide hospital care for veterans. While the need for additional hospital beds cannot be denied, there may be alternative federal programs which should be pursued before the expenditure of state moneys in this area can be justified. The possibility of additional funds to the U.S. Veterans Administration to expand hospital facilities should be exhausted. The committee felt the evidence indicated that the federal government was upholding its responsibility of providing hospital care for veterans and, therefore, the state should not enter into that area.

The testimony presented to the committee did not warrant building a state veterans home in southern California at this time, since there is ample space at the existing home in Yountville.

RECOMMENDATION

No legislation.

SCOPE

In southern California there are hospitals operated by the U.S. Veterans Administration located at Long Beach, San Fernando, Sepulveda and at the Veterans Administration Center in Los Angeles. The Long Beach hospital has 1,600 beds, including 1,239 medical, 299 surgical, and 62 psychiatric. The San Fernando hospital has 519 beds, including 175 medical, 44 surgical and 300 T.B. The Sepulveda hospital has 956 beds, including 107 medical, 107 surgical, 701 psychiatric, and 41 T.B. The V.A. Center hospital has 5,999 beds, including 1,011 medical, 457 surgical, 1,981 psychiatric, and 2,550 domiciliary.

The waiting list of accepted applicants for each V.A. hospital as of January 7, 1964, follows. No service-connected illness or ailments are on the waiting list. Cases of an emergency nature are not on a waiting list.

The Long Beach hospital has a waiting list of 296, including 154 medical and 142 surgical. The San Fernando hospital has no waiting list. The Sepulveda hospital has a waiting list of 264, including 4 medical and 260 psychiatric. The V.A. Center in Los Angeles has a waiting

list of 1,345, including 1,086 psychiatric, 164 domiciliary, 69 medical, and 26 surgical.

The totals by type of care on the waiting list are 227 medical, 168 surgical, none T.B., 164 domiciliary and 1,346 psychiatric. Total of all cases on waiting list is 1,905. The greatest need is in psychiatric cases.

The California Department of Veterans Affairs maintains the position that the provision of hospital facilities for veterans is primarily a responsibility of the federal government. The veterans' organizations maintain the position that providing a home for the veterans is a dual responsibility of state and federal government.

The state maintains the Veterans Home of California in Napa County, for aged and disabled honorably discharged veterans who served during a time of war and who are eligible for admission to a facility of the U.S. Veterans Administration. Applicants to the state home must also be bona fide residents of California for five years immediately prior to applying for admission and must be financially unable to pay for care outside the facility. The facility provides three types of care: domiciliary, intermediate (nursing), and hospital care.

The State Veterans Home at Yountville has approximately 2,400 beds, including about an 865 bed hospital, together with the intermediate-type care (nursing home care), the balance of which is domiciliary. At the present time, there are over 400 vacant beds in the domiciliary section at Yountville. There is one complete barracks which houses approximately 200 that is vacant and unoccupied. As of June 1, 1964, the total on the waiting list for the State Veterans Home at Yountville is 228, including none for domiciliary, 75 for intermediate care and 153 for hospital care.

A.B. 2984 would amend various sections of the Military and Veterans Code to create a southern California Veterans Home within the Department of Veterans Affairs, prescribe its powers, duties, responsibilities, and organization, and make an appropriation for the construction thereof, out of the General Fund. The new southern California veterans home would be similar in nature to the Veterans Home in Yountville.

Congress has enacted legislation which would provide an additional dollar a day for support of each veteran receiving nursing home care in a state veterans home and at the same time appropriate \$5,000-000 a year for five years to assist the several states to construct state home facilities for furnishing nursing home care to veterans. The federal grant would be available until the end of the second fiscal year following the fiscal year for which they are appropriated. Not more than 10 percent of the funds appropriated for any fiscal year would be used to assist in the construction of nursing home care facilities in any one state. The amount of the grant requested for a state project may not exceed 50 percent of the estimated cost of construction of such project.

Federal participation in the cost of the state home is meeting one-third of the operating expenses at present. Federal assistance is currently \$912.50 per member per year, or \$2.50 per member per day. Since 1958, the cost of operating the State Veterans Home has been

over \$4,000,000 per fiscal year. The estimated operating cost for 1963-64 is \$5,116,445.

The Department of Public Health estimates that a southern California veterans home would cost approximately \$15,832,060. The estimated program proposes 250 beds for acute medical and surgical cases, 400 beds for intermediate nursing home care cases, and 500 beds for residential cases. Rehabilitation service would be provided. The average age of patients and residents would be approximately 65. The cost estimate includes basic and master plan area, fully air-conditioned construction, equipment, architect's fees, construction superintendents, budgetary contingency and change order contingency. The cost estimate does *not* include site acquisition costs, offsite improvements, parking areas, or landscaping. The cost estimates are based on the experience of the department in the administration of the Hospital Planning and Construction Program which provides state and federal funds for similar-type projects.

The Department of Public Health also estimates the annual operating cost for the southern California facility would be \$7,750,000.

Suggested locations for a southern California veterans home have been near the Medical School of Loma Linda University in San Bernardino County, or Riverside County, San Diego County, or Long Beach City.

The testimony of the veterans organizations emphasized the need for a veterans home in southern California for the following reasons: Yountville is too far, the greatest majority of the veteran population resides in southern California and veterans hospitals are overcrowded. The psychological factor of having the hospital close to the veteran's family and relatives was stressed as a primary factor in hospital treatment.

In a letter to the committee from the Department of Medicine and Surgery of the Veterans Administration, it is pointed out that authority has been granted to construct additional hospitals in East Los Angeles and San Diego. Each of the hospitals will have approximately 1,040 beds and will probably result in some reduction or elimination of obsolete facilities at the existing Los Angeles Center hospital.

The Los Angeles hospital is expected to be completed about December 1967 and will include 240 beds for treatment of patients with psychiatric conditions. Based on present tentative schedules, the San Diego hospital will be completed during 1969. This hospital will include 480 beds for treatment of patients with psychiatric conditions.

SECTION 699.5 OF THE MILITARY AND VETERANS CODE: THE CONTRACT SERVICES PROGRAM

INTRODUCTION

Hearings on Section 699.5 of the Military and Veterans Code were held on August 6, 1964, at the State Building in Los Angeles, and on August 20, 1964, at the State Veterans Home, Yountville. The purpose of the hearings was to determine whether the administration's elimination of contract services still provides the level of service to California veterans which prevailed prior to 1960.

This study was conducted pursuant to the recommendation in the 1959-61 Report of the Assembly Interim Committee on Military and Veterans Affairs.

FINDINGS

The evidence and testimony presented to the committee clearly indicates that the Department of Veterans Affairs has maintained the level of service to California veterans which prevailed prior to the elimination of the contract services program.

The committee had little evidence before it other than opinion regarding any reduction in the level of such services since 1960.

It was also apparent that the discontinuance of the contract services program eliminated duplication of service and saved the California taxpayer close to \$2,000,000 in the last four years.

RECOMMENDATION

The committee recommends that the activities of the Department of Veterans Affairs be further reviewed at the next interim session to insure the continued high level of service.

SCOPE

ORIGIN OF THE CONTRACT SERVICES PROGRAM

The bill which created Section 699.5 of the Military and Veterans Code was introduced in a regular session of the Legislature in 1943 by Assemblyman C. Don Field of Los Angeles County, then Chairman of the Committee on Governmental Efficiency. It was signed into law by Governor Earl Warren and filed with the Secretary of State on June 7, 1943.

This addition to the code authorized the Veterans Welfare Board (Department of Veterans Affairs) to assist every veteran of any war of the United States in presenting and pursuing such claims as the veteran may have against the United States, arising out of war service and in establishing the veteran's right to any privilege, preference, care, or compensation provided for by the laws of the United States or of this state.

It further authorized the board to contract, under certain circumstances, with any organization of veterans which had regularly for a

period of five years preceding the date of such contract maintained an established committee or agency rendering similar services to veterans. Such contract could only be made after the board had determined that veterans could be adequately served through such arrangements. An appropriation of \$150,000 was made to cover the cost of this operation for the ensuing biennium.

The board (in February 1944) entered into temporary trial contract with the California Departments of the American Legion, the Disabled American Veterans, and the Veterans of Foreign Wars. Allotments were made of funds sufficient to augment the established and previous services of these organizations to June 30, 1944.

In the original contract it was agreed that the Veterans Welfare Board would not subsidize any services then being provided by the veterans' organizations or contribute to the upkeep of their current structure, but that the funds would be used solely for the purpose of increasing their service work beyond the scope of the then present structure up to a certain monthly, maximum limitation. During this five months' testing period, the organizations moved slowly in increasing personnel. The total expended was \$13,741.66, as follows:

American Legion -----	\$8,073.08
Disabled American Veterans -----	2,539.00
Veterans of Foreign Wars -----	3,129.58

Rapid demobilization of the armed services began in 1945. The Legislature appropriated an additional \$300,000 to support veterans claims and rights service for the biennium. For the first time the contracts were considered on a participating basis to cover all employees, with the organizations and the state matching dollar for dollar up to a monthly maximum of one-twelfth of the contract amount.

In early 1946 the organizations petitioned the Veterans Welfare Board to amend these contracts, increase the monthly maximum allowances, and change the terms of matching basis from dollar for dollar to a basis of 70 percent state funds and 30 percent organization funds. The Legislature was then in an extraordinary session and an appropriations bill had been introduced to supplement the Veterans Claims and Rights Service Fund by \$250,000 without regard to fiscal years.

The state's fiscal system had been changed from biennial to annual budgeting and an appropriation of \$500,000 was included in the Governor's Budget for veterans' claims and rights service for fiscal year 1947-48. The California Veterans Board, meeting in Santa Cruz on July 24, 1948, unanimously agreed that the following rules be adopted and applied to the budgets and contracts submitted by the organizations:

1. The State of California will contribute only to those salaries and wages of personnel whose full, employable time is spent on service and rehabilitation work with the contracting veterans' organization at the department level.
2. Service officers of veterans' organizations may be stationed in service centers or other agencies supported by community chest funds and their salaries submitted to the Department of Veterans Affairs.
3. The budgets of the contracting veterans' organizations shall be based on presently established and filled positions and no expansion.

sion shall be recognized under the terms of this contract for the ensuing year.

The board also adopted the following resolution:

That the State of California, Department of Veterans Affairs, will contract with the American Legion, Veterans of Foreign Wars, and Disabled American Veterans for the fiscal year 1948-49 on a matching basis of 75 percent State of California funds and 25 percent of the respective organization, for salaries and wages only of those employees specified in the budget presented, whose full, employable time is spent on service and rehabilitation work with the contracting veterans' organizations at the department level.

After applying the above rules and regulations to the budgets as submitted by the three organizations, it was determined that sums would be allotted to the three organizations in the following, approximate amounts:

American Legion	\$273,588.75
Veterans of Foreign Wars	131,979.38
Disabled American Veterans	94,431.87

The appropriation for 1952-53 provided an additional \$16,000 to allow state participation in the service program of the American Veterans of World War II (AMVETS) for a period of eight months. An appropriation of \$574,000 for fiscal year 1953-54 was considered by the California Veterans Board to earmark \$24,000 for a full year's operation for AMVETS.

In 1958 the appropriation was increased to \$596,700 to permit participation of the Jewish War Veterans. The contract with this organization included only the Los Angeles operation to the extent of \$16,-097.60 of state funds. The balance of \$6,600 was returned to the General Fund.

During the 1959 session, the Legislature amended the budget bill by inserting an item of \$596,700 to be expended under provisions of Section 699.5; thus continuing an appropriation for claims and rights service. In signing the budget bill, Governor Edmund G. Brown reduced this amount to \$407,950 with the stipulation that contracts between the Department of Veterans Affairs and the organizations would terminate on December 31, 1959, and thereafter the same level of service as a minimum was to be made available direct to veterans service by the Department of Veterans Affairs. Thus, \$298,350 was contracted for with the veterans' organizations for six months only, and \$109,600 was earmarked for state operation of the program from January 1 through June 30, 1960. Of the latter amount, \$61,000 actually was expended.

During the period of the contractual arrangement with the veterans' organizations, the State of California expended \$7,524,567.82, distributed as follows:

American Legion	\$4,267,140.89
Veterans of Foreign Wars	1,877,576.75
Disabled American Veterans	1,176,678.59
AMVETS	175,831.76
Jewish War Veterans	27,339.83

In this same period, expenditures by the organizations were as follows:

American Legion -----	\$2,229,248.83
Veterans of Foreign Wars -----	733,532.42
Disabled American Veterans -----	555,766.25
AMVETS -----	71,286.22
Jewish War Veterans -----	13,469.97
	<hr/>
	\$3,603,303.70

The total cost, then, to the State of California and the organizations from February 1, 1944, to December 31, 1959, was \$11,127,871.52.

The question has been asked as to how the organizations raised their matching funds. Methods varied. In almost all instances, a per capita portion of membership dues was earmarked for claims and rights service, generally referred to by them as "Rehabilitation" or "Rehab."

Other fund raising included subventions from the national body of the organization; contributions of individuals and chapters of the organization; sale of rehab. stamps or decals; salvage operations; sales of plaques, ties, and Christmas cards; baby contests; poppy, forget-me-not and white clover sales just before Memorial Day, or other patriotic national holidays. These are offered only as examples, as many other devices were used from year to year.

The services provided by the organizations were those outlined in Section 699.5 of the Military and Veterans Code, but most of the cost involved representation before the Veterans Administration rating boards and contacts with veterans in Veterans Administration hospitals. In addition to appearing before the Veterans Administration, the organizations then offered representation before the United States Civil Service Commission, Bureau of Immigration and Naturalization, Social Security Administration, Bureau of Federal Employees Compensation, Defense Department, and related agencies. However, all of these services, except for that of the Veterans Administration, have now been eliminated, though still provided by the Department of Veterans Affairs.

Another question asked was whether the money went directly into claims and rights work in the portion intended by the state, or was it primarily devoted to administrative and personnel costs. For the most part, the answer is in the affirmative to both parts, since approximately 90 percent of costs were for salaries and wages of personnel directly involved in claims and rights service or its exclusive administration. As a result of surveys conducted in the early years by the Department of Veterans Affairs in cooperation with the State Personnel Board, Department of Finance, and the Legislative Auditor, certain discrepancies did develop in the use of these funds, which resulted in the policy action taken by the California Veterans Board in 1948. After that date adequate safeguards were put into practice, and these were supported by monthly fiscal and activity audits.

As the costs of the program under the contract agreements grew steadily higher, that portion which the organizations were responsible for mounted in like ratio. For the American Legion and the Veterans of Foreign Wars, this meant deficit financing on their part, requiring them to draw upon accumulated reserves of their departments which had been built up over more than 20 years.

Approximately 70 percent of new claims initiated by county service officers in California convey power of attorney of the veteran or dependent to the California Department of Veterans Affairs. A county service officer indicated that the state's service is superior to that ever offered by the organizations. The appointees to the state's claims and rights service have qualified under state civil service examination, where they demonstrated a greater knowledge of veteran laws, regulations, and procedures than did their competitors. In return, they have better job security and standardized salaries at a higher level than those enjoyed by the veterans' organization employees. Morale is good.

From February 1944 through calendar year 1959, 17 contracts were entered into by the department with the American Legion, with the Disabled American Veterans, and with the Veterans of Foreign Wars. Eight contracts were negotiated with AMVETS and two with the Jewish War Veterans.

To be eligible for contract a veterans' organization chartered by Congress must have maintained at its own expense an established committee or agency representing veterans before a California regional office of the Veterans Administration for a period of five years. If not a chartered organization, but recognized by the Veterans Administration, it must have maintained such representation before a California regional office of the Veterans Administration for a period of 12 years. This second provision applied only to the Jewish War Veterans.

The number of applications for assistance serviced under the auspices of the contract program during the last three complete fiscal years of its operation by each veterans' organization is as follows:

	1956-57	1957-58	1958-59
American Legion -----	311,697	316,798	297,077
DAV -----	89,519	95,533	91,293
VFW -----	154,324	150,543	126,177
AMVETS -----	24,823	20,179	19,858
JWV -----			15,094
	<hr/> 580,363	<hr/> 583,053	<hr/> 549,499

No comparable data can be provided for the direct claims and rights service program of the department, since reportable data is not comparable. The organizations reported the number of services performed; such as, interviews—office, telephone, hospital, and other; applications for hospitalization filed; applications for outpatient treatment filed; veterans claims filed—initial, reopened; dependents claims filed—initial, reopened; insurance forms filed; applications for vocational and rehabilitation training file; miscellaneous claims filed; rating actions; Veterans Administration files reviewed; personal intercessions, not rating board—Veterans Administration, other.

The Division of Service and Coordination veterans claims and rights service reports are based on work measurement rather than number of services. This new system was adopted upon the recommendation of the Organization and Cost Control Division of the Department of Finance after a one-year study.

The question is presented as to current trends and the number of applications relating to similar requests for assistance. Department re-

ports show a slight ascendancy during the past two years, pointing toward a plateau for a few years because of non-service-connected pension applications for World War I veterans of advanced age, then a temporary descent for a few years, followed by gradual increase in workload as World War II veterans' ages make such pensions attainable.

For the purpose of comparing the contract services with state direct operation, the department shows the following state costs for the last 4½ years of the contract period:

1955-56	-----	\$573,879.17
1956-57	-----	574,000.00
1957-58	-----	574,000.00
1958-59	-----	590,097.60
July 1959-December 1959	-----	298,350.00
		<hr/>
		\$2,610,326.77

Actual data on the cost of claims and rights service for the first 2½ years of direct operation is detailed below with estimates for the last 2 years, since no distinction has been made in recent budgets and fiscal records between the claims and rights service and the other functions administered by the Division of Service and Coordination:

January 1 to June 30, 1960	-----	\$58,333.40
Fiscal year ending June 30, 1961	-----	134,827.70
Fiscal year ending June 30, 1962	-----	149,065.51
*Fiscal year 1962-63 and 1963-64	-----	400,000.00
		<hr/>
		\$742,226.61

* Estimated

This represents a saving to the state of \$1,868,100 for the last 4½ years, as compared with the 4½ years preceding.

During the hearings on this matter, the issue was raised of whether state civil service workers are able to establish the same personal relationship with veteran applicants as is established by representatives of veterans' organizations. The testimony indicated that because state civil service employees are better paid, have better working conditions and better fringe benefits, they are in a better position to devote greater attention to each individual client.

The issue of whether the Department of Veterans Affairs is able to provide proper representation for clients before the Veterans Administration, either on the regional level or before the Veterans Appeals Board in Washington, D.C., was also raised. The evidence clearly indicated that the Veterans Administration has given the Claims and Rights Section of the California Department of Veterans Affairs every right of representation that it has given to any veterans' organization. The evidence also indicated that the rate of successful appeals by the department is well above the national average. However, the Board of Veterans Appeals does not break down statistics on certification or disposition of appeals by individual service organizations.

It was pointed out to the committee that provisions have been made for rendering service to veterans in state or federal hospitals by representatives of the Department of Veterans Affairs.

Testimony was heard from Department of Veterans Affairs and the major veterans' organizations in California.

APPENDICES

APPENDIX A

WITNESSES APPEARING AT HEARINGS

1. Mr. John Handsaker, Deputy Director, Department of Veterans Affairs.
2. Mr. W. Keith Garrison, California Association of Veterans Service Officers.

APPENDIX B

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 1563

Introduced by Mr. Burton

February 28, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to repeal Section 987.15 of the Military and Veterans Code, relating to veterans.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 987.15 of the Military and Veterans
2 Code is repealed.
3 ~~987.15. The department shall not acquire a home in which~~
4 ~~the veteran has an interest of record except in the following~~
5 ~~instances:~~
6 (a) ~~Where the application is for aid for the construction of~~
7 ~~a home upon unimproved real property owned by the ap-~~
8 ~~plicant.~~
9 (b) ~~Where, after July 2, 1957, the veteran had no interest~~
10 ~~of record in the property at the time of filing his application~~
11 ~~and thereafter secured interim financing pending the process-~~
12 ~~ing and approval of his application by the department.~~
13 (c) ~~Where the application has been filed with the depart-~~
14 ~~ment prior to July 2, 1957. Twenty percent of all funds avail-~~
15 ~~able for expenditure under this article, or so much thereof as~~
16 ~~may be necessary, shall be used by the department for the ac-~~
17 ~~quisition of homes in behalf of veterans who have filed applica-~~
18 ~~tions prior to July 2, 1957, and whose applications are con-~~
19 ~~sidered active by the department, for the acquisition of homes~~
20 ~~in which they have acquired interests of record, until such time~~
21 ~~as all applications of this nature have been granted.~~

LEGISLATIVE COUNSEL'S DIGEST

AB 1563, as introduced, Burton (Mil. & Vet. Aff.). Veterans.

Repeals Sec. 987.15, M. & V.C.

Repeals provision prohibiting Department of Veterans Affairs, under Veterans Farm and Home Purchase Act of 1943, from acquiring home in which veteran has interest of record.

APPENDIX C

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2813

Introduced by Mr. Meyers

April 25, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to repeal Section 987.15 of the Military and Veterans Code, relating to veterans.

The people of the State of California do enact as follows:

1 SECTION 1. Section 987.15 of the Military and Veterans
2 Code is repealed.

3 987.15. The department shall not acquire a home in which
4 the veteran has an interest of record except in the following
5 instances:

6 (a) Where the application is for aid for the construction of
7 a home upon unimproved real property owned by the ap-
8 plicant.

9 (b) Where, after July 2, 1957, the veteran had no interest
10 of record in the property at the time of filing his application
11 and thereafter secured interim financing pending the process-
12 ing and approval of his application by the department.

13 (c) Where the application has been filed with the depart-
14 ment prior to July 2, 1957. Twenty percent of all funds avail-
15 able for expenditure under this article, or so much thereof as
16 may be necessary, shall be used by the department for the
17 acquisition of homes in behalf of veterans who have filed ap-
18 plications prior to July 2, 1957, and whose applications are
19 considered active by the department, for the acquisition of
20 homes in which they have acquired interests of record, until
21 such time as all applications of this nature have been granted.

LEGISLATIVE COUNSEL'S DIGEST

AB 2813, as introduced, Meyers (Mil. & Vet. Aff.). Veterans.

Repeals Sec. 987.15, M. & V.C.

Repeals provision prohibiting Department of Veterans Affairs, under Veterans Farm and Home Purchase Act of 1943, from acquiring home in which veteran has interest of record.

APPENDIX D

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2704

Introduced by Mr. Meyers

April 24, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to amend Section 981 of the Military and Veterans Code, relating to veterans' education.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 981 of the Military and Veterans Code
- 2 is amended to read:
- 3 981. There is in the state government an educational insti-
- 4 tution known as the California Veterans' Educational Insti-
- 5 tute, which is under the management and control of the De-
- 6 partment of Veterans Affairs. The purpose of the institute is
- 7 to provide opportunities for veterans to continue *and main-*
- 8 *tain* their education.

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2704, as introduced, Meyers (Mil. & Vet. Aff.). Veterans' education.

Amends Sec. 981, M. & V.C.

States purpose of California Veterans' Educational Institute to be for purpose of maintaining as well as continuing education.

APPENDIX E

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2707

Introduced by Mr. Meyers

April 24, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to add Section 1051 to the Military and Veterans Code, relating to the Veterans' Home of California.

The people of the State of California do enact as follows:

- 1 SECTION 1. Section 1050 is added to the Military and Vet-
- 2 erans Code, to read:
- 3 1050. Subject to appropriation therefor, the department
- 4 shall provide for the conversion of a building at the home from
- 5 domiciliary use to a facility to be used to provide intermediate
- 6 and long-term nursing home care for veterans eligible for ad-
- 7 mission to the home. The department shall also provide for the
- 8 adequate staffing of such facility.

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2707, as introduced, Meyers (Mil. & Vet. Aff.), Veterans' Home of California.

Adds Sec. 1050, M. & V.C.

Requires Department of Veterans' Affairs, subject to appropriation, to convert domiciliary building at home to facility providing intermediate and long-term nursing home care for veterans eligible for admission to home.

APPENDIX F

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL

No. 2984

Introduced by Assemblyman Meyers

April 26, 1963

REFERRED TO COMMITTEE ON MILITARY AND VETERANS AFFAIRS

An act to amend the heading of Chapter 1 (commencing with Section 1010) of Division 5 of, and Sections 1010, 1011, 1012, 1012.1, 1013, 1014, 1018, 1019, 1023, 1024, 1025, 1026, 1030, 1030.1, 1031, 1032, 1033, 1034, 1035, 1035.1, 1036, 1037, 1038, 1039, 1041, 1042.1, 1043, 1045, 1046, 1047, 1048, 1049 of, the Military and Veterans Code, relating to California veterans' homes, and making an appropriation therefor.

The people of the State of California do enact as follows:

1 SECTION 1. The heading of Chapter 1 (commencing with
2 Section 1010) of Division 5 of the Military and Veterans Code
3 is amended to read:

4
5 CHAPTER 1. CALIFORNIA VETERANS' ~~HOME~~ HOMES
6 OF CALIFORNIA
7

8 SEC. 2. Section 1010 of said code is amended to read:

9 1010. As used in this chapter:

10 (a) "Home" means the *Northern California Veterans'*
11 *Home of California or the Southern California Veterans'*
12 *Home.*

13 (b) "Department" means the Department of Veterans Af-
14 fairs.

LEGISLATIVE COUNSEL'S DIGEST

A.B. 2984, as introduced, Meyers (Mil. & Vet. Aff.). Southern California veterans home.

Amends various secs., M. & V.C.
Creates a Southern California veterans home in the Department of Veterans Affairs, prescribes its powers, duties, responsibilities, and organization, and makes an appropriation for the construction thereof.

APPENDIX F—Continued

1 (c) "Veteran" means a member of ~~the~~ *a home provided for*
2 *by this chapter.*

3 SEC. 3. Section 1011 of said code is amended to read:

4 1011. There is in the Department of Veterans Affairs a
5 *Northern California Veterans' Home of California*, which is
6 situated at Veterans' Home, Napa County, *and a Southern*
7 *California Veterans' Home, which is situated at Veterans'*
8 *Home, _____ County.*

9 SEC. 4. Section 1012 of said code is amended to read:

10 1012. The ~~home~~ *homes are* for aged and disabled persons
11 who served in the armed forces of the United States during
12 a war period as defined by law; who were discharged under
13 honorable conditions from such service, and who are eligible
14 for hospitalization or domiciliary care in a veterans' facility
15 in accordance with the rules and regulations of the United
16 States Veterans Administration, and who have been bona fide
17 residents of this State for 10 years immediately preceding the
18 date of application. The property of the ~~home~~ *homes* shall be
19 used for this purpose. The provisions of this section shall not
20 be retroactive.

21 SEC. 5. Section 1012.1 of said code is amended to read:

22 1012.1. Prior to the admission of a veteran as a member of
23 ~~the~~ *a home*, and at any time during which a veteran is a mem-
24 ber of ~~the~~ *a home*, the department may investigate the veter-
25 an's financial status to insure that the veteran is unable to
26 pay for necessary hospital or domiciliary care outside of the
27 home. The department may contract with any other state
28 agency to conduct such an investigation in its behalf.

29 SEC. 6. Section 1013 of said code is amended to read:

30 1013. All property conveyed to and accepted by the State
31 under the provisions of Chapter 101, Statutes of 1897, and
32 any other property conveyed to and accepted for ~~the~~ *a home*
33 shall be the property of the home the same as though the de-
34 scription of such property and acceptance thereof were herein
35 set forth.

36 SEC. 7. Section 1014 of said code is amended to read:

37 1014. The ~~home~~ *homes* shall be under the management and
38 control of the department and, subject to the policies adopted
39 by the California Veterans Board and the direction of the
40 Director of Veterans Affairs, shall be administered by the
41 Commandant, Veterans' ~~Home~~ *Homes* of California, known
42 as the Manager of the Division of Veterans Homes.

43 SEC. 8. Section 1018 of said code is amended to read:

44 1018. The commandant, executive officer, chief surgeon,
45 quartermaster or supply officer, adjutant, chaplain, physicians
46 and surgeons, dental officers, hospital administrative officer,
47 and the utilities officer in office shall remain in office as pro-
48 vided in the State Civil Service Act. Thereafter the comman-
49 dant shall appoint, subject to civil service, qualified persons to
50 fill such offices. *The commandant shall also appoint deputy*

APPENDIX F—Continued

1 *commandants and deputy executive officers to administer the*
2 *homes and shall appoint, subject to civil service, such other*
3 *qualified persons necessary to administer the homes.*

4 SEC. 9. Section 1019 of said code is amended to read:

5 1019. Officers of the ~~home~~ *homes* shall take the oath of office
6 required of state officers, shall file a bond in form and amount
7 approved by the department, and shall reside at the ~~home~~
8 *homes* providing quarters are available. Officers may be re-
9 moved by the Director of Veterans Affairs for cause as pro-
10 vided in the State Civil Service Act.

11 SEC. 10. Section 1023 of said code is amended to read:

12 1023. The department may sue and be sued in any of the
13 courts of this State. All property held by the department
14 shall be held in trust for the State and for the use and benefit
15 of the ~~home~~ *homes*. The commandant shall manage the ~~home~~
16 *homes*, and administer ~~its~~ *their* affairs, and subject to the
17 direction of the Director of Veterans Affairs adopt rules and
18 regulations for the government of the ~~home~~ *homes*, in con-
19 formity as nearly as possible, to the rules and regulations of
20 the United States Veterans Administration for their facilities.

21 SEC. 11. Section 1024 of said code is amended to read:

22 1024. The department may conduct such investigation as
23 may be required to determine the total value of the property
24 and assets of any veteran applying for admission to ~~the a~~
25 *home*, and may contract with any other state agency to con-
26 duct such an investigation in its behalf.

27 SEC. 12. Section 1025 of said code is amended to read:

28 1025. The ~~home~~ *homes* shall be open at any time to the
29 inspection of the Director of the United States Veterans Ad-
30 ministration or his authorized representative.

31 SEC. 13. Section 1026 of said code is amended to read:

32 1026. The records, reports, and accounts kept by the ~~home~~
33 *homes* shall conform, as nearly as possible to the requirements
34 of the United States Veterans Administration.

35 SEC. 14. Section 1030 of said code is amended to read:

36 1030. The department shall report to the Governor before
37 the first day of January of each year stating all receipts and
38 expenditures, the condition of the ~~home~~ *homes*, the number of
39 veterans received and discharged during the preceding fiscal
40 year, and such other matters touching upon the management,
41 conduct, and interest of the ~~home~~ *homes* as the department
42 deems proper, or as are required by the Governor.

43 The department shall also make any other reports which the
44 Governor requires. All reports shall be verified by the Director
45 of Veterans Affairs and shall be certified by the commandant.

46 SEC. 15. Section 1030.1 of said code is amended to read:

47 1030.1. The department may enter into contracts with the
48 United States or any agency thereof, any governmental agency,
49 any person, or any corporation for the performance of services
50 or manufacture of articles by disabled members of the ~~home~~

APPENDIX F—Continued

1 *homes*. The proceeds of any such contract, less the actual op-
2 erating expenses, shall be paid to the individual disabled vet-
3 erans who perform the services or labor.

4 SEC. 16. Section 1031 of said code is amended to read:

5 1031. All moneys received by the State from the United
6 States for the use of the ~~home~~ *homes* shall be placed to the
7 credit of and shall augment the current appropriation for the
8 support of the ~~home~~ *homes*.

9 SEC. 17. Section 1032 of said code is amended to read:

10 1032. The department shall fix a schedule of wages for
11 veterans who are employed at the ~~home~~ *homes*, subject to the
12 approval of the Director of Finance.

13 SEC. 18. Section 1033 of said code is amended to read:

14 1033. All bills and charges against the ~~home~~ *homes* for sup-
15 plies, salaries, or other expenses, from state appropriations
16 shall be prepared and audited in the manner provided by law
17 and warrants therefor shall be paid out of any money available
18 for such purposes according to the directions of the comman-
19 dant approved by the Department of Finance.

20 SEC. 19. Section 1034 of said code is amended to read:

21 1034. Except money received from this State for disburse-
22 ment, all moneys received by the ~~home~~ *homes*, or by any offi-
23 cer of the ~~home~~ *homes*, including pension and other moneys
24 belonging to veterans and other trust moneys, shall be im-
25 mediately paid to the executive officer of the ~~home~~ *homes*. On
26 or before the 10th day of each month the executive officer of
27 the ~~home~~ *homes* shall forward to the State Treasurer all moneys
28 in his possession, except pension and other moneys belonging to
29 veterans, trust moneys, the post funds, and the emergency
30 fund, hereinafter mentioned, together with a statement of the
31 sources from which the same have been received. The moneys
32 shall be deposited by the State Treasurer to the credit of the
33 General Fund of the State; provided, however, that abate-
34 ments of support expenditures shall be credited to the support
35 appropriation current at the time of collection.

36 SEC. 20. Section 1035 of said code is amended to read:

37 1035. Any balance of moneys of any veteran held by the
38 ~~home~~ *homes*, or by ~~its~~ *their* authority, shall, upon the death of
39 the veteran, where undisposed of by will, executed prior to the
40 date of the veteran's admission to ~~the a~~ *a* home, be held as a
41 trust fund to be paid by the ~~home~~ *homes* upon proof deemed
42 to be proper to the commandant, directly and without probate,
43 to the spouse, dependent children, or dependent father or
44 mother of the veteran; provided, that the commandant is
45 hereby empowered to disburse funds of any deceased veteran
46 for payment of such funeral expenses.

47 If no spouse, dependent children, or dependent father or
48 mother are discovered within five years after the death of the
49 veteran, or if the spouse, dependent children, or dependent
50 father or mother discovered within such time are not entitled

APPENDIX F—Continued

1 to the whole thereof, the moneys not paid to the spouse, de-
2 pendent children, or dependent father or mother, and undis-
3 posed of by will executed prior to the date of the veteran's
4 admission to ~~the a~~ home or by will executed thereafter, leaving
5 such property to the spouse, dependent children, or dependent
6 father or mother, shall be paid to the post fund of the ~~home~~
7 *homes* which fund shall be used for the common benefit of the
8 veterans under the direction of the commandant.

9 SEC. 21. Section 1035.1 of said code is amended to read:

10 1035.1. If any member of ~~the a~~ home dies, any balance of
11 money or personal property held by the home shall be dis-
12 tributed in the manner prescribed in this chapter, and any
13 will executed subsequent to the date of the veteran's admission
14 to the home shall not be valid as it relates to money or personal
15 property held by the home, except to the extent that such will
16 disposes of the money or property to the spouse, dependent
17 children, or dependent father or mother of the veteran.

18 SEC. 22. Section 1036 of said code is amended to read:

19 1036. The veterans may voluntarily deposit money with
20 ~~the a~~ home, which the home shall receive and keep without
21 charge as a trust fund.

22 SEC. 23. Section 1037 of said code is amended to read:

23 1037. The money belonging to a veteran and voluntarily
24 deposited with ~~the a~~ home may be withdrawn, in whole or
25 in part, at the will of the veteran. Any balance remaining
26 upon his death, undisposed of by will, executed prior to the
27 veteran's admission to the home, and not paid to his spouse,
28 dependent children, or dependent father or mother pursuant
29 to a will or within the time and in the manner hereinbefore
30 provided, shall be paid to the post fund.

31 SEC. 24. Section 1038 of said code is amended to read:

32 1038. All money deposited with ~~the a~~ home for a veteran
33 shall be paid to him on demand, upon his discharge from or
34 voluntary leaving the home. If such money is not so demanded
35 at the time of discharge or leaving or within a period of five
36 years thereafter, or demanded by the spouse, dependent chil-
37 dren, dependent father or mother, devisees, or legatees in case
38 of his decease after his discharge or voluntary leaving, the
39 same shall be paid to the post fund.

40 SEC. 25. Section 1039 of said code is amended to read:

41 1039. All moneys received by ~~the a~~ home under specific
42 trust agreements shall be paid into the post fund five years
43 after the trust agreement terminates if not claimed by the
44 spouse, dependent children, dependent father or mother, de-
45 visees, or legatees of the veteran as hereinabove provided.

46 SEC. 26. Section 1041 of said code is amended to read:

47 1041. If the personal property of a veteran is unclaimed
48 for a period of one year after the date of his death or the date
49 of his discharge or voluntary departure from ~~the a~~ home, the
50 commandant ~~of the home~~ may proceed by public auction or

APPENDIX F—Continued

1 private sale to sell the property. The sale shall take place at
2 a public place in the home, and notice of sale shall be posted
3 in such place at least 10 days previous to the date of sale. The
4 proceeds of sale shall be credited to the post fund.

5 SEC. 27. Section 1042.1 of said code is amended to read;
6 1042.1. If any check is drawn upon any trust fund of ~~the~~
7 a home and remains unclaimed, or is not cashed, for a period
8 of one year, it shall be canceled and the amount thereof shall
9 be turned over to the executive officer and be deposited to the
10 credit of the post fund and used for the common benefit of the
11 members of the home.

12 SEC. 28. Section 1043 of said code is amended to read:
13 1043. With the exception of officers and employees and
14 their families, no person shall be admitted to reside in ~~the a~~
15 home, who is not eligible under Section 1012.

16 SEC. 29. Section 1045 of said code is amended to read:
17 1045. Nothing in this chapter shall prevent the State from
18 transferring the property and management of the ~~home~~ homes
19 to the United States for a home of similar character.

20 SEC. 30. Section 1046 of said code is amended to read:
21 1046. If it appears necessary or proper that a guardian of
22 the estate of a veteran be appointed, the court in its discretion
23 may, upon application of the commandant, acting through his
24 designated officer, appoint ~~the a~~ home as guardian of such es-
25 tate and cause letters of guardianship of such estate to be
26 issued to the home.

27 For the purposes of this chapter, the ~~home~~ is homes are
28 made a ~~corporation~~ corporations and, acting through an officer
29 designated by the commandant, may act as guardian of es-
30 tates, assignee, receiver, depository or trustee, under appoint-
31 ment of any court or by authority of any law of this State,
32 and transact business in such capacity in like manner as an
33 individual, and for this purpose may sue and be sued in any
34 of the courts of this State.

35 The ~~home~~ homes shall be appointed as guardian, assignee,
36 receiver, depository or trustee without bond. The officer desig-
37 nated by the commandant shall be required to give a surety
38 bond in such amount as may be deemed necessary from time
39 to time by the commandant, but in no event shall the initial
40 bond be less than ten thousand dollars (\$10,000) which bond
41 shall be for the joint benefit of the several estates, the com-
42 mandant, and the State of California. The ~~home~~ homes shall
43 receive such reasonable fees as shall be allowable for its ex-
44 penses for filing fees, attorneys' fees, and bond premiums. The
45 court shall allow to ~~the a~~ home at the time of its appointment
46 as guardian of an estate an amount which the court estimates
47 would be the bond premium for the estate if a separate bond
48 were required for the estate. The fees paid to the home may
49 be used as a trust account from which may be drawn expenses
50 for filing fees, attorneys' fees and bond premiums in all es-

APPENDIX F—Continued

1 tates it undertakes to administer. Whenever the balance re-
2 maining in such trust account shall exceed a sum deemed
3 necessary by the commandant for the payment of the filing
4 fees, attorneys' fees and bond premiums incurred in the vari-
5 ous estates, such excess shall be paid annually into the post
6 fund of the ~~home~~ homes.

7 The ~~home~~ homes when acting as guardian of a veteran may
8 deposit the funds of the estate in the special deposit fund of
9 the ~~home~~ homes, and may invest and reinvest such funds in
10 securities which are legal investments for savings banks in
11 this State.

12 SEC. 31. Section 1047 of said code is amended to read:

13 1047. The commandant shall maintain a post fund which
14 shall be used, at the discretion of the commandant subject to
15 the approval of the Director of Veterans Affairs, to provide
16 for the general welfare of the ~~home~~ homes and ~~its~~ their mem-
17 bers to include but not limited to providing for operations of
18 the post ~~exchange~~, ~~motion picture theater~~, ~~library~~, ~~band ex-~~
19 ~~changes~~, ~~motion picture theaters~~, ~~libraries~~, ~~bands~~, and to pay
20 for newspapers, chapel expenses, welfare and entertainment
21 expenses, sport activities, celebrations, and to pay for any
22 necessary insurance to protect property of the fund or the
23 post ~~exchange~~ ~~exchanges~~, or any other activity for the benefit
24 of the ~~home~~ homes or ~~its~~ their members.

25 SEC. 32. Section 1048 of said code is amended to read:

26 1048. The post fund shall include any profits from opera-
27 tions of the post ~~exchange~~ ~~exchanges~~, all donations to the
28 fund, and any money from the estates of deceased members
29 which have been held for five years and unclaimed by the
30 heirs.

31 SEC. 33. Section 1049 of said code is amended to read:

32 1049. The post fund may be used to establish or operate a
33 post ~~exchange~~ ~~exchanges~~ which may conduct any lawful en-
34 deavor which in the judgment of the commandant will benefit
35 the members of ~~the~~ a home. The commandant may establish
36 the post ~~exchange~~ ~~exchanges~~ to operate at a profit.

37 SEC. 34. The sum of ----- (\$-----) is hereby ap-
38 propriated out of any moneys in the State Treasury in the
39 General Fund to the Department of Veterans Affairs to con-
40 struct the Southern California Veterans Home.

APPENDIX G

MILITARY AND VETERANS CODE

DIVISION 4. VETERANS' AID AND WELFARE

Chapter 1. Department of Veterans Affairs

Section 699.5. The department may assist every veteran of any war of the United States and the dependent of every such veteran in presenting and pursuing such claim as the veteran or dependent may have against the United States arising out of war service and in establishing the veteran's or dependent's right to any privilege, preference, care, or compensation provided for by the laws of the United States or of this State. The department may cooperate and, with the approval of the Department of Finance, contract with any organization of veterans chartered by the Congress of the United States and authorized by the Veterans Administration to pursue claims before federal agencies and which has regularly, for a period of five years next preceding the date of such contract, maintained an established committee or agency, in a Veterans Administration regional office in the State of California, rendering similar services to veterans and dependents as the services referred to in this section and pursuant to such contract may compensate such organization for services within the scope of this section rendered by it to any veteran or dependent. The department also may cooperate and, with the approval of the Department of Finance, contract with any other organization of veterans authorized by the Veterans Administration to pursue claims before federal agencies and which has regularly, for a period of 12 years next preceding the date of such contract, maintained an established committee or agency, in a Veterans Administration regional office in the State of California, rendering similar services to veterans and dependents as the services referred to in this section and pursuant to such contract may compensate such organization for services within the scope of this section rendered by it to any veteran or dependent. No such contract shall be made unless the department determines that, owing to the confidential relationships involved and the necessity of operating through agencies sympathetic towards their problems, the services cannot satisfactorily be rendered otherwise than through the agency of veterans or dependents involved will be served if such contract is made.

APPENDIX H

COMPARATIVE MEMBERSHIP FIGURES OF VETERANS ORGANIZATIONS IN CALIFORNIA

<i>Organization and commander</i>	<i>Membership July 1964</i>	<i>Percentage of California Veterans</i>	<i>Membership July 1963</i>	<i>Membership July 1962</i>
American Legion ----- Harry C. Dennis Fresno	127,409	4.9%	134,000	133,078
Veterans of Foreign Wars ----- Allen J. Martin La Puente	52,000	2%	48,000	50,064
Veterans of World War I ----- Cloye Williams Alhambra	24,500	1%	23,000	unknown
Disabled American Veterans ----- Jack P. Kramer Monterey Park	14,620	$\frac{1}{2}$ of 1%	14,000	13,406
AmVets ----- Thad Males Paso Robles	2,000	1/10 of 1%	2,200	2,000
Jewish War Veterans ---- Hyman Manber San Bruno	1,800	1/10 of 1%	1,800 est.	1,640
United Spanish War Veterans ----- Enoch Jones San Francisco	1,450	1/10 of 1%	1,790	unknown
Military Order of Purple Heart ----- Edward Alunno San Jose	775	1/20 of 1%	1,000 est.	675
Total -----	224,000	9%	226,000	225,000 est.

The combined total of the membership in the eight veterans' organizations approximates 224,000. It should be noted, however, that these are individuals and thus the figures do not take into consideration the multiple memberships held by some veterans. If only one of each three held membership in a second organization, it would reduce the total to about 150,000. It is believed that multiple memberships are even more common than the one-in-three ratio, but no confirmation can be obtained. Present figures indicate there are approximately 2,600,000 veterans in California, of whom about 1,500,000 are California veterans under the definition of California laws.

APPENDIX I

BUDGET ANALYSIS OF CLAIMS AND RIGHTS

Since the 1958-59 fiscal year, the last complete one during which the state contracted with veterans' organizations for claims and rights service, a total of 23 employees have been added to the staff of the Division of Service and Coordination.

Except for the assistant information officer, let us assume the remainder of 22 employees devote full time to claims and rights. In order to be fair to the organization in making a comparison of costs we will also assume all 22 employees are paid at the highest step of their salary ranges.

	<i>1-1-64</i>	<i>Year</i>
2 Supervising veterans representatives	@ \$870-960	\$21,960
11 Veterans representatives	@ \$753-829	\$103,752
9 Clerks	@ \$486	\$52,488
22 Employees 1963-64 fiscal year		\$178,200
Add full difference in operating costs between the 1958-59 and 1963-64 fiscal years		\$26,742
		<u>\$204,942</u>

Therefore comparing the state's costs during the 1963-64 fiscal years with the cost of veterans' organization contracts during the 1958-59 fiscal year indicates a saving of \$391,758 to the state. Had there been an increase in subsidy to the organizations during the intervening years, the saving would be even greater.

LETTER OF TRANSMITTAL

CALIFORNIA STATE LEGISLATURE
ASSEMBLY COMMITTEE ON NATURAL RESOURCES,
PLANNING, AND PUBLIC WORKS

January 5, 1965

HONORABLE JESSE M. UNRUH
Speaker of the Assembly, and
HONORABLE MEMBERS OF THE ASSEMBLY
State Capitol
Sacramento, California

Gentlemen:

The Assembly Interim Committee on Natural Resources, Planning, and Public Works submits herewith Part II of its report to the Legislature on 1963-65 Interim studies. This part of the report is devoted to the following subjects:

Regional Planning in the Lake Tahoe Basin (H.R. No. 464, 1963)
Filling of San Francisco Bay (H.R. Nos. 117, 538, 1963)
Control of Outdoor Advertising (H.R. No. 475, 1963)
Administration of Tide and Submerged Land (H.R. No. 512, 1963)
Old Sacramento State Park (A.B. No. 2097, 1963)
Land Acquisition Policies and Procedures (H.R. No. 460, 1963)
Recreational Boating (A.B. No. 1362, 1963)
Riding and Hiking Trails (A.B. 1877, 1963)

Each of these matters, while differing in scope and content, is of significance to the long-range development of California and is illustrative of the increasingly complex problems of responsible resources planning and management posed by the state's rapidly growing population.

The attached report presents a brief review of each problem and sets forth the general conclusions and recommendations of the committee for the legislation which seems indicated, and in certain instances includes suggested draft bills. These conclusions and recommendations are the result of a series of public hearings and additional research conducted during the interim period.

As outlined more fully in the attached report, your committee has reached the following general conclusions:

Regional Planning in the Lake Tahoe Basin. The Lake Tahoe Basin is in immediate danger of serious overexploitation, and in the absence of an effective long-range master plan and a bistate regional authority with meaningful enforcement powers, the destruction of the world-

famous amenities of this region will proceed through uncontrolled urban sprawl and pollution of the lake's uniquely clear waters.

Filling of San Francisco Bay. The basic problem is in developing an effective long-range master shoreline plan which recognizes all the values of San Francisco Bay, and a meaningful enforcement mechanism to see that it is carried out. Failure to develop such a plan and implementation authority will result in the destruction of the Bay as one of the great resources of the State of California.

Control of Outdoor Advertising. Interim study prior to adjournment of the 1964 Budget Session was a major contribution to passage of the Collier-Z'berg Act, providing for expanded control of outdoor advertising on the interstate highway system in California. Subsequent review has established the desirability of extending the provisions of this legislation to the entire state highway system.

Administration of Tide and Submerged Lands. The huge potential for exploitation and development of tide and submerged lands along the California coast makes essential the enactment of a uniform, comprehensive policy for their administration. Such a policy does not currently exist, and its development is dependent upon the results of numerous studies currently underway.

Old Sacramento State Park. As an integral part of the Sacramento Redevelopment Area, the Old Sacramento State Park will be a worthy addition to the State Park System.

Land Acquisition Policies and Procedures. Because of the increasing interdependence of state agencies, it appears that statewide planning and coordination of land acquisition would be better served by the creation of a single agency charged with this responsibility.

Recreational Boating. Because of the inequitable manner in which the program for refunding boat gasoline taxes operates, it would appear that these refunds should be discontinued. In addition, serious deficiencies are noted in the enforcement of state boating laws.

Riding and Hiking Trails. There is a clear need for institution of a riding and hiking trail program near urban areas, and work on such a program should begin immediately.

The committee expresses its deep appreciation to the many organizations, public officials, and private citizens who contributed so generously and responsibly to these studies, and they should feel a sense of participation in whatever long-range improvements result from their contributions to this work.

Respectfully submitted,

EDWIN L. Z'BERG, *Chairman*

BURT M. HENSON, *Vice Chairman*

REGIONAL PLANNING IN THE LAKE TAHOE BASIN

SUMMARY OF THE PROBLEM

Lake Tahoe, described by Mark Twain as "surely the fairest picture the whole earth affords,"¹ is one of the great natural resources of California—and the entire United States. Located at an elevation of 6,200 feet in a structural basin of the snowcapped, forest-covered Sierra Nevada Mountains on the border between California and Nevada, this magnificent body of water is 21 miles long and 12 miles wide, has an area of some 192 square miles, and is one of the highest and deepest fresh water lakes in the world. With a maximum depth of 1,645 feet and a mean depth of 990 feet, it contains the staggering total of 122 million acre-feet of water; by comparison, Lake Mead, formed by Hoover Dam, which is one of the largest artificial lakes in the world, contains an average of approximately 14 million acre-feet of water.

In its superb setting, and possessing the unique quality of being one of the clearest lakes in the world (only Lake Baikal in Russia and Crater Lake in Oregon are known to be comparable), it is not surprising that Lake Tahoe has become one of the most popular all-year mountain recreational attractions in the western United States. Of course, wherever such an incomparable lake were to be located, it is likely that it would see a steady increase in visitors and permanent residents as a natural consequence of exploding population and improved transportation means and facilities, coupled with the increasing leisure and financial resources at the disposal of the American people.

However, the Lake Tahoe Basin has been blessed or cursed, depending on one's point of view, with several additional factors which have uniquely contributed to the phenomenal recent and projected increase in its temporary and permanent population, and the accompanying rapidly accelerating rate of private and commercial development. Included in these factors are (1) the year-round attraction of legalized gambling in numerous resorts and casinos on the Nevada side of the lake, (2) the high-speed, high-volume transportation arterials leading into and out of the Lake Tahoe Basin, (3) the proximity to and easy access from the increasingly heavily populated San Francisco Bay region and Sacramento Valley, which provide a ready market for permanent home and cabin sites on the lake and a variety of commercial enterprises, and (4) the accelerating development of year-round facilities for such sports as snow skiing, water skiing, boating, golf, fishing, and swimming at many points in the basin.

In view of this increasingly heavy usage and exploitation, the Lake Tahoe Basin is a microcosm of the developing need for integrated resources planning and management which is becoming apparent throughout the State of California. With nearly every major resource

¹ *Roughing It*, p. 169.

present to some extent in the basin, which is a well-defined region by most standards, it is clear that most of the problems of future development and the preservation of values in the basin are inescapably regional in their significance. And if this development is to proceed in such a manner as to preserve some of the basin's original charm and beauty, and yet strike the proper balance with the private and commercial exploitation necessary to serve the permanent population of some one-half million and an annual visitor count in the millions estimated for the basin in the year 2000, it can be achieved only by the most careful and visionary planning and enforcement of land use, and unyielding protection of the values which are unique to this area.

However, the achievement of a truly workable approach to these development problems is immeasurably complicated by the profusion of governmental jurisdictions (one federal government, two states and five counties), districts, and administrative agencies in the basin, each of which exercises a varying degree of responsibility and authority for specific matters in the basin.

Accordingly, the Assembly Committee on Natural Resources, Planning, and Public Works was assigned the responsibility of determining the impact of development to date on the Lake Tahoe Basin, the status of regional planning, and the prospects for a regional approach to the long-range development of the basin.

In examining this matter, the committee felt that the following questions were of basic importance:

1. What has been the impact of development to date on the Lake Tahoe Basin?
2. Who holds the responsibility and authority for regional planning and development in the Lake Tahoe Basin?
3. What should be the role of the State of California and its agencies in regional planning and development in the Lake Tahoe Basin?
4. What is the status of regional planning in the Lake Tahoe Basin?
5. What is the necessity, desirability, and feasibility of establishing a regional multipurpose authority, with broad powers under the law to develop and enforce a regional master plan, which will ensure the optimum development and maximum preservation of the values which are unique to the Lake Tahoe Basin?

As the first phase of this in-depth study, the committee held an intensive two-day public hearing on September 10-11, 1964, at Lake Tahoe, during which it received carefully prepared testimony from a score of witnesses intimately familiar with development problems in the basin. The detailed statements were focused on the questions cited previously, and in accordance with committee policy were submitted prior to the hearing for advance review by the members. Subsequent to this hearing, the committee met in executive session to consider this testimony and other relevant information, and develop the report.

This report of the committee consists of findings and conclusions, and limited supporting information, concerning the fundamental problems, and recommendations for the most promising initial steps in its

solution. Because of the complex nature of basin problems and existing governmental relationships, it is anticipated that the actions arising out of the first phase of this study will mark only the beginning of efforts toward a solution, and that its ultimate form will be the result of further hard work by all basin interests. The committee expects to follow closely the progress of efforts to solve this problem, and stands ready to initiate any appropriate legislation in addition to that recommended in this report.

The committee wishes to acknowledge its sincere appreciation to the many individuals, organizations, and governmental agencies who have so thoughtfully and carefully examined this problem and expressed their views to the committee. It has been impressed by the deep interest and evident sincerity of the many witnesses who appeared before it, and they are to be commended for their concern over the initiation of a long-range program for the orderly and responsible development of the Lake Tahoe Basin.

FINDINGS AND CONCLUSIONS

This examination by the Assembly Interim Committee on Natural Resources, Planning, and Public Works of the status of long-range regional planning in the Lake Tahoe Basin is the first comprehensive review of this matter to be made by a policy committee of the California Legislature. However, the initiation of this study is particularly appropriate at this time because of the rapidly approaching crisis in the exploitation of basin resources and the noteworthy progress in the preparation of a long-range regional plan which has been made under the auspices of two unofficial organizations of basin interests in both states—the Lake Tahoe Area Council and the Tahoe Regional Planning Commissions of California and Nevada. The committee compliments the far-sighted public officials and private citizens who worked so diligently through these organizations to define the initial problems and sponsor the preparation of the Lake Tahoe 1980 Regional Plan, which has recently been completed and is now under review by basin interests.

Careful analysis and evaluation by the committee of the testimony presented in public hearing and other information available to it leads to the following findings and conclusions with respect to regional planning in the Lake Tahoe Basin.

1. Although it varies by location, the general impact of development to date in the Lake Tahoe Basin has been serious, and in some areas thoughtless exploitation has damaged the amenities beyond reasonable hope of recovery. In addition, if the growth in basin population continues at its present pace in the absence of a responsible pattern of controls, the basin faces the possibility of general and irreversible overexploitation. The most urgent problems arising from this situation are the need for the development and enforcement of a responsible land use plan, and an effective means of protecting the unique clarity of lake water from pollution and eutrophication.²

² A biochemical process in lake waters by which increasing biological activity (usually algal growth) resulting from added nutrients, frequently from sewage wastes, produces turbidity, a process which would destroy the unusual character of Lake Tahoe water.

2. Under existing law, the responsibility and authority for planning in the Lake Tahoe Basin is vested in the planning commissions and boards of supervisors or commissioners of the five basin counties. The Lake Tahoe Regional Planning Commission, which is composed of representatives of the county governing bodies and planning commissions, performs an advisory function only, and in this capacity made a substantial contribution to the preparation of the Lake Tahoe 1980 Regional Plan. In addition, there are a number of independent governmental agencies which are under no compulsion to make administrative decisions in conformance with the provisions of any land-use plan approved by the county planning commissions and governing bodies.

3. Pending the development of the characteristics of a possible regional authority, the committee concluded that there should be no modification of the existing statutory responsibilities of California state agencies with respect to the development and implementation of a regional plan for the basin. On the basis of the preliminary information presented to it, however, the committee expresses its concern over the state and local administrative organization and standards governing the control of water pollution of Lake Tahoe, and is hopeful that this matter will eventually be clarified.

4. As a result of the foresight and leadership displayed by public bodies and private interests through the Tahoe Regional Planning Commission and the Lake Tahoe Area Council, a Lake Tahoe 1980 Regional Master Plan has been prepared to guide the long-range development of the basin. This plan, which is presently being reviewed by the individual basin counties, appears to the committee to be a well-conceived approach to achieving the long-range crucial and necessary balance between exploitation and preservation of the varied resources unique to the basin. The committee agrees, however, that the ultimate effectiveness of this land-use plan will be measured by the degree to which its essential provisions are carried out. With respect to this, the committee expresses its concern over the possible compromise of one of the fundamental premises of the Lake Tahoe 1980 Regional Plan—namely, the West Shore Parkway—by the apparent insistence of the California Division of Highways and California Highway Commission on imposing a four-lane, controlled-access freeway in place of the parkway along the west shore of Lake Tahoe.

5. Because the complex pattern of governmental jurisdictions in the basin makes all but impossible the unified, comprehensive approach to basin management which is necessary to prevent overexploitation of the remaining amenities of this great resource, the committee finds a clear need for the creation of some kind of bistate, regional authority to govern basin development. This regional authority would have broad powers under the law for the development and enforcement of a regional master plan which will ensure optimum development and maximum preservation of the values which are unique to the Lake Tahoe Basin. General support was expressed at the public hearing of the committee for this regional approach to basin management, and a general desire was evident to proceed to the task of defining the most effective means by which this objective can be realized.

RECOMMENDATIONS

In view of the findings and conclusions of this committee, and the general support by basin interests of a regional approach to management of the Lake Tahoe Basin, the committee concludes that the most promising first step would be for the California and Nevada State Legislatures to provide the tools necessary for shaping the most effective course of action.

Accordingly, the committee makes the following recommendations.

1. The California State Legislature should give statutory recognition and sanction to the Tahoe Regional Planning Commission of California. This commission, which would continue to coordinate planning activities in the Lake Tahoe Basin with the Tahoe Regional Planning Commission of Nevada, would serve during the interim period prior to creation of the regional authority.

2. A Lake Tahoe Regional Authority Study Commission should be established to develop the character, statutory framework, and powers of the regional authority necessary to provide for comprehensive management of development in the Lake Tahoe Basin.

3. To provide a clear statutory basis for the construction of parkways by the State of California, the statutory authority for the designation, construction, and maintenance of parkways should be enacted.

FILLING OF SAN FRANCISCO BAY

SUMMARY OF THE PROBLEM

The impact of California's growing population on the environment is becoming increasingly apparent in many ways, and is posing increasingly complex and difficult problems of responsible resources planning and management. One of the most dramatic illustrations of those complex problems can be found in the accelerating plans for reclamation of tide and submerged lands in the San Francisco, San Pablo, and Suisun Bays. These plans, which are a direct result of the rapidly expanding population in the San Francisco Bay area and the demand for additional real estate for residential, commercial, and industrial use, bring into unusually sharp focus the urgent need for responsible, visionary, long-range regional planning which integrates all of the needs of the region, and strikes the proper balance between private and commercial exploitation of the bay and the recreational and aesthetic requirements of the public.

Although it is generally agreed that San Francisco Bay is a unique and valuable resource—one of the greatest of its kind in the world—and possesses many values other than use as real estate, the study process of filling the marsh, tidal, and submerged lands susceptible of reclamation has in the last one hundred years shrunk the bay from some 568 square miles to less than 325 square miles. And there are ambitious, unilateral plans on the part of the many grantees, lessees, and owners to fill much of these remaining lands. If this process continues in the absence of a responsible plan, in another generation the bay as a major element of the San Francisco Bay region will cease to exist.

This situation has developed as a result of the failure of public policy in California to recognize the importance of San Francisco Bay as a major resource in its own right and to enact a responsible, uniform, comprehensive policy to govern the disposition of state-owned tide and submerged land. As a result, much of the tide and submerged land in the San Francisco Bay has been granted, leased, or actually sold to a profusion of governmental entities and private organizations, with development governed by a wide array of terms and conditions. In view of this, it is not surprising that the greater proportion of planning for the future filling and/or development of the bay has been proceeding on a local, piecemeal, often provincial basis, unrelated to the needs of adjoining areas or the bay area as a whole.

However, public awareness and concern with respect to this situation has been rapidly increasing, and a number of public and private organizations have taken an active role in attempting to find a solution to this complex problem. Because of the many governmental agencies at the local, state, and federal level and the numerous private organizations and individuals who are concerned with the uses which are

made of San Francisco Bay, the present period is one of confusion while the essential dimensions of the problem are being defined.

The two major activities which are currently underway are a study by the San Francisco Bay Conservation Study Commission which was created by the 1964 session of the Legislature, and the preparation of a regional shoreline plan by the Association of Bay Area Governments, which is an informal organization of the nine counties and 80-odd cities in the San Francisco Bay region.

The Conservation Study Commission, which will report to the 1965 session of the Legislature, has been charged with the basic responsibilities of defining the public interest in San Francisco Bay, determining the broad effects of further filling, and recommending legislation which protects the public interest. In furtherance of these objectives, the commission has been holding weekly meetings since August 1964.

The Association of Bay Area Governments, which opposes state action until it has been demonstrated that local action is ineffective, has begun the preparation of a regional master shoreline plan for the entire San Francisco Bay region, and is building a professional planning staff for this purpose. It is anticipated that completion of this plan will take two to three years.

Because of the general concern on the part of numerous individuals and organizations, especially with respect to continuing reclamation in the interim period while the master plan is being developed, a number of bills were introduced in the 1963 and 1964 sessions of the Legislature, most of which would have restricted filling activities until a long-range solution to the problem has been developed. Opposition from private interests and the Association of Bay Area Governments, which was based on the premise that local action should be given the first opportunity to solve the problem, prevented passage of the legislation at both sessions of the Legislature.

As a result of the opposition to initial legislation in the 1963 General Session, this committee was directed to make a preliminary review of the problem prior to the 1964 Budget Session. The consequence of the initial hearing on this subject, which was held in San Francisco on October 22-23, 1963, was the introduction of additional legislation in the 1964 session, which resulted in creation of the Conservation Study Commission referred to previously. The committee had a second hearing in San Jose on July 9-10, 1964, in which special attention was given to planning for the south shoreline of San Francisco Bay.

In addition to the difficult tasks of defining the public interest in San Francisco Bay and determining the effects of further filling, the following fundamental questions must be resolved by the many investigations currently underway:

1. How can reasonable and meaningful restrictions be placed on all further filling projects pending completion and adoption of a responsible regional shoreline plan?

2. Will a meaningful master shoreline plan be developed and adopted which recognizes all the values of San Francisco Bay and displays a responsible balance between exploitation and preservation?

3. Will an effective means be developed for enforcement of the provisions of the master shoreline plan?

The answers to these questions are not clear at present, but there is reason to be hopeful that satisfactory progress will be made. To encourage continued progress and as a result of its review of this problem, the committee sets forth the findings and recommendations in this report. The committee expects to follow closely the efforts toward a solution of these difficult problems, and is prepared to initiate whatever legislation is required to effect a responsible long-range plan for the development of San Francisco Bay.

The committee wishes to thank the many public and private officials and organizations for the responsible manner in which they examined this problem and set forth their views to the committee. They are to be commended for their interest in the development and execution of responsible public policies in resources planning and management.

FINDINGS AND CONCLUSIONS

This review by the Assembly Interim Committee on Natural Resources, Planning, and Public Works of the problems posed by the unregulated filling of San Francisco Bay is one of several studies of various aspects of this complex matter which are currently underway by various public and private organizations. However, based on careful evaluation of the information available to it, the committee makes the following findings and conclusions.

1. As the result of past indiscriminate filling, the total marsh, tidal, and submerged land in San Francisco, San Pablo, and Suisun Bays susceptible of reclamation has shrunk in the last one hundred years from approximately 568 square miles to some 325 square miles.

2. There are plans by a number of grantees, lessees, and owners to fill much of the remaining unreclaimed marsh, tidal, and submerged land.

3. There has not been, and is not, a uniform, comprehensive state policy to govern the granting of tide and submerged lands, and as a result, grants have been made in the past on an individual, piecemeal basis, with little or no consideration given to the needs of the San Francisco Bay region as a whole. As a result, most grantees, lessees, and owners of tide and submerged lands are preparing development plans based on local needs and requirements, and in the absence of a long-range regional plan and new state policies governing the disposition and administration of ungranted lands, this process will continue.

4. San Francisco Bay is a unique and valuable natural resource—one of the greatest of its kind in the world—and possesses many values other than use as real estate. For example, fish, wildlife, boating, and scenery are values important to recreation and business in the bay area, and continued unregulated filling will have a presently unknown impact on each of these values by decreasing the volume and surface area of bay water and contributing to increased pollution. It is obvious that such a large body of water, possessing an irregular shoreline of nearly 300 miles, and strategically located in the heart of a vast agricultural-urban-commercial-industrial complex in a rapidly growing state, is a regional feature of the first magnitude. As such, its significance transcends the interests of any one of the nine counties and 80-odd cities

which line its shores, and the manner in which this great natural resource is used is of legitimate concern to the region, the state, and the United States. Because of its importance to the bay region as a whole, any changes in the nature and extent of the bay will have a presently unknown impact on the entire region, and the effect is little known on such considerations as navigation, tidal flow, flood control, earthquake hazards, pollution, fish and wildlife, mineral resources, recreation, climate, and scenic values. Completion of studies currently being conducted should begin to clarify some of these matters.

5. In view of these many and complex considerations, it is obvious that the long-range future of San Francisco Bay depends on responsible, comprehensive planning today which takes into account all of its many values and uses. To accomplish this, it is absolutely essential that a meaningful regional shoreline plan be prepared and adopted by all bay interests, and that its provisions are carried out by an effective enforcement mechanism.

6. Pending the development and adoption of the master plan, in the event local action does not produce a meaningful restriction of all filling activities it may be necessary for the state to impose a moratorium on all further filling projects. In addition, it may be necessary to initiate a program of reacquisition of certain previously granted tide and submerged lands.

RECOMMENDATIONS

In view of the findings and conclusions of this committee, it reaffirms its concern in the future development of San Francisco Bay and the interest of the state therein, and recommends that the Assembly, through this committee, continue to evaluate the progress of the Association of Bay Area Governments in the following specific areas:

1. Preparation of a long-range regional plan for the future development of San Francisco, San Pablo, and Suisun Bays, with special attention to the definition of the shoreline and the consideration given to land use, shoreline development, earthquake hazards, transportation, fish and wildlife, recreation, navigation, pollution, sewage disposal, tidal flow, mineral resources, and scenic values.

2. Development of an effective mechanism for implementation of the adopted regional shoreline plan.

3. Progress on voluntarily imposed moratoriums and the relationship of these adopted moratoriums to the needs of the long-range development of the bay area as reflected in the regional plan.

To ensure that the committee is fully and continuously informed in these areas, the Association of Bay Area Governments is requested to submit a quarterly report to the committee, commencing April 1, 1964, which sets forth the current status of progress in each area outlined above.

The committee further recommends that consideration be given to the various means by which legislation can restrict further filling of tide and submerged lands pending development and adoption of a regional shoreline plan. It is hoped that the report of the Conservation

Study Commission will include recommendations for a moratorium on further filling projects pending the development and adoption of a regional plan, and an effective mechanism for the approval of essential projects in the interim period.

Based on this continuing evaluation, and the recommendations of the Conservation Study Commission, the need for additional legislation will be determined.

CONTROL OF OUTDOOR ADVERTISING

SUMMARY OF THE PROBLEM

It is generally agreed that California is among the outstanding scenic areas in the country—and the world. The variety and extent of its scenic resources are a major attraction for the thousands of tourists who visit the state each year, and a source of continuing pleasure to its steadily increasing population.

However, this continuing population growth is demanding an ever increasing mileage of roads, highways, and freeways throughout California, and this in turn creates numerous other problems which can only be resolved through the development of responsible public policies.

One of these problems which has become a matter of increasing concern throughout the state is the proliferation of outdoor advertising along the rapidly expanding road, highway, and freeway network, a growth which is seriously eroding the scenic beauties of California's landscape, and by distracting motorists, creating a potentially serious hazard to traffic safety.

This concern was translated into a 1963 legislative proposal, supported by the Governor, to expand state regulation of outdoor advertising along the interstate and state highway systems. After careful review, the proposal was referred to this committee for detailed study during the interim period. Pursuant to the resolution directing this study, the committee held three intensive public hearings—in Los Angeles on October 15, 1963, in Palm Springs on October 16, 1963, and in San Diego on February 24–25, 1964—during which it received carefully prepared testimony from a large number of witnesses, including representatives of the outdoor advertising industry.

These hearings clearly established the need for expanded state control of outdoor advertising, and consequently the Governor placed this matter on special call at the 1964 Budget Session of the Legislature. The legislation which was introduced resulted in passage of the Collier-Z'berg Act, which established the principle of expanded control of outdoor advertising in California and applied strict controls to advertising along the interstate highway system. In addition, enactment of this legislation qualified California for an estimated \$8 million in additional federal highway funds.

With the principle of expanded state regulation of outdoor advertising clearly established by passage of the Collier-Z'berg Act, the committee held an additional public hearing in San Diego on September 1, 1964, to consider legislation applying the provisions of the Collier-Z'berg Act to the remainder of the state highway system.

The committee expresses its appreciation to the many individuals, organizations, and governmental agencies who carefully and responsibly reviewed this problem and presented their views to the committee, and they should feel a sense of participation in the development of public policies to restore and preserve the scenic resources of this state and contribute to increased traffic safety.

FINDINGS AND CONCLUSIONS

Based on the need to restore and preserve the scenic resources of California and contribute to increased traffic safety, the committee finds a clear requirement for expanded regulation of outdoor advertising along the state and interstate highway system in California. The committee concludes that this principle was recognized by the State Legislature with passage of the Collier-Z'berg Act, and that because the safety and well being of the traveling public should receive first consideration on all state thoroughfares, that subsequent legislation should extend the provisions of the Collier-Z'berg Act to the entire state highway system.

RECOMMENDATIONS

The committee recommends that the provisions of the Collier-Z'berg Act, which established the principle of expanded regulation of outdoor advertising along the interstate highway system, be extended to the entire state highway system in California. Legislation to accomplish this extension is included in this report.

PROPOSED LEGISLATION

Legislative Counsel's Digest

Outdoor advertising.

Amends various secs., B. & P.C.

Extends the provisions of the Collier-Z'berg Act regulating outdoor advertising adjacent to certain segments of state highways included in the national system of interstate and defense highways, so as to regulate outdoor advertising adjacent to all other state highways.

An act to amend Sections 5286, 5288, 5288.1, 5288.2, and 5288.4 of the Business and Professions Code, relating to outdoor advertising.

The people of the State of California do enact as follows:

SECTION 1. Section 5286 of the Business and Professions Code is amended to read:

5286. No advertising display shall be placed or maintained in any of the following locations or positions or under any of the following conditions or if the advertising structure or sign is of the following nature:

(a) If within the right-of-way of any highway.

(b) If visible from any highway and simulating or imitating any directional, warning, danger or information sign permitted under the provisions of this chapter, or if likely to be mistaken for any such permitted sign, or if intended or likely to be construed as giving warning to traffic, such as by the use of the words "stop" or "slow down."

(c) If within any stream or drainage channel or below the flood water level of any stream or drainage channel where the advertising display might be deluged by flood waters and swept under any highway structure crossing the stream or drainage channel or against the supports of the highway structure.

(d) If not maintained in safe condition.

(e) If visible from any highway and displaying any red or blinking or intermittent light likely to be mistaken for a warning or danger signal.

(f) If visible from any state highway which is a part of the national system of interstate and defense highways (and which highway is constructed upon right-of-way, the entire width of which was acquired subsequent to July 1, 1956), or any other state highway, and displaying any flashing, intermittent or moving light or lights, except that any such display lawfully maintained in existence on July 1, 1964, may be maintained in existence until July 1, 1969.

(g) If any illumination thereon shall be of such brilliance and so positioned as to blind or dazzle the vision of travelers on adjacent highways.

(h) If visible from any state highway which is a part of the national system of interstate and defense highways (and which highway is constructed upon right-of-way, the entire width of which was acquired subsequent to July 1, 1956), or any other state highway, and is erected or maintained in existence on July 1, 1964, may be maintained in existence until July 1, 1969.

SEC. 2. Section 5288 of said code is amended to read:

5288. (a) The regulation of advertising structures adjacent to any state highway included in the national system of interstate and defense highways, or any other state highway, as herein provided is hereby declared to be necessary to promote the public safety, health, welfare, convenience and enjoyment of public travel, to protect the public investment in such highways, to preserve the scenic beauty of lands bordering on such highways, and to insure that information in the specific interest of the traveling public is presented safely and effectively, recognizing that a reasonable freedom to advertise is necessary to attain such objectives.

(b) Notwithstanding any other provisions of this chapter, no advertising display shall be placed or maintained within 660 feet from the edge of the right-of-way of, and the copy of which is visible from, any highway included in the national system of interstate and defense highways (and which highway is constructed upon right-of-way, the entire width of which was acquired subsequent to July 1, 1956), or any other state highway, other than the following:

(1) Directional or other official signs or notices that are required or authorized by law.

(2) Signs advertising the sale or lease of the property upon which they are located.

(3) Displays which advertise the business conducted or services rendered or the goods produced or sold upon the property upon which the advertising display is placed if the display is upon the same side of the highway and within 50 feet of the point on the property on which the business is conducted or services rendered or goods produced or sold.

(4) Signs erected or maintained pursuant to regulations of the director, and not inconsistent with the national policy set forth in Section 131 of Title 23 of the United States Code and the standards

promulgated thereunder by the Secretary of Commerce, advertising activities being conducted at a location within 12 miles of the point at which such signs are located.

(5) Signs erected or maintained pursuant to regulations of the director, and not inconsistent with the national policy set forth in Section 131 of Title 23 of the United States Code and the standards promulgated thereunder by the Secretary of Commerce, and designed to give information in the specific interest of the traveling public.

SEC. 3. Section 5288.1 of said code is amended to read:

5288.1. The provisions of Section 5288 shall not apply to those segments of the national system of interstate and defense highways *or the state highway system* which traverse and abut on commercial or industrial zones within the boundaries of incorporated municipalities, as such boundaries existed on September 21, 1959, wherein the use of real property adjacent to and abutting on the national system of interstate and defense highways *or the state highway system* is subject to municipal regulation or control, or which traverse and abut on other areas where the land use, as of September 21, 1959, is clearly established by state law as industrial or commercial.

SEC. 4. Section 5288.2 of said code is amended to read:

5288.2. Any advertising display located within 660 feet of the edge of the right-of-way of, and the copy of which is visible from, any highway included in the national system of interstate and defense highways (and which highway is constructed upon right-of-way, the entire width of which was acquired subsequent to July 1, 1956), *or any other state highway*, lawfully maintained in existence on July 1, 1964, which is not within one of the classes specified in Section 5288(b) may be maintained in existence until July 1, 1969, unless required to be removed prior thereto by order of the director; provided that this section shall not apply to advertising displays adjacent to a landscaped freeway.

SEC. 5. Section 5288.4 of said code is amended to read:

5288.4. The director shall prescribe and enforce regulations for the erection and maintenance of advertising structures permitted by Section 5288 *adjacent to state highways included in national system of interstate and defense highways* consistent with the national policy set forth in Section 131 of Title 23 of the United States Code and the national standards promulgated thereunder by the Secretary of Commerce; provided that the director shall not prescribe regulations to conform to changes in federal law or regulations made after the effective date of this section without prior legislative approval.

Notwithstanding any other provisions of this chapter, no outdoor advertising shall be placed or maintained adjacent to any state highway included in the national system of interstate or defense highways in violation of the present Section 131 of Title 23 of the United States Code, or the present national standards promulgated thereunder by the Secretary of Commerce and the director shall prescribe and enforce regulations consistent therewith.

ADMINISTRATION OF TIDE AND SUBMERGED LANDS

INTRODUCTION

High on the list of California's extraordinary variety and abundance of natural resources is a unique resource found in less than half of the other states, and in few instances is it found with the same potential for exploitation and wealth as it is in California. This resource—the tide and submerged lands lying in the bays and along the 1,200 mile coast of California—is of immense value and significance to the future development of the state.

The millions of dollars in revenue derived from oil and gas operations conducted in the Long Beach area have spectacularly demonstrated the importance of these lands from a purely economic point of view. In the future this aspect of the tide and submerged lands resource may be even more important. Speaking before the Fifth World Petroleum Congress in 1959, Mr. Frank Hortig, executive officer of the California State Lands Commission, estimated California's offshore oil potential at four billion barrels. But even that figure may prove to be too conservative. At the same meeting a representative of the oil industry estimated the potential at more than 11 billion barrels.

The potential of these tide and submerged lands for the production of other minerals has never been adequately investigated. However, there are indications that valuable deposits of phosphates and manganese lie off California's coast. As exploration and recovery techniques develop it is possible that the offshore area will be exploited for these and other minerals.

Resolution of the present dispute between California and the United States over the offshore lands will determine the degree of the state's economic interest. But even if the controversy should be resolved adversely to California, the tide and submerged lands would continue to have great economic significance for this state.

Of course the value of our tide and submerged lands should not be measured solely in terms of their mineral potential. As our knowledge and techniques develop, these lands will become increasingly important for the foodstuffs and fresh water that they can supply. Furthermore, under the pressure of an expanding population there will be increasing demand to make use of tide and submerged lands for industrial, residential, and recreational purposes. In fact the recreational possibilities alone—boating, swimming, fishing, and nature study areas, for example—may prove to be more important than any revenue which might be derived from oil or mineral production.

If California is to realize the full potential of these lands, a carefully conceived policy governing their development and administration must be formulated. The present controversy concerning land reclamation in San Francisco Bay and the protracted dispute over the

division of the Long Beach oil revenues clearly demonstrate that we have not had such a policy in the past. The degree to which such problems may be avoided in the future will depend in large measure upon our ability to unravel our past mistakes.

House Resolution No. 512 directed the committee to study the development and administration of tide and submerged lands held by various **political entities** under legislative grants in trust. The resolution placed responsibility upon the committee for the formulation of policy governing the administration and development of these lands by directing that the study seek the "establishment of appropriate conditions, trust provisions, and reservations for grants of tide and submerged land, past and prospective . . ." This study was initiated with a preliminary review of the entire problem at a public hearing in Anaheim on September 17-18, 1964. At this hearing the State Lands Commission, the Resources Agency and the State Office of Planning, each of which is engaged in studying various aspects of this problem, presented information to the committee and suggested certain courses of action which might be followed in formulating a comprehensive policy in this extraordinarily complex matter.

FINDINGS AND CONCLUSIONS

Analysis of the preliminary information available to it leads the committee to the following findings and conclusions.

1. The tremendous potential of California's tide and submerged lands for mineral exploitation, and their importance as a potential source of land for recreational, industrial, and residential development, make them one of the state's most extraordinary and valuable natural resources.

2. The full potential of these lands cannot be realized unless sound policies for their development and administration are formulated. The present dispute over the filling of San Francisco Bay and the recently resolved controversy concerning the division of Long Beach oil revenues indicate past deficiencies in the administration of these lands.

3. The provisions, conditions, and reservations contained in the various legislative grants in trust of tide and submerged lands vary widely, and in many instances do not ensure that the lands will be developed or administered to advance the total state interest.

4. The exact nature and extent of the state's interest in its tide and submerged lands has not been determined, and substantial additional knowledge, much highly technical in nature, concerning the present administration, physical characteristics, economic importance, and demand and use potential of these lands must be acquired.

5. In addition to this committee, during the 1963-65 interim period two other legislative committees, one study commission, and several state agencies have been engaged in the study of various phases of this problem. In view of the facts that (a) the development of a comprehensive policy for the administration of these tide and submerged lands must rest on a solid factual basis and must be coordinated and

integrated with the long-range development policies of the state, and (b) a large amount of technical, legal, and planning data must be developed before intelligent discussion of alternatives can proceed, it is the feeling of the committee that a coordinated program must be established to gather this information and eliminate duplication of efforts. At such time as sufficient information is available, this committee will be in the position to develop a responsible, comprehensive, long-range policy for the administration of tide and submerged lands which will take into consideration the total state interest.

RECOMMENDATIONS

Because California's tide and submerged lands have great importance to the future development of the state, it is important that policies and procedures concerning their development and administration be grounded upon a solid basis of factual information. In view of the fact that substantial additional information is required, it is the feeling of the committee that a piecemeal solution of the problem should not be attempted at this time.

Therefore, it is recommended that

1. The committee maintain a continuing interest and responsibility in this overall problem in conformance with the general directives contained in House Resolution No. 512, and upon completion of the overall study of tide and submerged lands being conducted by the State Office of Planning under the State Development Plan, that the committee carefully review the findings and recommendations as the basis for the development of a comprehensive policy for the administration of tide and submerged lands.

2. To properly implement this responsibility, it is further recommended that the State Office of Planning be directed to make quarterly reports to this committee, beginning April 1, 1965, outlining the progress and tentative conclusions of its tide and submerged lands study.

3. Finally, pending the development of a uniform, comprehensive policy for the administration of tide and submerged lands, it is recommended that the Legislature make no further grants of tide and submerged lands.

SUMMARY OF THE PROBLEM

When California was admitted to the union it became the fee simple owner of all the tide and submerged lands within its jurisdiction. Despite the fact that the state holds these lands subject to a public trust for the purpose of navigation, commerce, and fishing, thousands of acres of tide and submerged lands, most of them in San Francisco Bay, passed out of the state's control by means of sale to private persons and corporations. These sales reflected the early attitude that tide and submerged lands represented a convenient source of revenue. That attitude persisted until 1879 when the Constitution was amended to prohibit the sale to private persons, partnerships, or corporations of tide and submerged lands lying within two miles of an incorporated

town. But sales beyond that limit continued until 1909 when they were prohibited by statute.

Since 1911 the state's main device for disposing of its tide and submerged lands has been the grant in trust. The first such grant was actually made in 1851 to the City of Martinez; however, only 12 grants in trust were made prior to the turn of the century, and it was not until about 1911 that visions of increased trade through the proposed Panama Canal produced the first large scale use of the grant in trust device. Most of these early grants were given for the purpose of constructing harbors for commerce and navigation.

Since 1851 the Legislature has passed more than 200 statutes dealing with grants in trust. Some 130 specific areas of tide and submerged land has been disposed of to 61 political entities along the coast—46 cities, 7 counties, 7 harbor districts and 1 sanitary district. Twenty percent of all the grants have been made since 1959; 50 percent of the grants made since 1959 and 50 percent of the total grants made since 1851 dealt with lands lying in the San Francisco Bay region. The total area of the grants in trust comprise more than 10 percent of California's coastline.

Provisions, Conditions, and Reservations in Grants in Trust

At the request of the committee the State Lands Division of the Department of Finance has prepared a tabulation of the various provisions, conditions, and reservations contained in all of the grants made by the Legislature. For purposes of the tabulation the 130 specific areas of granted lands were combined into 83 parcels. Thus where a political entity received more than one grant in trust of contiguous tide and submerged lands for the same purpose, with the same required conditions, and the same rights reserved to the state, the combined area was reported as a unit in the tabulation. If the same entity received grants of separately defined areas of land, or if the grants were for differing purposes, contained varying conditions or reserved different rights to the state, each area of land was reported as a separate unit.

Trust Purposes. Evidently the Legislature has assumed over the years that local and state interests in the tide and submerged lands have been identical. Thus the purposes for which the grants have been made have tended to reflect the particular interests of the grantee. Furthermore, those interests have, in the main, reflected the desire of various grantees for additional transportation facilities.

Many of the grants were stated to be for more than one purpose.

Harbor for commerce and navigation	72
Aviation facilities	25
Highways, streets (incidental to harbor)	12
Public recreation facilities	46
Small boat harbors, marinas	16
Commercial and industrial uses	9
Residential uses	2
Flood control	1
Establishment of sanitary district	1

Conditions Required of Grantees. While many conditions recur in a large number of the granting statutes the tabulation does not reveal a consistent insistence upon some of the more important conditions.

No alienation	78
May grant franchises and/or leases	74
No discrimination in tolls, rates, or charges	68
Shall issue bonds of a specified amount within a specified number of years	4
Shall commence improvement within a specified number of years	3
Shall expend a specified amount within a specified number of years	3
Shall be improved without expense to the state	59
May use funds received for development from the state	24
Grantee to pay costs of survey conducted by State Lands Commission	33
Lands to be improved within 10 years	35

The tabulation reveals that the statutes relating to five parcels, the grantees were the Cities of Martinez, Oakland, Long Beach (grant made in 1961), Monterey, and Buenaventura, did not prohibit the grantees from conveying the lands to private individuals or corporations. There has been no recent investigation of the 78 parcels which carried a stipulation against alienation. However, the State Lands Division reports that "prior investigations revealed . . . there have been in effect conveyances . . ." despite the prohibitory language of the granting statutes.

While the statutes relating to most of the parcels have specifically allowed the grantee to grant franchises or leases, there has been no consistent policy as to the length of the franchise or lease period. For example the City of Buenaventura is allowed to grant a franchise or lease for only 10 years (longer terms permitted only if approved by two-thirds of the electors voting) while many other grantees may provide terms of up to 99 years.

The requirement that the grantee commence improvement within a specified period, issue bonds for improvement purposes, and expend a specified amount upon the improvements, has not been imposed since the 1917 session of the Legislature.

Moss Landing, in 1947, was the first grantee required to make "substantial improvements" upon its tide and submerged lands within 10 years. That requirement has been incorporated in all grants made since 1959. One grant to the City of Antioch allowed the grantee 20 years in which to make improvements; all the other grants containing the improvement clause have allowed only 10 years.

It should be noted that the "substantial improvement" clause might prove to be detrimental to the long-run interests of the state in some tide and submerged lands areas. The requirement probably resulted from a 1951 investigation of the tide and submerged lands situation conducted by the Assembly Interim Committee on State-federal Cooperation in the Discovery, Production, Transportation, Refining,

and Use of Petroleum Oil and Its Products. That investigation revealed that many grantees had made little effort to improve the lands granted to them by the Legislature. Thus the clause is a logical device to force grantees to make use of their lands. But on the other hand, the opponents of San Francisco Bay filling charge that the clause hastens the destruction of the bay. If it does in fact have that effect, then the state may be encouraging the destruction of the bay at the same time that it is seeking a means to save it.

Responsibility to Police. The statutes covering 26 grants place upon the State Lands Commission the responsibility to determine whether the grantees have made "substantial improvement" within a specified time period. The Division of Beaches and Parks and the Division of Small Craft Harbors are given similar responsibility in relation to two other grants. Apparently the statutes covering the remaining seven parcels (35 parcels carry the improvement provision) fail to state that a specific state agency has responsibility to determine whether the grantees have complied with the improvement provision.

In those instances where it has the responsibility to determine compliance with the improvement clause the State Lands Commission has followed the practice of requesting the grantees to submit information that would enable the commission to fulfill its responsibility. In no case has a grantee furnished the requested information. Only one granting statute, the grant to the City of Oakland, requires the grantee to submit a report to the State Lands Commission stating the degree to which the lands have been improved.

There is no state agency which is given the general responsibility to supervise the development and administration of tide and submerged lands held in trust by the grantees. Public Resources Code Section 6301 provides that the State Lands Commission is vested with "all jurisdiction and authority remaining in the state as to tidelands and submerged lands as to which grants have been or may be made..." The Attorney General has interpreted that code section to give the Lands Commission the *authority* to investigate and, in conjunction with the Attorney General, to enforce the trust conditions. However, it does not place upon the Lands Commission the specific *duty* to undertake sustained investigation, policing, audit, or review of grantee administration of their trust lands.

Amendments made to Chapter 5, Part 2 of Division 6 of the Public Resources Code in 1959, gave the State Lands Commission supervisory duties over the leasing of granted lands for oil, gas, and mineral purposes. Section 7062 of the code requires that all grantees having oil and gas operations on their lands must submit to the commission a detailed report concerning all revenues and expenditures so that it may check for compliance with trust provisions. Long Beach is specifically excluded from the operation of the section; however, the commission is empowered by Chapter 29, Statutes 1956, First Extraordinary Session, and Chapter 138, Statutes 1964, First Extraordinary Session, to supervise the Long Beach trust revenue expenditures.

Rights Reserved to the State. The rights which the state has reserved to itself when making grants of tide and submerged lands are summarized as follows:

Right of the people to fish in and gain convenient access to waters	74
Right of the state to use transportation facilities without charge	70
Rights to hydrocarbon deposits	1
Rights to all minerals	52
Use for highway purposes	43
Reversion to the state	41
Control of oyster beds	1

The statutes relating to six parcels failed to reserve any rights to the state; all of those grants were made prior to 1936. About 60 percent of all grants have reserved the mineral rights in the land to the state. However, one grant made to the City of Buenaventura in 1935 retained only the right to hydrocarbons and left all other minerals to the grantee.

Only 50 percent of the grants stipulated that the lands would revert to the state upon violation of the trust provisions.

Right of the Grantee to Collect and Retain Revenues. The statutes relating to 42 of the parcels included in the tabulation specifically authorized the grantees to "collect and retain rents and other revenues from leases, franchises and privileges . . ." However, there are some areas of confusion in relation to revenues from tide and submerged land grants.

The Legislature has never adequately defined the word "revenue" as it applies to moneys derived from activities upon granted tide and submerged lands. For example, "revenue" could conceivably include property taxes on improvements placed upon those lands.

The courts have held that a grantee can expend revenue derived from tide and submerged lands only for the purposes permitted in the trust conveyance; thus, for example, a city holding a grant of tide and submerged lands cannot expend revenue derived therefrom for general municipal purposes. But the courts have not dealt with the question which might be presented if grantee expends revenue from granted lands upon ungranted lands for purposes specified in the granting statute. This situation could arise where the trust conveyance permitted the use of granted lands for recreational purposes and the grantee used tide and submerged lands revenue to develop a beach on ungranted land. Since the development of a beach is an expenditure of money for a recreational purpose the courts might uphold this as a valid expenditure of revenue from the granted lands.

Tide and Submerged Lands Studies in Progress During the Interim

During the 1963-65 interim period at least four other organizations were actively engaged in studying problems relating to tide and submerged lands. Those organizations were the Senate Factfinding Committee on Natural Resources, the Joint Legislative Committee on Tidelands, the Bay Conservation Study Commission, and the State Office of Planning. In addition, various state agencies are interested in problems connected with the development of these lands. This situation

presents problems concerning possible duplication of effort, dispersal of information, and conflicting recommendations.

As part of its work on the State Development Plan the State Office of Planning is conducting an extensive study of all aspects of the tide and submerged lands. It is working on both a formal and informal basis with many state agencies; for example, both the Resources Agency and the State Lands Division will supply some of the information going into the study. The Office of Planning has broken the study down into three broad categories: inventory, analysis, and policy recommendations to the Legislature.

Suggestions for Future Study

The committee could at this time make substantive recommendations regarding the policy governing the granting of tide and submerged lands in trust. However, it is felt that any recommendations made now would not be based upon adequate information. The committee's primary concern is that these lands be developed and administered in a manner which will ensure the maximum benefit to all of the people of the state. But a policy which will adequately foster that objective cannot be formulated until the tide and submerged lands have been exhaustively studied from the standpoint of their economic importance, physical characteristics, present administration, potential use, and the potential demands which might be made upon them.

Many of those who cooperated with the committee in its efforts to gather information relating to tide and submerged lands offered suggestions for further study or specific suggestions for changes in present policy. The remainder of this report will deal with those and other suggestions.

Basic Data Studies

Inventory. The Resources Agency suggests that a complete inventory of the tide and submerged lands be made. This would provide information on the lands originally held by the state, the lands sold by the Legislature, lands leased by the State Lands Commission, lands granted in trust by the Legislature, and the lands remaining for disposition.

Some information of this nature will be forthcoming from the study now being conducted by the State Office of Planning as part of the State Development Plan. Since many of the grants in trust have never been surveyed the type of inventory suggested by the Resources Agency could prove to be a lengthy undertaking.

As part of the inventory the Resources Agency also suggests that extensive oceanographic studies be made. These might include mapping, mineral sampling, temperature sampling, and sampling of biologic content. Again, some information of this nature will come from the work being done on the State Development Plan. The State Office of Planning has contracted with the Institute of Marine Resources, University of California at La Jolla, to do an ocean resources study.

Investigation of Grantee Compliance With Trust Provisions. Information on this subject will also be forthcoming from the State De-

velopment Plan; the Division of State Lands of the Department of Finance is the contractor for this phase of the study. In addition, the Joint Legislative Committee on Tidelands has engaged in an investigation of the administration of tide and submerged lands by grantees and that committee will undoubtedly provide information on this subject. There are indications that some grantees are resisting such an investigation and therefore, legislation may be necessary to facilitate the gathering of information.

Investigation of the Interests and Plans of Various State Agencies. One of the things lacking at the present time is a precise statement of the interests of various state agencies in the tide and submerged lands area. We also do not have a statement of plans or projects proposed or contemplated for the tide and submerged lands. Both the Division of State Lands and the Resources Agency are engaged in working on the Development Plan. Thus, their interests will presumably be stated. However, it is not clear that other agencies, such as the Department of Public Works and the Department of Public Health, will be drawn directly into the tide and submerged lands portion of the Development Plan. The interests and plans of those agencies may be expressed through other aspects of the Development Plan and correlated to the tide and submerged lands study by the Office of Planning.

It would appear to be essential that an investigation be undertaken and perhaps it should include a determination of the interests and plans of any federal agencies concerned with California's offshore area.

Miscellaneous Studies. A large amount of information covering a number of differing subjects relating to tide and submerged lands will be necessary for the formulation of policy and procedures, or will be required for decision making purposes at a later date. The State Development Plan will supply much information of this nature. However, it may be profitable to obtain continuing reports from the State Office of Planning on the type of information being gathered and its correlation into the tide and submerged lands portion of the Development Plan.

The following headings merely suggest some possible categories of information which may be obtained from the Office of Planning or some other source:

Water Pollution. Estimates of present and potential pollution levels. Impact of present and proposed reclamation plans on pollution.

Air Pollution. Possibility of increased air pollution resulting from fill prohibition.

Recreation. Present and potential requirements. Estimates of tide and submerged lands use possibilities.

Wildlife. Present and potential need for wildlife areas. Impact of various land uses upon wildlife. Economic implications of wildlife.

Land Demand. Present and potential uses in tide and submerged lands area. Present and potential uses in surrounding areas. Cost of reclamation. Earthquake hazards in reclaimed areas. Existing

local and regional plans for tide and submerged lands development. Transportation terminal requirements.

Ocean Resources. Hydrocarbon and mineral potential. Fisheries potential. Impact of reclamation on fisheries.

Aesthetics. Criteria development. Structure design. Open space requirements.

Legal Aspects of Grant Revocation. Revocation when trust provisions violated. Revocation when trust provisions complied with. Practical implications of attempted revocation.

Agency Capabilities. Costs of new responsibilities. Staff capabilities. Possibility of creating new agency.

Possible Administrative Changes

The following suggestions for possible administrative changes are offered merely as alternatives which may be chosen once it is felt that sufficient information has been obtained to formulate an overall policy for tide and submerged lands development.

The one change in the present policy that the committee endorses at this time is a cessation in the granting of these lands until sufficient information concerning them has been obtained to make possible a thorough analysis of all the factors involved. The representatives of the two state agencies perhaps most concerned with these lands—the Resources Agency and the State Lands Commission—both recommended a moratorium on the granting of tide and submerged lands pending the completion of further study.

Designation of Responsibility. A number of suggestions were made dealing with clarification or designation of agency responsibility in relation to grants in trust of tide and submerged lands.

1. In the majority of trust conveyances no state agency has been directed to ensure that the grantees comply with the trust provisions. The State Lands Commission suggests that its responsibility in this regard be clearly specified.

2. The State Lands Commission also recommends that existing grants be amended to require, and future grants provide, that the granted lands will be developed in accordance with “approved planning concepts.” The commission suggests that it be given the responsibility to approve any programs for development of granted lands.

3. Of those grants where the State Lands Commission has been given the responsibility to determine grantees compliance with a “substantial improvement” clause only one conveyance requires the grantee to supply the commission with information concerning the state of its tide and submerged land development. If the Legislature continues to make use of the “substantial improvement” clause then the grantees should be required to make information relative to improvement of the lands available to the commission.

4. The Resources Agency suggests that all requests of a grant or lease of tide and submerged land be accompanied by an application

submitted to a review board. The board would perform the function of coordinating the interests of all state agencies having an interest in those lands, and would make recommendations to a higher level body for final action on the request. The board might be structured in such a manner that it would represent the Resources Agency, the Division of Highways of the Department of Public works, the State Office of Planning, the Division of State Lands of the Department of Finance, and the Department of Public Health.

Development of Policy Criteria. It would be desirable to establish the criteria by which decisions will be made and responsibilities carried out.

1. Prior to the disposition of a parcel of tide and submerged land there should be a systematic analysis made of the effects which would stem from the proposed use to be made of the land by the grantee. The Resources Agency suggests that this might be accomplished by means of a check list of factors which require consideration prior to a determination of the terms and conditions to be included in the granting statute. Such a check list might include such things as the state of local planning, regional planning, prospective revenue to be derived from the lands, water pollution factors, fish and wildlife factors, and earthquake hazards, in addition to other considerations.

2. The State Lands Commission recommends that criteria be established to determine when the grantee has complied with the terms and provisions of the grant.

3. The State Lands Commission suggests that there be a determination of the priorities between mineral and surface development where there is no immediate conflict between the two. For instance, in areas where development can be expected in the not too distant future, the state might encourage the exploitation of the underwater resources before their exploitation conflicts with surface development.

4. The Lands Commission also suggests that a formula for sharing revenue derived from granted lands be developed and applied to those lands where the state did not reserve the mineral rights.

Changes in Grant Terms, Conditions, and Reservations. Once the tide and submerged lands have been thoroughly studied and policies developed to govern their administration and development then those policies can be reflected in the terms of the individual grants.

1. If a state agency is given the specific authority to supervise grantee administration of tide and submerged lands then it would be desirable to require the grantees to make periodic reports to that agency. The report might include statements relating to the amount and source of revenue derived from the lands, a statement of revenue expenditures, and exposition of any local and regional plans that would affect the lands, and a notification of any legal actions concerning the lands.

2. To encourage the development of the lands on an area wide basis the grantees could be required to participate in regional planning.

3. It may also be desirable to amend existing grants, and to word future grants, to provide for uniform provisions relating to reversion to the state upon violation of the grant terms, reservation to the state of all mineral rights, and the length of leases or franchises the grantees may grant.

WITNESSES APPEARING BEFORE THE COMMITTEE OR SUBMITTING STATEMENTS

Frank J. Hortig, Executive Officer, State Lands Commission: Chief, State Lands Division, California State Department of Finance

Mr. Hortig recommended "the placement of a moratorium on the issuance of new grants until such time as the various studies being conducted by the executive and legislative branches of state government are complete and appropriate legislative control specifications have been adopted."

John Sheehan, Deputy Director, California State Department of Finance

"The problems which are encountered in the formulation of the state policy for the development and conservation of the tide and submerged lands are as difficult to solve as they are important. At this time, neither our knowledge nor examination of the issues is sufficiently complete for us to be in a firm enough position to provide the committee with comprehensive and long-range recommendations for both the immediate and long-term disposition and use of tide and submerged lands. The Development Plan study of the tide and submerged lands, on which we will base the body of our evaluation and recommendations for policy, is advancing but will not be completed until October 1, 1965. At that time the information will be available upon which, we think, rational decisions may be based and correlated with other strategies for the economic growth and development of California."

Hugo Fisher, Administrator of Resources Agency, State of California

"For those tide and submerged lands lying offshore from the California coastline, the future is apt to witness great activity in many and diverse directions. For instance, the tides may be harnessed as a source of energy. The seas will even be subject to more exploitation for their biological crops. Minerals will be harvested from the ocean floor. Oil and gas fields will be developed in increasing number. Sea water will be distilled to a useful quality for land use. Waste will be disposed of in the watery depths overlying the lands. Undersea habitation and transportation, now being researched, show future promise, and mounting recreation pressures will result in both the water surface and submarine areas being in greater demand. Thus, in a collective sense, the tide and submerged lands resource is a complex aggregation of lands, subject to innumerable uses and abuses, present and potential.

"The six sequential steps that I shall discuss are: (1) the declaration of a moratorium on future grants of tide and submerged lands pending development of an adequate policy; (2) preparation of an inventory of all such lands; (3) the determination of the interests and responsibilities of the numerous state, federal, and other entities in such lands; (4) the analyzation of the historical terms and conditions imposed by the state on grantees and lessees in the past; (5) the preparation of a new set of comprehensive and uniform policies and procedures for such lands; and (6) the reorganization of our laws and organizational structures to the extent necessary to accommodate such new policies and procedures as adopted by the Legislature.

"We do not have enough total knowledge as yet regarding the proper husbandry of these lands. Consequently, a waiting period of two years or so during which time this information and knowledge can be gained and a comprehensive, coordinated policy and procedure could be developed, would be worth the obvious temporary inconvenience. In other words, I believe it necessary that a moratorium be declared in order to protect the natural resources of the state which previously have not been given adequate consideration until policies, sought after in House Resolution 512, have been formulated and adopted."

The following persons also appeared before the committee or submitted statements for its consideration. A complete transcript of all testimony received at the Anaheim hearings and the full text of all statements received from those interested in the subject matter are on file in the committee offices.

Warren J. Abbott, Deputy Attorney General, State of California

Arthur O. Spaulding, Assistant City Administrative Officer, representing C.

Erwin Piper, Administrative Officer, City of Los Angeles

Don Nay, Assistant Port Director, Port of San Diego

John T. Schulte, Director of Public Works, City of Manhattan Beach

Douglas Maloney, County Counsel, Marin County

Mrs. James P. Crowley, Citizens Committee for Preservation of Beaches and Parks

Lohn R. Ficklin, City Manager, City of Vallejo

OLD SACRAMENTO STATE PARK

INTRODUCTION

The western portion of the City of Sacramento is an area rich with historical significance for the State of California and the nation. During the years 1849 to 1870 it was the hub of the California gold rush. As the jumping-off place for the goldfields of Northern California, the area became the transportation, communication, commercial, and cultural center for one of the greatest migrations in history. The events that transpired in and around Sacramento set the stage for the tremendous growth and development that California has obtained today.

Many of those events occurred in the old section of the city. It was there, at the foot of K Street in 1861, that ground was broken for construction of the Central Pacific Railroad; eight years later the Central Pacific tracks became part of the nation's first transcontinental railroad. On April 4, 1860, the first run of the famed Pony Express left Sacramento carrying mail destined for St. Joseph, Missouri, and points east; the Hastings Building, the western terminus for the Pony Express, still stands on the corner of Second and J Streets. The Embarcadero along Front Street was the terminal point for thousands of tons of supplies brought up the Sacramento River and transhipped to the goldfields of the interior. The offices, hotels, and saloons of the area were the setting for many far-reaching decisions affecting the development of the West.

Present-day California has a direct link with the events that took place in the old section of Sacramento. Business firms having their roots there include: the Sacramento *Union*, the Sacramento *Bee*, W. P. Fuller Paint Company, the Southern Pacific Company, Wells Fargo Bank, Baker and Hamilton, Western Union, the Bank of California, the Crocker-Citizens National Bank, the Pacific Mutual Life Insurance Company, and the DiGiorgio Fruit Company. In addition, the personal fortunes of such men as Crocker, Huntington, Hopkins, and Stanford had their beginnings in Old Sacramento and later made significant contributions to the financial, cultural, and educational life of the state.

The personalities who made Old Sacramento their base of operations have long since passed into the pages of history books. But in many instances the buildings they used are still standing. Two structures—the Hastings Building and the Big Four Building—have been declared to be of national historical significance. Many other buildings of equal historical or architectural importance still remain in the area or could be reconstructed there.

Due to the presence of these old buildings the state, in cooperation with the City of Sacramento and private enterprise, has a unique opportunity to recreate the setting and atmosphere existing in Old

Sacramento during the 1849-1870 period. When completed, such a project would offer a continuing source of education and pleasure for millions of Californians and visitors from other states.

Since 1957 the Department of Parks and Recreation has been working in cooperation with the Redevelopment Agency of the City of Sacramento, the City of Sacramento Historical Landmarks Commission, and other state and private organizations to develop a plan for the creation of a state park in the area. The Redevelopment Agency plans to develop an Old Sacramento Historic Area and Riverfront Park in the area bounded generally by the Sacramento waterfront pierhead line on the west; the I Street Bridge viaduct and approach ramps on the north; the westerly right-of-way line of the interstate Freeway Route 5 on the east; and the center line of S Street on the south. The historic area will be constructed above Capitol Avenue and the Riverfront Park will lie in the area south of Capitol Avenue. The proposed state park will be located within the historic area.

The total cost of the historic area project is estimated to be approximately \$30 million. A portion of the cost will be supplied by Federal Urban Renewal Funds and the state's contribution to the project would consist of about \$5 million spent on developing the state park.

Plans of the Department of Parks and Recreation call for the reconstruction of an 1849 scene on the western half of the block between Front Street, Second Street, I Street, and J Street. In this area would be reconstructed such buildings as the New England Feed Store, the Cothrin Building, the Washburn Building, the Round Tent, the Eagle Theatre, the McDowell Company Building, the City Hotel, the Hotel de France, the People's Market, the Hensley Building, the Gunn Blacksmith Shop and several other incidental buildings. Some of these structures would be operated as house museums; i.e., presented exactly as they would have appeared in 1849. Others will be operated as concessions; for example, the Round Tent and the Eagle Theatre might be concessioned to theatrical groups for the presentation of their productions.

The space between the 1849 scene and the river may be used to present a typical wharf scene of the era. The Big Four Building will be reconstructed on the quarter block immediately north of the 1849 scene and it will house a railroad museum. The Hastings Building will remain at its present site on the northeast corner of Second and J Streets. The main floor of the structure will be interpreted as the western terminus of the Pony Express; the second floor will be reconstructed to show it has the first State Supreme Court and the original site of the State Library.

The portions of the historic area surrounding the state park will be developed by the Redevelopment Agency to recreate as nearly as possible the scene and atmosphere of the 1849-1870 era. However, this will not merely be a museum area; it is planned that present day business and commercial activities will be carried on there, and private capital has already shown much interest in the project.

On October 5, 1964, the committee held a public hearing in the State Capitol on A.B. 2097 relating to the establishment of an Old

Sacramento State Park, at which testimony was received from Mr. Charles DeTurk, Director, State Department of Parks and Recreation; Frank P. Durkee, member, Redevelopment Agency of the City of Sacramento, chairman, Redevelopment Agency Old Sacramento Committee; Donald L. Kline, deputy director, Redevelopment Agency of the City of Sacramento; Clyde Trudell, project manager, Redevelopment Agency of the City of Sacramento; Aubrey Neasham, consultant to City of Sacramento Historic Landmarks Commission.

FINDINGS AND CONCLUSIONS

Analysis of the testimony taken at the Sacramento hearing and other information available leads the committee to make the following findings and conclusions respecting the establishment of an Old Sacramento State Park.

1. The western portion of the City of Sacramento lying generally north of Capitol Avenue, east of the Sacramento River, south of I Street, and west of Third Street is an area of great historical importance to the State of California and the nation. The area was the locale of many events and activities during the period 1849-1870 which were important to the development of California and the West. The western regional office of the National Park Service has recommended that the area be recognized as a Registered National Historic District and it is expected that the Secretary of the Interior will soon act to approve this recommendation.

2. That portion of the City of Sacramento is the location of many buildings having historical and architectural significance. Two structures—the Hastings Building and the Big Four Building—have already been declared to be of national historical significance.

3. Due to its historical importance and the presence of a large number of buildings of historical and architectural significance certain portions of the area are uniquely suited for development as a state park.

4. The City of Sacramento through its Redevelopment Agency has completed a master physical development plan for a Sacramento Historic Area and Riverfront Park. This plan has been arrived at in cooperation with various state agencies and private interests. It calls for the development of a historic area in the western portion of the City of Sacramento by the City of Sacramento, the State of California, and private capital. The total cost of the project is estimated at \$30 million, about \$5 million of which would be furnished by the state for the development of an Old Sacramento State Park.

5. The Department of Parks and Recreation is nearing completion of a master plan for the development of an Old Sacramento State Park with the Old Sacramento Historic Area. Preliminary studies for the state park were conducted pursuant to Chapter 2315, Statutes of 1957 and Chapter 117, Statutes of 1963.

RECOMMENDATIONS

The committee makes the following recommendations.

1. That those portions of the Old Sacramento area which the Division of Beaches and Parks of the Department of Parks and Recreation have found or will find to be suitable for inclusion in the state park system, be declared a State Park.

2. That the Division of Beaches and Parks of the Department of Parks and Recreation continue, in cooperation with the Redevelopment Agency of the City of Sacramento, its Historic Landmarks Commission, and private interests, to develop a master plan for the construction of a state historical park in Old Sacramento.

PROPOSED LEGISLATION

An act to add Article 4 (commencing with Section 5055) to Chapter 1 of Division 5 of the Public Resources Code, relating to historic parts of the City of Sacramento.

The people of the State of California do enact as follows:

SECTION 1. Article 4 (commencing with Section 5055) is added to Chapter 1 of Division 5 of the Public Resources Code, to read:

Article 4. Old Sacramento State Historic Park

5055. As used in this article:

(a) "Old Sacramento" means that area including buildings and structures, in the City of Sacramento, bounded on the west by the westerly boundary of the City of Sacramento, on the north by the centerline of the I Street Bridge and approach viaduct, on the east by the centerline of Third Street, and on the south by the centerline of Capitol Avenue; and that area including buildings and structures bounded on the west by the westerly boundary of the City of Sacramento, on the north by the centerline of Capitol Avenue, on the east by the easterly right-of-way line of Front Street, and on the south by the centerline of S Street.

(b) "Old Sacramento State Historic Park" means that portion of Old Sacramento, including land, buildings and structures, acquired or administered by the State of California for state park purposes pursuant to this article.

(c) "Early days" means that period of time between 1849 and 1870.

5055.5. The Legislature hereby finds and declares:

(a) That the portion of the City of Sacramento herein defined as Old Sacramento for purposes of this article is rich in past personalities, places and incidents vitally important in the development of this state and now of major historic interest and value to the people of this state and to the entire nation, including, among others, the western terminus of the Pony Express in Sacramento, the starting point of the great Central Pacific Railroad, the site of the Sutter Embarcadero and the heart of the busy Sacramento River Transpor-

tation System linking the gold country of Northern California to San Francisco and the outside world, and the site of architecturally significant or historically valuable buildings, such as the Big Four Building and the Hastings Building; that the Old Sacramento area has been declared to be a national historic site.

(b) That the Division of Beaches and Parks, as authorized by Chapter 2315 of the Statutes of 1957, has completed a preliminary survey of buildings and structures in a portion of the area herein defined as Old Sacramento; that all of Old Sacramento is now included in one or more project areas in which the Redevelopment Agency of the City of Sacramento is or will be carrying out a program of slum clearance and redevelopment pursuant to the provisions of the Community Redevelopment Law (Part I (commencing with Section 33000) of Division 24 of the Health and Safety Code); and that it is of the utmost urgency and importance that the State of California, the City of Sacramento and its Historic Landmarks Commission, and the Redevelopment Agency of the City of Sacramento consult and cooperate together in undertaking detailed and comprehensive planning for the preservation, development and administration of the historically significant aspects and features of Old Sacramento in a manner consistent with the rich heritage which they hold for the people of the State of California.

5056. It is hereby declared to be the policy of the State of California to participate in the establishment, preservation and administration as an historic area representative of the early days of this state and the early history of the City of Sacramento, as the state capital, a portion of Old Sacramento, exclusive of land required for State Highway Route 5, which is determined to have statewide historic or architectural-historic significance and value.

5056.5. To assure the accomplishment of this policy it is directed that:

(a) To the extent that funds are available for such purposes, the department shall cooperate with other public agencies, including the Redevelopment Agency of the City of Sacramento, the City of Sacramento and its Historic Landmarks Commission, and private interests in the making of a survey based upon historical research to determine the types and materials of construction, location, and uses of the structures which existed in Old Sacramento during the early days, and based upon the data so obtained shall cooperate with other public agencies, including the Redevelopment Agency of the City of Sacramento, the City of Sacramento and its Historic Landmarks Commission, and private interests in the preparation of a master plan, including subsequent modifications or revisions thereto, to which all work of preservation, restoration, reconstruction, development, and operation shall substantially conform. The master plan shall include historical, archeological, architectural, engineering and economic findings on the desirability and feasibility of retaining, relocating, reconstructing or restoring, in whole or in part, structures in Old Sacra-

mento. The master plan shall provide for or recommend the public or private agencies or persons to be in charge of and participate in such work and shall designate the source of available funds which may be lawfully expended for such work.

(b) The department may let or sublet in accordance with policies established by the State Park Commission, any buildings and other property, real or personal, owned or acquired by the state within Old Sacramento on such terms and conditions as determined by the department for occupancy, including such lawful use which is found to be the same or similar use which held in the early days or which as determined by the department is not inconsistent with the objectives of this article.

(c) A building or buildings owned by the state may be designated and used for the establishment of a museum or shelter and display exhibits of articles and equipment used in shipping, mining, railroad or other activities of the vicinity, articles formerly possessed or used by early-day inhabitants of the area, and items of historic interest or suitable for inclusion as approved by the department, whether loaned, donated or otherwise acquired.

(d) Any structures in Old Sacramento State Historic Park the preservation, restoration or reconstruction of which is assured by suitable contribution, when approved by the department, may be named in honor of or as a memorial to the donor or as designated by the donor; provided, however, that structures which are commonly identified or known by a particular name or designation which relates to their recognized historical significance or value shall, when preserved, restored or reconstructed, retain such name or designation by which they are commonly known.

5057. Notwithstanding Section 5006.5 and Article 5 (commencing with Section 5060) of this chapter, the department may, in accordance with policies established by the State Park Commission, acquire for state park purposes, by lease, purchase, gift, bequest, eminent domain, or otherwise, out of any moneys available for such purpose, land and structures and other real property in Old Sacramento, to be thereafter known and designated as Old Sacramento State Historic Park, which in the judgment of the department are considered of sufficient statewide historic significance to be included in such project for state park purposes, as a part of the state park system, and which is not otherwise being devoted to use consistent with the development of Old Sacramento as an historic area.

5057.5. The department may, upon such terms and conditions as it deems appropriate, purchase, lease, obtain option on, acquire by gift, grant, bequest, devise or otherwise, historic artifacts and other personal property for use, exhibit or display in Old Sacramento State Historic Park.

5058. Nothing contained in this article shall in any way be construed to prevent or interfere with the execution by the Redevelopment Agency of the City of Sacramento of a slum clearance and

redevelopment program covering all or a portion of Old Sacramento, or with the acquisition therein of land and structures by the State of California for highway purposes, or the construction, maintenance and operation thereon of a state highway, it being the intent of this article that the planning and development of Old Sacramento State Historic Park be coordinated and done in cooperation with all public agencies having an interest or jurisdiction in the area.

5058.5. That portion of Old Sacramento acquired for state park purposes and known as Old Sacramento State Historic Park is a unit of the state park system and shall be administered in accordance with the laws applying thereto subject to the provisions of this article.

LAND ACQUISITION POLICIES AND PROCEDURES

SUMMARY OF THE PROBLEM

State agencies which acquire land are becoming increasingly interdependent. It is not unusual for two agencies to be interested in the same or contiguous land at the same time. Several agencies' functions are so similar that the same land may be involved in several government purchases. One agency negotiating a purchase of land may establish a precedent of price for a second agency interested in land in the same area.

Very often the original development of a government program in a particular site causes land values to rise sharply and additional purchases of land by other agencies are much more costly than the original purchase.

For these reasons, it would appear that statewide planning and coordination would be better served by the establishment of a single division charged with the responsibility of acquiring land on behalf of all state agencies. This division would in no way interfere with the individual state agency's determination as to what land should be acquired nor would it obviate the need for obtaining approval of their purchases as may be otherwise required by law.

Other advantages will accrue to the state as a result of a separate agency to physically negotiate for and acquire property for various governmental purchases. In many agencies, the program of land acquisition tends to fall in peaks and valleys, i.e., heavier workloads at some times of years and lighter workloads at others. For this reason the committee feels that consolidation would result in reduction of the number of employees required for all of the state's land acquisition functions.

In addition, there is general recognition among state agencies that the Division of Highways has excellent programs and procedures for acquiring land. As a matter of fact, during the 10-year period from 1954-55 through 1963-64, the division has acquired 1,359 parcels of land valued at \$42,927,790 on behalf of other state agencies. Well over half of that number of parcels and approximately half of that dollar amount has been involved in the last three fiscal years. Thus there appears to be a wider use of the Division of Highways for acquisition of land on behalf of other state agencies. The committee believes that this is a recognition of the Division of Highways' having become specialists in the field of land acquisition and are better equipped to acquire land than other state agencies. It would logically follow that the creation of a land acquisition division would give the state a specialized land acquisition program far superior than the decentralized units which exist today.

At the present time, the Division of Highways maintains its own legal staff for negotiation or condemnation of land. With one other

notable exception, the University of California, the Attorney General represents state agencies in their condemnation suits. Again, it would appear that staffing the proposed division of land acquisition with its own legal counsel would result in specialization on condemnation suits that would serve the state to good advantage. Since most requests for acquisition of land are subject to the approval of the Department of Finance, there seems to be a disproportionate legal review in some land acquisition cases. Since the Department of Finance also uses the Attorney General to verify legal opinions of its staff attorneys, a Department of Water Resources transaction concerning land condemnation for example, receives legal review by its own staff attorneys, the Department of Finance and the staff of the Attorney General.

On this basis, consolidation of a legal staff specialized in land acquisition programs seems desirable as a part of the proposed division of land acquisition.

RECOMMENDATIONS

The committee recommends that a division of land acquisition be created in the Department of Public Works, and that the physical negotiation and/or condemnation of land for use by *all* state agencies be conducted by this division. The division would be created by the consolidation of all existing land acquisition units in state government.

The committee further recommends that the division maintain its own legal staff for review of such legal documents as may be necessary in the acquisition of land by negotiation and to institute such legal actions as may be necessary in the condemnation of property.

PROPOSED LEGISLATION

An act to amend Section 14005 of, and to add Chapter 5 (commencing with Section 14600) to Part 5, Division 3, Title 2, of the Government Code, and to repeal Sections 86 and 1091.1 of the Military and Veterans Code, relating to acquisition of real property by the state.

The people of the State of California do enact as follows:

SECTION 1. Section 14005 of the Government Code is amended to read:

14005. For the purpose of administration, the director shall organize the department with the approval of the Governor in the manner that he deems necessary properly to segregate and conduct the work of the department. The work of the department shall be divided into at least four divisions known as the Division of Highways, the Division of Aeronautics, the ~~Division of Contracts and Rights of Way~~ *Division of Land Acquisition*, and the Division of Bay Toll Crossings.

SEC. 2. Chapter 5 (commencing with Section 14600) is added to Part 5, Division 3, Title 2 of the Government Code, to read:

CHAPTER 5. LAND ACQUISITION

Article 1. Definitions

14600. Unless the context otherwise requires, the definitions in this article govern the construction of this chapter.

14601. "Chief" means the Chief of the Division of Land Acquisition.

14602. "Director" means the Director of Public Works.

14603. "Division" means the Division of Land Acquisition.

14604. "Real property" includes the fee or any lesser estate or interest in real property.

Article 2. Division of Land Acquisition

14620. There is in the Department of Public Works the Division of Land Acquisition which is created to provide centralization of real property acquisition functions of state government.

14621. The division is under the control of an executive officer known as the Chief of Land Acquisition.

14622. The chief, with the approval of the director, shall perform all duties, exercise all powers and jurisdiction, assume and discharge all responsibilities, and carry out and effect all purposes vested by law in the division.

14623. Notwithstanding the provisions of Section 11043 of the Government Code, the director may employ an attorney at law and such assistant attorneys as are necessary to provide legal counsel for the division. These attorneys may advise the chief and the officers and employees of the division concerning legal affairs of the division and may represent the division and the state in litigation concerning affairs of the division.

Article 3. Functions

14640. Notwithstanding any other provision of law, the division has exclusive power to acquire any real property for the state by condemnation, purchase, lease, hire, or exchange.

14641. The division also succeeds to and is vested with all of the duties, functions, powers, purposes, responsibilities, and jurisdiction vested in the Division of Contracts and Rights of Way of the Department of Public Works.

14642. Whenever the acquisition of any real property for any state agency, except the division, is authorized or contemplated by any law, the state agency for which the real property is to be acquired shall request the division to acquire such real property. The request shall be in writing and shall contain all of the following:

(a) A description of the real property which is to be acquired.

(b) A statement of the authority under which the real property is to be acquired.

(c) A statement of any conditions which are required to be satisfied by the division before the real property may be acquired for the state agency, or before proceedings may be commenced by the division to condemn the real property.

(d) Such other information as the chief may require.

14643. If the division determines that the acquisition of any real property which it is requested to acquire for any state agency, or which is necessary for the purposes of the division, is authorized or required by law and that the funds are available to pay the costs of the acquisition of the real property, the division shall acquire the real property.

14644. Where, prior to October 1, 1965, a particular procedure is required to be followed by any state agency in acquiring any real property, such procedure shall be followed by the division, as nearly as may be practicable in acquiring such real property for such state agency.

SEC. 3. Section 86 of the Military and Veterans Code is repealed.

86. ~~The department shall investigate and determine the advisability of accepting or acquiring on behalf of the State the Corona Naval Hospital, including the buildings and grounds thereof, from the United States government, for use either as a state veterans' home or hospital, or both, or for use as a state veterans' facility used in conjunction with the federal Veterans Administration.~~

Following such investigation and determination as the department shall make, the department may accept or acquire on behalf of the State from the United States government any part or all of the Corona Naval Hospital, including the buildings and grounds thereof, for use either as a state veterans' home or hospital, or both, or for use as a state veterans' facility used in conjunction with the federal Veterans Administration if the property becomes available to the State for such use and if the department deems the acquisition and the terms and conditions thereof to be in the best interests of the State and provided that the department accepts or acquires only that portion of the property which may reasonably be used by the department for a veteran's facility, and provided that no state funds shall be expended in connection with the acquisition of Corona Naval Hospital without the prior approval of the Legislature.

SEC. 4. Section 1091.1 of said code is repealed.

1091.1. ~~The manager of the Division of Veterans Homes may purchase grave plots for the interment of indigent members of the home out of any funds under his control.~~

SEC. 5. The Division of Contracts and Rights of Way of the Department of Public Works is hereby abolished.

SEC. 6. All public property, real or personal, of any state agency which is used principally or primarily in the carrying out of any function, or acquired in connection with the exercise of any function, which function is transferred by this act to the Division of Land Acquisition of the Department of Public Works, is transferred to such division.

SEC. 7. All officers and employees of state agencies on the operative date of this section, who are serving in the state civil service, other than temporary employees, and who are engaged in the performance of a function transferred to the Division of Land Acquisition of the Department of Public Works or who are engaged in the administration of a law, the administration of which is transferred to such division, by this act shall be transferred to the Division of Land Ac-

quisition and their status, positions, and rights shall not be affected by their transfer and they shall continue to be retained as employees of the Division of Land Acquisition pursuant to the State Civil Service Act, except as to positions the duties of which are vested in a position exempt from civil service in such division.

SEC. 8. This act shall become operative October 1, 1965.

**WITNESSES APPEARING BEFORE THE COMMITTEE

Ray Hunter, California Farm Bureau Federation

James H. Corley, Vice President, University of California

RECREATIONAL BOATING

SUMMARY OF THE PROBLEM

Part I

As a result of a study conducted by the legislative analyst in accordance with Assembly Resolution No. 47 of the 1961 session, approximately \$3,600,000 was determined to be the proper amount of unclaimed gas taxes which should be transferred from the motor vehicle fuel fund to the Small Craft Harbor Revolving Fund.

Assembly Bill 239 of the 1963 legislative session transferred \$2,000,000 per year for this purpose. This committee strongly urges that the additional moneys in the motor vehicle fuel fund attributable to taxes imposed on distributions of motor vehicle fuel used or usable in propelling vessels be transferred to the Small Craft Harbor Revolving Fund.

The committee notes that pursuant to Senate Concurrent Resolution 68 of the 1963 General Session, a supplementary study is being conducted. However, the study has not been completed as of the time of the drafting of this report.

Under existing law, individuals can claim refunds under Section 8108 of the Revenue and Taxation Code for fuel used or usable in propelling vessels. Money unrefunded is being transferred to the Small Craft Harbors Fund and loaned for construction of boating facilities and grants for construction of boat launching ramps. Once these facilities are constructed, they are available to use equally by persons who claim their gas tax refunds and by persons who did not choose to do so. This creates a basic inequity where unclaimed gas tax funds build facilities used by persons who claim their refunds. For this reason, the committee recommends that refunds be discontinued except to charitable organizations, such as the Sea Scouts, whose claim for refunds should be honored.

Part II

This committee is extremely concerned with the lack of adequate enforcement of California's boating laws. It is also concerned with the apparent recognition of the fact that all boats presently being used are not registered in accordance with California law. For this reason it recommends that the law require that all boats be registered and that exemption certificates be issued without charge for those boats in dry storage and subsequently not in use. This recommendation will accomplish two goals:

- (a) The California Highway Patrol will be able to determine if boats being trailered on state highways are properly registered. The present law, which provides that only boats on the waters be registered, allows trailered boats to travel from place to place

without proper registration documents when it would appear that the boats are being transported for the purpose of use.

- (b) Requiring all boats to be registered and issuing exemption certificates for those not in use would, for the first time, give the State of California an accurate census of the number of boats owned by California residents. The issuance without cost of a certificate exempting boats from registration when they are in dry storage and not in use will cause no financial hardship on the boat owner. At such a time as he intends to put his boat into use he can return the exemption certificate and apply for registration, thus incurring no penalty for failure to register his boat during the period it was in dry storage.

Because it appears to be widely recognized that many boats remain unregistered, although registration is required under California law, the committee further recommends that the penalty fee be increased from 50 percent of the registration fee to an amount equal to the registration fee. In recognition of the cost to county government for enforcement of the California boating laws, the committee feels that the increase in penalties for failure to register should be allocated to county government. Where counties are issuing citations for failure to register, the increased fee should be allocated to that county. Where penalty fees are routinely assessed by the Division of Small Craft Harbors because of voluntary late registrations, the increased penalties should be allocated to the county in which the boat is registered.

During the last two general sessions, legislation granting peace officer authority to harbor personnel so that they might enforce California's boating laws has been vetoed by the Governor. In his veto message on Assembly Bill 1362 of the 1963 General Session, Governor Edmund G. Brown stated:

"It appears to me that the whole subject, of what additional classes of law enforcement personnel should have peace officer status, is a matter that might appropriately be studied by a legislative interim committee. Pending the completion of such study, I believe that there should be a clear showing of urgent need before such powers are granted to additional persons. Such clear showing has not been made in this case."

There is no question in the minds of this committee that the present California boating laws are not being uniformly enforced. Many counties have no enforcement whatsoever. This committee strongly feels that limited peace officer authority (for enforcement of California's boating laws only) should be granted to special harbor personnel, employed by cities, counties or special districts, where the primary function of this personnel is enforcement of local marine ordinances. Such limited peace officer power should only be granted within the confines of the area in which such special harbor personnel are employed.

This committee further recognizes that part of the problem of uniform enforcement lies in the fact that sparsely populated counties with negligible ownership of boats on the personal property assessment

rolls contain bodies of water imminently suitable for boating. Examples of this situation are the Salton Sea in Riverside and Imperial Counties, Lake Tahoe in Placer and El Dorado Counties, and Lake Berryessa at Napa. These waterways are widely used by nonresidents of the bordering counties and create an undue financial burden on the counties to supply adequate law enforcement. This committee recommends that during the next interim period, a thorough study be conducted on a method of reimbursing these counties to insure that proper enforcement of California's boating laws are conducted by the local law enforcement agencies.

This does not, however, prevent those counties whose personal property tax rolls contain a large number of boats from the responsibility of enforcing California's boating laws on waterways within their county boundaries. This committee is gravely concerned with the failure of those counties to enforce the boating laws, and in many cases, total failure to make any effort toward enforcement of these laws. This committee rejects the theory that the U.S. Coast Guard has law enforcement authority on federal navigable waters, therefore obviating the need for local law enforcement. The U.S. Coast Guard has no authority to enforce California law on federal navigable waters.

RECOMMENDATIONS

Part I

It is recommended that the proper amount of unrefunded motor vehicle fuel tax be transferred to the Small Craft Harbor Revolving Fund and used for the purposes prescribed for this fund. In addition, the committee recommends that refunds of motor vehicle fuel tax by boatowners be discontinued and that funds previously refunded be deposited in the Small Craft Harbor Revolving Fund.

Part II

The committee recommends that the present California boating laws be properly enforced by local law enforcement agencies. To assist in this enforcement, the committee recommends:

- (a) That all boats be registered and exemption certificates be issued without charge to boats in dry storage and not in use.
- (b) That a penalty equal to the registration fee be charged for boats not registered within the time prescribed by law and that the penalty fee provision be rigidly enforced by the Small Craft Harbors Commission. The committee further recommends that 50 percent of the penalty fees be allocated in the following manner: (1) Where citations have been issued for failure to register, 50 percent of the penalty fee shall be annually allocated in the county in which the citation was issued. (2) Where penalty fees are assessed without a citation being issued, 50 percent of the penalty fee shall be allocated to the county in which the boat is registered.
- (c) That limited peace officer authority be granted to special harbor personnel whose primary function is enforcement of marine laws within the confines of the area in which they are employed.

PROPOSED LEGISLATION

Registration fees.

Amends Secs. 680, 681, adds Sec. 680.3, H. & N.C.

Exempts from registration and renewal fees undocumented vessels kept out of water in dry storage, and provides for issuance of special exemption certificates.

Makes unlawful the use of waters of state by such vessels until regular registration fees have first been paid.

Makes technical clarifying changes.

An act to amend Sections 680 and 681 of, and to add Section 680.3 to, the Harbors and Navigation Code, relating to undocumented vessels.

The people of the State of California do enact as follows:

SECTION 1. Section 680 of the Harbors and Navigation Code is amended to read:

680. ~~Effective April 1, 1960, every~~ Every undocumented vessel using the waters of within this state shall be numbered whether or not such vessel is using the waters of this state. ~~No person shall operate or a county, city, or political subdivision give permission for the operation of any undocumented vessel on such waters unless the~~ Every undocumented vessel is shall be numbered in accordance with this chapter; ~~or~~; except that such a vessel may be numbered in accordance with applicable federal law, or in accordance with a federally approved numbering system of another state, and unless provided that (1) the certificate of number issued to such undocumented vessel is in full force and effect, and (2) the identifying number set forth in the certificate of number is displayed on each side of the bow of such undocumented vessel.

SEC. 2. Section 680.3 is added to said code, to read:

680.3. No fees shall be required in connection with an application for number or for the renewal of a certificate of number for any vessel required to be numbered by this state, for so long as such vessel is maintained out of the waters of this state in drydock or other dry storage. The Division of Small Craft Harbors shall, in connection with the issuance of a certificate of ownership and a certificate of number or the renewal thereof for any such vessel, issue to the certificate of exemption from fees.

The commission may adopt rules and regulations necessary for the effective administration of the provisions of this section.

It shall be unlawful to place in any of the waters of this State any vessel for which a certificate of exemption from fees has been issued, unless the fees prescribed by Section 681 for vessels using the waters of this state have been paid.

SEC. 3. Section 681 of said code is amended to read:

681. (a) The owner of each vessel requiring numbering by this state shall file an initial application for number with the Division of Small Craft Harbors at its Sacramento Office or an agent authorized

by the Division of Small Craft Harbors on forms approved by the commission. The application shall contain the name and address of the owner, and of the legal owner if any, and the builder's hull number or any hull number of the vessel as may be required by the division. The application shall be signed by the owner of the vessel. *and. With respect to vessels which are to use the waters of this state, the application shall be accompanied by a fee of five dollars (\$5); except that initial application for numbers made during 1961 and every third year thereafter shall be accompanied by a fee of four dollars (\$4); and initial application for numbers made during 1962 and every third year thereafter shall be accompanied by a fee of three dollars (\$3).* Upon receipt of the application in approved form, the Division of Small Craft Harbors shall issue a certificate of ownership to the legal owner and a certificate of number to the owner, or both to the owner if there is no legal owner, stating the number issued to the vessel and the name and address of the owner. The owner shall paint on or attach to each side of the bow of the vessel the identification number in such manner as may be prescribed by rules and regulations of the commission in order that it may be clearly visible. The number shall be maintained in a legible condition. The certificate of number shall be pocket size and shall be available at all times for inspection on the vessel for which issued, whenever such vessel is in operation. The Division of Small Craft Harbors may issue one or more stickers, tabs or other suitable devices to identify vessels as being currently registered. The size, shape, and color of such sticker, tab, or other device and the positioning of such on the vessel shall be as determined by the commission.

(b) The owner of any vessel already covered by a number in full force and effect which has been issued to it pursuant to then operative federal law or a federally approved numbering system of another state shall make application within thirty (30) days after the ninety (90) day reciprocity period provided for in Section 682. Such application shall be in a manner and pursuant to the procedure required for the issuance of a number under subdivision (a) of this section.

(c) Should the ownership of an undocumented vessel change, the existing certificate of ownership and a new application form accompanied by a fee of three dollars (\$3) shall be filed with the Division of Small Craft Harbors and a new certificate of ownership and a new certificate of number shall be issued in the same manner as provided for in the initial issuance of number and the number shall be reassigned to the new owner.

(d) In the event that an agency of the United States government shall have in force an overall system of identification numbering for undocumented vessels within the United States, the numbering system employed pursuant to this article shall be in conformity therewith.

(e) The Division of Small Craft Harbors may issue any certificate of ownership and certificate of number or temporary certificate of number directly or the Division of Small Craft Harbors may authorize any person to act as agent for the issuance of a certificate of number or temporary certificate of number. In the event that a person

accepts such authorization, he may be assigned a block of numbers which upon issuance, in conformity with this article and with any rules and regulations of the commission, shall be valid as if issued directly by the Division of Small Craft Harbors. All registration of vessels pursuant to the provisions of this code shall be conducted by the Division of Small Craft Harbors at its Sacramento office or by any agent authorized by the Division of Small Craft Harbors to conduct such registration. No field offices shall be established by the Division of Small Craft Harbors for the registering of vessels.

(f) All records of the commission, the department, and the Division of Small Craft Harbors made or kept pursuant to this section shall be public records.

(g) Every certificate of number issued pursuant to this article shall continue in full force and effect until December 31, 1962 unless sooner terminated, discontinued or extended in accordance with the provisions of this article. Certificates of number shall be renewed by the owner between January 1, 1963, and February 4, 1963, or between January 1 and February 4 every three years thereafter, by presentation of the certificate of number last issued for the vessel or by presentation of a potential registration card issued by the Division of Small Craft Harbors. ~~The~~ *With respect to vessels which are to use the waters of the state the fee for renewal shall be three dollars (\$3)* and shall accompany the request for such renewal.

(h) All certificates of number valid on the effective date of this section, and all certificates of number issued from that date to December 31, 1962, shall expire on December 31, 1962, and on December 31st of every third year thereafter regardless of when such certificates are initially issued.

(i) If the initial application for number is not received by the Division of Small Craft Harbors on or before the date set by the commission a penalty of one-half the fee shall be assessed. If a certificate of number is not renewed on or before the date on which it expires a penalty of one-half the fee shall be assessed, except where the vessel has not been used on the waters of the state subsequent to the expiration date.

(j) All money received, except moneys collected under Section 683, pursuant to this article shall be deposited in the Small Craft Harbors Revolving Fund and is appropriated for the support of the Division of Small Craft Harbors in the administration of this article. Any money that is not so used shall be expended in accordance with Section 5882 of the Public Resources Code.

(k) The owner shall furnish the Division of Small Craft Harbors notice of the wrecking or junking, or the destruction or abandonment of such undocumented vessel within fifteen (15) days thereof. Such wrecking, junking, destruction or abandonment shall terminate the certificate of ownership and certificate of number of such undocumented vessel which if in existence shall be surrendered to the Division of Small Craft Harbors. The Division of Small Craft Harbors, upon receiving notice of the abandonment of an undocumented vessel, or upon an official determination that an undocumented vessel has been aban-

doned, may order the destruction of such vessel at the expiration of 30 days if an investigation by the division has disclosed that no owner, legal owner, or lienholder claims an interest in such vessel, or if such persons have waived their interest. Nothing in this section shall be construed to deny the legal rights, otherwise provided for by law, of any person claiming an interest in an abandoned vessel if such person notifies the division within the time specified in this section.

(l) Any holder of a certificate of number shall notify the Division of Small Craft Harbors within 30 days, if his address no longer conforms to the address appearing on the certificate and shall, as a part of such notification, furnish the Division of Small Craft Harbors with his new address. The Division of Small Craft Harbors may provide for the surrender of the certificate bearing the former address and its replacement with a certificate bearing the new address or for the alteration of an outstanding certificate to show the new address of the holder.

(m) No number other than the number issued to an undocumented vessel or granted reciprocity pursuant to this article shall be painted, attached, or otherwise displayed on either side of the bow of such undocumented vessel.

(n) A fee of one dollar (\$1) shall be charged for a copy of certificate of number, certificate of ownership, or any application filed pursuant to this article.

(o) Fees received pursuant to this article are appropriated for payment of refunds of money received or collected in the payment of fees, permits, or services whenever the fee, permit or service cannot lawfully be issued or rendered to the applicant, and in cases where the payment in whole or in part represents overpayment or payment in duplicate.

(p) The Division of Small Craft Harbors shall transmit information from each initial application and each transfer application or renewal application to the county assessor in the county of residence of the owner of the vessel and to the county assessor in the county in which the vessel is principally kept if other than the county of residence of the owner. If an application shows that the owner of the vessel has changed his residence from one county to another county or that there has been a change in the county in which the vessel is principally kept, the Division of Small Craft Harbors shall transmit information of the change to the assessor of the county in which the owner of the vessel formerly resided or the assessor of the county in which the vessel formerly was principally kept. After the Division of Small Craft Harbors receives a notice pursuant to subdivision (k) of this section the division shall transmit information of the destruction or abandonment to the assessor of the county in which the owner of the vessel resides and to the assessor of the county in which the vessel is or was principally kept, if other than the county of residence of the owner.

(q) A nonprofit corporation organized solely for charitable purposes pursuant to Part 10 (commencing at Section 9000) or Part 3 (commencing at Section 10200), Division 2, Title 1 of the Corporations Code, which purposes relate to promoting the ability of boys and girls to

do things for themselves, to train them in scoutcraft and camping, and to teach them patriotism, courage, self-reliance and kindred virtues, shall not be required to pay the fees provided for in this section.

(r) On or after October 1, 1963, upon application for original registration or transfer of registration of an undocumented vessel, the division may assign an appropriate builder's hull number to such vessel whenever there is no builder's hull number thereon, or when a builder's hull number thereon has been destroyed or obliterated; and such builder's hull number shall be permanently marked in an integral part of the hull which is accessible for inspection.

(s) No person shall intentionally deface, destroy, or alter the builder's hull number of a vessel required to be numbered under this chapter, without written authorization from the division; nor shall any person place or stamp any serial or other number or mark upon an undocumented vessel which might interfere with identification of the builder's hull number. This does not prohibit the restoration by an owner of an original number or mark when the restoration is authorized by the division, nor prevent any manufacturer from placing in the ordinary course of business numbers or marks upon new vessels or new parts thereof.

The rules and regulations adopted by the commission shall be adopted in accordance with the provisions of Chapter 4 (commencing at Section 11370), Part 1, Division 3, Title 2 of the Government Code.

LEGISLATIVE COUNSEL'S DIGEST

Undocumented Vessels: Penalty Fees.

Amends Sec. 681, adds Sec. 685, H. & N.C.

Increases penalties for late registration or failure to register undocumented vessels, from one-half to full amount of the regular fee.

Provides for distribution to counties of one-half of the penalty fees.

An act to amend Section 681 of, and to add Section 685 to, the Harbors and Navigations Code, relating to undocumented vessels.

The people of the State of California do enact as follows:

SECTION 1. Section 681 of the Harbors and Navigations Code is amended to read:

681. (a) The owner of each vessel requiring numbering by this state shall file an initial application for number with the Division of Small Craft Harbors at its Sacramento office or an agent authorized by the Division of Small Craft Harbors on forms approved by the commission. The application shall contain the name and address of the owner, and of the legal owner if any, and the builder's hull number or any hull number of the vessel as may be required by the division. The application shall be signed by the owner of the vessel and shall be accompanied by a fee of five dollars (\$5); except that initial application for numbers made during 1961 and every third year thereafter shall be accompanied by a fee of four dollars (\$4);

and initial application for numbers made during 1962 and every third year thereafter shall be accompanied by a fee of three dollars (\$3). Upon receipt of the application in approved form, the Division of Small Craft Harbors shall issue a certificate of ownership to the legal owner and a certificate of number to the owner, or both to the owner if there is no legal owner, stating the number issued to the vessel and the name and address of the owner. The owner shall paint on or attach to each side of the bow of the vessel the identification number in such manner as may be prescribed by rules and regulations of the commission in order that it may be clearly visible. The number shall be maintained in a legible condition. The certificate of number shall be pocket size and shall be available at all times for inspection on the vessel for which issued, whenever such vessel is in operation. The Division of Small Craft Harbors may issue one or more stickers, tabs or other suitable devices to identify vessels as being currently registered. The size, shape, and color of such sticker, tab, or other device and the positioning of such on the vessel shall be as determined by the commission.

(b) The owner of any vessel already covered by a number in full force and effect which has been issued to it pursuant to then operative federal law or a federally approved numbering system of another state shall make application within thirty (30) days after the ninety (90) day reciprocity period provided for in Section 682. Such application shall be in a manner and pursuant to the procedure required for the issuance of a number under subdivision (a) of this section.

(c) Should the ownership of an undocumented vessel change, the existing certificate of ownership and a new application form accompanied by a fee of three dollars (\$3) shall be filed with the Division of Small Craft Harbors and a new certificate of ownership and a new certificate of number shall be issued in the same manner as provided for in the initial issuance of number and the number shall be reassigned to the new owner.

(d) In the event that an agency of the United States government shall have in force an overall system of identification numbering for undocumented vessels within the United States, the numbering system employed pursuant to this article shall be in conformity therewith.

(e) The Division of Small Craft Harbors may issue any certificate of ownership and certificate of number or temporary certificate of number directly or the Division of Small Craft Harbors may authorize any person to act as agent for the issuance of a certificate of number or temporary certificate of number. In the event that a person accepts such authorization, he may be assigned a block of numbers which upon issuance, in conformity with this article and with any rules and regulations of the commission, shall be valid as if issued directly by the Division of Small Craft Harbors. All registration of vessels pursuant to the provisions of this code shall be conducted by the Division of Small Craft Harbors at its Sacramento office or by any agent authorized by the Division of Small Craft Harbors to conduct such registration. No field offices shall be established by the Division of Small Craft Harbors for the registering of vessels.

(f) All records of the commission, the department, and the Division of Small Craft Harbors made or kept pursuant to this section shall be public records.

(g) Every certificate of number issued pursuant to this article shall continue in full force and effect until December 31, 1962 unless sooner terminated, discontinued or extended in accordance with the provisions of this article. Certificates of number shall be renewed by the owner between January 1, 1963, and February 4, 1963, or between January 1 and February 4 every three years thereafter, by presentation of the certificate of number last issued for the vessel or by presentation of a potential registration card issued by the Division of Small Craft Harbors. The fee for renewal shall be three dollars (\$3) and shall accompany the request for such renewal.

(h) All certificates of number valid on the effective date of this section, and all certificates of number issued from that date to December 31, 1962, shall expire on December 31, 1962, and on December 31st of every third year thereafter regardless of when such certificates are initially issued.

(i) If the initial application for number is not received by the Division of Small Craft Harbors on or before the date set by the commission a penalty of ~~one-half the~~ *equal to the initial* fee shall be assessed. If a certificate of number is not renewed on or before the date on which it expires a penalty of ~~one-half the~~ *equal to the renewal* fee shall be assessed, except where the vessel has not been used on the waters of the state subsequent to the expiration date.

(j) All money received: ~~except moneys collected under Section 683,~~ pursuant to this article, ~~except moneys collected under Section 683,~~ shall be deposited in the Small Craft Harbors Revolving Fund ~~and~~. *The money so deposited, except that which is to be disbursed to counties pursuant to Section 685,* is appropriated for the support of the Division of Small Craft Harbors in the administration of this article. *Any of the appropriated* money that is not so used shall be expended in accordance with Section 5882 of the Public Resources Code.

(k) The owner shall furnish the Division of Small Craft Harbors notice of the wrecking or junking, or the destruction or abandonment of such undocumented vessel within fifteen (15) days thereof. Such wrecking, junking, destruction or abandonment shall terminate the certificate of ownership and certificate of number of such undocumented vessel which if in existence shall be surrendered to the Division of Small Craft Harbors. The Division of Small Craft Harbors, upon receiving notice of the abandonment of an undocumented vessel, or upon an official determination that an undocumented vessel has been abandoned, may order the destruction of such vessel at the expiration of 30 days if an investigation by the division has disclosed that no owner, legal owner, or lienholder claims an interest in such vessel, or if such persons have waived their interest. Nothing in this section shall be construed to deny the legal rights, otherwise provided for by law, of any person claiming an interest in an abandoned vessel if such person notifies the division within the time specified in this section.

(l) Any holder of a certificate of number shall notify the Division of Small Craft Harbors within 30 days, if his address no longer conforms to the address appearing on the certificate and shall, as a part of such notification, furnish the Division of Small Craft Harbors with his new address. The Division of Small Craft Harbors may provide for the surrender of the certificate bearing the former address and its replacement with a certificate bearing the new address or for the alteration of an outstanding certificate to show the new address of the holder.

(m) No number other than the number issued to an undocumented vessel or granted reciprocity pursuant to this article shall be painted, attached, or otherwise displayed on either side of the bow of such undocumented vessel.

(n) A fee of one dollar (\$1) shall be charged for a copy of certificate of number, certificate of ownership, or any application filed pursuant to this article.

(o) Fees received pursuant to this article are appropriated for payment of refunds of money received or collected in the payment of fees, permits, or services whenever the fee, permit or service cannot lawfully be issued or rendered to the applicant, and in cases where the payment in whole or in part represents overpayment or payment in duplicate.

(p) The Division of Small Craft Harbors shall transmit information from each initial application and each transfer application or renewal application to the county assessor in the county of residence of the owner of the vessel and to the county assessor in the county in which the vessel is principally kept if other than the county of residence of the owner. If an application shows that the owner of the vessel has changed his residence from one county to another county or that there has been a change in the county in which the vessel is principally kept, the Division of Small Craft Harbors shall transmit information of the change to the assessor of the county in which the owner of the vessel formerly resided or to the assessor of the county in which the vessel formerly was principally kept. After the Division of Small Craft Harbors receives a notice pursuant to subdivision (k) of this section the division shall transmit information of the destruction or abandonment to the assessor of the county in which the owner of the vessel resides and to the assessor of the county in which the vessel is or was principally kept, if other than the county of residence of the owner.

(q) A nonprofit corporation organized solely for charitable purposes pursuant to Part 1 (commencing at Section 9000) or Part 3 (commencing at Section 10200), Division 2, Title 1 of the Corporations Code, which purposes relate to promoting the ability of boys and girls to do things for themselves, to train them in scoutcraft and camping, and to teach them patriotism, courage, self-reliance and kindred virtues, shall not be required to pay the fees provided for in this section.

(r) On or after October 1, 1963, upon application for original registration or transfer of registration of an undocumented vessel, the division may assign an appropriate builder's hull number to such vessel whenever there is no builder's hull number thereon, or when a

builder's hull number thereon has been destroyed or obliterated; and such builder's hull number shall be permanently marked in an integral part of the hull which is accessible for inspection.

(s) No person shall intentionally deface, destroy, or alter the builder's hull number of a vessel required to be numbered under this chapter, without written authorization from the division; nor shall any person place or stamp any serial or other number or mark upon an undocumented vessel which might interfere with identification of the builder's hull number. This does not prohibit the restoration by an owner of an original number or mark when the restoration is authorized by the division, nor prevent any manufacturer from placing in the ordinary course of business numbers or marks upon new vessels or new parts thereof.

The rules and regulations adopted by the commission shall be adopted in accordance with the provisions of Chapter 4 (commencing at Section 11370), Part 1, Division 3, Title 2 of the Government Code.

SEC. 2. Section 685 is added to said code, to read:

685. There shall be established in the Small Craft Harbors Revolving Fund a penalty account for each county of the state. One-half ($\frac{1}{2}$) of each penalty collected pursuant to subdivision (i) of Section 681 shall be credited to the penalty account of a county in the manner following:

(a) If the penalty collected was the result of an arrest made by any peace officer, one-half ($\frac{1}{2}$) thereof shall be credited to the penalty account of the county in which the arrest was made.

(b) If the penalty collected was the result of action taken by the Division of Small Craft Harbors, one-half ($\frac{1}{2}$) thereof shall be credited to the penalty account of the county in which the vessel is principally kept.

On or before the end of each fiscal year, the State Controller shall, by drawing warrants on the Small Craft Harbors Revolving Fund, disburse to each county the total of moneys which may, at the date of disbursement, be credited to the penalty account of such county. The moneys so disbursed shall in each instance be deposited to the credit of the general fund of the county.

LEGISLATIVE COUNSEL'S DIGEST

Peace officers.

Amends Sec. 817, Pen.C.

Gives various harbor personnel of city, county, harbor district or other public agency limited peace officer authority within boundaries of the public agency employing them.

An act to amend Section 817 of the Penal Code, relating to peace officers.

The people of the State of California do enact as follows:

SECTION 1. Section 817 of the Penal Code is amended to read:

817. A peace officer is the sheriff, undersheriff, deputy sheriff, coroner, deputy coroner, regularly employed and paid as such of a county, marshal or deputy marshal of a municipal court, constable of a judicial

district, marshal, policeman of a city or town, or any juvenile officer of a city or town engaged in performing juvenile law enforcement functions which are generally performed by the local police department, the Deputy Director of the State Department of Justice, the Chief, Assistant Chief, special agents of the Bureau of Criminal Identification and Investigation, the Chief, Assistant Chief and narcotics agents of the Bureau of Narcotic Enforcement, and any parole officer of the State Department of Corrections, and any placement or parole officer of the Youth Authority.

Inspectors and investigators regularly employed and paid as such in the office of a district attorney, members of the California Highway Patrol, policemen of the Board of State Harbor Commissioners for San Francisco Harbor, a supervisor or guard employed by the Department of Corrections, each member of an arson-investigating unit of an organized fire department, the Chief and inspectors of the Bureau of Food and Drug Inspection, inspectors and investigators of the California State Board of Pharmacy not exceeding 10 in number, investigators of the Board of Medical Examiners of the State of California, special investigators of the Board of Osteopathic Examiners of the State of California, investigators of the Board of Chiropractic Examiners of the State of California, and investigators of the Department of Motor Vehicles are respectively peace officers for the purpose only of carrying out the duties of their respective employments. When he is carrying out his duties, a supervisor or guard employed by the Department of Corrections engaged in transportation of prisoners or apprehension of prisoners who have escaped is a peace officer whether acting within or without this state.

Any qualified person, when deputized or appointed by the proper authority as a deputy sheriff or city policeman for the purpose only of transporting prisoners, is a peace officer while engaged in the transportation of prisoners.

When a sheriff designates any qualified public officer or employee as a deputy sheriff for the purpose of supervising the labor of county prisoners, such person, while acting in the performance of such services, is a peace officer.

Each deputized law enforcement member of the Wildlife Protection Branch of the Department of Fish and Game shall be deemed a peace officer for the purposes set forth in Section 856 of the Fish and Game Code.

Harbor policemen, harbor patrolmen, or other persons employed by a city, county, harbor district, or other public agency whose primary duty it is to enforce the laws in Division 2 (commencing with Section 240) and Chapter 5 (commencing with Section 650) of Division 3 of the Harbors and Navigation Code and the regulations adopted pursuant to such sections, or local ordinances relating to the operation, equipment and protection of watercraft on the waters of the state are peace officers for the purpose of enforcing such laws, regulations, and ordinances, but only within the boundaries of the city, county, harbor district or other public agency employing them.

When in any law a public officer or employee is designated as, given the powers of, or determined to be, a peace officer, such officer or

employee shall be deemed to be a peace officer but only for the purpose of that law.

The restriction of peace officer functions of any public officer or employee shall not affect his status for purposes of retirement.

When, pursuant to Nevada law, an officer or employee of the Nevada State Prison has in his custody in California a prisoner of the State of Nevada whom he is transporting from the Nevada State Prison or any honor or forest camp in Nevada to another point in Nevada for the purposes of firefighting or conservation work, such officer or employee of the Nevada State Prison shall have the power to maintain custody of the prisoner in California and to retake the prisoner if he should escape in California to the same extent as if such officer or employee were a peace officer appointed under California law and the prisoner had been committed to his custody in proceedings under California law.

RIDING AND HIKING TRAILS

SUMMARY OF THE PROBLEM

The committee is very concerned over the failure of the California Riding and Hiking Trail program which was authorized by the 1945 General Session of the Legislature. It recognizes, however, that the lack of eminent domain authority for easements for this program has prevented the program from making any substantial headway.

The committee feels that the 3,000-mile riding and hiking trail loop recommended by the Division of Beaches and Parks may no longer be required for the needs of California's current riding and hiking trail advocates. It is noted that over 31,000 miles of riding and hiking trails exist in California, primarily on federal national forest lands. Most of these trails have been established since 1945 and eliminate much of the need of any further riding and hiking trails in rural areas. Horsemen and hikers who are taking extended trips have adequate trails available for this purpose.

However, increased population in urban areas requires the completion of riding and hiking trails and/or loops near metropolitan centers, and requires that such a program be implemented immediately. This implementation requires eminent domain authority for acquisition of rights-of-way for riding and hiking trails. The committee feels that such a program should be approved by the Legislature and eminent domain authority should be restricted to such an approved program. At its meeting on September 13, 1963, the committee requested the Division of Beaches and Parks to supply it with legal descriptions and names and addresses of owners of rights-of-way on those parcels that were preventing the completion of contiguous trails near the urban centers of population. Through its representative, the Division of Beaches and Parks informally agreed to do so, and on September 18, 1963, the chairman of this committee informed the Director of the Department of Parks and Recreation by letter of the committee's request. The committee intended to assist in the negotiation for these rights-of-way to get the first hand information as to the problems the department was facing and to enlist the aid of the local legislators in some negotiated agreement for rights-of-way. This information has not yet been received by the committee.

The committee urges that the department proceed with the immediate preparation of a program of riding and hiking trails or loops near the urban centers of population and present it to the Legislature for consideration during the 1965 legislative session, together with a request for such eminent domain authority as may be necessary to acquire rights-of-way for this program after its approval.

RECOMMENDATIONS

The committee recommends that the Department of Parks and Recreation prepare and submit to the Legislature for approval a rid-

ing and hiking trail program which envisions a series of riding and hiking trails and/or loops near urban centers of population. The committee further recommends that at such time as the Legislature approves this program, the approval include the right of eminent domain for acquisition of rights-of-way for the approved program.

The committee also recommends that such a program be submitted to the 1965 Legislature for its approval and requests that when the program is prepared it be forwarded to the Assembly Committee on Natural Resources, Planning and Public Works for introduction. At the same time, the committee recommends that a list of specific parcels preventing completion of trails near urban centers of population be forwarded.

RECREATIONAL USE OF STATE WATER PROJECTS

The committee makes no recommendations on the subject of recreational use of California Water Plan facilities. The committee does reiterate the need of the programs presently underway for creating recreational facilities as construction of the California Water Plan proceeds.

However, since the problems here are primarily fiscal in nature, this committee defers to those studies made by the Assembly Interim Committee on Water and urges consideration by the 1965 Legislature of the recommendations of that interim committee.

ASSEMBLY CALIFORNIA LEGISLATURE

E. RICHARD BARNES

Member of Assembly, Seventy-eighth District

SAN DIEGO COUNTY

I disagree with the recommendations of the Interim Committee on Natural Resources with reference to control of outdoor advertising.

Outdoor advertising is, in my judgment, a legitimate business providing employment for hundreds of California working people, and should be encouraged, not legislated out of existence. Proper control is one thing but obliteration is another.

At a time, when there is substantial unemployment in important areas of California, I can find no justification for a legislative course which would contract job opportunities, not expand them.

Outdoor advertising is an important tool of many other business enterprises in our state, and its destruction would have far-reaching repercussions outside the industry itself.

Outdoor advertising, like other advertising media, is an important means of communicating with the public. I believe the protection of freedom of expression should extend to this segment of the communications industry.

The committee report clearly points out that "the principle of expanded state regulation of outdoor advertising" was "clearly established by passage of the Collier-Z'berg Act." This act applied strict state controls to advertising along interstate highways. It is now proposed to expand such coverage "to the remainder of the state highway system."

This again illustrates that once the door of bureaucratic regulation has been opened, its stifling control continually seeks to expand. The ultimate result is the destruction of a free enterprise industry.

I believe that the extension of state control over outdoor advertising will have an adverse effect on the local tax base, and I am unalterably opposed to adopting regulatory laws of this kind in order to secure a subsidy or bribe from the federal government.

For these reasons, I do not concur in the section of the committee report entitled "Control of Outdoor Advertising," and do not support the proposed legislation included in the report.

I am in general agreement with the principles and objectives outlined in the section of the committee report entitled "Land Acquisition Policies and Procedures." In implementing this policy, however, I think it is important that the Legislature take special precautions to assure that this implementation will reduce, not increase, state expenditures for land acquisition, and that it will not result in an increase in the number of state employees involved in such acquisition.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER
CALIFORNIA LEGISLATURE
November 24, 1964

HON. JESSE M. UNRUH, *Speaker of the Assembly*
MEMBERS OF THE ASSEMBLY
State Capitol, Sacramento 14, California

Gentlemen :

Pursuant to HR 467 of the 1963 General Session and HR 54 of the 1963 First Extraordinary Session, your Assembly Interim Committee on Water herewith submits a report on State Assistance to Local Water Development under the Davis-Grunsky Act.

In this report the committee presents an analysis of the act, together with comments on changes in the program which have been proposed.

In tracing the legislative development of Davis-Grunsky Act program from its origin in 1957, the committee reaffirms its support of the program but does not recommend additional legislation to implement its provisions. The substantial amendments made at the 1961 and 1963 sessions appear to have been satisfactory and a workable program of state assistance to local projects has been achieved.

This report, which is the result of staff research and a public hearing, was prepared by the Davis-Grunsky Act Subcommittee. The subcommittee's report was adopted by the full committee at a meeting on October 9, 1964.

Respectfully submitted,

CARLEY V. PORTER, *Chairman*
Assembly Interim Committee on Water

I.

INTRODUCTION

The committee's consideration of the Davis-Grunsky Act is authorized by two resolutions assigned to this committee for study. House Resolution 467 of the 1963 General Session, by Assemblyman Z'berg, requested a study of "the entire program of state financial assistance for local projects pursuant to the Davis-Grunsky Act . . ." House Resolution 54 of the 1963 First Extraordinary Session, by Assemblyman Lunardi, requires a study of "the feasibility of modifying the Davis-Grunsky Act to include grants for basic access roads . . ." In addition, Assembly Bill 1841, by Assemblyman Lunardi, was assigned to this committee for interim study.

For its study, pursuant to these resolutions, the committee conducted an extensive staff investigation and study and the subcommittee also held one public hearing in Auburn on October 24, 1963, on the specific subject of House Resolution 54.

II.

THE DAVIS-GRUNSKY ACT AND STATE FINANCIAL ASSISTANCE

In response to House Resolution 467 the committee presents a brief historical development of the act together with a more detailed analysis of certain aspects of the program. In the discussion the committee makes its recommendations as to each aspect of the program.

History of Program

The Davis-Grunsky Act was enacted by the Legislature in 1957 as the Grunsky Act, in a much more modest form than the present act (Statutes of 1957, Chapter 2052, Senate Bill 2174). The original purpose of the program was set forth in Water Code Section 12880 as follows:

In furtherance of the development, control and conservation of the water resources of the State it is the policy of the State to provide financial assistance to public agencies for the construction of projects for water development in which there is a state-wide interest by making grants or loans, or both, and by participating in the construction and operation of such projects, in accordance with this section.

The original program provided for loans to be made "upon such terms as may be prescribed by the Legislature" and the District Securities Commission was required to certify that the amount of the loan was "beyond the reasonable financial ability of the public agency and for which funds cannot be obtained from other sources."

The types of projects eligible were limited to those of public agencies for "flood control, for the diversion, storage, distribution or other use of water primarily for domestic, municipal, agricultural, or industrial purposes, and for the production of power."

Grants were available for construction costs allocated to the preservation and enhancement of fish and wildlife and recreational benefits of statewide interest, that were *incidental* to the primary functions of the projects. Thus, projects primarily for these purposes were not eligible. Projects were required to conform substantially to the California Water Plan and be engineeringly feasible and economically justified.

Both loans and grants were available only upon specific authorization of the Legislature.

A section of the act authorizing state participation was also included:

If in order to accomplish the objectives of The California Water Plan it is necessary to construct a project that is beyond the requirements of the public agency constructing the project, the State may participate in financing those costs of the project in excess of the costs necessary to meet the requirements of the public agency, on terms agreed upon with the agency, to the end that the project to be constructed and operated shall accomplish the maximum

water development objectives at a minimum total expenditure. (Section 12880(f))

No legislation authorizing grants or loans was passed at the 1957 session and no completed applications were processed by the department prior to the 1959 legislative modifications.

On February 2, 1959, Senate Bill 425 (Chapter 1752) was introduced calling for a greatly expanded program, including loans and grants made administratively by the Department of Water Resources. On February 27, 1959, Assembly Bill 1717 was introduced providing for a \$1,260,000 loan from the Investment Fund (later the California Water Fund) to the South Sutter Water District for its Camp Far West Project. This bill was finally enacted into law and became the first such legislative authorization under the program.

Senate Bill 425 greatly expanded the program by (1) financing the program first through a revolving fund, the "Local Projects Assistance Fund" consisting of \$15,000,000 from the California Water Fund; and (2) by providing that grants up to \$300,000 and loans up to \$4,000,000 could be made administratively by the Department of Water Resources, subject to the approval of the California Water Commission without approval of the Legislature. Larger loans or grants required specific authorization by the Legislature.

The legislation placed the former responsibilities of the Districts Securities Commission with the Department of Water Resources.* The department was required to report to the Legislature on each application, making findings as to "the nature and extent of the statewide interest in the project, the public necessity for the project, the urgency of the need, and the engineering feasibility, economic justification, and financial feasibility of the project."

Interest on loans was set at "a rate equal to the net interest cost to the state on the last sale of general obligation bonds of the state that occurred prior to the time the application for a loan was filed with the department . . ."

Senate Bill 425 provided that if Senate Bill 1106, the California Water Resources Development Bond Act (Burns-Porter Act) were enacted into law and the bond issue were approved by the voters in November 1960, the \$15,000,000 revolving fund would be abolished and funding of the program would be from \$130,000,000 in proceeds from the \$1.75 billion water bond issue. The bond issue was approved and the Davis-Grunsky program is now being financed as provided in the Burns-Porter Act. The program, however, is no longer a revolving fund program.

In 1960, a Department of Water Resources spokesman explained to the Senate Fact Finding Committee on Water Resources the basis for determining the \$130,000,000 figure:

While developing "The California Water Plan" and conducting the California Water Planning Program, the Department has made numerous planning studies of potential local projects.

Nearly 30 projects throughout California, requiring on the order of \$200,000,000 to construct, have been identified as water resource

* See 40 Ops. Atty. Gen. 198, for discussion of Districts Securities Commission and the Davis-Grunsky Act.

development that could, in the foreseeable future, significantly enhance the economy of local areas and consequently the State. This is understandably not a complete total for with further and more extensive planning and with the growing need for new water supplies, additional projects will be conceived.

On the other hand, not all of the projects will prove to be feasible within the foreseeable future. In any event, not all of the cost would need to be financed under the Davis-Grunsky Act. Substantial funds could come from other sources such as sale of bonds and federal loans and flood control grants.

When the department suggested the inclusion of the \$130,000,-000 as a figure for local water development projects, it did so in response to a feeling that local areas should, as nearly as possible, be put upon a parity, in the satisfaction of their water needs, with the areas which would be supplied with water from the major export facilities which were to be constructed with the remainder of the \$1,750,000,000. (Hearing of Senate Fact Finding Committee on Water Resources, June 23, 1960, *Transcript*, at 13-14.

Applications under the program came in rather slowly during the first years of the program. At the 1961 General Session a number of modifications were proposed, some of which were adopted. Two major problems faced the Legislature during the 1961 session as a result of preliminary experience in administering the Davis-Grunsky Act by the Department of Water Resources.

Risk Assumed by State

The first problem was the degree of financial risk that should be assumed by the state in making a loan. At that time Section 12880(b) of the act required that "... if the loan is proposed that there is reasonable assurance that the public agency can repay it". While on the other hand, Section 12880(d) stated, "... in no event shall any such loan be in an amount which is greater than the portion of the cost of the project which the department finds to be beyond the reasonable ability of the public agency to finance from other sources".

The Department of Water Resources and the California Water Commission adopted a joint policy statement in March 1960 to clarify the practical application of these sections, as follows:

The state should take a reasonable risk in financing developmental water projects in relatively undeveloped areas, provided such projects can be shown to be economically justified on the basis of acceptable methods of analysis.

In 1961 the Legislature attempted to remedy the situation by modifying Section 12280(b) as follows:

The proposed project may be approved for assistance only if it is determined . . . that the loan is proposed, that there is reasonable assurance, *commensurate with the need for the proposed project, that the public agency can repay it.* (New language italicized)

This language did not completely resolve the problem and in 1963 the Legislature again modified this language by adding the following additional guidance to the Department of Water Resources:

The potential future growth and development of the area shall be taken into consideration in the calculation of the benefits for the determination of the economic justification of a proposed project . . . Such factors as the public health, safety and welfare shall be taken into consideration in determining the need for a proposed project. (Section 12880(b))

Additional attention is given to this problem in the "Joint Statement of Policies for Administration of the Davis-Grunsky Act" adopted by the Department of Water Resources and the California Water Commission.

The policies further define reasonable inability to finance from other sources as requiring the following conditions:

- (1) The project is not eligible for federal assistance or, if eligible, it appears that funds are not available or when need is so urgent this would preclude financing from federal sources.
- (2) Bonds can't be marketed at an interest rate commensurate with the feasibility of the project.
- (3) The agency has no other funds or source of funds available.

Inability to finance may well be a short-term condition in which local assessed valuations without construction of the project are insufficient to permit local bond financing.

This does not mean, however, that once the project is constructed the added value will not be sufficient to permit repayment of the loan. If the added local valuation does not permit eventual repayment of the loan (including the liberal development period benefits) it would seem the project is either unsound or unworthy of construction.

This aspect of the program nevertheless will undoubtedly continue to remain a troublesome one, as the two concepts of inability to finance from other sources and the requirement that the project be economically feasible to protect the state's investment are, by definition, contradictory.

The committee believes, however, that the present language of the act and administrative flexibility is satisfactory and no further statutory changes need be made.

Distribution System Projects

The second problem which concerned the department and this committee during the 1961 session was the matter of loans for either irrigation or municipal distribution system projects.

In March 1960 the Department of Water Resources and the California Water Commission, in their joint policy statement, required that a project to be eligible must "develop new basic water supplies", in other words, included storage and diversion works (except in case of extreme hardship), in order to prevent use of the program for a large number of distribution system projects.

During the 1959-61 interim this committee studied this problem and in its report to the Assembly dated January 2, 1961, on the Davis-Grunsky Act (see *Assembly Journal, January 5, 1961, at 139*) included the recommendations that:

Clarification of policy with respect to distribution facilities is needed and that amendment of the law is a better method to make this clarification than administration policy.

The Director of Water Resources advised the Assembly Committee on Water, April 4, 1961, of his concern with regard to distribution system loans:

While it is true that loans and grants for distribution systems technically are authorized under it (Davis-Grunsky Act), we believe that the Legislature contemplated, in the main, that the Davis-Grunsky Act be used as a vehicle for making loans of the type previously described (loans for projects which develop new basic water supplies). Were this not to be done a substantial portion, if not all, of the \$130,000,000 could be utilized for construction of distribution facilities without developing any new water, which would be contrary to the obvious underlying purpose of the Burns-Porter Act which makes those funds available. (Statement before Assembly Water Committee, April 4, 1964, at 4)

Several bills were introduced to accomplish the clarification. The language adopted in 1961 (and presently in the act) is substantially the same as the previous administrative policy:

12880.2. . . . No funds shall be loaned for either irrigation distribution system projects or municipal distribution projects, except in cases which, in the judgment of the department and the commission, involves extreme hardship which jeopardizes the public health, safety or welfare. Distribution facilities which are a necessary and integral part of an overall water development project may be covered by a state loan.

This provision is read together with a provision that:

In the administration of this chapter the department and the commission shall give preference to projects involving development of new basic water supplies. (Section 12880.2)

This committee believes that the present language with regard to distribution system loans is also satisfactory and is sufficiently flexible to permit the department to make loans for distribution systems which are essential to local areas while at the same time guaranteeing that as many Davis-Grunsky loans as possible are utilized for development of water supplies so that the program does not become a loaning device for municipal distribution systems, which could run into the millions of dollars.

As was indicated by a Department of Water Resources spokesman:

Without this stipulation [in the 1961 Statutes] it is of course quite possible that a large portion of the \$130,000,000 would be used for construction projects to distribute water from the Cali-

fornia Aqueduct, without accomplishing any additional development of new local water supplies. (William Berry "State Financial Assistance to Local Water Projects Under the Davis-Grunsky Act—A Progress Report," April 6, 1962, p. 7)

Development Period

In addition, at the 1961 Session provisions for Davis-Grunsky loans were modified to provide that payments on principal may be deferred, during the optional 10-year development period. It was pointed out that the flexibility offered by such deferment of principal payments was similar to that of the Reclamation Act of 1939 under which the Secretary of Interior was authorized to allow a development period. It should be noted that 1963 modifications of the act provided that *interest* also may be deferred during the first ten years of the 50-year repayment period:

When in the department's judgment such development period is justified under the circumstances. If the payment of interest is deferred . . . interest shall be charged on the interest amounts for which the payment is deferred at the same rate as the rate of interest charged on the principal amount of the particular loan. The accrued interest may, at the option of the public agency, be paid in annual installments during the remainder of the loan repayment period at the same rate of interest as is charged on the principal amount of the loan. (Section 12880(d))

The committee believes that this provision which, in its present form, represents a gradual easing of the repayment obligation by expanding the development period concept, is satisfactory and should not be modified further. It must be cautioned that a deferment of both principal and interest necessarily causes increased burdens on the latter part of the repayment period and any additional benefits to the early period is unwarranted at this time.

Authority of Districts to Participate

The 1961 session also saw extensive amendments to the act with regard to the authority of local districts to participate in the Davis-Grunsky program. These amendments expressly granted the various public agencies sufficient power to contract with the department for assistance under the act. It also required that proposed contracts for loans and grants be submitted to a vote of the people of the public agency before the contracts were entered into between the state and the local agency. This requirement of an election was further modified in 1963 to exempt from the election provisions in the case of a grant:

. . . a public agency where the applicable law contains provision for the election of the members of the governing body of the agency or where a county Board of Supervisors acts as the governing body of the agency. (Section 12880(i))

Experience with the act showed that in the case of grants (which involve no obligation of repayment or other major financial obligations upon the district) an election in the district is unnecessary where the

district board is itself elected by the people and responsible to them. The rationale of continuing the requirement for loans, however, is valid inasmuch as these loans represent the incurring of an indebtedness similar to that of a bonded indebtedness. *No further modifications to this phase of the program seem appropriate.*

The most extensive changes in the Davis-Grunsky Act came at the 1963 session of the Legislature. The appendix to this report includes the complete text of the Davis-Grunsky Act showing deletions and additions made at the 1963 Regular Session of the Legislature. The major modifications are described below.

Projects Primarily for Recreation and Fish and Wildlife Enhancement

The basic concept of the program was expanded to broaden the definition of eligible project to include a project whose primary purpose was "recreation or fish and wildlife enhancement".

Thus, for the first time loans and grants are now available to public agencies for financing water projects which are *primarily* for fish and wildlife and recreation.

In order to implement this policy change, it was necessary to limit the grants to projects which involve the development of "new water supplies" and to place limitations on the grant amount, in order to prevent the entire project from being financed by a grant. These limitations are as follows:

- (1) A grant for the part of a cost of a project properly allocated to the enhancement of fish and wildlife may not exceed 50 percent of the project construction cost.
- (2) A grant for the part of the cost of any dam and reservoir of a proposed project properly allocated to recreational functions of state wide interest may not exceed 50 percent of the construction cost of the dam and reservoir.
- (3) The total amount granted for the above purposes may not exceed 75 percent of the project construction cost.

Thus, it is possible for a public agency building a project for which recreation or fish and wildlife enhancement are the primary purpose to receive a maximum grant of 75 percent of the construction cost of each project. It, of course, would be possible for the agency to obtain a loan for the remainder of the construction cost if it qualified for such a loan.

The Director of Water Resources has indicated that:

This basic amendment alone should stimulate the economic development of areas of this state where recreation is, or could become, an important industry by assisting in financing much needed additional water facilities for recreation and enjoyment by the people of this state.

This committee agrees with the Director of Water Resources and, at the time of this amendment, concurred in the advisability of modifying the basic purposes of the act to include fish and wildlife and recreation projects. The committee has been concerned, however, lest a disproportionate amount of the funds in the Davis-Grunsky program be granted

for such projects at the expense of projects with the primary purpose of water supply development.

A warning in this regard was made to the committee by a representative of the Mountain Counties Water Resources Association:

We support the initial concept of the Davis-Grunsky Act which primarily recognized this fund as a source of loan financing for the development of needed water supplies in counties of limited financial ability.

While the introduction to the act of recreational aspects has circumvented some of the financial problems connected with marginal projects, the organization prefers still to view this as a means to the primary objective of actually making available domestic, agricultural and industrial water which will permit the valuable rural counties to reach a reasonable degree of economic maturity.

A reaction of the introduction of these aspects is the ultimate effect that Davis-Grunsky monies may, in the majority, be granted for state wide benefits associated with projects in lieu of a state fund for this purpose. This trend is being set and while it cannot be denied, it is perhaps engendering new water supplies, the fact remains majority depletion of the monies is in a field disassociated with the initial concept. (*Transcript of hearing, October 24, 1963, at 70-71*)

A review of projects to date since the 1963 amendments has indicated that although sponsors of a number of projects have made application which would not have been eligible under the previous provisions of the act, a fair balance between recreation and fish and wildlife projects and projects primarily for municipal and industrial and irrigation water supplies has been achieved. *It would appear that the 1963 amendments in this regard are working satisfactorily and no further changes are necessary.*

Initial Water Supply and Sanitary Facilities Grants

A second major change in the program was to expand the scope of grant provisions to provide grants to finance the cost of constructing initial water supply and sanitary facilities which are needed for the public recreational use of each proposed dam and reservoir of a project. These grants are limited to 25 percent of the total amount granted for recreation and fish and wildlife enhancement costs of the project. It became obvious to this committee and to the Legislature that in providing grants and loans to local agencies for projects the state was giving substantial impetus to the development of such projects, which are located primarily in northern California. It was also obvious, however, that basic recreation facilities were absolutely essential to the proper utilization of a project when completed. A provision of grants for initial water supply and sanitary facilities appears to have filled an important need with regard to the Davis-Grunsky program.

As originally introduced, legislation making this modification also included language permitting similar grants for initial basic access roads. This provision was deleted by the Assembly Water Committee and is discussed in greater detail later in this report.

The Department of Water Resources has interpreted the language authorizing these additional grants as authorization for such grants even if this is in excess of that amount specifically authorized by the Legislature. For example, if the legislature authorizes a one million dollar maximum grant for a specific project, according to the department, an additional \$250,000 could be granted for the purposes of water supply and sanitary facilities without further approval of the Legislature. (See letter from William E. Warne to Ralph M. Brody, dated July 29, 1963, found in *Activities and Transactions of the Department of Water Resources under the Davis-Grunsky Act, 1963 Report to the Legislature, January, 1964.*)

The Director of Water Resources has commented that this new grant provision:

Represents a substantial step forward in helping local public agencies to carry out their grant contract obligations with the state . . . The grant contracts require the public agencies to cause on-shore recreation facilities to be installed and operated in conjunction with the recreational functions of the dams and reservoirs. Eligible public agencies will now be in a position to finance the initial water supply and sanitary facilities portions of those on-shore recreational facilities . . .

Table 1, on page 22, indicates that the total amount which presently is estimated to be granted for initial water supply and sanitary facilities is \$2,176,120. This amount is based upon the 15 projects which have already been approved by the department and the commission and three projects which are now under review by the department.

In February 1964, the Director of Water Resources submitted to the California Water Commission the "Joint Statement of Policies for Administration of the Davis-Grunsky Act" in regard to initial water supply and sanitary facilities. The Director of Water Resources indicated that:

Initial water supply and sanitary facilities should include those necessary to protect the health and safety of persons using the reservoir for recreation. These facilities should generally be restricted to permanent works and should include any or all of the following: (1) development of a water source; (2) water treatment facilities; (3) pumps; (4) storage facilities; (5) pipelines, including the appurtenances; (6) fire hydrants; (7) comfort stations, including the building, toilets, washbasins, and showers; (8) drinking fountains; (9) sewers and appurtenances; (10) sewage treatment and disposal facilities.

When economic studies indicate a savings in construction costs, pumps, pipes, storage and treatment facilities to be constructed for the first phase of the recreation development may be sized to serve all the recreation facilities shown in the feasibility report.

On March 6, 1964, the California Water Commission adopted the following policy statements with regard to recreation facilities and the definition of initial water supply and sanitary facilities to be used in considering these grants:

Recreation Facilities

Recreation facilities should be staged in a logical and economical manner. Initial water supply and sanitary facility grants are to provide for only the first phase of recreation development. The first phase of recreation development must be the most economical plan, considering all costs.

Definition of Initial Water Supply and Sanitary Facilities

"Initial Water Supply and Sanitary Facilities," as used in Water Code Section 12880(c) (3), are those which reasonably might be installed as the first phase of the overall development of water supply and sanitary facilities to protect the health and safety, and to provide for the convenience of persons using the reservoir for recreation. Such facilities must be constructed and operated in conformance with applicable local and state public health standards.

Initial water supply facilities may include works necessary to collect, treat, and distribute water from the source to the recreation area. Initial sanitary facilities may include the works necessary to collect, treat, and dispose of wastes from the recreation area.

Initial water supply and sanitary facilities should meet the needs of the recreationists to be served by the first phase of onshore recreation facilities. The water supply and sanitary facilities may be constructed to meet the needs of later phases of development when the department finds such enlargement to be reasonable, considering physical conditions and economic factors; provided that the agency agrees to pay the incremental cost involved.

Experience thus far with this provision indicates that grants for this purpose will substantially meet the needs of local agencies for these purposes. It must be pointed out that the amounts of the grants possible are based upon the project cost rather than specific recreation needs. More experience is required with this phase to determine in the long run what relationship these amounts bear to actual needs.

It has been suggested that administrative policy be adopted to limit these grants to those projects approved after the effective date of the section, September 22, 1963. That is, apply this provision *prospectively*.

We concur in the advisability of this limitation.

Increase in Maximum Grant

In addition, the maximum grant permitted without legislative approval was increased from \$300,000 to \$400,000 at the 1963 session. This amount was a compromise figure worked out by the Davis-Grunsky subcommittee of this standing committee. At the time this increase was considered the department indicated that it would have been helpful in a few cases in the past to have had an increased maximum when costs allocated to recreation fell between the \$300,000 and \$400,000 range. *The committee believes that this maximum amount is the most appropriate level at which to maintain the limit and recommends no further changes.*

Revised Interest Rate

An additional amendment proposed by this committee revised the interest rate on construction loans and feasibility study loans. The former language, which required repayment over an entire period of a loan at the rate "equal to the net interest cost to the state on the last sale of general obligation bonds," would provide a hardship on loans that were made at a time when state bonds (for an entirely different purpose) were selling at a higher rate. By the same token, it would provide an unusually low rate for those projects whose approval was granted by coincidence when the state bond market was more favorable. This committee recommended, and the Legislature approved, an interest rate based upon the average of the net interest cost to the state on the sales of general obligation bonds over a five-year period. The actual language of the amendment provided that during the period January 1, 1962 inclusive, through the year immediately preceding the year in which the loan application was filed, if the application is filed before 1968, or during the five-year period immediately preceding the year in which the loan application was filed, if the application was filed during or after 1968. Thus, over the long haul the interest rate should be not only representative of the overall bond market, but will reflect an equitable rate for all projects and local agencies will not be subjected to either high or low interest rates based on chance, adding stability and conformity to the program. Commenting on this formula the Department of Water Resources indicated that:

The new formula should prove of assistance to the public agencies because the interest rate will only be subject to change once a year, in contrast to several possible changes a year under the old formula, because the changes under the new formula will ordinarily be less pronounced, making the interest rate to be charged in each case more predictable. (Letter from William Warne to Ralph M. Brody, dated July 29, 1963, found in *Activities and Transactions of the Department of Water Resources Under the Davis-Grunsky act; 1963 Report to the Legislature, January 1964.*

Maximum Feasibility Study Loans

In addition the Davis-Grunsky Act was modified in 1963 to increase the maximum feasibility study loan from 2 percent of the estimated cost of the project, or \$25,000, whichever is less, to 2 percent of the estimated cost of the proposed project or \$50,000, whichever is less. The feasibility study loan program was enacted at the 1961 Session. The department has appropriately pointed out that this amendment "serves the worthy purpose of avoiding the necessity of waiting the time consuming process of special legislative approval to obtain a loan of relatively small magnitude."

Experience with the act to the present indicates that this amendment has provided an adequate maximum level for these loans and further modification of it is not warranted.

State Participation

A final modification made at the 1963 Session was a substantial amendment to the state participation portion of the act which had

not been modified since the original enactment of the Davis-Grunsky Act. Section 12880(f) was revised to expressly authorize the department, subject to the prior approval of the California Water Commission, to participate with local public agencies in the planning, designing, constructing, operating and maintaining of projects that are primarily for domestic, municipal, agricultural, industrial, recreational or fish and wildlife enhancement purposes without the need for special legislative authorization to participate in each given project up to \$1,000,000.

Each project in which the department participates would have to be larger than a project which the particular agency proposes to construct by itself. The amendments specifically provide that before the department may participate in the larger project with a public agency such participation must first be requested by the public agency. The amendment of this section provides that the department may perform all or part of the planning, designing, construction, authorization or maintenance of the projects on terms agreed upon by the agency. The department may also finance its participation with funds allocated to the Davis-Grunsky Program under the Burns-Porter Act.

The amendment also provides that the department may make loans and grants to public agencies for projects in addition to participating in a project, therefore, the department can not only utilize state participation for the additional features of the project but may also provide loan funds for the basic project to meet the needs of the local agency.

These modifications were recommended by the Department of Water Resources, which expressed the view that, as previously worded, the provisions for state participation were unclear and unworkable. At the present only one application for state participation has been received by the department, that is an application by the Tuolumne County Water District No. 2. No action has been taken on this application.

A department spokesman has discussed the meaning behind the "state participation" feature of the act:

As we see it now, the state participation clause might be implemented in a situation where development of a local water project, to a size larger than required to serve local needs, would result in savings and benefits to all parties concerned. For example, should a local agency in the North Coastal area of California propose to construct a small project at a location which is most suitable for a larger project, possibly the state could participate in building the project to the larger capacity. The waters conserved by the project that are in excess of those required to serve local needs might then be integrated into the state's own water system. I should point out again, however, that as we see it, such an arrangement could only be made if it were to the mutual benefit of both the local agency and the state. (William Berry, "State Financial Assistance to Local Water Projects—A Progress Report, April 6, 1962, at 6)

An even broader example of state participation is exemplified in Assembly Bill 1841 by Assemblyman (now Senator) Lunardi, which

was sponsored by the Department of Water Resources and which was referred to this committee for study.

Assembly Bill 1841 would have added a new article to the Davis-Grunsky Act for the purpose of establishing a procedure that would lead to the construction by the Department of Water Resources of water projects to meet local needs. Under such procedure, the department would plan such projects and submit project reports to the Legislature. Thereafter, the department would construct the projects on specific authorization of the Legislature.

This committee *cannot* recommend approval of this proposal for the following reasons, among others:

1. Such a program would be a serious financial drain on the available Davis-Grunsky funds. For this reason alone it is inappropriate to utilize the act for this purpose.
2. No demonstrable need for this program has been shown.
3. The liberalized Davis-Grunsky program represents a substantial state financial commitment to local projects.
4. Through its operation the department might impose projects and financial burdens on areas unwilling or unable to receive them.
5. Assembly Bill 1841 would open up an entirely new concept of state construction of local projects. This state construction of purely local projects represents a major entry into a new field of state activity. Davis-Grunsky projects must be of statewide interest. The state is properly assisting in this manner. Assembly Bill 1841 is an unwarranted departure from this concept.

On July 20, 1964, the Director of Water Resources proposed to the California Water Commission the following additional language to the "Joint Statement of Policies for the Administration of the Davis-Grunsky Act":

*State Participation Under Section 12880(f) for
Recreation and Fish and Wildlife Enhancement Purposes*

It is the view of the Department of Water Resources and the California Water Commission that the Legislature intended that the use of Davis-Grunsky funds to promote the construction of water projects for recreation and/or fish and wildlife enhancement purposes should be confined to the making of grants and loans to the local public agencies under the liberal provisions of subdivisions (c) and (d) of Water Code Section 12880. Therefore, the department will not participate in a project under subdivision (f) of Section 12880 for such purposes.

Action has not yet been taken by the commission upon this proposal which was explained as follows by the Director of Water Resources:

Subsection (f) authorizes, but does not require the department to form a partnership with a local agency in constructing a project that is primarily for domestic, municipal, agricultural, industrial, recreational, or fish and wildlife enhancement purposes. Since grants may be obtained for recreation and the enhancement of fish

and wildlife, it does not appear that the department should participate as a partner in projects constructed primarily for these purposes. In fact, to do so would render meaningless the restrictions placed on the grants.

The . . . policy statement would limit state assistance to local projects for recreation and/or fish and wildlife enhancement purposes to the same restrictions as those placed on grants under Section 12880(c).

This committee concurs with the Director of Water Resources in his interpretation of this amendment of the state participation provisions. Although it has not been adopted by the Water Commission, such a modification appears reasonable and appropriate. It appears that administrative action is sufficient here but if necessary, legislation embodying this concept could be introduced.

Summary

The basic concept of the grant program has been, from the inception of the Davis-Grunsky program to finance portions of local projects which would primarily benefit the state at large and which would be desirable but should not be borne strictly by the local agency. This, of course, is exemplified by recreation and fish and wildlife.

The loan program, on the other hand, was to provide an alternative source of financing for local projects. It is imperative that the program be continued within the framework of this original concept and that grants continue to represent that part of the project which has statewide interest and which is most properly a function to be assumed and financed by the taxpayers of the state as a whole.

The trend of the Davis-Grunsky program, however, from a standpoint of applications received and approved, has been to emphasize grants and the largest portion of the money disbursed and approved to date is for grants rather than loans. It must be emphasized that it is through the loan program that the state makes its most important contribution with regard to assistance to local projects and Davis-Grunsky is basically a program of assistance to local projects. It is through loans that water supply projects are developed and local projects needed for strictly local purposes can be made more easily available to the local people in areas with limited present economic resources.

This committee is concerned lest the original concept of state assistance for local projects be overshadowed by the availability of nonreimbursable grants. It should not be overlooked that the loan program now is one of the most attractive forms of financing to local agencies available in the state.

In addition to extensive changes in the act, the Legislature authorized in 1963 maximum grants exceeding \$400,000 for 10 projects. These

TABLE 1
ESTIMATED COSTS AND AMOUNTS TO BE GRANTED UNDER DAVIS-GRUNSKY ACT
September 10, 1964

Agency	Access roads		Project		Purposes
	Cost	Grant	Construction cost	Construction grant	
1. Helix I.D. -----	\$10,000	\$3,000	\$2,803,000	\$537,000 ¹	Domestic, irrigation and recreation
2. Browns Valley I.D. -----	60,000	26,000	5,491,000	700,000 ¹	Irrigation, power and recreation
3. South Sutter W.D. -----	186,200	73,000	8,931,400	960,000 ¹	Irrigation and recreation
4. San Luis Obispo Co. FC&WCD * -	550,000	336,000	9,338,000	3,285,000 ²	Domestic, municipal, agricultural, industrial and recreation

* Applications under review by department.

¹ Authorized grants by 1963 Legislature.

² \$1,000,000 grant authorized by 1963 Legislature.

³ Authorized grant by 1962 Legislature.

⁴ Allocation—\$12,500 recreation and \$25,100 fish enhancement.

⁵ Includes \$3,481,000 for fish enhancement—\$5,000,000 total grant authorized by 1963 Legislature.

10 projects represent total possible grants of \$28,025,000 excluding on-shore facilities grants. Table 2 on page 25 describes these 1963 authorizations. Also, at its 1961 session, the Legislature authorized a grant for the Paskenta Project in the amount of \$3,090,100 (Assembly Bill 2265, Chapter 1292).

The substantial liberalizations of the act at the 1963 session,* together with the large number of projects authorized for increased maximum grants by the Legislature at that time indicate that activities under the Davis-Grunsky program are being stepped up substantially. At the present, however, we have not had sufficient experience with the 1963 amendments to completely assess their effect since the Department of Water Resources and the California Water Commission are still working on modifications to their joint policy statement to reflect 1963 changes.

It appears clear at this time, however, that the Davis-Grunsky Act has been made more useful, more flexible, and a more valuable program to the State of California as a result of these amendments. *As was indicated above with regard to individual provisions of the act, additional modifications of these provisions is not recommended.* (A discussion of the access road problem is given below.)

With regard to the expected expenditures for Davis-Grunsky during the next few years, the Director of Water Resources told the California Water Commission on June 7, 1963:

In the department's current programing for the sale of water bonds and use of the California Water Fund, I am anticipating expenditures in the order of \$10,000,000 per year for the Davis-Grunsky program, during about the same period that the other features of the state water facilities are under construction. . . . As we move forward with the Davis-Grunsky program, particularly after the 1965 Session . . . I believe that a priority system to select projects will become essential. I plan to work closely with the California Water Commission on establishment of priorities when this becomes necessary.

This committee does not agree that a priority system will be necessary in the immediate future. The number of legislative authorizations anticipated at the 1965 session does not appear now to be as great as at the 1963 session.

The Governor's Budget for 1964-65 indicated an estimated \$11,104,901 was disbursed during the 1963-64 fiscal year and an estimated \$9,529,025 will be disbursed during the 1964-65 fiscal year.

It appears, thus, that annual disbursements for the program are running at approximately the rate estimated by the Director of Water Resources.

Elsewhere in this report concern has been expressed over the trends of operation of the Davis-Grunsky Act whereby a greater emphasis has been placed on grants than loans. Financing of both loans and grants, of course, may be from either California Water Fund moneys available or Burns-Porter Act bond proceeds. For several years this committee has been concerned over the problems raised by utilization of Burns-Porter Act bond funds for nonreimbursable grants.

* AB 45 (Chapter 82), AB 219 (Chapter 1075), AB 308 (Chapter 769), SB 137 (Chapter 2023), SB 193 (Chapter 908), and SB 253 (Chapter 53).

BILLS SPECIFICALLY AUTHORIZING GRANTS UNDER DAVIS-GRUNSKY ACT

Enacted as Result of 1963 Regular Legislative Session

<i>Bill no. and related ch. no. of 1963 Cal. Stats.</i>	<i>Agency and project</i>	<i>Maximum authorized grant amount</i>
AB 1076 <i>Helix Irrigation District in San Diego (Ch. 1962) County</i>	Terminal storage reservoir to regulate imported water for domestic and irrigation uses—includes incidental recreation functions. (Chet Harritt project.) Estimated cost—\$2.9 million.	\$900,000
AB 1576 <i>Placer County Water Agency (Ch. 1969)</i>	Extensive power project on the Middle Fork American River—includes irrigation and recreation functions. (Middle Fork American River project.) Estimated cost—\$116 million.	\$3,000,000
AB 1577 <i>Nevada Irrigation District in Nevada and (Ch. 1970) Placer Counties</i>	Extensive power and irrigation project on Yuba-Bear River System—includes incidental recreation functions. (Yuba-Bear development.) Estimated cost—\$16 million.	\$3,500,000
AB 1842 <i>South Sutter Water District in Sutter and (Ch. 1973) Placer Counties</i>	Irrigation water supply project under Federal Public Law 984—includes incidental recreation functions. (Camp Far West project.) Estimated cost—\$7.7 million.	\$960,000
AB 2536 <i>Siskiyou County Flood Control and Water (Ch. 1987) Conservation District in Siskiyou County</i>	Recreation and fish enhancement project. (Box Canyon project.) Estimated cost—\$4.8 million, including cost of onshore recreation facilities.	\$2,800,000
<i>Bill no. and related ch. no. of 1963 Cal. Stats.</i>	<i>Agency and project</i>	<i>Maximum authorized grant amount</i>
AB 2675 <i>Yuba County Water Agency (Ch. 1993)</i>	Extensive power, flood control and irrigation project on Yuba River—includes incidental recreation and fish enhancement functions. (Yuba Basin development.) Estimated cost—\$154 million.	\$5,000,000
SB 327 <i>Browns Valley Irrigation District in Yuba (Ch. 132) County</i>	Irrigation water supply project under Federal Public Law 984—includes incidental recreation. (Virginia Ranch project.) Estimated cost—\$5.25 million.	\$700,000
SB 634 <i>San Luis Obispo County Flood Control and (Ch. 531) Water Conservation District in San Luis Obispo County</i>	Municipal and irrigation water supply project—includes incidental recreation and fish enhancement functions. (Lopez project.) Estimated cost—\$4.25 million.	\$1,000,000
SB 1228 <i>Oroville-Wyndotte Irrigation District in (Ch. 1925) Butte, Plumas and Yuba Counties</i>	Extensive power project on South Fork Feather River—includes irrigation and incidental recreation functions. (South Fork project.) Estimated cost—\$65 million.	\$3,500,000
SB 1413 <i>Tuolumne County Water District No. 2 (Ch. 1932)</i>	Water development for recreation and fish enhancement purposes—includes water supply for domestic purposes. (Tuolumne River project.) Estimated cost—\$6.6 million.	\$6,665,000
Total		\$28,025,000

The committee was gratified that in proposing the 1964-65 Budget, the Department of Finance administratively set aside the expected \$11,000,000 in revenues to the California Water Fund from tidelands for use first for Davis-Grunsky Act expenditures. (Most of which are grants.) This is a major policy step and should prevent future problems from arising as a result of the large number of nonreimbursable grants as long as annual disbursements remain approximately at or below the level of \$11,000,000 a year. A complete summary of the program including loans and grants authorized by both the commission and the department together with those expected to be approved shortly is found in Table 1.

The cost of administration of the Davis-Grunsky program was a subject of some concern to this committee during the early years of the program when few grants and loans were actually approved. The table below indicates the cost of the administration of the Davis-Grunsky program since its inception in the 1958-59 fiscal year. It has been pointed out by the Director of Water Resources that in some cases the department spends a great deal of time in assisting an agency in preparing a feasibility report by furnishing available data, and by advising an agency on such matters as data that should be included. According to the Director of Water Resources it is expected that as additional applications now being reviewed are included in the tabulation, administrative costs will average out at about 4 percent. In view of the detail involved in the analysis of each proposed project it would appear that the department's cost of administration is reasonable and appropriate for a program of this type.

<i>Fiscal year</i>	<i>Work¹ (man-years)</i>	<i>Administrative expenditures</i>	<i>Fund</i>	<i>Preliminary requests</i>	<i>Formal applications</i>	<i>Funds approved</i>
1958-59	0	\$8,560	General	0	0	\$1,260,000
1959-60	4	54,487	General	19	0	0
1960-61	8	101,299	Water	16	3	600,000
1961-62	11	163,134 ²	Water	6	2	4,000
1962-63	19	285,719 ⁴	Water	25	12	7,806,800
1963-64 ³	17	122,536 ⁵	Water	15	7	537,000
TOTALS		\$735,785		81	24	\$10,207,800

¹ Estimated.

² \$1,463 reimbursed by South Sutter Water District.

³ First six months.

⁴ Includes \$6,417 to Fish and Game.

⁵ Includes \$5,474 to Fish and Game.

III

ACCESS ROADS GRANTS

Under existing Davis-Grunsky Act provisions a certain amount of access road construction may be included within a recreation and fish and wildlife grant. Eligible roads are those considered part of the "construction cost" of the dam itself, as explained by the Director of Water Resources:

The cost of those roads which are necessary for construction, operation, or maintenance of the project, or of the dam and reservoir of the proposed project, are considered to be a part of the cost of the joint works and, therefore, a part of the cost to be allocated among the project functions. Some part of the cost of such roads then may be allocated to fish and wildlife enhancement or to recreation as appropriate. The cost of constructing roads for recreation would not be a part of the joint cost to be allocated among functions. However, the cost of lands for such roads, in some instances, could be included as part of the construction cost of the given dam and reservoir under the second section of Water Code Section 12880 (c2), and become a part of the grant by virtue of the roads being located on lands above the high waterline of reservoirs which are necessary or desirable for public recreation in connection with the reservoir.

The department does not limit the length of the roads necessary to construct, operate and maintain a project or a dam and reservoir. Plans for each project are reviewed separately and the cost of safe, low-cost roads necessary to construct, operate and maintain the dam and reservoir are accepted as part of the cost of the project.

The department does not distinguish between roads that are necessary only for the construction of a dam and reservoir, or proposed project, and those that are used after construction for operation and maintenance. No distinction is made between the main road to the dam site and in other roads necessary to construct, operate, and maintain the reservoir. (Transcript, October 24, 1963, at 7, 8)

Such an interpretation of the law is consistent with the interpretation by the Legislative Counsel. (See Op. 1131, Oct. 23, 1963). The Legislative Counsel also has held that a road constructed or improved solely for recreation use not required for project construction could not be included in a grant under existing law:

Accepting this assumed fact (that the improvement of the existing access road is not needed in order to bring men and equipment to the construction site but is being undertaken solely for recreational purposes) our conclusion would have to be that the cost of improving the road could not be covered by a grant under Section 12880.

The extent to which the total access road requirements of various projects could be met by *existing law* is indicated in the table below:

COST OF ACCESS ROADS FOR DAVIS-GRUNSKY PROJECTS			
Agency	Construction cost for access roads (multipurpose)	Grant (Amount of cost allocated to recreation)	Under existing law percent- age of cost met by Davis- Grunsky grant
1. Helix Irrigation District-----	\$10,000	\$3,000	30%
2. Browns Valley Irrigation District	60,000	26,000	43%
3. South Sutter Water District----	186,200	73,000	39%
4. San Luis Obispo County FC&WCD -----	550,000	336,000	60%
5. Humboldt Bay Municipal Water District -----	2,000	100	5%
6. City of Santa Cruz -----	119,000	15,500	13%
7. Georgetown Divide Public Utility District -----	0	0	0%
8. Alameda County FC&WCD (Cull Creek Project) -----	15,000	3,700	25%
9. Alameda County FC&WCD (San Lorenzo Creek Project) -----	23,000	5,700	15%
10. Monterey County FC&WCD -----	605,000	28,900	5%
11. Sacramento Municipal Utility District (Loon Lake) -----	182,000	24,800	14%
12. Sacramento Municipal Utility District (Gerle Creek) -----	16,000	6,200	39%
13. Sacramento Municipal Utility District (Union Valley) -----	438,000	25,800	7%
14. Sacramento Municipal Utility District (Ice House) -----	163,000	29,700	18%
15. Jackson Valley Irrigation District	0	0	0%
16. City of San Diego -----	51,000	17,400	34%
17. Nevada Irrigation District -----	1,364,000	201,000	15%
18. Yuba County Water Agency -----	804,400	37,600	5%
TOTALS -----	\$4,588,600	\$834,000	24%

It can be seen that approximately 24 percent of the total access road construction involved in present project plans can be included in existing Davis-Grunsky grants. The table above, of course, refers only to those access roads to be used primarily for the construction, operation and maintenance of projects.

With regard to roads to be used specifically and primarily for recreation, the Department of Water Resources has prepared the following table indicating the amount of money required for construction roads (as indicated in the table above) together with an estimate of the total amount to be expended for each project for recreation roads (none of which is covered by existing Davis-Grunsky Act program).

Agency and project	Roads	
	Construction	Recreation
1. Helix Irrigation District—Chet Harritt Project	\$10,000	\$34,000
2. Browns Valley Irrigation District—Virginia Ranch Project -----	60,000	22,000
3. South Sutter Water District—Camp Far West Project -----	186,200	72,800

<i>Agency and project</i>	<i>Roads</i>	
	<i>Construction</i>	<i>Recreation</i>
4. San Luis Obispo County FC&WCD—Lopez Project -----	\$550,000	\$520,650
5. Yuba County Water Agency—Yuba River Development Project -----	804,000	45,000
6. Nevada Irrigation District—Yuba-Bear Development Project -----	1,364,000	451,800
TOTALS -----	\$2,974,600	\$1,146,250

In discussing access roads it must be emphasized that roads primarily for recreation often are used for other purposes such as logging trucks, etc. Also the length of a road required is based upon the physical location and terrain of the project and is not directly related to recreation use or needs in many cases.

At this committee's hearing on House Resolution 54 a number of witnesses representing existing or potential Davis-Grunsky projects supported further broadening the act to include access roads for recreation purposes. The Director of Water Resources, however, cautioned that

There is a very difficult problem of the relationship between the cost of the project and the cost of the access road to it. In other words, a project might be proposed primarily or perhaps exclusively, for recreation purposes and it might be desirable . . . that it might involve an extraordinarily difficult access. We need some kind of a limitation, some measure of the benefit here, I think, before we can include access roads as a part of the Davis-Grunsky Act for fear of getting the program pretty badly out of balance. This is the matter that concerns us . . . The Davis-Grunsky program is perhaps best described as a program designed to assist local public agencies in developing local water supplies. Now among the purposes are municipal water supplies, irrigation water supplies and other beneficial uses. Until this last year, recreation and the fish and wildlife enhancement had to be simply incidental to the central theme of the project, now they may also become primary objectives of the program. I think the balance that I had in mind is that which you have indicated, for example, if we build a small reservoir somewhere that costs twice as much to get into it as it does to build the reservoir that would put an unbalanced amount of this Davis-Grunsky \$130,000,000 that we have available into recreation projects and the individual project might be unbalanced. I think it would be illogical to choose such a project over one which gave a greater benefit from the water development—a greater proportion of benefit. I am fearful of the possibility, you know, of having to build a \$5,000,000 road to a \$500,000 reservoir. And this \$130,000,000 ought to be related to all appropriate types of water development in these areas. Now, I personally welcome the inclusion of recreation and fish and wildlife enhancement into the basic purposes of the program because in a good many instances these are going to be controlling factors as to whether the project is going to be able to go forward or not. But there are other reasons—other purposes—for the program and we ought not to overlook them. . . . The hope for a balance is the motivation

for the recommendation that I have made, that we don't get ourselves too much committed to access road expenditures until we have a little better experience in how much is going to be involved in it. (Transcript, Oct. 23, 1964, at 14, 23, 24, 25 and 28.)

The scope of access road requirements can be indicated by using as an example the Middle Fork-American River Project of the Placer County Water Agency. This is a major water development project which will be financed primarily from power revenues developed by the project. Total cost of the project is estimated to be \$115,000,000. According to spokesmen for the district a report of the agency's recreation consultants indicated that the number of visitor days generated by the project will increase from 84,300 in 1970 to 671,300 in 2020. It was pointed out that for this project present access to the area is still a forest service highway the major use of which is for hauling timber. The agency estimates that an entirely new access road will be required for recreational use. The expected cost of the access road will be approximately \$2,000,000. The total Davis-Grunsky grant authorized for this project at the 1963 session was \$3,000,000 (with another \$750,000 available for initial sanitary and water supply facilities). Thus, it can be seen that if the entire access road was financed through the Davis-Grunsky program nearly \$6,000,000 would be utilized from the funds for this project alone.

A second project which the committee explored was the project of the Nevada Irrigation District which has received authorization for a Davis-Grunsky construction grant in the amount of \$3,500,000 which would also permit it an \$875,000 grant for water supply and sanitary facilities. The following table indicates the total recreational development costs of the four reservoirs comprising the Nevada Irrigation District complex:

RECREATIONAL DEVELOPMENT COSTS
NEVADA IRRIGATION DISTRICT RESERVOIRS

	<i>Costs</i>	<i>Percentage of total cost</i>
Access Roads * (8.11 miles) -----	\$437,790	14
Water Supply and Sanitary Facilities -----	928,800	29
Recreational Land -----	209,000	7
All Other Facilities -----	1,587,300	50
TOTAL ALL STAGES -----	\$3,162,890	100

* These are "perimetrical" access roads only. Roads leading from major highways into the back country are not included.

From this table it can be seen that a major portion of the water supply and sanitary facilities requirements can be met by the Davis-Grunsky facilities grant of \$875,000. The Department of Water Resources has estimated that the total access road cost, *including perimetrical access roads for recreation purposes only* will total \$1,364,000. Of this amount, \$201,000 is eligible for a grant under existing law as part of the construction cost of the dam. At this complex the type of access road varies on each of the four dams involved. All of the dams are relatively close to existing main access roads operated by the county or the forest service or the state and, comparatively speaking, the access roads in this project are of less magnitude than those on the Placer County Water Agency project described above. These two projects are

the only two about which, at the present time, there is substantial detailed information available with regard to access roads. The modifications to the Davis-Grunsky Act in 1963 provide that the state may finance all of the recreation construction cost of the dam and reservoir and most of the onshore water supply and sanitary facilities. If access road grants were added to the program, virtually all onshore recreation facilities at these projects would be financed by the state.

It must be pointed out that substantial benefits to the local areas accrue from recreational developments of this type at projects. These substantial economic advantages accrue from increases in the assessed valuation and economic base of a county due to development of the project as well as increases in sales tax, gas tax, and other revenues as a result of increased economic activity in the area involved. It does not seem appropriate in view of the economic advantages to areas receiving Davis-Grunsky grants that the entire obligation of recreation and its attendant requirements such as access roads be met by the state in view of the limitations upon money available in the Davis-Grunsky Act program. Local areas, including counties and public agencies have important obligations regarding road construction.

A great many Davis-Grunsky projects involve construction on land owned by the U.S. Forest Service and access roads to such projects involve Forest Service land. The Forest Service outlined its policies with regard to access roads for the committee:

Construction of water and power development projects within National Forests generally requires new or improved access roads and trails, and causes considerable impact on the Forest Development road and trail system. Usually roads of higher standard are required to serve the combined needs of project construction traffic and recreation and other user traffic to and from a reservoir or water development project than would be needed for forest user and protection traffic without the project.

In general, it is our position that the construction agency on such water development projects should provide the new roads or improve the existing roads sufficiently to provide service for the increased public traffic generated by the water facility upon its completion. It is important that plans, specifications and estimates for such access roads and for soil erosion control and revegetation measures on the roads and borrow pits be included in project plans. Where the recreation facilities developed on the reservoir are campgrounds, picnic sites or boat launching ramps on national forest land the Forest Service has a responsibility in connection with maintenance of the roads directly serving these sites.

Where the facilities will be developed on private lands or other than national forest lands, or the sites are summer homes or commercial establishments, the maintenance responsibility then becomes one in which we feel it is proper to look to the project developer or the County or other benefitting local authority. In many cases gas tax receipts are a factor that should be considered.

Timing of access road construction for water projects must be keyed to project construction schedules (e.g. main road must often be built before the dam), and this time requirement may complicate the financing problems. Regulations concerning use of forest road

development funds provide that we will not construct or maintain roads for public service traffic as distinguished from forest user traffic. Where both types of traffic are involved, the Forest Service can and has cooperated in financing construction and maintenance. (Transcript, Oct. 24, 1963, at 118)

In the above statement the matter of maintenance of access roads is raised and it is pointed out that when projects are constructed on national forest land the Forest Service does have a responsibility in connection with the maintenance of roads serving those sites. Thus, additional assistance to local areas is provided through maintenance of these roads. It seems obvious that the maintenance responsibilities on mountainous roads of this type can be substantial. From time to time funds are also available for construction of roads from the Forest Service road development fund. Thus, Placer County Water Agency officials pointed out that Congress authorized \$900,000 to the agency for roads, providing that matching funds could be raised by the agency, but such funds were not available from the agency. (See Transcript, Oct. 24, 1963, at 61).

Financing of recreational facilities at the state water facilities is a further complication to the problem faced by the committee with regard to the Davis-Grunsky Act. It is important to emphasize that substantial amounts of money for onshore facilities, access roads and other facilities will be financed by the General Fund of the state under existing law during the next decade or so. Policy modification in the Davis-Grunsky Act to provide financing for access roads must be considered in light of the overall requirements of state expenditures for recreation facilities.

Suggestions were also made to the committee that gasoline tax revenues be specifically earmarked for recreation road development including access roads required for Davis-Grunsky Act projects. It does not appear that such a course of action is desirable.

The Legislature has recognized the needs of the counties as to road construction funds (see report of the Senate Fact Finding Committee on Transportation and Public Utilities, *Critical Deficiencies on City Street and County Roads and other Transportation Matters, 1963*) and through enactment of the Collier-Unruh Local Transportation Development Act (Senate Bill 344, Chapter 1852) at the 1963 session of the Legislature additional funds were made available to cities and counties for local streets and roads. Thus, funds are presently available to counties and cities from gas tax receipts which can be used for roads providing access to water projects by the local entity. Very little would be gained by earmarking portions of this money already going to local areas for water project purposes as needs vary greatly from county to county. In addition, there would be an undesirable mixing of water project financing and state and city and county road and street financing.

We do not believe that Davis-Grunsky funds should be used for extensive road development. Already portions of access road construction properly allocated to recreation are eligible for grants. This committee must reaffirm its belief that the construction of water project access roads is basically an obligation of the local counties, cities and public entities. As indicated above, the Davis-Grunsky Act was not

created to finance the total water project needs of all local areas. Utilization of large sums for road construction is contrary to the spirit and objectives of the Davis-Grunsky program. State assumption of access road costs would be an abdication of the local entities' responsibility to shoulder its fair share of local project costs.

It should be emphasized that already part of this traditional local responsibility has been assumed by the state through the generous provisions for initial water supply and sanitary facilities grants. This has resulted in a definite easing of the burden on local entities to provide onshore facilities. Money which would have been required for these purposes may now be available to local areas for access road construction. The 1963 modifications have made substantially more money available to individual local projects under the Davis-Grunsky program and the Davis-Grunsky program today may finance up to 75 percent of the cost of the project under certain circumstances.

In addition only meager information was available on anticipated access road requirements at the hearing of this committee in October 1963, with the exception of the Nevada Irrigation District and the Placer County Water Agency projects discussed above. Little additional information has become available since that time with regard to the needs of various other projects under the Davis-Grunsky Act.

A number of additional suggestions were made with regard to possible alternative methods of providing state assistance for access roads. These include (1) loans rather than grants for such purposes. This is presently possible under the Davis-Grunsky Act but the net effect of loans on the overall program would be the same as if they were used for grants since the money repayed on the loan could not be reused for Davis-Grunsky purposes since a revolving fund concept cannot be legally instituted while Davis-Grunsky expenditures are being made under authority of the initial \$130,000,000 available from the Burns-Porter Act. The major advantage of a loan program would be to make the additional money available on a revolving fund basis. (2) Provision of statutory limits on the amount of funds available for access road grants. It has been suggested that the amount be no more than that amount of proposed onshore facilities grant. (Which is 25 percent of the basic recreation grant). It was further suggested that limitations on the basis of mileage of roads be applied to access road grants. It appears that due to the great diversity of road requirements from project to project that any such formula based on existing information would not be satisfactory, it would be nothing more than arbitrary amount. (3) Additional aid from the Federal Government, which is beyond the scope of this committee study.

Therefore, this committee recommends that the Davis-Grunsky Act not be modified further to provide for recreational access road grants.

APPENDIX

THE DAVIS-GRUNSKY ACT

Showing Deletions and Additions Made at the
1963 Regular Session of the
Legislature

CHAPTER 5. STATE FINANCIAL ASSISTANCE FOR LOCAL PROJECTS

(Chapter 5 added by Stats. 1957, Ch. 2052.)

State policy

12880. In furtherance of the development, control and conservation of the water resources of the State and the State Water Resources Development System it is the policy of the State to provide financial assistance to public agencies for the construction of water projects to meet local requirements in which there is a statewide interest by making grants or loans, or both, and by participating in the construction and operation of water projects, and also to provide financial assistance to public agencies for the preparation of certain feasibility reports on such water projects by making loans, in accordance with this chapter.

"Project"

(a) As used in this chapter, "project" means any construction or improvement by a public agency for the diversion, storage, or distribution of water primarily for domestic, municipal, agricultural, industrial, *recreation, fish and wildlife enhancement*, flood control, or power production purposes. "Public agency" means any city, county, district or other political subdivision of the State. "Feasibility report" means such report on the feasibility of a public agency's proposed project as the department may require the public agency to file with the department in support of an application by the public agency under this chapter for a loan for the construction of the proposed project.

Approval

(b) The proposed project may be approved for assistance only if it is determined that the project substantially conforms to The California Water Plan, is engineeringly feasible, economically justified, and, if a loan is proposed, that there is reasonable assurance, commensurate with the need for the proposed project, that the public agency can repay it. *The potential future growth and development of the area shall be taken into consideration in the calculation of the benefits for the determination of the economic justification of a proposed project. In the case of a grant for recreation or fish and wildlife enhancement, or both, the determination of economic justification of the proposed project may, in the department's discretion, be limited to a determination of the economic justification of the recreation and fish and wildlife enhancement functions of the project. Such factors as the public health, safety, and*

welfare shall be taken into consideration in determining the need for a proposed project. A loan for the preparation of a proposed feasibility report on a proposed project may be approved only if it is determined that there is reasonable assurance that the public agency can repay the loan and only if the agency receives a favorable written reply from the department on a written request for a preliminary determination of eligibility for a loan for the construction of the proposed project filed with the department by the agency under the regulations of the department promulgated pursuant to this chapter.

Grants

(c) Grants in furtherance of a project *that involves the development of a new water supply* may be made for the following purposes:

(1) For the part of the construction cost of the proposed project properly allocated to the enhancement of fish and wildlife ; ~~incidental to the primary functions of the project~~ *provided, that a grant for such part shall not exceed fifty percent (50%) of the construction cost.*

(2) For the part of the construction cost of ~~the any~~ dam and reservoir of the proposed project properly allocated to recreational functions of statewide interest ~~that are incidental to the primary functions of the project~~ ; *provided, that a grant for such part shall not exceed fifty percent (50%) of the construction cost, and provided further, that the total grant under paragraphs (1) and (2) of this subdivision for any one project shall not exceed seventy-five percent (75%) of the construction cost of the project.* Such construction costs may include expenditures for lands located above the high waterline of reservoirs which are necessary or desirable for public recreation in connection with the reservoir.

(3) *For the construction of initial water supply and sanitary facilities which are needed for public recreational use of each proposed dam and reservoir of the proposed project. A grant for the purpose specified in this paragraph (3) shall not be subject to the limitation contained in Section 12885 on grants for the purposes specified in paragraphs (1) and (2) of this subdivision and shall not be included in computing the total amount which may be granted to a public agency in connection with a project for such purposes. A grant for the purpose specified in this paragraph (3) shall not exceed one-fourth of the total amount granted to a public agency in connection with a project for the purposes specified in paragraphs (1) or (2), or both, of this subdivision.*

Loans

(d) Loans may be made only for projects primarily for domestic, municipal, agricultural, ~~or~~ industrial, *recreation, or fish and wildlife enhancement* purposes. Such loans may be made for all or any part of the construction cost of any such project but in no event shall any such loan be in an amount which is greater than the portion of the construction cost of the project which the department finds to be beyond the reasonable ability of the public agency to finance from other sources. Such loans shall be repayable over a period not to exceed 50 years. A period of development of not exceeding 10 years may be

allowed within such maximum 50-year repayment period, during which no payments on the principal of *or the interest on* such loans shall be required, when in the department's judgment such development period is justified under the circumstances. *If the payment of interest is deferred pursuant to this subdivision, interest shall be charged on the interest amounts for which payment is deferred at the same rate as the rate of interest charged on the principal amount of the particular loan. The accrued interest may, at the option of the public agency, be paid in annual installments during the remainder of the loan repayment period at the same rate of interest as is charged on the principal amount of the loan.*

Same: Feasibility reports

(e) Loans may be made for all or any part of the cost of the preparation of proposed feasibility reports on proposed projects, but in no event shall any such loan be in an amount which is greater than the portion of the cost of the preparation of the proposed feasibility report which the department finds to be beyond the reasonable ability of the public agency to finance from other sources. Such loans shall be repayable over a period not to exceed 10 years.

State participation

(f) If in order to accomplish the objectives of this chapter it is necessary to construct a project that is ~~beyond the requirements of the public agency constructing the project, larger than one which a public agency proposes to construct,~~ the State may participate in planning, designing, constructing, operating and maintaining the project, and in ~~financing~~ so participating shall finance those costs of the project ~~in excess of the costs necessary to meet the requirements of the public agency allocated to the State,~~ on terms agreed upon with the agency, to the end that the project shall accomplish the maximum water development objectives at a minimum total expenditure. *In participating in a project under this subdivision (f), the department may perform all or part of the planning, designing, construction, operation or maintenance of the project on terms agreed upon with the agency.*

The department is authorized, following receipt of an application for state participation from a public agency, to participate under this subdivision (f) on behalf of the State in any project that is larger than the one which the public agency proposes to construct and that is primarily for domestic, municipal, agricultural, industrial, recreational or fish and wildlife enhancement purposes and in so participating shall finance those costs of such project that are allocated to the State, on terms agreed upon with the public agency, subject to the prior approval of the California Water Commission, and to expend for participation in the planning, designing, and construction of any one project an amount not exceeding one million dollars (\$1,000,000) from moneys available for such participation, including but not limited to, the moneys appropriated by the California Water Resources Development Bond Act (Chapter 8 (commencing with Section 12930) of Part 6 of Division 6 of the Water Code) for provision for water development facilities for local areas as provided in this Chapter 5. Expenditures by the department in excess of one million dollars (\$1,000,000) for the

planning, designing, and construction of any one project may be made only upon specific authorization of the Legislature.

The department is authorized to make loans and grants to public agencies pursuant to the provisions of this chapter for projects in which the department participates under this subdivision (f).

Applications for loans or grants

(g) Applications for loans or grants or financial participation by the State under this chapter shall be made to the department in such form and with such supporting material as may be prescribed by the department. *Supporting material with respect to the ability of a public agency to repay the loan and to the reasonable ability to finance the proposed project from other sources may be supplied by the county assessor and the county engineer.* A report on each application shall be prepared by the department and filed with the Legislature. In such reports the department shall make findings as to the nature and extent of the statewide interest in the project, the public necessity for the project, the urgency of the need, and the engineering feasibility, economic justification, and financial feasibility of the project; provided, that in the case of reports on applications for loans for the preparation of proposed feasibility reports, in lieu of the above findings, the department shall make findings with respect to the public necessity for and urgency of need of the proposed project and the ability of the applicant to repay the requested loan for the preparation of the proposed feasibility report.

Additional powers of public agencies

(h) Notwithstanding any provision of law to the contrary, every public agency empowered by law to construct and operate a project, as defined in subdivision (a) of this section, is hereby granted, in addition to and not in derogation or limitation of the powers conferred upon the public agency by any other law, the power:

(1) To borrow money from and repay the same with interest to the State in accordance with this chapter on behalf of the entire public agency or of any portion or portions thereof for which the law applicable to the agency authorizes an indebtedness or liability to be incurred, including any improvement district, distribution district, or zone within the public agency, notwithstanding any debt limitation or other provision in the law applicable to such agency which might otherwise preclude or limit such borrowing.

(2) To enter into a contract with the department, on behalf of the entire public agency, or of any portion or portions thereof referred to in paragraph (1) of this subdivision (h), for a loan or grant under this chapter or for participation by the State in a local project under subdivision (f) of this section and to use the loan or grant contracted for as an additional or alternative means of financing the project proposed by the public agency.

(3) To comply with the provisions of any contract entered into with the department under this chapter, including any provision which obligates the public agency, or any specified portion or portions thereof, to meet all commitments, financial or otherwise, undertaken by the public agency in such contract notwithstanding any individual default

by its constituents or others in the payment to the public agency of taxes, assessments, tolls, or other charges levied by the public agency.

(4) To include recreation and enhancement of fish and wildlife, or either of them, as functions ~~incidental to the primary functions~~ of a project which the public agency is empowered by law to construct and operate, and to construct and operate the project for such ~~incidental~~ recreation and enhancement of fish and wildlife functions, or either of them, in accordance with the provisions of a grant contract entered into with the department, including provisions for public use of the project facilities for fishing and other recreational activities.

(5) To construct and operate such onshore recreational facilities, fish and wildlife enhancement facilities or other facilities as the department or the Legislature may require in connection with a grant to the public agency under this chapter, and to construct and operate such facilities in accordance with the provisions of a grant contract entered into with the department, including provisions for public use of such facilities for fishing and other recreational activities.

(6) To annually levy or cause to be levied upon all property in the public agency, or in any portion or portions thereof, subject to taxation or assessment by the public agency an ad valorem tax or assessment, based upon the assessed valuation of such property, necessary and sufficient to meet all commitments, financial or otherwise, of the public agency that are set forth in any contract which the agency enters into with the department under this chapter, in addition to any other taxes or assessments which the public agency is authorized to levy or cause to be levied on such property and notwithstanding any provision in the law applicable to such agency which might otherwise preclude or limit such taxing or assessing. Where the law applicable to such public agency does not set forth a procedure for levying and collecting taxes or assessments on an ad valorem basis, such public agency shall utilize the procedure for levying and collecting taxes for the payment of principal and interest on general obligation bonds of municipal water districts, set forth in the Municipal Water District Act of 1911 (Chapter 671, Statutes of 1911), as it may now or hereafter be amended, for the purpose of levying and collecting taxes or assessments necessary and sufficient to meet commitments in a contract entered into under this chapter.

(7) To make charges for the furnishing of services from the project for which the public agency receives financial assistance under this chapter and to pledge and use any or all revenues received from the collection of such charges for the purpose of meeting the commitments, financial or otherwise, of the public agency that are set forth in any contract which the public agency enters into with the department under this chapter.

(8) To perform all acts and do all things that are necessary or convenient to carry out the above powers.

Elections

(i) *Except in the case of a grant to a public agency where the applicable law contains provisions for the election of the members of the governing body of the agency or where a county board of supervisors*

acts as the governing body of the agency, before a public agency may enter into a contract with the department for a construction loan or a grant under this chapter, the public agency shall hold an election on the proposition of whether or not the public agency shall enter into the proposed contract and more than 50 percent of the votes cast at such election must be in favor of such proposition; provided, that if a higher percentage of favorable votes is required for the issuance of any bonds by the public agency or is required by the Constitution before the public agency may incur an indebtedness, such higher percentage shall apply in lieu of the percentage set forth in this subdivision. Such election shall be held in accordance with the following provisions:

(1) The procedure for holding an election on the incurring of bonded indebtedness by such public agency shall be utilized for an election on the proposed contract as nearly as the same may be applicable. Where the law applicable to such agency does not contain such bond election procedure, the procedure set forth in the Revenue Bond Law of 1941 (Chapter 6 (commencing with Section 54300) Part 1, Division 2, Title 5 of the Government Code), as it may now or hereafter be amended, shall be utilized as nearly as the same may be applicable.

(2) No particular form of ballot is required.

(3) The notice of the election shall include a statement of the time and place of the election, the purpose of the election, the general purpose of the contract, and the maximum amount of money to be borrowed from the State under the contract.

(4) The ballots for the election shall contain a brief statement of the general purpose of the contract substantially as stated in the notice of the election, shall state the maximum amount of money to be borrowed from the State under the contract, and shall contain the words "Execution of contract—Yes" and "Execution of contract—No."

(5) The election shall be held in the entire public agency except where the public agency proposes to contract with the department on behalf of a specified portion, or of specified portions, of the public agency, in which case the election shall be held in such portion or portions of the public agency only.

Validation

(j) Every public agency that has obtained authority through an election held pursuant to subdivision (i) of this section is enter into a contract with the department under this chapter is hereby granted the power to bring an action in the superior court of the county in which the office of such agency is situated to determine the validity of ~~the contract~~ any contract made with the department under this chapter and the authority of the public agency to enter into the contract. The action shall be had as in the case of the judicial determination of the validity of the public agency's bonds, as nearly as the same may be applicable, and with like effect. Where the law applicable to such agency does not set forth a procedure for the judicial determination of the validity of the public agency's bonds, the action shall be had as in the case of the judicial determination of the general obligation bonds of irrigation districts under the Irrigation District Law (Division 11 (commencing with Section 20500) of this code), as it may now or here-

after be amended, as nearly as the same may be applicable, and with like effect.

(Added by Stats. 1957, Ch. 2052; amended by Stats. 1959, Ch. 1752, Stats. 1961, Ch. 1723, and by Stats. 1963, Ch. 2023)

Project preference

12880.2. In the administration of this chapter, the department and the commission shall give preference to projects involving development of new basic water supplies.

Loan limitations

In furtherance of this policy, no funds shall be loaned for either irrigation distribution system projects or municipal distribution system projects, except in cases which, in the judgment of the department and the commission, involve extreme hardship which jeopardizes the public health, safety or welfare. Distribution facilities which are a necessary and integral part of an overall water development project may be covered by a state loan.

Applications for loans in hardship cases

Applications for loans for irrigation distribution system projects or municipal distribution system projects which involve extreme hardship which jeopardizes the public health, safety or welfare shall be made in the following manner:

The governing body of the public agency shall submit an application to the department describing, generally, such extreme hardship existing with respect to the water supply, the financial and economic conditions existing in the area, and the proposed project. The statements by the governing body shall be based upon, and the application shall be accompanied by:

(a) A report by the assessor of the local agency with respect to assessed valuations and tax delinquencies.

(b) A report by the engineer of the local agency (or if it has none, by the county surveyor or road commissioner) describing the project and estimating its cost, in general terms.

(c) In cases involving a health hazard with respect to the domestic water supply, a report by the local health officer or by the Department of Public Health with respect to such health hazard.

(d) Such other information as the department may require from the agency.

(Added by Stats. 1961, Ch. 1286.)

Legal counsel

12880.5. Whenever a public agency is required to have legal counsel in connection with any of its activities pursuant to this chapter, it may use the services of the district attorney or county counsel of the county in which it is located.

(Added by Stats. 1961, Ch. 520.)

12881. (Added by Stats. 1959, Ch. 1752; repealed by Stats. 1961, Ch. 1723.)

12881.5. (Added by Stats. 1959, Ch. 1752; repealed by Stats. 1961, Ch. 1723.)

12882. (Added by Stats. 1959, Ch. 1752; repealed by Stats. 1961, Ch. 1723.)

State loans to public agencies

12883. The department is authorized to make state loans to public agencies for the construction of projects, from moneys available for such loans, in amounts not exceeding four million dollars (\$4,000,000) for any one project, subject to the provisions of this chapter and to the prior approval of the California Water Commission for each loan that the department proposes to make. Loans in excess of four million dollars (\$4,000,000) for any one project may be made by the department only upon specific authorization of the Legislature and upon such terms and conditions as the Legislature may prescribe.

(Added by Stats. 1959, Ch. 1752; amended by Stats. 1961, Ch. 1723.)

Same: Feasibility reports

12883.5. The department is authorized to make state loans to public agencies for the preparation of feasibility reports on proposed projects, from any moneys available for such loans, in an amount for any one feasibility report on a proposed project not exceeding 2 percent of the estimated cost of the proposed project or ~~twenty-five~~ fifty thousand dollars (~~\$25,000~~) (\$50,000), whichever is less, subject to the provisions of this chapter; provided, that only one such loan may be made to a public agency in relation to any one proposed project. A loan in excess of said amount for any one feasibility report may be made by the department only upon authorization by the Legislature and upon such terms and conditions as the Legislature may prescribe.

(Added by Stats. 1961, Ch. 1723; amended by Stats. 1963, Ch. 908.)

Interest rates

12884. The department shall require the payment of interest on each loan made pursuant to this chapter at a rate equal to the net interest cost to the State on the last sale of general obligation bonds of the State that occurred prior to the time the application for a loan was filed with the department; provided that when the applicable net interest cost to the State is not a multiple of one-quarter of 1 percent, the interest rate on the loan shall be at the multiple of one-quarter of 1 percent next above the applicable net interest cost.

(Added by Stats. 1959, Ch. 1752; amended by Stats. 1961, Ch. 1723; repealed by Stats. 1963, Ch. 1075.)

Interest rates

12884. The department shall require the payment of interest on each loan that is made pursuant to this chapter after September 19, 1963, at a rate equal to the average, as determined by the department, of the net interest costs to the State on the sales of general obligation bonds of the State that occurred during the period from January 1, 1962, inclusive, through the calendar year immediately preceding the calendar year in which the application is filed if the application is

filed prior to the year 1968 or that occurred during the period of five calendar years immediately preceding the year in which the application is filed if the application is filed after the year 1967; provided, that when the applicable average of the net interest costs to the State is not a multiple of one-tenth of 1 percent, the interest rate on the loan shall be at the multiple of one-tenth of 1 percent next above the applicable average of the net interest costs.

(Added by Stats. 1963, Ch. 1075.)

State grants to public agencies

12885. The department is authorized to make state grants to public agencies from moneys available for such purpose in amounts not exceeding ~~three~~ four hundred thousand dollars (~~(\$300,000)~~ (\$400,000) for any one project for the purposes specified in paragraphs (1) and (2) of subdivision (c) of Section 12880 and, in addition, in amounts as authorized by paragraph (3) of subdivision (c) of Section 12880, subject to the provisions of this chapter and to the prior approval of the California Water Commission for each grant that the department proposes to make. Grants in excess of ~~three~~ four hundred thousand dollars (~~(\$300,000)~~ (\$400,000) for any one project for the purposes authorized by paragraphs (1) and (2) of subdivision (c) of Section 12880 may be made by the department only upon specific authorization of the Legislature and upon such terms and conditions as the Legislature may prescribe.

(Added by Stats. 1959, Ch. 1752; amended by Stats. 1963, Ch. 2023.)

California Water Commission: Conflict of interest

12885.7. No member of the California Water Commission shall participate in the action of the commission in considering for approval, or approving, a loan or grant under this chapter to a public agency of which he is an officer, employee, agent, consultant, accountant, engineer, or legal counsel or in which he owns real property.

(Added by Stats. 1961, Ch. 1348.)

Terms and conditions

12886. In making loans or grants pursuant to this chapter, the department shall impose terms and conditions that are designed to protect the State's investment and that are necessary to carry out the purposes of this chapter.

(Added by Stats. 1959, Ch. 1752.)

Effectuating loans

12887. In order to effectuate loans or grants made by the department pursuant to this chapter, the State Controller shall, upon demand of the department, draw warrants made payable to such public agencies and in such amounts as are from time to time designated by the department. The State Treasurer shall pay such warrants from available moneys in the fund.

(Added by Stats. 1959, Ch. 1752.)

Records and accounts

12888. The department shall keep full and complete records and accounts concerning all of its transactions under this chapter and shall render a report on such transactions to the Legislature within 15 days after the commencement of each legislative session.

(Added by Stats. 1959, Ch. 1752.)

12889. (Added by Stats. 1959, Ch. 1752; repealed by Stats. 1961, Ch. 1723.)

Rules and regulations

12890. The department is authorized to make from time to time such rules and regulations as may be necessary to carry out, and as are consistent with, this chapter.

(Added by Stats. 1959, Ch. 1752.)

Audits by State Controller

12891. It shall be the duty of the State Controller to make such audit or audits of the books and records of public agencies receiving loans or grants pursuant to this chapter, as he may deem necessary from time to time, for the purposes of determining that the money received by such public agencies as loans or grants hereunder has been expended for the purposes and under the conditions authorized herein. Whenever the State Controller determines that any money paid to such a public agency has been expended by such public agency for purposes not authorized by this chapter, or exceeds the final cost of the project for which a loan or grant was made, or exceeds the final cost of the feasibility report for which a loan was made, the State Controller shall furnish written notice to the department and to the public agency directing the public agency to pay into the State Treasury the amount of such unauthorized expenditures, or the amount in excess of the final authorized cost of the project or the feasibility report. Upon receipt of such notice, such public agency shall, at the time specified therein, pay to the State Treasurer the amount set forth in such notice. Such amount shall, upon order of the State Controller, be deposited in the State Treasury to the credit of the California Water Resources Development Bond Fund to be available for the purposes prescribed in Section 12937 of this code.

It shall be the duty of such public agency to make the payments to the State Treasurer as provided in this section, and it shall be the duty of the State Controller to enforce such collection on behalf of the State.

(Added by Stats. 1959, Ch. 1752; amended by Stats. 1961, Ch. 1723.)

Short title

12891.1. This chapter shall be known and may be cited as the "Davis-Grunsky Act."

(Added by Stats. 1959, Ch. 1752.)

JOINT STATEMENT OF POLICIES FOR ADMINISTRATION OF THE DAVIS-GRUNSKY ACT

Adopted by the California Water Commission and
by the Department of Water Resources on March 16, 1962
and Subsequent Amendments Thereto

INABILITY TO FINANCE PROJECT CONSTRUCTION COSTS FROM OTHER SOURCES

Reasonable inability to finance project construction costs from other sources will be established when all of the following conditions exist:

1. When the proposed project is not eligible for financial assistance under a program of the federal government, or, if the project is eligible for such assistance, when: (a) there is no reasonable possibility that funds could be obtained due to administrative policy of the federal government or to lack of funds, or (b) when the need for the project is so urgent that the time factor would reasonably preclude an effort to finance from federal sources.
2. When the agency cannot market bonds at an interest rate commensurate with the feasibility of the project, such inability to be demonstrated to the satisfaction of the department and the commission.
3. When the agency has no other funds, or sources of funds, available to finance the project.

WATER RIGHTS

Construction loans and grants will not be made to agencies for projects on which water rights necessary for project operation are in litigation.

LAND REQUIREMENTS FOR GENERAL PROJECT PURPOSES

In addition to other land requirements, a protective strip of land shall be provided around the shore line of the reservoir of a proposed project above the normal pool elevation, such that proper control of the shore line can be assured. Normally, a minimum strip of 100 feet in horizontal width will be considered adequate for this purpose.

RECREATIONAL GRANTS

A project is considered to have recreational functions of "statewide interest," if:

1. It fosters the conservation and proper utilization of water resources for recreational use, and
2. It produces benefits which are dispersed generally throughout the local community or area, and
3. The recreational features are open and accessible to the general public on a nondiscriminatory basis.

DEFINITION OF A PROPOSED PROJECT (Concurred in March 1, 1963)

A project is considered "proposed" under the terms of Section 12880(b) of the Davis-Grunsky Act if all of its physical works, other than future stage facilities, have *not* been constructed, or if its physical works have been constructed but are *not* operable for their intended purposes.

The determination as to whether a project is "proposed" will be made as of the date of the filing of a request for preliminary determination of eligibility (refer to the department's letter to the commission of June 15, 1962).

GRANTS FOR INITIAL WATER SUPPLY AND SANITARY FACILITIES

(Concurred in January 3, 1964)

No consideration will be given requests for facilities grants for projects which were completed at the time of application for such facilities grants, or for which construction grants have been approved by the California Water Commission prior to the effective date of amendments providing for such facilities grants. (September 20, 1963)

FURTHER AMENDMENTS TO JOINT POLICY STATEMENTS

DAVIS-GRUNSKY ACT

(Concurred in February 7, 1964)

RECREATION FACILITIES

Recreation facilities should be staged in a logical and economical manner. Initial water supply and sanitary facility grants are to provide for only the first phase of recreation development. The first phase of recreation development must be the most economical plan, considering all costs.

DEFINITION OF INITIAL WATER SUPPLY AND SANITARY FACILITIES

"Initial Water Supply and Sanitary Facilities," as used in Water Code Section 12880(c) (3), are those which reasonably might be installed as the first phase of the overall development of water supply and sanitary facilities to protect the health and safety, and to provide for the convenience, of persons using the reservoir for recreation. Such facilities must be constructed and operated in conformance with applicable local and state public health standards.

Initial water supply facilities may include works necessary to collect, treat, and distribute water from the source to the recreation area. Initial sanitary facilities may include the works necessary to collect, treat, and dispose of wastes from the recreation area.

Initial water supply and sanitary facilities should meet the needs of the recreationists to be served by the first phase of onshore recreation facilities. The water supply and sanitary facilities may be constructed to meet the needs of later phases of development when the department finds such enlargement to be reasonable, considering physical conditions and economic factors; provided that the agency agrees to pay the incremental cost involved.

RECREATION FEES

Fees charged for use of recreation facilities shall not exceed those charged by other governmental agencies, under comparable conditions as determined by the department, for the use of similar facilities or the provision of similar services, in the general area of the project, nor shall they exceed an amount calculated to return to the agency the total capital and annual cost allocated to recreation, less any grant or grants thereto. The fees may be adjusted from time to time throughout the contract period upon approval by the state.

The fee schedule approved by the state shall apply to all members of the general public without exception.

DEFINITION OF WATER DEVELOPMENT AND DISTRIBUTION SYSTEM PROJECTS
UNDER SECTION 12880(c) AND 12880.2 OF THE ACT

1. A project that involves the development of a new water supply means a project which includes surface or underground storage to develop, conserve, and regulate water resources that are not presently available on a dependable and timely basis. Such a project also involves the development of new basic water supplies. (The commission subcommittee recognizes that in the near future, categories and/or standards within this classification must be adopted for the purpose of establishing priorities. We most strongly recommend, however, that such categories or standards not be absolute, but should serve merely as a guide in judging the weight of various factors of need. These could include financial need, recreational needs, fish and wildlife, sanitary and health considerations, etc., all of which could change in emphasis from year to year and from area to area.)
2. A distribution system project means a project to divert and convey waters from an existing dependable source of surface or underground water supply to or into an area of use. Such a project may include the distribution works that are normally owned by water districts, and would not include domestic service connections or on-farm laterals.

CALIFORNIA ADMINISTRATIVE CODE

Title 23

CHAPTER 2. DEPARTMENT OF WATER RESOURCES

SUBCHAPTER 2. FINANCIAL ASSISTANCE FOR LOCAL PROJECTS

Article 1. General Provisions

400. Definitions. As used in these regulations, the terms listed below shall have the meanings noted:

(a) Department. "Department" shall mean the Department of Water Resources of the State of California.

(b) Project. "Project" shall mean a project as defined in Section 12880(a) of the Water Code.

(c) Public Agency. "Public agency" shall mean any city, county, district, or other political subdivision of the State.

(d) Governing Body. "Governing body" shall mean the body which is empowered by law to govern the business of a public agency.

(e) Act. "Act" shall mean the Davis-Grunsky Act as set forth in Chapter 5 (commencing with Section 12880) of Part 6 of Division 6 of the Water Code, and any and all amendments which may hereafter be made thereto.

(f) Applicant. "Applicant" shall mean any public agency applying for financial assistance under the Davis-Grunsky Act.

405. Purpose and Effect of Regulations. These regulations are adopted for the purpose of carrying out the provisions of the Davis-Grunsky Act. Under no circumstances shall these regulations be construed as a limitation or restriction upon the exercise of any proper discretion that is vested in the department, nor shall they in any event be construed to deprive the department of any exercise of powers, duties, and jurisdiction conferred by law, nor to limit or restrict the amount or character of data or information which may be required for the proper administration of the law.

406. Official Records. Official records of the department may not be taken from the custody of the department, but access thereto and inspection thereof will be permitted during regular office hours and copies will be made and certified as required, the expense thereof to be borne by the person requiring the same.

407. Filing Fees. No filing fee is required to accompany any request for a preliminary determination of eligibility or any application for assistance under the act.

Article 2. Request for Preliminary Determination of Eligibility
for a Project Construction Loan or Grant

411. Form of Request for Preliminary Determination of Eligibility. Applicants for a loan or grant under the act for the construction of a proposed project shall file with the department a request for a preliminary determination of eligibility in duplicate on a form provided by the department.

412. Material to Accompany Request. Each request that is filed with the department shall be accompanied by duplicate copies of the following material:

(a) A resolution by the governing body authorizing the filing of the request, and designating a representative authorized to act on behalf of the applicant.

(b) A generalized sketch of the proposed project on a U.S. Geological Survey quadrangle map or on any other suitable and readily available map.

(c) Applicant's most recent financial statement.

(d) Such other material as the department may require.

413. Omissions in Requests for Preliminary Determination of Eligibility. If a request for a preliminary determination of eligibility submitted to the department is not complete, or if additional information is required, the department will notify the public agency in what respect the request is incomplete. If the request is not completed within 60 days after notice that the request is incomplete, unless the department extends this time for good cause shown, the department will return the request to the public agency without making any finding as to eligibility and without prejudice to the submission of a new request at any future time.

414. Review by Department. Upon receipt of a properly completed request, the department will review it forthwith and will make

preliminary findings regarding eligibility as to type of agency, type of project, purposes of project, conformance with The California Water Plan, statewide interest, and, when a loan is proposed, the reasonable ability of the applicant to finance from other sources.

415. Notice to Applicants. After a review of a request, the department will notify the applicant of the department's preliminary findings. Such findings shall be solely for the information and guidance of the applicant in determining whether or not it wishes to proceed with an application.

416. Time to Complete Applications. Upon notice by the department to a public agency of its findings on a request for preliminary determination of eligibility, the public agency will be given a period of one year to complete an application, as set forth in Article 3. If an application is not completed within one year, or within such additional time as the department may grant for good cause shown, then a new request for preliminary determination of eligibility must be filed with the department.

Article 3. Application for a Project Construction Loan or Grant or Facilities Grant

420. Form of Application. Applicants for a loan and applicants for a grant under the act for the construction of a proposed project, and applicants for a grant under the act for the construction of initial water supply and sanitary facilities, shall also file with the department and application in writing which shall contain a specific request for each type of assistance applied for in a specified amount. Such application may be in the form of a letter and shall be accompanied by twenty-five (25) copies of a feasibility report on the applicant's proposed project and by a resolution by the governing body of the applicant adopting the feasibility report and specifically authorizing the filing of the application by a designated representative who is to represent the applicant until final action is taken by the department on the application. Feasibility reports shall be prepared at the expense of the applicant, under the direction of a licensed civil engineer, except that where an applicant for a loan for an irrigation distribution system project or a municipal distribution system project has no engineer, the feasibility report may be prepared by, or under the direction of, the county surveyor, road commissioner or comparable officer of a county in which the applicant is located, in whole or part. Applicants shall obtain a determination from the department before filing an application whether feasibility reports shall include reports prepared by financial consultants, economists, recreation planners, or by consultants in other special fields. Supporting material with respect to the ability of a public agency to repay a loan and with respect to the reasonable ability of the public agency to finance the proposed project from other sources may be supplied by the county assessor or the county engineer.

In addition to the above, applications for loans for irrigation or municipal distribution system projects which involve extreme hardship which jeopardizes the public health, safety or welfare shall describe, generally, such extreme hardship existing with respect to the water

supply, the financial and economic conditions existing in the area, and the proposed project and shall be accompanied by:

(a) A report by the assessor of the local agency with respect to assessed valuation and tax delinquencies.

(b) In cases involving a health hazard with respect to the domestic water supply, a report by the local health officer or by the Department of Public Health with respect to such health hazard.

420.1. Time of Filing Application for Facilities Grant. Applicants for a grant under the act for the construction of initial water supply and sanitary facilities shall file an application for such assistance at the same time an application is filed for a grant for the construction of a proposed project.

421. Contents of Feasibility Report. The feasibility report should contain sufficient information and data to demonstrate that the proposed project is engineeringly feasible, economically justified, and financially sound. The amount of detailed information required in the feasibility report will vary with the type, purpose, and complexity of the project. In each case, the department will advise the applicant regarding the nature and scope of the information and studies which should be contained in the feasibility report. The department will also advise the applicant of the criteria it will use to evaluate the engineering, economic, and financial aspects of the project. In general, feasibility reports shall contain the following:

(a) A general description of the project plan, purpose, and accomplishments, with a map showing the project features and service area.

(b) Studies of water resources and water requirements, including project operational studies demonstrating the accomplishments of the project.

(c) Status of water rights necessary for operation of the project.

(d) Preliminary designs and cost estimates of the project features in sufficient detail to establish probable cost of the project. Estimates of annual costs of operation and maintenance should also be included.

(e) Economic studies to establish the benefits and economic justification of the project.

(f) An allocation of costs among the purposes of the project, if the project has more than one purpose.

(g) Financial studies indicating the proposed method of financing, sources of revenue, and repayment schedule.

(h) A construction schedule and an estimate of the amount of state funds required each year.

(i) Such other information as the department may require.

422. Omissions in Application. If an application submitted to the department is not complete, or if additional information is required, the department will notify the public agency in what respect the application is incomplete. If the application is not completed within

90 days after notice that the application is incomplete, unless the department extends this time for good cause shown, the department will return the application to the public agency without making any findings on the application and without prejudice to the submission of a new application at any future time.

423. Use of Department's Data. Any pertinent data in the files of the department will be made available to applicants for use in preparing applications and feasibility reports. Such data will be furnished free of charge except for costs of reproduction. If the proposed project has been reported on by the department, the report may be used by the applicant and supplemented by such additional information as may be necessary to complete the application.

424. Review and Report by Department. On receipt of a completed application, the department will review it and will prepare a report containing its findings and recommendations with respect to the application and will file the report with the State Legislature. Copies of the department's report will be furnished to the applicant.

425. Submission to California Water Commission. The department will submit all applications filed under this Article 3 and the department's reports thereon to the California Water Commission before final action is taken by the department. In the case of each application for a construction loan not exceeding \$4,000,000 for a construction grant not exceeding \$400,000, and for a grant for the construction of initial water supply and sanitary facilities, the department will request approval of the commission prior to the making of a loan or grant pursuant to the application. In the case of each construction loan exceeding \$4,000,000 and of each construction grant exceeding \$400,000, the department will request the advice of the commission before final action is taken by the department.

426. Notice to Applicants. The department will notify each applicant of the official action taken by the department and by the California Water Commission with respect to the application.

Article 4. Applications for State Participation

427. Form and Filing of Application. Applications for state participation under Section 12880(f) of the act shall be made to the department by a public agency in the form of a letter stating the conditions under which the state participation is desired, accompanied by a resolution by the governing body of the applicant authorizing the filing of the application by a designated representative who is to represent the applicant until final action is taken by the department on the application. The applicant shall submit to the department such additional information as the department may require to reach a decision in the particular case.

Article 5. Procedure Following Approval of a Project Construction Loan or Grant, or Facilities Grant, or State Participation

431. Contract. State funds will not be advanced to any applicant pursuant to an approved loan or grant until a contract between the applicant and the department setting forth terms and conditions of such loans or grants has been executed.

432. Water Rights. The department will not execute a contract with any applicant for a loan or grant for the construction of a proposed project, or grant for the construction of initial water supply and sanitary facilities, or state participation, until the applicant submits evidence satisfactory to the department that the applicant holds or can acquire water rights adequate to permit operation of the project as specified in the application. No funds shall be disbursed under the contract unless or until the applicant has or obtains a right or permit to appropriate the water required for operation of the project.

Article 6. Application for Loan for Preparation of Feasibility Report

435. Feasibility Report. As used in this Article 5 of these regulations, "feasibility report" shall mean such report on the feasibility of a public agency's proposed project as the department may require the public agency to file with the department in support of an application by the public agency under the act for a loan for the construction of the proposed project.

436. Form and Filing of Application. Applicants for a loan under the act for the preparation of a feasibility report on a proposed project shall file an application for the loan on a form provided by the department. Such application should be filed after receipt of a favorable written reply from the department on a written request for a preliminary determination of eligibility for a loan for the construction of the proposed project filed with the department by the applicant in accordance with Article 2 of these regulations. The application shall be accompanied by such additional information as the department may determine is required to reach a decision in the particular case.

437. Other Applicable Provisions. The provisions of Sections 422, 423, 424, and 431 of these regulations shall also apply to applications for loans under the act for the preparation of feasibility reports.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER

December 31, 1964

HONORABLE JESSE M. UNRUH,
Speaker of the Assembly

MEMBERS OF THE ASSEMBLY
State Capitol
Sacramento, California

Gentlemen:

Pursuant to various authorizations cited in each report, your Assembly Interim Committee on Water herewith submits a report of the Subcommittee on Water Pollution and a report of the Full Committee on Sea Water Intrusion From Marinas and Other Excavations.

Included in the report of the Subcommittee on Water Pollution are the following: I. Impact of San Joaquin Valley Drainage Waters on San Francisco Bay; II. Water Quality Management, and III. Biodegradability of Detergents. Although pertaining to the matter of ground-water management rather than water pollution, the report of the Full Committee on Sea Water Intrusion From Marinas and Other Excavations is being included in this report as Section IV because it does not warrant separate publication and does not relate to the other reports of the full committee, such as *Arizona v. California* and Pacific Southwest Water Problems.

Respectfully submitted,

CARLEY V. PORTER, *Chairman*
Assembly Interim Committee on Water

SUBCOMMITTEE LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER

December 15, 1964

HONORABLE CARLEY V. PORTER

Chairman

Assembly Interim Committee on Water

Room 2114, State Capitol

Sacramento, California

Dear Carley:

Transmitted herewith are three reports of the Subcommittee on Water Pollution of the Assembly Interim Committee on Water. These reports are listed with a brief note on the highlights on each report:

1. Impact of San Joaquin Valley Drainage Waters on San Francisco Bay

The subcommittee was unable to establish that the San Francisco Bay will not be adversely affected by the discharge from the San Joaquin Valley drainage system. A need was found for legislation to secure formal determination by established water pollution agencies of the appropriate short and long-range protection needed for the San Francisco Bay and the delta consistent with reasonable provisions for disposal of San Joaquin Valley waste waters. This involves enactment of legislation to place all state discharges under the waste discharge requirements procedure of the regional water pollution control boards and to revise the membership of the State Water Quality Control Board so that the appointive directors of state departments are transferred from the state board to a coordinating and advisory committee designed to assist the state board. These actions are deemed necessary so that the full public interest will be reflected in all waste discharge matters involving state discharges.

2. Water Quality Management

The subcommittee found a continuing widespread support for the regional concept of water pollution control and no justification for any change in the relatively autonomous operation of the present regional boards. In addition, legislation is needed to change the title of the regional water pollution control boards to regional water quality control boards and to add authority to establish water quality policy at the regional board level.

3. Biodegradability of Detergents

The subcommittee found such rapid progress is being made in marketing new biodegradable detergents that there is no need for legislation to control the biodegradability of detergents at this time. However,

the experience with the new detergents should be observed carefully by the State Water Quality Control Board. We recommend passage of a concurrent resolution requesting continued study by the board.

In transmitting these reports to you, I wish to express the appreciation of myself and the subcommittee members for the cooperation and assistance of you and your committee staff. In addition I would like to thank the Office of Legislative Analyst and the Legislative Counsel for their services at hearings and in the preparation of these reports and drafts of bills.

Respectfully submitted,

CHARLES W. MEYERS, *Chairman*
Subcommittee on Water Pollution

I. IMPACT OF SAN JOAQUIN VALLEY DRAINAGE WATERS ON SAN FRANCISCO BAY

House Resolution 164 (1963 General Session)

FINDINGS

Conflicting testimony and lack of either complete data or conclusive study result in an inability to establish that the San Francisco Bay either will or will not be adversely affected by the discharge of San Joaquin Valley drainage waste waters into San Francisco Bay. The problem is so technically complex and involves so many unresolved considerations that the subcommittee cannot draw responsible conclusions. Instead legislation is needed to secure formal determination by established water pollution agencies of the appropriate short- and long-range protection needed for San Francisco Bay consistent with reasonable provisions for disposal of San Joaquin Valley waste waters. The present problem is only an indication of the magnitude of the future waste disposal problems in and around San Francisco Bay which may occur unless long-range plans and provisions for waste disposal are undertaken now.

RECOMMENDATIONS

The subcommittee recommends that legislation be enacted to place all waste discharges by state agencies (the San Joaquin Valley drainage system to be constructed by the Department of Water Resources is a conspicuous example) under the same regulation by regional water pollution control boards as applies to any private citizens or units of local government. In addition, the decisions of the State Water Quality Control Board should reflect the broadest public interest rather than partially reflecting the views of appointive directors of state departments who may be influenced by their superiors to support a certain type of drainage discharge requirement. The subcommittee therefore recommends that all state officials be transferred from the state board to a coordinating and advisory committee designed to assist the state board.

Finally, to assure that the state's waters are fully protected from undesirable federal waste discharges, the subcommittee recommends that the Legislature adopt a joint resolution urging Congress to pass legislation similar to the original provisions of S. 649, which would place federal waste discharges under a permit system administered by the U.S. Public Health Service.

In making these recommendations, the subcommittee has not found that any state or federal agency has acted or proposed to act in neglect of the public interest with regard to disposal of San Joaquin Valley waste waters in San Francisco Bay. Rather, the subcommittee recommends that in the event of disagreement over the harmful effects of any drainage discharge, state and federal agencies should comply with the

same legal waste discharge requirements that would be imposed upon any citizens or local government making the same discharge.

SCOPE OF THE PROBLEM

The Department of Water Resources and the U.S. Bureau of Reclamation have been active for more than a decade in various phases of planning, designing and constructing the San Joaquin Valley water supply features of the State Water Facilities (located in the southwestern part of the valley) and the San Luis Unit of the Central Valley Project (located in the west central part of the valley). These two water supply projects will jointly supply approximately 2,300,000 acre feet of new water to the west side of the San Joaquin Valley to develop new farming lands and to replace water now being mined from the underground.

Such large additional water supplies are recognized by these state and federal agencies as certain to create drainage problems in the low-lying lands of the service area or at elevations below the water supply service areas. These water deliveries will accentuate the drainage problems that already exist in some areas along the west side of the valley. Therefore, Congress has authorized the Bureau of Reclamation to construct a San Luis Interceptor Drain as part of the San Luis Unit of the Central Valley Project or secure satisfactory assurances of service from the state's drainage system. The authorizing language specified that the interceptor drain should terminate at the Sacramento-San Joaquin Delta.

The Burns-Porter Act provided authorization and financing for a San Joaquin Valley drainage system to serve the state's service area in the southwestern part of the valley and to provide such additional drainage service as the San Joaquin Valley should need. Since fiscal year 1957-1958, the Department of Water Resources has been engaged in extensive planning to formulate its drain. The department was not pressed by the time deadline which confronts the Bureau of Reclamation and has consistently stated that the state's drain would not be needed for a number of years. Subsequent to the initiation of this subcommittee's inquiry, the two drains were integrated into one master drain to be constructed by the Department of Water Resources.

Associated with the formulation of these drainage facilities, various water quality studies have been undertaken by both the state and federal agencies to determine what effect the discharge of these drainage waters would have on the delta. Both the Department of Water Resources and the Bureau of Reclamation have had a special interest in the location of the drainage discharge. Their interest stems not only from the desire to secure the least harmful and most economical point of discharge but also from the fact that the discharge will be close to the intake in the delta of their own water supply facilities serving the San Joaquin Valley and Contra Costa County.

Much discussion has centered around the location of the drainage discharge points. In planning the work of the Assembly Interim Committee on Water, it became evident last summer that serious problems could arise from any major discharge of waste water into the delta or

eastern San Francisco Bay. It was decided that this was the highest priority water pollution problem of the state and that it should be studied under the broad language of HR 164 which authorized the committee to study all problems relative to the pollution of the waters of the state.

Four days of hearings devoted primarily to the impact of San Joaquin Valley waste waters on San Francisco Bay were held as follows:

December 9, 1963	-----	San Francisco
December 10, 1963	-----	San Francisco
August 19, 1964	-----	San Francisco
August 20, 1964	-----	San Francisco

The first two days of hearings were devoted to receiving testimony from representatives of the U.S. Bureau of Reclamation and the Department of Water Resources who are involved in planning and constructing the drainage facilities and those state and federal agencies which had information concerning the effect of these drainage waters on the delta and San Francisco Bay. During the interval between December 1963 and August 1964 a number of important changes in planning for the drainage facilities occurred. Therefore, the hearings in August 1964 were intended to bring the subcommittee's record up to date and to provide testimony from persons and organizations around San Francisco Bay who wished to express their views on the actions which should be taken to resolve the problems defined in the December hearing.

This report is based on the latest information presented to the subcommittee in its August hearing and from official documents readily available to the public. Only when consideration of the rapidly moving events of the past year is needed to understand the findings and recommendations of the subcommittee, does this report trace such historical development. Otherwise reference is always to the latest information or conditions. This limitation is important since the subcommittee's report is not historical but deals only with the current water pollution aspects of the drainage facilities.

Throughout the hearings, a broad difference of opinion among witnesses was evident. The Department of Water Resources and the U.S. Bureau of Reclamation, as the agencies responsible for planning and construction of the drainage facilities, assured the subcommittee that there would be no pollution problem, or if one should eventually develop after the drainage facilities were in operation and discharges increased to significant amounts, that corrective action would then be taken.

The San Francisco Bay and Central Valley Regional Water Pollution Control Boards could offer the subcommittee no assurance that pollution would not occur. Their official position would prohibit any drainage discharges until certainty of no adverse effect is determined. The Department of Fish and Game could offer no specific assurance at this time that the drainage water would not damage fish and wildlife resources in the delta and bay because the department's analysis of the problem is not yet completed.

Both the U.S. Corps of Engineers, as a result of its studies of barriers in the San Francisco Bay and the operation of the San Francisco Bay model, and the U.S. Public Health Service stated that their studies showed a future problem of inadequate waste disposal capacity in the bay. Both agencies suggested an eventual need for ocean disposal of bay area wastes. The Public Health Service pointedly advised that no drainage discharges should be made into the bay until it could be determined that the assimilative capacity of the bay would be adequate.

The broad difference of opinion described above became more difficult to evaluate as further testimony and questioning by the subcommittee revealed that witnesses were not always talking about the same problem. Two questions were continuously discussed but frequently without identification and differentiation. The Department of Water Resources and the Bureau of Reclamation generally limited their remarks and assurances to the effect of drainage discharges on the delta. Their studies are centered around the delta, and while they have considered the problems of the San Francisco Bay, they have not studied them in detail. Their assurances and conclusions relate to the delta. The second group of witnesses centered its attention on San Francisco Bay. Their concern about the effect of drainage discharges is addressed specifically to San Francisco Bay and in some instances also to the delta. The subcommittee had to consider, therefore, the effect of San Joaquin Valley waste discharges on both San Francisco Bay and the delta as separate but related matters.

REVIEW OF TESTIMONY

Description of the Project

In order to understand the inability of the subcommittee and all concerned to resolve the San Francisco Bay and delta water pollution problems, it is necessary to develop a number of important factors. These include a description of the project, the type of wastes proposed to be discharged, the interrelationship of the delta and San Francisco Bay, data on the waste assimilative capacity of the Bay, and other similar factors. The following paragraphs summarize this information and the status of present knowledge as contained in the record of the hearings or other published documents.

During the December 1963 hearings the Department of Water Resources and the Bureau of Reclamation described their individual proposals for drainage systems to serve the San Joaquin Valley. At approximately the same time, considerable public opposition developed in the San Joaquin Valley to the construction of two drainage systems and support developed for a single integrated facility. Members of the subcommittee likewise expressed strong support for an integrated facility during the December hearings.

Subsequently, it was agreed by the Department of Water Resources and the Bureau of Reclamation that the Department of Water Resources would construct an integrated facility and would provide service to the San Luis service area pursuant to a contract to be negotiated between the department and the bureau. The bureau would pay the capital costs of the capacity required to provide the service it needed. Thus the department became the agent for the bureau and in essence

assumed the responsibility for disposing of the wastes. Therefore, the concept of the drainage facility presented below is based on the department's testimony of August 19, 1964, for an integrated facility.

As presently contemplated the drain will be constructed in stages with the first stage basically being the San Luis Interceptor Drain to provide service to the San Luis service area plus some additional areas. The proposed drain will extend 190 miles from Kettleman City to the delta at Antioch Bridge. Generally it will be an open, lined canal with a terminal capacity between 400 and 500 cubic feet per second and will be fully operational in 1970. Timing is currently based on present construction schedules for the San Luis Unit, with construction proposed to start not later than January 1966 in order to be in operation by July 1968. In December 1963 the bureau indicated to the subcommittee that the drainage flow from the San Luis service area and areas immediately adjacent is not expected to exceed 10,000 acre-feet annually during the first 10 years.

The construction cost of the first stage of the drain is expected to be met by a \$34 million contribution from the Bureau of Reclamation, the remaining \$12 million cost will be a state responsibility and will be financed from Burns-Porter Act money. Later stages will be a state responsibility because service will be for the southern San Joaquin Valley. Construction of later stages would extend the drain southward some time after 1975 into Kern and Buena Vista Lakebeds. Eventual enlargement of the first stage to a full capacity of between 900 and 1,000 cubic feet per second would meet requirements until the year 2000. If the department found it necessary, the point of discharge would also be moved westward.

At the time the decision was made to integrate the federal and state drainage systems, the Bureau of Reclamation also explored various methods of ponding the drainage water in the valley and other approaches which were considered to be interim solutions. These interim solutions to the drainage problem were intended to delay the completion date for construction of the San Luis Interceptor Drain in order to provide more time to study the location of its terminus and other problems. However, landowners in the San Joaquin Valley, who now have a drainage problem or who expect to have one when the San Luis Project begins to deliver water, would not agree to any interim solution but instead relied on the San Luis Authorizing Act which requires completion of the interceptor drain by 1968. The pressure to decide all problems now was thereby created.

Constituents of Drainage Water

The drainage waters are expected to contain about 7,000 parts per million total dissolved solids initially and about 3,000 parts per million after the initial leaching periods. Constituents will be principally sodium and sulfate ions, with smaller quantities of chloride, calcium, magnesium and carbonate ions. The principal nutrient is expected to be nitrogen which the department expects may reach 20 to 25 parts per million. Recent tests by the department indicate that pesticides now in drainage water in the San Joaquin Valley are about one-half part

per billion which is about the concentrations of samples taken from rivers and channels of the Central Valley and the Delta-Suisun Bay area.

Discharging drainage water with several thousand parts per million of salts into an already saline San Francisco Bay is not now known to result in any problem. However, the discharge of this same saline drainage water into the western delta, where problems already exist because of salinity intrusion in the summer when outflow of fresh water is reduced, may only aggravate an already serious problem. Furthermore, the future export of more fresh water from the delta by the State Water Facilities and the San Luis Project will reduce the amount of fresh water now available in the delta for dilution and flushing action.

The pesticides in the drainage water are small in quantity at present. There is no reliable data to indicate whether they might increase or decrease with development of degradable pesticides or new methods of application. The tendency of pesticides to be ingested by small organisms and to concentrate in the systems of these organisms has caused alarm among public health officials and others that it may be harmful for fish and wildlife. However, the State Department of Agriculture has the authority to control the application of such pesticides and should actively evaluate whether it is desirable or practicable for it to act in order to reduce their presence in the drainage discharge.

The presence of nutrients such as nitrogen in the drainage water will facilitate the growth of algae in the drainage water and the receiving waters. These algae "blooms" occur periodically and create serious problems of odor and unsightliness as well as depleting the oxygen supply in the water when they die. The presence of organic wastes in the drainage water also depletes the dissolved oxygen content of the receiving water. Reduction of the dissolved oxygen content can be harmful to, or even eliminate, aquatic life depending on the extent of the depletion.

Various possibilities exist to mitigate the severity of these problems and effects, and they are under study by the Department of Water Resources and other agencies such as the Department of Fish and Game. Among these possibilities are (1) the cultivated growth of algae in the drainage water and harvesting of the algae to remove the nutrients from the water, (2) the ponding of the drainage water during low flow periods for release during winter rains when the delta outflow is large, (3) dilution of the drainage waters with good quality water released through a delta water project, and (4) use of brackish water conversion equipment to remove the minerals and leave only a brine for disposal. While all of these possibilities exist, none of them is sufficiently investigated or developed to permit being designated by witnesses before the subcommittee as solutions to the drainage discharge problem.

Effect of the Drainage Discharge

Any proposal to construct a drainage facility which will eventually discharge approximately 500,000 acre-feet of waste water from the San Joaquin Valley into receiving waters of any part of the state must

inevitably result in expressions of strong concern from the areas adjacent to the point of discharge. Contra Costa County is the area most directly concerned with this waste discharge.

Contra Costa County interests have vigorously campaigned to get the terminus of the drainage system moved west to Port Chicago rather than having it at Antioch because their intake for public water supplies and the sources of cooling and processing water for several of their large industrial installations are close to the Antioch point of discharge. The proposed movement of the point of discharge westward to Port Chicago would double the costs of the drainage facility by adding another \$43 million for a 1,000-cubic-foot-per-second capacity and add \$70 million for an extension to Martinez. This would constitute a burden on the San Joaquin Valley which would be in addition to the initial cost of constructing the drainage facility to the delta.

Contra Costa County and adjacent areas secured an amendment to the federal appropriation bill for the current fiscal year which prohibits the expenditure of any San Luis Project construction funds to build drainage facilities in Contra Costa County with a point of discharge east of Port Chicago. The intent of Congress was to preclude a decision during the current fiscal year on the location of the drainage terminus until studies now under way are completed and a "fully informed decision, in the interest of all values affected" can be made.

The location of the terminus for the San Joaquin Valley drainage system cannot be separated from the selection of the type of delta water project constructed to transfer water from the Sacramento River across the delta to the state and federal pumping plants near Tracy. In September 1964 a staff report prepared by the Department of Water Resources, the Corps of Engineers and the Bureau of Reclamation recommended that a peripheral canal be constructed to transfer the water through the eastern part of the delta to the pumping plants. It will be several months before the staff report will be given complete review by the agencies involved and a final decision made on the type of facility selected.

The Department of Water Resources testified on August 19 that the selection of a delta water project would have an effect on the discharge of the drainage water. In essence the Department of Water Resources and the Bureau of Reclamation by recommending a peripheral canal have concluded that the canal is needed because the delta as it now exists will not provide a quality water supply for their export needs in the future. In fact, new facilities to provide better quality water supplies for the western islands of the delta are included in the recommended facilities to be constructed in the delta.

Significantly, the report which recommends the peripheral canal states that questions of water quality resulting from the construction of the drain will have to be evaluated in the light of results of the delta and Suisun Bay Water Pollution Investigation which the Department of Water Resources has had underway for several years. The objective of this investigation among others is to evaluate the impact of the drainage discharges on the delta and Suisun Bay (not San Francisco Bay). A progress report on this investigation will be issued about

the first of 1965 and the final report is presently scheduled for release in July 1965.

In its testimony before the subcommittee, the department stated no more than that the proposed drainage discharge would not adversely affect the delta but it offered no data or substantiation. Substantiation presumably will have to await the publication of the report on the delta and Suisun Bay pollution investigation in about a year and its review and analysis by all interested parties. The results of three critical investigations pertaining to the discharge of San Joaquin Valley waste water into the delta (the Peripheral Canal Report, The San Joaquin Valley Drainage System Report, and the delta and Suisun Bay Pollution Investigation Report) are now available only to the extent that the staff report on the peripheral canal has been released for review and comment.

Thus data to substantiate any statement that the discharge of San Joaquin Valley waste water at Antioch will not be detrimental are not available, nor are such data available on the effect of this waste water on Contra Costa County. However, this is only the delta portion of the problem linked with the discharge of these wastes. These waste waters will be dispersed in the delta and San Francisco Bay by mixing and assimilation through the following processes: (1) the capacity of the bay and delta waters to oxygenize the wastes and purify the water, (2) the flushing action of fresh water flowing out from the delta into San Francisco Bay, (3) the mixing of waste water with fresh water in the delta or released from the peripheral canal or other delta water project, and (4) the action of the tides on the water in San Francisco Bay which tends to transport the receiving water and its waste load to the Pacific Ocean.

The manner by which the tidal action transports the bay receiving waters to the ocean may be extremely important to the entire San Francisco Bay. The best information presently available to the Corps of Engineers from its model studies appears to indicate that the movement of the receiving waters from the delta is along the coast of Contra Costa County and Alameda County and thence across the upper portion of South San Francisco Bay into the ocean. The movement does not appear to be through deep water channels directly into the ocean. The southern part of San Francisco Bay does not receive the same beneficial effect of tidal action as the rest of the bay. This partially explains why the southern part of the bay has had for many years a serious waste disposal problem. Only recently has the San Francisco Bay Regional Water Pollution Control Board partially succeeded in cleaning up these waters. There is no certainty that the tidal action of the bay on waste discharges from the San Joaquin Valley at the delta will not adversely affect the South San Francisco Bay area by preempting the waste assimilating capacity now available to remove South Bay wastes.

Testimony from the Corps of Engineers and the Public Health Service indicated their limited studies showed that large amounts of waste are presently discharged into San Francisco Bay due to the urban and industrial development of the bay area itself. Projections by these agencies show that the amount of these wastes will increase during

future years because of growth of the area and that eventually a piped system to discharge San Francisco Bay wastes into the Pacific Ocean will be needed, even assuming a higher degree of waste treatment.

In its testimony before the subcommittee on December 10, 1963, the Public Health Service stated:

"As a result of our evaluations we have concluded that discharge of wastes from agricultural sewers to the San Joaquin River in the vicinity of the Antioch Bridge is extremely undesirable because of the pollution problem that will inevitably develop in this area, if certain aspects of present state and federal water transfer programs materialize. Other alternative discharge locations mentioned previously become less undesirable (from a pollution control standpoint) because, in each case, the discharge is moved closer to the ocean.

"Because the magnitude and cost of proposed drainage schemes are very large and because their full impact in the area of discharge will not be realized until some time after the year 1990, we believe that agricultural waste discharges deserve very careful consideration and should be viewed in light of projected future conditions rather than existing conditions. Projections 25 years into the future are conjectural; however, if projections are not made, correction of errors which result from our having failed to consider the future could be extremely costly and provide an unnecessary burden which reasonable planning could now avoid.

"We have found in our preliminary investigations that due to a dearth of technical knowledge and methodology a quantitative evaluation of the effects of low net flows on the mixing, dispersion and net transport of pollutants in the estuaries of the delta, Suisun and San Pablo Bays has not been developed. However, we believe that such methodology and technical knowledge now exist and a reasonable evaluation of the problem can be made, if sufficient time and funds were available. . . .

"If the San Luis or other San Joaquin Valley drainage is discharged to the delta, the economic cost of water pollution by water users in the San Joaquin Valley, in effect, would be transferred to water users in the delta-Suisun Bay area As pollution loads in the western delta and bay system increase and outflows decrease, increased treatment costs will be incurred by the local people

"We believe decisions to discharge wastes from an agricultural sewer to the western delta or San Francisco Bay system at this time would be premature in view of the fact that adequate study of and planning for the future consequences of the proposed discharges have not been made. We further believe a decision relative to the disposal of San Luis wastes will establish a precedent for the future disposal of all wastes from the southern San Joaquin Valley and, therefore, such a decision must be made with extreme care." (Transcript of December 10, 1963, pp. 132, 133, 140, and 141.)

The Public Health Service also made a series of recommendations for actions to be taken to resolve problems associated with the drain. To the extent that time has permitted in the intervening period, these recommendations have been included in the drainage facility by the Department of Water Resources. Time, of course, has not permitted undertaking the major bay area studies which were recommended.

The San Francisco Bay Regional Water Pollution Control Board testified that it has worked for years to bring existing waste discharges into San Francisco Bay under its discharge requirements and to clean up the bay. Some significant improvement is recognized by all to have occurred in the past few years. The San Francisco Regional Board indicated its objective to further increase the quality of bay waters by requiring a higher degree of treatment of existing discharges into the bay. Resolution No. 535 has therefore been enacted to prohibit the discharge of San Joaquin Valley waste water into the bay until data are available to show that no harmful effect will occur.

The Department of Water Resources has stated only that the discharge of San Joaquin Valley wastes into the delta will not harm the delta. However, if it should be harmful, the department agrees that the discharge point of the drain should be moved westward to a point, based on experience, where the drainage will not have an adverse effect. The department is proposing to secure agreement from the Bureau of Reclamation that the federal government will contribute its proportionate share of the cost of the extension of the drain if it becomes necessary.

Additional Investigations

Testimony before the subcommittee, as set forth in this report, makes it clear that all witnesses have inadequate data at present, are uncertain, or are being overly cautious because of uncertainty. Much data and study will be needed before certainty and agreement can occur.

Fortunately, work is underway to fill some of the gaps in needed data. The most important project is the San Francisco Bay Investigation of the University of California which was begun at the request of the San Francisco Bay Regional Water Pollution Control Board and is financed by the State Water Quality Control Board. This investigation was begun in 1958 and will be essentially completed in another year. Its purpose is to develop information and data which will permit quantitative resolution of the effects of waste discharges on the beneficial uses of bay waters, with particular emphasis on the fishery resource.

The San Francisco Regional Board in years past has adopted some specific policies covering particular areas of the bay, based on the limited data available. The San Francisco Bay Investigation is intended to provide comprehensive information to permit evaluation of the waste assimilative capacity of the entire bay. In turn this will permit the regional board to establish water quality objectives for the entire bay on which better waste discharge requirements can be based.

The second important source of data is the Marine Resources Survey of San Francisco Bay, which has been under way by the Department

of Fish and Game for less than two years. It is designed to survey types and abundance of existing marine life, to relate the distribution to the existing environment, and assess the future potential of the bay for both sport and commercial fisheries.

The above two investigations are the only sources of comprehensive data on San Francisco Bay presently available. It is still unknown whether the data collected by these surveys will permit a comprehensive evaluation of the impact of San Joaquin Valley drainage waters on San Francisco Bay itself or whether additional information may be needed. It is reassuring, however, to recognize that the San Francisco Bay Investigation and the Marine Resources Survey were undertaken by the state sufficiently long ago to begin to produce useful information at this time.

The Corps of Engineers has received authorization to add the delta to its bay model at Sausalito and to conduct further model studies. The Department of Water Resources, acting through its delta and Suisun Bay water pollution investigation, has been verifying the usefulness of the model for water quality work. Data collection and studies by units of local government such as in Contra Costa County are also under way. In short, much important work is now being done.

The problem of waste disposal in and around San Francisco Bay area is actually much broader than the studies concerned with the severe problems now arising because of the discharge of San Joaquin Valley waste waters. It has already been noted that the San Francisco Bay Regional Water Pollution Control Board is in the midst of a long-range program designed to upgrade the bay waters, to make them fully usable for body contact sports and to improve the fishery which was substantially destroyed in past years because of pollution. At the same time, San Francisco is becoming even more widely known for the beauty and grandeur of its bay. This is both a tourist attraction and an element of pride among bay residents.

However, the wastes, both liquid and solid from a rapidly growing metropolitan center must be disposed of. Solid wastes have been dumped into the bay to form land fills. Elsewhere, major land fills have been made to create airports, housing developments, industrial sites, etc., and many more land fills are being proposed. Besides the conflicting opinions on the esthetic impact of many of these land fills, they also have a serious impact on the ability of the bay waters to assimilate wastes. This occurs because the marshy, shallow waters of the bay, the portion most susceptible to filling, is also important to the natural processes by which the water restores its oxygen content. This oxygen is vital to both aquatic life and to the capacity of the water to purify wastes. Since the actual waste assimilating capacity of the entire bay is not known, the seriousness of the land-filling process on waste assimilation cannot be fully determined at this time. However, witnesses before the subcommittee did indicate that the indiscriminate filling of the bay could eventually lead to a situation in which the waste disposal capacity of the bay would be limited largely to tidal action.

The people of San Francisco Bay and its adjacent areas have recognized that they are confronted with serious problems in assuring their

future welfare and the protection of the bay. The 1964 First Extraordinary Session of the Legislature passed Chapter 98 which created a San Francisco Bay Conservation Study Commission to evaluate the filling of the bay and to recommend a policy and action. The people of the bay area acting through their counties have expressed great concern in testimony before the subcommittee over the possibility that the discharge of San Joaquin Valley waste water into the bay will adversely affect both them and the bay. In recognition of this concern, the Association of Bay Area Governments has announced that it will serve as sponsor for a comprehensive long-range project to dispose of wastes from the central valley, the delta, and the bay area in cooperation with the U.S. Public Health Service. In addition the bay area sportsmen have strongly objected to any action which might harm the bay fishery.

Regulation of State Discharges

The extensive nature of concern around the bay for its future, and the searching now going on to find solutions to local problems require the subcommittee to raise explicitly the questions of equity and public policy presented by the present situation. It has been recognized by all witnesses before the subcommittee that it would be clearly inequitable for the state and federal governments to discharge waste waters into San Francisco Bay which would adversely affect the bay. The inequity would arise because the bay area has spent hundreds of millions of dollars on waste treatment facilities to clean up its own waste disposal problems in order to meet the waste discharge requirements established by the San Francisco Bay Regional Water Pollution Control Board pursuant to state law. In other words, the state would have encouraged and required the bay area to clean up the waters of the bay, while proposing through another state agency (such as the Department of Water Resources) to discharge large quantities of San Joaquin Valley wastes into the same waters. There is neither equity nor a furtherance of the public interest in permitting such an event without compelling reasons of public advantage which have neither been advanced nor suggested in this case.

The Department of Water Resources and the Bureau of Reclamation have clearly recognized that they should not discharge wastes that would be detrimental to the bay area, or which the Central Valley or San Francisco Bay Regional Water Pollution Control Boards would not permit private industry or local government to discharge into the bay. Before the agreement in early 1964 that the Department of Water Resources would construct an integrated drainage facility, the Bureau of Reclamation had complied with a request of the Central Valley Regional Water Pollution Control Board to supply data on its proposed discharges from the San Luis Interceptor Drain. The Central Valley Regional Board is proceeding to set discharge requirements for the San Luis Interceptor Drain which is the only project on which it has information. Meanwhile both the Central Valley and San Francisco Regional Boards have passed resolutions prohibiting San Joaquin Valley drainage discharges in either the delta or San Francisco Bay until they

are satisfied no adverse effect will occur. This action has been taken even though these boards presently have no legal authority to control state or federal discharges. (See chapter on legal problems.)

The position of the San Francisco Bay Regional Board before the subcommittee was stated as follows:

"Resolution No. 535 of February 20, 1964, prohibited waste discharges from the San Luis Drain into the San Francisco Bay region 'until the discharger has submitted evidence and assurances satisfactory to this board that the proposed discharges will not adversely and unreasonably affect the receiving waters for any of the beneficial uses which are now being protected or which will be protected by this board.' Copies of our Resolution No. 535 are included as part of this presentation.

"Thus far the Bureau of Reclamation has produced neither evidence nor assurances satisfactory to this regional board as required by the above resolution. Indeed the evidence gathered thus far by the people who have given this matter the most careful consideration, i.e., the U.S. Public Health Service, casts serious doubt on the whole proposal. They point out that a thorough study of the entire problem should be made *before* designs and decisions are finalized. We concur with them. It seems almost unbelievable to us that a project costing tens of millions of dollars should be built on a trial and error basis. We are now being told in effect that a combination state-federal drain (the San Joaquin Valley Drainage Facility) will be built terminating at Antioch Bridge and that 'a long period of time is available to operate the drain and study its consequences prior to the maximum period use.'

"It is doubtlessly true that a long period of time *will* elapse before the drain reaches its maximum capacity. This, of course, reduces the likelihood of any sudden dramatic change in the condition of the bay and increases the chances of complacency. There is greater probability that such degradation as takes place will be insidious in nature and can thus be attributed to factors other than the discharge from the drain.

"It is our firm conviction that the 'consequences' of the discharge from this proposed drain should be ascertained as nearly as practicable *before*, *not after*, its construction. We want a thorough study in advance rather than an autopsy later.

"Suppose for example that the 'consequences' eventually turn out to be severe due to the effects of nutrients, pesticides, and other wastes and that it becomes apparent that the drain should never have discharged to the ocean, what would then be done about it and who would pay for the necessary rerouting, etc?

"It is well to remember that eventually the diversions of water from the Sacramento River, in connection with the California Water Plan, will leave us with less good quality water for waste dilution than we have at present, while at the same time the increase of population and industry both in the bay area and the Central Valley will result in the production of more wastes—and the need to dispose of them. The state, as you probably know, plans

to allow disposal of treated sewage and industrial wastes into its drain, along with agricultural wastes.

"In short, as the capacity of the bay to assimilate wastes is reduced (by some unknown amount) a huge volume of new wastes (whose effects have not been thoroughly evaluated) is to be placed on it—according to present plans. It is our contention that interim solutions for disposal of San Joaquin Valley agricultural wastes are available and economically practicable and justifiable and that they should be implemented. Meanwhile, the actual construction of the San Luis Drain, or any state drain terminating in the San Francisco Bay system, should not be allowed to proceed. During this interim period of, say, five years, the state and federal governments should study the matter thoroughly and evaluate the effects on the bay. If it appears that ocean disposal is the proper solution then the bay area communities should be consulted as to their participation in a master drain which would take care not only of wastes from the Central Valley but from the bay area as well."

The Administrator of the Resources Agency stated that as a matter of administrative policy he had ordered the Department of Water Resources to comply with discharge requirements set by the regional boards. Since only a prohibition of discharge has been adopted by the regional boards and no discharge requirements have been set, it is too soon to state what the influence of any waste discharge requirements on the drainage discharge may be. However, the point at issue is clearly established that the two regional boards involved will not, based on present data, approve the drainage discharge in the delta or San Francisco Bay. The Department of Water Resources has not stated what it proposes to do to secure such approval which the Resources Agency Administrator has ordered it to secure.

Recapitulation

The foregoing discussion can be recapitulated in several points:

1. While the Department of Water Resources and the Bureau of Reclamation have studied, but not reported on the effect of San Joaquin Valley waste discharges on the delta, they have not made similar studies for San Francisco Bay.
2. The Corps of Engineers and the Public Health Service have completed some studies of San Francisco Bay water pollution problems and they urge caution. The Public Health Service recommends no discharge of drainage until it is established that the discharge will not harm the bay.
3. Local interests and both the Central Valley and the San Francisco Bay Regional Water Pollution Control Board are alarmed over this drainage discharge. The regional boards have officially moved to prohibit it pending further information. The task of establishing water quality objectives for the delta and the bay has only been started.
4. Data for a comprehensive evaluation of the effect of the drainage discharge on the bay is very limited but will be partially available in future years.

5. The urgency to construct the interceptor drain and get it into operation by 1968 springs from the authorizing language of the San Luis Act, which was intended to assist San Joaquin Valley farmers with an existing drainage problem. These farmers have not accepted interim drainage solutions which would permit delaying the drain.

6. Congress has recognized the seriousness of the problem by adding language to the Bureau of Reclamation's appropriation to prohibit construction of any terminal facilities of the drain east of Port Chicago in Contra Costa County. The precedent is thereby established by Congress to delay construction of the drain until adequate evaluation of the location of both the drainage system terminus and the impact of the discharge on San Francisco Bay can be made.

7. The Corps of Engineers has authorization and is seeking funds to add the delta to the San Francisco Bay model at Sausalito. This may permit integrated and more definitive studies of water quality in the delta and San Francisco Bay.

8. The various studies of the Department of Fish and Game are not completed and final decisions on the nature of a delta water project such as the peripheral canal are yet to be made.

9. Some concept of the future waste disposal needs of the San Francisco Bay area itself, and preferably a long-range plan, should be developed to assist in evaluating whether the overall problem in disposing of future San Francisco Bay wastes and San Joaquin Valley wastes, plus possible future wastes from the Sacramento Valley, could best be transported to the Pacific Ocean by an integrated facility.

The subcommittee cannot recommend, after the voices of concern which have been raised, that immediate construction of the San Joaquin Valley drainage system be undertaken with any particular point for its terminus. Instead, the subcommittee believes a wise course of action would be to delay the construction of the drain for several years until adequate data is available to permit full discussion and agreement. Meanwhile, the interim measures suggested by the Bureau of Reclamation should be undertaken in the San Joaquin Valley to handle the small drainage problem which will occur there in the immediate future. The question of how best to undertake a comprehensive approach to the solution of the problem confronting San Francisco Bay in the future remains for consideration in the next chapter.

LOOKING AHEAD

The Association of Bay Area Governments will sponsor development of a long-range waste disposal plan for the San Francisco Bay area, the delta, and the Central Valley to be prepared by the U.S. Public Health Service. Various federal water-oriented agencies are proposing additional studies of the delta and the bay. Numerous state studies are underway at this time and more will probably be undertaken in the future. The number of proposed studies is bewildering and a sound approach to these studies raises many questions. What data is presently available? What additional data will be needed in the future, at what time in the future? Who should collect this data? More impor-

tantly, if the San Joaquin Valley drainage system is delayed for several years, how can the time so gained be most effectively used?

Witnesses before the subcommittee testified only about their present activities, most of which were directed to the immensity of the problems confronting them in trying to evaluate the drainage facility and deciding where it should be located. Very little thought has been given to the next steps and what should be done if a delay of several years were to be secured for study and resolution of the current problems. There is no plan or approach available and the great number of federal, state and local units of government anxious to participate only adds to the difficulty.

The subcommittee by itself cannot establish an approach since the most advanced technical knowledge will be required. The subcommittee therefore recommends that the State Water Quality Board, as the state agency with the most direct responsibility for the quality of the state's waters should establish the approach. The board should empanel a small group of technically qualified outside consultants to perform the following tasks: (1) identify the studies now underway concerned with waste disposal in the San Francisco Bay area, establishing the scope, timing and objectives of each, (2) review the data now being collected on waste disposal in the San Francisco Bay area, (3) review the proposals for studies to be undertaken in the future by all agencies with an interest and responsibilities, (4) recommend such additional data and studies or investigations as may be needed to permit development of a long-range plan and solution for the problems associated with disposition of San Joaquin Valley waste waters, San Francisco Bay wastes and other related wastes. The objective of the panel should be to recommend the participation of those agencies most capable of handling the work based on an orderly approach in order to assure that no gaps or duplication in work occurs and the necessary work is completed on a reasonable time schedule.

In the past, numerous uncoordinated studies have been undertaken on the San Francisco Bay, the delta and adjacent areas. There is no assurance that future studies will be adequate or that substantial gaps will be found when completed studies are compared. Furthermore, the task is sufficiently large and expensive that there is undoubtedly a best role for nearly every agency, if that role is identified and defined. Finally, the highly technical nature of the work to be done and the unique or even research nature of certain parts of it require utmost caution to assure that it is performed by the agency that can best handle it.

The subcommittee believes that the State Water Quality Control Board should proceed immediately with the formation of such a panel and transmit its results to the 1965 General Session of the Legislature before the session ends for such action as may be needed. The state board should finance the panel with any federal funds it may have available or with money from the Department of Water Resources or contributions from federal or local agencies.

LEGAL PROBLEMS

The customary regulatory approach to the discharge of undesirable wastes into the waters of the state has been for the regional water pollution control boards to establish waste discharge requirements which specify quality of the receiving water to be preserved. Normally these discharge requirements can be met most economically by the discharger if he provides some degree of waste treatment through a sewage treatment plant. This system has worked with considerable success in California and has resulted in substantial improvement of the receiving waters of the state although much remains to be done.

The present State Water Pollution Control Act applies to all private citizens, industry, and units of local government. It does not apply to state agencies such as the Department of Water Resources. The actions of the regional boards in prohibiting the drainage discharge into the delta or San Francisco Bay are little more than advisory. The subcommittee inquired whether state agencies and departments should be required to secure waste discharge requirements from a regional board and to comply with them. There was unanimous agreement among witnesses that the law should be amended to place state agency discharges on the same basis as any other discharge in view of the pending discharge of San Joaquin Valley waste waters into the delta and San Francisco Bay. The Administrator of the Resources Agency endorsed such a change and stated that he would support it. The subcommittee is therefore preparing legislation to revise the definition of "persons" to whom the law applies to include state agencies and recommends that such legislation be enacted.

Under our federal concept of government, the states have no power or authority over the federal government or its activity unless the federal government has specifically authorized state action such as in the case of granting water rights to the U.S. Bureau of Reclamation. The prospect that the State of California might be delegated control by Congress over any waste discharges made by federal agencies in California is virtually nil. However, if the Department of Water Resources, as is now proposed, constructs an integrated drainage facility and contracts with the Bureau of Reclamation for capacity in that facility, the authority of the state over the discharge is obscure. The contract might include provisions that could be interpreted to mean that the federal government will agree to any waste discharge requirements set by the state since the state is building the facility and will operate it under federal acquiescence. On the other hand, the contract provisions might be interpreted to mean that the Department of Water Resources, as an agent of the federal government, would not have to meet any waste discharge requirements established by the state. In view of the positive statements of the Administrator of the Resources Agency that San Joaquin Valley drainage discharges should meet the requirements of the regional boards, the subcommittee assumes that the administrator will agree to no contract with the federal government that will threaten state control over these discharges.

At present, the Bureau of Reclamation must consider the water quality and fish and wildlife aspects of the Federal Water Pollution

Control Act and the Fish and Wildlife Coordination Act. Originally when S. 649 was introduced in the 88th Congress, it would have required federal waste dischargers to secure a permit from the Department of Health, Education and Welfare for disposal of any matter into waters of the United States in order to control water pollution which may affect the health or welfare of any persons. The subcommittee believes that legislation of this type should be enacted by Congress to assure that federal agencies do not pollute the waters of the state. In the long run, this is probably the only real assurance the state can have that no federal agency will dispose of wastes into San Francisco Bay either in the form of agricultural drainage or from military or other federal installations which will adversely affect the state's waters. The subcommittee is preparing a joint resolution in support of legislation similar to S. 649 and recommends that the Legislature approve such a resolution.

Customarily the regional boards act to establish waste discharge requirements in line with some concept of the purposes that the receiving waters will serve. This purpose is usually established by investigation and hearing and is stated in the form of objectives that the regional board will seek to protect. These objectives then become the basis for the establishment of waste discharge requirements.

Under Chapter 1463, Statutes of 1963, the Legislature gave the State Water Quality Control Board the authority to establish statewide water quality policy in addition to the objectives set by the regional boards. The regional boards would then be guided by the water quality policies of the state board and their own individual board water quality objectives in establishing waste discharge requirements for the delta, San Francisco Bay, or any other area.

It is important that the State Board Act, as it now is acting, to establish water quality policy for the delta and San Francisco Bay. This is particularly important in view of the fact that the water to be exported from the delta will go into the central and southern parts of the state and the discharge of San Joaquin Valley wastes will involve the interests of both the Central Valley and the San Francisco Bay Regional Water Pollution Control Boards. In event of disagreement over the waste discharge requirements established by a regional board, present law provides for an appeal to the state board. Thus, the state board could become the deciding factor in determining the waste discharge requirements for the drainage facility.

The Administrator of the Resources Agency testified that he has no statutory authority to intercede in the above procedure by reducing any waste discharge requirement set by a regional board or by the State Water Quality Board, but that he could administratively order the Director of Water Resources to meet any discharge requirement or a higher requirement than that established by a regional board. However, testimony developed that the three Directors of Water Resources, Fish and Game, and Conservation are members of the State Water Quality Control Board and are supervised by the Resources Agency Administrator. In addition the Directors of Agriculture and Public Health, while not in the Resources Agency, are also members of the

State Water Quality Board and are responsive to the views of the Administration. Thus, 5 of the 14 state board members are appointive state officials. (All of these directors, except the Director of Conservation, also have their own independent statutory authority which directly or indirectly provide them with power to act on certain matters involving water pollution and water quality.)

The subcommittee believes that these five department directors should be transferred from the State Water Quality Control Board to an advisory and coordinating committee with the responsibility to advise the state board. The state board would then represent the public and could act in behalf of the public rather than the public and certain departments. Transferring these five officials from the state board would also eliminate the possibility that any action of the state board with respect to the San Joaquin Valley drainage system would not fully reflect the public interest but instead might be unduly tempered by the interests of any department with a particular interest in the drain. The subcommittee is preparing such legislation and recommends that it be adopted.

II. WATER QUALITY MANAGEMENT

Assembly Bill No. 3025 (Meyers)

FINDINGS

The subcommittee found a continuing widespread support for the regional concept of water pollution control and no justification for any change in the relatively autonomous operation of the present regional boards. Considerable uncertainty now exists because of the passage of S.B. 1096 (Chapter 1463, Statutes of 1963) in the 1963 session and interpretations of it which require clarification. The various state agencies for water pollution control and water quality are making progress in coordinating their activities but further improvement and better coordination is still needed.

RECOMMENDATIONS

The subcommittee recommends that no legislation be adopted which will weaken the regional approach to water pollution control. No support was found for A.B. 3025 which was developed by the administration and which is no longer supported by the administration. Legislation should be passed to change the title of the Regional Water Pollution Control Boards to Regional Water Quality Control Boards and to add authority to establish water quality policy at the regional board level. The objective should be to retain the relationship between the state and regional boards that existed before passage of S.B. 1096.

APPROACH TO HEARINGS

The primary purpose of the hearing on A.B. 3025 was to investigate the broad question of the need for legislation to revise the present state organization and management policies for water pollution and water quality control. This purpose was broader than the contents of A.B. 3025 itself which only involved one proposal for reorganization of the state and regional boards.

A broader approach was adopted because in the 1963 session of the Legislature, S.B. 1096 was adopted which changed the responsibilities and title of the State Water Pollution Control Board. Subsequent questions regarding the intent and interpretation of this statute were included in the hearing because they properly fitted into the subject matter of A.B. 3025 and were within the assigned responsibilities of the subcommittee. In addition, the Legislature had directed the preparation of a report entitled "An Interagency System for Water Quality Management." The recommendations of this report and the extent of their adoption by the Resources Agency had not previously been reviewed by the Legislature. It was therefore determined to consolidate these three subjects into one hearing which can appropriately be entitled a hearing on water quality management in California.

A hearing was held on September 10, 1964 in Los Angeles. The four days of hearings previously held by the subcommittee on the impact of San Joaquin Valley Drainage Waters on San Francisco Bay provided substantive consideration of certain organizational questions involving water quality. The transcript of those hearings and the subcommittee's findings and recommendations contained in its report entitled "Impact of San Joaquin Valley Drainage Waters on San Francisco Bay" also relate to and support the subject of this report. The legislation recommended as a result of the San Joaquin Valley drainage hearings includes bills pertinent to the hearing on A.B. 3025. None of this material is repeated here but its pertinence should be kept in mind with respect to this report.

REPORT ON "AN INTERAGENCY SYSTEM FOR WATER QUALITY MANAGEMENT"

During the 1962 session, the Legislature added language to the Budget Bill which required the State Water Pollution Control Board to contract with an outside consulting firm for a review of the "water quality, waste discharge, water pollution and contamination data obtained by the Departments of Water Resources, Public Health, Fish and Game and the state and regional water pollution control boards from any and all sources."

On November 30, 1962, Water Resources Engineers, Inc., which had been selected by the State Water Pollution Control Board to do the study, released its report entitled "An Interagency System for Water Quality Management." Various recommendations for specific changes in handling data were made in the report along with some recommendations on organization.

The subcommittee requested a panel of representatives from the agencies studied in the report of Water Resources Engineers to appear at the hearing and to review the progress in adopting the recommendations contained in the report. Where no action had been taken, the reasons for no action were explained by the panel. It became evident that an extensive and thorough review of the report had been made by the Resources Agency and that most of the recommendations had been adopted or were in the process of being adopted.

The subcommittee was pleased that real progress had been made. In two cases, however, the subcommittee did not feel that the recommendations had been sufficiently implemented. The first instance involved the coordination of data collection in the field, its analysis in laboratories, and its storage in a manner to make its recall easy and most useful. The Resources Agency Administrator assured the subcommittee that he had ordered "a study into means for pooling all data processing equipment so that all data necessary, including water quality data, for resources planning and development can be stored, processed and retrieved conveniently and efficiently but on an integrated and coordinated basis. It will be necessary to complete the move into our new building before we can proceed along this line. I am certain, however, that once the move is completed, we will start to progress in the direction of integrated data management for the Resources Agency."

The coordinated handling of water quality data has been a most difficult problem, both with respect to the desire of the agencies to continue present vested operations and the technical problems of developing a system that will efficiently and economically store and recall the data while permitting identification of deficient, unneeded or duplicate data. The subcommittee believes that the proposal of the Resources Agency Administrator to begin by pooling data processing equipment is reasonable. Unfortunately, it leaves the real decisions and implementation for the future, and this may mean that the good intentions of the moment will disappear in future disagreement over details. The subcommittee therefore requests that the Resources Agency Administrator, the Department of Finance, and the Legislative Analyst continue to check future developments to assure that an integrated system is satisfactorily completed. In addition, the subcommittee also requests a brief memorandum report every six months be furnished it as well as the three offices mentioned above to indicate the progress being made.

Directly related to the problem of integrated data handling is the development of a common program framework for budgeting water quality investigations and related work. A start has been made with the publication of a report entitled "Proposed Definitions to be Used by California State Agencies in Recording and Reporting Activities in the Field of Water Quality Control." Much more work remains to be done before the report will become a fully useful tool for analysis of the work involved. The panel indicated that a standard glossary or list of terms is to be developed to facilitate communication among the technical employees involved in water quality work as well as to assist management in understanding the essential relationships and responsibilities of the various agencies and their activities.

In the second instance of difference in view between the Resources Agency and the subcommittee, the report of Water Resources Engineers had recommended that the Department of Fish and Game undertake a review of Section 5650 of the Fish and Game Code with the objective of "redrafting it in modern language consistent with the department's goals and policies." The Department of Fish and Game rejected this recommendation because the law has proved workable and because a change would weaken the law. The department is overlooking the fact that the language involved is so restrictive and arbitrary that excessive discretion is left to the department to determine when it will prosecute. Obviously under the absolute standards of the section the department could not enforce it according to a literal interpretation. The recommendation of the report is that the section be redrafted consistent with the department's goals and policies. It would appear that part of the reluctance of the department results from the administrative problems of stating the department's goals and policies rather than any legal or policy questions. The subcommittee recommends that the department proceed to revise the language and submit it to the Legislature for enactment.

The report of this subcommittee cannot detail the improvements in personnel administration, use of mobile laboratories; and other actions which have resulted from the report of Water Resources Engineers. It believes that a good start has been made and that the initial momentum

for improvement gained from the report should be increased to give the state the best possible interagency system for water quality management.

REORGANIZATION OF THE STATE'S WATER QUALITY WORK

One important recommendation of the report of Water Resources Engineers remains for consideration. The report recommended that the State Water Pollution Control Board be replaced with a Water Resources Management Board and that a staff of water quality management specialists be added to the staff of the state board, along with other changes. This recommended change placed substantial emphasis on water quality management. In another recommendation, the report strongly supported the regional board concept and recommended its continuation.

The Resources Agency sought to carry out the first recommendation for reorganization and proposed a complex reorganization which would have removed all real authority from the regional boards and would have centralized authority over the regional staffs in an administrative office in Sacramento. This approach was the essence of A.B. 3025 as it was introduced in behalf of the Resources Agency.

At the hearing on A.B. 3025, there was no support for the bill and the Resources Agency administrator stated that the Resources Agency was willing to proceed under S.B. 1096 rather than A.B. 3025. The hearing on the bill elicited strong support for the concept of the regional boards from a variety of interests including industry, sportsmen and water users. The regional concept, as a result, is more firmly accepted than ever.

The subcommittee cannot overlook the obvious fact that the original and only support for A.B. 3025 was from the Resources Agency and the Department of Water Resources. The record of the subcommittee's hearings on the impact of San Joaquin Valley drainage waters on San Francisco Bay makes it clear that at present the San Francisco Bay and Central Valley Regional Water Pollution Control Boards are opposed to discharging San Joaquin Valley drainage water into the delta and San Francisco Bay until it is certain no adverse effects will occur. The subcommittee also cannot overlook the well-established record from its hearings that the department has not yet completed studies of its proposed drainage discharges into the delta and San Francisco Bay and that the Regional Water Pollution Control Boards have not yet received any data from the department which the boards can use to set waste discharge requirements.

In its report on "Impact of San Joaquin Valley Drainage Waters on San Francisco Bay," the subcommittee strongly supports the position of the regional boards. It is pertinent to observe here that had the ideas of the Resources Agency and the Department of Water Resources on the state's organization for water quality been adopted and the regional boards reduced in effectiveness and autonomy by losing their staff, their work to date on the San Joaquin Valley drainage discharges might have been impossible and the San Francisco Bay area and the delta left without any protection from possibly damaging drainage waters.

The subcommittee recommends that no further consideration be given to A.B. 3025 by the Legislature.

PROBLEMS INVOLVING SENATE BILL No. 1096

After A.B. 3025 was sent to interim study, the Legislature passed S.B. 1096 which became Chapter 1463. This act changed the name of the State Water Pollution Control Board to the State Water Quality Control Board and added authority for the State Water Quality Control Board to establish water quality policy. Although the principle of adding establishment of water quality policy to the state board's responsibilities was widely accepted when the legislation was passed and still is, important doubts and uncertainties soon arose over the effect of this new authority on the regional boards.

The State Water Quality Control Board sought an opinion from the Attorney General on the changes made by S.B. 1096. Pertinent parts of this Opinion No. 64/218 are quoted below:

"The state board was the agency selected by the Legislature to coordinate water quality activities by formulating and adopting statewide policies for water quality control. Section 13022 was amended to require the state board to adopt a statewide policy of water quality control. The state board's obligation under Section 13022 to adopt a policy for control of water pollution remains tempered in that such policy must be adopted 'with due regard for the authority of the regional boards.' The adoption of the policy of water control, however, is not so qualified. Since the Legislature has determined that the matter of water quality is of statewide interest and concern, it must follow that the policy of water quality control cannot be adopted on a purely regional basis.

"While the statutory responsibility for declaring statewide policy is placed solely upon the state board, it is not to be anticipated that the state board will act differently than it has in the past. The state board has throughout its history followed procedures of consulting with all interested agencies, public and private, in order to glean all possible views and interests before taking action on policy which vitally affects waters of the state. Also in this regard, Section 13003 now provides that the state board will cooperate with other state agencies in all matters of mutual concern 'to the fullest extent practicable.'

"In carrying out the mandate of Section 13022, the state board is guided by Section 13005. Prior to 1963, the state board's concern with water quality was limited to the effect thereon of the discharge of sewage and industrial wastes. For example, we advised the state board by letter in 1950 that deterioration of water quality caused by saline intrusion was not within its jurisdiction since no discharge of sewage or industrial wastes was involved. Section 13005 now allows the state board in setting water quality control policy to consider *any* factor which unreasonably and adversely affects the quality of water for beneficial use. Thus the state board in setting water quality control policy may now consider such matters as saline intrusion, the reduction of waste assimilative capacity caused by reduction of the quantity of water, and watershed management projects as they may affect water quality.

"The 'water quality control policy' to be formulated and adopted by the state board is defined as 'water quality objectives' where they

are needed now or in the future to assure the availability of water of suitable quality.

"The Legislature did not further define 'water quality objectives'. Technically the state board might carry out its responsibilities by adopting objectives in the broadest and most general form. However, it seems clear that the Legislature had something far more specific and effective in mind. It is very possible that to properly carry out its duties the state board will in some cases have to declare objectives in terms of parts per million of various substances which will be permitted in certain waters. . . .

" . . . The state board is not specifically empowered to enforce the water quality policy it adopts, except of course, as it may exercise its powers of long standing under Section 13025. . . .

" . . . it appears clear that the 1963 Legislature intended to improve control practices prevailing under the Dickey Act by requiring that various state agencies and political subdivisions of the state coordinate their actions in maintaining water quality. That in furtherance of this requirement state offices, departments and boards engaged in any water quality activity must, in the performance of their duties, give conscious recognition to, or heed, the statewide policy of water quality control duly formulated and adopted by the state board, and that where the water quality activity of an office, department or board is carried out pursuant to a provision of law which it is specifically required to administer, the state board's policy or ruling in the case is entitled to great weight and consideration and should be adhered to unless to do so would abrogate the duties or responsibilities under other laws of the state of the office, department or board.

"Thus, where specific authorization to engage in water quality activities has been granted by the Legislature to a state department, office or board, the enactment of Chapter 1463 effectively directs them to carry out their functions in the light of such statewide policy on water quality as the state board may from time to time adopt."

The first paragraph quoted from the Attorney General's Opinion No. 64/218 makes it clear that only the state board has the authority to establish water quality policy and that only the state board's authority to adopt policy for water pollution control is tempered by the language "with due regard for the authority of the regional boards." The opinion further states that the adoption of water quality policy by the state board "is not so qualified." Furthermore, the sweeping language and broad implications of the last two quoted paragraphs in the opinion attributes a paramount role to the state board in all water quality matters except where specific statutory language governing other department or agencies would be "abrogated."

The opinion confirms the concern of the regional boards and many water interests that S.B. 1096 provides no role for the regional boards in establishing water quality policy and limits the regional boards to their existing authority to establish water pollution objectives. This was not the intention of the author of S.B. 1096, Senator George Miller, Jr. At a meeting of the policy committee of the state board on April 21,

1964, Senator Miller clearly stated that in Water Code Section 13022, the language "with due regard for the authority of the regional boards" applied to the establishment of policy for water quality control as well as policy for water pollution control. (Page 8, transcript of meeting furnished to the subcommittee by the state board and available in the subcommittee's files.)

The foregoing discussion indicates that the implementation of S.B. 1096 has not developed as expected by the author of the legislation. Difficulties under the language of S.B. 1096 soon arose when the state board, on August 5, 1964, considered a resolution to carry out its new water quality responsibilities. The resolution indicated that the state board would proceed to establish policy on various problems of water quality. It did not indicate any significant intent to work with the regional boards in establishing such policy. The regional boards objected to the absence of any role for them and the state board then amended the resolution to make specific commitments to cooperate with the regional boards. Thus, as a matter of policy, the state board has determined that it will work with the regional boards in establishing water quality policy. Although this decision of the state board determines that the regional boards will contribute to the establishment of water quality policy by the state board, it of course does not and cannot grant authority to the regional boards to establish water quality policy within their respective regions.

Those witnesses before the subcommittee who testified on the matter stated that the relatively autonomous nature of the regional boards should be retained and some of them suggested that the regional boards be given authority over water quality. No objections were expressed to the action of the Legislature in giving authority to the state board to establish water quality policy. Under these circumstances, the obvious solution to the problem is to grant authority to the regional boards to establish regional water quality policy. This solution is also logical since it would provide machinery at the regional level to handle the many local problems relating to water quality which cannot now be approached except through action of the state board.

The subcommittee therefore recommends that authority to establish regional water quality policy be granted to the regional boards. When this is done, the name of the regional boards should be changed to water quality control boards. Such a change in board titles will eliminate an unusually awkward situation at present in which the state and regional boards have different titles. Thus, the state board would establish statewide water quality control policy while the regional boards would establish regional water quality control policy. The regional policy would at all times be subordinate to the statewide policy. The subcommittee also considers it desirable to add language to require a public hearing before either the state or regional boards establish water quality policies.

S.B. 1096 gave the state board no enforcement powers other than its present power to enforce waste discharge requirements where water pollution is involved. No consideration has been given by the subcommittee to granting any enforcement powers to the state or regional boards over matters of water quality. No witnesses suggested such

action. The subcommittee recommends that the water quality authority of both the state and regional boards remain without enforcement powers. The policy is merely an affirmation of desirable objectives to be carried out by all state agencies in the conduct of any affairs which involve water quality and to guide the regional boards in establishing waste discharge requirements.

III. BIODEGRADABILITY OF DETERGENTS

Assembly Bill No. 228 (Allen) and Assembly Bill No. 1686 (Chapel)

FINDINGS

The subcommittee found that the detergent soap industry has made rapid progress in developing and bringing to the market new biodegradable detergents of a high quality. As a consequence there will be no need for the enactment of legislation to establish standards of biodegradability of detergents marketed in California.

RECOMMENDATIONS

The subcommittee recommends no legislation to control the biodegradability of detergents but that experience with the use of new biodegradable detergents be observed carefully by the State Water Quality Control Board.

HEARING ON A.B. 228 AND A.B. 1686

A.B. 228 (Allen) would have given authority to the State Water Pollution Control Board (now the State Water Quality Control Board) to establish standards for the biodegradability of synthetic detergents where necessary to prevent excessive concentrations of the detergent in the waters of the state. The bill further declared it to be unlawful to sell in California any detergent which does not meet the board's standards.

A.B. 1686 (Chapel) would have authorized similar standards to be established by the State Department of Public Health and also would have made it unlawful to sell any detergents which did not comply with the standards. These two bills were used by the subcommittee as a vehicle to determine the progress of the detergent industry in developing new detergents.

The problem of biodegradability of synthetic detergents arises because the housewife and industries using cleaners have come to prefer synthetic detergents to the other types of soaps available. These synthetic detergents are considered to do a better cleaning job, to be more effective in hard water and to produce less objectionable scum. Unfortunately, the alkyl benzene sulfonate, or ABS, contained in these detergents tends to foam and this foaming action is not degraded or reduced rapidly by bacterial decomposition in ordinary sewage treatment plants. As a result, foaming has occurred at sewage treatment plants, on streams where treated sewage is discharged and even in groundwater pumped from basins where synthetic detergents in waste waters eventually percolate back into the groundwater aquifer. The foaming in water supplies has been considered particularly obnoxious by the public, probably because it is a reminder of the reuse of waste water. No adverse effects on humans or other life from the presence of alkyl benzene sulfonate have been demonstrated. Nevertheless, its foaming

characteristic has resulted in many public demands to control the use of this type of synthetic detergent. Having recognized this problem, the detergent soap industry began efforts several years ago to develop a new biodegradable synthetic detergent, that is, one that will decompose and lose its foaming action more rapidly under bacterial attack.

In the 1963 General Session, A.B. 2341 (Quimby) was passed (Chapter 1578) which directed the State Water Quality Control Board together with the Departments of Water Resources and Public Health, to study the need for standards of biodegradability for synthetic detergents. Work on this project has been proceeding and constituted an obvious source of information for the subcommittee to determine the need for biodegradability standards for detergents. In addition, the subcommittee requested testimony from a panel of representatives from the detergent industry to detail their progress in bringing new biodegradable detergents to the market. A hearing to secure this testimony was held in Los Angeles on September 11, 1964.

The State Water Quality Control Board reported that work is progressing on the study required by A.B. 2341 but that no firm conclusions had been reached. Data becoming available on the biodegradability of the new detergents is being collected by the University of California under other statutes but is being reported as part of the project. This data indicates to date that the new detergents have the biodegradability claimed for them which is roughly equivalent to the biodegradability of other organic substances in waste water.

A panel of representatives from the synthetic soap industry appeared before the subcommittee to report on the industries' progress in developing new biodegradable detergents, the best known of which is called linear alkylate sulfonate, or LAS. The panel consisted of a representative of the Soap and Detergent Association, a representative of a company which is manufacturing raw materials for detergents, and two representatives of firms marketing synthetic detergents.

The panel reported that the original schedule of the industry to have all production of detergents shifted to the new biodegradable detergents by the end of 1965 would be exceeded and that it should be completed by June 30, 1965. The panel also indicated that ample capacity to produce the new detergents is being constructed, that the price of the new material will be about the same as present detergents, and that its cleaning quality is considered equivalent to present detergents. The panel further indicated the industry planned to shift to the new detergents without making a public announcement of the change.

In view of the information developed at the hearing, the subcommittee found no basis for recommending enactment of regulatory legislation such as A.B. 228 and A.B. 1686. The subcommittee cannot anticipate the final results of the technical evaluation of LAS and other new detergents being made by the State Water Quality Control Board under A.B. 2341 or the possibility that new and unforeseen problems will arise when the new detergents become widely used. It therefore recommends that the State Water Quality Control Board observe carefully the actual experience with LAS and other new detergents and advise the Legislature immediately if any difficulties occur from its use.

IV. REPORT OF FULL COMMITTEE

SEA WATER INTRUSION FROM MARINAS AND OTHER EXCAVATIONS

(House Resolution 71, 1963 General Session)

FINDINGS

The committee's investigation and hearing identified only two areas where problems were suspected to exist or may exist because of the intrusion of sea water into ground water basins due to the construction of marinas or other excavations such as navigation or flood control channel construction. Subsequent investigation since the hearing indicates that no evidence of a problem presently exists in the Huntington Harbor area while there is still uncertainty about the causes of intrusion along the Ballona Creek flood channel. In other areas, sea water intrusion appears to result from overpumping of ground water basins and has not been attributed to excavations which remove the impervious clay or other similar barriers to movement of sea water into fresh ground water basins.

Since the committee's hearing, the State Water Quality Control Board has adopted Resolutions Nos. 64-4 and 64-5 which provide state policy on intrusion and administrative machinery adequate for the severity of the problem presently existing and foreseeable in the immediate future. This action has been taken under the provisions of S.B. 1096 (Chapter 1463, Statutes of 1963) which empowered the board to establish policy for maintaining the water quality of the state.

RECOMMENDATIONS

The committee recommends the enactment of no legislation at the present time but recommends that the construction of marinas and other works be initially observed along with the results obtained from the water quality policy established by the State Water Quality Control Board. If a clearly identifiable problem arises in the future, legislation should then be considered.

REPORT ON HEARING

House Resolution 71 (Porter) was introduced by the committee chairman because of indications that problems were developing, particularly in southern California, from the intrusion of sea water into ground water basins due to the construction of marinas and other coastal facilities. The resolution directed a legislative study of the problem and the preparation of a report to the Legislature on the result of the investigation along with appropriate recommendations for legislation.

A hearing was held in Fullerton, California, on December 18, 1963, to receive testimony on the problems involved. A first objective of the

committee was to determine the existence or the extent of the existence of the problem. Testimony was therefore requested from all state and federal agencies having any authority or data pertaining to the construction of marinas, flood control channels, navigation works or other facilities involving coastal or tidewater excavation. Letters were also sent to all the coastal counties in southern California to elicit information on any problem areas which might be unknown at the state and federal levels.

Only two problem areas were identified. The first was the construction of Huntington Harbor in Orange County. Testimony from representatives of the Orange County Water District and the Huntington Harbor Corporation indicated that the possibility of sea water intrusion due to the construction of the project was recognized by all concerned. As a result the corporation undertook a study of the possibility that intrusion would occur and agreed to establish five monitoring wells to determine whether any intrusion did occur. An inquiry to the Orange County Water District and the Department of Water Resources during August 1964 showed that almost a year after the committee's hearing, no intrusion had occurred to date but there can be no certainty that it will not occur in the future.

The second intrusion area was around the Marina Del Rey and the flood control channel of Ballona Creek. At the time of the hearing last year, data were being collected that showed some possibility of intrusion. A further check with the Department of Water Resources during August 1964 indicated that the department has found evidence of intrusion in its sampling of wells in the area. A check with the Los Angeles County Flood Control District brought the response that intrusion was evident in years past and that responsibility of the Ballona Creek flood control work for this intrusion was not clear. Thus the cause and significance of the intrusion appears to remain in doubt but not the fact of its existence. This is the only area in the state where intrusion which may be attributable to excavation or construction activity was found.

Normally a ground water basin along a coastline has good quality water because the ground water is under hydraulic pressure from the ground water at higher elevations in the inland portions of the basin. This pressure forces the fresh water into the portions of the ground water basin under the coastline and even under the ocean. The fresh water thus acts as a barrier to the intrusion of sea water into the aquifer. However, if overpumping of the ground water basin reduces the level of water in the basin, eliminates the hydraulic pressure or even results in an inland flow of water from the portions of the aquifer under the ocean, intrusion of the sea water will occur even without being facilitated by construction or excavation works. When these same conditions occur and construction activities remove the impermeable layers of clay or other material which separate the fresh water basin from sea water, intrusion of sea water is further facilitated. If, however, the ground water basin were under pressure, the intrusion of sea water still would not normally occur. Thus, overpumping of a ground water basin is normally a prerequisite to the existence of intrusion due to construction works.

In its study of ground water problems two years ago (see *Ground Water Problems in California*, December 1962, Volume 26, Number 4, of Assembly Interim Committee Reports), this committee concluded that the nature of the corrective action needed to solve ground water overdraft and recharge problems was largely local. Local understanding of the problem and a local recognition of the benefits to the area from preventing overdraft or financing its correction are the major steps leading to improvement.

The committee's conclusions in its report on ground water are pertinent to the present problem of sea water intrusion. The construction of works with an intrusion potential is presently not a state responsibility. The financing of corrective action to recharge ground water basins is essentially a local responsibility with the benefits received by local water users.

One approach that was overlooked at the time of the committee's hearing was the augmented authority granted to the State Water Quality Control Board by the Legislature in 1963 when it enacted S.B. 1096 (Chapter 1463). This legislation amended the State Water Pollution Act to add a definition of water quality control as "the control of any factor which adversely and unreasonably impairs the quality of the waters of the state for beneficial use." (Sec. 13005.) Section 13022 was also amended to read "The state board shall formulate and adopt a statewide policy for control of water pollution with due regard for the authority of the regional boards and shall formulate and adopt a statewide policy of water quality control. Such policies shall be in conformity with the policies set forth in Chapter 1 (commencing with Section 13000), and state offices, departments, and boards shall take cognizance of such policies in carrying out water quality activities."

Pursuant to this new authority to establish statewide policy for water quality control, the State Water Quality Control Board on April 8, 1964, adopted Resolution No. 64-4. After setting forth the nature of the intrusion problem, the resolution states as follows:

Resolved, That the State Water Quality Control Board (1) reeognizes that sea water intrusion is a major and urgent water quality control problem in California (2) finds that the problem of sea water intrusion falls within the statutory definition of "water quality control," and (3) declares its intention to establish water quality control policy in this subject area; and be it further

Resolved, That the state board declares that all reasonable measures should be taken to reverse existing encroachments of sea water in ground water basins and to prevent intrusion into basins not yet damaged; and be it further

Resolved, That the state board request the Department of Water Resources to provide technical counsel, submit recommendations for state board policy actions, and report periodically to the board on all aspects of sea water intrusion; and be it further

Resolved, That the state board establish water quality control policy for those areas in which ground water quality could be adversely affected by sea water intrusion resulting from coastal or embayment dredging or excavation; and be it further

Resolved, That the U.S. Corps of Engineers, the State Department of Parks and Recreation (Division of Small Craft Harbors), the State Lands Division of the Department of Finance, and the U.S. Geological Survey be urged to give consideration to the possibility of ground water quality degradation by sea water intrusion whenever said agencies are reviewing or appraising projects which entail coastal or embayment dredging, and to advise the state board whenever it appears that such projects might threaten ground water quality by sea water intrusion; and be it further

Resolved, That the Department of Water Resources be requested to have made a review of all projects of proposed coastal or embayment dredging to determine whether such practice will threaten to accelerate sea water intrusion into coastal ground water basins, and to report such findings to the State Water Quality Control Board; and be it further

Resolved, That copies of this resolution be transmitted to the appropriate representatives of the U.S. Corps of Engineers, the U.S. Geological Survey, and the state departments of Water Resources, Parks and Recreation, and Finance.

At the same time the board also adopted Resolution No. 64-5 which states "That the regional water pollution control boards be requested to advise the State Board whenever it appears that projects of coastal or embayment dredging might threaten coastal basin ground water quality by sea water intrusion;".

By adopting these two resolutions, the state board set up machinery for the state to be informed of projects which may involve sea water intrusion, to provide for the technical review of these projects by the Department of Water Resources, to request the federal agencies to give consideration to the possibility of ground water quality degradation by sea water intrusion at federal projects, and finally to state the policy of the state board that all reasonable measures should be taken to reverse existing encroachments of sea water in overdrafted ground water basins and to prevent intrusion into basins. These steps are substantially in line with the recommendations for corrective action made to the committee at its hearing. Although some more stringent legislation was recommended at the hearing, the testimony did not develop evidence of a problem severe enough to warrant steps any stronger than that taken by the State Water Quality Control Board which action was directly responsive to the hearing held by the committee.

The introduction of H.R. 71 and the committee's hearing coincided with active investigation and determination of courses of action in Orange County for construction of the Huntington Harbor Project. This may have been fortunate, since it focused considerable attention on this project. The record indicates that the Huntington Harbor Corporation recognized its responsibilities and acted to fulfill them. This has set a pattern of investigation of geologic conditions and agreement on establishing monitoring wells which the committee believes can serve as a precedent for any future conditions of a similar type which may arise.

At its hearing, the committee was also pledged the full cooperation of all federal and state agencies which have responsibilities for planning, constructing, or approving harbor and other coastal projects. State agencies with the primary responsibility are covered by Resolution 64-4 of the State Water Quality Control Board. The circumstances involved in each project are different. The best assurance that the intrusion problems will be properly evaluated and resolved lies in the expressed intentions of these agencies to live up to their commitments. This is further reinforced by the policy pronouncements of the State Water Quality Control Board.

The committee requests the State Water Quality Control Board and the Department of Water Resources to inform the Legislature if any conditions arise in the future that existing machinery cannot handle and specifically to seek corrective action if subsequent data verify beyond doubt the existence of an intrusion problem at Ballona Creek.

APPENDIX

PROPOSED SUBCOMMITTEE LEGISLATION

A.

An act to amend Section 13005 of, and to add Section 13025.5 to, the Water Code, relating to water pollution.

The people of the State of California do enact as follows:

1 SECTION 1. Section 13005 of the Water Code is amended to
2 read:

3 13005. "State board" means the State Water Quality Con-
4 trol Board.

5 "Regional board" means any regional water pollution con-
6 trol board created pursuant to this division.

7 "Person" as used in this division also includes any city,
8 county, ~~or~~ district, the state or any department or agency
9 thereof.

10 "Sewage" means any and all waste substance, liquid or
11 solid, associated with human habitation, or which contains or
12 may be contaminated with human or animal excreta or excre-
13 ment, offal, or any feculent matter.

14 "Industrial waste" means any and all liquid or solid waste
15 substance, not sewage, from any producing, manufacturing
16 or processing operation of whatever nature.

17 "Waters of the state" means any waters, surface or under-
18 ground, including saline waters, within the boundaries of the
19 state as defined and described in Section 1 of Article XXI
20 of the Constitution and as given greater precision in Sections
21 170, 171, and 172 of the Government Code.

22 "Contamination" means an impairment of the quality of
23 the waters of the state by sewage or industrial waste to a de-
24 gree which creates an actual hazard to the public health
25 through poisoning or through the spread of disease. "Con-
26 tamination" shall include any equivalent effect resulting from
27 the disposal of sewage or industrial waste, whether or not
28 waters of the state are affected.

29 "Pollution" means an impairment of the quality of the
30 waters of the state by sewage or industrial waste to a degree
31 which does not create an actual hazard to the public health
32 but which does adversely and unreasonably affect such waters
33 for domestic, industrial, agricultural, navigational, recrea-
34 tional or other beneficial use, or which does adversely and
35 unreasonably affect the ocean waters and bays of the state
36 devoted to public recreation.

1 "Nuisance" means damage to any community by odors or
2 unsightliness resulting from unreasonable practices in the dis-
3 posal of sewage or industrial wastes.

4 "District attorney," as used in this division, means "county
5 counsel" with respect to any county having such an officer and
6 "city attorney" with respect to any city and county having
7 such an officer as to all matters except the prosecution of
8 crimes.

9 "Water quality control" means the control of any factor
10 which adversely and unreasonably impairs the quality of the
11 waters of the state for beneficial use.

12 "Water quality control policy" means water quality objec-
13 tives for affected waters of the state where water quality con-
14 trol measures are necessary or may be needed in the future
15 to assure suitable water quality for beneficial use.

16 SEC. 2. Section 13025.5 is added to said code, to read:

17 13025.5. In the event a waste discharge in one region affects
18 the waters in another region and there is any disagreement
19 between the regional boards involved as to the requirements
20 which should be established, either regional board may submit
21 the disagreement to the State Water Quality Control Board
22 which shall determine the applicable requirements.

B.

An act to add Section 13009 to, and to amend Sections 13000, 13001, 13003, 13005, 13022, 13050, and 13052 of, and to amend the heading of Chapter 4 (commencing with Section 13040) of Division 7 of, and to repeal Section 13000.4 of, the Water Code, relating to water quality control.

The people of the State of California do enact as follows:

1 SECTION 1. Section 13000 of the Water Code is amended
2 to read:

3 13000. The Legislature finds and declares that it is neces-
4 sary to the health, safety and welfare of the people of this
5 state to provide means for coordinating the actions of the vari-
6 ous state agencies and political subdivisions of the state in
7 the control of water pollution and the maintenance of water
8 quality.

9 The Legislature further declares that it is necessary to
10 provide means for the regional control of water pollution and
11 water quality since problems of water pollution and water
12 quality in this state are primarily regional and dependent
13 upon factors of precipitation, topography, population, and
14 recreational, agricultural and industrial development which
15 vary greatly from region to region, and to provide for co-
16 ordinated statewide control of water quality since where water
17 quality is a matter of statewide interest and concern.

18 SEC. 2. Section 13000.4 of said code is repealed.

19 ~~13000.4. The Legislature finds and declares that, because~~
20 ~~of the widespread demand and need for the full utilization of~~
21 ~~the water resources of the state for beneficial uses, maintenance~~
22 ~~of water quality is a matter of statewide interest and concern.~~

23 SEC. 3. Section 13001 of said code is amended to read:

24 13001. No provision of this division or any ruling of the
25 State Water Quality Control Board or a regional water pollu-
26 tion quality control board is a limitation:

27 (a) On the power of a city or county to adopt and enforce
28 additional regulations not in conflict therewith imposing fur-
29 ther conditions, restrictions, or limitations with respect to the
30 disposal of sewage or industrial waste or any other activity
31 which might result in the pollution of water.

32 (b) On the power of any city or county to declare, prohibit,
33 and abate nuisances.

34 (c) On the power of a state agency in the enforcement or
35 administration of any provision of law which it is specifically
36 permitted or required to enforce or administer.

37 (d) On the right of any person to maintain at any time any
38 appropriate action for relief against any private nuisance as
39 defined in the Civil Code or for relief against any contamina-
40 tion or pollution.

1 SEC. 4. Section 13003 of said code is amended to read:
2 13003. It is the intent of the Legislature that the State
3 Water Quality Control Board and each regional water ~~pollu-~~
4 ~~tion~~ *quality* control board shall cooperate with the Depart-
5 ment of Water Resources and other state agencies in all mat-
6 ters of mutual concern to the fullest extent practicable.

7 SEC. 5. Section 13005 of said code is amended to read:

8 13005. "State board" means the State Water Quality Con-
9 trol Board.

10 "Regional board" means any regional water ~~pollution~~ *qual-*
11 *ity* control board created pursuant to this division.

12 "Person" as used in this division also includes any city,
13 county or district.

14 "Sewage" means any and all waste substance, liquid or
15 solid, associated with human habitation, or which contains or
16 may be contaminated with human or animal excreta or excre-
17 ment, offal, or any feculent matter.

18 "Industrial waste" means any and all liquid or solid waste
19 substance, not sewage, from any producing, manufacturing
20 or processing operation of whatever nature.

21 "Waters of the state" means any waters, surface or under-
22 ground, including saline waters, within the boundaries of the
23 state as defined and described in Section 1 of Article XXI of
24 the Constitution and as given greater precision in Sections
25 170, 171, and 172 of the Government Code.

26 "Contamination" means an impairment of the quality of
27 the waters of the state by sewage or industrial waste to a
28 degree which creates an actual hazard to the public health
29 through poisoning or through the spread of disease. "Contam-
30 ination" shall include any equivalent effect resulting from the
31 disposal of sewage or industrial waste, whether or not waters
32 of the state are affected.

33 "Pollution" means an impairment of the quality of the
34 waters of the state by sewage or industrial waste to a degree
35 which does not create an actual hazard to the public health but
36 which does adversely and unreasonably affect such waters for
37 domestic, industrial, agricultural, navigational, recreational or
38 other beneficial use, or which does adversely and unreasonably
39 affect the ocean waters and bays of the state devoted to public
40 recreation.

41 "Nuisance" means damage to any community by odors or
42 unsightliness resulting from unreasonable practices in the dis-
43 posal of sewage or industrial wastes.

44 "District attorney," as used in this division, means "county
45 counsel" with respect to any county having such an officer and
46 "city attorney" with respect to any city and county having
47 such an officer as to all matters except the prosecution of
48 crimes.

49 "Water quality control" means the control of any factor
50 which adversely and unreasonably impairs the quality of the
51 waters of the state for beneficial use.

1 "Water quality control policy" means water quality objec-
2 tives for affected waters of the state where water quality con-
3 trol measures are necessary or may be needed in the future to
4 assure suitable water quality for beneficial use.

5 SEC. 6. Section 13009 is added to said code, to read:

6 13009. The state and regional boards shall not adopt a
7 water quality control policy unless a public hearing is first held
8 respecting the adoption of such policy.

9 SEC. 7. Section 13022 of said code is amended to read:

10 13022. The state board shall formulate and adopt a state-
11 wide policy for control of water pollution *and water quality*
12 *control* with due regard for the authority of the regional boards
13 ~~and shall formulate and adopt a statewide policy of water~~
14 ~~quality control~~. Such policies shall be in conformity with the
15 policies set forth in Chapter 1 (commencing with Section
16 13000), and state offices, departments, and boards shall take
17 cognizance of such policies in carrying out water quality ac-
18 tivities.

19 SEC. 8. The heading of Chapter 4 (commencing with Sec-
20 tion 13040) of Division 7 of said code is amended to read:

21
22 CHAPTER 4. REGIONAL WATER ~~POLLUTION~~ QUALITY
23 CONTROL BOARDS
24

25 SEC. 9. Section 13050 of said code is amended to read:

26 13050. Each regional board shall:

27 (a) Establish an office.

28 (b) Select one of its members as chairman at the first
29 regular meeting held each year.

30 (c) Appoint as its confidential employee, exempt from civil
31 service, under Section 4(a)(5) of Article XXIV of the Con-
32 stitution, and fix the salary of, an executive officer who shall
33 meet technical qualifications as defined by the State Water
34 *Pollution Quality* Control Board. The executive officer shall
35 serve at the pleasure of the regional board.

36 Notwithstanding the amendment of this subdivision at the
37 1963 Regular Session, any person incumbent in the position of
38 executive officer on the effective date of such amendment shall
39 continue to serve at the pleasure of his appointing board.

40 (d) Employ such other assistants as may be determined
41 necessary to assist the executive officer.

42 SEC. 10. Section 13052 of said code is amended to read:

43 13052. Each regional board, with respect to its region,
44 shall:

45 (a) Obtain coordinated action in the abatement, prevention
46 and control of water pollution and nuisance by means of for-
47 mal or informal meetings of the persons involved;

48 (b) Encourage and assist in self-policing waste disposal pro-
49 grams for industry, and upon application of any person shall
50 advise the applicant of the condition to be maintained in any
51 disposal area or receiving waters into which the waste is being
52 discharged;

- 1 (c) Require any state or local agency to inspect and report
2 on any technical factors involved in water pollution or nuis-
3 ance;
- 4 (d) Request enforcement of laws concerning water pollution
5 or nuisance by appropriated federal, state and local agencies;
- 6 (e) Formulate and adopt long-range plans and policies with
7 respect to water pollution control *and water quality control*
8 within the region in conformity with the policies set forth in
9 Chapter 1 (commencing at Section 13000) *and any water*
10 *quality control policy adopted by the state board.*
- 11 (f) Recommend to the state board projects for the reduction
12 of water pollution which the regional board considers eligible
13 for any financial assistance which may be available through the
14 state board;
- 15 (g) Report to the state board and appropriate local health
16 officer any case of contamination in its region which is not
17 being corrected.
- 18 (h) File with the state board, at its request, copies of any
19 official action with respect to any particular case of actual or
20 threatened pollution.
- 21 (i) Have the power to require any state or local agency to
22 obtain and submit analyses of well water.

C.

An act to amend Section 13011 of, and to add Section 13014 to, the Water Code, relating to reconstituting state officials as a technical coordinating and advisory committee.

The people of the State of California do enact as follows:

1 SECTION 1. Section 13011 of the Water Code is amended to
2 read:

3 13011. The state board consists of nine members appointed
4 by the Governor and the following officers of the State or their
5 nominees:

6 (a) ~~The Director of Public Health;~~

7 (b) ~~The Director of Water Resources;~~

8 (c) ~~The Director of Conservation;~~

9 (d) ~~The Director of Agriculture;~~

10 (e) ~~The Director of Fish and Game.~~

11 Of the nine these members appointed by the Governor, at
12 least one shall be selected from qualified persons engaged in
13 each of the following fields:

14 (a) Production and supply of domestic water;

15 (b) Irrigated agriculture;

16 (c) Industrial water use;

17 (d) Production of industrial waste;

18 (e) Public sewage disposal;

19 (f) City government;

20 (g) County government.

21 Of the two members appointed by the Governor who are not
22 selected from qualified persons engaged in a field specified in
23 this section, one member shall be a person, not employed by
24 any governmental agency, from a responsible organization
25 associated with both recreation and wildlife, and one member
26 shall be a person not specifically associated with any of the
27 foregoing interests representing the public at large.

28 Insofar as reasonably practicable the Governor shall appoint
29 a member from each of the nine regions defined in Section
30 13040.

31 Of the members originally appointed to the state board,
32 three members shall be appointed for a term of two years com-
33 mencing on the effective date of this act; three members shall
34 be appointed for a term of three years commencing on the
35 effective date of this act; and three members shall be appointed
36 for a term of four years commencing on the effective date of
37 this act. Thereafter, all members shall be appointed for a term
38 of four years. Vacancies shall be immediately filled by the
39 Governor for the unexpired portion of the terms in which
40 they occur.

- 1 SEC. 2. Section 13014 is added to said code, to read:
2 13014. The following officers of the state or their nominees
3 shall act as a technical coordinating and advisory committee
4 to the state board but shall not be members thereof:
5 (a) The Director of Public Health;
6 (b) The Director of Water Resources;
7 (c) The Director of Conservation;
8 (d) The Director of Agriculture;
9 (e) The Director of Fish and Game.

D.

*Assembly Joint Resolution No. ----
Relating to water pollution*

1 WHEREAS, The control of pollution of the waters of this
2 nation is fast becoming one of the most pressing problems
3 faced by conservationists desiring to preserve our water re-
4 sources for the future; and

5 WHEREAS, Although vast improvement has been made in
6 recent years in many areas in the control of water pollution,
7 there yet remains much which must be done to properly pro-
8 tect the water resources; and

9 WHEREAS, The ever increasing pressure of an expanding
10 population has extended the burden of protecting our water
11 purity to every level of civilian and governmental activity;
12 and

13 WHEREAS, Federal governmental agencies are presently di-
14 rected, in keeping with the Federal Water Pollution Control
15 Act, to do no more than cooperate with the Department of
16 Health, Education and Welfare in controlling pollution from
17 any property over which the agencies have jurisdiction; and

18 WHEREAS, The State of California has enacted laws to con-
19 trol pollution of its waters and is endeavoring to maintain
20 high quality water for all beneficial uses; and

21 WHEREAS, There is a strong belief in California that both
22 federal and state waste discharges should be controlled, and
23 the California State Legislature is now considering such legis-
24 lation; such legislation to apply to state agencies; and

25 WHEREAS, In direct implementation of the declared policy
26 of Congress and as necessary to provide effective control of
27 water pollution which may adversely effect the health and
28 welfare of the public, S. 649 of the 88th Session as originally
29 introduced would have required a permit from the Department
30 of Health, Education and Welfare for any federal agency to
31 dispose of any matter into waters of the United States; now,
32 therefore, be it

33 *Resolved by the Assembly and Senate of the State of Cali-*
34 *fornia, jointly, That the Congress of the United States is*
35 *memorialized to favorably consider a permit system for federal*
36 *agencies disposing of wastes into waters of the United States;*
37 *and be it further*

38 *Resolved, That the Chief Clerk of the Assembly be hereby*
39 *directed to transmit copies of this resolution to the President*
40 *of the United States, to the President pro Tempore of the*
41 *Senate, to the Speaker of the House of Representatives, and*
42 *to each Senator and Representative from California in the*
43 *Congress of the United States.*

E.

Assembly Concurrent Resolution No. ---—Relating to water pollution by detergents.

1 WHEREAS, The Subcommittee on Water Pollution of the
2 Assembly Interim Committee on Water has completed a two-
3 year study of the biodegradability of synthetic detergents; and

4 WHEREAS, Said committee recommended in its report that
5 the State Water Quality Control Board observe carefully the
6 actual experience with LAS-type and other new detergents and
7 advise the Legislature if difficulties occur from their use; and

8 WHEREAS, The report of a study by the State Water Quality
9 Control Board, State Department of Water Resources, and
10 State Department of Public Health pursuant to Section 103026
11 of the Water Code shows the progress already made in control
12 of pollution from detergents and notes the advancements made
13 by the detergent industry in converting from hard (ABS-type)
14 detergents with a low level of biodegradability, with a hopeful
15 solution to the major problems when such conversion is com-
16 pleted; now, therefore, be it

17 *Resolved by the Assembly of the State of California, the*
18 *Senate thereof concurring,* That the State Water Quality Con-
19 trol Board is directed to continue to study the effect of biode-
20 gradable detergents on the quality of the waters of the state;
21 and be it further

22 *Resolved,* That the board report briefly to the Legislature at
23 the 1967 Regular Session on the results of its study including
24 recommendations as to whether or not standards of biodegrad-
25 ability for detergents should be enacted into law; and be it
26 further

27 *Resolved,* That the Chief Clerk of the Assembly shall trans-
28 mit a copy of this resolution to the State Water Quality Con-
29 trol Board.

OFFICE OF THE ATTORNEY GENERAL
STATE OF CALIFORNIA

STANLEY MOSK
Attorney General

OPINION

of

STANLEY MOSK
Attorney General

J. M. SANDERSON
Deputy Attorney General

No. 64/97
June 23 1964

THE SAN FRANCISCO BAY REGIONAL WATER POLLUTION CONTROL BOARD requests the opinion of this office on the following questions:

“Does this Regional Board have the power to regulate the discharge of wastes *into* this Region (including sewage and industrial wastes) when such wastes originate *outside* the boundaries of this Region and are conveyed to San Francisco Bay (within this Region’s boundaries) by means of drainage canals, it being understood that such drainage canals would be constructed as part of the California Water Plan?

“Does this Regional Board have power to regulate waste discharges which originate outside its regional boundaries but which enter the Region by means of natural streams?”

The conclusions are:

1. A regional water pollution control board has no authority to prescribe requirements for discharges from works operated by the State of California or by the United States or by a joint venture of the State and the United States.

2. The San Francisco Regional Water Pollution Control Board has no authority to prescribe water discharge requirements for discharges originating outside its regional boundaries and entering the region through natural streams. If the waste is carried by means of drainage canals and discharged into the region, the board would have authority to prescribe requirements.

ANALYSIS

Both of the questions propounded include to some extent the problem of regulating waste discharges which occur outside of the particular region involved but are carried into the region by means of natural stream channels.

The Water Pollution Control Act was established by the Legislature on a regional basis with each region to be responsible for conditions of pollution or nuisance within that region. Section 13000 of the Water Code provides as follows: “The Legislature further declares that it is necessary to provide means for the regional control of water pollution since problems of water pollution in this state are primarily regional. . . .” (All section references are to the Water Code.) For this pur-

pose section 13040 divides the State into nine separate regions. The entire State is included within these nine regions and no overlap of regions occur. In addition, the control program established by the Water Pollution Control Act is also set up on a regional basis. Section 13053 provides as follows: "Each regional board shall prescribe requirements relative to any particular condition of pollution or nuisance, existing or threatened *in the region.*" (Emphasis added.) Other sections are similarly worded and clearly indicate that a regional board may act with regard to waste discharges only on such discharges as occur in its own region. For example, see sections 13054, 13054.1, 13054.3, 13055, 13060 and 13080. Further, section 13025 provides that the State Board may act when a regional board fails to take appropriate action to correct conditions of pollution or nuisance. (Therefore if conditions of pollution or nuisance were permitted in a region adjoining the San Francisco Bay region and adversely affecting the San Francisco Bay region, the State Board could be called upon to correct the situation.)

It is therefore our conclusion that the San Francisco Bay Regional Water Pollution Control Board does not have power to regulate waste discharges originating outside of its regional boundaries. The regional board, however, would have power to regulate the discharge of wastes by means of drainage canals in which discharges occur within the region. A drainage canal would present no different situation than would that where an industrial concern establishes its plant in one region but conveys by pipeline its discharge into a different region. The region wherein the discharge occurs has the jurisdiction to regulate the nature of that discharge. The material carried by drainage canals, however, might not fall into the definitions of either sewage or industrial wastes. It is possible that drainage canals would carry runoff materials which are not the result of a producing, manufacturing or processing operation, nor would such runoff material constitute sewage. In such a case the discharge would not be of the nature over which a regional water pollution control board would have jurisdiction.

Assuming, however, that the drainage canals carry return waste resulting from the irrigation of farm land, then such water would constitute liquid waste resulting from a producing, manufacturing and processing operation and would, therefore, be subject to the control of a regional water pollution control board.

Assuming further, however, that the drainage canals are operated by the State of California under the California Water Plan or by the United States or by a joint venture of the State and the United States, a regional board has no authority under the Water Code to prescribe requirements upon either of those two agencies. The regional board's authority to prescribe requirements applies to persons as that word is defined in sections 19 and 13005. Since neither the State of California nor the United States is mentioned in that section, the regional board has no legal authority to prescribe requirements for discharges by either of those agencies. 45 Cal. Jur. 2d, *Statutes*, §§ 123, 133 (1958). The regional board could, of course, make recommendations to these agencies to assist them in developing programs and projects which would avoid the creation of conditions of pollution or nuisance.

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER
December 31, 1964

HONORABLE JESSE M. UNRUH,
Speaker of the Assembly
MEMBERS OF THE ASSEMBLY
State Capitol
Sacramento, California

Gentlemen:

I have the pleasure to transmit herewith the latest progress report of the Assembly Interim Committee on Water covering recent developments in saline conversion and nuclear energy as they apply to the water problems of California and specifically to the State Water Project. The report was prepared by the Subcommittee on Saline Conversion and Nuclear Energy and was adopted by the full committee.

Respectfully submitted,

CARLEY V. PORTER, Chairman
Assembly Interim Committee on Water

Hale Ashcraft
Frank P. Belotti
John L. E. Collier
Gordon Cologne
William E. Dannemeyer *
Pauline L. Davis (with some reservations)

SUBCOMMITTEE LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER
December 24, 1964

ASSEMBLY INTERIM COMMITTEE ON WATER
Assembly Post Office Box 38
State Capitol
Sacramento, California

Gentlemen:

Transmitted herewith is the report of the Subcommittee on Saline Conversion and Nuclear Energy of the Assembly Interim Committee on Water. The subcommittee's report is entitled "Report on Saline Conversion and Nuclear Energy."

The report reviews developments in the field of saline conversion and nuclear energy which have occurred since its last report two years ago. These developments have been rapid since both saline conversion and nuclear energy are presently being evaluated for major application to water problems here in California.

The subcommittee recommends that the Metropolitan Water District of Southern California proceed with its studies to determine the feasibility of constructing a large-scale sea water conversion plant. The timing of the engineering studies for this large scale plant coincides closely with the reconstruction of the Point Loma Demonstration plant by the Department of Water Resources and the Office of Saline Water, United States Department of the Interior. It is not clear from the evidence available to the subcommittee whether the Point Loma plant will serve any useful purpose if the much larger plant is constructed by the Metropolitan Water District of Southern California at about the same time. Therefore, the subcommittee has recommended that the Department of Water Resources exercise caution in proceeding with the reconstruction of the Point Loma plant until it can be determined that a useful purpose to the state exists.

The subcommittee has already communicated its major recommendation to the interested parties because of the limitations of time involved. This recommendation is that the Department of Water Resources, the Los Angeles Department of Water and Power, the California Power Pool Companies, the Atomic Energy Commission, the water contractors and other interested groups cooperatively study the unresolved problems discussed in the body of the report and report to the Legislature at least 30 days prior to committing the state to an energy source for the State Water Project pump lifts but in any event no later than June 1, 1965. This recommendation was made because of the subcommittee's finding that more work needed to be done before a commitment is made. The parties listed in the recommendation have already replied to the chairman and indicated their intentions to proceed in line with the recommendation.

The subcommittee chairman and the members of the subcommittee wish to express their appreciation for the staff assistance received from the office of the Legislative Analyst and for the cooperation and excellent testimony presented by witnesses.

Respectfully submitted,

CARLEY V. PORTER, Chairman
Subcommittee on Saline Conversion and
Nuclear Energy

Hale Ashcraft
Gordon Cologne
William E. Dannemeyer *
Houston I. Flounroy

Myron H. Frew
Burt M. Henson
John C. Williamson

* For additional comments by Mr. Dannemeyer see page 27.

FOREWORD

It should be understood in reading the following report that it was prepared between the dates of November 5 and December 8. Furthermore, any and all references and conclusions with regard to nuclear reactor systems are made almost solely on the basis of the testimony submitted to the Assembly Water Committee at the November 5 hearing. The Legislature and its Water Committees are not provided with technical staffs to make detailed engineering analyses and judgments between the different relatively new nuclear systems presently being developed. All references to the seed-blanket reactor (LSBR) in the report are based upon information presented to the Assembly Water Committee by the Department of Water Resources. In the report the term "experimental" is used in contrast to "commercially available" reactors to describe a reactor design on which more research or development work is required before construction can be undertaken. The AEC prefers the term "developmental" instead of "experimental."

I. FINDINGS

The subcommittee found that developments in saline conversion and nuclear energy have been both rapid and spectacular during the last two years. These developments have brought both technologies to the point of final determination of feasibility for limited application to California's water problems.

The Metropolitan Water District is making engineering studies of the feasibility of immediate construction of a sea water conversion plant in the size range of 50 to 150 million gallons per day. The Department of Water Resources is working with the Atomic Energy Commission on the possibility of constructing a seed-blanket, thorium-fueled reactor to supply pumping energy for the State Water Project. If actually constructed, the saline conversion plant and the nuclear reactor would bring to fruition the work undertaken in 1957 by this subcommittee and its predecessor subcommittees to establish the practicability of using saline conversion and nuclear energy in solving California's water problems.* The subcommittee commends all federal, state and local officials as well as the University of California, business firms and many private individuals who have contributed toward the approaching goal.

The subcommittee found that the Department of Water Resources has committed itself by a Memorandum of Understanding to the joint construction with the AEC of a seed-blanket reactor before all the study and evaluation recommended by the Fluor Corporation in its report entitled "Energy Source Study" has been completed and before the views and testimony presented before the subcommittee at its hearing have been adequately considered. The subcommittee found that testimony at its hearing generally indicated it is premature to concentrate on any given source of pumping energy at this time.

* See the following Assembly Interim Committee Reports: *Report of Subcommittee on Water Project Uses for Atomic Power*, Vol. 13, No. 16 (1955-57); *Power for Water*, Vol. 13, No. 27 (1957-59); *Report of Subcommittee on Saline Conversion and Nuclear Energy*, Vol. 26, No. 3 (1959-61); *Saline Conversion and Nuclear Energy*, Vol. 26, No. 7 (1961-63).

II. RECOMMENDATIONS

The subcommittee recommends that the Metropolitan Water District proceed with studies to determine the feasibility of constructing a large-scale sea water conversion plant.

The subcommittee recommends that the Department of Water Resources not make any commitments for joint construction with the AEC of a seed-blanket experimental reactor until (1) an engineering review has been made comparing this reactor with other commercially available reactors and demonstrating the desirability of including this reactor in the State Water Project from the point of view of the State of California and the water contractors, (2) negotiations have been undertaken with the California Power Pool Companies on the purchase of power for project pumping, whether as a major or supplemental source, and a contract has been executed for the sale of Oroville-Thermalito power, and (3) all available data including several recent changes directly involving the power needs of the State Water Project have been established and more fully studied as recommended by the Fluor Corporation report entitled "Energy Source Study."

The subcommittee has always been anxious that the state provide the lowest cost energy for pumping in the State Water Project. The Fluor Report and other recent work have greatly narrowed the choice of energy sources to only a few remaining alternatives. As befits a possible investment of \$80 million in an initial nuclear reactor and a similar amount in a second reactor in the near future, careful study will best serve the needs of the state while refraining from premature decisions. The Fluor Report has indicated that the state has about one year remaining before it must make an initial decision on the first major sources of pumping energy. The subcommittee recommends that the Department of Water Resources, the Los Angeles Department of Water and Power, the California Power Pool Companies, the AEC, the water contractors and other interested groups use this time as profitably as possible in cooperative study of the unresolved problems discussed in the body of this report and such others as may be pertinent and report to the Legislature at least 30 days prior to committing the state to an energy source but in any event no later than June 1, 1965.

III. INTRODUCTION

The Subcommittee on Saline Conversion and Nuclear Energy had its origin in 1957 when then Assemblyman Jack Beaver conceived the idea that nuclear energy might at some future date become a source of low-cost energy for the pump lifts of the State Water Project. Although the project had not been fully authorized and financing had not been provided, Assemblyman Beaver began steps to evaluate the usefulness of nuclear energy. These early evaluations, as set out in the subcommittee's report of 1957, pointed out that "present estimates of the Atomic Energy Commission that atomic energy will become competitive with conventional sources by 1965 are predicated on private development. Consequently, with the historically lower cost of public financing and extended amortization, atomic power may not only be economically feasible but may also be the cheapest source by the time power is needed for pumping in the Feather River Project."

It soon became evident that if a reactor offered low cost energy for transporting water into southern California, this same low-cost energy could also be used to convert sea water. The development of low cost conversion processes could eliminate transporting water over long distances and provide a more direct and easily managed water supply. Assemblyman Beaver secured funds to provide a small staff in the Department of Water Resources to monitor the state's interest in developments involving saline conversion and nuclear energy. Over the intervening years the subcommittee worked closely with the Department of Water Resources in shaping the state's program for nuclear energy and saline conversion. Continuity in the subcommittee's work was maintained by utilizing the staff services of the Office of the Legislative Analyst. Members of that staff have kept contact with the department, the University of California, and other organizations involved in pertinent work so that the subcommittee could be fully informed on all developments.

Since 1957, the subcommittee has produced biennial progress reports which have recorded the developments in nuclear energy and saline conversion that appeared to have significance to the state's water problems. The work of the Department of Water Resources and the University of California have been supported as well as the activities of the Atomic Energy Commission and the Office of Saline Water. An effort was made to secure an early demonstration of the usefulness of saline conversion and nuclear energy when these two techniques were coupled in the initial proposal for the Point Loma sea water conversion demonstration plant. When it became impossible to locate the reactor at the chosen site, a conventional oil-fired boiler was used instead. Since the conversion equipment being demonstrated and the reactor were too small to demonstrate an optimum coupling, no technical loss occurred,

but the opportunity to demonstrate jointly the potential of two new developments was lost.

During the period since 1957, many technical developments have occurred in both saline conversion and nuclear energy. Most of the credit for these developments goes to the Atomic Energy Commission, the Office of Saline Water and the Congress which has authorized extensive research and development programs and provided adequate funding for them. The subcommittee is able to report that the initial goals of applying both saline conversion and nuclear energy to the solution of California's water problems are nearing achievement. Emphasis must still be placed on the term "nearing" for the goal is not reached at this time.

IV. SALINE CONVERSION, HEARING OF DECEMBER 17, 1963

In its last report, the subcommittee was largely guided by the then current technical thinking that there was little possibility for any substantial cost reduction in conversion processes unless basic technological breakthroughs occurred. To this end Congress and the Office of Saline Water had just revised the federal conversion program to add major emphasis on basic research as recommended by the Woods Hole Conference of the National Academy of Sciences.

Meanwhile, Dr. Phillip Hammond, while working at the Los Alamos Laboratories and at Oak Ridge under the auspices of the Atomic Energy Commission, had produced a new concept of optimizing the size of a combined electric generation and sea water conversion plant using a reactor for energy to produce up to one million acre-feet of water per year and several thousand megawatts of electric energy. While some new design concepts were involved, the rumored low cost of about \$35 per acre-foot was the result of greatly increasing the size of the plant and the use of low-cost nuclear energy.

The purpose of the subcommittee's hearing in Fullerton on December 17, 1963 was to secure testimony on various studies that had been made of large scale combinations of electric generators with conversion equipment and using reactors for a heat source. Besides reviewing the progress of the saline conversion research program of the University of California, Professor Everett Howe also discussed the concepts involved in Dr. Hammond's work. Subsequent to the hearing, a report on Dr. Hammond's work entitled, "Large Nuclear Powered Sea Water Distillation Plants" dated March 1964, was released by the United States Office of Science and Technology. This report reviewed the Hammond concept and generally supported its ability to produce water at 20 to 25 cents per thousand gallons and electric energy at 2.3 to 2.5 mils per KWH in about 1975 if adequate development work is done in the intervening years. Because this publication by the federal agencies involved in the work has now been issued, no further data will be provided in the report.

The San Diego Gas and Electric Company testified at the hearing on a study it had completed of a 25-million-gallon-per-day multiple-effect flash evaporator using steam supplied from one of the company's steam-electric generating stations. The study showed that converted sea water could be produced at 41.1 cents/1000 gallons or \$134 per acre-foot, based upon 90 percent load factor, a 6 percent annual fixed capital charge and current fuel costs.

A companion study was made by the City of San Diego to determine whether it could use this water. The city concluded it was unable to utilize the output of the plant because, after the necessary blending of the product water with other water supplies, the production of the plant would substantially exceed the minimum daily demand of the city for water. Furthermore, any reduction in the output of the conversion unit to meet lesser demands would have increased the unit costs

of water sharply. The city studied two alternatives, that of pumping the product water to a major storage reservoir and remineralization of the product water at the conversion plant site for direct pumping into the city's system. The first alternative would have resulted in water costing 46.6 cents/1000 gallons or \$152 per acre-foot. The second would have cost 44.7 cents/1000 gallons or \$145.75 per acre-foot. This price was approximately twice the cost of imported water from the State Water Project. The proposal for a 25-million-gallon-per-day conversion plant was abandoned, but it provided valuable information on the costs of such a plant computed by responsible operating agencies and based on their own knowledge of current operating costs.

The Fluor Corporation described a study of a plant sized for 140,000 acre-feet per year, using nuclear heat and today's technology. This plant, financed by a public agency would produce water at \$101.30 per acre-foot if producing water only, or at costs ranging down to \$83 per acre-foot if various combinations of nuclear-powered steam electric generation were added.

In its testimony the Department of Water Resources stated that "our analyses of large-scale sea water conversion possibilities have indicated that favorable economic comparisons for municipal and industrial water supplies between conversion and extensive imports from northern California may be achieved by projects to be constructed 25 years hence." (Transcript of December 17, 1963, p. 70). In Bulletin 136, p. 145, the North Coastal Investigation, the department also made the same observation.

The purpose of the hearing had been to evaluate whether recent rapid developments in sea water conversion and nuclear energy could supply water competitive with additional imported supplies from the north coastal area by approximately the year 1985 or 1990 when new supplies may be needed. The answer seemed to be yes. More consideration to this conclusion is not given in this report because major events occurring in 1964 overshadowed the conclusions reached in the December 1963 hearing.

V. SALINE CONVERSION, HEARING OF NOVEMBER 5, 1964

During the summer of 1964 the Metropolitan Water District of Southern California reached an agreement with the Office of Saline Water for joint financing of a study involving preliminary design for a sea water conversion plant to be constructed by the district to augment its surface water supplies. This step was extremely important because of the proposed 1970 completion date for the plant, because the Metropolitan Water District has scheduled this water into its supplies available to meet increased demands during the next few years, and because a combination of events leads the district to believe that the plant will be economic for the particular timing and uses proposed. The district proposes to undertake immediate construction of the plant if the 15 months' study shows the expected feasibility.

Because of the significance of the move to saline conversion by the Metropolitan Water District, testimony on this project was requested from the district at the subcommittee's second hearing, which was held in Sacramento on November 5, 1964. The district testified that its interest in conversion had begun when it contracted for a study in 1959 which showed that, based on conservative assumptions with regard to expected technological advances, fresh water from a combination nuclear steam plant and multistage flash distillation plant producing 140,000 acre-feet per year would cost about \$102 per acre-foot if scheduled for completion in 1972, and that under optimistic predictions of future technological advances, a water cost of \$77 per acre-foot could be realized. Early in 1964 the district approved a program leading toward the acquisition of a suitable site for a sea water conversion plant of approximately 150,000-acre-foot-per-year capacity and authorized consultations on the possibility of constructing such a plant.

On August 18, 1964, the district signed a contract with the Office of Saline Water for a joint study to determine the engineering, economic feasibility, and preliminary design of a combination power and desalting plant in the size range of 50 million to 150 million gallons of water per day and 150 to 750 megawatts of electric power production. The contract covers all aspects of plant location, economics, disposition of product water and electric energy, detailed costs and preliminary designs and specifications. The district will pay one-third and the Office of Saline Water two-thirds of the cost of the work which is estimated to total \$450,000.

The district testified that it is undertaking this project with a hoped-for completion date of 1970 even though it will begin to receive water from the State Water Project by 1972. It is doing this for the following reasons:

1. The period prior to delivery of water from the State Water Project is a critical supply period for the district because of questions regarding the sufficiency of the Colorado River water supply of the district. The product water from the plant would be a useful auxiliary source of

supply if there were any delay in completing the State Water Project or the district's connecting facilities to receive the water.

2. The district's service area will be supplied water through three long aqueducts which cross the San Andreas Fault. The conversion plant could serve as an emergency water supply should a major geologic disturbance disrupt the water supply through these three aqueducts.

3. The distilled water would improve the quality of the district's supply. Depending on the location chosen for the plant, the distilled water may be transported to Orange County where it could eliminate the need to add a softening plant and would provide a better water for use in a fresh water barrier to repel sea water intrusion.

4. The plant will furnish the district with reliable cost figures for sea water conversion to be used in evaluating the various regional plans for transporting additional water supplies to augment the supplies of the Pacific Southwest.

The subcommittee's hearing clearly showed that the Metropolitan Water District has evaluated recent developments favorably enough to conclude that it should construct a large-scale sea water conversion plant if more detailed study and design work substantiate these conclusions. If the district's conclusions are substantiated by more detailed study, it will mean that the day when large-scale sea water conversion will be economically feasible under certain conditions is at hand. A year ago, the subcommittee concluded that large-scale conversion would no doubt be competitive with importation of water from the north coastal area in 1985 or 1990. The recent action by the Metropolitan Water District indicates that because of certain circumstances, the present technology of sea water conversion, nuclear energy and large steam-electric plants may have developed to the point that conversion is economically feasible as a backup to an initial supply of water from the State Water Project.

Testimony from Atomics International, a southern California firm which designs and constructs reactors, discussed a recent proposal it had made to construct a combination saline conversion and electric generating plant with energy derived from a reactor. The company stated:

"The United States Atomic Energy Commission has publicly announced its interest in seeing a large sodium graphite reactor demonstration power plant built, and its readiness to provide financial support for the engineering of such a project and for certain of the fuel cycle costs in the initial year's operation. Taking such support into consideration, including Atomics International's fixed price for the energy plant, the water plant cost estimates, and estimates for the owner's costs during construction, it appears that . . . electric power could be sold for 4.0 mills kwhr and water produced for 25.6¢/1000 gallons." (Transcript of November 5, 1964, pp. 144-145.)

Ionics, Inc. of Cambridge, Massachusetts, presented a different approach using the electrodialysis process. Ionics proposed transmission of low-cost electric energy from a nuclear electric generating plant to the location of brackish water or water suitable for reclamation on the premise that it is cheaper to transport the electric energy to the elec-

trodiyalysis plant than transport product water from a sea water conversion plant to the point of use. According to the data of Ionics, water produced from an electrodiyalysis plant in the size range of 50 to 150 million gallons per day would cost between 9 and 16 cents per thousand gallons. As a first step toward the construction of such a large scale plant, the company proposed the construction of an electrodiyalysis demonstration plant of 5 to 10 million gallons per day capacity which it is prepared to build now. Ionics also stressed the need for continued development of brackish water conversion processes to provide water supplies for municipalities and local areas in California.

On September 22, 1964, the Secretary of the Interior transmitted a "Program for Advancing Desalting Technology" to the President who approved it on October 25. The program includes an increase in the expenditure authorization of the Office of Saline Water to \$200 million. Emphasis will be placed on distillation and membrane processes, particularly reverse osmosis. The program also states:

"An experimental facility is planned on the West Coast where full-scale components will be subjected to conditions approximating those anticipated in the finished plant. Such a facility with a common supply of steam and sea water will provide a much needed central location for comparing alternate component designs by standardized methods, and for evaluating the group performance of components. The test station will be particularly necessary for the evaluation of hydraulic design which is still largely based on operating experience."

In addition to the West Coast test facility the program includes the start of construction of at least one 50-million-gallon-per-day plant by 1967.

After the President requested the preparation of the above report last summer, the Director of Water Resources wrote to the Secretary of Interior on August 10, 1964 and proposed that the Department of Water Resources cooperate with the Department of Interior in the construction of a combination electric power and saline water conversion plant utilizing nuclear energy. The Department of Water Resources has evaluated a possible site in Ventura County as well as in the Tehachapi Mountains for the construction of a nuclear plant to supply electric power for the pumps of the State Water Project. Included in its proposed plans for a possible plant in Ventura is a provision for adding a sea water conversion plant of approximately 15 million gallons per day capacity. The department has suggested that if this nuclear plant is built in Ventura, the conversion plant should be associated with the federal test site. The Director of Water Resources urged the subcommittee to consider participation by the state in the construction of the test facility and the 50-million-gallon-per-day plant.

The problems and the costs involved in this proposal by the Department of Water Resources are sufficiently large to warrant careful study and the time is available for such study. The need for comprehensive economic analyses and development of brackish water processes to produce local water supplies should not be overlooked. The subcommittee

has not had time to evaluate the department's proposal but will consider it in detail in the future.

Another event of importance to the state occurred in February 1964 when the Secretary of Interior turned the Point Loma demonstration plant over to the Navy for transport to Guantanamo Bay, Cuba, to provide a water supply at that base. It was agreed between the Departments of Water Resources and Interior that a new plant should be constructed at Point Loma which would replace the state's investment in the original plant. The new plant would be of the same size but would be constructed as a one-fiftieth slice of an up-to-date design for a 50-million-gallon-per-day flash distillation plant. The money to construct the new plant would be furnished by the Navy and the replacement of the plant would be at no cost to the state.

The subcommittee attempted to determine whether the construction of the replacement plant at Point Loma would return full value if the Metropolitan Water District is to construct a full-scale plant on the order of 50 to 150 million gallons per day, based on a determination of economic feasibility and using substantially the same design. If the replacement plant at Point Loma can be constructed and operated on such a schedule that it will provide useful data for design of the district's plant it may serve a useful purpose, otherwise the wisdom of reconstructing the plant appears questionable. This view is based on the probability that a small test plant at Point Loma would have no value if a full-scale plant were simultaneously being built by the Metropolitan Water District. The subcommittee could not determine that the timing of the reconstruction of the Point Loma plant would permit it to serve a useful purpose if the district proceeds with immediate construction of a 50-to-150-million-gallon-per-day plant. Therefore, the subcommittee recommends that the Department of Water Resources exercise caution in proceeding with this proposal until it can be determined that the reconstructed plant will serve a useful purpose to the state.

VI. ALTERNATIVE ENERGY SOURCES FOR STATE WATER PROJECT PUMPING

FLUOR REPORT

A second objective of the subcommittee's hearing on November 5, 1964 was to review the report prepared by the Fluor Corporation for the Department of Water Resources on alternative energy sources for pumping in the State Water Project. This report by the Fluor Corporation, which had been 22 months in preparation was a broad evaluation of all possible sources of pumping energy ranging from nuclear reactors and off-peak electric energy purchases to importation of coal, oil and natural gas.

The report narrowed down the choice to three cases:

Case 1 involved state-owned nuclear generation as the principal energy source. The small amount of power required for project operations during the period through 1970 would be purchased. The state would construct the first unit of a two-unit nuclear generating station by 1971. The second unit would be installed in 1976, and the two units would then supply all of the pumping energy requirements. (All energy in all three cases would be transmitted over the transmission systems of the California Power Pool Companies.)

Case 2 used energy purchased from the California Power Pool Companies except that from 1967 through 1982 energy obtained from the Northwest-Southwest Intertie would also be used. Thereafter, all energy would be supplied by the Power Pool.

Case 3 covered a combination of Cases 1 and 2. From 1967 through 1981, energy would be obtained from the Northwest-Southwest Intertie supplemented by energy from the California Power Pool Companies. In 1982, a state-owned nuclear generating plant would be placed in operation and would supply the energy to the end of the study period. (Pp. II-2 and II-3 of the Fluor Corporation Report entitled, Energy Source Study, September 1964.) The major differences between Case 1 and Case 3 are the date for construction of a nuclear power plant by the state, that is, 1971 or 1982 and the length of time the state would buy power, once again, whether until 1971 or 1982.

Figures prepared by the Department of Water Resources from cost data developed by Fluor indicate costs per acre-foot for state water delivered at Perris Reservoir in 1992 will be \$44.90 for Case 1 and \$47.40 for Case 2, compared to \$61.20 previously estimated several years ago by the department for power approximately equivalent to Case 2. A general decrease in the value of power in the last few years, while resulting in some loss of revenues from sale of project generated hydroelectric power, will overall result in a major reduction in water costs for water contractors.

The department briefed the conclusions of Fluor as follows:

"Fluor concluded that Case 2 should not be adopted on the basis of the Power Pool proposal of December 1963, and that comparisons show that no firm choice can be made between Case 1 and Case 3 on the basis

of the final report. Fluor recommends that the state reevaluate both Case 1 and Case 3 on the basis of firm data that may be developed in negotiations between the state and other agencies. The report indicates the state may delay a final decision until as late as about September 1965 without incurring any penalty." (Statement of Director of Water Resources, pp. 2 and 3.)

Considerable confusion has occurred because during the preparation of the Fluor Corporation Report, the Department of Water Resources has been negotiating a cooperative agreement with the AEC for the construction of a seed-blanket reactor for pumping power. The department may have proceeded on the basis of the expectation expressed in an interim report that the final Fluor Report would recommend immediate construction of a nuclear reactor as the lowest cost energy source. As noted above, the report did not make this recommendation but instead found no basis to select Case 1 over Case 3 which deferred construction of a reactor until 1982. Furthermore, Fluor stated on page II-6 of its report that changed conditions "would have an effect on the findings of the study. Further evaluation should be made using values developed as a result of negotiations" with the utilities.

However, the department testified that it has signed a Memorandum of Understanding with the AEC leading to the negotiation of a contract to construct the seed-blanket reactor for operation by 1971. Since Fluor did not specifically recommend this course of action, a course which Fluor made clear at the subcommittee's hearing that it had not studied or evaluated, the department's determination to proceed appears to be based on the explanation contained in the following paragraph taken from its statement to the subcommittee:

"The final Fluor Report confirmed the findings of Fluor's interim reports that state-owned nuclear power plants would provide the lowest cost power source for project pumping. Fluor's final report considered two plans for staging the nuclear plants. In one plan the first unit of a two-unit nuclear plant would be placed in operation in 1971 and the second unit in 1976. In the other plan, the nuclear plant would be placed in operation in 1982. Based on cost levels now prevailing, the Fluor study shows no significant difference in project pumping costs between the two plans. Such a study, of course, is purely academic. There is no assurance that a decision by the state in 1964 to build a nuclear plant in 1982 could ever be carried out. If the state were to proceed on this basis its position to bargain effectively for low-cost power from existing sources would be anything but strong. If the State Water Project is to be assured of the benefits of low-cost power, positive steps must be taken now to put the state in position to proceed with construction of a state-owned nuclear power plant.

"It then follows that the proposed AEC-state cooperative arrangement may logically be compared with Fluor's plan for construction of a nuclear plant, the first unit of which would be placed in operation in 1971." (Transcript of November 5, 1964, pp. 27 and 44.)

The two paragraphs quoted above are the sole justification advanced to date for immediate joint construction of a seed-blanket reactor with the AEC. Several aspects of these two paragraphs warrant special consideration. The first sentence of the first paragraph is only partly correct since the Fluor Report also recommended a reevaluation of at least Case 3 on the basis of more current data and after further negotiations with the utilities. On page 10 of the department's statement to the subcommittee is the following promise for further study of Case 2, "On the face of it, it doesn't appear that the above advantages (enumerated in the statement) are particularly substantive, . . . but the department's engineers will further study this matter." The promise and the quoted conclusion are inconsistent.

The first quoted paragraph also states that further study of Cases 1 and 3 is "purely academic." While the type of evaluation used by Fluor in these three cases can only rest on approximations, it is nevertheless the only basis presently available for decision-making by the state. To dismiss the further study recommended by Fluor as academic at this time is equivalent to dismissing as academic the whole Fluor Report. However, the department has already chosen to adopt part of the report to the extent that it justifies immediate construction of a nuclear power plant. Furthermore, the statement that the department must proceed immediately with the construction of a nuclear power plant otherwise "its position to bargain effectively for low-cost power from existing sources would be anything but strong" implies that the department must be committed to a nuclear plant before it can bargain with the utilities for a supplemental or alternative supply of power. This is illogical because if the department has established nuclear energy as its source of power for the State Water Project, there is no need to bargain with the utilities for an alternative source of power and little need for a supplemental source. In other words, the justification for building a nuclear plant cannot rest on prejudging the outcome of negotiations but must be based on the results of the negotiations themselves.

The second paragraph quoted above states that the proposed cooperative construction of a plant with the AEC may "be compared with Fluor's plan for construction of a nuclear plant, the first unit of which would be placed in operation in 1971." The participation by the AEC in the plant is to pay the research and developmental costs for this plant, the extra construction costs for innovations and instrumentation, and finally to provide and warrant the initial core, estimated to last for nine years if operated at 90-percent load factor, for which the state would pay a stipulated rate for energy from the nuclear fuel as the energy is delivered. After the first nuclear core the state would have to provide nuclear fuel. It is possible that some savings may eventually result, but no one can know at this time.

SEED-BLANKET REACTOR

The proposed cooperative seed-blanket reactor must be understood in order to appreciate why the AEC is interested in it and why the

reactor is not the same as the commercial reactors now being used for electric power generation by the electric utilities. The reactor is a new, advanced design reactor which will demonstrate breeding in its initial core. Breeding reactors are reactors which produce as much fuel as they consume. Successful demonstration of breeding will permit using thorium as a major source of reactor fuel and will thereby extend the world's nuclear fuel supplies almost without limit. The reactor will also demonstrate new techniques of pressure vessel construction to house the fuel elements and demonstrate field assembly of the pressure vessel. This permits constructing the reactor to the presently proposed size of 525 mw of electrical power which would be the largest reactor yet constructed. With this technique even larger reactors up to 1,000 mw may be constructed. While all these advances would be demonstrated in the reactor core and fuel assembly, the electrical generation equipment and the light water technique used to transmit heat from the core of the reactor to the heat exchanger will be relatively well-developed and engineered equipment scaled up in size.

The subcommittee has made an effort to obtain information on the advantages and disadvantages of the proposed seed-blanket reactor compared to commercially available reactors for use in the State Water Project. The Fluor Corporation specifically testified that it had not included the seed-blanket reactor in its study for the Department of Water Resources because the department did not ask for it. Fluor further stated that the conclusions of its report were arrived at without considering the seed-blanket reactor because Fluor had not studied it. Therefore, the subcommittee will require further information to establish whether or not the proposed seed-blanket reactor is a wise investment for California.

It should be understood that the AEC has an important interest in demonstrating the seed-blanket reactor and that the pump lifts of the State Water Project may be an ideal place for such a demonstration. The AEC is fulfilling its responsibility. However, it is for the state to independently determine whether the reactor is desirable from its own point of view considering the long term requirements of the State Water Project and the interests of the water contractors. The state's responsibility is to provide an economical and dependable water supply to its citizens. Accordingly, the subcommittee requests that the Department of Water Resources present to the subcommittee the results of a careful objective study of the use of the seed-blanket reactor for the state water project.

The subcommittee has always encouraged innovation and development of new technology whenever and wherever these advances are soundly documented and studied. It still takes that position but suggests that the Department of Water Resources must demonstrate by well-documented analysis and careful study the desirability of the seed-blanket reactor before the state commits itself to construction of it.

The department presently has a posture of being ready to proceed immediately with the construction of the seed-blanket reactor, when discussing the reactor or when negotiating with the AEC, that is inconsistent with its statements to this subcommittee and the Power Pool Companies that no decision will be made on a source of project pumping power until all possible sources of energy have been fully explored and discussed in detail. This dual posture leads to confusion and apprehension regarding the position of the department. For example, in a letter to the Governor dated October 22, 1964 in which the Director of Water Resources transmitted copies of the Memorandum of Understanding between the department and the AEC for construction of the seed-blanket reactor, the director stated:

"In his memorandum, Chief Engineer Golzé points out that positive steps must be taken now to put the state in a position to proceed with construction of a state-owned nuclear power plant if the State Water Project is to be assured of the benefits of low cost power. It is his judgment that final studies substantiate the indicated economics of the proposed arrangement with AEC. Following his recommendation, I have signed the Memorandum of Understanding with AEC for the department.

"I propose to proceed with negotiations with AEC on a draft of contract which could be entered into when the proper authorities have been established. This will be done following established procedures of state government involving the Departments of Finance and General Services. In the meantime, I will be advising, consulting and otherwise conferring with public and private agencies in California regarding the desirability and advantages to be derived from proceeding with the proposed joint arrangement with AEC for a nuclear power plant."

It will be noted that the above language infers only further negotiations on the AEC proposal and not on alternative sources of energy as recommended by Fluor. In transmitting the signed Memorandum of Understanding to Dr. Seaborg, Chairman of the AEC, the director stated:

"I am appreciative of the opportunity afforded through our joint efforts to participate in this impressive undertaking. I believe that substantial benefits will accrue both to the state and to the nation in the contribution of this plant toward the delivery of low cost water in our project and to the advancement of nuclear power technology."

There is no suggestion in the letter of transmittal that any course other than construction of the seed-blanket reactor is under consideration or a possibility. This is reinforced by the language in the Memorandum of Understanding as follows:

"It is the intent of the parties that, subject to any required authorizations and approvals, they will endeavor to negotiate and execute, as soon as practicable, a definitive contract containing the principal features set forth in this memorandum."

The Memorandum of Understanding then proceeds to develop the details of the respective responsibilities and duties of the AEC and the department for construction of the reactor. It is apparent that these statements are inconsistent with deferment of any decision during a one-year period of detailed study.

OTHER CONSIDERATIONS

Assuming that the construction of the seed-blanket reactor or any other reactor is the best answer to low cost energy for the State Water Project, the department testified it presently has no funds to construct a reactor. The available financing from the California Water Fund, water bond proceeds, and the revenue bonds to be issued for the power facilities at Oroville are all fully committed. Therefore, the department must find additional sources of money and it testified that issuing more Central Valley Project revenue bonds is the only method now showing much promise. The department admitted that there will be many difficult legal and financial problems to be overcome before it can use the revenue bond authority and that it has not solved these problems. The use of revenue bonds will increase the state's costs over the general obligation bond interest rate used by Fluor and should therefore be used in future calculations of costs for a state-constructed reactor.

Even assuming that the construction of the seed-blanket reactor is eventually found desirable, the department has not yet undertaken negotiations to determine what it will have to pay for the short-term power it must purchase even if it builds a reactor. While the three cases analyzed by the Fluor Corporation all differed, each one involved some purchase of power by the department. The major difference was the timing and amount of power to be purchased. Even with the seed-blanket reactor, the department must negotiate for purchase of power for the initial years of project operation while the reactor is being built. Therefore, the department should undertake negotiations to determine the price of power it will have to purchase under all three cases before it makes any decision on sources of pumping power.

The department has undertaken no significant negotiations as yet for the sale of power it generates at Oroville and Thermalito. It has indicated that offers will be sought in December 1964. Arrangements for the disposition of Oroville-Thermalito power should be completed at least to the extent of ascertaining its disposition and price before any commitment is made to secure pumping power. This is a reasonable precaution to cover the remote possibility that the power will not be sold but must be used for pumping purposes within the project. While this would be an economic loss to the project, it would be still more

serious if the department had already made commitments for a reactor that it would not need if Oroville-Thermalito power cannot be sold outside the project.

The California Power Pool Companies testified after reviewing the Fluor Report, that in view of major power developments during the past year, such as the agreement to construct the Northwest-Southwest Intertie, further study should be given to Cases 2 and 3. The Pool Companies then recommended that no commitment on state-owned nuclear generation be made until the end of the one-year period which the Fluor Report indicated is available for study before a decision need be made. The Pool Companies further indicated their willingness to negotiate with the department for a supply of off-peak power under Case 3 which would permit the department to defer any decision about the construction of a reactor until the late 1970's at which time advances in nuclear technology might have occurred which would be of even greater advantage to the water contractors and the project than at present.

The subcommittee felt that some consideration should be given to taxes foregone if the state were to build the pumping power plants. Therefore, the California Power Pool Companies indicated in a letter of November 23 to the subcommittee chairman the taxes they would pay under Case 2. Their estimate was an eventual \$6,300,000 per year consisting of \$4,000,000 in state and local taxes and \$2,300,000 in federal taxes. Over a 75-year period this would total \$199,000,000 in state and local taxes and \$115,000,000 in federal taxes, with a present worth of \$58,000,000 for both which would approximately balance the present worth of Cases 1 and 2.

However, these figures appear too high. The companies have proposed to supply power to the state at their minimum cost of generation rather than their average costs, therefore, not all of the above taxes would be derived from revenues resulting from sale of power to the state but would partially come from other power sales. In addition, to the extent that the federal government should need to raise \$115,000,000 in new revenues, California's share would only be about \$14,000,000 and the rest would come from other states. The lesser figure appears to be more appropriate for California to use for evaluation purposes although the full \$115,000,000 would be appropriate at the federal level. Another factor which is beyond computation is the loss of state and federal income taxes on earnings of utility securities used to finance the plants compared to use by the state of tax free bonds. Finally, to the extent that the Los Angeles Department of Water and Power or other publicly-owned utilities furnished power to the state, no taxes would result.

Testimony from the Los Angeles Department of Water and Power also urged further study and stated:

"The Los Angeles Department of Water and Power is vitally interested in all facets of the State Water Project as they affect the cost of delivered water, not only because of our continuing responsibility to provide for the future water needs of Los Angeles at the lowest possible cost, but also because of the influence of the

cost of water on the economy of the city, of Southern California, and in fact the whole state . . .

"There have been important developments in the power supply picture in California in recent years. One of these is the downward trend in the cost of production of electrical energy due primarily to more efficient units of larger size. There is every reason to believe that this trend will continue as utilities find it possible to add larger and more efficient generating units to their systems, and as they make the best use of their resources through pooling agreements and large scale interconnections. Another development is the recent agreement on the principal features of the Pacific Intertie. This makes available to California a large source of relatively low cost hydroelectric power and surplus energy from the Pacific Northwest . . .

"Considering these and other developments, it appears to us that at least for the period from 1968 through 1982 the lowest cost of pumping power would result under an arrangement whereby the energy requirements, over and above those to be supplied from the Pacific Northwest, would be purchased from the California utilities, including the Department of Water and Power. In this way the state would automatically gain the advantage of improved cost of production on the utility systems. Whereas, if the state decides at this time to build its own generating plant, costs will be fixed from the time it goes into operation until the end of its life.

"The great advantage of the plan proposed here is, I am sure, entirely evident to this committee. The state can defer decision for up to 15 years on a capital expenditure of over 150 million dollars for a nuclear generating plant of its own. It will not be committed to a design which admittedly is in the development stage. Every authoritative source in the United States agrees that there will be significant developments in the atomic energy field during the next decade, and that these developments can only lead to lower costs. Capital costs will decrease as experience is gained with prototype plants now in operation or under construction, and energy costs will be reduced due to lower cost of manufacturing nuclear fuel and increased efficiency in its use. The state will under our proposal have complete flexibility in reviewing these developments as well as others as they take place, and can therefore select at the proper time the source of power for pumping which will truly result in the minimum long-range overall cost of the project.

"Furthermore, it appears to us that in order to gain the highest revenue from the power produced on the project, power developments need to more nearly match the present and future load requirements of the utilities in the area. This applies in particular to the project south of the Tehachapi where we believe the state plans are still subject to change.

"It is our recommendation, therefore, that before the state becomes committed to a program of constructing thermal generating plants and interplant transmission lines, a comprehensive load and resource study be undertaken jointly by the California utilities and

the state and its consultant to determine the optimum use of the facilities of the State Water Project and those of the utilities . . ." (Transcript of November 5, 1964, pp. 102-105.)

Testimony from Atomies International made it clear that the seed-blanket reactor design is not the only new design that the AEC is anxious to see developed. Atomies International has developed the sodium graphite reactor system for use both as a power source and as a source of heat for a conversion system. The company stated with respect to a reactor for pumping power:

"... We have developed a preliminary design of a 510 mg electric sodium graphite reactor plant for this service. We are prepared to offer such a plant, and its fuel, at fixed prices with warranties on electrical output and fuel cycle cost. Based on Department of Water Resources financing and ground rules, we estimate the total power cost should be 3.25 mills /kwhr at 80 percent plant factor. This power cost is based on a capital cost for the plant, including estimated client's costs, of \$78.9 million and AEC Round III type of assistance." (Transcript of November 5, 1964, pp. 147-148.)

A final consideration which should not be overlooked is the fact that the report by the Fluor Corporation was very general, its conclusions were mostly expressed in terms of present worth and its approximation of pumping loads for the State Water Project were totals for the whole project. As previously noted it did not consider disposition of Oroville-Thermalito power as having any relationship to pumping energy requirements. Furthermore, the loads were not adjusted to take into consideration the increased demands for pumping power from the recent expansion of the aqueduct into southern California by 500,000 acre-feet. For these reasons, the study by Fluor Corporation should be kept in perspective because it did not purport to designate finite answers to the question of how best to meet the energy needs for the pumps. Instead it dealt in major quantities and generalizations in order to sift the three best approaches from among approximately 40 alternatives under consideration. Having done this, Fluor stated the next step is more detailed study of the three cases in order to determine more precisely the merits of each. The Fluor Report is not a basis for immediate selection of a pump energy scheme but is only the first step.

The subcommittee recommends that the Department of Water Resources enter into a further contract with Fluor or some other suitable firm to review the advantages and disadvantages of all possible reactor designs for the State Water Project. While this is being done the department should be negotiating with the California Pool utilities to arrive at precise contract values for the purchase and transmission of amounts of power needed for each of the three cases outlined by Fluor. The department should continue its negotiations with the AEC for assistance in the seed-blanket reactor, but not to the exclusion of other types of reactors. Finally, all this information should be put together before June 1, 1965 in a report to the Legislature to show the best method of meeting the pumping requirements of the project.

The subcommittee believes that the department should be commended for its aggressiveness and willingness to employ nuclear energy in the State Water Project. However, the subcommittee does not agree that nuclear energy from a state reactor, whether a seed-blanket reactor or other type, has been conclusively demonstrated to be the best solution to the energy problem. The subcommittee appreciates the assistance and sincere concern of the AEC in working with the department to solve our water project energy problems. It further recognizes that the proposal of the AEC may prove to be very beneficial to the state and that the AEC has faithfully performed its responsibility. However, it is the responsibility of the state to determine whether the seed-blanket reactor or any other reactor is a desirable energy source for its project and the basis for this decision has not yet been determined.

ADDITIONAL COMMENTS

The water needs of southern California have long sought a solution outside of the geographical region known as southern California. Presently we are engaged in a dispute with Arizona, notwithstanding the decision of the Supreme Court, as to water on the Colorado. This dispute will ultimately take years, and perhaps generations, to resolve, if the premise that is currently at the base of the thinking being used by way of an approach to this problem is followed. That premise is that the ultimate solution of the water needs of southern California are outside the geographical location of southern California.

The point is that the long-term solution of the water needs of our area are immediately adjacent to us. A lake of inexhaustible supply is readily available. There is creditable evidence that technology in its present form has the capacity to build sea water conversion plants in southern California and produce water at a price that is competitive with what we expect to pay for water in northern California. It is important to understand this because it will necessitate the accommodation of our people in the geographical region known as southern California to the presence of atomic reactors close at hand. This will take an adjustment of great magnitude and the sooner that people begin to understand this the closer we will be to achieving a long-term solution of the water problem in southern California. One continues to hear of schemes for the delivery of water from the northern part of the state and from the northern part of the United States to southern California and to other regions for the solution of water problems. These public works projects are of great magnitude and great cost. It seems to me that too much of the energy of our engineering capacity has been devoted to studying and proposing such schemes and too little of our energy has been devoted to the conversion of sea water to fresh water.

LETTER OF TRANSMITTAL

December 20, 1964

HONORABLE JESSE M. UNRUH, *Speaker of the Assembly*
Members of the Assembly
State Capitol
Sacramento 14, California

Gentlemen:

Pursuant to ACR 1 and HR 10 of the First Extraordinary Session of 1963, the Assembly Interim Committee on Water herewith submits its final report on "*Arizona v. California* and Pacific Southwest Water Problems."

Under the same authorization this committee published a report, *The Pacific Southwest Water Plan*, Volume 26, No. 8, November 8, 1963. This first report was limited specifically to our comments on the initial Pacific Southwest Water Plan proposed by Secretary of the Interior Stewart L. Udall. It was issued last year because the plan was "so important that it was incumbent upon this committee to make its views known and formulate appropriate comments on the policy considerations involved." The committee's comments were forwarded to the secretary by the Governor together with California's Official State Comments.

During 1964 additional proposals for Pacific Southwest water planning were made, several of which were introduced in Congress as project authorization bills. None, however, were enacted into law. During this period the committee held three days of public hearings and conducted staff study and research, and held two executive sessions. The concern of the State Senate in these plans was demonstrated when its Factfinding Committee on Water Resources scheduled a two-day joint hearing with the Assembly committee.

The report submitted herewith consists of a comprehensive summary of the decision in *Arizona v. California* and the basic Pacific Southwest water problems faced by California and other states of the West today. The committee has selected several major policy areas which have proved to be the most important to California and concerning which there is substantial disagreement in California and the Congress. The committee has endeavored to present its views on the most desirable policies for California to pursue in supporting a program of regional planning for the Pacific Southwest.

The committee has felt compelled to present its views because of the adverse conditions confronting California, that is, its representatives have negotiated a compromise with Arizona which has no support in California among the water interests involved. As a result of modification of this compromise by the U. S. Senate, California has withdrawn

its support of the bill containing the compromise and now seems to have no position. The committee's report is an effort to reestablish basic elements of a position which will have broad public support in California.

In our report of November 1963 the committee stated:

There should be no state acceptance of the proposed plan or commitment to alter the State Water Facilities *without the express approval of this Legislature.*

In our 1964 report, the committee reaffirms its belief that the State of California should make no commitment to support a regional plan or legislation implementing such a plan without the express approval of the Legislature.

The committee wishes to thank the many federal, state and local public and private agencies in California who have been of assistance to it in this study. We are particularly indebted to the Office of Legislative Analyst and the Colorado River Board of California.

Respectfully submitted,

CARLEY V. PORTER, *Chairman*
Assembly Interim Committee on Water

INTRODUCTION

Assembly Concurrent Resolution 1 (1963 First Extraordinary Session) coauthored by Assemblyman Porter and Senator Cobey, was referred to the Assembly Interim Committee on Water and requests this committee to study the effect of the United States Supreme Court decision in *Arizona v. California* on state water planning. The resolution states, "... it is appropriate at this time that the Legislature undertake a study of the effect of the decision including an analysis of any state action which may be required as a result of the decision. . . ."

During the 18 months which have elapsed since the issuance of the decision, this committee has made an intensive staff and committee study of all aspects of the Supreme Court decision.

On October 31, 1963, this committee met jointly with the Senate Factfinding Committee on Water Resources and received testimony on the initial Pacific Southwest Water Plan which was then pending before the Governors of the affected states. On November 8, 1963, the committee issued a report, *The Pacific Southwest Water Plan*.¹ which was transmitted to the Secretary of the Interior together with the State's Comments prepared by the Governor.

In January 1964, the Secretary of the Interior submitted a revised Pacific Southwest Water Plan, and in April the six agencies of southern California which utilize Colorado River water sponsored S. 2760, introduced by United States Senator Thomas Kuchel. In addition, a number of other proposals for solution of Pacific Southwest water problems were made, some of which were introduced in Congress.

During 1964 this committee held two public hearings pursuant to ACR 1. On July 23, the committee met in Santa Monica and received testimony from state officials. On August 13 and 14 the committee met jointly with the Senate Factfinding Committee on Water Resources in Sacramento and received testimony from federal, state, and local officials with regard to the wide range of proposals pending for solution of Pacific Southwest water problems.

During the First Extraordinary Session of 1964, Chairman Porter coauthored SCR 22 with Senator Cobey. This resolution requested the University of California to make "a thorough, exhaustive, disinterested, objective, and analytical study of the January 1964 Pacific Southwest Water Plan . . . and seek to ascertain the respective advantages and disadvantages of a regional approach . . . and the individual state approach contained in the California Water Plan. . . ." In response to this resolution the university submitted a report by Fred A. Clarenbach of the University of Wisconsin entitled, "Western Regional Planning of Water Resources" to the joint committee meeting on August 13. This study has been published separately; however, comments on it are included in the report which follows.

¹ *Assembly Interim Committee Reports*, Vol. 26, No. 8 (1963-65).

At this time the opinion of the court in *Arizona v. California*, which was released on June 3, 1963, has been followed by a final decree. Proposals are now before Congress for a regional solution to the problems of the Pacific Southwest. In this report this committee attempts to gather together all pertinent material related to the Colorado River decision in a comprehensive presentation and to comment specifically upon proposals for solution of the more important aspects of Southwest water problems now pending.

Chapter VI includes a brief summary of the committee's recommendations.

As is developed in this report, a regional program to develop water for the Pacific Southwest and the West is by necessity a multibillion-dollar program involving many of the states of the West. Commitment of the State of California (or any other individual state) to any specific water development proposal represents a major policy decision by that state. As an area of need and an area of potential replacement supplies for the Colorado, California must be deeply involved in regional planning for the Pacific Southwest and the West.

The committee believes that the Legislature must have an important role in the formulation of state water policy, particularly with regard to regional development. The record of the Resources Agency and its constituent departments during the past two years with regard to regional planning has not been satisfactory.

The committee was particularly disturbed by the unusual events which culminated in a modification of Senators Hayden and Goldwater's original Central Arizona Project Bill, S. 1658, into the "Lower Colorado River Basin Project Act," through the "Abbott Goldberg Amendment."

In mid-May 1964 California water interests were first apprised of the fact that for some four weeks, representatives of the Department of Water Resources including Mr. Abbott Goldberg, the Chief Deputy Director, and Mr. Wesley Steiner, the chief adviser on Colorado River problems, had been secretly negotiating in Washington with representatives of Senator Hayden to develop compromise legislation to authorize the Central Arizona Project. This clandestine period of negotiation was in sharp contrast to the highly publicized solicitation of comments from all California interests on the original Pacific Southwest Water Plan.

The first official explanation of this unprecedented method of solving California's Colorado River problems was given by the Resources Agency Administrator at the committee's hearing in Santa Monica in July 1964:

At the request of President Johnson that Arizona and California negotiate their differences and at Senator Hayden's invitation, Governor Brown assigned Abbott Goldberg, Chief Deputy of the Department of Water Resources, and Wesley Steiner, departmental staff expert on Colorado River matters and staff adviser to the agency administrator, to negotiate with staff counterparts from Arizona. These negotiations resulted in a regional approach which the administration of both states and apparently a majority of the members of the [U.S.] Senate subcommittee believe should prove acceptable.²

² Hearing transcript, July 23, 1964, at 10.

These Washington negotiations had been conducted in such secrecy that neither the California Legislature, California's U.S. Senators, members of our congressional delegation, nor the water agencies in southern California whose water was involved were aware of the negotiations. The meetings, which began in mid-April, did not conclude until mid-June.

Representatives of southern California water interests having rights to Colorado River water involved in the negotiations expressed concern over this unusual interstate bargaining. This displeasure was shown by the statement of James Krieger, Chairman of the Southern California Water Conference, a large group of southern California water leaders, to this committee in August 1964:

On May 22, 1964 we discussed with the Governor the fresh draft of what was then called the "Goldberg Amendment" to S. 1658. Inasmuch as that bill had been drafted by members of the Governor's staff in conjunction with representatives from Arizona and the Interior Department it seemed to us an appropriate moment to discuss the water-policy-making procedures of this state. The six agency members of the Colorado River Board were the parties immediately affected by the 1963 decree in *Arizona v. California*. It was the responsibility of these six agencies to provide water for their inhabitants and lands. Still their water was in a sense being negotiated by state officials who did not have the primary responsibility of supplying water to the people within these six agencies.

Mr. Krieger added that:

We urged the Governor to broaden the base of his policymaking team to include representatives from the Legislature and from these affected agencies.³

The negotiators returned to Washington, however, to continue their secret negotiations, without any additional consultation.

Substantially the same language as the Goldberg Amendment was offered as an amendment to S. 1658 on July 21, 1964, by Senator Frank Moss of Utah, Chairman of the Senate Subcommittee on Irrigation and Reclamation. The full Senate Interior and Insular Affairs Committee considered the amendment in executive session and by a 15-to-1 vote (Senator Kuchel dissenting) reported the bill to the Senate floor on July 31, 1964.

Mr. Goldberg and California's negotiators had previously returned to California to resume their duties with the Department of Water Resources. They returned to Washington, however, for the task of preparing a committee report for S. 1658. This report, No. 1330, was ordered to be printed by the U.S. Senate on August 6, 1964. With regard to authorship of this report, the following colloquy between Chairman Porter and Mr. Goldberg at this committee's August hearing is of interest:

Mr. Goldberg: . . . this is the official Senate report, which under their rules is required to accompany a bill going to the floor.

³ Statement for Hearing, August 14, 1964, at 3, 4.

Assemblyman Porter: Is this the one that you helped write?

Mr. Goldberg: Yes, Mr. Steiner and I worked on parts of this.

Assemblyman Porter: Good. So you are quoting yourself? ⁴

This odd juxtaposition of officials—with a leading California water official as a spokesman and ghost writer for a bill authorizing a project which an Arizona Senator termed, “. . . the most important piece of legislation in his congressional career,”⁵ — has not been adequately explained to this committee and has placed California at a disadvantage in all subsequent actions regarding Colorado River water.

Concern over this activity of California officials was expressed by the Vice Chairman of the California Water Commission immediately following a presentation to the commission by Mr. Steiner on the Goldberg Amendment:

Mr. Jennings: Mr. Steiner, I have some comments and some questions in regard to your material. *I would like to preface it by saying you make a very good advocate for the position of Arizona.* How good an advocate you make for the position of California I'm not too sure of.

Then followed this interesting colloquy:

Mr. Jennings: . . . I would like to ask you this, from the viewpoint of California alone without regard to political possibilities and false premises whether of one nature or another in connection with a project bill with a priority for existing uses, of course, limited to California's adjudicated 4.4 million for all projects wherever located, would not that be to California's advantage if it could be obtained?

Mr. Steiner: Yes, it would be advantageous.

Mr. Jennings: So it is a position then that is a legitimate position for California to take when it is addressing its view to the best of California, is that not true?

Mr. Steiner: Yes.⁶

The long series of events since April 1964—negotiation of the Goldberg Amendment, the subsequent preparation of arguments in favor of it through the medium of the Senate Committee Report No. 1330, and the continuing statements of support for the Goldberg Amendment by administration officials—have served to divide California and have not advanced the interests of California, particularly those Californians who rely upon Colorado River water for their supply.

Regrettably, it is true the public pronouncements of Mr. Goldberg and Mr. Steiner do indeed sound more as if they were speaking for Arizona than for California. For example, referring the California Water Commission to a chart showing water supply available in the lower basin, Mr. Steiner stated that the

Chart . . . demonstrates why Arizona will never willingly agree to, and Congress, in my view, will never force her to accept, an in perpetuity priority to California.⁷

⁴ Hearing Transcript, August 13, 1964, at 108.

⁵ Sacramento Bee, August 4, 1964, at A11.

⁶ Transcript of California Water Commission meeting, August 7, 1964, at 23, 24. (Emphasis added.)

⁷ Ibid., at 16.

And before the same commission Mr. Steiner lectured that body on California's chances for success in Washington :

There is a lesson to be learned from the actions of the Senate subcommittee and of the full committee. California cannot expect to get everything she desires in a regional program. We will have to be realistic in our demands . . . These votes clearly indicate that support in United States Senate for permanent priority to 4.4 million acre-feet for California is and will be "scarce as hen's teeth." To demand provisos in the act authorizing the Central Arizona Project that are unattainable is tantamount to outright obstruction.⁸

The transcript of the committee's August 13-14 hearing indicates conclusively that there is no support in California for the compromise to S. 1658 negotiated by its representatives. Its sole support came from Mr. Goldberg. A major purpose of this committee's work and of this report is to explore the alternatives which thereby confront California and to suggest a position more consonant with California's true interest.

This committee feels that California requires and will have vigorous and positive leadership in water matters. The future prosperity and economic and physical well-being of the people of our state are at stake. Our state has learned that we can ill afford to put forth water policies developed more closely with representatives of the State of Arizona than with our own water agencies and our own State Legislature.

The appendix of this report includes the texts of the Colorado River Compact, the Boulder Canyon Project Act, the California Limitation Act, the Supreme Court decree in *Arizona v. California*, and legislation proposed by the committee. Pertinent excerpts from proposed legislation (S. 1658, as amended (Goldberg Amendment) S. 2760, and draft Pacific Southwest Water Plan) are found within the text of Chapter V.

⁸ *Ibid.*, at 22.

Chapter I

THE COLORADO: ITS DEVELOPMENT AND USE

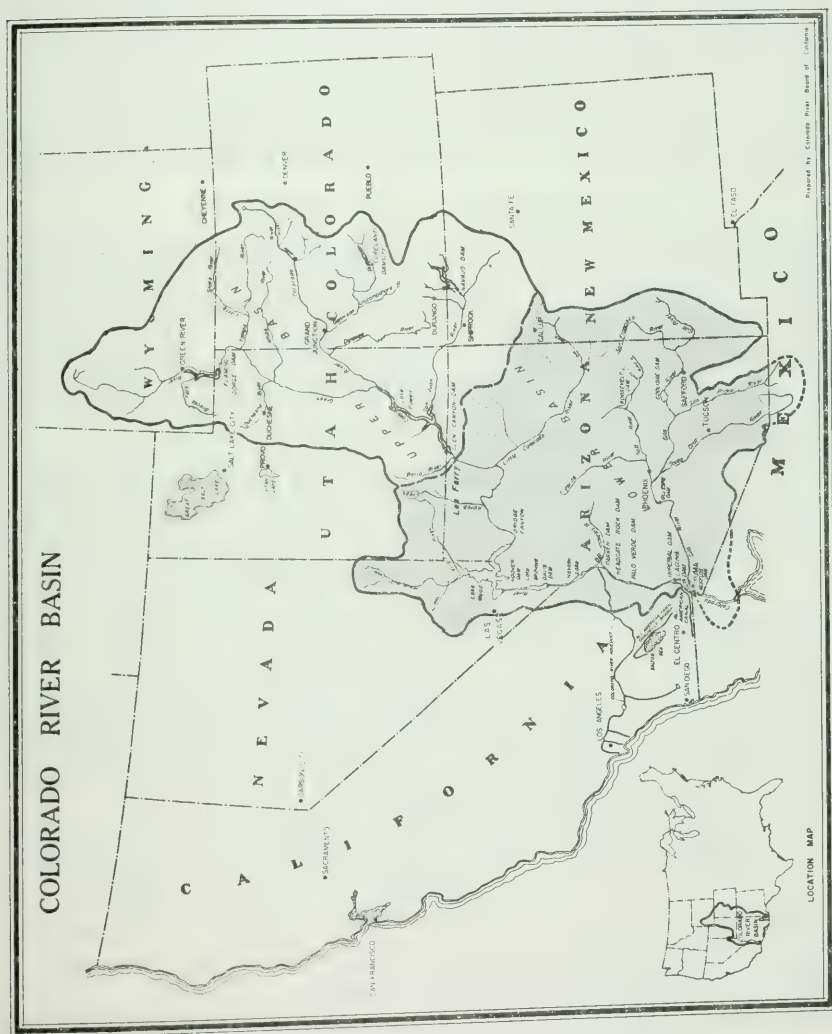

THE COLORADO RIVER BASIN

The Colorado River, from its headwaters in the mountains of north central Colorado, travels approximately 1,300 miles through Colorado, Utah and Arizona to its mouth at the Gulf of California. It flows 245 miles between Arizona and California to form their boundary and drains a total area of 242,000 square miles in the United States, approximately one-twelfth of the continental United States. The drainage basin of the river includes portions of Wyoming, Colorado, Utah, New Mexico, Arizona, Nevada and California. The 3,599 square miles of the basin within California represent 1.5 percent of the total basin area, compared with 107,242 square miles or 44.3 percent of the total basin area in Arizona.

California is the only basin state without a major tributary to the Colorado. The map which follows on the next page shows the Colorado River Basin. The Colorado's tributaries and the states in which they flow are as follows:

<i>Tributaries</i>	<i>States</i>
The Green	Utah, Colorado, Wyoming
The Gunnison	Colorado
The Dolores	Colorado, Utah
The San Juan	Utah, Colorado, New Mexico, Arizona
Johnson Creek	Utah, Arizona
Kanab Creek	Utah, Arizona
The Little Colorado	Arizona, New Mexico
The Bill Williams	Arizona
The Gila	Arizona, New Mexico
The Virgin	Nevada, Utah, Arizona

The Colorado River Compact divides the basin into an Upper Basin and Lower Basin. The Upper Basin is defined in the Compact as the area "within and from which waters naturally drain into the Colorado above Lee Ferry (in Arizona)" and the lower basin is the area "within and from which waters naturally drain to the Colorado River System below Lee Ferry."

LEGISLATIVE HISTORY

The need for major development on the Colorado was widely recognized in the early part of the century. In 1920, the Congress passed the Kinkaid Act which directed the Secretary of the Interior to make a study of some of the River's problems. Subsequently, the Fall-Davis Report was submitted to Congress in February 1922. One of this report's recommendations was that "through suitable legislation the United States undertake the construction with government funds of a reservoir at or near Boulder Canyon. . . ." ¹

A political problem blocked such a project, however. The more slowly developing Upper Basin states were apprehensive that such a Lower Basin facility would result in rapid expansion of irrigation in the Lower Basin and would form the basis for *appropriative rights* in the Lower Basin to the detriment of Upper Basin needs. At that time, as today, the doctrine of *prior appropriation* governed water rights in all Colorado River Basin states including California, which also recognizes *riparian* rights.

THE COLORADO RIVER COMPACT

In 1921, at the request of the affected states, Congress authorized the states to enter into a compact "providing for an equitable division and apportionment among said states of the water supply of the Colorado River and of the streams tributary thereto. . . ." Commissioners were appointed and a compact was signed in Santa Fe, New Mexico, on November 24, 1922, *by representatives of the seven states and the United States.*

The compact has several main provisions:

1. It divides the Colorado River Basin into two parts as shown on the map on p. 15.
2. It apportioned from the "Colorado River system" in perpetuity 7,500,000 acre-feet a year to each of the two basins for beneficial consumptive use.
3. It authorized the Lower Basin the right to increase its beneficial consumptive use by 1,000,000 acre-feet a year.
4. It recognized the rights of Mexico to waters of the Colorado. This share was to come from the surplus over the 16,000,000 allocated to the two basins. The compact provided, however, that if this surplus was not available, the Mexico share shall be met equally by the Upper and Lower Basins.
5. It required the states of the Upper Basin to "not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 consecutive years . . ."

The compact was promptly ratified by the Legislatures of all of the states except Arizona.²

¹ *Arizona v. California, Report of the Special Master*, at 21.

² According to the U.S. Supreme Court, one of the reasons for Arizona's refusal was the Compact's inclusion of tributary flow, particularly the Gila, in its allocation scheme. See 10 L.Ed.2d 554.

Between 1922 and 1927 three attempts were made in Congress to obtain legislation authorizing the construction of a mainstream dam and a canal located entirely in the United States to replace the existing facility serving Imperial County. Congressman Philip Swing and Senator Hiram Johnson of California spearheaded these three efforts.

BOULDER CANYON PROJECT ACT

The fourth attempt to obtain approval, a fourth Swing-Johnson bill, was successful. When approved by Congress in December 1928 it became the Boulder Canyon Project Act and authorized the construction of Hoover Dam and the All-American Canal. (45 Statute 1057)

In the act Congress consented to the compact, waived the compact requirement of seven-state approval, and provided "this approval shall become effective when the State of California and at least five of the other states mentioned, shall have approved or may hereafter approve said compact as aforesaid and shall consent to such waiver, as herein provided."

The Project Act provided that it not take effect until (1) all seven states ratified the contract, or (2) if the seven states did not ratify within six months, until the compact was ratified by six states, including California, and further including agreement by California to limitations on its consumptive use of Colorado River water.

Arizona did not ratify the compact within the six-month period. California's Legislature then passed the *California Limitation Act* in 1929.³ This accepted the limitations imposed by the Project Act of: (a) 4,400,000 acre-feet a year of the 7,500,000 acre-feet allocated to the Lower Basin, plus (b) one-half the surplus or excess water available.

The mainstream supply only is to be considered in this computation since the Project Act's apportionment of waters among the states of the Lower Basin, in the court's opinion "... was a complete statutory apportionment intended to put to an end the long-standing dispute over Colorado River waters."⁴

The limitations on California in the Project Act were again a protection to the Upper Basin states. As the court stated, "The Upper Basin states feared that, if Arizona did not ratify the Compact, the division of water between the Upper and Lower Basin agreed on in the Compact would be nullified. The reasoning was that Arizona's uses would not be charged against the Lower Basin's apportionment and that California would therefore be free to exhaust that apportionment herself. Total Lower Basin uses would then be more than permitted in the Compact, leaving less water for the Upper Basin."⁵

* The Project Act authorized Arizona, Nevada and California to enter into an agreement further apportioning the Lower Basin share between them as follows (beneficial consumptive use):

1. Apportioning to Nevada, 300,000 acre-feet annually.
2. Apportioning to Arizona, 2,800,000 acre-feet annually.
3. Providing that Arizona may annually use one-half of the excess or surplus waters "unapportioned by the compact."

³ Stats. of 1929, Ch. 16. See appendix for text of this legislation.

⁴ 10 L.Ed.2d 555.

⁵ Loc. cit.

4. Granting Arizona "the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said state."
5. Apportioning to California 4,400,000 acre-feet annually. Providing also that California may annually use one-half of the excess or surplus waters unappropriated by the compact.
6. Subjecting the agreement to all provisions of the compact and conditioning the tristate agreement on ratification of the compact by all three states.

The tristate apportionment agreement authorized by the Project Act was *never entered into* by the states involved.

On June 25, 1929 President Hoover declared the Boulder Canyon Project Act to be effective. It was almost 15 years later, however, before Arizona finally approved and ratified the Colorado River Compact.

The Project Act authorized the Secretary of the Interior "under such general regulations as he may prescribe, to contract for the storage of water in said reservoir (Lake Mead) and for the delivery thereof at such points on the river . . . as may be agreed upon, for irrigation and domestic uses . . ." The act added, "No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated."

THE MEXICAN TREATY

The compact provided as follows with regard to a Mexican Treaty:

Article 3(c) if, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River system such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantity specified in paragraph (a) and (b) [7.5 million acre-feet to Upper and Lower Basin and Lower Basin option to increase use by one million acre-feet], and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the states of the Upper Basin shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d) [75,000,000 acre-feet for any period of ten consecutive years].

The United States signed a treaty with Mexico on February 3, 1944 (59 Stat. 1219). The treaty guarantees annually to Mexico one and one-half million acre-feet annually provided that in times of surplus the United States would endeavor to deliver not to exceed 1.7 million acre-feet and provided further that in the event of extraordinary drought or serious accident to the irrigation systems of the United States making it difficult for the United States to deliver the guaranteed 1.5 million acre-feet per year the water delivered to Mexico would be reduced in the same proportion as consumptive uses in the United States are reduced.

Thus today the rights of Mexico are fixed by the treaty and the duty of both the Upper Basin and the Lower Basin to deliver water to Mexico is required by the compact. The Upper Basin therefore insists that Lower Basin tributaries be taken into account in computing the "surplus" available for Mexico, even though such tributaries as the Gila River furnish no physical supply for Mexico. The requirement that 1.5 million acre-feet be delivered to Mexico has implications with regard to the efforts of United States entities to meet water needs within the United States.⁶ Serious problems have also resulted from the recent high quantities of salt in waters transported to Mexico.

PRESENT DEVELOPMENTS

Lower Basin

First large-scale use of Colorado River water for irrigation purposes in California was in the Palo Verde area in 1901. California has made constant use of the river's supplies through several pioneering projects. The importance of the Colorado River was made clear by Special Master Rifkind:

Today it is perfectly clear that the viability of numerous communities in the Lower Basin is conditioned on and limited by the availability of Colorado River System waters.

It is thus manifest that in the Lower Basin the water of the Colorado River System is "more than an amenity"; it is more than a "treasure." It is indispensable to life; no substitute for it has yet been invented or envisaged.

Described below are the major storage and irrigation projects now in existence in the Lower Basin along the Colorado and its tributaries. It has been appropriately pointed out that California's investment alone in Colorado River development of dams, aqueducts and canals is in excess of \$600,000,000. In addition the federal government has invested millions of dollars. These facilities supply more than 5,000,000 acre-feet of water a year to more than 8 million persons and a major part of California's agricultural economy.⁷

MAINSTREAM

Hoover Dam

This is the largest single dam on the river with a usable storage capacity of 27,200,000 acre-feet. Located in Black Canyon 330 miles above the Mexican border this dam first impounded water on February 1, 1935 and was constructed and is operated by the Department of the Interior.

Parker Dam

This is the diversion point on the river for the Colorado River Aqueduct of the Metropolitan Water District and is located 155 miles below Hoover Dam and 17 miles above Parker, Arizona. The dam, which has a capacity of 648,000 acre-feet, first impounded water on June 29, 1938,

⁶ For an interesting comment on the Mexican treaty see "The Colorado Waters Dispute," *Foreign Affairs Quarterly Review*, April 1964 at 495, which includes a large amount of historical material.

⁷ Northcutt Ely, "The Supreme Court's Decision in *Arizona v. California* and its effect on California's water supply," statement before Feather River Project Association, Long Beach, July 12, 1963, at 5.

and is operated by the Department of the Interior, and owned by the United States although paid for in full by the Metropolitan Water District.

Davis Dam

Located 67 miles below Hoover Dam west of Kingman, Arizona, this dam, which has a capacity of 1,820,000 acre-feet serves to reregulate releases from Hoover Dam. It first impounded water on January 17, 1950. It also is operated by the Department of the Interior.

Headgate Rock, Imperial, Laguna and Morelos Dams and Palo Verde Dam

These five dams are diversion dams for irrigation projects and have no appreciable storage capacity.

Headgate Rock Dam is located 15 miles below Parker Dam and serves as the diversion point for the Colorado River Indian Reservation in Arizona. Palo Verde Dam completed as a permanent structure in 1957, and located 42 miles below Headgate Rock Dam, serves as the diversion point for the Palo Verde Irrigation District. The Imperial Dam, located 90 miles below Palo Verde Weir and 18 miles above Yuma, Arizona, is the diversion point for the All-American Canal, the Yuma Project, and the Gila Project. Laguna Dam, located 5 miles below Imperial Dam was formerly used as the diversion point for the Yuma and North Gila Valley projects and dates back to 1910. Morelos Dam is located below Pilot Knob between Arizona and Mexico and serves as a diversion point for the Mexican Canal irrigating Mexicali Valley.

The All-American Canal System

The All-American Canal System received its first significant use in 1940, replacing the older Alamo Canal which was mostly in Mexico. From its headworks at Imperial Dam the canal stretches westward across Imperial County roughly parallel to the Mexican border for 36.2 miles. The facility is used by the Imperial Irrigation District, which was formed in 1911 and is the largest such district in the state, encompassing about one million acres. First diversions in this area were in 1901. At this point the Coachella branch of the canal then leads in a northwesterly direction for 123 miles while the main canal extends westward another 44 miles. The Coachella branch also serves the Coachella Valley County Water District and was completed in 1948. The Coachella District, which was formed in 1918, includes more than 267,000 acres and is located in Riverside and Imperial Counties. First diversions to Coachella were in 1949.

Diversions through the All-American Canal for the period 1951-55 averaged 5,232,000 acre-feet per year, with 3,836,000 acre-feet diverted annually for the Imperial Irrigation District and the Coachella Valley County Water District, and 1,396,000 diverted annually for the Yuma Project. This Project's Reservation Division serves about 15,000 acres of land in California in the area between the Colorado River and the All-American Canal across from Yuma, Arizona. The project receives water from the All-American Canal and includes a large amount of Indian land.

Yuma Project

This project consists of three separate divisions.

The Yuma Project's Valley Division serves about 50,000 acres south of Yuma, Arizona, along the east side of the Colorado River to the Mexican Border. The water is diverted at Imperial Dam through the All-American Canal and crosses under the Colorado at a siphon 15 miles from Imperial. This project was authorized in 1904 with the project works completed in 1913.

The Yuma Project, California Division, was authorized in 1904 with first diversions coming in 1910.

The Yuma Auxiliary Project serves 3,305 acres near the Yuma Project in Arizona and receives water from the Gila Gravity Canal.

Palo Verde Irrigation District Project

The Palo Verde Irrigation District was formed in 1923 and encompasses more than 120,000 acres in the Palo Verde Valley and Mesa, located in Riverside County midway between Parker and Imperial Dams. A distribution system constructed and operated by the district leads from Palo Verde Dam. First diversions at Palo Verde were prior to 1900.

The Colorado River Aqueduct

This 242-mile-long aqueduct leads from Parker Dam to Lake Mathews in Riverside County. It serves the Metropolitan Water District of Southern California, formed in 1928, and the City of San Diego and the San Diego County Water Authority (a member of the Metropolitan Water District since 1946) through the San Diego Aqueduct, all of which aqueduct service area is located outside the drainage area of the Colorado River but within the "Compact Basin." The Colorado River Aqueduct was financed, and is owned and operated, by the Metropolitan Water District. First used in 1941, it was recently completed to its maximum capacity of 1,212,000 acre-feet a year. In 1962, 1,073,410 acre-feet were delivered through the aqueduct.

TRIBUTARIES

The Gila Project

This project also originates at the Imperial Dam. The Gila Gravity Canal, with a capacity of 2,200 c.f.s., extends southward from Imperial Dam to serve three separate areas through branch canals. The total area capable of service is 103,000 acres. First authorized in 1937, this project was reauthorized in 1947.

San Carlos Project

This is a joint project by the U.S. Bureau of Indian Affairs and others and serves about 100,000 acres on both sides of the Gila River in Arizona southeast of Phoenix and the Salt River Project. The project includes Coolidge and Ashurst-Hayden Dams on the Gila River. Coolidge Dam has a capacity of 1,285,000 acre-feet while Ashurst-Hayden is a diversion dam. For the 20-year period ending in 1955, annual surface diversions of the project were 187,000 acre-feet.

The Salt River Project

This project has a capability of serving about 240,000 acres and is located in Central Arizona along the Salt River east of its confluence with the Gila River. The project, which includes the City of Phoenix, was built by the Bureau of Reclamation and is now owned and operated by the Salt River Valley Water Users' Association. It includes the Granite Reef Diversion Dam, Stewart Mountain Dam, Horse Mesa Dam, Mormon Flat Dam and Roosevelt Dam on the Salt River; Bartlett Dam and Horseshoe Dam on the Verde River, and a flood control dam on Cave Creek.

The Las Vegas Valley

The Las Vegas Valley, including more than 200,000 acres, receives water pumped from Lake Mead behind Hoover Dam. In 1963 a total of 26,442 acre-feet was utilized from this source, for Boulder City and Henderson, Nevada.

The Seven Party Agreement

The Secretary of the Interior contracted with water users beginning in 1930. At the request of the Secretary, however, the various water users in California signed an agreement on August 18, 1931 setting forth relative priorities among the California users. This agreement is known as the Seven Party Agreement. Its terms were recommended by the State Division of Water Resources and the Secretary of the Interior incorporated these priorities in September 1931 in regulations relating to contracts for the storage and delivery of mainstream water impounded by Hoover Dam. The provisions of the agreement are included in all these contracts.⁸

The various priorities resulting from this agreement are as follows: (when more than one agency is listed in a priority the rights of each "are equal in priority.")

Priority	Agency	Amount (acre-feet)
I	Palo Verde Irrigation District (district lands in 1931) ----	Unspecified *
II	Yuma Project (Bureau of Reclamation)-----	Unspecified *
III	(a) Imperial Irrigation District	} --- Unspecified *
	(b) Palo Verde Irrigation District (16,000 mesa acres) }	
	Total of Priorities I, II, and III-----	3,850,000 †
IV	Metropolitan Water District and/or City of Los Angeles ‡--	550,000
V	(a) Metropolitan Water District-----	550,000
	(b) City and/or County of San Diego ‡-----	112,000
VI	(a) Imperial Irrigation District	} --- 300,000
	(b) Palo Verde Irrigation District (16,000 mesa acres) }	
VII	For use in Colorado River Basin-----	All remaining water available
	Total Priorities I-VI-----	5,362,000

* Based upon acres to be irrigated. (Note, however, total set for Priority 1, II, and III.)

† Beneficial consumptive use.

‡ Now merged with Metropolitan Water District priority.

Thus, this agreement contemplates the distribution of 5,362,000 acre-feet of water, with only part of the Los Angeles Area/San Diego supplies included in the 4,400,000-acre-foot figure. Priorities I, II, and III are considered agricultural uses.

California has fully developed its available supplies from the Colorado River, but both Nevada and Arizona have only used part of their basic entitlement to date. Probably the key to water availability in the Lower Basin (and thus a major determination of whether or not immediate importation of new supplies to the river is needed) is the rate of development in the Upper Basin and other Lower Basin states, which with California, share the waters of the Colorado River. A summary of existing lower basin development, together with estimates of future annual needs for these existing or authorized developments for the lower basin (as estimated by the Colorado River Board and assuming a total of available supply from the Colorado River in California of 4.4 million acre-feet) is shown on the following table.

⁸ Report of Special Master *op. cit.*, at 28.

TABLE I
EXISTING LOWER COLORADO RIVER BASIN MAINSTREAM PROJECTS

Project	1963 Net diversions (acre feet)	Estimate of annual requirement in futures	Constructed by ⁴	Type of project

Upper Basin

A major factor in the overall water availability in the Lower Basin is the expected development in the Upper Basin states. Serious differences exist however, in the available estimates of ultimate water development in the Upper Basin both from existing projects and proposed ones.

Table II compares the Colorado River Board and Bureau of Reclamation estimates of eventual uses of *existing and authorized* Upper Basin projects only.

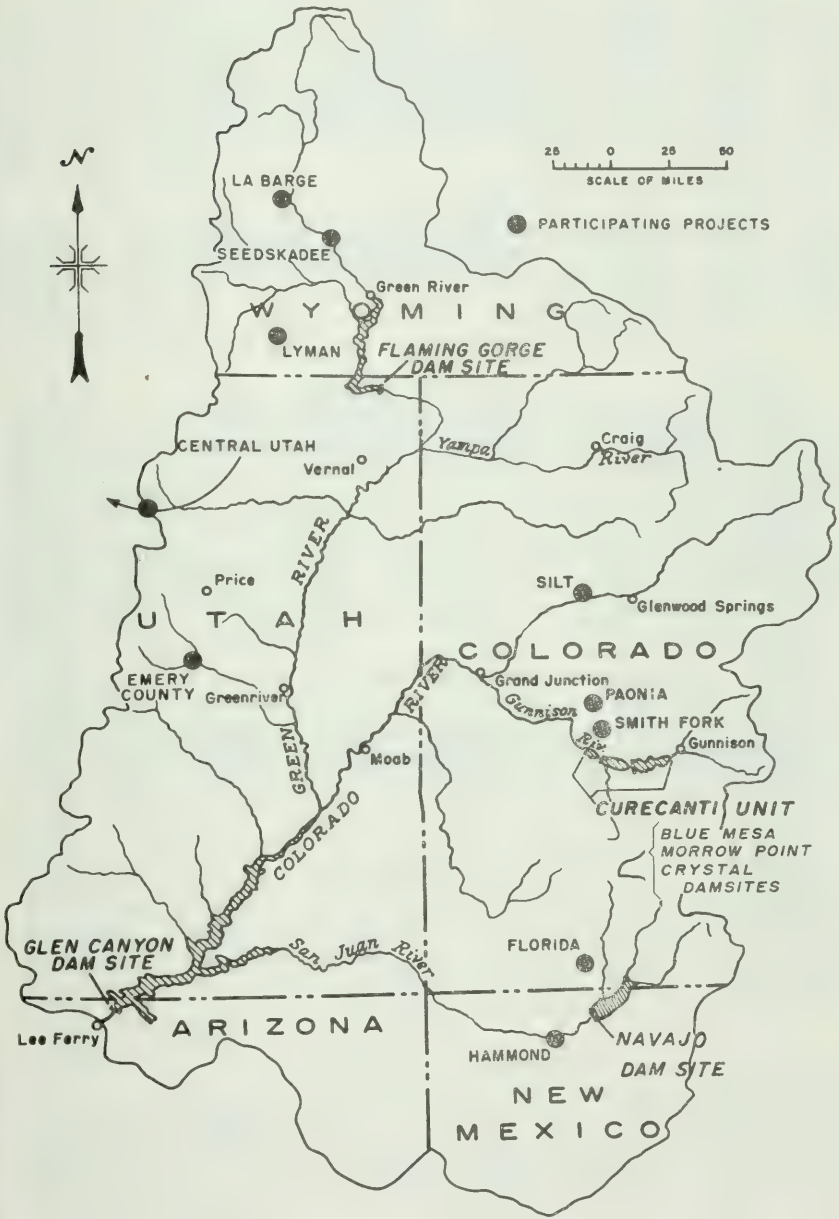

COLORADO RIVER STORAGE PROJECT

The Colorado River Storage Project involves development in Arizona, Colorado, New Mexico, Utah and Wyoming and is the initial stage of comprehensive development of the Upper Colorado River Basin. Its objectives are to provide long-time regulatory storage sufficient to permit the upper division of the basin to meet the obligations of the Colorado River Compact with regard to flow at Lee Ferry and also to utilize the basin's apportionment of the waters of the Colorado. The plans are to include four major dams and storage units—Glen Canyon on the Colorado River in Arizona near the Utah border, Navajo on the San Juan River in New Mexico, near the Colorado border, Flaming Gorge on the Green River in Utah, near the Wyoming border, and Curecanti on the Gunnison River in west central Colorado. Also authorized with the project are a number of participating projects which will receive power revenues from the larger project to help pay for their irrigation construction costs. The arrangement is similar to that proposed for the Pacific Southwest through the development fund.

The various participating projects are as follows:

PAONIA PROJECT

This project is located in west central Colorado and will ultimately serve 2,230 acres of land now under irrigation and 13,070 acres already irrigated lands. The project includes Paonia Dam and reservoir on Deep Creek and canal works.

Colorado River Storage project.

¹ Colorado River Board: at time of full development. U. S. B. R. Long time average annual depletions.

² Colorado River Board: at time of full development. U. S. B. R. Full development of all projects not yet attained (H.D.N. 364 (83rd Congress, 2nd Sess.), p. 148).

³ New Mexico.

⁴ Includes U. S. B. R. estimate of 691,000 acre-feet of annual reservoir evaporation from Glen Canyon, Flaming Gorge, Navajo and Curecanti.

HAMMOND PROJECT

The Hammond Project is located in northwestern New Mexico along the San Juan River and will provide irrigation water for approximately 3,900 acres most of which is not now irrigated. The project includes the Hammond Diversion Dam and canal systems, storage releases from the Navajo Reservoir, part of the Colorado River Storage Project, will supplement natural stream flow as a major source to the water for the project.

SMITH FORK PROJECT

The Smith Fork Project is located in west central Colorado. The project will provide supplemental irrigation water supply for 6,920 acres of land and provide a new supply for 1,320 acres of new unirrigated land. The project includes Crawford Dam and reservoir, and a number of canals and related facilities.

CENTRAL UTAH PROJECT

The Central Utah Project will serve central and northeastern Utah. The project will be constructed in two phases. The initial phase will serve approximately 160,000 acres of land with approximately 48,800 acre-feet annually available for municipal and industrial and related purposes. The project includes nine storage dams for the combined storage capacity of 1,600,000 acre-feet, eight diversion dams and a 37-mile aqueduct in the Uinta Basin and seven storage reservoirs with a capacity of 107,400 acre-feet, aqueducts, power plants, and diversion dams in the Bonneville Basin.

FLORIDA PROJECT

The Florida Project will serve the Florida, Mesa and Florida River Valley in southwestern Colorado. The project will provide irrigation water for 12,700 acres of presently developed land and 6,300 acres not presently irrigated. The major features of the project will include Lemon Dam and distribution and drainage facilities.

EMERY COUNTY PROJECT

This project is located in east central Utah. The project involves an irrigable area of about 24,000 acres and is located in the Green River Basin. Approximately 75 percent of the area involved is presently irrigated in part with limited supplies available. The project includes Joes Valley Reservoir on Cottonwood creek and a series of canals, and a diversion dam.

SEEDSKADEE PROJECT

This project is located in the Upper Green River Basin in Wyoming. The project provides irrigation water for approximately 60,000 acres undeveloped land. Features of the project include Fontenored Dam on the Green River, a pumping plant, laterals, drainage system and a series of canals.

SILT PROJECT

This project is located in Garfield County in west central Colorado along Rifle and Elk creeks tributaries of the Colorado River. The project will develop water to serve approximately 1,900 acres of undeveloped land and to provide supplemental water for 5,400 acres of land presently under irrigation. Principal feature of the project is the Rifle Gap Reservoir on Rifle Creek. Project will also include a canal system.

PROPOSED DEVELOPMENT**Lower Basin**

Since existing uses in the Lower Basin utilize most of the water allocated to the basin, there is general agreement as to the extent of *proposed* Lower Basin development, as shown in the following table based on Colorado River Board estimates:

TABLE III
PROPOSED LOWER BASIN MAINSTREAM PROJECTS

<i>Proposed project</i>	<i>Estimated use at full development (acre-feet)</i>	<i>Constructed by</i>	<i>Type of project</i>

Southern Nevada } Mojave Valley }	180,000 *	U.S.B.R. U.S.B.R.	M. and I. Irrigation
Total	1,430,000		

* Includes federal and nonfederal development at Boulder City-Las Vegas-Henderson.

Upper Basin

As can be seen from Table II on page 28 the estimates of the U.S.B.R. and the Colorado River Board are at variance with respect to existing and authorized projects. A similar difference occurs in the consideration of estimated diversions from proposed Upper Basin projects.

The Colorado River Board's estimate is as follows:

TABLE IV
PROPOSED UPPER BASIN DEVELOPMENT
(COLORADO RIVER BOARD ESTIMATE)

Project	Estimated diversion at full development (acre-feet)	Estimated depletion schedule	Constructed by	Type of project

¹ These projects were named in Sec. 2, P.L. 485, 84th Cong. (Authorizing C.R.S.P.) and are recommended for early investigation. Construction partly dependent upon excess power revenues from Upper Colorado River Basin Fund after subsidizing authorized participating projects. Based upon U.S.B.R. repayment schedule and allowable development period, some of these projects could be started immediately. The aggregate of the depletions is assumed to begin in 1970 and increase on straight line basis to full development in 1995. All are potential U.S.B.R. projects.

The following table summarizes the estimates of the Bureau of Reclamation as to long time annual depletions by projects currently proposed.

TABLE V
PROPOSED UPPER BASIN DEVELOPMENT
(BUREAU OF RECLAMATION ESTIMATE)

Project	Estimated use
Animas-La Plata, Colorado-New Mexico	129,000
Bostwick Park, Colorado	3,000
Fruitland Mesa, Colorado	28,000
Savery-Pot Hook, Colorado-Wyoming	38,000
Total	198,000

The Department of the Interior representatives indicated to the committee that the differences between the Colorado River Board and

the Department of the Interior in projecting the future rate of Upper Colorado River Basin depletions reflect, almost entirely, different judgments as to:

1. The scope and timing of construction of Federal Reclamation projects in the Upper Basin.
2. The magnitude and timing of future industrial demands for water such as represented by the oil shale industry.
3. The magnitude and timing of future municipal and domestic water demands.

Such differences in estimated development raise uncertainties in various areas as to anticipated future supplies. Until the estimates of the state and federal agencies are more nearly agreed we cannot be certain as to when critical shortages will occur. As is described below, estimated Upper Basin development particularly, is a major factor in determining supplies available to the *Lower Basin*.

These differences between the projections of Upper Basin development by the two agencies are summarized in the following tabulation:

Year	Colorado River Board of Calif. * (1,000 A.F.)	Department of Interior * (1,000 A.F.)	Difference (1,000 A.F.)
1975	4,300	4,000	300
1990	5,400	4,900	500
2000	5,700	5,430	270

* Total for reservoir losses and other depletions.

The Department of the Interior's projection, in general, envisages an increase over historic trends in the rate of Upper Basin depletions until the year 1975. Such an increase obviously will result from the construction and operation of federal projects authorized in recent years, principally the Colorado River Storage Project and participating projects, the Fryingpan-Arkansas Project, and the San Juan-Chama and Navajo Indian Irrigation Projects. After 1975 the department expects the 1960-1975 rate of increased depletion to reduce until the year 2000, after which it will further tend to level off as the Upper Basin approaches full use of its share of Colorado River Basin water.

The impact of this expected development, coupled with natural flows expected in the river for use in both the upper and lower basins is discussed in the sections below.

COLORADO RIVER WATER SUPPLY

The Colorado is characterized by uneven and unpredictable flows. Available flow data indicates that the flow has varied from 4,396,400 acre-feet in 1934 to 22,003,000 acre-feet in 1907. The river's early history was marked by "violent floods causing great damage."⁹ In addition to erratic flow, prior to construction of Hoover and Glen Canyon Dams, the river carried large quantities of silt, estimated during the suit, *Arizona v. California*, as being "proportionately 17 times that of the Mississippi River."¹⁰

⁹ Report of Special Master, *op. cit.*, at 18.

¹⁰ *Ibid.*, at 20.

Although the Colorado is usually pictured as a colossus among rivers (including its popular and impressive features such as the Grand Canyon) it is a smaller river than most believe. For example, the Sacramento River, which has but 10 percent of the drainage area of the Colorado River, produces from 40 to 50 percent more water each year than the Colorado. The Colorado drains an arid part of the West, and, in the Lower Basin, serves an arid area.

The table below shows the historic flow of the Colorado River at Lee Ferry. It can be seen that recent years were comparatively dry ones.

TABLE VI
HISTORIC FLOW OF THE COLORADO RIVER AT LEE FERRY
(Stream flow in acre-feet)

		1964.....	6,824,000

Sources: 1896-1957 Report of Special Master, *op cit*, p. 117.
1958-1964 Colorado River Board.

The estimated inflow to Lake Mead which would have occurred during the wet and dry periods of record is shown in the table below:

	Estimated average annual flow (in millions of acre-feet)			
	1896-1908	1909-29	1930-62	1909-62
Colorado River at Lee Ferry	14.3	16.1	11.3	13.2
Net gains Glen Canyon to Hoover Dam --	--	1.1	0.8	0.9
Inflow to Lake Mead	--	17.2	12.1	14.1

Source: Pacific Southwest Water Plan.

It can be seen the amounts vary greatly from the dry periods to the wet periods and the 1909-62 average is substantially less than the average from 1909-29, which was the flow used for consideration of the Boulder Canyon Project Act.

Of course, the selection of water periods can effectively determine whether or not a surplus is indicated for a given area. Care must be exercised in dealing with Colorado River flow statistics so as to not mislead.

The total main stream supply on the basis of the entire period 1896-1962 as estimated by the *Bureau of Reclamation* is summarized as follows:

	<i>Million A.F.</i>
Virgin flow at Lee Ferry	14.9
Historic net gain Glen Canyon to Hoover Dam9
Undepleted flow Bill Williams River1
Present depletions Glen Canyon to Hoover Dam2
Total long-time average virgin water supply	16.1

The differences in the above supply figures and those of the Colorado River Board are shown on the chart on the following page prepared by the Colorado River Board of California.¹¹

The bureau figures are based upon the 1896-1962 runoff period while the Colorado River Board figures are based on the period of 1922-1962.

According to the Department of the Interior in addition to the differences as to runoff there are three other reasons for the differences between the estimates of the two agencies. Each, to a large extent results from judgment factors:

1. The CRB chart estimates a faster rate of depletion by the Upper Basin states than does the bureau.
2. The CRB chart reflects a higher estimate of future channel and control losses below Parker Dam than does the bureau.
3. The CRB chart reflects a lower estimate of useable water supply due primarily to different assumption as to reservoir operations.

The breakdown of these three separate reasons, each of which reflects the availability of additional water for use at and below Hoover Dam of the bureau estimates for the period 1975-2000, is as follows:

<i>Item</i>	<i>Difference (1000 A.F.)</i>		
	<i>1975</i>	<i>1990</i>	<i>2000</i>
Upper Basin depletion	400	500	270
Channel, control, and evaporation losses	335	365	365
Useable water supply	500	390	445
Total	1,235	1,255	1,080

¹¹ A detailed explanation of the criteria utilized in the board's estimates can be found in the appendix to the hearing transcript, August 13, 1964.

† Senate Subcommittee Hearings on Central Arizona Project and Discussion of Pacific Southwest Water Plan, 88th Congress, p. 468 and Table 16A in January 1964 report on Pacific Southwest Water Plan.

¹ Based on Colorado storage project reservoir drawdown and 1930-62 runoff period.

² Based on 14.0 million acre-feet dependable annual yield at Lee Ferry. Figures shown are 14.0 minus figures in line 1.

³ No drawdown shown because a closed cycle is assumed, i.e. same storage at beginning and end of selected period.

⁴ As indicated in note 2, the C.R.B. figures are based on 14.0 dependable yield. The 1922-64 avg. annual virgin flow is 13.7-13.8 which means the 14.0 figure is on the optimistic side and to have these amounts for Lower Basin use means that 0.2 or 0.3 more salvage would be needed over the amount shown in line 2.

8/13/64

As is indicated in other sections of this report, the Colorado River Board and others are particularly critical of what they consider over-estimated amounts of potential water salvage. This difference is shown in the board's estimates in this report and was called to the committee's attention at a hearing by the chief engineer of the Colorado River Board:

The composition of the U.S.D.I. figure for salvage is 170,000 acre-feet per annum savings from Senator Wash Regulator Reservoir, 220,000 from groundwater recovery, 100,000 from phreatophyte eradication and control, and 190,000 from channelization. Deducting these quantities from the amount of the present losses would leave only 160,000 acre-feet a year to take care of the remaining net river losses in the over 200 river miles from Davis Dam to Mexico. In only the 49 miles from Davis Dam to Topock the net losses have averaged 186,000 acre-feet a year since 1953 when extensive channelization work in that reach was completed. Furthermore, it is difficult to see how Senator Wash, although a worthwhile project, can save 170,000 acre-feet a year. In each of several months of the past 3 years excess arrivals in Mexico were less than 5,000 acre-feet, without Senator Wash. Much of the excess arrival during the past 3 years has been caused by salinity and sediment problems and winter flow factors which Senator Wash will not solve. Mexico has already protested the ground water recovery program. Fish and game and recreational interests are pressing for more, not less, recreational and wildlife area along the Colorado River. A channelized river with large denuded areas will surely be resisted by outdoor enthusiasts. Whereas the C.R.B. favors all feasible water salvage programs, it believes that realism should be made part of the hydrology studies. Large savings such as assumed by the U.S.D.I. might be realized, but should not be assumed until the programs have been accomplished.¹²

Figures 1 and 2 which follow are graphic illustrations of the difference in water supply anticipated by the state and federal agencies. To as great an extent as possible the two charts illustrate comparable considerations.

These figures are illustrative of the past quagmire of contradictory hydrological data upon which far-reaching water developments are expected to be predicated.

It can be seen from the foregoing material that a large amount of water evaporates each year from reservoirs on the Colorado. According to the Bureau of Reclamation gross evaporation rates from reservoirs along the mainstream varied from 60 to over 80 inches annually. Net evaporation from Lake Mead during the five-year period ending in 1962 was estimated to average approximately 845,000 acre-feet a year while reservoir evaporation losses below Hoover Dam including Lake Mojave and Lake Havasu are estimated to average 370,000 acre-feet annually. Also, it is estimated by the Colorado River Board that 700,000 acre-feet a year and by the Bureau of Reclamation that 680,000 acre-

¹² Statement of Dallas Cole, hearing, August 14, 1964, at 2.

WITH APPLICATION OF PRIORITY IN LOWER BASIN

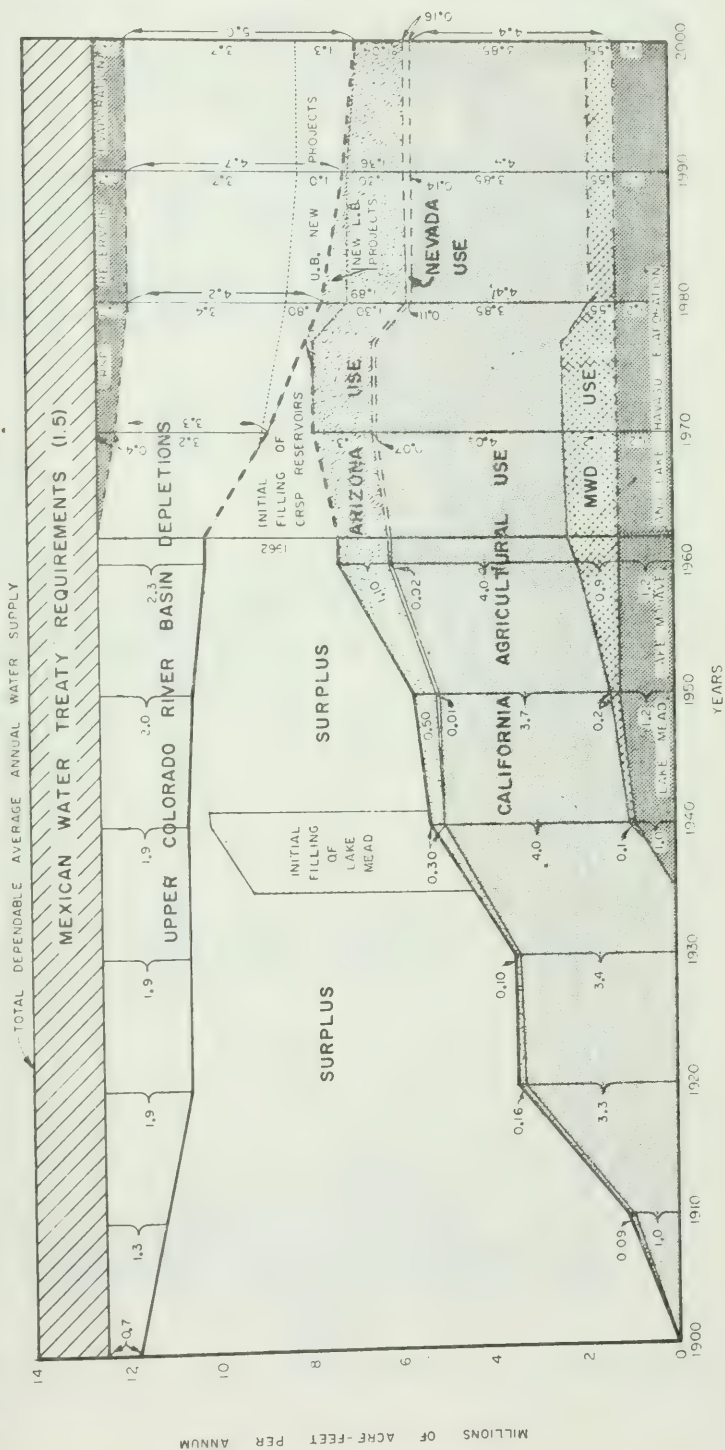

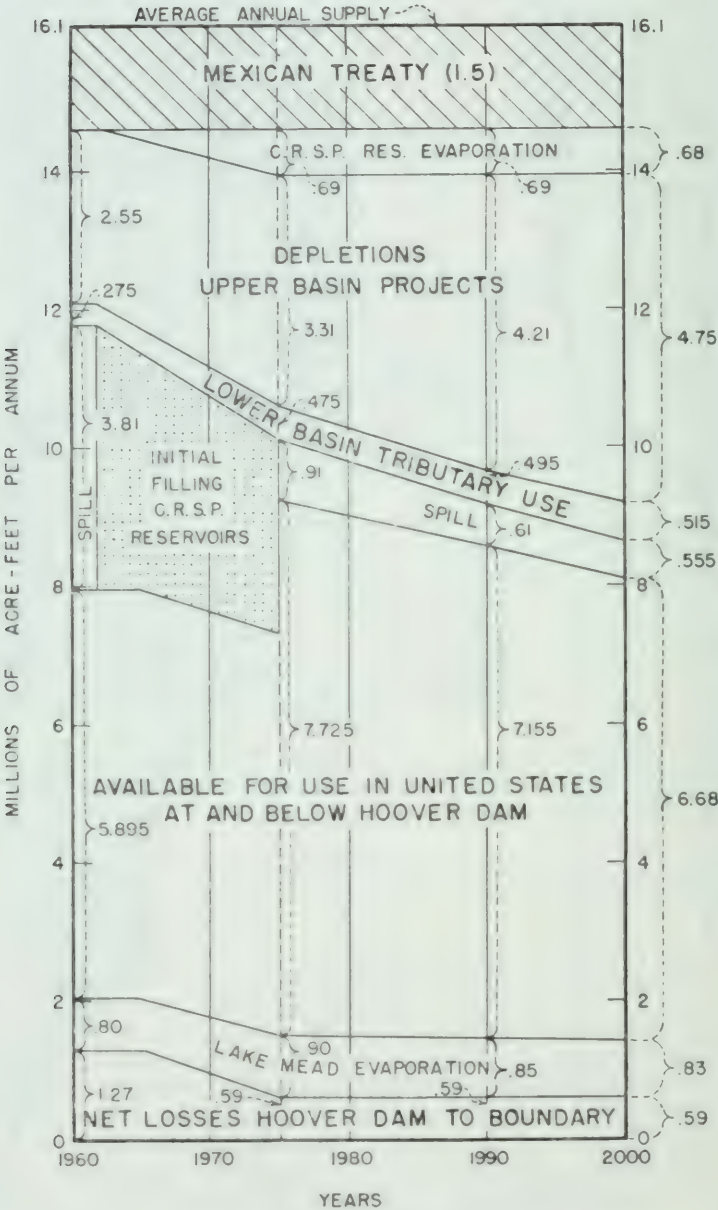

FIGURE 2

COLORADO RIVER SYSTEM
WATER SUPPLY AND WATER DEMAND
1960 - 2000

feet a year will be lost from evaporation on Colorado River Storage Project reservoirs in the Upper Basin. Evaporation control research, however, is now being conducted by several entities.

In addition to reservoir losses there is the matter of channel losses along the Colorado River below Hoover Dam. A number of agencies have made studies to determine the amount of water lost in this manner. There are several indeterminable factors including unauthorized diversions, channel and open ground evaporation, unaccounted consumptive uses, etc., so that estimated losses are not considered as accurate as the reservoir evaporation figures. The Bureau of Reclamation, in the Pacific Southwest Water Plan, shows 670,000 acre-feet annually in channel losses for the period 1957-61. Estimated annual regulatory losses of about 230,000 acre-feet were used as representative of "optimum operational control with present facilities and scheduling methods." Thus, it can be seen that reservoir evaporation losses and channel losses below Hoover Dam total approximately 1,270,000 acre-feet annually. If significant advances, particularly in reservoir evaporation control, are made in the coming years it should result in increasing the supply in the Colorado. In any consideration of water requirements and water supply the matter of evaporation and channel losses must be considered an important factor. It can be seen from Figure 1 that the amount lost through evaporation and channel losses in the Lower Basin alone is equal to that required by the Central Arizona Project.

The conflicting estimates of water supply include complex factors such as reservoir release, scheduling, etc.

Not only is there this disparity in estimates but Arizona Governor Paul Fannin registered a strong objection to the bureau's estimates of Colorado River Water supply in his state's comments on the original Pacific Southwest Water Plan.

Arizona does not concur in the estimate of water supply contained in the Pacific Southwest Water Plan. Arizona's estimate of the future water supply available in the main stream of the Colorado River is much higher than that presented in the report. I feel that there would be little to be gained by a discussion by me of the technical aspects of figures as to water supply. This problem was debated at great length during the trial phases of the *Arizona v. California, et al.*, litigation. . . ¹³

An adequate inventory and study of the Colorado River has not been made and is sorely needed. For example, the quantity of water available effectively determines the amount of power generation possible on the river. The Lower Basin states cannot plan with any certainty when there are gross variations in water supply figures utilized by the various agencies. In the long run, of course, this committee and all California water agencies are in agreement that the ultimate needs of our state and our neighboring states in the Lower Basin will require that additional water be imported into the Colorado River Basin.

A detailed discussion of the water supply and requirements of the Lower Basin is presented in Chapter IV of this report.

¹³ *Hearings on S. 1658 Before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs*, 83 Cong. 2d Sess., Part II, at 708-9.

Chapter II

THE LONG SUIT

BACKGROUND

The present case, *Arizona v. California*, is the fifth in a series of suits over the waters of the Colorado River. The specific circumstance which brought about the current case was the decision of Congress not to approve the Central Arizona Project, utilizing Colorado River water, until the water rights question was solved.

In 1948 the Secretary of the Interior submitted a favorable report to the Congress recommending the authorization and construction of the Central Arizona Project. The project would serve the Tucson-Phoenix area with 1.2 million acre-feet of Colorado River water a year. Authorization bills for the project were unsuccessfully sought at the 79th, 80th, 81st and 82nd Congresses although some passed the Senate. In 1951 the House Committee on Interior and Insular Affairs adopted a resolution which resulted in the postponement of consideration of bills relating to the Central Arizona Project until use of water in the Lower Basin was either adjudicated or mutual agreement was reached.

Thus, on August 13, 1952, Arizona initiated this suit. The Arizona complaint was against California and seven of its public agencies (Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego and County of San Diego). The original jurisdiction of the U.S. Supreme Court, as provided in the Constitution, was invoked.

The complaint alleged that pursuant to the Colorado River Compact and the Boulder Canyon Project Act, Arizona was entitled to the bene-

ficial consumptive use of 2.8 million acre-feet of water each year from the Colorado River System, and that California be limited to 4.4 million acre-feet. The United States and Nevada intervened and on motion of California, New Mexico and Utah were added as parties to the case.

A chronology of major events in the case is as follows:

April 13, 1952	Motion to file a complaint filed by Arizona
January 19, 1953	Court granted motion
June 1, 1954	George I. Haight of Chicago appointed Special Master
July 15, 1954	Motion by California to join Colorado, New Mexico, Utah, and Wyoming as parties
July 18, 1955	Special Master Haight's report recommending that California's joinder motion be denied
October 10, 1955	Following Mr. Haight's death, Simon H. Rifkind appointed Special Master
October 20, 1955	California's filed exceptions to Special Master Haight's recommendations on joinder motion
December 12, 1955	Court denied California's motion to join as parties Colorado and Wyoming, and granted the motion to join as parties Utah and New Mexico only to the extent of their capacity as Lower Basin States
June 14, 1956	Trial began in San Francisco
August 28, 1958	Trial concluded
May 5, 1960	Draft report circulated among parties
December 5, 1960	Report of Special Master issued
January 8-11, 1962	Oral arguments before court (16 hours)
November 13-14, 1962	Additional arguments before court (6 hours)
June 3, 1963	Opinion of court rendered
September 16, 1963	California petition for rehearing filed
October 21, 1963	California petition for rehearing denied
March 9, 1964	Decree issued

At the trial, which lasted over two years, 340 witnesses were heard orally or by deposition, thousands of exhibits were received and 25,000 pages of transcript were filed. The Master's Report was a 433-page volume.

MAJOR ISSUES

1. Exclusion of Tributaries

As stated by the Special Master:

Perhaps the most crucial issue in the case arise from these conflicting views, an issue that is summarized by this question: *Is the application of the (Boulder Canyon) Project Act limited to the mainstream of the Colorado River or does it apply to the entire river system in the Lower Basin, that is, to both mainstream and tributaries?* (Emphasis added)¹

In its opinion the court stated:

As we see this case, the question of each State's share of the waters of the Colorado and its tributaries turns on the meaning and the scope of the Boulder Canyon Project Act . . . That meaning and scope can be better understood when it is set against its background—the gravity of the Southwest's water problems; the inability of local groups or individual States to deal with these enormous problems; the continued failure of the States to agree

¹ Master's Report, *op. cit.*, at 4, 5.

on how to conserve and divide the waters; and the ultimate action by Congress at the request of the States creating a great system of dams and public works nationally built, controlled, and operated for the purpose of conserving and distributing the water.²

Arizona claimed 2.8 million acre-feet and one-half of the surplus allocated to the Lower Basin based upon the mainstream supply only. This would permit Arizona to utilize 2.0 acre-feet of tributary flow in addition to its 2.8 million acre-feet mainstream allocation. At the time of the case, existing Arizona projects consumed less than half this amount. The remainder is contemplated to be used largely by the proposed Central Arizona Project.

On the other hand, California claimed that both mainstream and tributaries should be considered in the total available. On this basis (including the Gila River System, the major Arizona tributary), almost all of Arizona's entitlement would be already utilized.

The court's opinion includes a detailed examination of the legislative history of the Project Act.³ The Special Master similarly examined the question. With only Justice Douglas dissenting, the court held that the Congress intended to include only the mainstream flows when it enacted the Project Act. Thus the tributaries, which can deliver an estimated 2.0 million acre-feet annually, were lost to California in the computation of its allocation.

The court stated, "We have concluded. . . that Congress in passing the Project Act intended to and did create its own comprehensive scheme for the apportionment among California, Arizona and Nevada of the mainstream waters of the Colorado River, leaving each State its tributaries." The court (agreeing with the master) adopted the view that the Colorado River Compact, the law of prior appropriation and the doctrine of equitable apportionment (the doctrine used by the court in the absence of statute in resolving interstate claims according to the equities) *do not* control the issues in the case. Thus, the burden of the court's argument on both apportionment and tributary exclusion rested with congressional intent in enacting the Project Act. Justice Douglas was most critical of the court's opinion on the tributaries question and termed the majority opinion ". . . the baldest attempt by judges in modern times to spin their own philosophy into the fabric of the law, in derogation of the will of the Legislature."⁴

According to Northcutt Ely, California's chief counsel in the case, the decision on tributaries "practically eliminates the long-range availability of excess or surplus, which, on the water supply evidence, would have furnished a dependable supply of about 250,000 acre-feet to California if the tributaries had been included."^{4a}

An examination of the water supply situation, had the court included the tributaries, will show that it was on this key issue that California received its most serious setback from the suit. The following table

² 10 L.Ed. 2d 550, 551.

³ See also Ely & Wilbur, *Hoover Dam Documents*, 80th Congress, 2d Sess., House Document 717.

⁴ 10 L.Ed. 2d 581.

^{4a} Ely, *op. cit.*, at 3.

illustrates the water supply available to California and Arizona and the amount available for new projects in Arizona, under California's contention that the tributaries be included in the computation of the states' entitlements. (For the purposes of illustration throughout this chapter a 6-million-acre-foot long-time Lower Basin supply (a shortage situation) is used).

TABLE VIII
WATER AVAILABLE UNDER SITUATION INCLUDING TRIBUTARIES
(California's Contention)

	<i>Acre-feet per year</i>
ESTIMATED MAINSTREAM SUPPLY (long-time dependable supply) -----	6,000,000
ESTIMATED TRIBUTARY FLOW* -----	2,000,000
Total to allocate -----	8,000,000
<i>California's Share:</i>	
Basic 4,400,000 acre-feet amount -----	4,400,000
One-half of surplus over 7,500,000 -----	250,000
Total available to California -----	4,650,000
TOTAL CALIFORNIA USE (1963)	
Maximum contracted for (consumptive use) -----	5,362,000
Total California deficit -----	(712,000)
<i>Arizona's Share:</i>	
Basic 2,800,000 acre-feet amount -----	2,800,000
One-half of surplus over 7,500,000 -----	250,000
Total available to Arizona -----	3,050,000
TOTAL ARIZONA USE (present projects)	
Mainstream use (diversions less return flows) (Maximum expected to be used by Year 2000 from existing projects, <i>not including Central Arizona Project</i>) -----	1,300,000
Tributary use -----	1,800,000*
Total -----	3,100,000
Total Arizona deficit (without Central Arizona Project constructed)---	(50,000)

* Existing projects in Utah, Nevada and New Mexico require 151,000 acre-feet of tributary flows.

It can be seen that, based upon an estimated annual mainstream supply of 6.0 million acre-feet a year and including tributary waters in the computation, California's existing needs as expressed by present use *could not be fully met* on a long-term basis under conditions of maximum Upper Basin development. Even if California had "won" the lawsuit on this issue, reductions were inevitable. Upper Basin development and declining supplies in the river made it inevitable that California would be denied its full contract entitlement of 5,362,000 acre-feet. Exclusion of tributaries virtually eliminates any future possibility of surplus supplies in the river.

It can be seen also that the needs of the Central Arizona Project, requiring 1.2 million acre-feet annually, *could not be met at all* in this situation. The key here is that the tributaries are in Arizona and not in California and they are almost completely developed at present. In excluding the tributaries the court's opinion noted, "Not only does

the Gila enter the Colorado almost at the Mexican border, but also in dry seasons it virtually evaporates before reaching the Colorado."⁵

Former Attorney General Mosk has commented:

There is no question about it, we lost the tributary issue, and I have not recommended that we ask Congress to reverse that decision. There has been little disposition on the part of other Californians to do so.^{5a}

The court, by refusing to interpret the compact (Decree, *Arizona v. California*, Article XIII(D)) and by concluding tributaries were excluded from the apportionment under the project act, has created uncertainty as to accounting between the upper and lower basins for the Mexican Treaty burden. Resolution of this problem can only be determined by legislation interpreting the compact. There appears to be substantial Upper Basin sentiment in opposition to the court's decision on this issue. Significantly enough, the report of the Senate Committee on Interior and Insular Affairs transmitting S. 1658, the Goldberg Amendment, favorably to the Senate floor included a minority report by three Senators (all members of the committee), Gordon Allott and Peter Dominick from Colorado, and Milward Simpson from Wyoming. These gentlemen pointed out in their minority statement:

The net affect of all apportionments is to place a draft upon the Colorado River of 17.5 million acre-feet annually. This amount of water is simply not available from the Colorado River if the Lower Basin tributaries are excluded. The Lower Basin tributaries produce, on the average, about 3 million acre-feet of water annually. The compact apportions the waters of "Colorado River System" not just the mainstream. Therefore, surpluses as they pertain to the apportionment of the waters of the "Colorado River System" between the basins require an accounting of waters of the whole Colorado River System in the Upper Basin as well as an accounting of waters of the whole Colorado River System in the Lower Basin. . . . If the Lower Basin tributaries are excluded, then the Upper Basin, in almost every year, will have to deliver additional water to satisfy the Mexican Treaty. "We feel compelled to oppose the enactment of this bill [S. 1658] unless an amendment including tributary flows is adopted."⁶

In addition to this minority report Senator Clinton P. Anderson and Senator Edwin L. Mechem, both members of the committee and U.S. Senators from New Mexico attached individual views to the committee report stating:

We are therefore, sympathetic to language that would amend this bill in order to provide for assurance of an accounting of the

⁵ 10 L.Ed. 2d 560, vote 40.

^{5a} Stanley Mosk "California's Water Crisis . . . A Time for Decision," address before Town Hall, Los Angeles, July 7, 1964, at 5.

⁶ U.S. Senate, 88th Congress, 2d Session, *Report 1330*, at 30.

waters in the Colorado River system in accordance with the provisions of the Colorado River Compact.⁷

Furthermore, Senator Frank E. Moss of Utah, also a member of the committee, stated:

I concur in the individual views of Senator Anderson and Senator Mechem of New Mexico. . . . It is well to underline the duty to account for all the waters to all with interest in the river, and I would support positive language to accomplish this. I endeavored to retain the duty of the Secretary of Interior and Commissioner of Reclamation to account for all of the waters of the Colorado River System allotted, in accordance with the Colorado River Compact. . . .⁸

Senator Thomas H. Kuchel of California refused to sign the committee report and thus, a total of seven Senators of the 15-member Senate Committee on Interior and Insular Affairs have taken issue with the court's decision on the exclusion of tributaries issue. California is not alone in being dissatisfied with the court's general result in this regard.

2. Specific Allocation

As was indicated above, the Project Act authorized a tristate compact among the Lower Basin states to apportion the 7.5 million acre-feet allocated to that basin. This compact was never entered into. Therefore, the court, in its opinion, concurred five to three with the master in apportionment of the mainstream supply to the states as follows:

California	4.4 million acre-feet plus one-half of excess over 7.5 million
Arizona	2.8 million acre-feet plus one-half of excess over 7.5 million
Nevada	300,000 acre-feet

The court held that Congress, in passing the Project Act, intended to and did create its own comprehensive scheme for the apportionment and the compact provisions did not control.^{8a}

3. Allocation of Shortages

The allocation of shortages among the states was another major issue of the case. The special master devised a formula for allocation of shortage based upon allocations whereby states would be reduced in proportion to their entitlement as follows:

California	44/75 of water available
Arizona	28/75 of water available
Nevada	3/75 of water available

⁷ *Ibid.*, at 27.

⁸ *Ibid.*, at 28.

^{8a} 10 L.Ed 2d 556.

The effect of the master's recommendation is shown in the following table:

TABLE IX

MASTER'S RECOMMENDATION

(Based upon mainstream use only and assuming a longtime dependable supply of 6.0 million acre-feet a year and maximum Upper Basin development)

	Total acre-feet per year
Estimated mainstream supply (Lower Basin)-----	6,000,000
Total to allocate -----	6,000,000
California's share:	
Since shortage exists, based upon $4\frac{4}{75}$ formula -----	3,500,000
Present California use (consumptive use) -----	5,362,000
Total California reduction -----	(1,862,000)
Arizona's Share:	
Since shortage exists, based upon $28\frac{2}{75}$ formula -----	2,240,000
Present Arizona use (Diversion less return flows) -----	1,300,000
Available for Central Arizona Project -----	940,000

In this case, however, the Central Arizona Project would be reduced and its remaining supply would come at the expense of California. The master's recommendation would have left no water for the Metropolitan Water District in a shortage period of this magnitude.

The court rejected, unanimously, the master's formula, which was the most *damaging* feature of the master's report for California. In rejecting it, the court appears to have reduced the adverse impact which would have resulted if the court had adopted the formula, but the court divided over the choice of a replacement one. A formula which respected priorities in the tradition of the western water law "first in time, first in right" doctrine was supported by Justices Douglas, Harlan and Stewart. They advocated a formula with interstate priorities controlling. This would have protected existing uses in California and Arizona against new projects such as the proposed Central Arizona Project. The future projects would thus bear the risk of shortage. The majority left the apportionment to the secretary and did not accept the master's formula.

The majority held that the Project Act had vested the Secretary of the Interior with the authority to devise a shortage formula which might be based upon either proration, or priority, or other factors. The secretary has never announced such a formula. The court pointed out that the Congress has the authority to restrict or enlarge the secretary's powers in this respect. The responsibility immediately rests with the secretary but, as the court points out, ultimately rests with Congress.

Former Attorney General Stanley Mosk has commented:

"If California loses any part of that 4.4 million acre-feet, it will not be the result of the Supreme Court decision. It will be the result of action hereafter to be taken by the Secretary of the Interior or by Congress. I am sure that neither the secretary nor the Congress will ever take that action if our people understand what is involved."⁹

⁹ Mosk, *op. cit.*, at 5.

This is most important. It is because of the transfer of responsibilities to the secretary and Congress that California interests are sponsoring legislation to establish a shortage formula whereby existing California projects will be protected. In effect, the court left the matter to the Congress and to the secretary.

Much concern has been expressed over the impact of this portion of the court's decision on the role of the secretary in water development. The court's construction of the Boulder Canyon Project Act was strongly opposed by Justice Douglas who commented:

The present decision . . . grants the federal bureaucracy a power and command over water rights in the 17 western states that it never has had, that it always wanted, that it could never persuade Congress to grant, and that this court up to now has consistently refused to recognize. Our rulings heretofore have been consistent with the principles of reclamation law . . . The rights of the United States as storer of waters in western projects has been distinctly understood to be simply that of "a carrier and distributor of water."¹⁰

California's former Attorney General, Stanley Mosk, expressed similar views:

The court will review any allocation the Secretary makes for abuse of this discretion, but there are precious few controls on that discretion, which the secretary might abuse. The secretary's power may be enlarged or it may be contracted by Congress.

The remarkable part of the decision cannot be stated in terms of which state gets how much water. The remarkable part is the vast, unprecedented, uncontrolled, and uncontrollable power conferred on one man, the Secretary of the Interior. In dissent, Mr. Justice Douglas, who is the most knowledgeable member of the court with respect to water rights, summed up the result like this:

"Now one can receive his priority because he is the most worthy Democrat or Republican, as the case may be."

That sentence describes why I am confident that executive fiat as the basis of water rights will ultimately prove as unacceptable to Arizona, to Nevada, and to the rest of the country as it is to California. Law—not the caprice of any executive official, however wise and however fair he may try to be — must be the basis of water rights.¹¹

The following table illustrates the difference in result under California's original contention in the suit (including tributaries), the master's proration formula, and the court's opinion (assuming a 4.4 million acre-foot priority to California) based upon the same shortage conditions assumed in previous charts:

¹⁰ 10 L.Ed. 2d 581.

¹¹ Mosk, *op. cit.*, at 6-7.

TABLE X

**COMPARISON OF CALIFORNIA'S CONTENTION, MASTER'S RECOMMENDATION
AND COURT OPINION (WITH PROTECTION OF EXISTING PROJECTS)
UNDER MAXIMUM UPPER BASIN DEVELOPMENT**

	<i>California's contention</i>	<i>Master's recom- mendations *</i>	<i>Court's opinion †</i>
1. Total water to be allocated	8,000,000	6,000,000	6,000,000
2. Available to California	4,650,000	3,500,000	4,400,000
3. Total California contracts	5,362,000	5,362,000	5,362,000
4. California loss	(712,000)	(1,862,000)	(962,000)‡

* Since maximum available is less than 7.5 million, master's shortage formula would be in effect.

† Assuming 4.4 priority to California.

‡ The General Manager and Chief Engineer of the Metropolitan Water District has referred to this amount as "contract" or "paper" water, as contrasted to the "wet" water loss of 250,000 acre-feet which represents the difference between the total loss under California's contention compared with the loss under the court's opinion. Mr. Skinner discusses this concept in California State Senate Fact Finding Committee on Water Resources, Hearing, *Transcript* Sept. 4, 1964, at 146-148.

In its decision, the court reduced California's certain rights to what the decree calls "present perfected rights," which are defined as rights to the quantity of water actually put to use before congressional authorization of Hoover Dam in 1929 plus the rights of Indian reservations. A determination of the extent of present perfected rights is being made at the present time, however, the estimates have been variously given as anywhere from 3.1 to 3.6 million acre-feet for California. Of course, Arizona's would also be reduced to her "present perfected rights."

Before the Senate Interior and Insular Affairs Committee, in discussing the court's decree, Northcutt Ely emphasized that the decree *protects* these present perfected rights, which are based upon diversions from the Colorado prior to enactment of the Boulder Canyon Project Act and construction of any major diversion works on the river. Thus, in any shortage formula the secretary might adopt the only amounts actually being dealt with are those above the amount of present perfected rights. Practically speaking, this amount above the present perfected rights is water that was made available to users as a direct result of the major storage projects and diversion works on the Colorado. Mr. Ely indicated that

"Article II(B)(3) of the decree thus restricts the scope of the secretary's discretion to the marginal quantity that represents the difference between 7.5 million and the aggregate of present perfected rights, that is to say, the *incremental stored water* which is the 'amount remaining available' above present perfected rights. Present perfected rights, not yet determined, are probably about 3.5 million in California, 600,000 in Arizona, a total of 4.1 million acre-feet of 'present preferred rights.' These were the quantities that were used before Hoover Dam was built. If 7.5 million is available altogether, the incremental stored water made available by construction of Hoover Dam thus represents about 3.4 million. Arizona's apportionment of 2.8 million thus includes about 600,000 acre-feet of present perfected rights plus about 2.2 million of the incremental stored water, or, in the language of the decree, the 'amount remaining available.' Arizona's 2.2 million of this is about

65 percent of the whole 3.4 million. California, receiving 4.4 million altogether, is getting 900,000 acre-feet, or less than 27 percent of the incremental stored water, in addition to her present perfected rights. Nevada's 200,000 is just under 9 percent of the 3.4 million acre-feet of stored water."

The secretary told the committee that he is preparing regulations to promulgate a shortage formula. It is difficult to see how he can announce one which conforms to the decree until present perfected rights have been determined, or one which gives Arizona a greater share of the stored water—that is, the incremental stored water, the "amount remaining available" in the decree language—when the supply diminishes, than the 65 percent of it that she receives when the supply is full. We think that a proper formula must protect existing uses. (Emphasis added.)¹²

Mr. Ely's analysis may be summarized as follows:

SUMMARY OF SOURCE OF ENTITLEMENT

(Assuming supply of 7.5 million acre-feet)

	California	Arizona	Nevada
Present perfected rights (estimated)	3,500,000	600,000	—
Share of incremental supply	900,000	2,200,000	300,000
Total	4,400,000	2,800,000	300,000

Thus, it can be seen that with a full river supply of 7.5 million acre-feet the relationship of incremental supply to present perfected rights is as follows:

	All States
Present perfected rights	4,100,000
Incremental supply	3,400,000
Total	7,500,000

Thus, as a matter of fact, should the supply in the river amount to 7.5 million acre-feet a year, California is receiving $\frac{9}{34}$ ths or 26 percent of the incremental stored water. Arizona, on the other hand, is receiving $\frac{22}{34}$ ths or 65 percent of the incremental water and Nevada is receiving $\frac{3}{34}$ ths or 9 percent of the stored water.

This analysis shows that California, if it receives a supply of 4.4 million acre-feet, gains little over its 1929 present perfected rights and the major share of Arizona's supply is that developed by the major projects on the river constructed since 1929 and paid for in great measure by Californians.

This committee does not believe a shortage formula or proration should be used. However, if proration were to be adopted, a formula based on Mr. Ely's analysis is the most acceptable to this committee. The master's formula is manifestly unfair. Under the shortage formula suggested by Mr. Ely, the supply to California would be based on 26 percent of the incremental supply.

Unless this minimum formula is utilized, California's share would be proportionately less under conditions of shortage than with a full river.

¹² Hearings on S. 1658, Part II, *op. cit.*, at 499, 500.

Thus, it can be seen that the master's proposed formula of proportionate sharing would have been grossly unfair to California because it did *not* take into consideration apportionment of only the *incremental* supply.¹³

For purposes of illustration, the following table (using a river supply of 6.0 million acre-feet a year as in previous tables) illustrates the water supply picture under a formula based on this *essential* minimum requirement.

Situation Under Minimum Acceptable Shortage Formula

	<i>Total acre-feet per year</i>
Mainstream supply	6,000,000
Total to allocate	6,000,000
California's share:	
Present perfected rights	3,500,000
Share of incremental water (9/34)	502,930
Total	4,002,930
Present California use	5,362,000
Total California loss	—(1,359,070)
Arizona's share:	
Present perfected rights	600,000
Share of incremental water (22/34)	1,229,300
Total	1,829,300
Total Arizona use	1,300,000
Surplus available for Central Arizona Project	+ 529,300

This table should be compared with Table IX on page 46 showing results of California's contention, the master's recommendation, and the court's decree with a 4.4 guarantee to California.

Other Issues

A number of other issues were involved in the case. These are being omitted from this report since they do not bear directly upon the major issue with which we are concerned. These other issues included such matters as government claims over the reservation of water for the use of 25 Indian reservations as well as the Arizona-New Mexico Gila controversy.

Summary

It can be seen that the question of the shortage formula basically turns on the basis of the court's decision itself—an interpretation of the Boulder Canyon Project Act. By leaving the matter of allocation of shortages to the Secretary of the Interior, the court in effect rejected all contentions as to the intent of Congress in 1929 and left the matter to the Secretary of the Interior. In determining the shortage formula he is to impose, the Secretary of the Interior would presumably base

¹³ The Master's formula does not give full recognition to present perfected rights. In effect, it penalizes states which have acquired substantial present perfected rights.

his decision in part upon what was really intended as an equitable method by Congress in 1929 when dividing the waters of the river in passing the Boulder Canyon Project Act. It appears that Secretary Udall has agreed with the court and has concluded that the principle of equitable apportionment was not intended by Congress in 1929. As the Secretary told the Senate Committee on Interior and Insular Affairs:

I have, as I say, Senator, the terrible and heavy burden of dealing with a shortage problem, unless Congress decides to get into that field. If there is one cardinal principle that I see—and I have discussed it with everybody in my department—that must apply and that has to apply, it is that these states within the terms of the contract that they signed with one another *have to be on equal footing*.

I do not think Congress in any past project in this whole Colorado River Basin has given one state or one irrigation district the priority position over any other state. I see no equitable or legal or reasonable principle under which you can.¹⁴

As is discussed in Chapter V, this committee recommends the principle of priority of appropriation and a 4.4 million acre-foot priority to California. In any event, if proration were to be used, it must be based on the formula suggested by Mr. Ely which, in turn, is based on the project act.

¹⁴ *Hearings on S. 1658, Part I, op. cit.*, at 354-255 (emphasis added).

Chapter III

WATER SUPPLY AND REQUIREMENTS IN THE PACIFIC SOUTHWEST

Water supply data indicates that sufficient future natural supplies in the river will not be available to operate both the Central Arizona Project and meet California's uses (even when cut to 4.4 million acre-feet a year) without import of new supplies into the basin. It is appropriate at this point, therefore, to examine the matter of total water availability in the Pacific Southwest.

THE PACIFIC SOUTHWEST

The Pacific Southwest generally is defined as the Colorado River Basin downstream from Lee Ferry plus the southern portion of California, south of the Tehachapi Mountains. It includes three major areas which will be discussed below: The Los Angeles metropolitan area, the agricultural areas of southeastern California, and Arizona. The region consists of approximately 190,000 square miles.

According to the Bureau of Reclamation this "... is the most critically water short region of the nation ..." The Pacific Southwest is generally an area of low precipitation and is an area of net moisture deficiency (precipitation less evaporation and run-off).

Areas with an excess of 40 inches a year of rainfall are located almost entirely in western Oregon, Washington and northern California. The

only areas having a "moisture surplus" are in Oregon and Washington. Much of the region, including areas in Arizona and southeastern California, are classed as desert and semidesert.¹

In spite of the lack of water, recent population growth in the area has been among the greatest in the nation. It is expected that the population growth will continue and that the area known as the Pacific Southwest, which had a population of a little over 10,000,000 in 1960, will have a population of more than 24,000,000 in 1990 and almost 38,000,000 in the year 2020 (see Table XI). All economic indices with regard to employment and economic development also indicate that the area is a national leader in the economic growth rate and undoubtedly will continue such development.^{1a} In Chapter I the conflicting estimates of the actual supply in the Colorado were discussed together with the various factors entering into this determination, such as estimated Upper Basin development.

Turning now specifically to the Pacific Southwest and using tables incorporating both Department of Interior and Colorado River Board of California estimates, Table XII shows the estimated Pacific Southwest water supply from the present through the year 2030. It can be seen by comparing lines A7 and B3 that the total supply, as estimated by the Department of Interior, is consistently more than that estimated by the Colorado River Board of California.

Table XIII indicates the Department of Interior estimate of total water requirements in the entire Pacific Southwest and shows graphically the extent to which southern California and Arizona uses are

¹ Dean Peterson, "Geological and Hydrological Considerations Relating to Western Water Supply," Western Interstate Water Conference, Las Vegas, September 16-17, 1964.

^{1a} Chapter I of the *Pacific Southwest Water Plan*, Report of August 1963 as modified January 1964, includes a more detailed description of many of these factors.

expected to increase over the period of the next 65 years. Tables XII and XIII are compared to show the future water supply and water requirement in Table XIV, which shows the total water deficiency in the Pacific Southwest area, using first the Department of Interior estimates and then the Colorado River Board estimates. Consistent with the differences in estimated water supply, larger deficiencies are estimated by the Colorado River Board than by the Department of Interior.

These data are for the entire Pacific Southwest area. At the present time line A5 of Table XIV indicates that there is a 1.43 million acre-foot deficiency in the entire Southwest. This represents mined ground water. As will be discussed below, the overall deficiency is localized in certain parts of the Pacific Southwest while conditions are in balance in others. The overall conditions of deficiency make it abundantly clear that the entire Southwest is deficient and should work together to develop more water even though certain areas are concerned less with critical deficiencies at the present than others.

The three Tables XII-XIV are graphically summarized on Figure 3, which shows the estimates of supply and demand with California limited to 4.4 million acre-feet a year (the assumption utilized throughout this report).

FIGURE 3

ESTIMATES OF COLORADO RIVER WATER SUPPLY
AND REQUIREMENTS IN PACIFIC SOUTHWEST
Assuming California's Use is Limited to 4.4 After 1980

SOUTHERN CALIFORNIA COASTAL PLAIN

We shall first consider the water supplies available to the coastal plain of southern California as defined by the service area of the Metropolitan Water District of southern California.

The southern California coastal plain is a semiarid region. During the past few decades the region has been faced with an extremely severe drought which has overtaxed the local water supply available in the area.

More than half the population of the state, approximately 10 million people, however, now live in southern California, almost double the number living there in 1946, and the Metropolitan Water District expects 20 million people in the area by 1990.

The State of California has agreed to increase the maximum annual entitlement of the Metropolitan Water District for water from the state water facilities from 1.5 million acre-feet per year to 2 million acre-feet per year. The State Water Project was designed to meet the needs of southern California through 1990.

It can be seen from Table XV that beginning in 1975 and through 1990 water supply and water demand will be in balance in the Metropolitan Water District service area and, in fact, increasing ground water storage is expected beginning in 1975.

Thus, based upon assumed Colorado River supplies to the Metropolitan Water District of 550,000 acre-feet in 1990 (the portion of a 4.4 million acre-foot priority extending to 1990 which the Metropolitan Water District would receive, the increase in the contract entitlement for the State Water Project, together with the proposed increased capacity of the City of Los Angeles Aqueduct, will meet the needs of coastal southern California through 1990 based on present construction schedules. The critical periods and the periods of water deficiency, as

⁷ Including prepared enlargement of yield of State Water Project to 4,230,000 acre-feet.

shown in the chart, are the years immediately leading up to and during the first years of delivery of water from the State Water Project. It should be noted that the estimates in Table XV include the development of a maximum of 90,000 acre-feet from waste water reclamation.

Thus, it can be seen that if the state's entitlement to the Colorado is *not permitted* to drop below 4.4 million acre-feet southern California needs can be met through 1990 from supplies within the state.

The general manager and chief engineer of the Metropolitan Water District has described the water supply situation in southern California.

... there is available from local water resources what the hydrologists call a "safe annual yield" of sufficient water for no more than 5 million people. That's the dependable long-term supply of water provided by nature in the form of surface streams and ground water replenished from rainfall and run-off within the region. To this, we add the supply available to the City of Los Angeles from its Owens River Aqueduct. And on top of that, the major contribution by the Colorado River Aqueduct—one almost equal to the local dependable natural supply.

The supply from the Colorado, despite the many news stories about our loss of water from that source, will continue to be sufficient to carry us through, we believe until the water from northern California starts to flow through the Tehachapis in the early 1970's Another significant factor is that about half of the Colorado River water is now going for replenishment of over-drawn underground supplies and for agriculture. The Metropolitan Water District was organized—and the law under which it operates defines this as its purpose—to supply water for domestic and municipal uses. Therefore, if these needs so require and if the current drought continues, some cutback in the replenishment program and perhaps even in agricultural uses might prove necessary before the state water reaches here.

... a few conspicuous points should be emphasized. As a matter of reassurance, the uncertainties and wide disparity of views in regard to regional plans pose no threat to our immediate or near-future well-being. The State Water Project already authorized and financed under the Burns-Porter Act and other legislation, and now well along in construction, will sustain the Metropolitan Water District and the remainder of southern California until about year 1990. This is so even with the worst conceivable impairment of Metropolitan's supply from the Colorado River during the intervening period. As adjusted under a . . . contract amendment, Metropolitan's maximum annual entitlement to state project water will increase to 2 million acre-feet, 65 percent more than Metropolitan's present contractual allotment of Colorado River water. Altogether, the apportionment to southern California south of the Tehachapi Mountains will aggregate 2.5 million acre-feet among 14 contracting agencies. We must assume that Metropolitan's supply of Colorado River water will be cut to 550,000 acre-feet by year 1990 or 45 percent of its present contract allotment. Nevertheless, the local water resources together with the City of Los Angeles supply from the High Sierras, Metropolitan's

reduced importation from the Colorado River, and state project water, aggregating in all 4.9 million acre-feet in the state project service area south of the Tehachapis, will support a population of approximately 20 million, the expected number of people in this area by year 1990. Nothing said here is intended to imply that the intense current concern in regional concepts is precipitate. It is none too soon to do the advance planning. We should remember that basic studies for the California Water Plan, of which the present State Water Project is the first development, began three decades ago.²

SOUTHEASTERN CALIFORNIA

The primary activity in southeastern California is agriculture and is one of the state's most productive agricultural areas. For example, the Colorado Desert hydrographic area has an estimated 709,000 irrigated acres. Imperial County, with total irrigable lands of 570,000 acres, presently has 550,000 acres under irrigation. The value of all farm products sold in Imperial County increased 64.8 percent between 1954 and 1959, more than double the state average and the total value of crops in the county in 1959 was \$169,324,300.³

Under the Seven Party Agreement for allocation of Colorado River water within California, the first three priorities (comprising 3,850,000 acre-feet) are held by the agricultural areas of southeastern California. Table XVI shows the present estimated net water requirements

³ *California Agriculture*, Calif. State Dept. of Finance, State Office of Planning, May 1964, pp. 22, 34, 35 and statistical appendix.

of the desert area and the Colorado River areas of southeastern California. It can be seen that the area's needs are primarily agricultural, although there is a limited amount of municipal and industrial need. It is not expected that significant additional water will be required in this area during the next few decades.

Projections in the revised Pacific Southwest Water Plan are shown in the following table:

TABLE XVII
SOUTHERN CALIFORNIA—PROJECTED WATER REQUIREMENTS
(1,000 acre-feet)

	<i>Present</i>	<i>1975</i>	<i>1990</i>	<i>2000</i>
Colorado River areas	340	440	440	440
Desert areas	3,250 *	3,250	3,360	3,450
Coastal areas	2,270	3,290	4,230	4,930
	5,860	6,980	8,030	8,820

* Includes 233,000 acre-feet not presently served by Colorado River supplies—much of this area to be served through 1990 by the State Water Project.

Mojave Water Agency 50,800 acre-feet maximum state entitlement in 1990

Antelope Valley-East Kern Water Agency 138,400 acre-feet maximum state entitlement in 1990

Source: Pacific Southwest Water Plan, January 1964, *Table 13*.

Coastal areas of the southern California counties of Los Angeles, Orange, Riverside, and San Diego, are included in this table for illustration to show that of the total requirements of 4,820,000 acre-feet in the year 2000 this represents an increase of 2,660,000 acre-feet over present requirements for coastal areas but represents an increase of only 320,000 acre-feet for the Colorado River and desert areas during that same period. In addition, the desert areas shown in the Bureau of Reclamation estimates on this table include areas served by the Mojave Water Agency and the Antelope Valley-East Kern Water Agency, which in the aggregate, have contracts for nearly 200,000 acre-feet of water a year from the State Water Project.

Thus, it can be seen that relatively small increases in water supply are going to be needed to serve the area of southeastern California, assuming no increase in irrigated agriculture.

Table XVIII briefly summarizes the water supply from the Colorado River and shows that at the present with California permitted to take its entire contract entitlement, agricultural users may take up to a maximum of 4,150,000 acre-feet a year. Under conditions with California restricted to 4.4 million acre-feet a year the agricultural areas would be entitled to 3,850,000 acre-feet. The agricultural areas are not using the entire 4,150,000 acre-feet available to them at the present. Representatives of the agricultural agencies served in that area explained that increased quantities of water will be required in future years as the salt content of Colorado River water increases. In fact, they have stated that the entire amount of water salvaged under Pacific Southwest Water Plan proposals could be utilized for that single purpose.

No additional cutback in agricultural water would be suffered in the area until California's diversions from the Colorado River per year dips below 3,850,000 acre-feet per year, an unlikely occurrence.

TABLE XVIII
SOUTHEASTERN CALIFORNIA
PRESENT AND ESTIMATED FUTURE SUPPLY FROM THE COLORADO RIVER
(1,000 acre-feet)

	<i>Present uses</i>	<i>With California limited to 4.4 million acre- feet a year</i>
Imperial Irrigation District	3,850.0	3,850.0
Coachella County Water District *	(Priorities I-III)	(Priorities I-III)

	<hr/> 4,150.0	<hr/> 3,850.0

* District also has state contract for 20,000 acre-feet of water per year.

† Not all being used at present.

In summarizing the water supply and requirements data for southeastern California and of southern California, it can be seen that through 1990 (assuming a 4.4 million acre-foot supply of water for California from the Colorado water supply) requirements are basically in balance. The data in the Pacific Southwest Water Plan indicating the present and expected future deficiencies in water supply for the Pacific Southwest shows the deficiencies in Arizona. Although the entire Pacific Southwest is an area of deficiency, the situation in individual areas varies greatly because of the activity of the local areas in providing sufficient imported water supplies.

ARIZONA

The area of principal water deficiency in the Pacific Southwest at the present is Arizona and specifically the service area of the Central Arizona Project.

In the August 1963 Pacific Southwest Water Plan the Bureau of Reclamation estimated that in the Central Arizona Project service area the present pumpage is exceeding the available recharge by approximately 2.2 million acre-feet per year at the headgate.⁴

In the Supplemental Report on the Central Arizona Project, however, these estimates were revised:

The indicated headgate deficiency of 2,190,000 acre-feet annually, . . . had to be met by ground-water pumping. A portion of this deficiency became return flows on application. What portion of the return flows was and will be utilizable at the present or in the future is unknown. It is basic, through, that most of these waters are "in transit" and must be classified as recharge; however, in some instances it may be years before this supply is available for reuse. Therefore, the net overdraft may range from a quantity substantially lower than 2,190,000 acre-feet or closely approach it. *On the basis of limited data presently available, it is estimated that 30 percent of the applied water became return flow, thereby*

⁴ Pacific Southwest Water Plan, Revised, at III-4, III-6.

decreasing the deficiency, in terms of overdraft, to about 1.5 million acre-feet annually. It is expected that, from further studies now being carried out, adjustments will be necessary in estimates of overdraft.^{4a}

Irrigation efficiency is another factor to be considered with regard to the overdraft. The Budget Bureau of the Executive Office of the President noted that the Bureau of Reclamation estimated irrigation efficiencies in the Central Arizona Project service area of only 50 percent.⁵

It can be seen that although overdraft conditions now exist in Arizona, the water requirements of the Central Arizona Project service area will increase only from 3,080,000 acre-feet at the present to 3,890,000 acre-feet in the year 2000, an increase of 800,000. The requirements of the entire Arizona area will increase from 3,985,000 to 5,485,000 by the year 2000, an increase of approximately 1.5 million acre-feet. It is obvious from this table that the major area of water deficiency in the Pacific Southwest is in Arizona through the year 1990 or 2000 (inasmuch as we have seen that southern California areas are basically in balance until that time assuming a guaranteed supply of 4.4 to California from the Colorado River).

Referring to previous information on the water supply in the Colorado River, it is recognized that if California were to receive a 4.4 million acre-foot priority the entire 1.2 million acre-feet water supply of the Central Arizona Project would not be available through the year 2000. A substantial part of the water supply of the Central Arizona Project, however, would be available even with the 4.4 priority to California.

All of these assumptions however, include a continued annual overdraft in Arizona. The ability of the area in Arizona to continue to sustain this overdraft is a matter beyond the scope of this report. It should be pointed out however, that estimates by the State Department of Water Resources have indicated that the annual overdraft in California's San Joaquin Valley is in excess of 2,000,000 acre-feet a year.

NEW MEXICO AND UTAH

According to the revised Pacific Southwest Water Plan report:

"Present pumpage in that portion of New Mexico tributary to the Colorado River, essentially limited to the Gila River Basin, is estimated to be about 25,000 acre-feet annually. It is indicated that there has been no long-term water level decline, although there may be localized deficiencies. No data are available to estimate the relatively minor quantity of gross pumpage in the part of Utah tributary to the Colorado River."⁶

Chapters III and IV of the Pacific Southwest Water Plan revised report include detailed information on water supply and demand based upon the Bureau of Reclamation's estimates of water supply in the Colorado.

Chapter IV

PROPOSED SOLUTIONS TO PACIFIC SOUTHWEST WATER PROBLEMS

Having discussed water supply and requirements considerations in Chapter III, it is appropriate that we outline briefly the basic features of each of the proposals which were presented to solve Pacific Southwest water problems. A number of considerations which are unusually controversial and important in California common to all of these, such as area of origin protection, a 4.4 million acre-foot priority to California, regional water commissions, etc., are discussed, together with the committee's comments, in Chapter V, "Major Policy Problem Areas." A more general picture of the proposals is presented in this chapter.

1. THE CENTRAL ARIZONA PROJECT (S. 1658, as introduced)

The Central Arizona Project itself is the major initial feature of all of the proposed solutions to Pacific Southwest water problems and will be discussed in detail here and only referred to in future sections.¹

It was first reported on by the Department of the Interior in 1947 and was published as House Document 136, 81st Congress, First Session. It was on the basis of the 1947 report that legislation was first introduced to authorize the project. This legislation was pending at the

¹ The Central Arizona Project was a subject of hearings by the Senate Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs on August 27-28 and October 1-2, 1963 and April 9-11, 13-17 and 20-23, 1964. The hearings also included detailed discussion of the Pacific Southwest Water Plan. Transcript of the hearings has been published. A hearing by the House Committee on Interior and Insular Affairs Committee was held on November 9, 1964.

time of the action of the House Committee on Interior and Insular Affairs in 1951, in postponing further action on the Central Arizona Project until such time as Arizona's right to the use of Lower Colorado River water was adjudicated.

During the years following the 1947 report Arizona experienced a great population growth. In March 1961 the Arizona Legislature made \$100,000 available to the Arizona Interstate Stream Commission to contribute to the Bureau of Reclamation to update the 1947 report. The State of Arizona also contributed \$100,000 for a statewide inventory of water resources under which much of the basic data used in re-examining the 1947 report were assembled. In addition, \$30,000 was contributed by New Mexico to help finance the report.

As a result of this additional funding Region Three of the U.S. Bureau of Reclamation submitted a "Supplemental Report on the Central Arizona Project" to the Commissioner of Reclamation in June 1963.² It is this report that formed the basis for the Central Arizona Project which is included in the various proposals for the Pacific Southwest development.

The basic revenue producing feature of the project is the High Bridge Canyon Dam, reservoir and power plant. The disposition of this revenue is the major difference between the Central Arizona Project as proposed in S. 1658, as introduced, and the Central Arizona Project as proposed in the regional plans. Under the regional proposals the Marble Canyon Dam would be constructed in addition to Bridge Canyon Dam, and the excess in power revenues from the two dams would be deposited in the development fund.

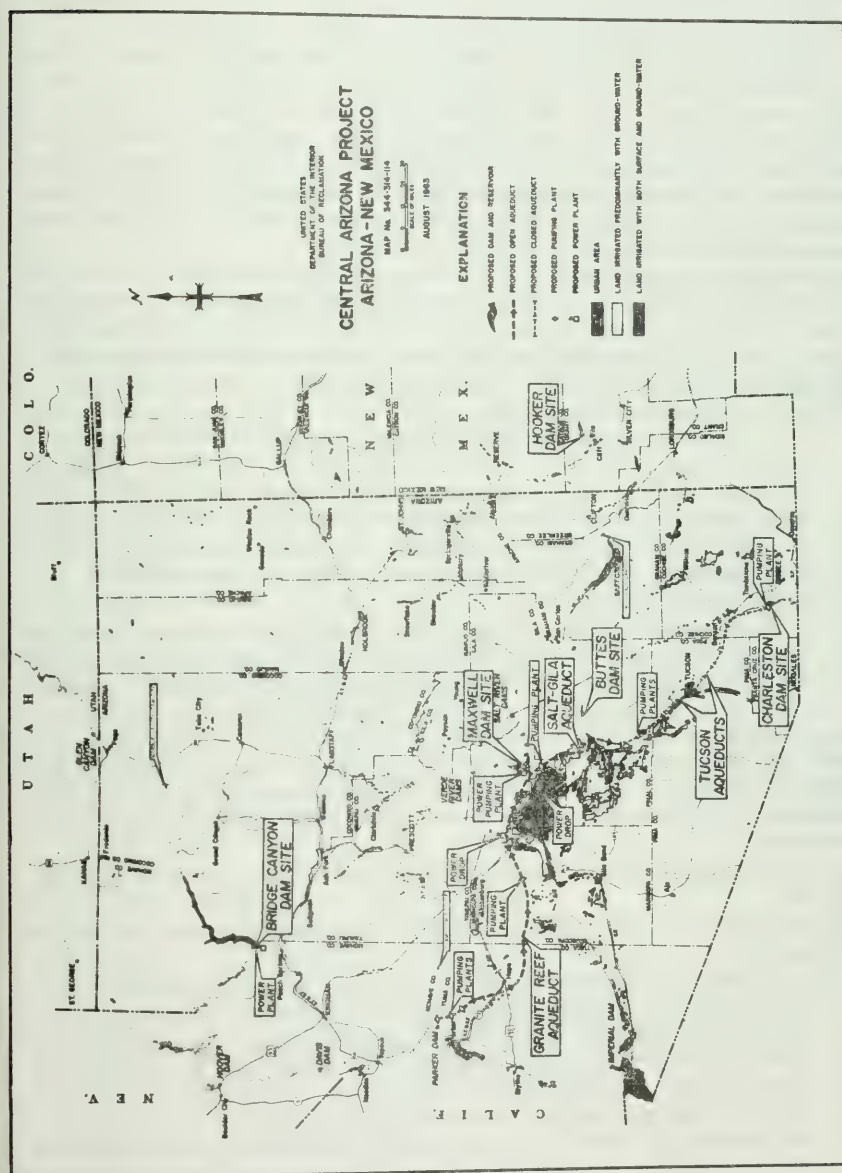

The High Bridge Canyon Dam reservoir and power plant would be located in the lower Granite Gorge of the Colorado River northeast of Kingman, Arizona and at the upper end of Lake Mead, 117 miles upstream from Hoover Dam. It would be a concrete, thin arch dam with a reservoir capacity of 3,710,000 acre-feet. The 1.5 million kilowatt capacity power plant will generate an estimated 5.8 billion kilowatt hours annually.

The backbone canal system of the Central Arizona Project would pump water from Lake Havasu, also the source of the Metropolitan Water District's Colorado River Aqueduct, in a series of three pumping plants having a static lift of 969 feet. The water would be conveyed 219 miles by the Granite Reef Aqueduct from Lake Havasu to Granite Reef Dam and would have a capacity of 1,800 cubic feet per second (cfs). Along this canal at three delivery points, part of the delivered water at the low power drops would generate power. Water required for the Salt River Valley would be delivered at Granite Reef. The remainder would be siphoned under the Salt River and transported south through a Salt-Gila aqueduct which extends from the Salt River to Picacho Reservoir. This aqueduct would have a capacity of 1,275 cubic feet per second.

The final portion of the aqueduct system would be a closed conduit (the remaining portions of the aqueduct are open concrete design) extending from near Picacho Reservoir to the City of Tucson. This aqueduct would deliver 100,000 acre-feet of water annually for municipal

² For a complete description of the project see this report.

and industrial use. The aqueduct, with a capacity of 150 cfs, would be 56 miles long and would include a pumping plant with a static lift of 920 feet.

The total length of the backbone canal system from the Colorado River to Tucson would extend approximately 341 miles, compared with 242 miles for the aqueduct from Lake Havasu to Lake Mathews in Riverside County, operated by the Metropolitan Water District of Southern California.

The existing Salt River project storage system would be integrated with the operation of the Central Arizona Project Canal System.

Additional dams would be required by the project. Maxwell Dam (1,130,000 acre-feet) on the Salt River would be utilized to store water in excess of that needed at Granite Reef. Buttes Dam (366,000 acre-feet) located on the Gila River about 14 miles upstream from Florence, Arizona; Charleston Dam (238,000 acre-feet) on the San Pedro River, southeast of Tucson, and Hooker Dam (98,000 acre-feet) on the main stem of the Gila River in Western New Mexico, would all be required to conserve and regulate local water supply.

It has been pointed out that a great deal of urban development has occurred in Arizona in the last decade, and, particularly since the 1947 report on the Central Arizona Project. Nevertheless, the basic purpose of the Central Arizona Project is to provide agricultural water supplies. As was indicated to the U.S. Senate Committee on Interior and Insular Affairs by Commissioner Dominy:

It is contemplated that approximately two-thirds of the Colorado River water diverted would be supplied for existing irrigation purposes and that about one-third would be supplied for municipal and industrial purposes under project conditions. This is a change in water use from that shown in the 1947 report as, in that report, only about 1 percent of the project water was assigned for municipal and industrial use.

The Central Arizona Project Plan does not provide for bringing in any new lands under cultivation. All additional water would be used to supplement the demand of presently developed areas.³

In the area served by the Central Arizona Project the Bureau of Reclamation estimates a population of 1,125,000. It is estimated that there are about 1,202,000 acres of land developed for irrigation in the area, of which an average of about 880,000 acres per year are now irrigated. This includes 75,000 acres of irrigated land on Indian reservations.

Total estimated cost of the Central Arizona Project will be \$1,101,-331,000.

According to the Department of Interior's supplemental report on the project:

Although construction of the Central Arizona Project would generate many benefits to the States of Arizona and New Mexico, the Lower Colorado River Basin, and the nation as a whole, the principal objective of the project is the stabilization and prevention of retrenchment of the economy of the project area. Even with an imported supply of water, some presently irrigated lands will eventually have to be abandoned because of water shortages, and urban developments resulting from the population increase in the area will encroach on other irrigated lands.⁴

³ Hearings on S. 1658, *op. cit.*, at 44.

⁴ United States Department of Interior, *Supplemental Report Central Arizona Project*, at 56, June 1963.

An offered amendment to the Central Arizona Project bill, the so-called "Mosk Amendment," named after its drafter, California's former Attorney General Stanley Mosk, provided that the water supply for the project was junior to 4.4 million acre-feet of existing California uses in perpetuity. The Mosk Amendment was not accepted by Senators Hayden and Goldwater, sponsors of the legislation.

2. PACIFIC SOUTHWEST WATER PLAN

August 1963

The Pacific Southwest Water Plan was first presented to the Governors of the Colorado River Basin States on August 26, 1963.⁵ Comments on the Pacific Southwest Water Plan were requested from the Governors of the several states pursuant to the Federal Flood Control Act of 1944. During the period provided for this review this committee held a joint hearing with the Senate Factfinding Committee on Water Resources and issued a report, *Pacific Southwest Water Plan* (Assembly Interim Reports, Vol. 26, No. 8 November 8, 1963).

The features of the original plan are enumerated briefly below inasmuch as its general concept is directly related to subsequent developments of regional planning proposals. The basic features of the original plan were as follows:

Initial Phase

1. Construction of Bridge Canyon and Marble Canyon dams and power plants on the Colorado River.
2. Enlargement of the California State Water Project to convey an additional 1.2 million acre-feet of capacity water to southern California.
3. An immediate additional 1.2 million acre-feet enlargement of the state's aqueduct through the Tehachapi Mountains to be utilized to convey water developed in phase II construction of the project.
4. Construction of the Central Arizona Project.
5. Authorization of a large (50 million gallons per day) desalting plant on the seacoast in southern California, and an intensified study under the Anderson-Aspinall Act on the feasibility of additional plants.
6. Construction of the Southern Nevada Water Supply Project, first stage, to provide up to 90,000 acre-feet annually by 1968 for the areas of Boulder City, Henderson and Las Vegas.
7. Construction of the Dixie Project in Southwestern Utah to provide about 60,000 acre-feet annually beginning in 1970.
8. Construction of Hooker Dam Project in New Mexico (a unit of the Central Arizona Project) with completion by 1974.
9. Expansion of Indian Irrigation Project facilities on the Colorado River, Fort Mohave and Chemehuevi Reservations.
10. Water salvage and ground water recovery projects along the mainstream of the Colorado River.

⁵ The full report, *Pacific Southwest Water Plan*, August 1963, includes a sketchy discussion of the features outlined in this section.

11. Initial programs of fish and wildlife and recreation and other related functions.

12. Establishing a development fund.

13. Extensive studies by bureau in cooperation with affected states to determine what projects are feasible for submission for authorization at subsequent dates.

Phase Two

1. Increase in capacity of Central Arizona Project by 1.2 million acre-feet such water to be conveyed to Arizona through the Lake Havasu aqueduct and the enlarged California Water Project (enlarged in Phase I).

2. Northern California Projects sufficient to provide export water and enlargement and extension of the East Side Division of the Central Valley Project.

3. Additional water reclamation in Arizona.

The estimated construction costs of the \$4 billion project are shown in the following table:

TABLE XIX
PACIFIC SOUTHWEST WATER PLAN (AUGUST 1963)
ESTIMATED CONSTRUCTION COST

<i>Project</i>	
Phase I—Immediate Action Program	
Bridge Canyon Dam and powerplant	\$504,797,000
California Aqueduct increment	474,110,000
Central Arizona Project	504,736,000
Desalting plant, California	37,300,000
Dixie Project, Utah	44,868,000
Ground-water recovery	38,800,000
Hooker Dam Project, New Mexico	(28,128,000)*
Indian irrigation, Arizona-California-Nevada	10,000,000
Marble Canyon Dam and powerplant	239,500,000
Recreation, fish and wildlife, and other agency programs	5,000,000
Southern Nevada Water Supply Project, first stage	42,551,000
Tributary projects, Arizona-New Mexico-Utah	10,000,000
Water salvage	9,200,000
Total—phase I	\$1,920,862,000
Phase II—Continuing Project Development	
Canal lining, California	\$105,000,000
Central Arizona Project increment	353,240,000
Indian irrigation, Arizona-California-Nevada	40,000,000
Lake Havasu Aqueduct and supply reservoirs	914,500,000
Recreation, fish and wildlife and other agency programs	5,185,000
South Fork Trinity River Project, California	387,000,000
Southern Nevada Water Supply Project, second and third stages	29,557,000
Terminal storage, California	122,000,000
Tributary projects, Arizona-New Mexico-Utah	40,000,000
Trinity River Project, California	150,000,000
Water reclamation, Arizona	18,000,000
Total—phase II	\$2,164,482,000
Total—phases I and II	\$4,085,344,000

* Included in Central Arizona Project.

Source: Pacific Southwest Water Plan, August 1963, at 19.

Marble Canyon Dam on the Colorado River, which is added to the Central Arizona Project in this plan (as well as the other regional plans), would be a thin arch concrete design dam rising 310 feet above the stream bed with a reservoir of 363,000 acre-feet capacity. It would have a power plant with an installed capacity of 600,000 kilowatts which is estimated to generate 2,310,000,000 kilowatt hours annually.

One of the features of the plan, as presented, was the export of water from northern California to Arizona in the Havasu Aqueduct, which would have paralleled the general route of the existing Colorado River Aqueduct of the Metropolitan Water District of Southern California but would have transported water in the opposite direction. The opposition of Californians to this proposal was unanimous in that it was illogical at best.

As the administrator of the California Resources Agency indicated to this committee, "It prematurely and unnecessarily committed the plan to an exportation to Arizona of water from northern California." The Revised Pacific Southwest Water Plan and the recent enlargement of the State Water Project by the state have indicated that the preliminary figures on which the plan was based overstated the water requirements of southern California and the adverse affect of *Arizona v. California*. While the original Pacific Southwest Water Plan contemplated import of water into southern California in the amount of 1.2 million acre-feet and export from California to Arizona of the like amount, it will be seen that subsequent proposals, including the Revised Pacific Southwest Water Plan, contemplate much smaller importations to southern California. As indicated below, the state's overall 230,000 acre-foot enlargement of the California aqueduct provided a satisfactory additional water supply to meet the expected needs of southern California through 1990.

Two projects included in the plan should be briefly described at this time as they are included in all of the regional proposals.

Although located in western New Mexico, Hooker Dam and reservoir is proposed as a part of the Central Arizona Project. Located on the upper Gila River it is a multipurpose reservoir to provide flood control, river regulation, recreation and fish and wildlife benefits. The capital cost of the dam and reservoir is estimated at about \$28 million.

The Dixie Project would be located on the Virgin and Santa Clara Rivers in southwest Utah.^{5a} It will consist of the multipurpose Virgin City Dam, plus smaller dams and canals. Power will be generated at the dam and at canal drops. The project would provide about 5,000 acre-feet of municipal and industrial water annually. It would also provide supplemental water supplies to 9,400 presently irrigated acres and full supply to about 11,600 acres of new irrigated land. The capital cost of the project is estimated to be \$45 million.

^{5a} A separate Department of the Interior report on this project, 85th Congress, 1st Session (House Document No. 86) gives complete detail on the project.

3. PACIFIC SOUTHWEST WATER PLAN REVISED

(January 1964)

The Revised Pacific Southwest Water Plan was released in January 1964. It represented a substantial modification of the original proposal of August 1963.⁶ The total cost of the program was greatly reduced by the elimination of a number of features including the contemplated transfer of 1.2 million acre-feet of water to Arizona and construction of sea water conversion facilities. The major features of the revised project are as follows:

1. Construction of Marble Canyon and Bridge Canyon Dams.
2. Water salvage and recovery programs.
3. Construction of the Central Arizona Project.
4. Enlargement of the California Aqueduct. (An aqueduct to convey water to the Imperial Irrigation District and the Coachella Valley County Water District, from Cedar Springs Dam and Reservoir, together with additional Trinity River Basin storage or other storage, and enlargement of the East Side Division of the Central Valley Project to convey this amount of water to southern California, is contemplated.)
5. Construction of Southern Nevada Water Supply Project.
6. Construction of Moapa Valley Pumping Project.
7. Construction of Hooker Dam and Reservoir.
8. Construction of Dixie Project, Utah.
9. Construction of Indian irrigation projects.
10. Construction of recreation and fish and wildlife features.
11. Establishing a development fund.

Water Salvage

One of the major changes in the plan, as compared with the original proposal, was a reduction in the water salvage and recovery programs. The Department of the Interior expressed the view in the Pacific Southwest Water Plan that a great deal of the waste water recovery program should be done locally.

Local organizations in California and Arizona have already undertaken a portion of the task required to salvage waste water return flows, and plans are in process for most extensive local development of this water resource. This is a field in which local and state agencies properly should contribute to the overall solution of water-deficiency problems in the Pacific Southwest. Thus, insofar as the initial plan is concerned renovation of waste water is a segment of the regional plan for which local and state agencies can accept a major responsibility.⁷

The remaining water salvage projects included in the revised plan are primarily the Senator Wash Project (now under construction), river channelization measures, phreatophyte control and ground water recovery. The contemplated lining of canals along existing irrigation projects has presumably been left to local agencies. However, officials

⁶ The full report, *Pacific Southwest Water Plan*, January 1964, includes a discussion of the features outlined in this section.

⁷ *Pacific Southwest Water Plan*, January 1964, *op. cit.*, at 13.

of the Imperial Irrigation District stated to this committee that the so-called "local projects" in California which transport Colorado River water for agricultural use in the Imperial and Coachella Valleys, are owned and operated by the federal government (the All-American and Coachella branch canal system). Since the facilities are federally owned, these officials claimed that major physical improvements such as lining (which may involve complete reconstruction of portions of the aqueduct) is properly a federal expense. The bureau indicated it would accept this responsibility but not as part of a regional plan:

The Bureau of Reclamation would cooperate fully with the state in the planning, design, construction, and solution of the problems of financing of a canal lining program. The bureau is presently investigating the feasibility of lining 87 miles of the unlined portion of the Coachella Canal to reduce seepage losses by an estimated 150,000 acre-feet annually. A feasibility report is scheduled for fiscal year 1966. Studies will also be initiated on the feasibility of lining the All-American Canal itself. These studies will result in conclusions and recommendations, together with cost estimates for procedures, types of lining, estimated reduction in seepage losses, etc.⁸

In addition, there is disagreement between the bureau and the agricultural agencies involved over disposition of the water salvaged. According to the bureau:

Before the federal government should participate in a canal lining program, however, the problem of the disposition of the conserved water must be resolved. If water conserved by canal lining were to be devoted to irrigation of new lands in the Imperial and Coachella Valleys, it would not be consistent with a primary objective of the Pacific Southwest Water Plan; i.e., to meet present water deficiencies and growing demands, but only to sustain, through the plan facilities, the existing level of irrigation development. If the conserved water were to be used not for irrigation of new lands but for meeting other water demands in California this would require, as a prelude, extensive negotiation and modification of existing agreements and contracts.

Proposals on such matters must originate in California. Because of the magnitude and importance of this untapped, inexpensive source of new water supply, it is urged that California take the initiative in seeking decisions, including proposals for contract modification, that will permit canal lining to be undertaken as part of the Pacific Southwest Water Plan or through some other program. The federal government should, of course, participate to the extent that its contractual responsibilities for Colorado River water are concerned. As soon as these matters are resolved and a feasibility report can be prepared, lining of these canals should be proposed for authorization.⁹

Officials of the Coachella County Water District, however, contended:

... If the canals were lined, it is obvious that some water could be saved for beneficial use which now is wasted through

⁸ Hearing Transcript, August 19, 1964 at 20.

⁹ *Pacific Southwest Water Plan, January 1964, op. cit., at 32.*

evaporation, transpiration and seepage. If the stated amount of water could be salvaged, it would, of course, have the effect of reducing the amount of imported supplemental water which must be brought into the Lower Basin of the Colorado River System, if the economy of the affected area is to be preserved or expanded.

. . . any water which might be salvaged, resulting from the lining of the canals in Imperial and Coachella Valleys, should first be available and employed to the end that these agencies of the State of California may continue in the future to firmly receive the supply of water to which the area is entitled, either by way of present perfected rights or contract rights, including the Priority Agreement of 1931. When such obligation has been met if there remains any excess or surplus water resulting as salvaged water, then and in such event, such excess or surplus, if any, should be available for beneficial use in the area to support and vouchsafe the expanding and developing economy of the region.¹⁰

Both representatives of the Colorado River Board and the agricultural agencies also testified that the amounts estimated to be salvaged, in their opinion, were overestimated.

The amounts to be salvaged under the original and revised Pacific Southwest Water Plans are compared in the following table:

TABLE XX
PACIFIC SOUTHWEST WATER PLAN
Potential Salvage

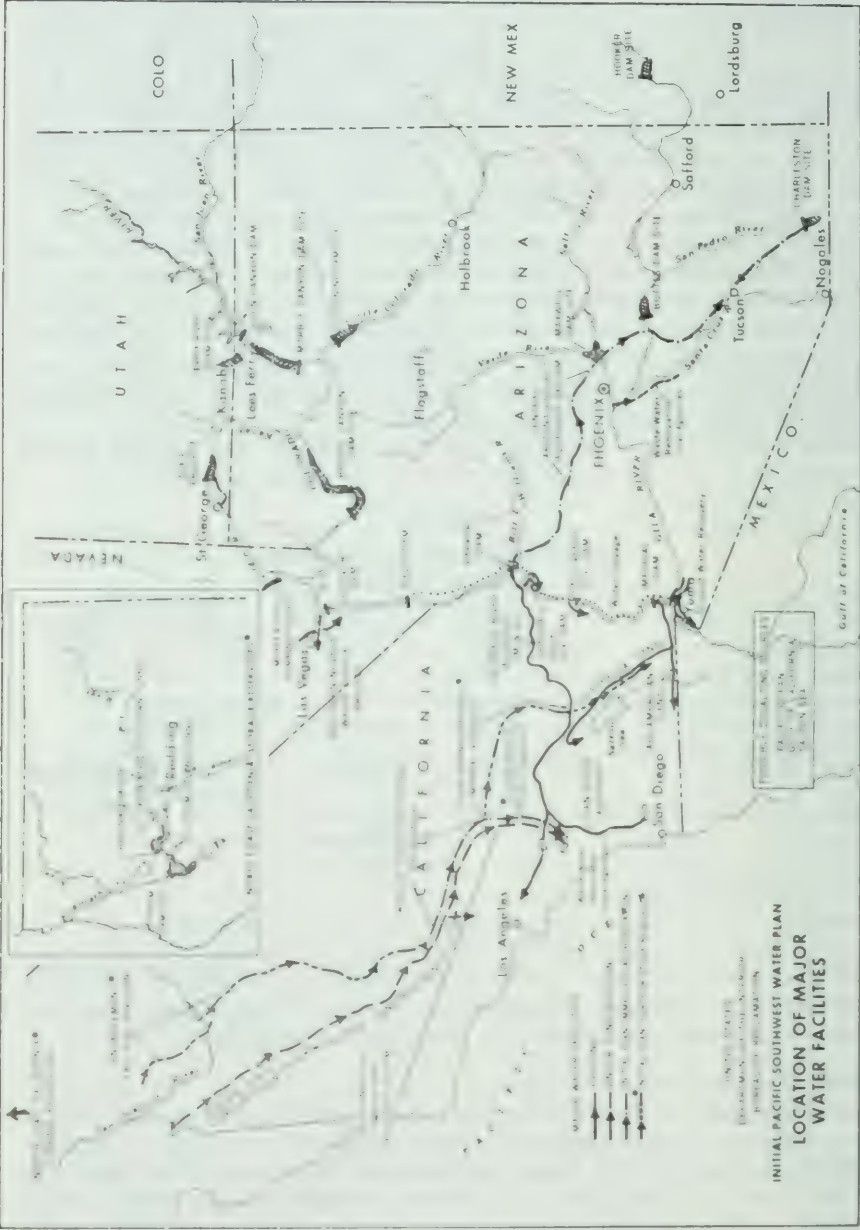

Program	Acre-feet annually		Estimated cost	
	Original Plan	Revised Plan	Original Plan	Revised Plan
Lining of All-American and Coachella Branch Canals --	500,000	--	\$105,000,000	
Ground water recovery -----	220,000	220,000	38,800,000	
Phreatophyte eradication and control -----	100,000	100,000	9,200,000	\$42,000,000
River channelization -----	190,000	360,000 (incl. Senator Wash)		
Reclamation of municipal and industrial waste in Arizona -----	200,000	--	18,000,000	--
Total -----	1,210,000	680,000	\$171,000,000	\$42,000,000

For details of salvage proposals, see a series of reconnaissance reports prepared by the U.S. Bureau of Reclamation, Region 3.

Aqueducts to Southern California

The proposal to build the Cedar Springs-Hayfield-Imperial Aqueduct and the Cedar Springs-Perris Aqueduct to transport northern California waters to the Imperial Irrigation District and the Coachella Valley County Water District is designed to replace water which would be lost to these agricultural agencies by a reduction of California's water supply from the Colorado to 4.4 million acre-feet a year.

¹⁰ Hearing Transcript, July 23, 1964, at 123, 124.

Pacific Southwest Water Plan, Revised, January 1964

The subsidy involved in such a program is unprecedented. Under the plan it will cost approximately \$75 an acre-foot to transport this water from northern California to southern California. It would be sold to the Metropolitan Water District for \$20 an acre-foot, the delivered cost of existing Colorado River supplies, and to the Coachella County Water District and the Imperial Irrigation District (agricultural agencies), for \$2.25 an acre-foot. This appears to be the most extensive irrigation subsidy ever proposed by the Bureau of Reclamation.

The basis of this aqueduct system proposal is to replace for the two districts the 300,000 acre-foot reduction they suffer under their Priority No. VII to Colorado River water. However, only one-half of the 300,000 acre-feet is presently being used by the agricultural agencies. If the water salvage proposals to line the All-American and Coachella Canals, which were not included in this plan, had been included, an anticipated 500,000 acre-feet of water would have been developed to make up the districts' loss. Thus, failure to include the water salvage program has, in effect, resulted in this unusual subsidy and the replacement of this amount from northern California.

The estimated water charges under the Revised Plan are as follows:

	<i>Water rates per acre-foot</i>
California	
Irrigation exchange	\$2.25
M and I exchange	20.00
Surplus	75.00
Central Arizona	
Irrigation	10.00
M and I	45.00
Dixie	
Irrigation	7.00
M and I	22.00
Southern Nevada	
M and I	28.00

In April 1964, Secretary of the Interior Udall submitted to the Subcommittee on Irrigation and Reclamation of the Senate Interior and Insular Affairs Committee a draft of legislation to authorize the Pacific Southwest Water Plan, Revised. However, the Bureau of the Budget, in a letter to Senator Jackson, Chairman of the Committee, advised that the bureau was unable at that time to recommend enactment of either S. 1658, the original Central Arizona Project bill, or the Pacific Southwest Water Plan.

... The Pacific Southwest Water Plan, as noted earlier, presents a number of major issues which are still under discussion with the Department of the Interior and other agencies concerned.

Central Arizona has experienced one of the most rapid population growth rates in the nation. This situation, combined with a continuing overdraft in ground water supplies, has resulted in an increasingly critical water supply problem. Moreover, the Central Arizona Project, which would alleviate this situation has been delayed more than a decade pending the outcome, as noted earlier, of litigation before the Supreme Court. The importance of the

Central Arizona Project to the people of Arizona is, therefore evident.

However, while the project as presently planned meets current tests of economic feasibility under the reclamation program, it raises a number of serious questions similar to those under consideration in connection with the Pacific Southwest Water Plan.

For example, the Department of the Interior's report states that present irrigation, efficiencies of only 50 percent prevail in the project area. Clearly, water imported from the Colorado River must be used more efficiently. Lining of conveyance and distribution facilities on project lands would, of course, be a necessity. Also, further attention should be directed toward management of forested lands in the area and to the conservation of water through control and eradication of phreatophytes. In summary, it is essential that steps be taken to develop an effective program for the use of ground and surface water that will assure an adequate and lasting solution to the critical water shortage in central Arizona.

For these reasons, the Bureau of the Budget is unable at this time to recommend authorization of S. 1658 or of the Pacific Southwest Water Plan.

However, we believe that the work done to date on the regional plan constitutes a challenging response to the serious water problems of the region. The tentative plan will benefit from review and criticism by the Congress and the people of the region, and from the continuing review which is going forward within the administration.¹¹

In addition, Secretary Udall told the Senate committee:

... I would be less than candid with the committee, however, if I were to attempt to gloss over the fact that the consensus in favor of a regional approach has not yet jelled into regional agreement upon all major aspects of a particular regional plan. Differences of opinion remain as to the particular uses to which the fund should be devoted, as to sources of import water which should be considered at this time, as to the matter of priorities in the event of shortage, and as to the details of some of the projects. Within the executive branch of the government, also, there remain divergent views as to the scope and content of a regional plan.

Given the magnitude of the water problems facing the Southwest, that there remain at this stage uncertainties and difficulties is disappointing but not surprising.¹²

According to the Department of Water Resources' Chief Adviser on Colorado River matters:

While the Department of the Interior draft bill was presented to the subcommittee for consideration and was printed as a committee print it has not been officially sponsored. The Udall proposal has, I believe, run its course and given way to alternative proposals.¹³

¹¹ Letter to Senator Henry M. Jackson from Phillip S. Hughes, Assistant Director for Legislative Reference, Executive Office of the President, Bureau of the Budget, dated April 9, 1964.

¹² Hearings on S. 1658, *op. cit.* at 318.

¹³ California Water Commission, transcript of hearing, August 7, 1964, at 15.

In later portions of this report, the language of *the draft bill* is referred to when reference is made to features of the Revised Pacific Southwest Water Plan.

TABLE XXI
INITIAL PACIFIC SOUTHWEST WATER PLAN
(January 1964)

Project	Estimated Construction Cost *	
	Immediate Authorization	
Mainstream Reservoir Division		
Bridge Canyon project		\$511,000,000
Marble Canyon project		239,000,000
Water salvage and ground-water recovery programs		42,000,000
Renovation of waste-water program		— ^a
Desalting programs		— ^b
Arizona		
Central Arizona project		527,000,000 ^c
California		
California Aqueduct enlargement		240,000,000
Nevada		
Southern Nevada water supply project		72,000,000 ^d
Moapa Valley pumping project		12,000,000
New Mexico		
Hooker dam and reservoir		(28,000,000) ^e
Utah		
Dixie project		45,000,000
Indian irrigation projects		10,000,000
Recreation and fish and wildlife programs		6,000,000
Subtotal		\$1,704,000,000
Features Requiring More Detailed Study		
Cedar Springs-Perris aqueduct		\$205,000,000
East Side Division enlargement and extension		250,000,000
Trinity River Basin storage or alternatives		617,000,000
Cedar Springs-Hayfield-Imperial aqueduct		350,000,000
Subtotal		\$1,422,000,000
TOTAL		\$3,126,000,000

* All cost estimates rounded.

^a Local agency undertakings.

^b Work under other federal, state, and local programs.

^c Includes \$20,000,000 for distribution facilities for Bureau of Indian Affairs projects.

^d Enlarged capacities for Southern Nevada Water Supply Project under consideration with state and local agencies may increase construction costs from \$72,000,000 to \$81,000,000.

^e Included in Central Arizona Project.

4. THE SOUTHWEST PACIFIC PROJECT ACT (S. 2760)

On April 22, 1964, Senator Thomas H. Kuchel of California introduced S. 2760. The bill was drafted by Northcutt Ely, California's Chief Counsel on the Colorado River litigation, at the direction of the six agency committee composed of the six Southern California agencies (Metropolitan Water District of Southern California, Palo Verde Irrigation District, City of Los Angeles, San Diego County Water Authority, Coachella Valley Water District and Imperial Irrigation District) which presently are utilizing Colorado River water in California.

According to Mr. Ely, S. 2760 is modeled on Secretary Udall's Pacific Southwest Water Plan Revised, and it includes the following features of the Udall Plan substantially unchanged:

1. Creation of a basin account, into which appropriations for construction would be made by the Treasury, and into which would later feed the power revenues from Bridge and Marble Canyon Dams, and from Hoover, Davis, and Parker Dams after they have paid for themselves. These revenues would assist in the repayment of the construction costs of the projects authorized by the act, and of future projects to import water into the Colorado River Basin.

2. Construction of Bridge Canyon and Marble Canyon Dams, powerplants, and transmission lines.

3. Construction of the central Arizona aqueduct.

4. Construction of the Dixie Project, Utah.

5. Construction of the southern Nevada and Moapa (Nevada) projects.

6. Construction of salvage works on the main stream.

7. Creation of a regional commission, composed, as proposed in the Pacific Southwest Water Plan, of representatives of the federal government and Lower Basin states, to which would be added representatives of the Upper Basin states and of each state in any basin from which water would be imported.

As Mr. Ely indicated:

In most of these [provisions] we follow Secretary Udall's Pacific Southwest Water Plan. We differ from his plan primarily in our protection of existing uses and restricting expansion of non-Indian irrigation on Indian reservations. The bill also proposes that the secretary carry out an investigation of all sources from which water might be imported, not merely northern California rivers.¹⁴

... [The bill] is in strict accord with the decree of the United States Supreme Court, [and] directs the Secretary of the Interior, in the administration of Article 2b 3, of the court's decree [the article which deals with shortages], to subordinate the water rights of the new Central Arizona Project to decreed rights and other senior existing water rights in Arizona and Nevada, now served under water contract to the United States by diversion works heretofore constructed and to 4.4 million acre-feet of such rights in California.¹⁵

This is basically the 4.4-million-acre-foot priority to California which was the Mosk Amendment to the original Hayden-Goldwater bill, the Central Arizona Project Act, and was drafted by California's former Attorney General Stanley Mosk.

The Pacific Southwest Project Act lists as its objectives:

The purpose of this Act is to initiate the execution of a regional plan to meet in full the deficiencies in water supply present and anticipated in both the upper and lower basins of the Colorado River, to authorize the construction of certain projects within the

¹⁴ Northcutt Ely, Statement to Senate and Assembly Water Committees, August 13, 1964, at 5.

¹⁵ *Ibid.*, at 7.

lower basin to transport water to areas of deficiency, and to authorize a coordinated development of the power resources of the lower basin in order to furnish power for pumping water into and in conveyance works and for sale as a means of financial assistance to the project herein authorized and to those which the Congress may hereafter authorize for the importation of water into the Colorado River basin. (Sec. 101).

Mr. Ely has described some of the other major changes from the Udall bill:

1. *Sources of supplemental water.*—The “feasibility study” which the plan authorizes for a project to import 1.2 million acre-feet from northern California rivers is broadened to include other possible sources, the goal is redefined as the elimination of deficiencies in both Upper and Lower Basins, so that requirements in the Lower Basin can be fully met without curtailment of the Upper Basin’s prospects of using 7.5 million acre-feet annually, and the secretary is directed to submit his report within 3 years. No source is preselected. (If Congress does designate a specific source, such as northern California rivers, it must necessarily do so on a contingent basis, to become inoperative if the 3-year survey shows that other sources are more feasible.)

2. *Importation directly into the Colorado.*—Water imported, whether from northern California rivers or elsewhere, would be delivered directly into the Colorado River, not, as the Udall Plan proposes, at Hayfield on the Metropolitan aqueduct and in Imperial Valley via an aqueduct down the interior of California. Recent studies indicate that even if northern California sources are selected, water may be delivered to southern California projects more cheaply via an aqueduct to the Colorado River than through the inland mountains. . . .¹⁶

One of the key features of the project is the “Transmountain Division” which would consist of projects as authorized by Congress in the future to “import water into the Colorado River Basin.” Thus, while recognizing that the water supplies of the Colorado River Basin are inadequate, S. 2760 does suggest that replacement water supplies be brought into the Colorado River Basin from outside the basin. To accomplish this objective the proposal contemplates the investigation and report by the Secretary of the Interior within three years after the effective date of the act described above to produce (1) his estimate of the long-range water supply available for consumptive use in the Upper and Lower Basins of the Colorado River; (2) water requirement of the Upper and Lower Basins at present, and as estimated for the years 1975–2000–2040 and under ultimate anticipated conditions; (3) the present and anticipated deficiencies of water supply for the quantities of water which, imported into the Colorado Basin, would eliminate these deficiencies; (4) the quantities of water which imported into the Colorado River Basin would make possible the use of 7.5 million acre-feet a year in the Upper Basin and eliminate present and anticipated deficiencies in the Lower Basin, and alternative sources from which water

¹⁶ Hearings on S. 1658, Part II, *op. cit.*, at 306–307.

might be imported into the Colorado River Basin. The secretary's report would also include recommendations for the construction of such projects.

The estimated cost of the Pacific Southwest Project is shown in the following table:

TABLE XXII
ESTIMATED COST
PACIFIC SOUTHWEST PROJECT ACT
(S. 2760)

Central Arizona Project *	\$527,000,000
Bridge and Marble Canyon Dam	750,000,000
Dixie Project	45,000,000
Southern Nevada Water Supply Project	81,000,000
Three-year investigation by Secretary of Interior	5,000,000
Moapa Valley Pumping Project	12,000,000
Water salvage	
Channelization	35,000,000
Senator Wash	8,700,000
Fish and wildlife and recreation	6,000,000
Indian projects	10,000,000
Total	\$1,479,700,000

* Includes Hooker Dam.

One of the major differences between Pacific Southwest Water Project Act and the Revised Pacific Southwest Water Plan is the fact that the revised plan called for immediate authorization of import facilities to provide replacement water for the Colorado River. In addition, the revised plan called for these imports from northern California. On the other hand, S. 2760 called for an intensive federally-financed study of *all alternative sources* including northern California and other areas of the Colorado River Basin, with later authorization of replacement supplies.

When S. 2760 was before the Senate Committee on Interior and Insular Affairs, a favorable recommendation on the bill was defeated 1-15. This action took place on the same day that S. 1658, as amended, was favorably reported to the floor of the Senate.

5. LOWER COLORADO RIVER BASIN ACT (S. 1658, as amended)

The Lower Colorado River Basin Project Act was proposed as an amendment to the original Hayden-Goldwater bill, S. 1658. The amendment was introduced on July 21, 1964 by Senator Moss of Utah on behalf of its principal proponent, Senator Hayden of Arizona. The amendment, which completely replaced the original Hayden-Goldwater Bill, was introduced following completion of hearings on the original Central Arizona Project Act. It was developed over several months of negotiations between Senator Hayden's office and certain representatives of California. It has been referred to variously as the "Hayden-Brown Compromise," "the Moss Amendment," and, as used in this report, the "Abbott Goldberg Amendment." As introduced, the amendment attempted a compromise between the proponents of S. 2760 and the proponents of the original Central Arizona Project Bill on one

basic point: a priority to California of 4.4 million acre-feet annually from the Colorado.

The project is basically similar to the other proposals for a Pacific Southwest water development (although far less comprehensive), inasmuch as the Central Arizona Project is its key and its first element to be constructed. Major features of the project are as follows:

1. Construction of Marble and Bridge Canyon Dams.
2. Construction of the Central Arizona Project.
3. Authorization for the Secretary of the Interior to prepare estimates of long-range water supply available for the Lower Basin, current water requirements in the basin, and the rate of growth requirements to the year 2030. Authorization from the secretary to investigate alternative sources in the *State of California* and various methods of meeting the current and anticipated water requirements in the Lower Colorado River Basin. Recommendations supported by feasibility reports for project construction would be submitted within five years.
4. Creation of a regional commission composed of representatives of the federal agencies concerned and of all affected states.
5. Establishing a development fund.
6. Construction of Hooker Dam and Reservoir.
7. Construction of the Southern Nevada Water Supply Project.
8. Provision of a 25-year priority to California of 4.4 million acre-feet annually from the Colorado River.

This plan has not been well received in California. The principal objection has been to the limited protection to California embodied in the 25-year priority provision. This matter of protection to the state is discussed in greater detail in the following chapter.

As introduced, the amendment provided for a study by the secretary and an investigation of alternative sources in the State of California or elsewhere "to meet the current and anticipated water requirements of the Lower Colorado River Basin."¹⁷ The words "or elsewhere," were stricken from the bill in the Senate Interior and Insular Affairs Committee and were not in the bill as reported to the Senate floor. Prior to deletion of these two words by the committee, the bill was supported by the state administration in California. Thereafter, the state administration opposed the bill, as follows:

Last Friday (July 31) the Senate Committee on Interior and Insular Affairs took the second step by reporting out an amended version of the Moss Compromise. Unfortunately, this was not a step satisfactory to California. Senator Jackson, chairman of the committee, was successful in amending the bill to authorize investigations of alternative sources of supply for the Pacific Southwest in the State of California only, rather than in California and elsewhere. Governor Brown immediately withdrew his support of the bill because of this change and promised to vigorously oppose the Jackson Amendment in future congressional actions.¹⁸

The language requiring that the replacement sources of water be found in California exclusively, has brought the state through a full

¹⁷ Sec. 103 (a) (2).

¹⁸ California Water Commission, hearing transcript August 7, 1964, at 22.

circle and returned us to the proposal in the original Pacific Southwest Water Plan. That plan would have conveyed to Arizona 1.2 million acre-feet of water from northern California per year. The state administration, in its Official Comments on that original plan, had vigorously opposed export of water to Arizona. S. 1658, as finally amended, however, established northern California as the sole source of such supplies. Were S. 1658 to be enacted as presently amended, the physical works involved would be substantially similar to the original Pacific Southwest Water Plan—a conveyance from northern California to Arizona on the Colorado River. An alternative, an exchange of water, would, however, provide the same overall result. Thus, S. 1658, as presently written, would “leap-frog” northern California to Arizona in virtually the same manner as proposed in the original plan.

It should be emphasized that the phrase “California or elsewhere,” was not satisfactory either because it still placed the primary emphasis on receiving replacement supplies in California. It represented a two-state regional plan—rather than a broad western approach. The estimated cost of the projects in the bill is shown in the following table:

TABLE XXIII
COST OF LOWER COLORADO RIVER BASIN PROJECT
(Goldberg Amendment)

Mainstream Reservoir Unit:	
Bridge Canyon Project, including dam, reservoir, powerplant, transmission facilities and appurtenant works	\$ 499,366,000
Marble Canyon Project, including dam, reservoir, powerplant, transmission facilities and appurtenant works	227,895,000
Cocconino Silt-detention Reservoir	11,960,000
Paria Silt-detention Reservoir	10,759,000
Subtotal, Mainstream Reservoir Unit	749,980,000
Central Arizona Unit	\$ 506,829,000
Water quality investigations	2,000,000*
Works to be authorized as units of project	(**)
Outdoor recreation, conservation of scenery, and natural historic and archeological objects and fish and wildlife	81,003,000
Total	\$1,346,227,000

* Estimated.

** No cost until authorized.

6. SNAKE-COLORADO PROJECT

In October 1963, shortly after the release of the original Pacific Southwest Water Plan, the Department of Water and Power of the City of Los Angeles proposed the Snake-Colorado Project, a plan to transport surplus Snake River water to the Pacific Southwest.¹⁹

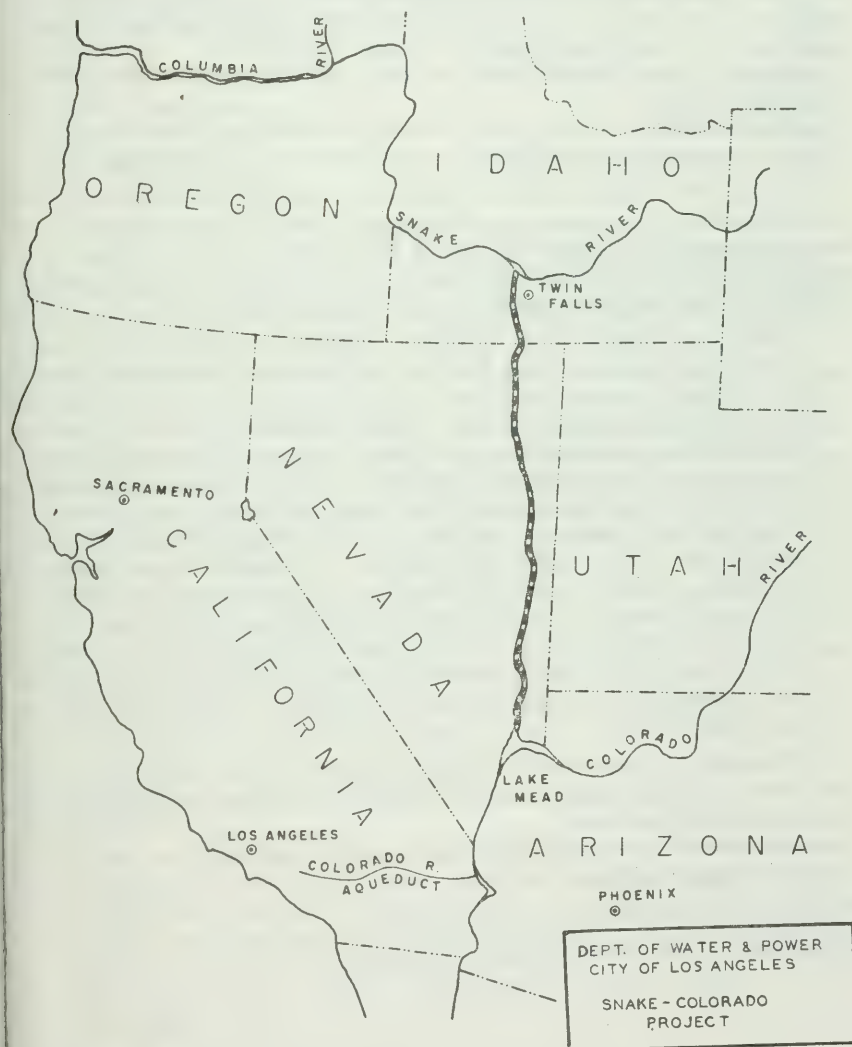

The main feature of the project is a diversion of 2.4 million acre-feet from the Snake River in Idaho to Lake Mead behind Hoover Dam on the Colorado through the Snake River-Lake Mead Aqueduct. It relies on a report of the Bureau of Reclamation and the U.S. Corps of Engineers which indicates a substantial future surplus of water in the Snake River.²⁰

¹⁹ For details on the project, see “Snake-Colorado Project, A Report of the Department of Water and Power, City of Los Angeles, October 1963, 22 pp. (Process).

²⁰ Joint report prepared by the U.S. Department of the Interior, Bureau of Reclamation and the U.S. Corps of Engineers, Upper Snake River Basin, 1961 (two volumes).

The project would divert water from the Snake River at an elevation of 3,000 feet, lift it approximately 3,200 feet, by seven pump lifts, and convey it across the high plateau of eastern Nevada. In southern Nevada the water would drop through power recovery plants into Lake Mead, where it would merge with that of the Colorado River; there it could continue downstream, where it would be diverted and develop power at existing power projects.

The project also contemplates utilizing the pumps from the Snake River to convey water for local irrigation projects in the vicinity of Twin Falls, Idaho. The objective of the project as stated by the depart-

ment would be to provide a supplemental water supply to the Lower Colorado River Basin "at a minimum cost, while making maximum use of existing water supply facilities and minimizing the interference with existing and proposed water development projects."²¹ The department recognized in presenting the plan that it is "only preliminary and will require additional study and investigation to refine and perfect the multitude of details involved in a project of this magnitude."²²

The project report emphasizes several benefits would accrue from this project as follows:

1. The average cost of transporting the first 1.2 million acre-feet of imported water would be approximately \$32 per acre-foot compared with a cost of \$44 per acre-foot for northern California water as contemplated by the original Pacific Southwest Water Plan.

2. Capital expenditures would be \$823 million less for the Snake-Colorado Project.

3. The additional high-quality Snake River supply would reduce salinity problems and provide power generation on the Colorado River.

Although the Department of Water and Power estimates that there is substantial surplus water in the Snake River, these estimates have been challenged by representatives of Idaho. Senator Len Jordan, for example, immediately suggested that the best source for replacement waters for the Pacific Southwest is the Columbia River:

Now my friends in the Northwest may rise to challenge my impertinence in suggesting a look at the Columbia River. So I hasten to say that I am not authorized to speak for anyone but myself on this matter. Some may say that I can be reckless with the Columbia in order to draw attention away from the Snake River which supports most of the economy of my state, and I do admit a prejudice, but one that can be supported by facts. No useful purpose could be served by creating a critical water shortage in one state to satisfy the partial needs of another . . . Should it ever become necessary, I shall go to whatever detail is necessary to convince this committee that Idaho's ultimate requirements will leave no water to export to other basins from the Snake River in Idaho. I hope that it will not be necessary because we should not confine our planning to the short-range approach of "robbing Peter to pay Paul."²³

The reaction to the proposed Snake-Colorado Project emphasizes the need for immediate comprehensive studies of the water supplies of all areas of the Pacific West.

An estimate of the costs of the Snake-Colorado Project are indicated on the following table:

²¹ Snake-Colorado Project Report, *op. cit.*, at 2.

²² *Loc. cit.*

²³ Hearings on S. 1658, Part II, *op. cit.*, at 478 and 479.

TABLE XXIV

CONSTRUCTION COST SUMMARY
SNAKE-COLORADO PROJECT

Initial construction (1.2 million acre-feet per year)

	\$ Million
Thousand Springs Reservoir	25.0
Pumping plants and penstocks	95.1
Regulating reservoirs	10.0
Aqueduct	574.7
Power development facilities	240.9
Subtotal	\$945.7
<i>Expansion (to full capacity, 2.4 million acre-feet per year)</i>	
Pumping plant and penstock additions	82.0
Aqueduct siphon additions	58.8
Power development facility additions	206.0
Subtotal	\$346.8
Total construction cost	\$1,292.5
Interest during construction	104.9
GRAND TOTAL	\$1,397.4

7. YELLOWSTONE-SNAKE-GREEN PROJECT

In March 1964 Thomas M. Stetson, a consulting engineer from Los Angeles, who was an expert witness for California in the suit, *Arizona v. California*, issued an analysis of the Revised Pacific Southwest Water Plan which was proposed under contract with the six-agency committee composed of users of Colorado River water in California. Mr. Stetson suggested diverting up to 2.0 million acre-feet annually to supplement Colorado River supplies²⁴ from the Yellowstone River near Corwin Springs, Montana. The proposal would involve pumping water from the Yellowstone River 1,600 feet through conduits and tunnels into Hebgen Lake on the upper reaches of the Snake River. Water would then be diverted downstream on the Snake River where it would be pumped 1,700 feet to be discharged into Beaver Creek, a tributary to the Green River. From that point the water would flow naturally into the Colorado River through Flaming Gorge and Glen Canyon Dams in the Upper Basin and through existing projects on the Lower Basin. Mr. Stetson suggested a combination of the 2.0 million acre-foot yield Yellowstone-Snake-Green Project with the 2.4 million acre-foot Snake-Colorado Project of the Los Angeles Department of Water and Power to make a total of 4.4 million acre-feet of imported supplies available to the Colorado River, and added that

“ . . . If in the future the water supplies of the Snake and Yellowstone Rivers should diminish to the extent that additional water were needed in those river basins, rivers further to the north, including some of those in western Canada, could be developed to replace the water exported. The Basin Development Fund, by that time, would have ample funds to finance the development of such replacement water.”²⁵

²⁴ For details of the proposal see Review of Pacific Southwest Water Plan, March 18, 1964, Thomas M. Stetson, Civil and Consulting Engineers, Los Angeles.

²⁵ *Ibid.*, at 34.

Mr. Stetson estimated that development of 1.0 million acre-feet of water from the Yellowstone-Snake-Green Complex would cost \$249.6 million and would cost (depending upon power generated) between \$15.70 and \$27.10 per acre-foot. Estimates for development of 2.0 million acre-feet of water by this same plan would result in capital costs of \$416.8 million and an average cost per acre-foot of water varying from \$14.20 per acre-foot to \$25.00 per acre-foot.

For a combination of the Snake-Colorado and Yellowstone-Snake-Green Project, Mr. Stetson estimated total capital costs of \$1,647,-000,000 for a total yield of 3.4 million acre-feet per year and \$1,814,-200,000 for development of 4.4 million acre-feet per year.

8. NORTH AMERICAN WATER AND POWER ALLIANCE (Parsons Plan)

In April 1964, The Ralph M. Parsons Company of Los Angeles, an engineering and construction firm, issued a preliminary report on a continental water supply program called the North American Water and Power Alliance.²⁶ This program, which would involve three countries and most of the North American Continent, would develop an estimated 141.7 million acre-feet per year of irrigation water and 37.0 million acre-feet a year of municipal and industrial water. See page 87.

Information on the plan and the elements which comprise it are included in "Western Water Development, A Summary of Water Resources, Projects, Plans and Studies Relating to the Western and Midwestern United States," compiled by the Special Subcommittee on Western Water Development of the Committee on Public Works, United States Senate, 80th Congress, Second Session, committee print, October 1964. This report is primarily concerned with the NAWAPA Proposal.

The objective of this plan is to collect the surplus water of the Rocky Mountain Region and redistribute it to the water-poor areas of Canada, the Midwestern and western United States and northern Mexico. The major feature would be a 500-mile-long storage reservoir in Canada, at an elevation of 3,000 feet, in what is known as the Rocky Mountain Trench. It is estimated that the project would develop power worth \$4 billion annually, and the sale of this power would be the primary method of financing the project. As indicated in Table XXV the project would be basically one to provide irrigation water. The project would provide a navigable waterway from Vancouver on the Pacific to Duluth on Lake Superior. This canal would also deliver irrigation water to the northern plains from Alberta to South Dakota, and increase the flow through the Great Lakes-St. Lawrence System to alleviate water pollution in that area.

According to The Parsons Company the program would assure adequate water supply to the continent for the next 100 years. The magnitude of the project is exemplified by the fact that according to the Senate Subcommittee on Western Water Development, all the water resources projects now authorized or contemplated in the Western United States by federal and nonfederal agencies would total 3,151 in-

²⁶ For details of the plan see NAWAPA, *Preliminary Report* of 15 April, 1964. The Ralph M. Parsons Company.

dividual projects, with a total cost of approximately \$60 billion and would provide 2,770,636,208 acre-feet of stored water. In comparison NAWAPA would encompass 369 projects, cost \$80 billion, and provide 4,338,509,000 acre-feet of stored water. Thus the NAWAPA System provides nearly twice the water storage for use in the United States as

But the pressure to move from attempting to solve water problems on a project basis, piecemeal, regional, without regard to the uniqueness of water resources, i.e., its mobility, has reached the point where bold initiative is demanded.²⁷

Surely, the Parsons Plan provides a basis for bold initiative. The Senate committee concluded that:

It now remains to determine if the size of the dams and reservoir areas as depicted by NAWAPA are physically possible to engineer and capable of supplying the degree of water called for. A comparison of the hydrological standards used by The Parsons Co. to determine water availability . . . indicates that the water is there

The concept contemplates using existing engineering methods and standard reservoirs, canals, and lifts. However, certain dam sizes and impoundments raise questions of physical feasibility. Also questions are raised relative to pumping capability. *But it does not appear that any question raised can be answered in any way short of a thorough engineering study.*²⁸

It would seem that a project of this type can only be considered a long-range program; even a preliminary engineering study should involve cooperation between the three nations involved: Canada, United States, and Mexico. The engineering study of the project would therefore seem to be a formidable one.

9. S. 3104 (KUCHEL-SALINGER)

On August 11, 1964, California Senators Thomas Kuchel and Pierre Salinger introduced S. 3104 in the United States Senate. This bill has two major features:

I. It requires the investigation of water requirements of the Colorado River Basin—an investigation of potential sources of supply.

Specifically, the Secretary of the Interior is directed to investigate:

1. The quantities of water which must be added to the main stream of the Colorado in order to assure a dependable supply of 7.5 million acre-feet a year for consumptive use in the main stream.

2. The additional quantities of water which must be added to the main stream of the Colorado in order to assure a dependable supply adequate to sustain the economies in Arizona, Nevada and California which are dependent or will become dependent in the future on the main stream as a major source of their water supply.

This would include the water requirements of the proposed Central Arizona Project, the undelayed development of water for use in the Upper Basin.

The secretary is required to provide cost estimates, preliminary plans, financing methods, and recommendations for legislation authorizing projects to furnish the water. The legislation requires that the sources investigated include, but not be limited to:

. . . salvage operations on the main stream; canal lining and other conservation measures; ground water recovery; desaliniza-

²⁷ *Senate Report, op. cit.*, at 1.

²⁸ *Ibid.*, at 6, 2 (emphasis added).

tion of sea water and brackish waters; weather modification; and importation of water from other watersheds. Plans for importation of water from other watersheds shall in all cases include adequate and equitable provisions for the ultimate requirements of the states and areas of origin of those waters.²⁹

The bill requires a report and recommendation not later than three years after the enactment of the act.

This is basically the investigation requirement of S. 2760, and it is, as drafted, broad enough to include rivers and waters of northern California and other states and watersheds, including the Pacific northwest, as potential sources of supply.

II. The second major objective of the legislation is to provide a permanent priority to California of 4.4 million acre-feet from the Colorado River, as follows:

... all rights to the consumptive use of water to be diverted by or for the central Arizona aqueduct from the main stream of the Colorado River shall be junior to all of the following senior existing rights to waters of the main stream, including all present perfected rights: Rights of water users served under contracts with the United States by diversion works heretofore constructed, and decreed rights of Federal reservations, in Arizona and Nevada; and such rights in California to the aggregate annual consumptive use of 4.4 million acre-feet of water of the main stream of the Colorado River.³⁰

Thus, in fact, S. 3104 does not propose a regional plan, but rather it represents what the authors consider the true essential requirements to California for a regional plan:

1. A study of important sources in the entire West, and
2. A 4.4 million acre-foot priority to California.

These two proposals together with other aspects of the regional plans are discussed and commented on by the committee in Chapter IV of this report.

The following chart summarizes the major features of each of the regional plans discussed thus far which have been formally presented to Congress or have been discussed by congressional committees. Thus the chart includes: The original Central Arizona Project (S. 1658); the Pacific Southwest Water Plan of August 1963; the Revised Plan of January 1964; the Pacific Southwest Project Act (S. 2760), the Lower Colorado River Basin Act (Goldberg Amendment S. 1658 as amended), and S. 3104.

Chapter V

RECOMMENDATIONS ON MAJOR POLICY PROBLEM AREAS

In this chapter, the committee will discuss major policy decisions confronting California involved in proposals for Pacific Southwest development and state the committee's views which it believes are appropriate for adoption by California on these various proposals.

1. A 4.4 MILLION ACRE-FOOT PRIORITY TO CALIFORNIA

Shortly after the U.S. Supreme Court handed down its opinion in *Arizona v. California*, B. Abbott Goldberg, Chief Deputy Director of the State Department of Water Resources succinctly summarized the position in which California found itself as a result of the decision:

The fact is that the court has done nothing which Congress cannot undo. While it has denied rights to California, it has not automatically made water available to Arizona. Instead, it has given great latitude to the Secretary of the Interior initially and to the Congress eventually to determine the course of development of the Southwest. The court has required nothing of the Congress, and Congress can allow the present situation to continue. Thus, what the court has done is *to transfer to the political forum what is essentially a political problem.*¹

As was indicated in the discussion of proposals to meet Pacific Southwest water needs, S. 2760 and S. 3104, and the proposed Mosk Amend-

¹ B. Abbott Goldberg, "Some Observations on *Arizona v. California*," speech to State Chamber of Commerce, Sacramento, July 1, 1963, p. 3 (emphasis added).

their entitlements. This is a "guarantee" in the usual sense of the word which amounts to a "warranty" or formal assurance.

A "guarantee," on the other hand, as used in the Pacific Southwest Water Plan and the Goldberg Amendment to S. 1658, is merely the establishment of a development fund under which the sponsors expect sufficient funds to be available to construct projects to import sufficient water into the Colorado River Basin to keep the river supply to the lower basin at 7.5 million acre-feet a year. This would be a guarantee only if funds were available and projects constructed. In any event, it would *not* provide a priority to California since under the proposals of S. 1658 and the Pacific Southwest Water Plan, if for any reason the import projects did not keep the supply at 7.5 million acre-feet, shortages would not be borne by Arizona before California. This "guarantee" is not a water right and depends on political action.

Thus, although a priority includes a "guarantee" in the usual sense of the word, a "guarantee" as used in S. 1658 and the Pacific Southwest Water Plan does not include a priority at all and is not even a "guarantee" in the usual sense of the word.

PACIFIC SOUTHWEST WATER PLAN

The objective of the Pacific Southwest Water Plan with regard to a 4.4 guarantee was expressed in the modified January 1964 report as follows:

1. Guarantee, as a matter of federal policy through the construction of necessary works, the equivalent of 7.5 million acre-feet of water per year in the Colorado River, either directly or through exchange, to satisfy the consumptive use of:

2.8 million acre-feet per annum in Arizona; 4.4 million acre-feet per annum in California; 0.3 million acre-feet per annum in Nevada; at cost to users no greater than would otherwise have been incurred had there been sufficient water in the river to satisfy the aforesaid amounts.²

In testimony before the U.S. Senate Interior and Insular Affairs Committee, Secretary Udall described the reasoning behind this provision:

There are several reasons and justifications for this guarantee. Extremely large financial obligations have been assumed by both irrigation and municipal and industrial users on the belief that they would have for use within the lower basin not less than 7.5 million acre-feet of Colorado River water. This belief was fostered in large measure by the United States acting pursuant to acts of Congress. Studies initiated under the Kinkaid Act, which provided the hydrologic data upon which the agreements were reached under the Colorado River Compact of 1922, indicated a supply of water substantially in excess of that which we now estimate is the firm supply available. It is questionable whether many of the financial obligations assumed in the past by water users within the lower basin would have been undertaken had not a firm water supply of 7.5 million acre-feet per year been assumed. In addition, most of

² Pacific Southwest Water Plan Revised, *op. cit.*, at 1 (emphasis added).

these obligations were undertaken prior to the time the United States agreed to deliver 1.5 million acre-feet or more of water per year to Mexico. In view thereof, it seems reasonable that the Congress provide a mechanism to maintain a firm supply of water to projects which have been constructed or were anticipated at the time the Colorado River Compact was signed. *This would not institute the United States as an insurer or "grantor" of a water supply in the legal sense of those terms, however.*³

Since the United States would not be an "insurer" or "guarantor" of a water supply in the legal sense of those terms, any guarantee to California of 4.4 million acre-feet a year under the Pacific Southwest Water Plan concept would depend on congressional authorization and construction of necessary facilities to maintain sufficient supplies in the river. It is not actually a "guarantee" in the usual sense of the word. It is a *promise* which may or may not be kept by Congress. Neither the Secretary of the Interior nor, in fact, today's Congress can commit a future Congress to appropriate funds to construct given projects.

The Revised Pacific Southwest Water Plan guarantee is described as a "physical and economic guarantee," which would be "made effective by early authorization and construction of projects importing additional supplies to the region from northwestern California."⁴ This guarantee, if effective, represents then simply an export program from northern California, a suggestion which was opposed vigorously in the State Comments on the original Pacific Southwest Water Plan.

PACIFIC SOUTHWEST PROJECT ACT (S. 2760)

This proposed legislation makes users in Arizona junior to users in California and requires that shortages be borne by these users in Arizona before any shortages are borne by users in California, who would have a "senior right." In proposing a guarantee by a water right priority, in which California's use of 4.4 million acre-feet a year would not be dependent upon construction of import projects and transportation of water into the river, Northcutt Ely gave the rationale behind the approach:

The various "regional plans" propose investigation of sources outside the natural basin of the Colorado River from which water might be imported to meet the deficiency so occasioned, but none of them authorize construction of the necessary importation projects. The question is whether, if importations are delayed until after the onset of the shortages occasioned by construction of the new consumptive-use projects, the existing uses shall be projected against these shortages, or whether they shall be obliged to share them.⁵

At the heart of the approach taken by Senator Kuchel in his legislation is the doctrine of prior appropriation, under which water rights

³ Hearings on S. 1658, *op. cit.*, at 313 (emphasis added).

⁴ Wesley E. Steiner, "Status Report on Regional Planning," presented to California Water Commission, October 7, 1964, at 10.

⁵ Northcutt Ely, *Principles of Priority of Appropriation*, August 1964, at 1.

are based on the concept of "first in time, first in right". The basis for the appropriative rights doctrine was described by Mr. Ely:

Three principles provide the cornerstones of the appropriative rights doctrine: (a) beneficial use is the basis, the measure, and the limit of the right; (b) the earlier beneficial user is protected against a later user by the principle of first in time, prior in right; and (c) one who has properly initiated an appropriative right and who diligently pursues the construction of works to enable him to use the water is entitled to a water right upon completion of his works with a priority dated back to his first initiation of the right for the full magnitude of the project he has built (the relation-back principle).

Thus the first fundamental is that a water right depends on beneficial use and is lost by nonuse. Where water is scarce, beneficial use must always be the basic criterion for a water right.

The second fundamental is the doctrine of priority: One who first initiates a project to put water to beneficial use and proceeds thereafter with due diligence has priority over later users. If there is a water shortage, that shortage is not shared equally by all persons with water rights on the same stream. Users cut back their use in inverse order of the priorities established by dates of initiation of the respective rights. The priority principle, rather than parity, has remained the basic element of western water law because it is the only principle, as experience has proved, which meets the needs of the West. There are several reasons for this.

In bringing land and water together, the investment of time and money—often great quantities of both—is required. The third fundamental, the relation-back principle, operating concomitantly with the priority principle, constitutes the only legal machinery yet devised which provides sufficient security to encourage, indeed to permit, the necessary investment. Under this doctrine the investor is protected against some risks, and other risks are calculable. He is relieved, under the priority doctrine and the relation-back principle, from yielding his place on the stream to a user who begins his use during the time the earlier appropriator has his project diligently under construction.⁶ He is protected from cut-backs in his supply by the acts of other men. Furthermore, he is insulated to some extent from shortages due to natural diminution of supply. At the time he wishes to undertake construction of a project the risks of supply under the prior appropriation doctrine are calculable. Dependable supply in a stream can be determined within reasonable limits of accuracy. The investor can thus ascertain in advance, within those limits, by determining the dependable supply and existing appropriative rights on the stream, how much of the dependable supply is unappropriated and will be available to his project. If parity is substituted for priority, no investor can evaluate the risks to which his project will be subject. Every user's water supply is always vulnerable to displacement or

⁶ E.g., the first surveys for the Colorado River Aqueduct of the Metropolitan Water District of Southern California were made in 1923, but the project at all times diligently pursued, was not completed until 1960. (Footnote by Mr. Ely.)

diminution by later users, the number of whom and the quantity of whose are unknown and unknowable.⁷

The priority doctrine discourages building projects in excess of the reasonably dependable supply. Overbuilding creates disaster. When risks are calculable, projects for which the risks clearly exceed the possible return are usually not built. But if the risks are undefined and undefinable, marginal projects are built. By the parity principle, both the prudent and the profligate share in disaster, which destroys the usefulness of the resource for all.⁸

It was explained to this committee by Mr. Ely that 17 western states recognize and apply priority of appropriation as either an exclusive basis for determining water rights or in combination with riparian rights, as in the law in California. Mr. Ely also noted that Congress has recognized and adopted by 37 statutes dating back as far as 1866 the principles of the law of appropriation and that the decisions of the United States Supreme Court have reaffirmed the rationale and purpose of the doctrine.⁹

In addition, the Arizona Legislature, in both 1961 and 1962, enacted laws¹⁰ to protect existing Arizona projects against the Central Arizona Project, applying precisely the doctrine within Arizona which S. 2760 applies between California and Arizona.

With regard to a permanent 4.4 priority, the General Manager and Chief Engineer of the Metropolitan Water District appropriately emphasized that with California limited to 4.4 million acre-feet, "... Metropolitan's uses will have been diminished by 662,000 acre-feet of its 1,212,000 acre-foot contract allotment, leaving 550,000 acre-feet for its use."¹¹ Thus, even with a 4.4 priority, California is still suffering a serious reduction in its water supply from the Colorado. A leading southern California water leader told the committee:

It is a bizarre and untenable situation that permits a state to follow one principle among its own water users as do Arizona and California and yet insist on another rule as between those very same states that apply that rule. Yet this is the position expressed by those who would prefer existing projects over new ones within their own state and then turn their back on it as between states... The Mosk Amendment [to S. 1658 as introduced and basically the same as S. 2760] seeks to implement the Supreme Court decision in *Arizona v. California*, not to reverse it. The high court invited the interested parties to seek a legislative answer to a judicial dilemma. In pursuing the principle of priority of existing projects over projects to be built California is merely responding to the mandate of the court... The principle of priority permits the sponsors of each successive project before it is built, to calculate the risk of water shortage and to take that risk if the sponsor wishes to take

⁷ See *Yeo v. Tweedy*, 34 N.M. 611, 620, 286 Pac. 970, 974 (1929): "The exercise of those rights which have been in abeyance will frequently destroy or impair existing improvements, and may so reduce the rights of all that none are longer of practical value, and that the whole district is reduced to a condition of non-productiveness. The preventive for such unfortunate and uneconomic results is found in the recognition of the superior rights of prior appropriators." (Footnote by Mr. Ely.)

⁸ Ely, *Principles of Priority of Appropriation*, op. cit., at 3-5.

⁹ See Northcutt Ely, *Principles of Priority of Appropriation*, op. cit., at 5-7.

¹¹ Hearing, *Transcript*, August 14, 1964, at 11, 12.

it. Any other principle, as for example the principle of proration, simply subjects all projects, existing and proposed, to the risk of shortage. The latter principle doesn't make much sense.¹²

Northcutt Ely summarized the practical effect of immediate authorization of the Central Arizona Project with a permanent 4.4 million acre-foot guarantee to California:

... On the secretary's figures, Arizona's situation, if California's 4.0 million is permanently protected, will be this: Arizona will have a permanent supply for all her existing projects, expanded from their present uses of less than 600,000 acre-feet . . . to their hoped-for maximum, which is about 1.1 million or 1.2 million acre-feet. In addition, she will have a full supply of 1.2 million acre-feet for the Central Arizona Project until the end of this same 25-year period that she offers to California in S. 1658. If imported water arrives before then, Arizona will continue to have a permanently full aqueduct. If importations are delayed, the Central Arizona aqueduct's supply will gradually shrink. It will still run half-full, well past the end of this century, even if importations are delayed that long and even if California is protected to the extent of 4.4 million. . . . But a half-full aqueduct is the best that California's Metropolitan Water District can hope for, even if California's 4.4 million is protected permanently.

This curtailment [of the MWD supply] will occur several decades before the flow in Arizona's aqueduct is similarly reduced, . . .¹³

California's former Attorney General Mosk, in discussing the question of the 4.4 priority, stated that there are those who argue that because of the possibility of shortage:

We have a moral obligation to compromise.

I am not an engineer and I shall leave it to the Lord to decide how much it will rain hereafter. Obviously, there is risk of shortage or none of us would have reason to be concerned. However, I will tell you that if the choice must be made between existing projects and future projects, both justice and fairness favor the existing projects. We can assert this in good conscience not only as Californians served by existing projects, but as citizens of the United States defending a principle vitally important to our nation. We should not compromise with our future.¹⁴

Preference of existing projects over new projects assures equal and continuing concern by both Arizona and California to solve the joint problem of shortage by an early importation of water from areas of surplus or by provision of alternative sources of water supply and therefore is not a tactic of obstruction.

LOWER COLORADO RIVER BASIN ACT (S. 1658 AS AMENDED)

The Goldberg Amendment to S. 1658 also provides for a limited 4.4 priority to California. The principal difference between the priority in the Goldberg Amendment, however, is that it lasts only for a period

¹² *Ibid.*, at 51.

¹³ Hearing, *Transcript*, August 13, at 176, 177.

¹⁴ Mosk, Town Hall statement, *op. cit.*, at 11, 12.

of 25 years from the effective date of the act compared with a priority in S. 2760 in perpetuity.

In its report to the Senate recommending approval of S. 1658, as amended, the Goldberg Amendment, the Senate Committee on Interior and Insular Affairs stated, with regard to its inclusion of the 25-year priority of 4.4 million acre-feet to California:

*It is only by reason of the grace and comity of Arizona that the committee approves this proviso, and its approval thereof is upon the condition and with the understanding that Arizona's rights under the decree in Arizona v. California are not affected, abridged, or impaired, and that California has no right after the period of 25 years to the renewal or extension of her use of any waters of the Colorado River awarded to Arizona.*¹⁵

Wesley Steiner, who assisted Mr. Goldberg in drafting the amendment to S. 1658, described the 25-year priority:

California would receive the benefit of a term insurance policy, assuring legal protection for 4.4 million acre-feet of existing uses for a period of 25 years or until the works required to maintain a basic supply of 7.5 million acre-feet have been completed, whichever occurs first. This period of protection would allow ample time for the planning and construction of the works required to supplement the flow of the Colorado. Once these works were in operation, California would have *what now appears to be reasonable assurances* of receiving, forever, 4.4 million acre-feet annually at Colorado River prices. These works would provide our permanent protection for the 4.4, and priorities to Colorado River flow would become meaningless.¹⁶

Northcutt Ely, however, pointed out that:

After 25 years, if S. 1658 (as amended) becomes law, water could be taken from existing projects in California to supply the Central Arizona Project. This point in time, 25 years, coincides almost exactly with the secretary's estimate of the time when Upper Basin depletions will have risen to the point where they reduce the river's flow below the quantity required to supply the Central Arizona Project's new demand plus those of the old projects that require protection. Thus, the effect of the 25-year restriction in the Goldberg bill is *much like language in a life insurance policy which says that the policy terminates on the death of the insured. There is no justification for it.*¹⁷

Thus, based on water supply projections, the 25-year priority proposed by S. 1658 is no guarantee at all to California. The following Table XXVII, prepared by the State Department of Water Resources and utilizing water supply data of the U.S. Bureau of Reclamation, (a

¹⁵ Report 1330 on S. 1658, *op. cit.*, at 21 (emphasis added).

¹⁶ Steiner, *op. cit.*, at 13 (emphasis added).

¹⁷ Hearing, *Transcript*, August 13, 1964, at 162 (emphasis added).

shown in Chapter I) shows what water would be available to California and the Central Arizona Project both with and without a permanent 4.4 million acre-feet priority to California.¹⁸

TABLE XXVII

WATER SUPPLY FOR CENTRAL ARIZONA UNIT AND CALIFORNIA

(Source of data: Pacific Southwest Water Plan—January 1964)

Millions of acre-feet

I. WATER SUPPLY AVAILABLE TO LOWER BASIN STATES:

	Year			
	1990	2000	2020	2030
Supply (Table 16A & U.S.B.R. Extension)	7.155	6.680	6.380	6.300
Salvage included but not yet authorized320	.320	.320	.320
Available mainstream supply	6.835	6.360	6.060	5.980

II. MAINSTREAM REQUIREMENTS: (Table 13 & U.S.B.R. Extensions, Calif. Limited to 4.4)

Arizona, exclusive of Central Arizona ^a	1.27	1.27	1.27	1.27
Nevada ^a	.17	.20	.30	.30
California	4.40	4.40	4.40	4.40
Total mainstream requirements	5.84	5.87	5.97	5.97

III. SUPPLY AVAILABLE TO CENTRAL ARIZONA UNIT:

(A) With permanent priority of 4.4 for California:

I - II	1.00	0.49	0.09	0.01
--------	------	------	------	------

(B) 25-year priority of 4.4 followed by proration

using special master's formula:

Arizona's share ^b	2.55	2.37	2.26	2.23
Arizona uses in II	1.27	1.27	1.27	1.27

Available to central Arizona unit	1.28	1.10	0.99	0.96
---	------	------	------	------

IV. SUPPLY AVAILABLE TO CALIFORNIA:

With 25-year priority of 4.4 followed

with proration using master's formula ^c	4.00	3.73	3.55	3.50
--	------	------	------	------

^a Inclusive of increased Indian and Mainstream fish and wildlife uses.^b 28/75 or 37.33 percent of water supply in I.^c 44/75 or 58.66 percent of water supply in I.

A 25-year priority, based on congressional passage of legislation in 1965, would mean that the priority would expire in 1990. The table shows that during almost the entire period of the 25-year priority then, there would be sufficient water to supply both the Central Arizona Project and California's needs. The 25-year priority to California, included in S. 1658 as amended, based on Bureau of Reclamation water supply data, is illusory and would have little practical effect.

The record of the hearings of this committee showed *no support* in California for S. 1658, other than that expressed by the Resources Agency.

¹⁸ Throughout this report the master's proration formula has been used to illustrate possible conditions under a principle of proration. It must be emphasized that the present secretary has not formally announced a formula and it is impossible to predict now what formula a secretary will adopt decades from now.

It has also been suggested that the various proposed 4.4 priorities are not absolute ones in that Arizona is free to make use of its Colorado River entitlement through development of local projects in that state. It seems apparent, however, that only a small portion of the Arizona entitlement would be so developed. The Central Arizona Project is a \$1-billion undertaking and two-thirds of the water served will be agricultural supplies involving substantial subsidies. Nevertheless, Arizona should be free to construct such a project if it wants to accept the risks and financial burdens involved, placing it on equal footing with California agencies in event of shortage.

The Administrator of the Resources Agency told the U.S. Senate Committee on Interior and Insular Affairs in April 1964 that:

The inescapable fact is that Congress must choose among three fundamental alternatives: (1) stop further development in the Lower Basin and allow a regression of existing developments in Arizona; or (2) allow further development in Arizona at the expense of existing developments in California; or (3) adopt a regional plan of development which will introduce adequate water supply into the Lower Basin.¹⁹

This committee does not believe that the choices are this narrow and suggests at least two additional alternatives:

1. Authorization of the Central Arizona Project now, together with a protection of existing rights in California up to 4.4 million acre-feet a year. Under this alternative, the Central Arizona Project, in the event import supplies did not materialize, would have a nearly full supply of water for at least 25 years through 1990, the same situation which California is offered in S. 1658. With such protection to California first, as either a permanent priority or one to last until import supplies are actually in the river, the states in the West can then join in these studies leading to major import projects to supplement the water supply of the Colorado River.

2. Postponement of the Central Arizona Project until the major study of western water resources, including a study of alternative sources of supply for Colorado River users, is completed in from three to five years. Authorization of the Central Arizona Project would then follow after determining that the project has a full water supply without depriving California of any part of its 4.4 million acre-foot supply.

The Central Arizona Project is sized not to the specific needs of Arizona, but to the 2.8 million acre-feet a year to which Arizona is entitled under *Arizona v. California* with a full 7.5 million acre-foot supply in the river.

In view of the water supply situation, a smaller or staged Central Arizona Project should be considered. There is no reason why a project

¹⁹ Hearings on S. 1658, Part II, *op. cit.*, at 402.

different from that formulated by the Bureau of Reclamation could not be constructed.

Both California and Arizona have an interest in working together to secure supplemental supplies for the Colorado. As long as both states' claimed rights exceed the expected long-time water supply, neither Arizona nor California can expect adequate water supplies for their people. Both states must exert leadership in this regard.

SUMMARY

The question of providing a 4.4 million acre-foot guarantee to California reduces itself to several basic elements.

First, the matter of *legal precedence*. There is substantial legal precedence for application of the principle of priority of appropriation to the Colorado River. The states of the West have long utilized this principle within their boundaries and for many years the principle has been recognized with regard to interstate water development. It is legally sound and equitable.

Second, the matter of *inadequate water supplies*. The entire question of priorities on the Colorado would, of course, be moot if the Colorado River had a sufficient water supply to meet the needs of California and Arizona, after meeting the needs of the Upper Basin states as set forth in the Colorado River Compact. It is urgent that additional supplies be obtained before shortages develop. However, at present the water supplies will not be sufficient to satisfy both states' full entitlement and both Arizona and California will need substantially more water than their basic entitlement in the years after 1990. Failure to obtain a 4.4 priority to California is to place our reliance on the uncertainties of long-range promises while sacrificing existing water supplies. Alternative sources of supply are unstudied, and the "guarantees" of the development fund concept do not afford sufficient assurance to California. The interests of California can best be served by reliance upon a legal guarantee. Consent to construction of the Central Arizona Project without a 4.4-million-acre-foot priority to California automatically undermines California's prior standing on the river by adding a later project on equal basis with a known inadequate water supply. California should not consent to construction of the Central Arizona Project knowing that the project will take water from existing California users below 4.4 million acre-feet a year.

Third, the matter of *prudent project formulation*. We do not believe that any major water development project, such as the Central Arizona Project, should be undertaken unless it has assurance of adequate water supplies. The burden to be borne by Arizona, the people of the nation and California's water users through this development fund is too great to develop a project without an adequate water supply. The prior assurance of adequate water supplies is the sound procedure for water development.

In supporting protection for existing California projects the committee is fully cognizant of the fact that California presently does not have a "legal right" to 4.4 million acre-feet unless there is at least 7.5 million acre-feet available to the Lower Basin.

We are fully aware of the fact that if Congress does not recognize the equity of such protection and take positive action in this regard California will not have such protection. In supporting a permanent 4.4 priority this committee is advocating a position which has never been accepted by this Legislature as a "lost cause" or fighting a battle that has already been "lost."

The committee recognizes the obvious desire of those in Arizona to develop the Central Arizona Project, after what has been a long delay during the Colorado River litigation. We are convinced, however, that prudent water planning, based upon sound principles of law and equity, must be the objective of Californians. This is particularly true when such water development is regional in scope and great economies depend on existing supplies. We believe that the adoption of a long-term 4.4-million-acre-foot priority for California projects best satisfies this objective, because Colorado River development in Arizona can be no more secure than in California.

2. THE DEVELOPMENT FUND

An important feature of all bills drafted to authorize construction of projects included in the Pacific Southwest Water Plan is a development fund. In each bill the fund is established by Congress (a) to receive the money appropriated by Congress for disbursement to construct the projects authorized and (b) to receive all project operating revenues for repayment of construction costs and interest of each feature to the extent required by authorizing legislation. In essence the development fund is intended to provide means for spreading the project revenues to assure repayment of all reimbursable costs. The emphasis in the fund is on repayment and the fund is, for all practical purposes, a repayment fund. For comparative purposes the language covering the development fund is set out in the table on the following pages.

Comparison of Legislation

The draft legislation for the revised Pacific Southwest Water Plan provided for the repayment of project costs from the development fund. However, only the costs of the projects specifically authorized in the bill were eligible for repayment from the fund. (See page 71 for the projects included). S. 1658 and S. 2760 introduce a new feature in that the costs of future projects not yet authorized by the bill itself are also eligible for repayment assistance at such time in the future as they are constructed. This provision is, according to the best information available to the committee, new and without precedent in federal law.

The availability of development fund revenues for repayment of future project costs are specifically limited in S. 1658 to those costs incurred to provide a supply of water amounting to 4.4 million acre-feet in California, 2.8 million acre-feet in Arizona and three hundred thousand acre-feet in Nevada, when the supply in the Colorado River falls

PROPOSED PACIFIC SOUTHWEST LEGISLATION—COMPARISON OF FEATURES

Feature: Development Fund

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
<p>Sec. 102. Development Fund. (a) There is hereby established a separate fund in the Treasury of the United States to be known as the Pacific Southwest Development Fund (hereinafter referred to as the "Development Fund") which shall remain available until expended as hereafter provided for carrying out the provisions of section 103 (except subsections (g) and (h)) of this Act.</p> <p>(b) All appropriations made for the purpose of carrying out the aforesaid provisions of section 103 of this Act shall be credited to the Development Fund as advances from the general fund of the Treasury.</p> <p>(c) There shall also be credited to the Development Fund all revenues collected in connection with the operation of facilities under the Initial Plan (except entrance, admission, and other recreation user fees or charges, proceeds received from recreation concessioners, and monies collected in connection with works mentioned in subsection 103(h) of this Act) and all revenues from the Boulder Canyon and Parker-Davis projects which, after completion of repayment requirements, are surplus to the operation, maintenance and replacement requirements of those projects and not needed to reimburse the Upper Colorado River Basin Fund (70 Stat. 106, 107) as provided in the Glen Canyon filing criteria (27 Fed. Reg. 6851) for any expenditures made from that fund to meet deficiencies in generation at Hoover Dam during the filling period of reservoirs of storage units of the Colorado River Storage project.</p> <p>(d) Such revenues shall be available, without further appropriation, for (1) defraying the costs of operation, maintenance, and replacements of, and emergency expenditures for, all features of the Initial Plan, within such separate limitations as may be included in annual appropriation acts; (2) payments as required by subsection (e) of this section; and (3) payments as required by subsection (f) of this section. Revenues credited to the Development Fund shall not be available for construction of features of the Initial Plan authorized by or pursuant to this Act.</p> <p>(e) Revenues in the Development Fund in excess of the amount necessary to meet the requirements of clause (1) of subsection (d) of this section shall be paid annually to the general fund of the Treasury to return:</p> <p>(1) the costs of each feature of the Initial Plan allocated to commercial power or municipal and industrial water supply within a period not exceeding fifty years from the date of completion of each such feature;</p> <p>(2) the costs of features of the Initial Plan allocated to irrigation within a period not exceeding fifty years from the date of completion of each such feature, exclusive of any development periods authorized by this Act; and (3) interest, (including interest during construction) on the unamortized balance of the investment in the commercial power and municipal and industrial water supply features of the Initial Plan at a rate determined by the Secretary of the Treasury in accordance with the provisions of subsection (g) of this section; and interest due shall be a first charge.</p>	<p>Sec. 201. Pacific Southwest Development Fund Established.—There is hereby established a separate fund in the Treasury of the United States to be known as the Pacific Southwest development fund (hereinafter referred to as the "development fund") which shall be available only for carrying out the provisions of this Act.</p> <p>Sec. 202. Authorization For Appropriations.—There is hereby authorized to be appropriated from the general fund to the development fund from time to time a total of not to exceed \$1,478,000,000 to carry out the purposes of this Act, of which the amounts available to carry out the purposes of the respective titles shall be limited to the amounts which those titles severally authorize to be appropriated from the development fund.</p> <p>Sec. 203. Cost Allocations.—(a) Upon completion of each division or separable feature thereof, the Secretary shall report to the Congress the total costs of constructing the same, together with his allocations of such costs among commercial power, irrigation, municipal and industrial water supply (all of which shall be reimbursable in the manner provided in this Act), and flood control, navigation, area redevelopment, recreation, and fish and wildlife (all of which shall be nonreimbursable).</p> <p>(b) The Secretary shall include in costs allocated to power, but to be returned without interest, such portion of the costs properly allocable to irrigation as are in excess of the irrigators' ability to repay, and all of the costs allocated to the transmountain division.</p> <p>(c) The interest rate to be used for purposes of computing interest during construction and interest on the unpaid balance of those portions of the reimbursable costs which are properly allocable to commercial power development and municipal and industrial water supply shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which this Act becomes effective, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for fifteen years from date of issue. If the interest rate so computed is not a multiple of one-eighth of 1 per centum, the rate of interest to be used for these purposes shall be the multiple of one-eighth of 1 per centum next lower than the rate so computed.</p> <p>Sec. 204. Repayment of Reimbursable Cost Allocations.—(a) The costs of each feature allocated to commercial power or municipal and industrial water supply shall be repaid from the development fund to the general fund of the Treasury within a period not exceeding 50 years from the date of completion of each such feature, with interest.</p> <p>(b) The costs of each feature allocated</p>	<p>Sec. 102. (a) There is hereby authorized a separate fund in the Treasury of the United States, to be known as the Lower Colorado River Basin development fund (hereinafter called the "development fund"), which shall remain available until expended, as hereafter provided, for carrying out the purposes of this Act.</p> <p>(b) All appropriations made for the purpose of carrying out the provisions of section 4 of this Act shall be credited to the development fund as advances from the general fund of the Treasury.</p> <p>(c) There shall also be credited to the development fund—</p> <p>(1) all revenues collected in connection with the operation of facilities herein and hereafter authorized in furtherance of the purposes of this Act, except entrance, admission, and other recreation user fees or charges and proceeds received from recreation concessioners, and (2) all revenues from the Boulder Canyon and Parker-Davis projects which, after completion of repayment requirements of the said Boulder Canyon and Parker-Davis projects, are: (A) surplus, as determined by the Secretary, to the operation, maintenance, and replacement requirements of those projects; (B) not needed for the purposes of the Colorado River development fund, established under subsection (d) of section 2 of the Boulder Canyon Project Adjustment Act (54 Stat. 775); and (C) not needed to reimburse the Upper Colorado River Basin fund, established under section 5 of the Act of April 11, 1956 (Colorado River Storage Project Act) (70 Stat. 107), as provided in the Glen Canyon filing criteria (27 Fed. Reg. 6851) for any expenditures made from that fund to meet deficiencies in generation at Hoover Dam during the filling period of reservoirs of storage units of the Colorado River storage project.</p> <p>(d) All revenues collected and credited to the development fund pursuant to this Act shall be available, without further appropriation, for (1) defraying the costs of operation, maintenance, and replacements of, and emergency expenditures for, all facilities of the project, within such separate limitations as may be included in annual appropriation Acts; and (2) payments as required by subsection (e) of this section. Revenues credited to the development fund shall not be available for appropriation for construction of the works comprised within any unit of the project herein and hereafter authorized in furtherance of the purposes of this Act.</p> <p>(e) Revenues in the development fund in excess of the amount necessary to meet the requirements of clause (1) of subsection (d) of this section shall be paid annually to the general fund of the Treasury to return—</p> <p>(1) the costs of each unit of the project or separable feature thereof, herein authorized, which are allo-</p>

	<p>of the cost of construction of projects that the Congress may hereafter authorize for the importation of supplemental water supplies into the Colorado River Basin. Balances in the transmountain account shall be invested in United States Government bonds, and the interest thereon shall be deposited in the transmountain account.</p> <p>Sec. 208. Payout Schedules; Reports; Budgets. —(a) The Secretary of the Interior shall furnish to the Congress, not less frequently than once each fiscal year, a report on his operations under this Act, which shall include a payout schedule which shall show, with respect to each division, and cumulatively with respect to all divisions, (1) the capital invested, the amounts repaid, and the unrecovered balance thereof; (2) gross revenues to the development fund, received and anticipated for each year of the repayment period of each division and of each separable unit thereof, from power, from storage and delivery of water for municipal and industrial use, and for irrigation use, and gross revenues from other sources; (3) amounts received from increments to power rates and charges which have been credited to the repayment of capital allocated to irrigation, and credited to the transmountain account; (4) annual costs, historic and anticipated, of operation, maintenance, and replacements; (5) historic and anticipated net revenues; (6) installments paid and to be paid, of interest and of principal, from the development fund to the Treasury; (7) unpaid balances; and (8) sums in the transmountain account available for repayment of the cost of construction of projects to import supplemental water supplies into the Colorado River Basin.</p> <p>(b) Business-type budgets shall be submitted to the Congress annually for all operations financed by the development fund.</p>	

below these quantities and at prices no greater than would have prevailed had Colorado River water been available. The intent is to pay the additional costs of transporting water from new sources to make up any deficiency in the Colorado below the specified amounts.

The draft of legislation to authorize the Pacific Southwest Water Plan also included a provision to permit assistance to areas of origin from the development fund for future projects and for preemption of lower cost project sites.

A somewhat different approach is contained in S. 2760 which includes provision for future congressional authorization of a transmountain division to transport water into the Colorado River Basin and directs the Secretary of the Interior to begin immediate investigations on the division. The purpose of the division is the importation into the Colorado River Basin of sufficient water to eliminate any future deficiencies.

The importation is not limited to the Lower Basin but includes the entire basin.

The newness of the repayment fund proposals caused the committee to inquire of the Department of Interior whether it had prior experience with a fund of this type. In response, data on the Upper Colorado River Basin Fund were supplied by the Department of Interior to the committee.

The Upper Colorado River Basin Fund was established in the legislation (P.L.84-485) for the authorization of the Upper Basin projects. The language in the draft bill to authorize the Pacific Southwest Water Plan closely follows the Upper Basin language. However, a review of the data supplied by the Department of Interior on the operations of the Upper Colorado River Basin Fund shows that the projects involved have only recently been completed or are not yet completed. Therefore, only \$64,000 in revenues had been deposited in the fund by the end of 1963. This is insufficient experience to permit any evaluation of the operation of the fund.

The feature of S. 2760 and S. 1658 which permits costs of guaranteeing a water supply up to 7.5 million acre-feet, requires special comment. In the revised Pacific Southwest Water Plan, the water needed to guarantee California 4.4 million acre-feet was proposed to be transported from northern California to the Imperial Valley and made available to the Imperial Irrigation District. The original plan had proposed direct delivery to the Metropolitan Water District of sufficient water to make up its losses on the Colorado River. This proposal was not warmly received in California because it involved subsidy for a municipal water supply. Therefore, the alternative of transporting the water further to the Imperial Irrigation District was used in the revised plan, presumably because this only involved subsidy to an irrigation water user. However, this delivery to the Imperial Irrigation District would have involved a subsidy approaching \$70 per acre-foot and this would have used up virtually all the repayment capacity of the development fund after the originally authorized projects were repaid.

The above situation illustrates that the sum of money expected to be accumulated in the development fund after the initially authorized projects have been repaid is significant only in terms of the purposes for which the money is to be spent. If the money is to be used to deliver a very expensive water supply to guarantee 7.5 million acre-feet in the Lower Basin, the fund balances may be dissipated without accomplishing all the objectives that might be served. In the case of the revised Pacific Southwest Water Plan, the fund was estimated to be sufficient to cover the high costs of delivering water to the Imperial Valley, but the high rate of subsidy involved meant that a large sum of money would have been expended without accomplishing the maximum benefit for the Pacific Southwest.

Language of the type included in S. 1658 and S. 2760 also introduces another consideration. To the extent that the Central Arizona Project is authorized for construction with an inadequate water supply (see page 100) the draft would have permitted repayment from the fund of those costs required to provide a water supply for the project, from the 2.8 million acre-feet guaranteed Arizona. This would mean that the

fund would assume the burden of providing a part of the water supply for the new Central Arizona Project which is not yet constructed. This is not the same as guaranteeing a supply of water to California up to 4.4 million acre-feet because California loses part of its existing supply for existing projects and, therefore, needs a replacement for water now in use. The net effect is to use the development fund to provide the Central Arizona Project with a supply of water which would otherwise be inadequate during future years based on present estimates of supplies and without certainty how future shortages will be apportioned.

The committee's report on *The Pacific Southwest Water Plan*, Volume 26, Number 8, included the statement that it would be inequitable if the development fund were to be used to provide any subsidy to irrigation water users which is made as a matter of national policy and which should, therefore, be a national responsibility. Since that time, the drafts of bills establishing development funds have become available. A review of these drafts shows that this problem has not occurred because the subsidy elements are excluded from the transfer of repayment money from the fund to the federal treasury and also because the development fund is not being used as a source of future construction capital.

Expected Revenues to the Fund

Another problem involves the probability that the development fund will actually receive the estimated revenues set forth in the report on the Pacific Southwest Water Plan and shown in detail in Table XVIII. This involves a question of whether the power can be sold in the future for the amounts anticipated, that is 6 mills per kwh for peaking power. On this point differences of opinion have occurred.

The following observations can be made:

1. The report of the Fluor Corporation, dated September 1964²⁰ indicates that the value of power in the west has been decreasing substantially during recent years due to the construction of larger scale new generating plants and because of the advent of nuclear energy. A long term energy cost for the State Water Project of less than 3.5 mills per kwh was estimated. This is substantially less than all estimates of several years ago. Since the Colorado River power is peaking power, it will have a greater value than 3.5 mills. The committee has received no data which would permit evaluating whether the 6-mill value is a realistic figure for the next 50 or more years.

2. The Department of Water Resources has observed that if the value of Colorado River power decreases in the future, there will be a corresponding decrease in the value of the power needed to pump water for the Pacific Southwest Water Plan. This statement is borne out by the experience of California on its State Water Project where the decreasing value of power has reacted to the net benefit of water contractors whose water costs consist of a high proportion of pumping energy costs. However, when water contractors do not have a high proportion of energy cost in their water prices, the principle does not apply. Thus, in the State Water Project, the loss of surplus power revenue at Oroville

Source: Department of Water Resources.

from reduced value of power generated there will be directly reflected in higher water costs for those contractors in the Feather River service area. Similarly in the northern part of the State Water Project those contractors who have insufficient pumping cost savings to offset the reduced power revenues will also have higher water costs.

3. The Department of Water Resources pointed out in a letter to the committee that

"Perhaps of greater significance (than the possible future reduction in power values) is the wide disparity in estimates of the future water supply available in the Colorado River for power production. Estimates prepared by the staff of the Colorado River Board of water available during the Pacific Southwest Water Plan payout period for generation at all power plants on the mainstream of the Lower Colorado River average about 15 percent less than those of the Bureau of Reclamation."²¹

²¹ Letter to Chairman Porter from William E. Warne, dated October 14, 1964.

It is obvious that should any water anticipated by the Bureau of Reclamation to be available for generation of power not be available, there will be some reduction in power revenues. Again, the absence of consistent water supply data results in uncertainties.

4. Since the first responsibility of the development fund and the surplus power revenues in it is for the repayment of the initially authorized and constructed features of the Pacific Southwest Water Plan, and since contracts for sale of water from the major projects of the plan have not yet been executed, a change in the repayment obligations of the fund for assistance to irrigation water users can occur. If reduced water charges result in a need for some additional repayment assistance from the fund compared to that originally anticipated, the surplus power revenues available to underwrite the guarantee of 7.5 million acre-feet will be correspondingly reduced. It may also be noted that the costs of constructing the initial projects of the Pacific Southwest Water Plan may increase in the future, but no comparable increase in revenues can be expected. This too, would tend to reduce the surplus in the fund.

5. Because the initial projects of the Pacific Southwest Water Plan must be paid out before surplus funds will be available for underwriting any guarantee of 7.5 million acre-feet, the date when revenues will first be available for this purpose is approximately the year 2000. Only then will there be revenues available for underwriting any guarantee of 7.5 million acre-feet. It is clear from the changes in the value of power in the last few years that any forecast of the value of power 35 years in the future is unreliable and is speculative. Yet it is the value of power beginning 35 years in the future which will essentially determine the amount of surplus revenues in the fund for underwriting the 7.5 million acre-foot guarantee.

From the foregoing discussion it can be concluded that it is not possible to determine now precisely how much money will be surplus in the development fund in future years to guarantee 7.5 million acre-feet of water. Any effort to arrive at a value different from the one selected by the Bureau of Reclamation would be subject to the same shortcomings that confronts the Bureau's figure, that is, it would essentially be a present value rather than a future value.

It would appear, based on recent experience, that the principal factors most likely to influence the value of power sold or the amount of surplus in the fund would be on the downward side. This is borne out by the experience of the Department of Water Resources in a different but similar situation, that of estimating the surplus revenues accumulating under priority 4 of the Burns-Porter Act at the end of the bond repayment period or 75 years. Bulletin No. 132-63, published in April 1963, showed in Table 42 an estimated \$1,063,076,000 in surplus revenues.^{21a} One year later in June 1964, Bulletin 132-64 showed in Table 30, for a slightly shorter period of time, a balance of only \$452,000,000.²² A variation of 100 percent in the balance over a one-year period of time for a project under construction and relatively

^{21a} Department of Water Resources, *Bulletin No. 132-63, The California State Water Project in 1963* (April 1963) at 235.

²² Department of Water Resources, *Bulletin No. 132-64, The California State Water Project in 1963* (June 1964) Table 30.

complete in planning and design, indicates the variation in estimates that can occur.

The committee also has been concerned with the tendency to think of the balance in the development fund as being relatively unlimited and, therefore, capable of supporting any fiscal demands against the Pacific Southwest Plan which might conveniently be charged against it. It should be apparent that this is dangerous and that if any substantial balance is to be accumulated for the purpose of guaranteeing 7.5 million acre-feet or for any other purpose, the fund must be guarded carefully and used discreetly.

Summary

The committee believes that the development fund presents interesting and worthwhile possibilities for fiscal management of the Pacific Southwest Water Plan. It should be looked upon as a very limited fiscal source in view of the large commitments involved if it is to guarantee 7.5 million acre-feet in the Colorado River or assist in providing additional imports of water into the Colorado River Basin. The committee is doubtful that the fund will accumulate all the surplus revenues that are estimated by the Bureau of Reclamation, but this cannot be determined, it can only be speculated. It would, therefore, be wise to avoid expecting too much assistance from the fund and to be cautious about all aspects of its management until much more information is available and particularly on the costs of import water projects.

3. FUTURE SOURCES OF WATER SUPPLIES

Surface Water Supplies

The three major Pacific Southwest regional proposals—the revised Pacific Southwest Water Plan, S. 2760, and the Goldberg Amendment to S. 1658 provide that following initial authorization of the Central Arizona Project certain studies be made to supply additional water for the Colorado River Basin. The revised Udall Plan calls for feasibility reports on all features that were not proposed for immediate construction, including conservation facilities in the north coastal area of California.

The planning for import supplies in the revised Pacific Southwest Water Plan is similar to that of the Goldberg Amendment to S. 1658, which requires that the Secretary of the Interior “investigate alternative sources in the State of California and various methods such as weather modification and desalinization of water as a means of supplying water to meet the current and anticipated water requirements in the Lower Colorado River Basin.”

S. 1658, however, includes the additional requirement that estimates of the long-range water supply and current requirements of the basin be made through the year 2030. The secretary is given five years to prepare feasibility reports on projects in northern California to provide the import supply.

S. 2760 (the Pacific Southwest Project Act), on the other hand, calls for an estimate of the long-range water supply and requirements together with a study of alternative sources from which water might be

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
<p>Sec. 103 . . . (d)(2) complete feasibility reports as expeditiously as funds are made available therefor on features of the Initial Plan for the conservation and storage of water in the north coastal areas of California, and for related conveyance and other facilities including enlargement of the potential East Side division of the Central Valley project, to make available to the Pacific Southwest up to approximately 1.2 million acre-feet of water per annum to make up deficiencies in main stream Colorado River water as provided in section 101 of this Act and for interim disposition pending its need for that purpose. Said reports shall be submitted promptly to the affected States, and thereafter to the President and the Congress . . .</p> <p>Sec. 104. Priority Planning. In carrying out further investigations of projects to be added to the Initial Plan, the Secretary shall give priority to completion of feasibility reports on tributary projects within the Pacific Southwest where undeveloped local water supplies are available or can be made available by replacement or exchange and on other projects, including Indian projects, in Arizona, California, and Nevada, which can utilize water by diversion from the main stream or which can utilize other water which can be developed either directly or through exchange to meet water deficiencies in the area. Similar priority in planning shall be given to projects in areas of origin of import supplies and, subject to appropriate modifications, relating to disposition of the conserved water, of existing contracts with the United States, to completion of a feasibility report on the lining of the All-American Canal system.</p> <p>Sec. 105. Continuing Study. The Secretary in cooperation with the States and with the Pacific Southwest Regional Water Commission, shall maintain a continuing review of the hydrology of the Colorado River, ground water pumping, and projections of future water supply and demand in the region, and report thereon to the Congress, such reports to be made complementary to the reports on water quality required by section 15 of the Act of June 13, 1962 (P.L. 87-84) and section 6 of the Act of August 16, 1962 (P.L. 87-590).</p>	<p>Sec. 301. Secretary of Interior Authorized to Investigate and Report.—</p> <p>(a) The Secretary of the Interior is authorized and directed to report to the Congress not later than three years after the effective date of this Act—</p> <ol style="list-style-type: none"> (1) his estimate of the long-range water supply available for consumptive use in the Upper and Lower Basins of the Colorado River, respectively; (2) the water requirements in the upper and lower basins, at present and as estimated for the years anno Domini 1975, 2000, 2030, and under ultimate anticipated conditions; (3) the present and anticipated deficiencies in water supply; (4) the quantities of water which, imported into the Colorado River Basin, would eliminate the said deficiencies; (5) the quantities of water which, imported into the Colorado River Basin, would make possible the consumptive use of 7.5 million acre-feet per annum in the upper basin, and eliminate present and anticipated deficiencies in the lower basin; and (6) alternative sources from which water might be imported into the Colorado River Basin in the quantities found required under paragraphs 4 and 5, with preliminary plans of projects which would accomplish such importations, their capital and annual costs per acre-foot of water at stated points of delivery; recommendations for the construction of such projects in stages or phases related in size and time to the projected deficiencies, recommendations as to State participation in construction and operation; recommendations of methods for repayment of the costs of construction, operation, and maintenance of such projects and recommendations, conforming to paragraph (b), for development of the water resources of the river basins from which such water would be imported, adequate to supply the ultimate requirements of the areas of origin of such water, in addition to supplying the quantities proposed to be imported into the Colorado River Basin. <p>(b) The planning of all such importation work shall be subject to the following conditions: (i) diversions shall be subordinate to all existing and anticipated future needs within the watersheds of origin, including the retention of water in the watersheds of origin if estimates of future needs prove insufficient; (ii) financial assistance from the development fund shall be available for the construction of any future projects in the watersheds of origin if such assistance is not otherwise provided; and (iii) additional costs of future projects, caused by the preemption of lower cost water sources which otherwise would benefit the areas of origin, shall be offset by assistance from the development fund to the extent that the costs chargeable to such projects would be no greater</p>	<p>Sec. 103. (a) The Secretary of the Interior is authorized and directed to—</p> <ol style="list-style-type: none"> (1) Prepare estimates of the long-range water supply available for consumptive use in the Lower Colorado River Basin, of current water requirements in said basin, and of the rate of growth of water requirements therein to the year 2030. (2) Investigate alternative sources in the State of California and various methods such as weather modification and desalinization of water as means of supplying water to meet the current and anticipated water requirements in the Lower Colorado River Basin, and prepare preliminary plans to accomplish such purpose. In planning any works to import water into the Lower Colorado River Basin from alternative sources in California, the Secretary shall give due consideration to existing and future needs within the areas of origin of the imported water and the State of California and the means of offsetting the additional costs of future projects within said areas of origin and State of California caused by the preemption of the lower cost water sources that otherwise would have benefited said areas of origin and State of California, including the use of the development fund for this purpose. (3) Investigate projects within the Lower Colorado River Basin, including projects on tributaries of the Colorado River, where undeveloped water supplies are available or can be made available by replacement or exchange. (4) (a) Investigate means of providing for prudent water conservation practices to permit maximum beneficial utilization of available water supplies. (b) The Secretary shall submit annually to the President and the Congress reports covering the investigations required by subsection (a) and, within five years from the effective date of this Act, the Secretary shall recommend to the President and the Congress projects and programs for authorization pursuant to paragraphs (2), (3), and (4) of subsection (a) and shall submit feasibility reports on such projects and programs. Said recommendation and feasibility reports shall include projects designed to provide water of an adequate quality for the Lower Colorado River Basin to assist in meeting that basin's long-range needs and, in any event, sufficient to meet deficiencies between the quantities required to supply water for the annual consumptive use of two million eight hundred thousand acre-feet in Arizona, four million four hundred thousand acre-feet in California, and three hundred thousand acre-feet in Nevada and quantities available in the mainstream of the Colorado River such uses as determined by the Secretary.

PROPOSED PACIFIC SOUTHWEST LEGISLATION—COMPARISON OF FEATURES—Continued

Feature: Study of Water Sources

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
	<p>than if there had been no export to the Colorado River Basin.</p> <p>(c) The Secretary shall consult the Pacific Southwest Regional Water Commission, created by title XI, and shall submit his report to the affected States, in the basins of origin as well as in the Colorado River Basin, for comment in accordance with the procedure required by section 1(b) of the Flood Control Act of 1944, prior to submission to the Congress.</p>	

imported into the Colorado River Basin in quantities required to maintain a river supply of 7.5 million acre-feet per year in the mainstream. The location of the sources called for in S. 2760 *is not limited to California* and, in fact, is unrestricted. Presumably under such legislation the secretary could study water supplies in the Pacific Northwest and in other areas as possible sources of water to be imported into the Colorado Basin. In addition to this study, S. 2760 establishes a trans-mountain division of the regional plan which assumes an import to the Colorado River Basin from other basins. S. 2760 goes further than the other proposals in suggesting that sources of water outside California be considered.

NORTHERN CALIFORNIA

It has been suggested by the Secretary of the Interior that water from the north coastal area of California be utilized to provide export supplemental supplies for the Colorado. It must be emphasized that this committee does not concur in this suggestion. There is no reason for limiting sources to those within the region. Also there is no greater obligation to supply it from a northern California source than there is from any other source. However, only reconnaissance studies have been made of north coastal area development. Proposed dams and reservoirs in that area must be evaluated and compared to other sources prior to the making of a decision to develop these California north coastal sources for any other use in California as contemplated in the California Water Plan, a master plan for the full development of all of California's water resources by all levels of government. The California Water Plan was adopted by the Legislature in 1959.²³ Recently, California's Department of Water Resources completed a seven-year reconnaissance investigation of the north coastal area, and released a preliminary edition of Bulletin No. 136, "*North Coastal Area Investigation*." This bulletin describes all projects for development of water supplies in the north coastal area of California. A summary of the possible major projects is given in the following table:

²³ See State Department of Water Resources, Bulletin #3, The California Water Plan, May 1957. (Water Code, Sec. 10004 et seq.).

TABLE XXIX

**SUMMARY OF POSSIBLE MAJOR PROJECTS IN NORTH COASTAL AREA
AND CONTIGUOUS AREAS OF SACRAMENTO VALLEY**

<i>Project and principal features</i>	<i>Project annual yield (1,000 A.F.)</i>	<i>Estimated capital cost (\$1,000,000)</i>
Paskenta-Newville Project	200	30
Upper Eel River Development (via Clear Lake) †		
Spencer Dam and Reservoir	470	55
Dos Rios Dam and Reservoir	110	25
English Ridge Dam and Reservoir	340	80
Putah Creek power facilities	--	32
Conveyance facilities *	--	106
Total	920	298
Trinity Diversion Project (via Clear Creek)		
Helena Dam and Reservoir	600	84
Conveyance facilities *	--	70
Total	600	154
South Fork Trinity Project		
Eltapom Dam and Reservoir	400	55
Burnt Ranch Dam and Reservoir	80	71
Beartooth Dam and Reservoir	120	14
Clear Creek power facilities	--	164
Conveyance facilities *	--	56
Total	600	360
Mad-Van Duzen Project		
Enlarged Ruth Dam and Reservoir	180	13
Anderson Ford Dam and Reservoir	60	30
Eaton Dam and Reservoir	230	26
Larabee Dam and Reservoir	130	37
Butler Valley Dam and Reservoir	--	13
Conveyance facilities *	--	101
Total	600	220
Greater Berryessa Project		
Enlarged Monticello Dam and Reservoir	1,600	131
Power, pumping, conveyance facilities	--	180
Total	1,600	311
Lower Eel River Development		
Sequoia Dam and Reservoir	600	170
Bell Springs Dam and Reservoir	400	101
Northwestern Pacific Railroad relocation	--	130
Conveyance facilities *	--	186
Total	1,000	587
Klamath River Development		
Humboldt Dam and Reservoir	6,000	652
Ironside Mountain Dam and Reservoir	--	11
Westside Conveyance System	--	130
Rancheria Dam and Reservoir	200	90
Conveyance facilities *	--	637
Total	6,200	1,520
Total	11,520	3,456
Grand Total		

* A major part of conveyance facilities costs is for tunnels.

POTENTIAL NORTH COASTAL DEVELOPMENT

Source: State Department of Water Resources.

Table XXIX shows the Upper Eel River Development, which provides 920,000 acre-feet a year of project yield at an estimated cost of \$298 million has been authorized by Governor Brown as the first delta replenishment facility to be developed by the state under the Burns-Porter Act. The yield of this project will be required to maintain the safe annual yield of the State Water Project of 4.23 million acre-feet a year. The remaining undeveloped projects are required for the State Water Project.

It can be seen that all projects in the north coastal area would develop more than 11.5 million acre-feet of water a year, but at a cost of \$3.4 billion. Although the projects outlined appear to be feasible at the present time, the largest single project and the one which would produce the greatest new supplies is the Klamath River Development, which is recommended in Bulletin 136 as the last project to be built. This project, which would develop 6.2 million acre-feet a year, would cost more than \$1.5 billion to construct. Not only is it the most costly but it is the most difficult and least accessible of all the projects.

Table XXIX indicates that in many cases large expenditures will be required to produce relatively small quantities of water. For example, although the Lower Eel River Development will produce a million acre-feet of water a year, a single railroad relocation involved in this project is estimated to cost \$130 million.

In Bulletin 136 it is estimated that present applied water requirements of 700,000 acre-feet within the north coastal area will grow to approximately 2.0 million acre-feet annually by the year 2020. Thus, substantial amounts of water now unused in the north coast will be required for the north coastal area itself.

With regard to development of the north coastal area of California, the Regional Director of the Bureau of Reclamation commented:

... I am quite sure that we all can agree right now, as a general principle, that what we want to do is to provide the best possible use of this water. All of us are confronted with working out cooperatively sound overall objectives as we proceed from the general investigation and initial action phases of the past, to the detailed specific project planning and accelerated construction phases which are now virtually upon us in the north coastal area. This challenge confronts all of us—the Bureau of Reclamation, State Department of Water Resources, and the Corps of Engineers, as major action agencies; our sister federal and state agencies with their important specialties; local interests and your regional Eel River Association; and water leaders throughout the State of California. It is squarely up to us, individually and collectively, to define and agree upon those measures, as we proceed, which will ultimately result in our actually achieving what really is the best use of the north coast water.

... the time has come for us all to proceed cooperatively, with full mutual recognition and coordination of objectives.^{23a}

In presenting this brief description of the north coastal area facilities, the committee must emphasize that since these projects involve

^{23a} Robert Pafford *The Total Objective*, statement to Statewide Water Conference, California State Chamber of Commerce, Eureka, July 10, 1964, at P-2, P-3.

large expenditures of money they *must be compared with* other potential water supplies. There is no evidence to show that north coastal area development will necessarily be the most economic and most advantageous method of providing this water throughout other parts of California.

A complete study of all alternative sources throughout the west is mandatory.

PACIFIC NORTHWEST

Although California's north coast streams today have substantial flows, the maximum annual discharge for the period of record is 12,580,000 acre-feet for the Klamath River, the largest north coast stream. This can be compared to the Columbia River, for example, at The Dalles in Oregon where the average annual discharge for period of record of the Columbia is 141.5 million acre-feet. The flow of the same river at Grand Coulee was 78,840,000 acre-feet.²⁴

Although far more water flows in the streams of the Pacific Northwest than California Rivers, there are those in the Pacific Northwest who insist that such flows are not surplus. Very few water exportation studies of the Pacific Northwest streams, and particularly the Columbia, have been made. It is imperative that immediate studies of the river, based upon several possible points of diversion, be made in order that the Columbia and other rivers in the Pacific Northwest can be evaluated.

This committee believes that it is imperative that a thorough analysis of the water supply and demand in the entire 11 western states be given extensive study during the next few years in order that elements of a regional plan can be intelligently determined, and a project may be designed and built when needed. A study at least as comprehensive as that embodied in S. 2760 and S. 3104 is necessary.

The committee is aware that water supplies of both Northern California and the Pacific Northwest may well be unnecessary for regional development if additional water supplies can be made available by other means as discussed below.

Sea Water Conversion

Precisely on the point of Pacific Southwest water development is the September 22, 1964 report of the Secretary of the Interior to the President of the United States on a program for advancing desalting technology. In his report to the President, Secretary Udall stated:

Three distinct water-use areas can be identified in the Pacific Southwest. These are: (1) Southern California—coastal, where water is used primarily for municipal and industrial purposes; (2) Arizona, where water is used for municipal, industrial and agricultural purposes; and (3) Southern California—interior, where most of the available water is used for agriculture.

Our immediate concern in the desalting program is the need for municipal and industrial water. Most of this need arises in or near the coast. Moreover large sea water conversion plants are best

²⁴ Senate Select Committee on Natural Water Resources, Water Resources Activities in the United States, *Committee Print #4*, at 89.

adapted to coastal locations and should be located near major population and industrial centers.

Water-resource planners generally agree that major decisions on future water supply for the coastal areas of Southern California should be made by the mid-1970s. Desalting plants, if the technology is sufficiently developed could provide the most economical source of water for this area.

Much of the existing inland deficiency is being met by "mining" ground water and the interior valleys of Southern California and in Arizona, ground water tables have dropped as much as several hundred feet and the situation is critical.

... desalting plants constructed on the coast could meet all or part of this demand (of the coastal plain for Colorado River water) thereby physically freeing Colorado River water to meet municipal and industrial deficiencies of inland areas in the region if appropriate exchange arrangements were developed.²⁵

In the secretary's report, the Pacific Southwest is singled out as the first economic market for sea water conversion facilities. In order to secure reliable cost data, the Metropolitan Water District of Southern California has contracted with the Department of Interior and the Atomic Energy Commission to study the feasibility of a dual purpose plant of 50 to 150 million gallons a day for possible construction as part of the M.W.D. system by 1970.

In discussing the Metropolitan Water District's contract, the Chief Engineer and General Manager of the District told this committee

... in evaluating the various regional plans for augmenting the water supply in the Pacific Southwest by importing water from even greater distances, it would be desirable to have dependable information regarding the cost of desalting sea water as an alternative supply. Operation during an extended time period of a desalting plant of substantial capacity would afford the most reliable source of cost data for purposes of such comparison. The possible economies to be derived from scale up in the size of desalting units and in the size of reactors cannot be demonstrated conclusively until a prototype plant has been constructed and operated. As the capital cost involved and in long-range regional plans are of immensely greater magnitude than those of the desalting plant we have been discussing, *it would be highly desirable to have concrete evidence of the true cost of large-scale desalinization of sea water before irrevocable commitments are made in the construction of a regional project.*²⁶

The Metropolitan Water District hopes for a cost of \$77 per acre-foot for converted water. This committee reiterates its belief that serious consideration, not mere lip service as in the Pacific Southwest Water Plan, must be given to sea water conversion as a possible alternative source of future supplemental water supply.^{26a}

²⁵ U.S. Secretary of the Interior, *Program for Advancing Desalting Technology*, Report to the President, September 22, 1964, at 9, 10.

²⁶ Statement of R. A. Skinner, November 5, 1964, at 10 (emphasis added).

^{26a} It should be pointed out that the State of California has consistently led all states in conversion research, spending more than all states combined on this effort. See also the report of this committee, *Saline Conversion and Nuclear Energy*, Assembly Interim Reports, Vol. 26, No. 12 (1963-65).

Reclamation of Waste Water and Water Salvage

The question of alternative sources of water also involves a consideration of waste water reclamation. As was discussed in Chapter III several hundred thousand acre-feet a year of waste water is potentially reclaimable in the coastal plain of Los Angeles County and throughout the Pacific Southwest Water Plan great emphasis has been laid on water salvage and conservation practices along the Colorado and along the aqueducts of projects served from the river. Although there is disagreement as to the amount of water which can be reclaimed and salvaged by the proposal in the Pacific Southwest Water Plan. We, nonetheless believe that a contribution to the overall water supply of the basin can be made by water salvage and reclamation proposals.

Evaporation Control

In addition, research on evaporation control should be stepped up. As is shown on water supply tables in this report more than a million acre-feet a year of water will be wasted by evaporation from the Colorado River during the next few decades. If evaporation control research can progress to the point where it is effective the water made available from this source should prove to be a significant benefit to the water supply of the area. Just as the Department of the Interior is recommending what is essentially a "crash" program of sea water conversion research, a "crash" program of evaporation control research would be appropriate at this time.

A Study of Western Water Resources

After Southern California representatives appeared before the Congress and suggested that new supply sources beyond northern California be explored in order to supplement the flows of the Colorado, there began a series of statements by representatives of various potential water sources.

First, Senator Len Jordan of Idaho, responding to the Los Angeles Department of Water and Power's proposal to tap the Snake River in Idaho for such supplies, commented:

The best sources of more water for the Lower Colorado River Basin States is the Columbia River . . .

Please note that even under the year 2010 level of irrigation development based on the natural flow, 1929-1948 average, slightly in excess of 160 million acre-feet flows into the Pacific Ocean. Please note also that under the same conditions of ultimate depletion, more than 110,000 acre-feet will flow past the Dalles Dam, 180 miles upstream from the coast. It is from this point, the Dalles Reservoir at an elevation of 160 feet, that water might be available for export.²⁷

Shortly thereafter Senator Alan Bible of Nevada said that he "agreed wholeheartedly with Senator Jordan's proposal to divert Columbia River water."^{27 28}

Senator Henry M. Jackson of Washington, Chairman of the U.S. Senate Committee on Interior and Insular Affairs, immediately de-

²⁷ Sacramento Bee, April 17, 1964, at B-8.

²⁸ Los Angeles Times, April 21, 1964, at 2.

nounced the plan to utilize Columbia River water. According to press dispatches, Senator Jackson "angrily" served notice that any plan contemplating meeting Southwest Water Problems by diversions from the Pacific Northwest river would be "dead" in his committee. "Jackson wrathfully descended on the Interior Subcommittee to deliver his ultimatum to Senators considering Interior Secretary Stewart L. Udall's . . . Pacific Southwest Water Plan".²⁹ In questioning Northcutt Ely, who was appearing before the committee and who had just suggested that the Columbia River diversion was one possibility of new source of supply, Senator Jackson commented caustically

. . . I want to tell you right now that if you are contemplating that, you are just in for trouble and you might as well face up to it . . . I think you are slightly unwise to come in here and advocate diversion of the Columbia. This has been an old, old gimmick for a long, long time . . .³⁰

When Mr. Ely suggested that S. 2760 did not propose diversions from the Columbia but only proposed a study of *all* possible diversions *including* the Columbia, Senator Jackson replied, "I know, you are authorizing the back door and the ultimate objective is to do that."³¹ Senator Jackson followed his comments with action in proposing the amendment to S. 1658 which was adopted by the Senate Committee requiring that California be the sole source of import supplies to the Colorado.

It is obvious to this committee that from the circumstances involved in the mere suggestion of study of sources outside of California a climate of cooperation among the states of the West has not yet been developed. Yet a climate of cooperation in development of the total water resources of the West is an essential requirement of any interstate regional plan.^{31a}

Sensing the confusion of the present situation, Governor Grant Sawyer of Nevada told a large gathering of water leaders throughout the West that:

Justifiably those living in areas of abundant water supplies look with alarm upon any plan of any outsider to take the waters away from their areas. To my knowledge, none of the plans proposed have been coordinated and planned with all areas affected. The time has come for you as legislators, educators, lawyers, engineers, geologists, and economists in the business of water conservation and use to conduct yourselves as statesmen and sit down around the table and work out the best plans to meet the needs of the entire West, not just you of the Southwest, and not just you of the Northwest.

Governor Sawyer appropriately admonished the assembled group,

You will hear . . . of the needs of the Colorado River Basin, the Northwest, and the critical needs of each of the three southwestern states, namely Arizona, Nevada, and California. Let me implore

²⁹ Sacramento *Union*, Wednesday, April 22, 1964, at 12.

³⁰ Hearings on S. 1658, *Op. Cit.* at 529.

³¹ *Loc. cit.*

^{31a} See also statements of various spokesmen of Pacific Northwest states at Western Interstate Water Conference, Las Vegas.

you to listen carefully to all of these needs because if you don't understand the other man's problems, you certainly will fail in developing plans to meet their needs, and yours.³²

In its report to this committee the University of California Water Resources Center noted:

"Future costs of moving larger volumes of water from Northern to Southern California may . . . be substantially greater than future costs of equal supplies from alternative sources. Major uncertainties with respect to availability and relative costs of alternative supplies cloud the horizon today. Fortunately, California's overall water situation allows time for thorough inquiry and for deferment of some heavy long-term commitments. The period of grace may wisely be used for prompt and broad investigation of the potentials of the integrated western system of water management. Such an inquiry should encompass not only the hydrologic and technical aspects of alternative regional proposals: there must be realistic appraisals of the economic, legal, and political factors relative to the proposals. Special interests should be given to water quality considerations and to the growing importance of water and recreational uses, for fish and wildlife habitat, and as an environmental amenity resource in both urban and rural settings . . .

A basic need for California and other western states today is a thorough and undistorted inquiry into major alternatives for long-range development and use of regional water resources. Such an inquiry would best be conducted as an integral part of an established and continuing process of regional water resources planning . . .

. . . it seems clear . . . that in the absence of such a study the western states will continue to be without an adequate basis for political decision.³³

Along these same lines the Western Governor's Conference in May, 1964 also called for a comprehensive study of the water resources of the western states. Its resolution noted that:

" . . . water supplies may become increasingly short . . . even in those areas where current supplies may appear to be in excess of the needs of local users and consumers . . . there is need for an adequate and unbiased appraisal of present and future water requirements of each region of the West, and for development of a comprehensive plan for equitably meeting such needs . . .

The Governor's Conference resolved that the study should give particular attention to the feasibility of interregional water utilization, alternative methods of meeting the needs of water deficient areas, now and in the future. The conference suggested that the comprehen-

³³ Fred Clarenbach, *Western Regional Planning of Water Resources*, Report of Water Resources Center, University of California, August 1, 1964, at 61, 63 and 64.

sive study be undertaken by the 11 western states jointly through the Council of State Governments and its affiliates.^{33a}

Summary

The committee recommends an immediate and comprehensive study of all possible alternative sources of supplemental water supplies for the Colorado River. Sources in all 11 states, including the Pacific Northwest, should be considered. The objective of this study should be to develop programs to insure a dependable supply of water to Colorado River users until at least 2020.

4. PROTECTION TO AREAS OF ORIGIN AND WATER RIGHTS

This committee, in its previous report on the Pacific Southwest Water Plan, expressed concern over the area of origin protection suggested in the original Pacific Southwest Water Plan. The report suggested the inclusion in authorizing legislation of protection for areas of origin by means similar to the provisions of the New Melones Project authorization of 1962. These provisions subordinated exportations of water from the basin to the existing and anticipated future needs within the basin, as determined by the Secretary of the Interior.

It is clear that regional development in the West will ultimately involve not only areas within states but entire states as areas of origin. Protection will be required equally for California, Idaho, Washington, Oregon, or any other state from which water is exported. Perhaps even areas of origin including more than one state will require special protection.

Nearly all states recognize that comprehensive area of origin protection is an absolute necessity for regional development. As the Administrator of the Resources Agency of California indicated to the U.S. Senate Committee on Interior and Insular Affairs:

The states of the Pacific Northwest, the Missouri Basin, or more distant areas will insist, and rightly so, upon demonstration that proposed exports will not injure their development potential. Reasonably conclusive demonstration will require study of the supplies, ultimate requirements, and the various methods of meeting these ultimate requirements in areas which range from the highly developed to almost virgin wilderness. Western experience in water conservation teaches us that these studies must be comprehensive and critical and will require many years to complete.³⁴

Others have shared this view and the resolution of the Western Governors' Conference in May, 1964 indicated:

Any proposal for transporting water from one region to another ought to include recognition that needs of the supplying region are paramount to those of any consuming region.

and went on to recommend:

Adoption of an underlying philosophy for regional development that will assure areas and states of origin which export waters to areas of deficiency full legal and economic protection of their future development rights.

^{33a} The Western Interstate Water Conference, held at Las Vegas, Nevada, in September 1964, passed a similar resolution.

³⁴ Hearings on S. 1658, Part II, *op. cit.*, at 401.

PROPOSED PACIFIC SOUTHWEST LEGISLATION—COMPARISON OF FEATURES

Feature: Area of Origin Protection

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
Sec. 103 . . . (d)(2) . . . The planning, construction, and operation of all such features shall be subject to the following conditions: (i) diversions shall be subordinate to all existing and anticipated future needs for consumptive uses within the watersheds of origin, including the future retention of additional water in the watersheds of origin if the original estimates of future needs for consumptive uses prove insufficient; (ii) financial assistance of the character provided under the Federal reclamation laws shall be available from the Development Fund for the construction of any future projects in the watersheds of origin if such assistance is not otherwise provided; and (iii) additional costs of future projects, caused by the preemption of lower cost water sources which otherwise would benefit the areas of origin, or the State of California insofar as the water supply therein is diminished, shall be offset by assistance from the Development Fund to the end that the costs chargeable to such projects shall be no greater than they would have been had there been no export under the Initial Plan: <i>Provided</i> , That the financial assistance under (ii) and (iii) above shall not exceed that available under Section 102(f) of this Act.	Sec. 301 . . . (6)(b) The planning of all such importation work shall be subject to the following conditions: (i) diversions shall be subordinate to all existing and anticipated future needs within the watersheds of origin, including the retention of water in the watersheds of origin if estimates of future needs prove insufficient (ii) financial assistance from the development fund shall be available for the construction of any future projects in the watersheds of origin if such assistance is not otherwise provided; and (iii) additional costs of future projects, caused by the preemption of lower cost water sources which otherwise would benefit the areas of origin, shall be offset by assistance from the development fund to the extent that the costs chargeable to such projects would be no greater than if there had been no export to the Colorado River Basin.	Sec. 103 (a)(2) . . . In planning any works to import water into the Lower Colorado River Basin from alternative sources in California, the Secretary shall give due consideration to existing and future needs within the areas of origin of the imported water and the State of California and the means of offsetting the additional costs of future projects within said areas of origin and State of California caused by the preemption of the lower cost water sources that otherwise would have benefited said areas of origin and State of California including the use of the development fund for this purpose.

It seems generally agreed that any proposal for export of water supplies from a basin or state must be predicated upon the establishment beyond question that surplus waters in excess of the ultimate needs of the basin actually exist.

Comparison of Legislation

It can be seen from the language of the proposed legislation that S. 1658 contains a vague and indefinite provision for protection to areas of origin, although the bill was developed as a substitute for the revised Pacific Southwest Water Plan. S. 1658 provides only that the secretary shall give "due consideration" to existing and future uses and various areas of origin problems, including preemption of low cost sites, and provides the development fund may be used for this purpose. This language is weaker than the New Melones provisions of the revised Udall Plan discussed below. The type of protection actually offered by "due consideration" of the secretary must be conjectural.

The language of the revised Udall Plan draft legislation (Section 103(d)2) is basically:

(1) The language of the New Melones authorization, under which diversions for the regional plan are subordinate to existing and anticipated future need within the watersheds of origin, including retention in the future of additional water in the watersheds if the original estimates prove insufficient. This New Melones language alone was rejected in the State's Official Comments on the original Pacific

Southwest Water Plan, as explained by the Administrator of the Resources Agency:

California must reject the New Melones provisions as inadequate. California's goal is twofold: (1) Exports from the areas and states of origin must not deprive either of the legal opportunity to develop in the future whether or not such development can presently be anticipated; and (2) Such opportunity must be genuine and not illusory; i.e. the areas of present surplus must not only have the legal right to develop, but this at no greater cost than they would have borne had no exports therefrom been made. To accomplish these two objectives, language must be drawn in substitution of the suggested "New Melones" clause.³⁵

(2) Additional provisions that financial assistance of the character provided by federal reclamation laws from the development fund will be available for future projects in the watersheds of origin if not otherwise available. This is the key, then, to the revised plan's area of origin provisions. Under the bill, the additional costs of future projects caused by the preemption of lower cost water sources which otherwise would benefit the areas of origin or the State of California will be offset from assistance from the development fund to the end that costs chargeable to such projects shall be no greater than they would have been had there been no export under the plan. This guarantee or protection to the areas of origin is based entirely upon the fiscal soundness of the development fund and the existence of sufficient money in the fund to provide for such works in the areas of origin.

The revised Pacific Southwest Water Plan draft legislation offers a good start toward the objectives of adequate protection to the areas of origin but sufficient information regarding its practicability is not available at this time. Much additional study of the means of implementing such a proposal is needed.

The Pacific Southwest Project Act, (S. 2760) incorporates virtually the identical language of the Revised Pacific Southwest Water Plan. The comments with regard to the Revised Plan are applicable to this legislation as well.

California should be gratified that this federal legislation, including one bill which was drafted by the Department of the Interior, recognizes California's contention that economic assistance is an integral part of protection to areas of origin. Although we do not feel that the language presently proposed is sufficient, it represents a major step forward by the federal government in recognizing the need for more comprehensive protection of areas of origin than earlier federal policy.

California Statutes

California has specific provisions in the Water Code (the county of origin law, Water Code Section 10505 and the Watershed Protection Act, Water Code Sections 11460 et seq.) which are statutory attempts to provide assurances to counties and areas of origin that water supplies for their future development will be available.

³⁵ *Hearing Transcript*, July 23, 1964, at 19, 20.

In developing the Burns-Porter Act, however, the California Legislature found that simply reserving water for future development in areas of origin was not sufficient.³⁶ Thus, in the Burns-Porter Act an additional guarantee to the areas of origin was provided through the "bond offset" provision. Under this provision (Water Code Section 12938), Burns-Porter Act Water Bonds in the amount equal to expenditures from the California Water Fund for the State Water Facilities after November, 1960 are set aside or "offset" to be utilized for the development of local projects and the replenishment of water supplies in the delta as areas of origin develop and utilize water initially flowing to the delta and exported by the project. As areas of origin develop in the future in California and require water which had previously been exported by the project to other parts of the state, the offset funds will provide for local projects and for projects to develop additional supplies for State Water Project users in central and southern California. In this manner the needs of both export users and area of origin users can be met through construction of necessary physical works.

This is an unique area of origin provision made possible through the combination of the availability of water bond proceeds, the availability of California water fund moneys, the existence of a physical delta "pool" from which to convey project waters, and the statutory protection of the Water Code.

The ability to finance future local projects is a very important feature of any area of origin concept. As was indicated to the committee by representatives of the State Chamber of Commerce:

... assuming that there is a surplus, the plan should guarantee that it would not increase the cost of water from projects serving California, both those now existing and those to be developed in the future. No export should be permitted that increases our own water costs . . .³⁷

Governor Edmund G. Brown of California, in a statement to the Western Governor's Conference expressed much the same view:

We should establish as a policy that the areas of origin, and states of origin, of surplus waters should have full legal and economic protection now and in the future. Any regional transfer of water under such a plan should literally be a transfer of *surplus* water. If the area of origin needs the water in years to come, it should have the legal right to use it—and the assurance that it can do so at cost that would have prevailed had the regional program never been established.³⁸

The serious problems which may arise from preemption of the most desirable damsites by early regional development can be illustrated by

³⁶ For an interesting discussion of area of origin laws in California see Porter R. Towner, "Laws Protecting Areas of Origin", statement to Eel River Flood Control and Water Conservation Association, Ukiah, California, October 9, 1964.

³⁷ California State Chamber of Commerce, *Regional Water Planning Policy* statement, at 1.

³⁸ Edmund G. Brown, Western Governor's Conference, San Francisco, May 3, 1964.

the fact that the state, for example, has proposed construction of lower cost north coastal projects first.

It was also explained to this committee by many witnesses that proposals for regional development must offer protection to the Sacramento and San Joaquin Valleys, since northern California streams are expected to be used as sources of water supply for the valley. The Sacramento and San Joaquin Valleys may well also be required to pay more for their next increment of water if present plans for low cost development envision use of sites which may be preempted by regional development.

Thus it can be seen that areas of origin and other areas of potential use in California, such as the Central Valley, are legitimately concerned lest by the time that they are ready to develop local water projects for their areas only the more difficult and costly projects will be available. These areas fear that although legal right to water may be available, these areas may be financially incapable of developing the water adequately.

The committee believes that basic elements of the type of "physical and economic guarantee" to areas of origin provided by the far-reaching provisions of the Burns-Porter Act are desirable and should be adapted to interstate regional water planning. We seriously doubt whether under existing congressional project authorization procedures, however, such guarantees are possible.

The present status of regional planning makes it clear that the economic impact of the guarantees needed for this purpose are incapable of estimation at this time and much more study of this problem is required, including detailed studies of the actual areas involved and the extent of the economic commitment which will be necessary.

Area of origin provisions approximating the degree of protection of the California State Water Project and satisfactorily meeting the problems raised by early preemption of more desirable water projects must be formulated for a regional plan. This committee cannot recommend adoption of a regional plan in the absence of such a procedure.

Water Rights

It has often been said that what is needed are more works, not more water laws. None of the regional programs proposed to date, however, recognize the current confusion existing over the status of state water rights and the need to clarify federal/state water rights relationships and reestablish the validity of state statutes. It will be difficult to construct massive works based upon a faulty legal foundation. Former Attorney General Stanley Mosk has pointed out:

The great engineering works which serve our cities and farms would not have been built in the face of today's legal uncertainties. A first step in securing a new works which we so badly need is to repair the fabric of our essential water laws.³⁹

Senator Thomas Kuchel of California introduced legislation in the 88th Congress, S. 1275, to clarify federal/state water rights relationships.⁴⁰

³⁹ Mosk, Town Hall statement, *op. cit.*, at 2.

⁴⁰ The complete text of this legislation is found in the appendix to this report. It was not adopted by the 88th Congress.

Attorney General Mosk, who participated in the drafting of S. 1275 reported on hearings on the legislation:

... I listened again, and with renewed amazement, to lawyers for the United States Department of Justice declare that there are no rights in a navigable stream which they cannot take, without compensation, and in the name of the United States. I heard them declare, as they declared in the *Fallbrook* case in California, that the United States need not acquire, because it already owns, all the water appurtenant to the national forests from which most of the water in western rivers flows.

... Congress must establish the principles on which the development of the water resources of our nation can proceed. The problems are simple, and they are common to every part of the country.

Expanding water needs require vast projects planned and built at the cost of billions of dollars in money and many years of time. Neither rivers, river basins nor water needs stop at state lines. Regional planning is a necessity to survival.

Regional planning is like any planning for projects to use water. Planning requires certainty of water rights; certainty of water rights must be based on law, not on the good will or the ill will of any federal or state official. The body of law which the western states have developed from experience in the last century must be the basis and the source of both law and principles in regional planning. Great projects cannot be built in reliance upon lawful water rights, only to have doubts cast upon those priorities decades later because other projects have become desirable. The law must be settled, once and for all.⁴¹

This committee concurs in the need for clarification in federal-state water rights relationships.

We are fully cognizant of the fact that state water rights laws should not be used by states to thwart or to impair federal development or regional developments involving the federal government. No state can afford to limit itself to its own parochial interests. Neither should California nor any other state participate in a program which does not involve clarification of federal-state water rights and which would have the effect of destroying the very fabric of water rights of that state. For example, the continued utility of area of origin laws which are applicable to the State Water Project is dependent upon continued recognition of state water rights laws. The Legislature adopted a resolution supporting S. 1275 or similar legislation at the 1964 Regular Budget Session (AJR 2, Porter, 1964 Res. Ch. 5). We reaffirm this action and reiterate that legislation similar to S. 1275 clarifying water rights relationship should be enacted prior to the adoption of any regional plan.

⁴¹ Mosk Town Hall statement, *op. cit.*, at 13, 15. For a witty exposition of the view of the federal government see Abbott Goldberg, "Interposition Wild West Water Style," 17 *Stan.L.Rev.*1 (Nov. 1964). Hearings on S. 1275 were held in 1964 and have been published by the U.S. Senate Committee on Interior and Insular Affairs.

5. REGIONAL ORGANIZATION

This section discusses the problems of establishing a regional organization to plan for transporting water to meet future needs in the west. There has been wide acceptance of the regional commission concept, but only limited consideration of the specific problems of organizing such a commission and determining what its functions should be. The only material on a commission that has come to the committee's attention is contained in the study of the University of California entitled "Western Regional Planning of Water Resources," dated August 1, 1964. This study was prepared for the Legislature in response to Senate Concurrent Resolution No. 22 of the 1964 First Extraordinary Session of the California Legislature and has been used in preparing this section.

The purpose of discussing regional organization in the committee's report is not to recommend any specific regional organization but to inquire into the nature of the organization that would be most appropriate and to focus attention on problem areas. This is done with the conviction that further public discussion of these problem areas will facilitate evaluation of them and will assist all interested persons in determining for themselves the need for, and type of regional organization that can best solve the water problems of the west.

A key feature of the three bills drafted to implement the Pacific Southwest Water Plan and its variations has been a regional commission. Since the commissions contained in these drafts build on prior federal experience, some background is necessary before proceeding to discuss the commission proposals themselves.

Past experience with comprehensive regional planning has been largely limited to the federal government. This is to be expected since the federal government is the only level of our government which has been active in regional water resources development.

The Tennessee Valley Authority was probably the first federal regional agency established to handle water resources development in a watershed. It operates on a basis completely independent from all other federal or local water resources agencies. Its independence and the politically controversial nature of some of its programs are probably the main reasons why Congress has refused to consider this type of organization for other watersheds of the nation such as the Columbia River Basin.

Interagency River Basin Commissions

In recognition of the growing need for coordination of various federal water resources activities by the federal agencies themselves, which has been pointedly criticized in the past by the Hoover Commission and others, the Department of Interior took the leadership in establishing interagency river basin commissions. Two have functioned in the west with some success. One is the Columbia Basin Interagency Commission and the other is the Pacific Southwest Interagency Commission. Both of these commissions are composed of regional representatives of the federal agencies involved in water resources work plus a representative of the states included in the basin. The chairmanship revolves among the representatives on the commission, which limits the leadership and

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
<p>Sec. 204. (a) For the purpose of carrying out the provisions of this title, the commission may—</p> <p>(1) hold such hearings, sit and act at such times and places, take such testimony, receive such evidence, and print or otherwise reproduce and distribute so much of its proceedings and reports thereon as it may deem advisable;</p> <p>(2) acquire, furnish, and equip such office space as is necessary;</p> <p>(3) use the United States mails in the same manner and upon the same conditions as departments and agencies of the United States;</p> <p>(4) employ and compensate such personnel as it deems advisable, including consultants at rates not to exceed \$100 per diem;</p> <p>(5) arrange for the services of personnel from any State or the United States, or any subdivision or agency thereof, or any intergovernmental agency;</p> <p>(6) make arrangements, including contracts, with any participating government, except the United States, for inclusion in a salary schedule and employee benefit system of such personnel as may be required for or continuing in service, retirement or employment, or otherwise provide for such coverage of its personnel;</p> <p>(7) purchase, hire, operate, and maintain passenger motor vehicles;</p> <p>(8) incur such expenses as are consistent with and reasonably required to perform its duties.</p> <p>(b) The chairman of the commission, or any member of the commission designated by the chairman, is authorized to administer oaths when it is determined by the commission that testimony shall be taken or evidence received.</p> <p>(c) To the extent permitted by law, all appropriate records and papers of the commission shall be made available for public inspection during ordinary office hours.</p> <p>(d) Upon request of the chairman of the commission, or any member or employee of the commission designated by the chairman thereof for the purpose, the head of any Federal department or agency is authorized (1) to furnish to the commission such information as may be necessary for carrying out its functions and as may be available to or procurable by such department or agency, and (2) to detail to temporary duty with the commission on a reimbursable basis such personnel within his administrative jurisdiction as it may need or believe to be useful for carrying out its functions, each such detail to be without loss of seniority, pay, or other employee benefits.</p> <p>(e) The chairman of the commission shall, in accordance with the general policies of the commission, make arrangements for the commission to be represented by a duly authorized representative at any public hearing thereon, and to be represented by a duly authorized representative at any public hearing thereon, and to be represented by a duly authorized representative at any public hearing thereon, and to be represented by a duly authorized representative at any public hearing thereon.</p>		

PROPOSED PACIFIC SOUTHWEST LEGISLATION—COMPARISON OF FEATURES—Continued

Feature: Regional Organization

Pacific Southwest Water Plan	S.2760 (Kuchel)	S.1658 (Goldberg Amendment)
<p>Sec. 205. (a) The commission shall determine the proportionate share of its expense which shall be borne by the Federal Government and each of the States. The commission shall prepare a budget annually and transmit it to the President and the States. Estimates of proposed appropriations from the Federal Government shall be included in the budget estimates submitted by the Secretary of the Interior under the Budgeting and Accounting Act of 1921, as amended, and may include an amount for advance to a commission against State appropriations for which delay is anticipated by reason of later legislative sessions. All sums appropriated to or otherwise received by a commission shall be credited to the commission's account in the Treasury of the United States.</p> <p>(b) The commission may accept for any of its purposes and functions appropriations, donations, and grants of money, equipment, supplies, materials, and services from any State or the United States or any subdivision or agency thereof, or intergovernmental agency, and may receive, utilize, and dispose of the same.</p> <p>(c) The commission shall keep accurate accounts of all receipts and disbursements. The accounts shall be audited at least annually in accordance with generally accepted auditing standards by independent certified or licensed public accountants, certified or licensed by a regulatory authority of a State, and the report of the audit shall be included in and become a part of the annual report of the commission.</p> <p>(d) The accounts of the commission shall be open at all reasonable times for inspection by representatives of the jurisdictions and agencies which make appropriations, donations, or grants to the commission.</p>		

continuity of the work. While the Columbia Basin Interagency Commission has made serious efforts to resolve planning controversies and to secure agreement on broad approaches to water development, its success has been limited. The major contribution of both the Columbia Basin Interagency Commission and the Pacific Southwest Interagency Commission is probably in the work of its subcommittees which have provided a means of communication at the technical level between the various agencies involved in water resources work.

Study Commissions

In other parts of the country, Congress has in recent years authorized the establishment of individual basinwide study commissions to develop comprehensive water resources plans. Membership has consisted of the regional representatives of federal agencies working on water resources development in the area and representatives of state governments. A prime purpose of these study commissions has been to stimulate state and local interest and participation in water resources planning. Even with this stimulation, the major part of the work and the costs have been carried by the federal government. The study commissions have been criticized for being too short lived and subject to the tendency

to produce a plan which is placed on the shelf because the commission's life terminates with completion of the plan.

S. 1111

A further step was taken in the last session of Congress when the administration proposed S. 1111. This bill provided for a stronger system of federal-state basinwide planning commissions. Under S. 1111 coordination of the federal agencies who are members of the commission would be facilitated by having the President appoint the chairman of the commission who has the additional responsibility of coordinating the positions of the various federal agencies. The vice chairman is to be a representative of the states and has the specific responsibility to coordinate the positions of the states. S. 1111 would authorize appropriation of federal funds to support the work of the commissions and provides for cost sharing with the states who are members of the commission. The bill provides for the members of the commission to seek consensus but when this is not possible the chairman and vice chairman are to set forth the positions of the federal and state members in the record. The duties of the commission are the coordination of federal, state and local planning for water and related land resources; to prepare and keep up to date a comprehensive, coordinated plan for federal, state and local development of water and land related resources; to recommend long-range schedules for the collection and analysis of basic data; and to foster and undertake studies of water and land related resources. The bill further provides for grant of federal funds to the states to permit them to participate in the comprehensive planning effort.

Pacific Southwest Water Plan

The Pacific Southwest Regional Water Commission contained in the draft bill of the Department of Interior to authorize the Pacific Southwest Water Plan is adapted directly from the provisions of S. 1111. No effort was made to adapt the commission to the special problems of the region. The draft limits the area of responsibility of the commission to the Lower Colorado River Basin and southern California. The federal members of the commission and the powers of the chairman and vice chairman are similar to S. 1111. The commission would have a broad responsibility to make studies and investigations needed to carry out the Pacific Southwest Water Plan. To do this the commission could hire staff, hold hearings, use the services of personnel of any state of the United States, prepare reports to be submitted to the President, etc.

Although these broad planning and investigation powers are granted the commission, the Secretary of Interior, in other sections of the bill, is directed to construct the initial features of the Pacific Southwest Water Plan, to complete feasibility reports on export projects in the north coastal area of California as well as facilities to convey such water, and to carry out further priority planning of projects to be added to the initial plan without any reference to the regional commission. Only with respect to a continuing review of the hydrology of the Colorado River, groundwater pumping, and projections of future water supply and demand in the region is the secretary directed to cooperate with the commission. Thus, the bill carefully refrains from establishing the commission in a role that would limit the authority of the secretary.

S. 2760 and S. 1658

S. 2760 generally follows the same commission concept contained in the draft bill by the Department of Interior, except that the area covered by the commission is the entire Colorado River Basin and any states from which water may be imported into the Colorado River Basin. S. 1658 includes the Lower Colorado River Basin states plus such additional states the President may find are effected. Other variations occurring between the three drafts can be determined from the table on page 130 which compares the language of the three bills.

Other Approaches to a Regional Commission

The University of California in its report entitled "Western Regional Planning of Water Resources" added another possibility by providing data on the interstate compact approach exemplified by the Delaware River Basin Commission. The Delaware River Basin Commission is a recently organized commission, based on an interstate compact, which has broad authority to gather data, plan, construct and operate projects and even exercise what might be considered as limited regulatory authority over local developments.

To date, only the planning commissions under federal statutes or the interstate compact commissions have shown much capacity for joint federal-state handling of water resources problems. The commissions established by federal statute are federal entities, existing under federal law, and therefore, place the government in the dominant, if not controlling position. The interstate compact organizations give the states more stature, and could provide the states with a role more nearly equal to the federal government. Unfortunately, the compacts require much time and patience to develop, are difficult to negotiate, and have little chance of being accepted by Congress where the federal interest is paramount. The compact also has little chance of being successful unless the work to be accomplished under it is reasonably well determined. Therefore, in the west the compact approach in particular faces formidable hurdles.

The disagreement on the best methods to provide additional water in the arid west means there is no clear project approach on which to construct any type of regional organization or to outline its powers, functions, and membership. This suggests that it is virtually impossible to formulate a concept of a long-term regional organization at this time. In fact, there is need for an interim regional organization to point the way toward long-term development and the type of organization that will be needed for a long-term development.

The proposals for regional organizations to date have resolved certain problems by arbitrarily including or excluding certain areas or leaving the problem to the discretion of the President. S. 2760 illustrates the problem of what states to include in the commission. It states that the commission shall include a member from each state from which water will be imported into the Colorado River Basin under the plan for a transmountain division which the Secretary is directed to prepare during the next three years. But the Secretary is also directed to prepare the plan for the transmountain division in consultation with the commission.

In general, the attitude seems to be developing in California and elsewhere that a prime function of the regional planning commission is to identify possible sources of water supply and to evaluate the costs and practicability of securing water from such sources. After this is done, a specific plan can be prepared for securing water from the best source. If this is to be the approach, it is logical to start with a regional planning commission that is broad in its areal coverage and representation. This would include all states along the Rocky Mountains and to the west. In view of the almost impossible task of developing an interstate compact among these 11 states and in view the early need to begin studies to secure new sources of water, the only approach left is federal legislation to set up a regional planning commission. There are other advantages or reasons in support of such an approach. Among these are:

1. The federal government, through the Department of Interior, the Corps of Engineers and other federal agencies will almost certainly carry the main burden of the studies and investigation, both because these agencies want to do the work and because in many instances they are the only agencies organized and staffed to do the work. It is therefore reasonable for the federal government to assume a major role in the commission.

2. A regional planning commission can be established under federal law with a termination date of about five years after which the commission would report to Congress and the states involved on the best solutions to the problem and even recommend a long-term organization, whether an interstate compact or otherwise, based on the greater knowledge that will then be available. If the commission has not solved the problems before its life terminates, some other approach can then be tried.

3. Because the regional planning commission should start from a broad approach and narrow down the alternatives, it is logical for the initial commission to be broadly represented and to include all states with a possible interest. As the nature of the solution to the problem becomes more apparent, some states may find that they are no longer interested and may wish to be excluded from the long-term regional commission established at the end of five years.

4. An interstate compact is most useful where bonding capacity or construction and operation of projects is involved. If it is eventually determined that only regional planning is needed, an interstate compact may then clearly become unnecessary. If, however, difficult questions of water rights or guarantees to areas of origin arise, the interstate compact may become the only vehicle with adequate legal powers to serve such purposes.

Duties of a Regional Commission

From the above discussion, it appears that a two-step approach to a regional organization may be the most timely and logical as well as perhaps the only practical approach. If this is the case, then what might be the duties of such a commission? Several duties can be suggested at the outset. Among these are:

1. Comprehensive evaluation, on both an economic and technical basis, of the feasibility in the short and long run of saline conversion,

reclamation of waste water, evaporation control, phreatophyte control and similar developments or technological improvements. Not only do these alternatives to imported water need to be evaluated technically and economically but conclusions need to be drawn on the roles they should play in meeting future water needs. The conclusions drawn by the commission should guide any planning for importation of water through surface delivery projects.

2. Establishing, consistent with applicable laws, broad objectives and guides for the investigations to be made. The language establishing the commission should make it clear that to the greatest extent possible the federal government should also follow the planning objectives and guides of the commission. Even when a federal agency cannot follow the objectives and guides, it nevertheless should evaluate them in its work as an alternative. This principle has been followed in the federal-state planning work on the delta peripheral canal and has produced agreement on a plan even though all agencies do not fully support all aspects of the plan. It is doubtful that any agreement would have occurred without this approach and its success in the delta warrants its trial on a broader basis.

3. Requesting and stimulating the appropriate federal agencies, and units of state and local government to undertake or to cooperate in specific planning tasks based on the commission's objectives and guides. Essentially this would result in assignment of important work among the various state, federal and local agencies most directly interested and capable of doing the work on a basis designed to produce an integrated plan. This would assure that all important work is covered without duplication. A request from the regional commission to an agency to do certain work would be based on the consensus of the commission, would be made without powers of enforcing compliance, and would rest on the validity and soundness of the commission's conclusions. The request would, of course, be a major justification for the appropriation of funds to that agency to pay for the work.

4. Encouraging cooperation between various federal, state and local agencies involved in a given task to work jointly on its solution. Such cooperation would build on the successful experience of cooperation between the Department of Water Resources and the federal government in planning and constructing the San Luis Project, in planning the peripheral canal in the Sacramento and San Joaquin Delta and in the planning work now beginning in the north coastal area of California. Examples of successful cooperation exist in other states which might be cited. In general, most units of government and most people are more cooperative and are more persuaded by the results of an investigation if they participate in it. In addition, the results are often more practical and susceptible of implementation when all interests participate. The application of this principle should be given special attention in studies of future import requirements and availability of water for export. The principle will also permit a flexible approach in which those states with established water resources organizations can participate in the planning. This will tend to overcome the difficulties posed by the relatively different levels of development of water resources investigation staffs among the western states.

Commission Advisory Committees

Another problem warrants consideration. It has been suggested that the representative of each state be assisted by an advisory committee. This idea appears to have substantial merit both because of the great importance of work involved to the individual states and because of the difficulties of developing a state position without some form of machinery for such a purpose. It, therefore, seems desirable that the federal legislation establishing any regional commission should clearly state that the individual states can legislate on the selection of their representatives and can establish an advisory committee which could appropriately consist of several legislators, representatives from water using agencies, fish and wildlife interests, and others.

Summary

The committee recommends the use of a federal statute to establish a regional planning commission composed of representatives of all 11 states west of the Rocky Mountains. The commission would be given approximately five years to evaluate all alternative methods of supplying water to the arid west, establishing objectives and guides to plan for a water supply and then requesting the most appropriate federal, state or local agency to undertake each planning task by itself or in cooperation with other interested agencies. The result would be to utilize all available talent to produce a coordinated, comprehensive plan in which all interested parties would have participated without duplication of effort. Where a given agency cannot concur in an objective or guide established by the commission, the agency should still study it as an alternative. At the end of the term of the commission, the commission should recommend the most appropriate long-term organization, whether interstate compact or other means, to carry on the work in the light of the greater knowledge of feasible solutions and means of executing them available at that time.

6. THE ROLE OF THE LEGISLATURE IN REGIONAL DEVELOPMENT

During the past several years the California Legislature has become increasingly aware that when the State of California is faced with participation in such far-reaching proposals as the Pacific Southwest Water Plan, the Legislature of the State of California must play an important role in the formulation of state policy and must approve any authorizations of state participation in a regional planning proposal.

In its letter of transmittal to the Speaker of the Assembly accompanying its report on the original Pacific Southwest Water Plan, this committee stated, "*It is the conclusion of this committee that there should be no state acceptance of the proposed plan or commitment to alter the State Water Facilities without the express approval of this Legislature.*" The state's comments on the first Udall Plan were made pursuant to the Federal Flood Control Act of 1944. Thus, although the original Udall Plan was subjected to the scrutiny of water users, interested parties, and the Legislature, the Goldberg Amendment was negotiated in secret and was not subjected to the discussions or understanding which are essential for the adequate consideration of such a far-reaching proposal.

Senator James A. Cobey, Chairman of the Senate Factfinding Committee on Water Resources, expressed the view at the joint hearing in August 1964 that:

We were disappointed then [fall of 1963]—and we have been disappointed since then—that our own state executive branch has not seen fit to consult more fully with its legislative branch . . . before formulating its recommendations to the federal government in this field.⁴²

Too often the only consultation between the Legislature and the Resources Agency has been at the specific request of legislative committees.

This committee firmly reiterates its previous statement that there should be no state acceptance of any plan for solution of Pacific Southwest water problems *without the express approval of this Legislature*. We regret that the Department of Water Resources ignored this explicit request and secretly committed itself to support the Goldberg Amendment to S. 1658 without such approval or even consultation with the Legislature.

This committee's report on the original Pacific Southwest Water Plan was the first statement by a legislative committee on a proposed federal project in California. It was explained to the committee by the Administrator of the Resources Agency that several hundred such projects have been commented on by the State of California in the last twenty years. Although many of these projects could be considered to be minor ones and involve local areas of the state, many of these projects have been significant water resource developments in California.

Under federal authorizing legislation, the Governors of the several states are requested to provide comments to the Secretary of the Interior or the appropriate federal agency prior to submission of said projects to the Congress. Under existing California statutes there is no requirement that views of the Legislature or other interested persons within the state be solicited in the preparation of the state's Official Comments.

We recommend that legislation be enacted to provide a statutory requirement that all federal projects upon which the Governor of California is requested to comment be submitted to the Legislature so that both houses may comment on these projects when appropriate. We further recommend that such legislation require that any comments by the Legislature on federal projects be submitted to the federal agency involved by the Governor together with the Governor's Official Comments.

Although such proposed legislation will not cover such developments as the secret Goldberg Amendment negotiations, it will provide a full opportunity for legislative hearings on other major water resource projects affecting California. A draft of a committee bill is found in the appendix of this report.

In addition, participation in any regional water organization by the state should be only upon specific authorization of the Legislature and any representatives appointed by the Governor should be subject to confirmation by the State Senate.

⁴² Hearing, *Transcript*, August 13, 1964, at 3.

Chapter VI

SUMMARY OF RECOMMENDATIONS

A number of recommendations regarding state water policy has been presented in this report. The following is a brief summary of the major recommendations made:

A. REGARDING A PROPOSED REGIONAL PLAN OF DEVELOPMENT

1. Any regional plan must permanently protect California's continued use of 4.4 million acre-feet from the Colorado River. A priority limited for 25 years must be rejected as not in the best interests of California. Construction of the Central Arizona Project must be contingent upon such a priority.

2. An immediate and comprehensive study of all possible alternative supplemental sources of water supply for Colorado River users must be undertaken. Sources in all eleven states, including the Pacific Northwest, should be considered. The objective of the study should be to develop programs to insure a dependable supply of water to Colorado River users in both Upper and Lower basins until at least 2030. Detailed studies should be made of various possible import projects.

The study should place the entire Pacific Southwest water situation in perspective, provide the objectives of a sound regional plan and, then, develop a workable plan to meet those objectives.

3. The basic elements of the type of "physical and economic guarantee" to areas of origin provided by the Burns-Porter Act should be adopted to interstate regional water planning. Provisions approximating the degree of area of origin protection found in the State Water Project must be formulated before the committee can recommend adop-

tion of a regional plan. Detailed studies of potential areas of origin, including the extent of the economic commitment which will be necessary to provide such protection, must be undertaken.

4. A comprehensive water supply inventory of the Colorado River must be initiated immediately to provide reliable estimates of the water supply of the river. It is essential that all levels of government and all affected agencies utilize the same water supply data in regional planning.

5. Legislation similar to S. 1275 of the 88th Congress should be enacted to clarify the relationship of the federal government and the state with regard to water rights prior to the adoption of a regional plan.

6. Any regional plan adopted must include maximum salvage programs as part of the immediate construction phase. The federal government should make an appropriate financial commitment to such activity. Federal, state and local officials should work out an effective formula for allocating water salvaged.

7. Research in evaporation control should be accelerated in order to maximize possible water savings from control of reservoir losses from evaporation now amounting to almost 2 million acre-feet a year.

8. Accelerated consideration and study, not mere lip service as in the Pacific Southwest Water Plan, must be given by the federal government to sea water conversion as a possible supplemental source of water supply for the Pacific Southwest.

9. The committee recommends the use of a federal statute to establish a regional planning commission composed of representatives of all eleven states west of the Rocky Mountains. The commission would be given approximately five years to evaluate all alternative methods of supplying water to the arid west, establishing objectives and guides to plan for a water supply and then requesting the most appropriate federal, state or local agency to undertake each planning task by itself or in cooperation with other interested agencies. The result would be to utilize all available talent to produce a coordinated, comprehensive plan in which all interested parties would have participated without duplication of effort. Where a given agency cannot concur in an objective or guide established by the commission, the agency should still study it as an alternative. At the end of the term of the commission, the commission should recommend the most appropriate long-term organization, whether interstate compact or other means, to carry on the work in the light of the greater knowledge of feasible solutions and means of executing them available at that time.

Federal legislation establishing any regional commission should clearly state that the individual states can legislate on the selection of their representatives and can establish an advisory committee with which major policies must be cleared. Such an advisory committee could appropriately consist of several legislators, representatives from water using agencies, fish and wildlife interests, and others.

**B. REGARDING THE ROLE OF THE LEGISLATURE
IN REGIONAL DEVELOPMENT**

1. There should be no state acceptance of any regional plan for solution of Pacific Southwest Water problems without the express approval of the Legislature.

2. Legislation should be enacted to require that all federal projects upon which the Governor is requested to comment be submitted to the Legislature so that both houses may comment on these projects when appropriate. The legislation should require that any comments of the Legislature be submitted to the federal government together with the Governor's Official Comments.

3. Participation in any regional water organization by the state should be only upon specific authorization of the Legislature and any representatives appointed by the Governor should be subject to confirmation by the State Senate.

APPENDIX

Transcripts of hearings held by the Assembly Interim Committee on Water pursuant to Assembly Concurrent Resolution 1 on October 31, 1963, July 23, 1964 and August 13-14, 1964 were mimeographed and distributed as hearings were held. The appendix to this report contains only material which was not included in the transcripts and has value for reference purposes.

Appendix 1

SUPREME COURT OF THE UNITED STATES

No. 8, ORIGINAL

STATE OF ARIZONA, PLAINTIFF
v.
STATE OF CALIFORNIA, ET AL., DEFENDANTS

DECREE.—MARCH 9, 1964.

It is ORDERED, ADJUDGED AND DECREED that

I. For purposes of this decree:

(A) "Consumptive use" means diversions from the stream less such return flow thereto as is available for consumptive use in the United States or in satisfaction of the Mexican treaty obligation;

(B) "Mainstream" means the mainstream of the Colorado River downstream from Lee Ferry within the United States, including the reservoirs thereon;

(C) Consumptive use from the mainstream within a state shall include all consumptive uses of water of the mainstream, including water drawn from the mainstream by underground pumping, and including but not limited to, consumptive uses made by persons, by agencies of that state, and by the United States for the benefit of Indian reservations and other federal establishments within the state;

(D) "Regulatory structures controlled by the United States" refers to Hoover Dam, Davis Dam, Parker Dam, Headgate Rock Dam, Palo Verde Dam, Imperial Dam, Laguna Dam and all other dams and works on the mainstream now or hereafter controlled or operated by the United States which regulate the flow of water in the mainstream or the diversion of water from the mainstream;

(E) "Water controlled by the United States" refers to the water in Lake Mead, Lake Mohave, Lake Havasu and all other water in the mainstream below Lee Ferry and within the United States;

(F) "Tributaries" means all stream systems the waters of which naturally drain into the mainstream of the Colorado River below Lee Ferry;

(G) "Perfected right" means a water right acquired in accordance with state law, which right has been exercised by the actual diversion of a specific quantity of water that has been applied to a defined area of land or to definite municipal or industrial works, and in addition shall include water rights created by the reservation of mainstream water for the use of federal establishments under federal law whether or not the water has been applied to beneficial use;

(H) "Present perfected rights" means perfected rights, as here defined, existing as of June 25, 1929, the effective date of the Boulder Canyon Project Act;

(I) "Domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power;

(J) "Annual" and "Year," except where the context may otherwise require, refer to calendar years;

(K) Consumptive use of water diverted in one state for consumptive use in another state shall be treated as if diverted in the state for whose benefit it is consumed.

II. The United States, its officers, attorneys, agents and employees be and they are hereby severally enjoined:

(A) From operating regulatory structures controlled by the United States and from releasing water controlled by the United States other than in accordance with the following order of priority:

(1) For river regulation, improvement of navigation, and flood control;

(2) For irrigation and domestic uses, including the satisfaction of present perfected rights; and

(3) For power;

Provided, however, that the United States may release water in satisfaction of its obligations to the United States of Mexico under the treaty dated February 3, 1944, without regard to the priorities specified in this subdivision (A);

(B) From releasing water controlled by the United States for irrigation and domestic use in the States of Arizona, California and Nevada, except as follows:

(1) If sufficient mainstream water is available for release, as determined by the Secretary of the Interior, to satisfy 7,500,000 acre feet of annual consumptive use in the aforesaid three states, then of such 7,500,000 acre feet of consumptive use, there shall be apportioned 2,800,000 acre feet for use in Arizona, 4,400,000 acre feet for use in California, and 300,000 acre feet for use in Nevada;

(2) If sufficient mainstream water is available for release, as determined by the Secretary of the Interior, to satisfy annual consumptive use in the aforesaid states in excess of 7,500,000 acre feet, such excess consumptive use is surplus, and 50% thereof shall be apportioned for use in Arizona and 50% for use in California; provided, however, that if the United States so contracts with Nevada, then 46% of such surplus shall be apportioned for use in Arizona and 4% for use in Nevada;

(3) If insufficient mainstream water is available for release, as determined by the Secretary of the Interior, to satisfy annual consumptive use of 7,500,000 acre feet in the aforesaid three states, then the Secretary of the Interior, after providing for satisfaction of present perfected rights in the order of their priority dates without regard to state lines and after consultation with the parties to major delivery contracts and such representatives as the respective states may designate, may apportion the amount remaining available for consumptive use in such manner as is consistent with the Boulder Canyon Project Act as interpreted by the opinion of this Court herein, and with other applicable federal statutes, but in no event shall more than 4,400,000 acre feet be apportioned for use in California including all present perfected rights;

(4) Any mainstream water consumptively used within a state shall be charged to its apportionment, regardless of the purpose for which it was released;

(5) Notwithstanding the provisions of Paragraphs (1) through (4) of this subdivision (B), mainstream water shall be released or delivered to water users (including but not limited to, public and municipal corporations and other public agencies) in Arizona, California, and Nevada only pursuant to valid contracts therefor made with such users by the Secretary of the Interior, pursuant to Section 5 of the Boulder Canyon Project Act or any other applicable federal statute;

(6) If, in any one year, water apportioned for consumptive use in a state will not be consumed in that state, whether for the reason that delivery contracts for the full amount of the state's apportionment are not in effect or that users cannot apply all of such water to beneficial uses, or for any other reason, nothing in this decree shall be construed as prohibiting the Secretary of the Interior from releasing such apportioned but unused water during such year for consumptive use in the other states. No rights to the recurrent use of such water shall accrue by reason of the use thereof;

(C) From applying the provisions of Article 7 (d) of the Arizona water delivery contract dated February 9, 1944, and the provisions of Article 5 (a) of the Nevada water delivery contract dated March 30, 1942, as amended by the contract dated January 3, 1944, to reduce the

apportionment or delivery of mainstream water to users within the States of Arizona and Nevada by reason of any uses in such states from the tributaries flowing therein;

(D) From releasing water controlled by the United States for use in the States of Arizona, California, and Nevada for the benefit of any federal establishment named in this subdivision (D) except in accordance with the allocations made herein; provided, however, that such release may be made notwithstanding the provisions of Paragraph (5) of subdivision (B) of this Article; and provided further that nothing herein shall prohibit the United States from making future additional reservations of mainstream water for use in any of such States as may be authorized by law and subject to present perfected rights and rights under contracts theretofore made with water users in such State under Section 5 of the Boulder Canyon Project Act or any other applicable federal statute:

(1) The Chemehuevi Indian Reservation in annual quantities not to exceed (i) 11,340 acre feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 1,900 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of February 2, 1907;

(2) The Cocopah Indian Reservation in annual quantities not to exceed (i) 2,744 acre feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 431 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of September 27, 1917;

(3) The Yuma Indian Reservation in annual quantities not to exceed (i) 51,616 acre feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 7,743 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with a priority date of January 9, 1884;

(4) The Colorado River Indian Reservation in annual quantities not to exceed (i) 717,148 acre feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 107,588 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, with priority dates of March 3, 1865, for lands reserved by the Act of March 3, 1865 (13 Stat. 541, 559); November 22, 1873, for lands reserved by the Executive Order of said date; November 16, 1874, for lands reserved by the Executive Order of said date, except as later modified; May 15, 1876, for lands reserved by the Executive Order of said date; November 22, 1915, for lands reserved by the Executive Order of said date;

(5) The Fort Mohave Indian Reservation in annual quantities not to exceed (i) 122,648 acre feet of diversions from the mainstream or (ii) the quantity of mainstream water necessary to supply the consumptive use required for irrigation of 18,974 acres and for the satisfaction of related uses, whichever of (i) or (ii) is less, and, subject to the next succeeding proviso, with priority dates of September 18,

1890, for lands transferred by the Executive Order of said date; February 2, 1911, for lands reserved by the Executive Order of said date; provided, however, that lands conveyed to the State of California pursuant to the Swamp and Overflowed Lands Act [9 Stat. 519 (1850)] as well as any accretions thereto to which the owners of such land may be entitled, and lands patented to the Southern Pacific Railroad pursuant to the Act of July 27, 1866 (14 Stat. 292) shall not be included as irrigable acreage within the Reservation and that the above specified diversion requirement shall be reduced by 6.4 acre feet per acre of such land that is irrigable; provided that the quantities fixed in this paragraph and paragraph (4) shall be subject to appropriate adjustment by agreement or decree of this Court in the event that the boundaries of the respective reservations are finally determined;

(6) The Lake Mead National Recreation Area in annual quantities reasonably necessary to fulfill the purposes of the Recreation Area, with priority dates of March 3, 1929, for lands reserved by the Executive Order of said date (No. 5105), and April 25, 1930, for lands reserved by the Executive Order of said date (No. 5339);

(7) The Havasu Lake National Wildlife Refuge in annual quantities reasonably necessary to fulfill the purposes of the Refuge, not to exceed (i) 41,839 acre feet of water diverted from the mainstream or (ii) 37,339 acre feet of consumptive use of mainstream water, whichever of (i) or (ii) is less, with a priority date of January 22, 1941, for lands reserved by the Executive Order of said date (No. 8647), and a priority date of February 11, 1949, for land reserved by the Public Land Order of said date (No. 559);

(8) The Imperial National Wildlife Refuge in annual quantities reasonably necessary to fulfill the purposes of the Refuge not to exceed (i) 28,000 acre-feet of water diverted from the mainstream or (ii) 23,000 acre-feet of consumptive use of mainstream water, whichever of (i) or (ii) is less, with a priority date of February 14, 1941;

(9) Boulder City, Nevada, is authorized by the Act of September 2, 1958, 72 Stat. 1726, with a priority date of May 15, 1931;

Provided further, that consumptive uses from the mainstream for the benefit of the above-named federal establishments shall, except as necessary to satisfy present perfected rights in the order of their priority dates without regard to state lines, be satisfied only out of water available, as provided in subdivision (B) of this Article, to each state wherein such uses occur and subject to, in the case of each reservation, such rights as have been created prior to the establishment of such reservation by contracts executed under Section 5 of, the Boulder Canyon Project Act or any other applicable federal statute.

III. The States of Arizona, California and Nevada, Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, Metropolitan Water District of Southern California, City of Los Angeles, City of San Diego, and County of San Diego, and all other users of water from the mainstream in said states, their officers, attorneys, agents and employees, be and they are hereby severally enjoined:

(A) From interfering with the management and operation, in conformity with Article II of this decree, of regulatory structures controlled by the United States;

(B) From interfering with or purporting to authorize the interference with releases and deliveries, in conformity with Article II of this decree, of water controlled by the United States;

(C) From diverting or purporting to authorize the diversion of water from the mainstream the diversion of which has not been authorized by the United States for use in the respective states; and provided further that no party named in this Article and no other user of water in said states shall divert or purport to authorize the diversion of water from the mainstream the diversion of which has not been authorized by the United States for its particular use;

(D) From consuming or purporting to authorize the consumptive use of water from the mainstream in excess of the quantities permitted under Article II of this decree.

IV. The State of New Mexico, its officers, attorneys, agents and employees, be and they are after four years from the date of this decree hereby severally enjoined:

(A) From diverting or permitting the diversion of water from San Simon Creek, its tributaries and underground water sources for the irrigation of more than a total of 2,900 acres during any one year, and from exceeding a total consumptive use of such water, for whatever purpose, of 72,000 acre-feet during any period of 10 consecutive years; and from exceeding a total consumptive use of such water, for whatever purpose, of 8,220 acre-feet during any one year;

(B) From diverting or permitting the diversion of water from the San Francisco River, its tributaries and underground water sources for the irrigation within each of the following areas of more than the following number of acres during any one year:

Luna Area	225
Apache Creek-Aragon Area	316
Reserve Area	725
Glenwood Area	1,003

and from exceeding a total consumptive use of such water for whatever purpose, of 31,870 acre-feet during any period of 10 consecutive years; and from exceeding a total consumptive use of such water, for whatever purpose, of 4,112 acre-feet during any one year;

(C) From diverting or permitting the diversion of water from the Gila River, its tributaries (exclusive of the San Francisco River and San Simon Creek and their tributaries) and underground water sources for the irrigation within each of the following areas of more than the following number of acres during any one year:

Upper Gila Area	287
Cliff-Gila and Buckhorn-Duck Creek Area	5,314
Red Rock Area	1,456

and from exceeding a total consumptive use of such water (exclusive of uses in Virden Valley, New Mexico), for whatever purpose, of 136,620 acre-feet during any period of 10 consecutive years; and from exceeding a total consumptive use of such water (exclusive of uses in Virden Valley, New Mexico), for whatever purpose, of 15,895 acre-feet during any one year;

(D) From diverting or permitting the diversion of water from the Gila River and its underground water sources in the Virden Valley,

New Mexico, except for use on lands determined to have the right to the use of such water by the decree entered by the United States District Court for the District of Arizona on June 29, 1935, in *United States v. Gila Valley Irrigation District, et al.* (Globe Equity No. 59) (herein referred to as the Gila Decree), and except pursuant to and in accordance with the terms and provisions of the Gila Decree; provided, however, that:

(1) This decree shall not enjoin the use of underground water on any of the following lands:

or on lands or for other uses in the Virden Valley to which such use may be transferred or substituted on retirement from irrigation of any of said specifically described lands, up to a maximum total consumptive use of such water of 838.2 acre-feet per annum, unless and until such uses are adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree; and

(2) This decree shall not prohibit domestic use of water from the Gila River and its underground water sources on lands with rights confirmed by the Gila Decree, or on farmsteads located adjacent to said

lands, or in the Virden Townsite, up to a total consumptive use of 265 acre-feet per annum in addition to the uses confirmed by the Gila Decree, unless and until such use is adjudged by a court of competent jurisdiction to be an infringement or impairment of rights confirmed by the Gila Decree;

(E) Provided, however, that nothing in this Article IV shall be construed to affect rights as between individual water users in the State of New Mexico; nor shall anything in this Article be construed to affect possible superior rights of the United States asserted on behalf of National Forests, Parks, Memorials, Monuments and lands administered by the Bureau of Land Management; and provided further that in addition to the diversions authorized herein the United States has the right to divert water from the mainstream of the Gila and San Francisco Rivers in quantities reasonably necessary to fulfill the purposes of the Gila National Forest with priority dates as of the date of withdrawal for forest purposes of each area of the forest within which the water is used.

(F) Provided, further, that no diversion from a stream authorized in Articles IV (A) through (D) may be transferred to any of the other streams, nor may any use for irrigation purposes within any area on one of the streams be transferred for use for irrigation purposes to any other area on that stream.

V. The United States shall prepare and maintain, or provide for the preparation and maintenance of, and shall make available, annually and at such shorter intervals as the Secretary of the Interior shall deem necessary or advisable, for inspection by interested persons at all reasonable times and at a reasonable place or places, complete, detailed and accurate records of:

(A) Releases of water through regulatory structures controlled by the United States;

(B) Diversions of water from the mainstream, return flow of such water to the stream as is available for consumptive use in the United States or in satisfaction of the Mexican Treaty obligation, and consumptive use of such water. These quantities shall be stated separately as to each diverter from the mainstream, each point of diversion, and each of the States of Arizona, California, and Nevada;

(C) Releases of mainstream water pursuant to orders therefor but not diverted by the party ordering the same, and the quantity of such water delivered to Mexico in satisfaction of the Mexican Treaty or diverted by others in satisfaction of rights decreed herein. These quantities shall be stated separately as to each diverter from the mainstream, each point of diversion, and each of the States of Arizona, California and Nevada;

(D) Deliveries to Mexico of water in satisfaction of the obligations of Part III of the Treaty of February 3, 1944, and, separately stated, water passing to Mexico in excess of treaty requirements;

(E) Diversions of water from the mainstream of the Gila and San Francisco Rivers and the consumptive use of such water, for the benefit of the Gila National Forest.

VI. Within two years from the date of this decree, the States of Arizona, California, and Nevada shall furnish to this Court and to the

Secretary of the Interior a list of the present perfected rights, with their claimed priority dates, in waters of the mainstream within each state, respectively, in terms of consumptive use, except those relating to federal establishments. Any named party to this proceeding may present its claim of present perfected rights or its opposition to the claims of others. The Secretary of the Interior shall supply similar information, within a similar period of time, with respect to the claims of the United States to present perfected rights within each state. If the parties and the Secretary of the Interior are unable at that time to agree on the present perfected rights to the use of mainstream water in each state, and their priority dates, any party may apply to the Court for the determination of such rights by the Court.

VII. The State of New Mexico shall, within four years from the date of this decree, prepare and maintain, or provide for the preparation and maintenance of, and shall annually thereafter make available for inspection at all reasonable times and at a reasonable place or places, complete, detailed and accurate records of:

(A) The acreages of all lands in New Mexico irrigated each year from the Gila River, the San Francisco River, San Simon Creek and their tributaries and all of their underground water sources, stated by legal description and component acreages and separately as to each of the areas designated in Article IV of this decree and as to each of the three streams;

(B) Annual diversions and consumptive uses of water in New Mexico, from the Gila River, the San Francisco River and San Simon Creek and their tributaries, and all their underground water sources, stated separately as to each of the three streams.

VIII. This decree shall not affect:

(A) The relative rights *inter sese* of water users within any one of the states, except as otherwise specifically provided herein;

(B) The rights or priorities to water in any of the Lower Basin tributaries of the Colorado River in the States of Arizona, California, Nevada, New Mexico and Utah except the Gila River System;

(C) The rights or priorities, except as specific provision is made herein, of any Indian Reservation, National Forest, Park, Recreation Area, Monument or Memorial, or other lands of the United States;

(D) Any issue of interpretation of the Colorado River Compact.

IX. Any of the parties may apply at the foot of this decree for its amendment or for further relief. The Court retains jurisdiction of this suit for the purpose of any order, direction, or modification of the decree, or any supplementary decree, that may at any time be deemed proper in relation to the subject matter in controversy.

MR. JUSTICE DOUGLAS dissents.

MR. JUSTICE HARLAN and MR. JUSTICE STEWART dissent to the extent that the decree conflicts with the views expressed in the dissenting opinion of MR. JUSTICE HARLAN, 373 U. S. 546, 603.

THE CHIEF JUSTICE took no part in the consideration or decision of this case.

Appendix 2

COLORADO RIVER COMPACT

The States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, having resolved to enter into a compact under the Act of the Congress of the United States of America approved August 19, 1921 (42 Statutes at Large, page 171), and the Acts of the Legislatures of the said States, have through their Governors appointed as their Commissioners:

W. S. Norviel for the State of Arizona

W. F. McClure for the State of California

Delph E. Carpenter for the State of Colorado

J. G. Scrugham for the State of Nevada

Stephen B. Davis, Jr., for the State of New Mexico

R. E. Caldwell for the State of Utah

Frank C. Emerson for the State of Wyoming

who, after negotiations participated in by Herbert Hoover appointed by The President as the representative of the United States of America, have agreed upon the following articles:

ARTICLE I

The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River System; to establish the relative importance of different bene-

ficial uses of water; to promote interstate comity; to remove causes of present and future controversies; and to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters, and the protection of life and property from floods. To these ends the Colorado River Basin is divided into two Basins, and an apportionment of the use of part of the water of the Colorado River System is made to each of them with the provision that further equitable apportionments may be made.

ARTICLE II

As used in this compact—

(a) The term "Colorado River System" means that portion of the Colorado River and its tributaries within the United States of America.

(b) The term "Colorado River Basin" means all of the drainage area of the Colorado River System and all other territory within the United States of America to which the waters of the Colorado River System shall be beneficially applied.

(c) The term "States of the Upper Division" means the States of Colorado, New Mexico, Utah, and Wyoming.

(d) The term "States of the Lower Division" means the States of Arizona, California, and Nevada.

(e) The term "Lee Ferry" means a point in the main stream of the Colorado River one mile below the mouth of the Paria River.

(f) The term "Upper Basin" means those parts of the States of Arizona, Colorado, New Mexico, Utah, and Wyoming within and from which waters naturally drain into the Colorado River System above Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System above Lee Ferry.

(g) The term "Lower Basin" means those parts of the States of Arizona, California, Nevada, New Mexico, and Utah within and from which waters naturally drain into the Colorado River System below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River System which are now or shall hereafter be beneficially served by waters diverted from the System below Lee Ferry.

(h) The term "domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power.

ARTICLE III

(a) There is hereby apportioned from the Colorado River System in perpetuity to the Upper Basin and to the Lower Basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a), the Lower Basin is hereby given the right to increase its beneficial consumptive use of such waters by one million acre-feet per annum.

(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River System, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the Upper Basin and the Lower Basin, and whenever necessary the States of the Upper Division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the Upper Division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of ten consecutive years reckoned in continuing progressive series beginning with the first day of October next succeeding the ratification of this compact.

(e) The States of the Upper Division shall not withhold water, and the States of the Lower Division shall not require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses.

(f) Further equitable apportionment of the beneficial uses of the waters of the Colorado River System unapportioned by paragraphs (a), (b), and (c) may be made in the manner provided in paragraph (g) at any time after October first, 1963, if and when either Basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b).

(g) In the event of a desire for a further apportionment as provided in paragraph (f) any two signatory States, acting through their Governors, may give joint notice of such desire to the Governors of the other signatory States and to The President of the United States of America, and it shall be the duty of the Governors of the signatory States and of The President of the United States of America forthwith to appoint representatives, whose duty it shall be to divide and apportion equitably between the Upper Basin and Lower Basin the beneficial use of the unapportioned water of the Colorado River System as mentioned in paragraph (f), subject to the legislative ratification of the signatory States and the Congress of the United States of America.

ARTICLE IV

(a) Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its Basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

(b) Subject to the provisions of this compact, water of the Colorado River System may be impounded and used for the generation of electrical power, but such impounding and use shall be subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

(c) The provisions of this article shall not apply to or interfere with the regulation and control by any State within its boundaries of the appropriation, use, and distribution of water.

ARTICLE V

The chief official of each signatory State charged with the administration of water rights, together with the Director of the United States Reclamation Service and the Director of the United States Geological Survey shall cooperate, ex-officio:

(a) To promote the systematic determination and coordination of the facts as to flow, appropriation, consumption, and use of water in the Colorado River Basin, and the interchange of available information in such matters.

(b) To secure the ascertainment and publication of the annual flow of the Colorado River at Lee Ferry.

(c) To perform such other duties as may be assigned by mutual consent of the signatories from time to time.

ARTICLE VI

Should any claim or controversy arise between any two or more of the signatory States: (a) with respect to the waters of the Colorado River System not covered by the terms of this compact; (b) over the meaning or performance of any of the terms of this compact; (c) as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided; (d) as to the construction or operation of works within the Colorado River Basin to be situated in two or more States, to be constructed in one State for the benefit of another State; or (e) as to the diversion of water in one State for the benefit of another State; the Governors of the States affected, upon the request of one of them, shall forthwith appoint Commissioners with power to consider and adjust such claim or controversy, subject to ratification by the Legislatures of the States so affected.

Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested States.

ARTICLE VII

Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.

ARTICLE VIII

Present perfected rights to the beneficial use of waters of the Colorado River System are unimpaired by this compact. Whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the Lower Basin, then claims of such rights, if any, by appropriators or users of water in the Lower Basin against appropriators or users of water in the Upper Basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.

All other rights to beneficial use of waters of the Colorado River System shall be satisfied solely from the water apportioned to that Basin in which they are situate.

ARTICLE IX

Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions.

ARTICLE X

This compact may be terminated at any time by the unanimous agreement of the signatory States. In the event of such termination all rights established under it shall continue unimpaired.

ARTICLE XI

This compact shall become binding and obligatory when it shall have been approved by the Legislatures of each of the signatory States and by the Congress of the United States. Notice of approval by the Legislatures shall be given by the Governor of each signatory State to the Governors of the other signatory States and the President of the United States, and The President of the United States is requested to give notice to the Governors of the signatory States of approval by the Congress of the United States.

IN WITNESS WHEREOF, the Commissioners have signed this compact in a single original, which shall be deposited in the archives of the Department of State of the United States of America and of which a duly certified copy shall be forwarded to the Governor of each of the signatory States.

DONE at the City of Santa Fe, New Mexico, this twenty-fourth day of November, A.D. One Thousand Nine Hundred and Twenty-two.

Appendix 3

BOULDER CANYON PROJECT ACT

[PUBLIC—No. 642—70TH CONGRESS]
[H. R. 5773]

AN ACT To provide for the construction of works for the protection and development of the Colorado River Basin, for the approval of the Colorado River Compact, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of controlling the floods, improving navigation and regulating the flow of the Colorado River, providing for storage and for the delivery of the stored waters thereof for reclamation of public lands and other beneficial uses exclusively within the United States, and for the generation of electrical energy as a means of making the project herein authorized a self-supporting and financially solvent undertaking, the Secretary of the Interior, subject to the terms of the Colorado River compact herein-after mentioned, is hereby authorized to construct, operate, and maintain a dam and incidental works in the main stream of the Colorado River at Black Canyon or Boulder Canyon adequate to create a storage reservoir of a capacity of not less than twenty million acre-feet of water and a main canal and appurtenant structures located entirely within the United States connecting the Laguna Dam, or other suitable diversion dam, which the Secretary of the Interior is hereby authorized

to construct if deemed necessary or advisable by him upon engineering or economic considerations, with the Imperial and Coachella Valleys in California, the expenditures for said main canal and appurtenant structures to be reimbursable, as provided in the reclamation law, and shall not be paid out of revenues derived from the sale or disposal of water power or electric energy at the dam authorized to be constructed at said Black Canyon or Boulder Canyon, or for water for potable purposes outside of the Imperial and Coachella Valleys: *Provided, however,* That no charge shall be made for water or for the use, storage, or delivery of water for irrigation or water for potable purposes in the Imperial or Coachella Valleys; also to construct and equip, operate, and maintain at or near said dam, or cause to be constructed, a complete plant and incidental structures suitable for the fullest economic development of electrical energy from the water discharged from said reservoir; and to acquire by proceedings in eminent domain, or otherwise, all lands, rights-of-way, and other property necessary for said purposes.

SEC. 2. (a) There is hereby established a special fund, to be known as the "Colorado River Dam fund" (hereinafter referred to as the "fund"), and to be available, as hereafter provided, only for carrying out the provisions of this Act. All revenues received in carrying out the provisions of this Act shall be paid into and expenditures shall be made out of the fund, under the direction of the Secretary of the Interior.

(b) The Secretary of the Treasury is authorized to advance to the fund, from time to time and within the appropriations therefor, such amounts as the Secretary of the Interior deems necessary for carrying out the provisions of this Act, except that the aggregate amount of such advances shall not exceed the sum \$165,000,000. Of this amount the sum of \$25,000,000 shall be allocated to flood control and shall be repaid to the United States out of 62½ per centum of revenues, if any, in excess of the amount necessary to meet periodical payments during the period of amortization, as provided in section 4 of this Act. If said sum of \$25,000,000 is not repaid in full during the period of amortization, then 62½ per centum of all net revenues shall be applied to payment of the remainder. Interest at the rate of 4 per centum per annum accruing during the year upon the amounts so advanced and remaining unpaid shall be paid annually out of the fund, except as herein otherwise provided.

(c) Moneys in the fund advanced under subdivision (b) shall be available only for expenditures for construction and the payment of interest, during construction, upon the amounts so advanced. No expenditures out of the fund shall be made for operation and maintenance except from appropriations therefor.

(d) The Secretary of the Treasury shall charge the fund as of June 30 in each year with such amount as may be necessary for the payment of interest on advances made under subdivision (b) at the rate of 4 per centum per annum accrued during the year upon the amounts so advanced and remaining unpaid, except that if the fund is insufficient to meet the payment of interest the Secretary of the Treasury may, in his discretion, defer any part of such payment, and the amount so deferred shall bear interest at the rate of 4 per centum per annum until paid.

(e) The Secretary of the Interior shall certify to the Secretary of the Treasury, at the close of each fiscal year, the amount of money in the fund in excess of the amount necessary for construction, operation, and maintenance, and payment of interest. Upon receipt of each such certificate the Secretary of the Treasury is authorized and directed to charge the fund with the amount so certified as repayment of the advances made under subdivision (b), which amount shall be covered into the Treasury to the credit of miscellaneous receipts.

SEC. 3. There is hereby authorized to be appropriated from time to time, out of any money in the Treasury not otherwise appropriated, such sums of money as may be necessary to carry out the purposes of this Act, not exceeding in the aggregate \$165,000,000.

SEC. 4. (a) This Act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this Act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 13 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within six months from the date of the passage of this Act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions, save that of such six-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this Act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this Act and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin States by paragraph (a) of Article III of the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

The States of Arizona, California, and Nevada are authorized to enter into an agreement which shall provide (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 2,800,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) that the State of Arizona may annually use one-half of the

excess or surplus waters unapportioned by the Colorado River compact, and (3) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (4) that the waters of the Gila River and its tributaries, except return flow after the same enters the Colorado River, shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin, and (5) that the State of California shall and will further mutually agree with the States of Arizona and Nevada that none of said three States shall withhold water and none shall require the delivery of water, which cannot reasonably be applied to domestic and agricultural uses, and (6) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact, and (7) said agreement to take effect upon the ratification of the Colorado River compact by Arizona, California, and Nevada.

(b) Before any money is appropriated for the construction of said dam or power plant, or any construction work done or contracted for, the Secretary of the Interior shall make provision for revenues by contract, in accordance with the provisions of this Act, adequate in his judgment to insure payment of all expenses of operation and maintenance of said works incurred by the United States and the repayment, within fifty years from the date of the completion of said works, of all amounts advanced to the fund under subdivision (b) of section 2 for such works, together with interest thereon made reimbursable under this Act.

Before any money is appropriated for the construction of said main canal and appurtenant structures to connect the Laguna Dam with the Imperial and Coachella Valleys in California, or any construction work is done upon said canal or contracted for, the Secretary of the Interior shall make provision for revenues, by contract or otherwise, adequate in his judgment to insure payment of all expenses of construction, operation, and maintenance of said main canal and appurtenant structures in the manner provided in the reclamation law.

If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract, or contracts, executed under this Act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona $18\frac{3}{4}$ per centum of such excess revenues and to the State of Nevada $18\frac{3}{4}$ per centum of such excess revenues.

SEC. 5. That the Secretary of the Interior is hereby authorized, under such general regulations as he may prescribe, to contract for the storage of water in said reservoir and for the delivery thereof at such points on the river and on said canal as may be agreed upon, for irri-

gation and domestic uses, and generation of electrical energy and delivery at the switchboard to States, municipal corporations, political subdivisions, and private corporations of electrical energy generated at said dam, upon charges that will provide revenue which, in addition to other revenue accruing under the reclamation law and under this Act, will in his judgment cover all expenses of operation and maintenance incurred by the United States on account of works constructed under this Act and the payments to the United States under subdivision (b) of section 4. Contracts respecting water for irrigation and domestic uses shall be for permanent service and shall conform to paragraph (a) of section 4 of this Act. No person shall have or be entitled to have the use for any purpose of the water stored as aforesaid except by contract made as herein stated.

After the repayments to the United States of all money advanced with interest, charges shall be on such basis and the revenues derived therefrom shall be kept in a separate fund to be expended within the Colorado River Basin as may hereafter be prescribed by the Congress.

General and uniform regulations shall be prescribed by the said Secretary for the awarding of contracts for the sale and delivery of electrical energy, and for renewals under subdivision (b) of this section, and in making such contracts the following shall govern:

(a) No contract for electrical energy or for generation of electrical energy shall be of longer duration than fifty years from the date at which such energy is ready for delivery.

Contracts made pursuant to subdivision (a) of this section shall be made with a view to obtaining reasonable returns and shall contain provisions whereby at the end of fifteen years from the date of their execution and every ten years thereafter, there shall be readjustment of the contract, upon the demand of either party thereto, either upward or downward as to price, as the Secretary of the Interior may find to be justified by competitive conditions at distributing points or competitive centers, and with provisions under which disputes or disagreements as to interpretation or performance of such contract shall be determined either by arbitration or court proceedings, the Secretary of the Interior being authorized to act for the United States in such readjustments or proceedings.

(b) The holder of any contract for electrical energy not in default thereunder shall be entitled to a renewal thereof upon such terms and conditions as may be authorized or required under the then existing laws and regulations, unless the property of such holder dependent for its usefulness on a continuation of the contract be purchased or acquired and such holder be compensated for damages to its property, used and useful in the transmission and distribution of such electrical energy and not taken, resulting from the termination of the supply.

(c) Contracts for the use of water and necessary privileges for the generation and distribution of hydroelectric energy or for the sale and delivery of electrical energy shall be made with responsible applicants therefor who will pay the price fixed by the said Secretary with a view to meeting the revenue requirements herein provided for. In case of conflicting applications, if any, such conflicts shall be resolved by the said Secretary, after hearing, with due regard to the public

interest, and in conformity with the policy expressed in the Federal Water Power Act as to conflicting applications for permits and licenses, except that preference to applicants for the use of water and appurtenant works and privileges necessary for the generation and distribution of hydroelectric energy, or for delivery at the switchboard of a hydroelectric plant, shall be given, first, to a State for the generation or purchase of electric energy for use in the State, and the States of Arizona, California, and Nevada shall be given equal opportunity as such applicants.

The rights covered by such preference shall be contracted for by such State within six months after notice by the Secretary of the Interior and to be paid for on the same terms and conditions as may be provided in other similar contracts made by said Secretary: *Provided, however*, That no application of a State or a political subdivision for an allocation of water for power purposes or of electrical energy shall be denied or another application in conflict therewith be granted on the ground that the bond issue of such State or political subdivision, necessary to enable the applicant to utilize such water and appurtenant works and privileges necessary for the generation and distribution of hydroelectric energy or the electrical energy applied for, has not been authorized or marketed, until after a reasonable time, to be determined by the said Secretary, has been given to such applicant to have such bond issue authorized and marketed.

(d) Any agency receiving a contract for electrical energy equivalent to one hundred thousand firm horsepower, or more, may, when deemed feasible by the said Secretary, from engineering and economic considerations and under general regulations prescribed by him, be required to permit any other agency having contracts hereunder for less than the equivalent of twenty-five thousand firm horsepower, upon application to the Secretary of the Interior made within sixty days from the execution of the contract of the agency the use of whose transmission line is applied for, to participate in the benefits and use of any main transmission line constructed or to be constructed by the former for carrying such energy (not exceeding, however, one-fourth the capacity of such line), upon payment by such other agencies of a reasonable share of the cost of construction, operation, and maintenance thereof.

The use is hereby authorized of such public and reserved lands of the United States as may be necessary or convenient for the construction, operation, and maintenance of main transmission lines to transmit said electrical energy.

SEC. 6. That the dam and reservoir provided for by section 1 hereof shall be used: First, for river regulation, improvement of navigation, and flood control; second, for irrigation and domestic uses and satisfaction of present perfected rights in pursuance of Article VIII of said Colorado River compact; and third, for power. The title to said dam, reservoir, plant, and incidental works shall forever remain in the United States, and the United States shall, until otherwise provided by Congress, control, manage, and operate the same, except as herein otherwise provided: *Provided, however*, That the Secretary of the Interior may, in his discretion, enter into contracts of lease of a unit or units of any Government-built plant, with right to generate

electrical energy, or, alternatively, to enter into contracts of lease for the use of water for the generation of electrical energy as herein provided, in either of which events the provisions of section 5 of this Act relating to revenue, term, renewals, determination of conflicting applications, and joint use of transmission lines under contracts for the sale of electrical energy, shall apply.

The Secretary of the Interior shall prescribe and enforce rules and regulations conforming with the requirements of the Federal Water Power Act, so far as applicable, respecting maintenance of works in condition of repair adequate for their efficient operation, maintenance of a system of accounting, control of rates and service in the absence of State regulation or interstate agreement, valuation for rate-making purposes, transfers of contracts, contracts extending beyond the lease period, expropriation of excessive profits, recapture and/or emergency use by the United States of property of lessees, and penalties for enforcing regulations made under this Act of penalizing failure to comply with such regulations or with the provisions of this Act. He shall also conform with other provisions of the Federal Water Power Act and of the rules and regulations of the Federal Power Commission, which have been devised or which may be hereafter devised, for the protection of the investor and consumer.

The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal Water Power Act upon or affecting the Colorado River or any of its tributaries, except the Gila River, in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this Act shall become effective as provided in section 4 herein.

SEC. 7. That the Secretary of the Interior may, in his discretion, when repayments to the United States of all money advanced, with interest, reimbursable hereunder, shall have been made, transfer the title to said canal and appurtenant structures, except the Laguna Dam and the main canal and appurtenant structures down to and including Syphon Drop, to the districts or other agencies of the United States having a beneficial interest therein in proportion to their respective capital investments under such form of organization as may be acceptable to him. The said districts or other agencies shall have the privilege at any time of utilizing by contract or otherwise such power possibilities as may exist upon said canal, in proportion to their respective contributions or obligations toward the capital cost of said canal and appurtenant structures from and including the diversion works to the point where each respective power plant may be located. The net proceeds from any power development on said canal shall be paid into the fund and credited to said districts or other agencies on their said contracts, in proportion to their rights to develop power, until the districts or other agencies using said canal shall have paid thereby and under any contract or otherwise an amount of money equivalent to the operation and maintenance expense and cost of construction thereof.

SEC. 8. (a) The United States, its permittees, licensees and contractees, and all users and appropriators of water stored, diverted, carried, and/or distributed by the reservoir, canals, and other works herein authorized, shall observe and be subject to and controlled by

said Colorado River compact in the construction, management, and operation of said reservoir, canals, and other works and the storage, diversion, delivery, and use of water for the generation of power, irrigation, and other purposes, anything in this Act to the contrary notwithstanding, and all permits, licenses, and contracts shall so provide.

(b) Also the United States, in constructing, managing, and operating the dam, reservoir, canals, and other works herein authorized, including the appropriation, delivery, and use of water for the generation of power, irrigation, or other uses, and all users of water thus delivered and all users and appropriators of waters stored by said reservoir and/or carried by said canal, including all permittees and licensees of the United States or any of its agencies, shall observe and be subject to and controlled, anything to the contrary herein notwithstanding, by the terms of such compact, if any, between the States of Arizona, California, and Nevada, or any two thereof, for the equitable division of the benefits, including power, arising from the use of water accruing to said States, subsidiary to and consistent with said Colorado River compact, which may be negotiated and approved by said States and to which Congress shall give its consent and approval on or before January 1, 1929; and the terms of any such compact concluded between said States and approved and consented to by Congress after said date: *Provided*, That in the latter case such compact shall be subject to all contracts, if any, made by the Secretary of the Interior under section 5 hereof prior to the date of such approval and consent by Congress.

SEC. 9. All lands of the United States found by the Secretary of the Interior to be practicable of irrigation and reclamation by the irrigation works authorized herein shall be withdrawn from public entry. Thereafter, at the direction of the Secretary of the Interior, such lands shall be opened for entry, in tracts varying in size but not exceeding one hundred and sixty acres, as may be determined by the Secretary of the Interior, in accordance with the provisions of the reclamation law, and any such entryman shall pay an equitable share in accordance with the benefits received, as determined by the said Secretary, of the construction cost of said canal and appurtenant structures; said payments to be made in such installments and at such times as may be specified by the Secretary of the Interior, in accordance with the provisions of the said reclamation law, and shall constitute revenue from said project and be covered into the fund herein provided for: *Provided*, That all persons who served in the United States Army, Navy, Marine Corps, or Coast Guard during World War II, the War with Germany, the War with Spain, or in the suppression of the insurrection in the Philippines, and who have been honorably separated or discharged therefrom or placed in the Regular Army or Naval Reserve, shall have the exclusive preference right for a period of three months to enter said lands, subject, however, to the provisions of subsection (c) of section 4 of the Act of December 5, 1924 (43 Stat. 672, 702; 43 U. S. C., sec. 433); and also, so far as practicable, preference shall be given to said persons in all construction work authorized by this chapter: *Provided further*, That the

above exclusive preference rights shall apply to veteran settlers on lands watered from the Gila canal in Arizona the same as to veteran settlers on lands watered from the All-American canal in California: *Provided further*, That in the event such an entry shall be relinquished at any time prior to actual residence upon the land by the entryman for not less than one year, lands so relinquished shall not be subject to entry for a period of sixty days after the filing and notation of the relinquishment in the local land office, and after the expiration of said sixty-day period such lands shall be open to entry, subject to the preference in this section provided.¹

SEC. 10. That nothing in this Act shall be construed as modifying in any manner the existing contract, dated October 23, 1918, between the United States and the Imperial Irrigation District, providing for a connection with Laguna Dam; but the Secretary of the Interior is authorized to enter into contract or contracts with the said district or other districts, persons, or agencies for the construction, in accordance with this Act, of said canal and appurtenant structures, and also for the operation and maintenance thereof, with the consent of the other users.

SEC. 11. That the Secretary of the Interior is hereby authorized to make such studies, surveys, investigations, and do such engineering as may be necessary to determine the lands in the State of Arizona that should be embraced within the boundaries of a reclamation project, heretofore commonly known and hereafter to be known as the Parker-Gila Valley reclamation project, and to recommend the most practicable and feasible method of irrigating lands within said project, or units thereof, and the cost of the same; and the appropriation of such sums of money as may be necessary for the aforesaid purposes from time to time is hereby authorized. The Secretary shall report to Congress as soon as practicable, and not later than December 10, 1931, his findings, conclusions, and recommendations regarding such project.

SEC. 12. "Political subdivision" or "political subdivisions" as used in this Act shall be understood to include any State, irrigation or other district, municipality, or other governmental organization.

"Reclamation law" as used in this Act shall be understood to mean that certain Act of the Congress of the United States approved June 17, 1902, entitled "An Act appropriating the receipts from the sale and disposal of public land in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," and the Acts amendatory thereof and supplemental thereto.

"Maintenance" as used herein shall be deemed to include in each instance provision for keeping the works in good operating condition.

"The Federal Water Power Act," as used in this Act, shall be understood to mean that certain Act of Congress of the United States approved June 10, 1920, entitled "An Act to create a Federal Power Commission; to provide for the improvement of navigation; the development of water power; the use of the public lands in relation thereto; and to repeal section 18 of the River and Harbor Appropriation Act, approved August 8, 1917, and for other purposes."

"Domestic" whenever employed in this Act shall include water uses defined as "domestic" in said Colorado River compact.

¹ As amended by act of March 6, 1946 (60 Stat. 36).

SEC. 13. (a) The Colorado River compact signed at Santa Fe, New Mexico, November 24, 1922, pursuant to Act of Congress approved August 19, 1921, entitled "An Act to permit a compact or agreement between the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming respecting the disposition and apportionment of the waters of the Colorado River, and for other purposes," is hereby approved by the Congress of the United States, and the provisions of the first paragraph of article 11 of the said Colorado River compact, making said compact binding and obligatory when it shall have been approved by the legislature of each of the signatory States, are hereby waived, and this approval shall become effective when the State of California and at least five of the other States mentioned, shall have approved or may hereafter approve said compact as aforesaid and shall consent to such waiver, as herein provided.

(b) The rights of the United States in or to waters of the Colorado River and its tributaries howsoever claimed or acquired, as well as the rights of those claiming under the United States, shall be subject to and controlled by said Colorado River compact.

(c) Also all patents, grants, contracts, concessions, leases, permits, licenses, rights-of-way, or other privileges from the United States or under its authority, necessary or convenient for the use of waters of the Colorado River or its tributaries, or for the generation or transmission of electrical energy generated by means of the waters of said river or its tributaries, whether under this Act, the Federal Water Power Act, or otherwise, shall be upon the express condition and with the express covenant that the rights of the recipients or holders thereof to waters of the river or its tributaries, for the use of which the same are necessary, convenient, or incidental, and the use of the same shall likewise be subject to and controlled by said Colorado River compact.

(d) The conditions and covenants referred to herein shall be deemed to run with the land and the right, interest, or privilege therein and water right, and shall attach as a matter of law, whether set out or referred to in the instrument evidencing any such patent, grant, contract, concession, lease, permit, license, right-of-way, or other privilege from the United States or under its authority, or not, and shall be deemed to be for the benefit of and be available to the states of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, and the users of water therein or thereunder, by way of suit, defense, or otherwise, in any litigation respecting the waters of the Colorado River or its tributaries.

SEC. 14. This act shall be deemed a supplement to the reclamation law, which said reclamation law shall govern the construction, operation, and management of the works herein authorized, except as otherwise herein provided.

SEC. 15. The Secretary of the Interior is authorized and directed to make investigation and public reports of the feasibility of projects for irrigation, generation of electric power, and other purposes in the States of Arizona, Nevada, Colorado, New Mexico, Utah, and Wyoming for the purpose of making such information available to said states and to the Congress, and of formulating a comprehensive scheme of control and the improvement and utilization of the water of the Colo-

rado River and its tributaries. The sum of \$250,000 is hereby authorized to be appropriated from said Colorado River dam fund, created by section 2 of this act, for such purposes.

SEC. 16. In furtherance of any comprehensive plan formulated hereafter for the control, improvement, and utilization of the resources of the Colorado River system and to the end that the project authorized by this act may constitute and be administered as a unit in such control, improvement, and utilization, any commission or commissioner duly authorized under the laws of any ratifying state in that behalf shall have the right to act in an advisory capacity to and in cooperation with the Secretary of the Interior in the exercise of any authority under the provisions of sections 4, 5, and 14 of this act, and shall have at all times access to records of all federal agencies empowered to act under said sections, and shall be entitled to have copies of said records on request.

SEC. 17. Claims of the United States arising out of any contract authorized by this act shall have priority over all others, secured or unsecured.

SEC. 18. Nothing herein shall be construed as interfering with such rights as the states now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River compact or other interstate agreement.

SEC. 19. That the consent of Congress is hereby given to the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming to negotiate and enter into compacts or agreements, supplemental to and in conformity with the Colorado River compact and consistent with this act for a comprehensive plan for the development of the Colorado River and providing for the storage, diversion, and use of the waters of said river. Any such compact or agreement may provide for the construction of dams, headworks, and other diversion works or structures for flood control, reclamation, improvement of navigation, division of water, or other purposes and/or the construction of power houses or other structures for the purpose of the development of water power and the financing of the same; and for such purposes may authorize the creation of interstate commissions and/or the creation of corporations, authorities, or other instrumentalities.

(a) Such consent is given upon condition that a representative of the United States, to be appointed by the President, shall participate in the negotiations and shall make report to Congress of the proceedings and of any compact or agreement entered into.

(b) No such compact or agreement shall be binding or obligatory upon any such states unless and until it has been approved by the legislature of each of such states and by the Congress of the United States.

SEC. 20. Nothing in this act shall be construed as a denial or recognition of any rights, if any, in Mexico to the use of the waters of the Colorado River system.

SEC. 21. That the short title of this act shall be "Boulder Canyon Project Act."

Approved, December 21, 1928.

Appendix 4

CALIFORNIA LIMITATION ACT

(Act of March 4, 1929; Ch. 16, 48th Sess.; Statutes and
Amendments to the Codes, 1929, pp. 38-39)

CHAPTER 16

An act to limit the use by California of the waters of the Colorado River in compliance with the act of Congress known as the "Boulder Canyon Project Act," approved December 21, 1928, in the event the Colorado River compact is not approved by all of the states signatory thereto

(Approved by the Governor March 4, 1929; in effect August 14, 1929)

The people of the State of California do enact as follows:

SECTION 1. In the event the Colorado River compact signed at Santa Fe, New Mexico, November 24, 1922, and approved by and set out at length in that certain act entitled "An act to ratify and approve the Colorado River compact, signed at Santa Fe, New Mexico, November 24, 1922, to repeal conflicting acts and resolutions and directing that notice be given by the Governor of such ratifications and approval," approved January 10, 1929 (Statutes 1929, Chapter 1), is

not approved within six months from the date of the passage of that certain act of the Congress of the United States known as the "Boulder Canyon Project Act," approved December 21, 1928, by the legislatures of each of the seven states signatory thereto, as provided by article eleven of the said Colorado River compact, then when six of said states, including California, shall have ratified and approved said compact, and shall have consented to waive the provisions of the first paragraph of article eleven of said compact which makes the same binding and obligatory when approved by each of the states signatory thereto, and shall have approved said compact without conditions save that of such six states approval and the President by public proclamation shall have so declared, as provided by the said "Boulder Canyon Project Act," the State of California as of the date of such proclamation agrees irrevocably and unconditionally with the United States and for the benefit of the states of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming as an express covenant and in consideration of the passage of the said "Boulder Canyon Project Act" that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California including all uses under contracts made under the provisions of said "Boulder Canyon Project Act," and all water necessary for the supply of any rights which may now exist, shall not exceed four million four hundred thousand acre-feet of the waters apportioned to the lower basin states by paragraph "a" of article three of the said Colorado river compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

SEC. 2. By this act the State of California intends to comply with the conditions respecting limitation on the use of water as specified in subdivision 2 of section 4 (a) of the said "Boulder Canyon Project Act" and this act shall be so construed.

Appendix 5

88th CONGRESS, 1st Session

S. 1275

IN THE SENATE OF THE UNITED STATES

April 4, 1963

MR. KUCHEL (for himself, Mr. Jordan of Idaho, and Mr. Moss) introduced the following bill; which was read twice and referred to the Committee on Interior and Insular Affairs

A BILL

To clarify the relationship of interests of the United States and of the States in the use of waters of certain streams.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (1) the withdrawal or reservation of surveyed or unsurveyed public lands, heretofore or hereafter made, shall not affect any rights to the use of water acquired pursuant to State law either before or after the establishment of such withdrawal or reservation.

(2) The provisions of section 1 (b) of the Flood Control Act of 1944 (Act of December 22, 1944, 58 Stat. 888-889, as amended; 33 U.S.C. 701-1 (1958)) shall apply to all works hereafter constructed by

or under the authority of the United States with respect to waters arising within States lying wholly or partly west of the ninety-eighth meridian.

(3) Any right claimed by the United States to the beneficial diversion, storage, distribution, or consumptive use of water under the laws of any State shall be initiated and perfected in accordance with the procedure established by the laws of that State.

(4) No vested right to the beneficial diversion, storage or consumptive use of any waters, navigable or nonnavigable, which is recognized by the laws of the State or States in which such waters are diverted or used as compensable if taken by or under the authority of the State, shall be taken by or under authority of the United States without compensation; and where such rights are acquired otherwise than by agreement with the owner, they shall be taken by proceedings in eminent domain under the laws of the United States or of the State or States affected.

SEC. 2. Nothing in this Act shall be construed as—

(1) modifying or repealing any provision of any existing Act of Congress requiring that rights of the United States to the use of water be acquired pursuant to State law;

(2) permitting appropriations of water under State law which interfere with the provisions of international treaties of the United States; or

(3) affecting, impairing, diminishing, subordinating, or enlarging (a) the rights of the United States or any State to waters under any interstate compact or existing judicial decree, (b) any obligations of the United States to Indians or Indian tribes, or any claim or right owned or held by or for Indians or Indian tribes, (c) any water right heretofore acquired by others than the United States under Federal or State law, (d) any right to any quantity of water used for governmental purposes or programs of the United States at any time prior to the effective date of this Act; or (e) any right of the United States to use water which is hereafter lawfully initiated in the exercise of the express or necessarily implied authority of any present or future Act of Congress or State law when such right is initiated prior to the acquisition by others of any right to use water pursuant to State law.

Appendix 6

PROPOSED COMMITTEE LEGISLATION

An act to add Chapter 5 (commencing with Section 450) to Division 1 of the Water Code, relating to the powers and duties of the Governor with respect to reports from federal agencies on proposed flood control and reclamation projects.

The people of the State of California do enact as follows:

SECTION 1. Chapter 5 (commencing with Section 450) is added to Division 1 of the Water Code, to read:

CHAPTER 5. FEDERAL REPORTS ON PROPOSED FLOOD CONTROL AND RECLAMATION PROJECTS

450. The Governor is hereby designated as the state official to receive the reports of the Chief of Engineers, Department of the Army, and the Secretary of the Interior required by Section 701-1 of Title 33 of the United States Code with respect to proposed flood control or reclamation projects, or both.

451. Within 10 days after the receipt by him of any such report, the Governor shall transmit copies thereof to both houses of the Legislature, if the Legislature is then in session. If not, the Governor shall transmit copies thereof to the Rules

Committees of the Assembly and the Senate of the Legislature, which committees shall immediately assign them to appropriate interim committees for study.

452. Any legislative committee to which such a report has been assigned may submit written comments thereon to the Governor.

453. The Governor shall transmit to the appropriate federal agency, together with his comments and the comments of any state department or commission as to any such report, the written comments, if any, as to such report submitted to him by either house of the Legislature, or by both houses, or by any committee of the Legislature.

LEGISLATIVE COUNSEL'S DIGEST

Federal water projects.

Adds Ch. 5 (commencing with Sec. 450), Div 1, Wat.C.

Designates the Governor as the state official to receive federal reports re flood control and reclamation projects.

Requires him to transmit copies of such reports to both houses of the Legislature, if in session, or, if not, to the Rules Committee of each house for assignment to appropriate interim committees for study. Authorizes any legislative committees to which such reports are assigned to submit written comments thereon to the Governor, and requires him to transmit any comments of the houses of the Legislature, or of any legislative committees, along with his comments, to the appropriate federal agency.

COMMITTEE LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON WATER

January 7, 1965

HON. JESSE M. UNRUH
Speaker of the Assembly
Members of the Assembly
State Capitol, Sacramento

Gentlemen:

Your Assembly Interim Committee on Water herewith submits its final report on water district organization. This report was prepared by the Water District Organization Subcommittee and adopted by the full committee.

The principal recommendation of the committee is the enactment of a Uniform District Election Law to simplify and modernize the existing law relating to district elections. This is the first major recommendation in the committee's long-range program of modernization of water district enabling acts which began during the 1961-63 interim.

It is the committee's recommendation that this study on water district organization be continued during the 1965-67 interim when additional areas of water district organization can be examined by the committee.

Respectfully submitted,

CARLEY V. PORTER, *Chairman*

INTRODUCTION

The Assembly Interim Committee on Water began its studies of water district organization following the 1961 session. At the end of the 1961-63 interim, the committee issued its first report, *Study of Water District Laws*.¹ This report included text and tabular material on selected provisions of water district acts, and included recommendations for remedial legislation, the majority of which had the primary objective of making available basic data about water districts. The committee also sponsored legislation authorizing all districts to consolidate.

In its first report, the committee recommended "the Legislature should continue to examine and study water district acts carefully, emphasizing its desire to bring about uniformity of language and procedures whenever possible . . ."

At the 1963 session, Chairman Porter authored House Resolution 506, requesting a continuing study of water district organization. This resolution was referred to the Assembly Interim Committee on Water and, in turn, to the Subcommittee on Water District Organization and provides the basis for a large portion of the material presented in this report.

Early in the current interim, in January 1964, the committee issued a 1963 revision of its *Study of Water District Laws*,² which brought the earlier report up to date to reflect changes in water district acts made at the 1963 session of the Legislature.

The committee has had long experience in working with water districts and is fully cognizant of the great contributions which water districts have made to the growth and prosperity of our state through pioneering municipal, industrial and agricultural water developments. The great majority of water districts today provide efficient, modern water service to Californians. The major general water district acts, however, are state statutes enacted by the Legislature. The ultimate responsibility for their improvement and modification rests with the State Legislature. On occasion, various interests sponsoring legislation relating to water districts have not given adequate attention to the Legislature's role and have neglected the statewide public interest which must be considered with regard to every district act. The committee strongly feels that it has an obligation in reviewing legislation of statewide application to make certain that any legislation not only be agreeable and beneficial to the local area involved but also be in the general public interest.

In approaching its studies, this subcommittee has attempted to take a cold, hard look at certain aspects of water district acts with the positive objective of improving these acts so that the water districts of California can better meet the challenges of the nation's largest state in the 1960's. In the following sections, as a result of these general

¹ Volume 26, No. 5 (1961-63).

² Volume 26, No. 9 (1963-65).

studies, a number of specific proposals for modification of water district acts are presented.

In addition to this general study by the committee, legislation referred to the committee for interim study is discussed, together with the committee's recommendations.

Hearings of the subcommittee were held as follows:

January 21, 1964, Berkeley, executive session.

January 21, 1964, Berkeley, uniform election procedures.

January 22, 1964, Berkeley, AB 2118.

October 19, 1964, Bakersfield, Antelope Valley-East Kern Water Agency.

December 18, 1964, Sacramento, uniform election procedures.

I. A UNIFORM DISTRICT ELECTION LAW

Findings

1. Water districts generally have a low "political visibility" characterized by extremely low voter participation in district elections and an unprecedented level of election cancellation due to lack of competition for elective district offices.

2. Election dates for water district officials vary not only from one type of district to another but also districts formed under the same act often have different election dates. Nearly every week of the year some water district conducts an election.

3. Confusion surrounding district elections has been further intensified by the immense variety of technical procedures under which elections of the various districts are conducted. Often these procedures, due to their complexity, are not uniformly followed nor easily understood.

4. The number of times a voter must go to the polls each year is often large. A single election for water districts will focus the spotlight on those elections, increase voter participation at elections and reduce the number of elections cancelled.

5. Healthy and strong democratic local government requires the highest possible level of citizen awareness and participation in local government affairs, including those of water districts.

6. Provision of a new uniform district election law is supported by most of the state's water districts and by county clerks and registrars of voters.

Recommendation

The committee recommends enactment of a uniform district election procedure to apply to all general act and special act water districts in the state which are not already holding consolidated elections. The act should provide for elections on the first Tuesday after the first Monday in November of each odd-numbered year. The key feature of such a proposal would be a single neighborhood polling place for each voter regardless of the number of districts in which he is eligible to vote. The county clerk or registrar of voters should be given primary responsibility for conducting these elections. Standard procedures for the nomination of candidates, notice of election, and appointment in lieu of election, establishment of precincts and polling places, and other election procedures should be provided. Special procedures for land-owner voting districts should be established whenever necessary.

Background

In the committee's 1962 report it was recommended that "the Legislature should continue to examine and study Water District Acts carefully, emphasizing its desire to bring about uniformity of language and procedures whenever possible. . ." The committee, through staff investigation and research selected district general election procedures as the first area in which to develop uniform procedures.

The committee held a hearing in Berkeley in January 1964 to receive general recommendations with regard to such a procedure. Subsequently, the committee engaged the services of Adolph Moskowitz, a Sacramento attorney specializing in water law, to prepare a draft procedure for uniform elections. Mr. Moskowitz submitted his final report to the committee in December 1964, and a public hearing on his basic recommendations was held on December 18, 1964, in Sacramento.¹

At the outset considerable controversy arose over the question of modifying the existing *basis* of voting, that is by residence or land ownership. A number of general act water districts use land ownership as a basis for voting. Concern has been raised that in view of recent U.S. Supreme Court decisions regarding reapportionment such procedures may not be valid.² The question of land ownership as a basis for voting is a complex one and is a subject suitable for continued study during the forthcoming interim. The committee specifically excluded consideration of this matter from its proposal.

The committee received considerable expressions of support for a uniform election procedure. The Director of Water Resources indicated to the committee that:

The Department of Water Resources has supported and will continue to support your committee's efforts to achieve uniformity in needed areas of water district law . . . we are of the opinion that the lack of voter participation in, and knowledge of, water district elections is a matter of general concern.

While a spokesman for the Irrigation Districts Association, representing the largest single group of water districts in the state, told the committee that:

I would like to emphasize very much that of the members of the Association, many of them are well aware that the proposal is an attempt to get the water districts in order, and the generally favorable response to the proposal reflects this.

Lack of Uniformity in Existing Law

In examining general and special water district acts, the committee found generally similar but not identical procedures for elections. The existing lack of uniformity can be broken down into two general areas. First, there is a lack of uniformity as to procedural matters related to elections. This includes provisions such as the filing dates for candidates, the method of notice, the date on which appointment of officers is made in lieu of election, the method of canvassing the vote, requirements for ballots, and related technical matters. Table 1, prepared by the Legislative Counsel, summarizes four selected provisions in water district acts as an example of a needless lack of uniformity. The committee found that because there are so many different technical procedures, water district election officials often find the maze of provisions difficult to work with and confusing.

¹ Copies of Mr. Moskowitz's complete report, including text and supporting material, are on file in the committee office in Sacramento.

² The Attorney General of the State of California indicated to the committee chairman in letter dated February 4, 1964 ". . . that there was no constitutional prohibition from such [land ownership] voting requirements." See 39 Ops. Cal. Atty. Gen. 211, 212-213 (1962).

California water (Sec. 34000 et seq., Wat.C.)*	Not less than 35 days before a general election (Sec. 35050).	By publication once a week for at least 2 weeks in a newspaper of general circulation published in each affected county (Sec. 35002).	Yes, if on the 34th day prior to the election there are insufficient nominees (Sec. 35054).	Canvassed by board of election after close of polls (Sec. 35100).
California water storage (Sec. 39000 et seq.)	Not less than 60 days before the election (Sec. 41305).	Not less than 24 days before election by publication once a week for 3 successive weeks and by posting in 3 public places in each election precinct (Sec. 41302).	Yes, if by the 59th day prior to the election there are insufficient nominees (Sec. 41307).	Canvassed by district board on 1st Monday after election (Sec. 41415).
County water (Sec. 30000 et seq.).	Between the 60th and 45th day prior to the election (Sec. 30754).	By publication at least once a week for 2 successive weeks before the date of election in a newspaper of general circulation published in the district and designated by the board of directors, or, if none, by publication in any paper of general circulation published in the county and designated by the board of directors (Sec. 30772).	Yes, if on the 35th day prior to the election there are insufficient nominees and a petition signed by 5 percent of the voters requesting that the election be held has not been presented to the board (Sec. 30815).	Canvassed by board of directors on 1st Monday after election (Sec. 30702).
Irrigation (Sec. 20500 et seq.)	Between the 65th and 40th day prior to the election (Sec. 21658).	By publication once a week for 2 successive weeks in a newspaper of general circulation published in the district, or, if none, by publication once a week for 2 successive weeks in a newspaper having general circulation in the district published in any affected county, or by posting in 3 public places in each election precinct (Sec. 21654); notices may also be mailed (Sec. 21655.1).	Yes, if on the 35th day prior to the election there are insufficient nominees and a petition signed by 5 percent of the qualified electors requesting that the election be held has not been presented to the board (Sec. 21661).	Canvassed by board on 1st Monday after election (Sec. 21707).

SUMMARY OF SELECTED FEATURES OF LAWS RELATING TO GENERAL ELECTIONS IN CERTAIN GENERAL ACT WATER DISTRICTS

Table 1—Continued

<i>District</i>	<i>Filing date for petition for candidate</i>	<i>Method of giving notice</i>	<i>Appointment of officers in lieu of election</i>	<i>Cannvass of votes</i>
Municipal water (1911 act) (Sec. 71000 et seq.)	Governed by provisions re election of county officers (Sec. 71505).	Governed by provisions re election of county officers (Sec. 71505).	Yes, if on the 65th day prior to the election there are insufficient nominees (Sec. 71510).	Governed by provisions re election of county officers (Sec. 71505).
Water conservation (1927 act) (Stats. 1927, Ch. 91, D.A. 9127a)	Within 15 days from the first publication of the notice calling the election (D.A. 9127a, Sec. 6).	By publication once a week for not less than 2 weeks in a newspaper in each of the counties in which the district is situated, if there be one, and by posting notice thereof in three public places in addition to posting in the office of the board of directors (D.A. 9127a, Secs. 6 and 14).	Yes, if there are insufficient nominees, and within 10 days after the first publication of notice of election a petition signed by 25 percent of the voters requesting that the election be held has not been presented to the district clerk (D.A. 9127a, Sec. 14).	Cannvassed by district board on 1st Monday after election (Sec. 16).
Water conservation (1931 act) (Stats. 1931, Ch. 1020, D.A. 9127c)	Within 15 days from the first publication of the notice calling the election (D.A. 9127c, Sec. 6).	By publication once a week for not less than 2 weeks in a daily or weekly paper in each of the counties in which the district is situated, if there be one, and by posting notice thereof in three public places in addition to posting in the office of the board of directors (D.A. 9127c).	Yes, if on the 8th day after first publication of notice of election there are insufficient nominees, and a petition signed by 5 percent of the electors requesting that the election be held has not been filed with the board (D.A. 9127c, Sec. 14.5).	Cannvassed by district board on 1st Monday after election (Sec. 16).
Water replenishment (Sec. 60000 et seq.)	Governed by Elections Code (Sec. 60210).	Governed by Elections Code (Sec. 60210).	Governed by Elections Code (Sec. 60210).	Apparently cannvassed by district board (see Sec. 60214).
Reclamation (Sec. 50000 et seq.)	Between the 75th and 54th day prior to the election (Sec. 50731.5).	By publication for 1 month in a newspaper in each county in which any of the district lands are situated, if any newspaper is published therein, and if not, in a newspaper having general circulation (Sec. 50732).	Yes, if on the 6th day prior to the election there are insufficient nominees and a petition signed by 5 percent of the voters requesting that the election be held has not been presented to the board (Sec. 50740).	Cannvassed by board of election (Sec. 50752).

• Unless otherwise specified, all section references are to the Water Code.

It is significant to note that there is no indication that this lack of uniformity has arisen because of any particular historical or substantive reason but rather because the district acts have been developed through the years independently of each other. Little consideration has been given through the years to developing districts along more uniform lines. The few such attempts, such as the District Organization Law, have been fruitless for the most part.

The area of water district election laws which is least uniform and which is most significant to this study is that of the *election date*. Table 2 indicates the general election dates for the major general act water districts of the state. Although some of the district acts require elections on the same date each year, it can be seen that California water district and reclamation district elections are held on completely irregular dates—either based on the date of formation or upon the bylaws of the district. As a result of this lack of uniformity in election dates, the committee found that water district elections occur throughout the calendar year. Nearly every Tuesday, some district somewhere in California is conducting a general district election.

We believe that the lack of uniformity of dates gives rise to a lack of voter knowledge even of the fact that an election is to be held. This is one of the committee's most serious objections to the existing law and is one of the major reasons for preparation of the uniform district election law. Director of Water Resources William E. Warne pointed out that:

Voters in water districts are often confused as to the places elections are to be held, the dates of elections, and the qualifications of district officials. The department is the frequent recipient of inquiry and complaint from individuals who profess a lack of knowledge of district affairs and district elections. We hear from people whose first awareness of being a "part of" a district arises when they receive their tax statement or notice of assessment. . . . Providing a uniform date for election will help in making the voters aware of local districts and their affairs.³

Table 2
GENERAL ELECTION DATES OF SELECTED WATER DISTRICTS

<i>District</i>	<i>Date of election</i>
California water (Sec. 34000 et seq., Wat.C.)	Every 2nd year after the formation of the district (Sec. 35000); exact time is governed by the district's bylaws (Sec. 35001).
California water storage (Sec. 39000 et seq.)	1st Tuesday in February in each odd-numbered year (Sec. 41300).
County water (Sec. 30000 et seq.)	Every 2nd year after formation on the fourth Tuesday in March (Sec. 30701), unless consolidated with the direct primary election (Sec. 30701.5).
Irrigation (Sec. 20500 et seq.)	1st Tuesday in February in each odd-numbered year (Sec. 21650).
Municipal water (1911 act) (Sec. 71000 et seq.)	On each even-numbered year at the time of the direct primary and consolidated therewith (Sec. 71450).

³ Hearing, December 18, 1964, *Transcript*, p. 6.

Table 2—Continued
GENERAL ELECTION DATES OF SELECTED WATER DISTRICTS

<i>District</i>	<i>Date of election</i>
Reclamation (Sec. 50000 et seq.)	Every 2 or 4 years as provided by district by-laws (Sec. 50730).
Water conservation (1927 act) (Stats. 1927, Ch. 91, D.A. 9127a)	1st Tuesday in February of each odd-numbered year (D.A. 9127a, Sec. 12).
Water conservation (1931 act) (Stats. 1931, Ch. 1020, D.A. 9127c)	1st Tuesday in February of each odd-numbered year (D.A. 9127c, Sec. 12).
Water replenishment (Sec. 60000 et seq.)	Governed by Elections Code (Sec. 60210).

In its draft legislation for a Uniform District Election Law, the committee has attempted to revise general procedures to make them more workable. The law is patterned after existing election code procedures. The following comment of one irrigation district to a committee inquiry as to its recent election points up just one of the many ludicrous situations which can result under the existing confused, disorganized and often undemocratic election procedures:

... the incumbent and one other person expressed a desire to hold office. Nomination papers could not be properly executed as there are only eight voters in the division [10 required]. The district board of directors therefore requested the county supervisors to make the selection. This was done with the incumbent returned to office.

Water District Elections Today

CANCELLATION OF ELECTIONS

As can be seen from Table 1 all water district acts provide that in the event that no candidates file for election to an office, or if only one candidate files for each post, the district may cancel the election. An appointment is then made by the county board of supervisors. The existence of this provision, together with the lack of uniformity of date and low public awareness of water districts, has created a situation where water district elections are the *exception rather than the rule*. It is the hope of the committee that one of the major results of the uniform election district law will be fewer canceled elections.

We believe it most important that public water districts, with general taxing and bonding powers and a broad range of other powers to provide services to the public, should be responsible to the public through regular district elections.

Recent information^{3a} indicates that this year, 90 percent of the Irrigation Districts and 100 percent of Water Conservation Districts (1931) canceled elections. Also, more than three-fourths of all irrigation, California and county water districts canceled elections during the four-year period from January 1, 1960, through November 1964

^{3a} The committee compiled results of the water district elections held in February 1965 and these are shown in Appendix 3 of this report. The committee is also grateful to the Assembly Committee on Municipal and County Government (Assemblyman John Knox, Chairman) for use of data which that committee collected with regard to recent water district elections. See Appendix 4 for sample election cancellation provisions.

(a period in which a total of two elections per district were scheduled to have been held). This rate of cancellation is extremely high. A summary of the cancellation rate of elections in these water districts for the four-year period is shown in Table 3 below.

Table 3
SELECTED WATER DISTRICTS
Cancellation of Elections (1-1-64 to 11-3-64)

<i>Type</i>	<i>Total number of districts</i>	<i>Districts reporting</i>	<i>Percentage of districts canceling elections</i>
Irrigation -----	113	65	81
County -----	186	88	77
California -----	109	39	76

The committee proposes in its Uniform District Election Law that an additional notice be required by districts prior to the closing date for nominations to inform the electorate that an election will be canceled if insufficient candidates do not file.

We reaffirm the desirability of having a district election cancellation procedure so that if there are insufficient candidates, districts can be spared the expense of an election and the uniform act incorporates such a procedure. The procedure can be abused, however.

VOTER PARTICIPATION

In addition to the extremely high rate of cancellation of elections, the voter participation in the water district elections that are held is often quite low. A study of district elections in the San Francisco Bay area prepared for the Association of Bay Area Governments indicated that county elections have a median turnout of 67 percent and city elections 45 percent. Unconsolidated water district elections averaged only 27 percent.⁴

The committee examined voter participation statistics for elections of irrigation districts and county water districts during the past four years and these are summarized in Table 4. The lowest turnout recorded was 2 percent, the mean turnout was 34 percent, and the median turnout was 28 percent. These figures are even more disturbing when one realizes that these statistics are based on only about 25 percent of the total elections that would have been held had elections not been canceled. Thus, even when public interest in the district is great enough to require an election, the average turnout is still quite low.

In the study of San Francisco Bay area district elections, it was concluded that district "elections are seldom given wide publicity; the local papers may or may not carry the returns. Unless a controversy has arisen in a district, voters are not likely to be aware of the identity of either the incumbent directors or the opposing candidates, if any."⁵

⁴ Association of Bay Area Governments (ABAG), *Special Districts in the San Francisco Bay Area: Some Problems and Issues* (by Stanley Scott and John Corzine), October 1963, p. 2.

⁵ *Ibid.*, p. 2. The committee's survey of district election results for 1965 elections bears out this comment. Of the irrigation districts responding to this query, 18 percent indicated press coverage of their elections was "fair," 13 percent termed it "poor," and 10 percent indicated no press coverage at all was given.

Table 4

VOTER PARTICIPATION IN ELECTIONS HELD BETWEEN JANUARY 1, 1960
AND NOVEMBER 3, 1964

Type	Number of districts	Number of districts answering survey reporting on election ¹	Low percent ²	High percent ²	Mean percent	Median percent
Irrigation						
0-10,000						
voters -- --		22	2	87	39	40.5
10,000-35,000						
voters -- --		4	3	48	27	29.5
Total -----	113	26	2	87	37	37.5
County						
0-1,000						
voters -- --		20	12	100	55	54.5
1,000-						
5,000 -- --		18	9	65	25	24.5
5,000-						
10,000 -- --		10	9	32	18	12.0
10,000-						
25,000 -- --		5	9	26	16	14.0
Total -----	186	53	9	100	34	28.0

¹ Only those districts which submitted information upon which voter participation could be computed were included.

² Ratio of votes cast to total voters eligible to vote.

The committee has found that in certain cases where elections are hotly contested turnout approximates that of city and county elections, but this is the exception not the rule.

Statistics developed in the study of San Francisco Bay Area Water District elections are illustrative of the dual problems of cancellation of elections and low turnout. The study covered Alameda, San Mateo, Contra Costa and Santa Clara district elections between 1956 and 1962. Over this six-year period, for county water districts alone, out of a total of 85 possible elections, only 20 elections, or 23 percent of the scheduled elections, were held. Thus 77 percent of the county water district elections in those four populous counties were canceled over a six-year period. Voter turnout in the elections that were held was also very low and averaged only 33.7 percent, ranging from a low of 10.4 percent to a high of only 57.4 percent.⁶

In investigating water district elections, the committee found in many cases a paucity of information was available from the districts themselves about their elections. One district indicated that it had not had an election since its formation in 1941. Many districts indicated that since formation, an election had never been held.

Surprisingly, 12 percent of the irrigation and county water districts replying to a survey indicated they did not know when their last election was held.

Thus, statistical information is often difficult to obtain. Forty-three percent of the irrigation districts and 46.5 percent of county water districts contacted indicated that they did not have adequate information available upon which to determine the percentage of voter participation.

⁶ *Ibid.*, appendix.

The committee found that in instances the statutory requirements for elections were not being complied with.

In its study the committee found that many water districts had very little if any community identity and too often districts were virtually impossible to locate. The result seemed to be general confusion, lack of public interest, much criticism of districts and frequent low "political visibility."

As the bay area study concluded :

One reason for voter apathy and lack of concern is that citizens are not informed about or interested in district activities. Even if they were, the sheer number of districts and the frequency of elections make impossible demands upon the voters' time and attention.⁷

It is expected that the conditions that led a member of this committee to comment "maybe we are electioning people to death" will be corrected in great measure by this legislation since by the consolidation of water district elections on a single day the percentage of turnout should increase and the number of elections canceled should decrease.

Democratic government can only stultify as a result of apathy and low citizens' interest and participation in its activities.

The Uniform District Election Law

An outline of the Uniform District Election Law follows:

OUTLINE OF UNIFORM DISTRICT ELECTION LAW

Form—A codified section establishing uniform election procedures applicable to all water districts which elect their board of directors and do not presently have consolidated elections. (To be later expanded to as many other types of districts as possible.)

Uniform Date—All elections for district officers are to be held on the first Tuesday after the first Monday in November of the odd-numbered years.

Unexpired Terms—Provision is made for the establishment of terms of office corresponding with the new election date. The first election under the law will be held in 1967.

Notice of Election—At least 75 days prior to the general district election day notice of election is to be published.

Nomination Petitions—Available 75 days prior to election day. Must be filed with secretary at district's office not later than 50 days prior to election day.

1. Petition must be signed by 10 or more electors or 25 percent of the electors if the number is less than 10. A voter may only sign one petition for each office.
2. A sample form of nomination paper and affidavit of nominee is provided in the law.

⁷ ABAG, *Ibid.*, p. 3.

Order of Names on Ballot—Incumbents are to appear first, other candidates in alphabetical order.

Notice of Appointment in Lieu of Election—Not less than 7 nor more than 14 days prior to the close of nominations the district secretary is to publish notice that only one or no nomination has been made.

Cancellation of Election—If on the 45th day prior to the general district election day there is an insufficient number of nominees and no petition signed by 5 percent of the electors requesting an election has been filed, secretary of the district shall notify the County Clerk or Registrar of Voters that no election is to be held and the supervising authority shall appoint to the office.

Conduct of Election by Registrar of Voters or County Clerk—Registrar of voters or county clerk of the affected county shall conduct the general district election. If a water district in which voter participation is determined by land ownership is located in two or more counties, the county clerks of the respective counties may contract to permit one clerk to conduct the election for the entire district.

Reimbursement of County—The county shall be reimbursed by each district for the actual expenses incurred.

Qualification of Electors—Qualification of voters will be determined by principal act of the electing district.

Voting—The principal act determines the number of votes a voter is entitled to cast.

District Boundaries—At least 75 days prior to election day the district secretary shall send to the county clerk or registrar of voters in order that a list of registered voters can be prepared.

List of Voters—The secretary of a district whose right to vote is based on the ownership of land shall send a list of qualified voters to the county clerk or registrar of voters at least 54 days prior to election day.

Precincts—County clerk or registrar of voters shall establish precincts, polls and appoint inspectors, judges and clerks.

Consolidated Polling Place—Polling places to be arranged so that a voter entitled to vote in more than one district shall cast his ballot at a single polling place.

Form of Ballot—County clerk or registrar of voters shall specify the form of ballot for districts whose voter qualifications are based on residence.

The form of ballot for land ownership districts shall be determined by their principal acts.

Preparation of Roster and Voting Lists—County clerk or registrar of voters shall prepare a list of voters for each ballot in each precinct. There shall be a separate roster for each ballot in each precinct.

Mailed Notice of Election—At least 10 days prior to the election the county clerk or registrar of voters shall mail to each voter a notice of election including date of the next general district election, address of

the polling place, and the names of the district(s) and the candidates for office.

Certificate of Votes—Tally lists and a certificate of votes shall be prepared at each precinct.

Disposition of Election Returns—The certificates, the roster of voters and tally lists shall be delivered to the county clerk or registrar of voters.

Canvass of Returns—The county clerk or registrar of voters shall canvass the returns and mail a statement of the result to the secretary of each district participating in the general district election.

Term of Office—Directors will hold office for four years.

Absentee Ballots—Absentee ballots shall be provided for resident voting districts. Proxy provisions will apply to landowner voting districts.

Due to the length of the legislation, the complete text of the law is not being included in this report.⁸

It is appropriate, however, to discuss several of the major features of the act, and the reasons for their inclusion in the committee's proposal.

Single Polling Place

Probably the most important feature of the act will be the provision of a single polling place for all water district elections. If a person resides in more than one district he will vote for all districts at the same neighborhood polling place. This is in sharp contrast to existing law when in some cases (even when elections are consolidated) the polling places are not, and one must go to several different places to vote.

Single Date

All water district elections will be held on the same day. The date selected for the election is the first Tuesday after November in each odd numbered year. At the present time the only regularly scheduled elections on this date in California are city elections in the City and County of San Francisco. There are no conflicts since San Francisco has only one public district. The date chosen also is the traditional election day in the United States.

Due to the complexity of district boundaries and other technical problems involved in conducting an election, it was advisable to select a date for the water district election on which no other elections were taking place. Ralph Epperson, a representative of the County Clerks Association (county clerks and registrars of voters will conduct the elections) advised the committee:

We would like first of all to endorse the proposed date of the first Tuesday after the first Monday in November of the odd-numbered years. This seems to fall best statewide for all county clerks to conduct an election.⁹

⁸ A list of the districts affected by the act and a compilation of the total number of local districts involved, by county, is found in Appendix A and B to this report.

⁹ Hearing, December 18, 1964, *Transcript*, p. 10.

Mr. Epperson, who is County Clerk of San Joaquin County, endorsed the concept of eventually having a number of election days each year for specific types of political bodies. He indicated that :

Our feeling is that we should be able to establish so many given days in a year for elections. This would be the first step where we have water districts the first Tuesday after the first Monday in November.¹⁰

Mr. J. E. Les Brown, County Clerk of Fresno County and Chairman of the County Clerks Association of California, indicated that :

. . . So far as this date is concerned it is the unanimous conclusion and concurrence that November in the odd-numbered years is a real workable date as far as we are concerned.¹¹

This date will also be desirable in that it avoids combining nonpartisan water district elections with partisan elections. Because of the large number of districts involved in each election on a single date, news media will be able to concentrate their coverage on water district election day. Including a special election day for water districts, each year the electorate of the state will be called upon to vote only a minimum number of times. In even-numbered years, elections are regularly scheduled in June and November for county and state offices and in the spring for general law cities. In odd-numbered years, school districts and many charter cities normally hold elections in the spring. At the outset special districts other than water districts will continue to elect on the present irregular basis. *It is hoped that the provisions applicable to water districts can be extended to all special districts in the state at a later date after the technical problems involved are carefully studied.*

Water districts, however, are the largest single group of public districts in the state and with a special provision for water districts a major portion of the special district elections in the state will be placed on a single date.

Conduct of Elections by County Clerk or Registrar of Voters

Water district elections will be conducted by the county clerk or registrar of voters. These county officials are experienced in handling elections and in many cases today conduct water district elections anyway under contract with districts. An attempt has been made to maintain as much district authority over elections as is consistent with a consolidated election procedure. The county clerks and registrars of voters, however, are equipped with modern election machinery to conduct the election. Their handling of the election should reduce the opportunity for districts to inadvertently forget elections. Uniform statewide compliance with the provisions of the election law should also result. The fact that all districts will be operating under a single uniform procedure should greatly reduce election errors.

Separate Provisions for Land Ownership Districts

One of the major problems which the committee encountered in drafting a proposal for uniform election date is the fact that many dis-

¹⁰ *Ibid.*, p. 15.

¹¹ *Ibid.*, p. 19.

tricts elect on the basis of land ownership. Complex procedures have been required in the past to effectively conduct an election based on this method of determining qualified voters and the number of votes per voter. Often thousands of parcels of land are involved. In this case the committee's proposed law requires that both types—land ownership and resident voter districts—utilize the same general procedures as to notice, for example. However, the specific details regarding election procedures such as counting of the ballots have been prepared with separate provisions for land ownership districts.¹² This procedure should result in overall simplicity and should make it possible for districts with different types of voting registration to conduct their elections simultaneously.

As in existing law no filing fee for district offices is proposed. With almost 75 percent of elections canceled and few candidates when elections are held, there is no justification for imposing a further impediment to potential candidates.

Most of the committee's proposed law follows substantially the provisions of the election code with regard to general elections in the state. It has also incorporated a number of unique features due to the unique nature of water districts.

There are a number of features of the proposed law which are not uniformly present in existing water district procedures. These include:

1. Absentee voters. Absentee ballots will be provided for all resident voter district elections. (For land ownership voter districts proxies will be provided.)

2. A sample ballot in the form of a postal card which includes the candidates for office and the location of the polling place will be required for every election.

3. Notice of election. The committee found that *none of the water district acts* required that a mailed notice be sent to all voters advising them of their polling place, a procedure always utilized for local city and county elections. It seems obvious that with the prolific number of district elections without a mailed notification of polling place, turnout will obviously be low. This notice will serve as a sample ballot by listing the candidates for office and, at the same time indicating the location of the polling place. This lack of notice of elections was one of the major drawbacks of existing district election procedures.

4. A single uniform ballot form will be provided for all residence voting districts.

¹² Consideration should be given by the Legislature in the future to simplification of these procedures as well. This was beyond the scope of this current study, however.

II. CITY AND COUNTY CONTROL OF WATER DISTRICTS WITH REGARD TO FIRE PROTECTION FACILITIES (A.B. 2118, 1963 General Session)

Findings

AB 2118 attempts to provide more uniform application of city and county ordinances controlling water laws for fire protection purposes by subjecting public water districts to these local ordinances. The committee finds that at present the need for a fire protection law of this type is not so great as to warrant the enacting of AB 2118, which is patently deficient in numerous ways. For example, the committee finds the application of fire protection standards would not be uniform under AB 2118 in that public utility companies could not constitutionally be so regulated, jurisdictional conflicts between regulatory agencies would result, and an inequitable distribution of the financial burden would be inevitable.

Recommendations

The committee recommends that AB 2118 not be reintroduced. The committee recommends that the feasibility of applying fire protection control legislation to fire protection entities rather than water districts should be considered as an alternative. Consideration should also be given to whether a statewide fire protection standards are needed in order to achieve uniformity of application and maximum fire protection to local areas. The committee suggests a final and most desirable alternative would be to utilize devices such as subdivision map approval and building permit and zoning ordinance standards to require adequate water flow for fire protection purposes in each area. Such an approach would apply fire protection standards to all entities involved in fire protection in a given area.

Background

AB 2118 introduced by Assemblyman Tom Carrell of Los Angeles County provides that suppliers of water for domestic use "... shall comply with all of those provisions of any city or county ordinance which pertain to supplying adequate water for fire protection in the locality in which such city or county ordinance applies."

A brief summary of the events leading up to this legislation will provide a background for examining the merits of AB 2118. On August 2, 1960, the Los Angeles County Board of Supervisors adopted Ordinance No. 7834, the "Water Ordinance." The ordinance is a long and complicated document setting forth procedures under which the county established specifications of minimum standards for water mains, and water systems for fire protection.

After the ordinance was adopted, a group of 14 public water districts in Los Angeles County organized to make a court test on the Water Ordinance to determine whether or not these public water districts were subject to the provisions of the Water Ordinance.

In *Baldwin Park County Water District v. County of Los Angeles*, 208 C.A. 2d 87 (1962) the district court of appeals held that the Legislature did not intend that irrigation and water districts should be subject to legislation by counties. The court concluded that in the case of the Water Ordinance, the ordinance was in conflict with state legislation. Since the above decision Los Angeles County has limited the Water Ordinance to water distributing entities other than public districts.

Assembly Bill 2118 which was sponsored by the County of Los Angeles would, in effect, overrule the court decision and specifically provide that cities and counties could regulate public water districts by ordinance in the very limited area of water supplies for fire protection. On January 22, 1964, the Subcommittee on Water District Organization met in Berkeley to receive testimony on AB 2118.

Levels of Fire Protection

Testimony revealed that standards have been developed by the Board of Fire Underwriters in order to determine fire insurance rates for the grading area under consideration. Captain Joseph Rotella of the Los Angeles County Fire Department testified that a reasonably adequate water system should receive a grade of class 1, 2, or 3.¹ Captain Rotella further stated that only 14 percent of the water systems in the fire protection areas under jurisdiction of the Los Angeles County Fire Department had ratings of 3 or better. The criteria of the Board of Fire Underwriters for determining the need for the proposed legislation were strongly criticized.

Testimony indicated that the Pacific Fire Rating Bureau assigns individual ratings to not only the *water systems of a fire area* but also to the other major factors in fire protection. Then an overall rating is established on the basis of the total individual ratings.² Thus, the fire rating for any given area is determined by a combination of such factors as fire department manpower, fire prevention, fire alarm facilities, and actual structural conditions. Data supplied by the Pacific Fire Rating Bureau revealed that in many instances the water service ratings were at least (relatively) equal to those of the grading class of the community.³

Certainly efforts made to protect homes and other valuable structures from the devastation of fires are commendable. Evidence presented at the January 22 hearing, however, did not clearly establish a pressing need for legislation of the type proposed. Ratings by the Board of Fire Underwriters are not in themselves an adequate criteria for examining water system fire fighting effectiveness because the ratings are only meaningful when considered as one of many other factors **related to fire** prevention. Furthermore, ratings of water systems made by the Pacific Fire Rating Bureau frequently are not coterminous with the boundaries of the fire protection area; thus the statistical evidence presented to

¹ Assembly Interim Committee on Water, Hearing January 22, 1964, Berkeley, California, p. 49.

² The individual ratings may be interdependent where, for example, the quality of the fire department is such that an otherwise highly rated water system would be ineffective. In such a case the water system rating would be modified.

³ See p. 163 (Appendix) January 22, 1964, Berkeley hearing.

the committee cannot be examined and compared with the other major fire prevention elements which constitute the areas total fire fighting capabilities.

**Application of City and County Water Ordinances:
Jurisdictional conflict between regulatory agencies**

The sponsors of AB 2118 urged its adoption on the theory that such legislation will provide a method by which local authorities can "... secure uniform compliance with ordinances designed to provide adequate water for fire protection."⁴

In fact, however, AB 2118 legislation *would not accomplish this purpose*. The bill would require a water district to comply with city or county ordinances. At present there are no legal requirements that these two groups of governmental entities coordinate their fire protection ordinances. The Los Angeles County Ordinance applies only in unincorporated areas. The incorporated areas include 76 different municipalities, each capable of enacting its own water ordinance. Instead of uniformity in this county, there is the possibility of 77 different water ordinances.

Also water systems are designed as engineering units and have no necessary relationship to geographical or political boundaries. Since many water districts serve water both in county areas and city areas it is quite likely that one water district would be subject to two, three or even more varying and conflicting fire protection codes. The only uniformity which would be secured by Assembly Bill 2118 would be in those water districts which were contained solely within unincorporated county area or within a single city.

Nonuniformity in Scope of Application

Assembly Bill 2118 also lacks uniformity in its application to water suppliers providing water for domestic use. City or county ordinances clearly apply to facilities of mutual water companies and would apply to public water districts if AB 2118 were enacted by virtue of overruling the *Baldwin* case. There is serious question whether the ordinances can be constitutionally applied to a private water company regulated by the Public Utilities Commission, i.e., a public utility.⁵ The Attorney General of California in an informal opinion to Chairman Porter stated that "... the provisions of Article XII, Section 23, of the California Constitution, preclude any regulations thereof [of private public utility companies] by a county."⁶ Edward Gaylord, Assistant County Counsel, County of Los Angeles, conceded there was

⁴Testimony by James Rostron, Division Engineer, Waterworks and Utilities Division, Department of County Engineer, County of Los Angeles, p. 90, January 22, 1964, hearing.

⁵These companies are substantial water purveyors in metropolitan areas, including Los Angeles County. For example, the California Water Service Company, the most extensive operation, serves 235,000 customers in 35 cities in the state.

⁶Letter from Attorney General Mosk to Chairman Porter, dated June 5, 1964. In a recent Los Angeles County Superior Court case, Los Angeles County was enjoined from enforcing the Water Ordinance against public utilities. The court held: Public utilities distributing water are regulated by the Public Utilities Commission by virtue of Article XII, Section 23, of the California Constitution and in California the Public Utilities Commission has preempted the field. *California Water Association v. County of Los Angeles*, minute order 842,988, January 19, 1965.

doubt as to the constitutionality of applying the Los Angeles Ordinance to public utilities subject to the Public Utilities Commission.⁷

It can be seen that the "uniformity" sought to be achieved by the proposed legislation may well be illusory if its application to a large number of domestic water purveyors was unconstitutional.

Inequitable Distribution of Financial Burden

The committee received considerable testimony to the effect that AB 2118 would shift the burden and cost of fire protection from fire fighting and fire protection districts and agencies to the water users of the public districts without commensurate benefits. Water line capacities, valve sizes and numerous other engineering requirements for adequate water system fire protection units frequently are unrelated to the nonfire needs of domestic water users. At present the water districts cooperate with fire districts and other fire protection entities in the establishment of fire protection facilities; there are no uniform methods used for the allocation of additional costs engendered by fire protection needs but a commonly used system is for the water district to charge the fire district a hydrant rental, which is in effect a service standby charge.⁸ AB 2118 would shift the costs presently allocable to the fire district to the water district.

Allocations of fire protection costs to water districts would be inequitable for two reasons. First, in most instances the boundaries of a water district are not coterminous with those of a fire district; therefore, the area receiving the benefits of fire protection facilities may not pay their fair share of the cost through the financing water district. Second, most water districts pay for their water service out of water revenue, that is, water charges, whereas almost all fire agencies are financed by direct tax on assessed valuation. The amount of water used by a home or business frequently bears no relation to the value of the property receiving the fire protection. Consequently, if additional fire protection costs were allocated through additional water rate charges a burden would be placed upon the water users of public water districts which in no way would be commensurate to the benefits received.

Possible Alternatives

Testimony at the committee's hearing emphasized the need for laws insuring that water systems to be developed in the future include fire flow capacity. Los Angeles County has, in fact, developed some ad hoc methods to at least partially accomplish this goal. For example, subdivision map approval has been conditioned on adequate fire protection facilities⁹ and building permit and zoning ordinance standards have been similarly used. Solving the problem along these lines on a permanent basis appears to be a much more direct and less cumbersome means of obtaining the basic objectives of proponents of AB 2118, that is, adequate fire protection facilities.¹⁰

⁷ *Hearing transcript*, January 22, 1964, p. 63.

⁸ *Ibid.*, p. 115.

⁹ *Ibid.*, pp. 72, 85.

¹⁰ Such an approach is even more appropriate when it is considered that the Los Angeles County Ordinance is applied only to new facilities and not to existing facilities anyway.

The feasibility of applying fire protection control legislation to fire protection entities rather than water districts should also be considered as an alternative. Finally, consideration should be given to whether statewide fire protection standards are needed in order to achieve uniformity of application and maximum fire protection to local areas.

In a letter dated March 17, 1964, to the Assembly Water Committee, the Los Angeles County Counsel submitted a redraft of Assembly Bill 2118.¹¹ The substance of this bill would be: (1) to limit its application to Los Angeles County; (2) to require water districts to comply with county and city ordinances which provide for minimum fire flow; (3) to require that 10 days notice be given to retail water sellers which would be affected by proposed amendments to local ordinances; and (4) to allow the granting of variances if unnecessary hardships would be caused by application of a local minimum fire flow ordinance. The committee does not believe that by limiting the legislation to a single county the substantive technical and other objectives to AB 2118 evaporate. The other proposed modifications are merely procedural.

¹¹ Letter on file in Assembly Water Committee office.

III. THE ANTELOPE VALLEY-EAST KERN WATER AGENCY (H.R. 71, 1964 Regular Session)

Recommendations

The east Kern portion of AVEK should not be severed, but particular attention should be given to the activities of this agency as part of the committee's continuing study of water districts. Legislation should be enacted restoring the original withdrawal procedures included in the AVEK Act at its enactment in 1959. The AVEK Act should be amended to eliminate the power of AVEK to control the formation and operation of other water districts within the AVEK boundaries. The committee recommends that technical amendments to the AVEK Act be enacted to clarify and correct errors in the act.

Background

House Resolution 71 of the 1964 Regular Session directed the Assembly Interim Committee on Water to study the Antelope Valley-East Kern Water Agency, "... including but not limited to, the formation, powers and operation of the agency, the feasibility and desirability of separating the Kern County area of the agency ..." Pursuant to this resolution, the subcommittee held a hearing in Bakersfield on October 19, 1964.

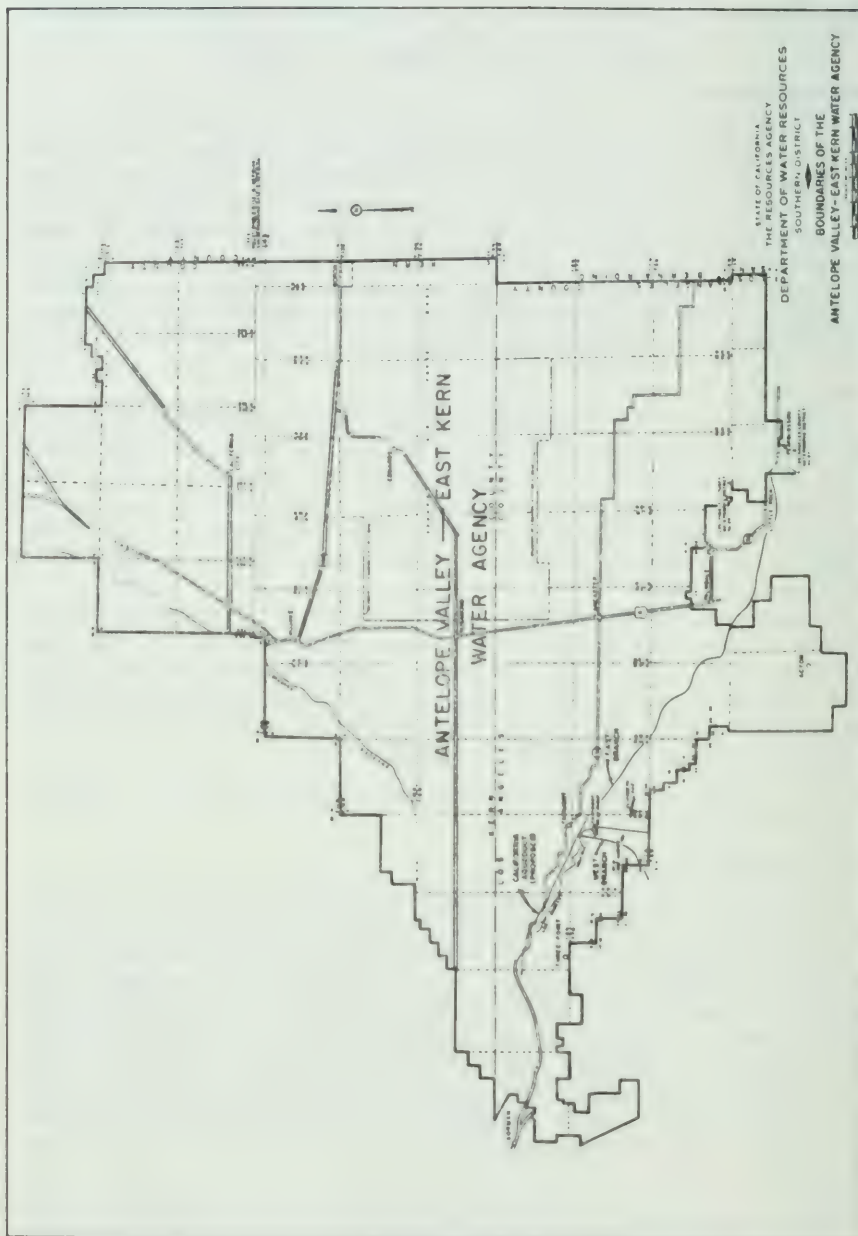

Witnesses at the Bakersfield hearing reviewed the unusual circumstances under which AVEK was created without a vote of the local residents and through unusual legislative action. Senator Walter Stiern, who represents the east Kern portion of the agency stated that the act creating AVEK did not go through normal legislative procedures. Senator Stiern described what he called the

"... bizarre way that this bill bounced around before it became enacted into law."¹

Severance of Kern County Territory

At the 1963 Regular Session of the Legislature Senate Bill 1524 was introduced by Senator Walter Stiern of Kern County. This bill would have eliminated Kern County territory from the agency by severing the agency at the Kern county boundary. It also would have changed the name of the agency to the Antelope Valley Water Agency. The bill was not enacted by the Legislature at that session. After the 1963 session, an Antelope Valley-East Kern Water Agency Advisory Committee was formed at the suggestion of Senator Stiern, to consider, among other matters relating to AVEK, the question of severance. The committee submitted its final report conclusions on August 31, 1964.

¹ See statement at October 19, 1964, hearing. The current dispute concerning severance is only one of the several that have resulted since the formation of AVEK. Assembly Interim Committee Reports Vol. 26, No. 6 (1961-63) describes in detail the rather serious questions raised concerning the creation of AVEK including a description of some of the legislative history.

Antelope Valley—East Kern Water Agency

Testimony at the Bakersfield hearing focused on two primary considerations regarding the feasibility of severing the east Kern area from AVEK. First it was contended that the "... two counties were joined together in the agency because they form a logical continuous area that by virtue of occupying one water basin could be effectively served by one district from the Feather River Project."² Several witnesses at the hearing were of a contrary opinion and felt that it had never been established that AVEK encompassed a single functional hydrological unit.³

The committee feels that resolution of the issue of whether AVEK's boundaries at present include a single ground water basin should not be determinative of the solution to be reached in this controversy. It is sufficient to note that there is a real question whether hydrologic data fully support the one-basin hypothesis.

The crucial issue which compels the committee to recommend against severance is the lack of an alternative distribution system for State Water Project water for the east Kern area. No testimony was received by the committee at the Bakersfield hearing indicating that the pro-severance groups had formulated or strongly considered what resolution should be made of their share of the State Water Project entitlement contracted for by AVEK.

James Doody of the Department of Water Resources stated that there were two possible alternatives. One, east Kern could be formed into a separate agency which then might receive an assignment of a portion of the AVEK state contract entitlement. Two, the severed portion could form a separate agency and contract with the Kern County Water Agency as a member unit of that agency. The Kern County Water Agency might in turn receive an assignment of a portion of the AVEK entitlement. Both these alternatives are presently unfeasible because the department indicated that it would not approve such an assignment unless the terms were agreeable to AVEK.

Mr. Doody stated that the department's basic concern is "... to protect the financial integrity of the State Water Project."⁴ The department has consistently taken this commendable position of protecting the state's contract. It has, however, generally been publicly indifferent toward the activities of the agency, many of which may also have an effect on the contract. Proper management of the district is essential. Success of the State Water Project cannot be insured solely by financial considerations.

AVEK has contracted for almost two acre-feet of water per person based on maximum annual entitlement and population at this time. Without question, enormous population and economic growth is required to make the present contract a financially sound one. The ability of the Antelope Valley and east Kern areas to generate this type of growth will certainly depend on the existence of harmonious relation-

² Testimony by Assemblyman Tom Waite. James Doody of the Department of Water Resources similarly testified to the existence of a common ground water basin.

³ Proponents of Severance Committee; Mr. R. James referring to Giannini Foundation Study No. 2, University of California Extension Service.

⁴ Testimony is on file with the committee. The department must also approve all annexations or exclusions which AVEK undertakes per its water service contract.

ships within the agency. A full understanding of the problems involved and a willingness to assist in every practical way is essential.

Aside from the difficulty of effectuating an assignment of a portion of the entitlement the question of cost of serving a severed area is a serious one. The Department of Water Resources felt that east Kern could be served, "... either through a separate facility or through a joint use facility with the Los Angeles portion of the agency."⁶ The estimated cost of a separate facility would total over \$15 million. This is almost half of the estimated cost of a fully integrated system to serve the entire existing area of the agency. Since east Kern is scheduled to receive only 20 percent of the AVEK entitlement, the additional cost of a separate facility appears to be excessive. The Kern County Water Agency indicated it could serve the east Kern area, but that it was not an advocate of severance.⁷ Again, the Kern County Agency noted that, "... if at all politically feasible, a joint use facility should be constructed . . ."⁸ The cost of parallel lines would be greater than a joint use facility. The large costs which would result from severance plus the lack of firm plans for an alternate distribution system in the event of severance prevent the committee at this time from recommending in favor of severance.

Management of the District

SCOPE OF OPERATIONS

Several phases of the operation of AVEK have been examined by the committee and its staff. A number of complaints regarding various plans of the agency's operation were presented to the committee. In this report we can only deal with a few major problem areas.⁹ There are several areas of AVEK management and operation which require immediate correction if severance is not to become the most feasible solution to the east Kern problems regardless of cost or impracticability.

First, the extension of the purposes for which AVEK was created. AVEK was intended to be a wholesaler of water delivered from the State Water Project.¹⁰ However, the committee has been given no information which indicates that AVEK has negotiated or entered into any contracts with local water agencies for the distribution of the enormous amount of water the agency is to receive from the State Water Project.¹¹ Not only is AVEK gradually creeping into the retail distribution

⁶ Statement to October 19, 1964, hearing.

⁷ Testimony by Dal Ogilvie, engineer-manager of the Kern County Water Agency, on file in the committee office.

⁸ *Ibid.*

⁹ The Major Taxpayers Committee, during its brief existence, made considerable headway in examining the agency's operations including the compilation of at least one engineering report.

¹⁰ Statement of Need and Justification for Enactment of Legislation to Create AVEK—Antelope Valley-East Kern Water Basin Association. Although the AVEK Act is patterned after the Municipal Water District Act of 1911, this group recognized that "... any attempt to create a Municipal Water District . . . will meet with opposition, will not be satisfactory to all parties, and will not adequately accomplish the purposes desired." The January 1962 report by the Department of Water Resources on the Feasibility of Serving the Antelope Valley-East Kern Water Agency from the State Water Facilities states, "... AVEK does not contemplate consumer service. . ." and "local water agencies will continue their present role as suppliers for individual water consumption."

¹¹ Testimony at the Bakersfield hearing by R. Lunt, engineer-manager of AVEK, indicated the agency could distribute the water, "... through the formation of improvement districts or direct assessment districts."

of state water to be received, it has already entered the retail water business by acquiring two water companies, forming improvement districts, issuing bonds, drilling wells and operating the companies.¹²

CONTROL OF LOCAL DISTRICTS

AVEK has gone one step further than acquiring retail water companies; it has in effect vetoed the application of a county waterworks district to provide retail service to residents within AVEK boundaries.¹³ Since the AVEK Act was hurriedly copied from the Municipal Water District Act of 1911 it includes a provision (Section 94) which was included in the Municipal Water District Act to prevent the overlap and duplication by municipal water districts with identical powers, an appropriate provision. This provision, however, gives AVEK unprecedented complete and seemingly boundless powers over the formation of other water districts within its area, a power held by no other special act district and one that became a part of the AVEK Act only due to the lack of adequate legislative consideration given the act in 1959. Clearly this section is inappropriate for the AVEK Act and strikingly illustrates the undesirability of creating special district acts merely by copying general district acts which were drafted for different purposes. We, therefore, recommend that Section 94 of the AVEK Act be amended to eliminate the power to veto the formation of other districts.

OTHER ACTIVITIES

AVEK has continued to expand its operations on many other fronts also. The agency was the prime sponsor of a million-dollar bond issue designed to finance a flood control improvement district. AVEK residents overwhelmingly voted to reject this phase of the proposed expansion.¹⁴ AVEK has also sought to enter the sewage effluent treatment field by applying for a federal grant and proposing a bond issue to finance the remainder of the needed funds while Los Angeles County is already studying the problem under a grant in the area. AVEK is also now seeking to modify its State Water Service contract to permit the agency to build a \$6 or \$7 million reservoir in the valley rather than have the state construct peaking facilities into its system pursuant to the original contract. The AVEK engineer-manager testified that \$400,000 in state funds might be available to finance the recreational features of the reservoir; subsequent news releases have informed AVEK residents that \$1 million in Davis-Grunsky funds might be used to reduce the cost of an agency-owned facility.¹⁵ No sooner had a feasi-

¹² Sunshine Ranchos and Westaire Mutual Water Companies.

¹³ AVEK board of directors refused to permit Los Angeles County Water Works District No. 35 to hold annexation election in the Sunshine Ranchos area; AVEK subsequently held an improvement district formation election in the area and purchased the Sunshine Ranchos Water Company. AVEK has consented to other annexations but has subjected their approval to a variety of conditions such as reserving the right to treat sewage effluent and requiring the annexing district to agree to purchase State Water Project water in lieu of pumping should AVEK so request. Los Angeles County Counsel has serious doubts concerning the validity of these restrictions.

¹⁴ September 22, 1964, special election—almost 70 percent voted against the bond issue.

¹⁵ Mojave Desert News, December 24, 1964; The Bakersfield Californian, December 15, 1964.

bility study for the reservoir been authorized than the AVEK agency discovered an underground subunit of the ground water basin and began planning the use of this area as an additional storage facility.¹⁶ As early as May 1962 the agency's manager asked the Legislature to amend laws relating to ground water to give AVEK unlimited control over the ground water resources of the area.¹⁷

WITHDRAWAL PROVISIONS

Further complicating the plight of any dissatisfied residents of the agency is the fact that the original withdrawal requirements of the act were so stiffened in 1961 that withdrawal from the agency is virtually impossible. For example, voters in the entire 1,500,000-acre district must vote to approve every withdrawal, regardless of size. The committee therefore recommends that the present withdrawal procedures in the act be replaced with the fair and reasonable ones as set forth in Section 84 of the act as originally passed by the State Legislature.¹⁸

FISCAL AFFAIRS

The financial operations of AVEK have been the subject of considerable concern on the part of the East Kern and Antelope Valley taxpayers. East Kern residents must pay a tax of 5 cents per \$100 assessed valuation to the Kern County Water Agency for State Water Project costs in addition to the taxes they pay to AVEK. Information submitted to the committee at its Bakersfield hearing indicates that AVEK is considering taking some steps to modify its program and eliminate an otherwise unfair burden on the taxpayers by financing a greater share of State Water Project costs out of water charges to water users. This was to be accomplished by adding a \$10-per-acre-foot charge to the cost of water.¹⁹ Data supplied to the committee reveals the Kern County residents of AVEK will pay 25 percent of the total agency taxes while receiving only 16 percent of the water.²⁰ The committee should point out that at times the information that has been submitted to it by the AVEK engineer-manager has been less than candid. A careful analysis of the formal report Mr. Lunt prepared for the committee at the Bakersfield hearing revealed that much of the

¹⁶ The Bakersfield *Californian*, December 1, 15, 1964.

¹⁷ Assembly Interim Committee on Water, Hearing Transcript, San Bernardino, May 22, 1962, pp. 164-173.

¹⁸ AVEK spokesman R. Lunt admitted at the Bakersfield hearing that present petition requirements are "... very severe." And these provisions were sponsored by the agency itself at the 1961 session.

¹⁹ Mr. Lunt testified that the \$10 figure was arbitrary and had yet to be approved by the board of directors.

²⁰ P. B-4, AVEK October 19, 1964, Report to Assembly Interim Committee on Water. Sec. 61.1 of the AVEK Act states:

It is the intent of this section to assure each area or district its fair share of water based upon the amounts paid into the agency, as they bear relation to the total amount collected by the agency. (Emphasis added.)

statistical data upon which the agency programs are premised financially may be deceptive or erroneous.²¹

The committee lacks sufficient information to determine if complaints over the relatively large administrative costs of AVEK—a district which will not have water to distribute for another six years—are justified.²² Administrative aspects of the district's operation are worthy of further study.

Summary

The committee feels that at this time severance of the East Kern Portion from the Antelope Valley-East Kern Water Agency would be unwise both financially and practically. It is to be emphasized, though, that this committee is aware of the criticisms which have been made of the AVEK Agency. Therefore, it is recommended that this committee, as part of its continuing study of water district organization continue to study the Antelope Valley-East Kern Water Agency. The committee urges the residents of both counties of AVEK to join together in resolving their problems within the framework of the present agency, assisted by the legislative modifications to the act recommended by this report.

The committee recommends that technical amendments be made to Section 52 of the AVEK Act as well.

²¹ Mr. Lunt in a letter to the committee dated October 29, 1964, admitted that a projected assessed valuation of the area upon which the estimated tax rate was based may be too large.

A comparison of the AVEK October 29, 1964, report, the AVEK Water Agency Advisory Committee Syllabus December 1963 report and the Department of Water Resources Feasibility Report January 1962 reveals that the agency has radically revised estimates of population and assessed valuation almost twofold.

*Projections made by
reports issued in*

		1964	1963	1962
Assessed valuation	{ 1980	918	542	591
(in millions -----)	{ 1990	1,827	881	1,018
Estimated population	{ 1980	482	338	285
(thousands) -----	{ 1990	911	546	490

This committee is aware that the relatively bright financial future forecasted on p. 14 in the report presented by AVEK in Bakersfield may prove overoptimistic. If the estimates of population and assessed valuation made by the agency and the state only two years before the current agency report prove to be more accurate, then current estimates of future taxes and water charges will be almost doubled.

²² \$39,909 preliminary budget 1963-64.

IV. EXTENSION OF THE WATER REPLENISHMENT DISTRICT ACT

Findings

The Water Replenishment District Act (Division 18, Water Code Sections 60000 et seq.) provides an excellent means of forming local districts with full water replenishment powers, including the replenishment assessment or "pump tax". These districts are formed on the basis of ground water basins and their organization in the future in areas throughout the state where critical ground water problems occur is more advantageous than enacting special legislation to provide a replenishment program. The existing restriction in the law limiting formation of these districts to seven southern California counties is obsolete.

Recommendations

The committee recommends that legislation be enacted removing the restriction on the formation of these districts and permitting their formation in *any area of the state*.

Background of the Act

In 1955 the Legislature created an unusual and in fact revolutionary new type of water district enabling act in California—the Water Replenishment District Act. Based on the outstanding and pioneering water replenishment activities of the Orange County Water District, a Special District Act, the Water Replenishment District Act authorized the formation of replenishment districts, one of the primary purposes of which was the utilization of a "replenishment assessment" or "pump tax" to finance the purchase of water for groundwater replenishment. The legislation was sponsored by the Southern California Water Coordinating Conference, and the original sponsors of the legislation sought immediate application of the act in Los Angeles County. Since its enactment, only one water replenishment district has been created on the local level, the Central and West Basin Water Replenishment District in Los Angeles County.¹ This district has an excellent record of accomplishments in the field of groundwater management.

The Water Replenishment District Act is presently limited in application to seven southern California counties (Santa Barbara, Los Angeles, Ventura, San Diego, Riverside, San Bernardino and Orange).

During the 1963-65 interim, the committee suggested the extension of the legislation to permit the formation of water replenishment districts in all of the state's 58 counties. In its *Study of Water District Laws*, this committee recommended that "formation of districts under general districts acts, rather than by special district act, should

¹ For detailed information on the act and its operation see the following reports of this committee: *Ground Water Problems in California*, Assembly Interim Committee Reports, 1961-63, Volume 26, No. 4; *Study of Water District Laws, (1963 Revision)*, Assembly Interim Committee Reports, 1963-65, Volume 26, No. 9.

be encouraged whenever practicable considering fully local needs. If existing general district acts prove to be consistently inadequate, resulting in the use of special district acts, considerations to be given to the enactment of new general district acts or the modification of existing acts to provide more flexibility."² In the last few years, areas not included in the southern California counties in which the water replenishment districts may be formed have utilized special legislation and special district acts to obtain water replenishment powers. For example, special legislation applying to *one general act district only* was enacted for the Alameda County Water District and the Stockton and East San Joaquin Water Conservation District. Replenishment powers were added to a number of *special districts acts* including the Santa Clara County Flood Control and Water District, the San Luis Obispo County Flood Control and Water Conservation District, and the Yolo County Flood Control and Water Conservation District. In addition, at the 1963 legislative session general replenishment powers were given to all districts formed under the Water Conservation Act of 1931, which today is then the only general district act having state-wide application and authorizing replenishment powers.

At the committee's hearing on December 18, 1964, testimony was requested on the advisability of extending the Water Replenishment District Act to all counties of the state. With regard to this proposal, the Director of Water Resources stated

. . . In many situations there are a number of different agencies with varying purposes and powers, each covering a part of the particular ground water basin. The result tends to be the incomplete utilization or sometimes misuse of ground and surface water resources.

An agency must have certain characteristics to undertake full ground water basin management. First its political boundaries should encompass the entire area of the underlying ground water basin. The boundaries of districts now in existence and exercising the powers of ground water replenishment, for the most part, were not influenced in their formation by the boundaries of underlying ground water basins. Secondly, the agency must have the authority to purchase, contract for, or otherwise finance the delivery of supplemental water supply. Thirdly, the agency must have legal authority to integrate the local and imported surface water supplies and ground water supplies into a planned pattern of overall water use.

An additional important problem is that of providing that the cost and benefits of ground water management will be equitably apportioned. Where the agency does not have complete control over the whole ground water basin there may be difficulty in recovering the cost of replenishment operations.

. . . The approach that your committee has recommended . . . seems to be a good step in the right direction. . . [their] purposes seems sufficient to enable them to equitably allocate costs and bene-

² Study of Water District Laws. *Op cit.*, p. 11.

fits. The Water Replenishment District Act also provides a method by which some of the geographical problems associated with ground water basins can be resolved. . . .³

Support for extension of the act was also received from the California Farm Bureau Federation. It should be pointed out that in the past, agricultural groups frequently objected to extension of the ground water replenishment programs because of the requirement that areas within replenishment districts are subjected to ground water recordation requirements.

Since use of the Water Replenishment District Act as a means of obtaining both recordation and ground water replenishment powers involves the formation of a local general act district, a local referendum or formation election would be required. According to representatives of the California Farm Bureau Federation:

Such enabling legislation would provide a permissive way for water users anywhere in the state, by their own action and according to their needs, to plan and carry on a basin management program. At the same time it would eliminate the need for local water districts to continually request special legislation. Amending the district acts to provide this authority has been the case during recent sessions of the Legislature.⁴

The committee concurs in this statement and recommends extension of the Water Replenishment District Act by eliminating the limitation in the act which now permits formation of water replenishment districts *only* in seven southern California counties. It is hoped that extension of the act will reduce the amount of special legislation required to meet water replenishment problems of other areas of California.

V. REPEAL OF OBSOLETE ACTS

Findings

The committee finds that the Limited Water District Law of 1959 and the California Resort District Law have never been utilized and are obsolete. The committee finds that the Municipal Water District Law of 1935 has received only minimum use. The act duplicates general city powers and is unnecessary.

Recommendations

The committee recommends that the Limited Water District Law of 1959 and the California Resort District Law be repealed.

The committee recommends that legislation be enacted prohibiting the formation of new districts under the Municipal Water District Law of 1935. The committee recommends that as soon as all activity under the 1935 law ceases that legislation be enacted repealing this act as obsolete.

Background

In this committee's first report it was pointed out that the last legislative attempt to review district acts and eliminate those which were obsolete or inoperative was in 1953. In its first report in November 1962 this committee recommended repeal of the California Water Storage and Conservation District Act (1941) which had never been utilized. The committee-sponsored legislation was enacted into law accomplishing this objective.

During the present interim, the committee has continued its investigation of acts which are obsolete and has concluded that several district acts should be repealed.

Limited Water District Law of 1959

This act authorized the formation of municipal water districts in a small area of northern Santa Clara County. As a result of unique problems peculiar to the area, the special act rather than the existing general district act was used for this purpose. The act was to be effective only until 1961. Subsequent developments made its utilization unnecessary. The act therefore is of no present usefulness and should be repealed.

The Municipal Water District Law of 1935

Not to be confused with the widely used Municipal Water District Act of 1911, the Municipal Water District Law of 1935 has been seldom used. At one time, several districts were active and in operation, however, the committee's investigation indicates that today no district is actually functioning as a district, although the provisions of the law are being utilized by a single municipality to provide basic municipal powers. According to the Legislative Counsel all of the powers available to municipalities through the Municipal Water District Law of 1935 are also available under the general laws applicable to cities.

In order to provide an orderly phasing out of existing utilization of this law for these purposes it is recommended that legislation be enacted prohibiting the formation of new districts in the future under this act. It is recommended further that at a subsequent legislative session when it is established that no further use is made of this act, the act be repealed as obsolete.

California Resort District Law

According to the Department of Water Resources:

Our records indicate that no districts have been formed under this act. We know of only two attempts to form districts under this act and both failed. This act is generally cumbersome to operate and very time consuming for small affairs of such a district.

This act has a number of general water powers, including the provision of sewage disposal, drainage and fire protection.

The Department of Water Resources is the supervising agency for formation of these districts and reviews their project reports and conducts formation proceedings.

This act also deeply involves the department in day-to-day operations of these districts by such matters as paying claims on warrants drawn by the department.

It should be noted at this point that the committee finds the department's comments helpful in evaluating legislation relating to districts.

However, the department as a general rule has taken a "hands off" attitude toward proposed changes in district acts. This lack of the department's assistance has contributed to the general lack of uniformity of water district acts and has denied the Legislature the benefit of the department's vast knowledge of water problems.

It is hoped that in the future the department will exercise appropriate leadership in district matters and will advise the Legislature rather than dismiss district legislation as strictly a "local matter."

VI. CODIFICATION OF THE WATER CONSERVATION ACT OF 1931

Findings

The committee finds that the Water Conservation Act of 1931, a general district act of broad powers, including replenishment or "pump tax" powers, has been used throughout the State of California. The committee finds that this act is expected to be continued to be used as a general enabling act for the formation of local water conservation districts. The committee finds further that the act is presently uncoded and is in need of modernization and codification.

Recommendations

The committee recommends that legislation be introduced codifying the Water Conservation Act of 1931 as Division 21 of the Water Code. The committee recommends that a nonsubstantive codification be enacted in order that the act can be brought up to date technically to reflect modern language and current terminology in other water district acts as well. In view of this action we also recommend limiting further use of the Water Conservation Act of 1927 to permit its use to be phased out. It is not widely used and other district acts with similar powers are available.

Background

The Water Code was codified in 1943 including many of the most popular general water district acts. Subsequent to the establishment of the Water Code new water district acts have been enacted as a part of the code. Through the years, however, a number of water district acts have remained as uncoded general laws of the State of California. In most cases these acts are special district acts or general district acts of little application and use (for example only one district each has been formed under the Metropolitan Water District Act and the County Water Authority Act). The committee believes that the Water Code itself, which is readily available, should contain not only those district acts which are active and frequently used throughout the state but all such acts. In recent years various groups have been interested in codifying water district acts and the very widely used (50 districts) Municipal Water District Act of 1911 was codified and added to the Water Code in 1963.

The committee believes that the present number of general district acts is sufficient to meet the many and varied needs of the local areas in the provision of water district and water service. The Water Conservation Act of 1931 is one of the acts which should be readily available for use throughout the state. It is the only general district act with broad general powers which also includes the authority to levy a replenishment assessment or "pump tax." Its use should be particularly valuable in areas where a district with both water replenishment powers and other broad powers is required.

The use of the Water Conservation Act for this purpose should reduce the number of special district acts or the need for special legislation affecting only a limited number of general district acts. In August 1963 this committee requested the Legislative Counsel to prepare a codification of the Water Conservation Act of 1931. A nonsubstantive draft was prepared by the counsel, who followed the same principle which served as the guide to the California Code Commission; i.e. to attempt to set forth the existing law in code form without substantive change.¹ The language of the act has been modernized and organization of the act has been revised to make it more consistent with the standard form of organization of most of the water district acts found in the Water Code.

It does not appear that there are additional uncodified general district acts for which codification would be desirable. It is hoped that in the future, formation of new water districts will be made under the established codified water district acts so that eventually all but the most widely used water district acts can be repealed or have their use limited as proposed by this committee in the case of the Municipal Water District Act of 1935 and the Water Conservation Act of 1927.

¹ Copies of the codification, together with cross-reference tables and comparison with existing law are available in limited supply from the office of the committee.

APPENDIX A

LIST OF WATER DISTRICT ACTS AFFECTED BY UNIFORM DISTRICT ELECTION LAW

I. *General Act Districts* *

California Water Storage Districts (Div. 13, Water Code)

California Water Districts (Div. 14, Water Code)

County Water Districts (Div. 12, Water Code)

Irrigation Districts (Div. 11, Water Code)

Reclamation Districts (Div. 15, Water Code)

Water Conservation Districts of 1927 (Deering Act 9127a)

Water Conservation Districts of 1931 (Deering Act 9127c)

II. *Special Act Districts* †

San Benito County Flood Control and Water Conservation District

Crestline Lake Arrowhead Water Agency

Mojave Water Agency

Kings River Conservation District

Orange County Water District

* Municipal Water Districts of 1911 and Water Replenishment Districts consolidate elections with the direct primary.

† All other special act districts either do not have an elected governing body or are consolidated with other elections already.

APPENDIX D

SPECIAL ELECTION CANCELLATION AND APPOINTMENT PROVISIONS OF THE IRRIGATION DISTRICT ACT

In conducting the elections results survey (see Appendix C) a large number of the districts which canceled elections cited as authority for not holding the election the following sections of the Irrigation District Act. These sections vividly illustrate how some provisions of existing law actually encourage districts to appoint rather than elect officials.

CHAPTER 2. SELECTING OFFICERS IN CERTAIN CASES

Article 2. Appointments in Default of Election

21285. A petition containing all of the following may be presented to the board of supervisors of the principal county:

(a) A showing that not more than twenty-five owners of land are residents and electors in the district.

(b) A showing that no general election was held on the last date on which it should have been held and that no special election was held in its place.

(c) Verification of the showings.

(d) Prayer that the board of supervisors appoint directors.

(e) Signatures of the owners of more than one-half of the land. (Amended by Stats. 1943, Ch. 945.)

21286. The board of supervisors shall set a date for the hearing of the petition and shall give notice of the hearing by publication in at least two issues of a newspaper published in the principal county.

21287. The date of the hearing shall be not less than 10 nor more than 30 days from the presentation of the petition.

21288. At the hearing, if the facts alleged in the petition are established to the satisfaction of the board of supervisors, it shall so find by resolution.

21289. Upon the adoption of the resolution the board of supervisors shall appoint for the district three directors, each of whom shall be an owner of land within the district but need not be a resident of the district.

21290. The directors so appointed shall take office as soon as they qualify and shall hold office for a period of four years and thereafter until their successors are elected or appointed and qualify.

21291. The directors so appointed shall constitute the board of the district.

21292. Upon its organization as a board the board so constituted shall fill by appointment the offices of treasurer, collector, and assessor, and none of the persons so appointed need be residents or landowners within the district.

Article 3. Appointments When Land Tax Deeded

21310. The commission may file a report with the board of supervisors of a principal county informing the board that:

(a) Not less than 90 per cent of the land in the district is deeded for delinquent taxes or assessments to either the State or the district or both.

(b) No election of directors of the district has been held for a period of more than four years next preceding the filing of the report.

(c) In the opinion of the commission the interests of the public will best be served by the appointment of directors pursuant to this article.

21311. Upon receipt of the report the board of supervisors shall set a date for a hearing on the report and shall promptly give notice by publication in at least two issues of a newspaper published in the principal county of the time and place at which the hearing will be held.

21312. The date of the hearing shall be not less than 10 nor more than 30 days from the first publication of the notice.

21313. If at the hearing it appears to the satisfaction of the board of supervisors that not less than 90 per cent of the land is deeded for delinquent taxes or assessments to either the State or the district or both and that no election of directors has been held for more than four years next preceding, the board of supervisors may appoint for the district three directors.

21314. The directors so appointed need not be residents or landowners in the district, but each shall be a resident landowner of a county supervisorial district in which all or a portion of the land in the district is situated.

21315. The directors so appointed shall take office as soon as they qualify and shall hold office for a period of four years and thereafter until their successors are elected or appointed and qualify.

21316. The directors so appointed shall constitute the board of the district.

21317. Upon its organization as a board the board so constituted shall fill by appointment the offices of treasurer, collector, and assessor, and none of the persons so appointed need be residents or landowners within the district.

Article 4. Return to Elective Method

21335. Not more than 60 nor less than 30 days before the first Wednesday in February of any odd numbered year a majority of the electors in a district then having directors appointed pursuant to Articles 2 or 3 of this chapter may petition the board of the district that an election be held.

21336. The petition shall show all of the following:

(a) There are persons who could qualify under Section 21100 as directors representing each division in the district.

(b) There are more than twenty-five owners of land in the district who are residents and electors thereof.

(c) There are sufficient electors in the district to conduct an election.

(Amended by Stats. 1943, Ch. 945.)

21337. If the board finds the facts alleged in the petition are true, it shall order that a general election be held, at which election a director for each division and all other elective officers shall be elected.

21338. The directors elected shall at their first meeting classify themselves into two groups in the same manner and with the same effect as is provided as to directors elected at a formation election.

It can be seen that following the default of an election, a majority of the district electors must petition the board to "return to the elective method." This provision permits virtual perpetual appointment because at one time an election was not held.

The following sections of the Irrigation District Act show how existing law further contemplates and makes special provision for districts which fail to call elections *as required by law*. This provision, in effect, condones districts which fail to comply with district election laws. In addition, the sections place the burden of correcting this failure of district officials on the voters of the district who must then petition to have an election conducted. As a result, a district can completely fail to call an election with impunity.

Article 4. Special Elections for Officers

21725. If a general election is not held as required, upon the filing with the secretary of a petition signed by 10 per cent of the voters requesting that a special election be called for the election of officers, the board shall call a special election for the election of officers to offices which should have been filled at a general election or the terms of whose incumbents have expired.

21726. The election shall be held at not less than 35 nor more than 50 days after the filing of the petition.

(Amended by Stats. 1947, Ch. 933.)

21727. The term of each officer elected at a special election is the unexpired term in the office to which he is elected.

The Uniform District Election Law would repeal all of the above provisions of the Irrigation District Act and any similar provisions in other district acts which discourage the holding of district elections.
